This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world’s books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that’s often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book’s long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

+ **Make non-commercial use of the files** We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.

+ **Refrain from automated querying** Do not send automated queries of any sort to Google’s system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.

+ **Maintain attribution** The Google “watermark” you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.

+ **Keep it legal** Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can’t offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book’s appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google’s mission is to organize the world’s information and to make it universally accessible and useful. Google Book Search helps readers discover the world’s books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at [http://books.google.com/](http://books.google.com/)

LIST OF WRITERS IN VOL. II.

NAMES.

G. F. B. GEORGE FERGUSON BOWEN, M. A.
Late Fellow of Brasenose College, Oxford.

E. H. B. EDWARD HERBERT BUNBURY, M. A.
Late Fellow of Trinity College, Cambridge.

G. B. GEORGE BUTLER, M. A.
Late Fellow of Exeter College, Oxford.

W. B. D. WILLIAM BODHAM DONNE.

T. H. D. THOMAS H. DYER.

J. S. H. J. S. HOWSON, M. A.
Principal of the Collegiate Institution, Liverpool.

R. B. J. EDWARD BOUCHER JAMES, M. A.
Fellow and Tutor of Queen's College, Oxford.

R. G. L. ROBERT GORDON LATHAM, M. A.
Late Fellow of King's College, Cambridge.

G. L. GEORGE LONG, M. A.
Late Fellow of Trinity College, Cambridge.

W. R. WILLIAM RAMSAY, M. A.
Professor of Humanity in the University of Glasgow.

J. R. JOHN ROBBIN, B. A.
Of the University of London.

L. S. LEONHARD SCHMITZ, PH. D., LL. D., F. R. S. E.
Rector of the High School of Edinburgh.

C. R. S. CHARLES ROACH SMITH, F. S. A.

P. S. PHILIP SMITH, B. A.
Head Master of Mill Hill School.

W. S. W. VAUX, M. A.
Of the British Museum.

H. W. HENRY WALFORD, M. A.
Of Wadham College, Oxford.

G. W. GEORGE WILLIAMS, B. D.
Fellow of King's College, Cambridge.

The Articles which have no initials attached to them are written by the Editor.

A DICTIONARY
OF
GREEK AND ROMAN GEOGRAPHY.

IABADUS.

IABA'DIUS (Ἰάμαδιος βίος, Pol. vii. 2. § 29, vili. 27. § 10), an island off the lower half of the Golden Chersonesa. It is said by Ptolemy to mean the "Island of barley," to have been very fertile in grain and gold, and to have had a metropolis called AMONTA. There can be little doubt that it is the same as the present Jasa, which also signifies "barley." Humboldt, on the other hand, considers it to be SAMARTA (Κριτική Ημερα. i. p. 64); and Mannert, the small island of Bonas, on the SE. side of Samarta. [V.]

JABBOK (Ἰάβοκ, Joseph.; Ἰαβώκ, LXX.), a stream on the east of Jordan, mentioned first in the history of Jacob (Gen. xxxii. 29). It formed, according to Josephus, the northern border of the Amorites, whose country he describes as isolated by the Jordan on the west, the Arnon on the south, and the Jabbok on the north. (Ant. iv. 5. § 2.) He further describes it as the division between the dominions of Sihon, king of the Amorites, and Og, whom he calls king of Gilead and Bashan (§ 2)—the Bashan of Scripture. In the division of the land among the tribes, the river Jabbok was assigned as the northern limit of Gad and Reuben. (Deut. iii. 16.) To the north of the river, in the country of Bashan, the half tribe of Manasseh had their possession (13,14.) [AMMONTA: AMORTES.] It is correctly placed by Eusebius (Onomast. s. e.) between Ammon, or Philadelphia, and Gerasa (Gerasa), to which S. Jerome adds, with equal truth, that it is 4 miles from the latter. It flows into the Jordan. It is now called El-Zerko, and "divides the district of Moerad from the country called El-Beiba." (Burckhardt's Syria, p. 347.) It was crossed in its upper part by Iry and Mangies, an hour and twenty minutes (exactly 4 miles) SW. of Gerash, on their way to Es-Sailul. (Travels, p. 319, comp. p. 475.) [G. W.]

JABESH (Ἰάβης, LXX.; Ἰαβεθ, Ἰαβες, Ἰα-
βης, Joseph.), a city of Gilead, the inhabitants of which were exterminated, during the early times of the Judges (see xx. 28), for not having joined in the national league against the men of Gilead (xxii. 9, &c.). Three centuries later, it was besieged by the Ammonite king, Nahash, when the hard terms offered to the inhabitants by the invaders roused the indignation of Saul, and resulted in the relief of the town and the rout of the Ammonites. (1 Sam. xi.) It was probably in requisit for this deliverance that the inhabitants of Jabesh-Gilead, having heard of the indignity offered to the bodies of Saul and his sons

after the battle of Gibbon," arose, and went all night, and took the body of Saul, and the bodies of his sons, from the wall of Beth-shan, and came to Jabesh, and burnt them there; and they took their bones and buried them under a tree at Jabesh, and fasted seven days." (1 Sam. xxxi. 11—13; 2 Sam. ii. 4—7.) It was situated, according to Eusebius, in the hills, 6 miles from Pella, on the road to Geresh; and its site was marked in his time by a large village (e. v. 'Απόριδι and 'Ιδαιος). The writer was unsuccessful in his endeavours to recover its site in 1842; but a tradition of the city is still retained in the name of the valley that runs into the plain of the Jordan, one hour and a quarter south of Wady el-Abab, in which Pella is situated. This valley is still called Wady Fawar, and the ruins of the city doubtless exist, and will probably be recovered in the mountains in the vicinity of this valley. [G. W.]

JABNEH. [IAMBIA.]

JACCA. [JACCETANI; VABONES.]

JACCETANI (Ἰακκητανοι), the most important of the small tribes at the S. foot of the Pyrenees, in Hispania Tarraconensis, E. of the Vabones, and N. of the Ilungetes. Their country, JACCETANIA (Ἰακκητανία), lay in the N. of Avarrae, below the central portion of the Pyrenean chain, whence it extended towards the Iberus as far as the neighbourhood of Ilerda and Oesca; and it formed a part of the theatre of war in the six battles between Por-tius and Pompey, and between Julius Caesar and Pompey's legates, Afranius and Petreius. (Strab. iii. p. 161; Cass. B. C. I. 60: concerning the reading, see JACCETANI; Pol. ii. 6. § 72.) None of their cities were of any consequence. The capital, JACCA (Jaca, in Biscaia), from which they derived their name, belonged, in the time of Ptolemy, to the Vabones, among whom indeed Pliny appears to include the Jaccetani altogether (iii. 3. § 4). Their other cities, as enumerated by Ptolemy, and identified, though with no great certainty, by Ukert (vol. ii. pt. 1. p. 425), are the following: — IMUS (Ἰαμύς, Ignatius); CEREDUS (Κερεδος, S. Columbia de Co-ruio); AMABUS (Ἀμαβος, Tarraco); BACASSA (Bacariis, near the district round which is still called Bagas); TELOBIS (Ὑλοβος, Martivel); ASCERRIS (Ἀσκερους, Sagarro); UDURA (Ou-
Boua, Cordova); LLUC OR LISA (Λυκα, near Man-
resa); SETINAS (Σετινας ἦ Σαλανα, Solaonas); CINNA (Χύνα, near Guasena), perhaps the same place as the Scissium of Livy (xxi. 60, where the MSS. have Sciensi, Situam, Sine.), and the Cura of

VOL. II.
PAVIBIAN (III. 76: cœsus, sp. Sestini, pp. 132, 163; Num. Goth.).

[ ]

IADAER ("Idaia, Ptol. iii. 16: § 10; "Idaia, Nicet. p. 348; Iadera, Plin. iii. 26; Iader, Pomp. Mel. ii. 3: § 13; Ptolema. Geogr. Rav.; on the orthography of the name see Tschacke, ad Medm. l. c. vol. ii. pt. 2, p. 275: Eth. Iaderitimus, Hirt. B. A. 42; Zara), the capital of Liburnia in Illy- ricum. Under Augustus it was made a Roman colony. ("Parens coloniae," Inscr. ap. Fastiani, Illyr. Sacr., vol. v. p. 5; comp. Ptol. l. c.) Afterwards it bore the name of Drusus; and so in a tribute was paid by the province of gold to the Eastern emperors (Comes Porph. de Aed. Imp. 30), until it was handed over, in the reign of the Basil of Macedon, to the Slavonic princes. Zara, the modern capital of Dalmatia, and well known for the famous siege it stood against the combined French and Venetians, at the beginning of the Fourth Crusade (Gibbon, c. ix.; Wilken, die Kreuzz. vol. v. p. 157), stood upon the site of Iadera. Little remains of the ancient city; the sea-gate called Porta di San Chrysogono is Roman, but its existence likely is that it has been brought from Aenona. The gate is a single arch with a Constantinian pilastr at each side supporting an entablature. Eckhel (vol. ii. p. 129) doubts the existence of any ancient road from Iadera, as some have been attributed to it by other writers on numismatics. (Sir G. Wilkinson, Dalmatia and Montenegro, vol. i. p. 78; J. F. Neigebar, Die Sappladen, pp. 181—191.)

[ ]

IADONI, a people in the extreme NW. of his- pania Tarraconensis, mentioned only by Pliny, who places them next to the Arroretes. (Plin. iv. 20. a. 5.)

IATIA or IETAE ("Iera, Steph. B.: Eth. Ierados, Id.; but Diodorus has Ieratós, and this is confirmed by coins, the legend of which is uniformly Ieratos, Eckhel, vol. i. p. 216: in Latin, Cicero has Ietinum, but Pliny Ietinum), a town of the interior of Sicily, in the NW. of the island, not very far from Panor- mus. It was mentioned by Philostratus (loc. cit. Steph. B. a. 112), and is called by Thucydides also (if the reading 'Ierós be admitted, in vii. 2) a fortress of the Siculians (Τησαρχία των Σικυόνων), which was taken by Gypplius on his march from Himera through the interior of the island towards Syracuse. It first appears as an independent city in the time of Ptolemy, and was attacked by that monarch on account of its strong position and the advantages it offered for operations against Panor- mus; but the inhabitants readily capitulated. (Diod. xxii. 10, p. 498.) In the First Punic War it was occupied by a Carthaginian garrison, but after the fall of Panormus drove out these troops and opened its gates to the Romans. (Id. xxviii. 18, p. 505.) Under the Roman government it appears as a munici- pal town, but not one of much note. The Itinera are only noticed in passing by Cicero among the towns whose lands had been utterly ruined by the excursions of Verres; and the Ietines are enumer- ated by Pliny among the "populi stipendiarii" of the interior of Sicily. (Cic. Verr. iii. 43; Plin. iii. 8. s. 14.) Many MSS. of Cicero read Ietinum, and it is probable that the Aetiones of the Iatian (iii. 4: § 15) is only a corruption of the same name.

The position of Iaeta is very obscurely intimated, but it appears from Diodorus that it was not very remote from Panormus, and that its site was one of great natural strength. Silius Italicus also alludes to its elevated situation ("celsa Ietas," xiv. 271).

Fazello assures us that there was a mediaval for- tress called Iato on the summit of a lofty moun- tain, about 15 miles from Palermo, and 12 N. of Entella, which was destroyed by Frederic II. at the same time with the latter city; and this he sup- poses, probably enough, to be the site of Iaeta. He says the mountain was still called Monte di Iato, though more commonly known as Monte di S. Cos- mano, from a church on its summit. (Fazell. x. p. 471; Amic. Lex. Top. Sic. vol. ii. p. 291.) The spot is not marked on any modern map, and does not appear to have been visited by any ancient travellers. The position thus assigned to Iaeta agrees well with the statements of Diodorus, but is wholly irreconcilable with the admission of 'Ierós into the text of Thucydides (vii. 2): this reading, however, is a mere conjecture (see Arnold's note), and must probably be discarded as untenable. (E. H. B.)

COIN OF IATIA.

JAEZER ("Iažer, LXX; Iažer and Aærop, Euseb.), a city of Gilead, assigned to the tribe of Gad by Moses. In Numbers (xxxii. 1), "the land of Jazer" is mentioned as contiguous to "the land of Gilead, and suited to cattle." In Jeremiah (xxviii. 32), "the sea of Jazer" occurs in some versions, as in the English (v. p. 422); but the LXX and Jod (v. p. 722) distinctly remarks, that this is not certain, as the passage may be pointed after the word "sea," and "Jazer," as a vocative, commence the following clause. But as "the land of Jazer" is used for the country south of Gilead, so the Dead Sea may be designated "the sea of Jazer." Eusebius (Onomast. s. v. Aærop) places it 8 miles west of Philadelphia or Ammon; and elsewhere (v. s. Iærop), 10 miles west of Philadelphia, and 15 from Esbon (Hesphon). He adds, that a large river takes its rise there, which runs into the Jordan. In a situation nearly corresponding with this, between Scæt and Edbus, Burckhardt passed some ruins named Sevr, where a valley named Wady Sevr takes its rise and runs into the Jordan. This is doubtless the modern representative of the ancient Jazer. "In two hours and a half (from Scæt) we passed, on our right, the Wady Sevr, which has its source near the road, and falls into the Jordan. Above the source, on the declivity of the valley, are the ruins called Sevr." (Syria, p. 364.) It is probably identical with the Τάκερ of Ptolemy which he reckons among the cities of Palestine on the eastern coast of Judæa. (Trans. 6.)

IALYSUS ("Ialwvoi, Ialwvoi, or Ialwvoi, Ekh. Ialwvoi, or Ialwvoi, Ialwvoi, one of the three ancient Dorian cities in the island of Rhodes, and one of the six towns constituting the Doric bêspolis. It was sit- uated only six stadia to the south-west of the city of Rhodes, and it would seem that the rise of the latter city was the cause of the decay of Ialysus; for in the time of Strabo (xiv. p. 655) it existed only as a village. Pliny (v. 36) did not consider it as an independent place at all, but imagined that Ialysus was the ancient name of Rhodes. Orychoma, the ci- tadel, was situated above Ialysus, and still existed in the time of Strabo. It is supposed by some that
IAMISSA.

Orchomenos was the same as the fort Achaisa, which is said to have been the first settlement of the Heladai in the island (Diod. Sic. v. 57; Athen. viii. p. 360); at any rate, Achaisa was situated in the territory of Ialysus, which bore the name Ialysia. (Comp. Hom. II. ii. 606; Pind. Ol. vii. 106; Herod. ii. 183; Thucyd. vii. 44; Pol. 2. § 34; Steph. B. s. v.; Sclav. Perip. p. 81; Dionys. Periegr. 504; Or. Met. vii. 365; Pomp. Mela, i. 7.) The site of ancient Ialysus is still occupied by a village bearing the name Ialoso, about which a few ancient remains are found. (Ross, Reisen auf dem Griech. Inseln, vol. iii. p. 98.)

[LS.]

IAMISSA. [THAMARUS.]

IAMNA, IAMNO. [Balaeker, p. 374, n.]

IAMNIA (Iamnias, LXX.; Ἰαμνία, Ἰαμνηλία) was a city of the Philistines, assigned to the tribe of Judah in the LXX. of Joshua xvi. 45 (Ἰαμνία); but omitted in the Hebrew, which only mentions it in 2 Chron. xxvi. 6 (Iamnah in the English version), as one of the cities of the Philistines taken and destroyed by Rehoboam. It is celebrated by Philo Judaeus as the place where the first occasion was given to the Jewish revolt under Catyliga, and to his insipid attempt to profane the temple at Jerusalem. His account is as follows:—

In the city of Iamnia, one of the most populous of Judaea, a small Gentile population had established itself among the more numerous Jews, to whom they were allowed to live little by little, by the wonted abrogation of their cherished customs. An unprincipled government officer, named Capito, who had been sent to Palestine to collect the tribute, anxious to pre-occupy the emperor with accusations against the Jews before their well-grounded complaints of his boundless extortion could reach the capital, ordered an altar of mud to be raised in the town for the deification of the emperor. The Jews, as he had anticipated, indignant at the profanation of the Holy Land, assembled in a body, and demolished the altar. On hearing this, the emperor, incensed already at what had lately occurred in Egypt, resolved to resent this insult by the erection of an equestrian statue of himself in the Holy of Holies. (Philo, de Legat. ed. Warburton, p. 254; R. W. U.) It is assigned by Josephus to that part of the tribe of Judah occupied by the children of Dan (Ant. v. i. § 22); and he reckons it as an inland city. (Ant. xiv. 4. § 4, B. J. i. 7. § 7.) Thus, likewise, in the 1st book of Maccabees (x. 69, 71), it is spoken of as situated in the plain county; but the author of the 2nd book speaks of the harbour and fleet of the Iamnites, which were fired by Judas Maccabaeus; when the light of the conflagration was seen at Jerusalem, 240 stadia distant. The apparent discrepancy may, however, be reconciled by the notices of the classical geographers, who make frequent mention of this town. Thus Pliny expressly says, "Iamnites duae: altera intus," and places them between Azotus and Joppa (v. 13); and Ptolemy, having mentioned Ιαμνηρίαν, "the port of the Iamnites," as a maritime town between Joppa and Azotus, afterwards enumerates Iamnia among the cities of Judaea. From all which it is evident that Iamnia had its Maajama, or naval arsenal, as Gassa, Azotus, and Ascalon also had. (La Quien, Oriens Christ. vol. iii. col. 597; and Ptolemy, describing the boundary of Antoninus placed in 36 M. P. from Gaza, and 18 M. P. from Dipolis (or Lydda); and Eusebius (Onom. s. v. Ιαμνηλία) places it between Dipolis and Azotus. Its site is still marked by ruins which retain the ancient name Yebes, situated on a small eminence on the west side of Wady Rabbâ, an hour distant from the sea. (Irby and Mangles, Travels, p. 182.) "The ruins of a Roman bridge," which they noticed, spanning the Nahr-al-Rabbi between Yebes and the sea, was doubtless built for the purpose of facilitating traffic between the town and its sea-port.

[LS. 3.]

IAMPBORNIA, the capital of the Maedi, in Macedonia, which was taken n. c. 211 by Philip, son of Demetrius. (Liv. xxvi. 25.) It is probably represented by Presia or Isorina, in the upper valley of the Morina. (Leake, Northern Greece, vol. iii. p. 473.)

[LS. 3.]

IANGACAUNI [MAREPTHAMA].

IANGUARIA (Ianguaria Xepa), a promontory on the coast of Cilicia, near Seropolis, between Malta and Aegaeus. (Suidas. §§ 149, 150.) It is now called Karadagh.

[LS.]

IAPIS (Iews), a small stream which formed the boundary between Megara and the territory of Eleusis. [ATTICA, p. 323 n.]

IAPODES, IAPYDES (Iāpodes, Strab. iii. p. 207, vii. p. 813; Iāpodes, Ptol. ii. 16. § 8; Liv. xii. 5; Virg. Georg. iii. 473; Tibull. iv. 1. 108), an Illirian people to the N. of Dalmatia, and E. of Liburnia, who occupied Iapedia (Plin. iii. 19), or the present military frontier of Croatia, comprised between the rivers Kupa and Kvarna to the N. and E., and the Veleka to the W. (Strab. vii. p. 315.)

In the interior, their territory was spread along Muns Allius (Vesio), which forms the extremity of the great Alpine chain, and rises to a great elevation; on the other side of the mountain they reached towards the Danube, and the confines of Pannonia. They followed the custom of the wild Thracian tribes in tattooing themselves, and were armed in the Celtic fashion, living in their poor country (like the Morlachi of the present day) chiefly on sea and millet. (Strab. vii. p. 315.)

In n. c. 129, the consul C. Sempronius Tuditanus carried on war against this people, at first unsuccessfully, but afterwards gained a victory over them, chiefly by the military skill of his legate, D. Junius Brutus, for which he was given the triumph at Rome (Appian, B. C. i. 19, Ill. 10; Liv. Épit. lix.; Cass. Capit. They had a "foedus" with Rome (Cic. pro Balb. 14), but were in n. c. 34 finally subdued by Octavianus, after an obstinate defence, in which Metulium, their principal town, was taken (Strab. l. c.; Appian, Ill. l. c.).

METULUM (Metroske), their capital, was situated on the river Colias (Kupa) to the N., on the frontier of Pannonia (Appian, l. c.), and has been identified with Mötöly s. or Métikás on the Kupa.

The Antonine Itinerary has the following places on the road from Senia (Zerky) to Siscia (Sissak):—

AYVENDONE (comp. Ptol. Tab.; Abudo, Geog. Rav. I. 19; Arab., App. Ill. l. c.; Oct. Strab. iv. p. 207, vii. p. 314); APOLIVIA (App. Ptol. Tab.; Parpianus, Geog. Rav.; *Apollinia, App. Ill. 16, perhaps the same as the *Apolloni of Ptolemy, ii. 16. § 9) now Ottocats. At BIBIUM, which should be read BIVIUM (Wesseling, ad loc.), the road divided, taking a direction towards Pannonia, which the Itinerary follows, and also towards Dalmatia, which is given in the Pentonius Table.

Neugebar (Die Sudslawen, pp. 224—235) has identified from a local antiquary the following sites of the Table:

EPIDOTUM (Ucelle); AUCUS (Chante); AU-
IAPTYGIA. [Sancalo (Vieste, near Udine); CIUMETMEI (Grachata). [E. B. J.]

IAPTYGIA (Ἰαπτγία), was the name given by the Greeks to the SE. portion of Italy, bordering on the Adriatic Sea, but the term was used with considerable vagueness, being sometimes restricted to the extreme SE. point or peninsula, called also Messapia, and by the Romans Calabria; at other times extended so as to include the whole of what the Romans termed Apulia. Thus Sclavus describes the whole coast from Lucania to the promontory of Drion (Mt. Garganum) as comprised in Iaptygus, and even includes under that appellation the cities of Metapontum and Heraclea on the coast of Tarantum. The latter, which are usually assigned to Lucania. Hence he states that their coast-line extended for a space of six days and nights' voyage. (Sclav. § 14. p. 5.) Polybius at a later period used the name in an equally extended sense, so as to include the whole of Apulia (iii. 89), as well as the Messapian peninsula; but he elsewhere appears to use the name of Iaptygus as equivalent to the Roman term Apuliâns, and distinguishes them from the Messapiâns (ii. 24). This is, however, certainly contrary to the usage of earlier Greek writers. Herodotus distinctly applies the term of Iaptygus to the peninsula, and calls the Messapian an Iaptygian tribe; though he evidently did not limit it to this portion of Italy, and may have extended it, at all events, to the land of the Pcenists, if not of the Dauniens also. (Herod. iv. 99, vii. 170.) Aristotle also clearly identifies the Iaptygians with the Messapiâns (Pol. v. 3), though the limits within which he applies the name of Iaptygus (Πατω) cannot be defined. Indeed, the name of the Iaptygian promontory (ιρω) is everywhere given to the headland, which formed the extreme point of the peninsula, sufficiently proves that this was considered to belong to Iaptygus. Strabo confines the term of Iaptygus to the peninsula, and says that it was called by some Iaptygus, by others Messapia or Calabria. (Strab. vi. pp. 281, 282.) Appian and Dionysius Periegetes, on the contrary, follow Polybius in applying the name both to Iaptygus and to the Roman peninsula, and the latter expressly says that the Iaptygian tribes extended as far as Hryumn on the N. side of Mt. Gargana. (Appian, Ann. 45; Dion. Per. 379.) Ptolemy, as usual, follows the Roman writers, and adopts the names then in use for the divisions of this part of Italy: hence he ignores altogether the name of Iaptygus, which is not found in any Roman writer as a geographical appellation; though the Latin poets, as usual, adopted it from the Greeks. (Virg. Aen. xi. 247; Ovid, Met. vi. 703.)

We have no clue to the origin or meaning of the name of Iaptygians, which was undoubtedly given to the people (Ἰαπτγινοι, Ἰαπτηγινοι) before it was applied to the country which they inhabited. Niebuhr (vol. i. p. 146) considers it as etymologically connected with the Latin Apulâns, but this is very doubtful. The name appears to have been a general one, including several tribes or nations, among which were the Messapiâns, Sallentini, and Penetrians; hence Herodotus calls the Messapian Iaptygians (Ἰαπτγινοι Μεσσηδανοι, vii. 170); and the two names are frequently interchanged. The Greek mythographers, as usual, derived the name from a hero, Iapex, whom they represented as a son of Lycaon, a descendent probably intended to indicate the Pelasgic origin of the Iaptygians. (Anton. Liberal. 31; Plin. iii. 11 a. 16.) For a further account of the national affinities of the different tribes in this part of Italy, as well as for a description of its physical geography, see the articles Apulâ and Calabria. [E. H. B.]

IAPTYGIAN PROMONTORY (Ἀπτγιαν Ἑλληνική, Cavo Sta. Maria de Leuca), a headland which forms the extreme SE. point of Italy, as well as the extremity of the long peninsula or promontory that divides the gulfs of Tarentum from the Adriatic sea. It is this long projecting strip of land, commonly termed the heel of Italy, and designated by the Romans as Calabria, that was usually termed by the Greeks Iaptygus, whence the name of the promontory in question. The latter is well described by Strabo as a rocky point extending far out to sea towards the SE., but inclining a little towards the Lacinian promontory, which rises opposite to it, and together with it encloses the gulf of Tarentum. He states the interval between these two headlands, and consequently the width of the Tarentine gulf, at its entrance, at about 700 stadia (70 G. miles), which slightly exceeds the truth. Pliny calls the same distance 100 M. P. or 800 stadia; but the real distance does not exceed 66 G. miles or 660 stadia. (Strab. vi. pp. 285, 288; Plin. iii. 11 a. 16; Polt. iii. 1. § 13; Poliby 1. 1.)

The same point was also not uncommonly termed the Salentine promontory (Παλλατινα Προμοντόρια, Μεταποντον, vol. ii. 4. § 8; Polt. ii. 30), from the people of that name who inhabited the country immediately adjoining. Sallysus applies the same name to the whole of the Calabrian or Messapian peninsula. (Sall. ap. Serv. ad Aen. iii. 400.) Its modern name is derived from the ancient church of Sta. Maria de Leuca, situated close to the headland, and which has preserved the name of Leuca; the latter was situated immediately on the W. of the promontory, and afforded tolerable shelter for vessels. [LEUCA.] Hence we find the Athenian fleet, in n. c. 415, on its way to Sicily, touching at the Iaptygian promontory after crossing from Corsica (Thuc. vi. 30, 44); and there can be no doubt that this was the customary course in proceeding from the Gulf of Taranto to the Tarentine gulf. [LEUCA.]

IARDANUS (Ἰαρδανος), a river on the N. coast of Crete, near the banks of which the Cydonians dwelt. (Hom. Od. iii. 292.) It is identified with the rapid stream of the Platanis, which rises in the White Mountains, and, after flowing between the Rhetio villages of Therao and Laci or Laka, runs through a valley formed by low hills, and filled with lofty plains; from which it obtains its name. The river of Platanis falls into the sea, nearly opposite the islet of Hypheia Thedhronos, where there is good anchorage. (Phalas. Trav. vol. ii. p. 22; Höck, Kretta, vol. i. pp. 23, 384.) [E. B. J.]

IARDANUS, a river of Elis. [PHENIA.]

JARZETHA. [LIBYTA.]

TASI. [ΛΑΣΙ.] [E. H. B.]

JASONIUM (Ἰασώνιον, Psil. vi. 10 § 3), a town in Margiana, at the junction of the Margus (Murgah-ab) and some small streams which flow into it. (Cf. also Ammian. xxiii. 6.) [V.]

JASONIUM (Ἰασώνιον, Psil. vi. 2. § 4; Strab. xi. p. 356), a mountain in Media, which extended in a NW. direction from the M. Parashoara (M. Ebenel), forming the bounding limit between the Taurus and the outlying spur of the Anti-Taurus. It is placed by Ptolemy between the Orontes and the Corous. [V.]

JASONIUM (Ἰασώνιον), a promontory on the
IASPIS.  

IASPIS. [Contestania.]  

IASIUS (Iaros), mentioned by Pliny as a population of Upper Pannonia (ii. 14, § 8). Pliny's form of the name (iii. 25) is Iasi. He places them on the Donare. [R. G. L.]

IASSUS, or IASUS (Iaros, or Iaros; Eth. Iarov), a town of Caria, situated on a small island close to the north coast of the Iasian bay, which derives its name from Iassus. The town is said to have been founded by an unknown meridian by Argaius; as they were sustained severe losses in a war with the native Carians, they invited the son of Neleus, who had previously founded Milletus, to come to their assistance. The town appears on that occasion to have received additional settlers. (Polyb. xvi. 12.) The town, which appears to have occupied the whole of the little island, had only ten stadia in circumference; but it nevertheless acquired great wealth (Thucyd. viii. 28), from its fisheries and trade in fish (Strab. xiv. p. 658). After the Sicilian expedition of the Athenians, during the Peloponnesian war, Iassus was attacked by the Lacedaemonians and their allies; it was governed at the time by Amorgus, a Persian chief, who had revolted from Darius. It was taken by the Lacedaemonians, who captured Amorgus, and delivered him up to Tissaephernes. The town itself was destroyed on that occasion; but must have been rebuilt, for we afterwards find it besieged by the last Philip of Macedonia, who, however, was compelled by the Romans to restore it to Persia. (Polyb. xvii. 2; Liv. xxxvi. 33; comp. Polyb. v. 2. § 9; Plin. v. 29; Suid. Mosch. Smy. §§ 274, 275; Hieroc. p. 9.) The mountains and the neighbourhood of Iassus furnished a beautiful kind of marble, of a blood-red and livid white colour, which was used by the ancients for ornamental purposes. (Paul. Silent. Epigr. S. Soph. ii. 213.) Near the town was a sanctuary of Hestia, with a statue of the goddess, which, though standing in the open air, was believed never to be touched by the rain. (Polyb. xvi. 12.) The same story is related by Strabo, of a temple of Artemis in the same neighbourhood. Iassus, as a celebrated fishing place, is alluded to by Athenaeus (iii. p. 105, xiii. p. 606). The place is still existing, under the name of Asemen or Azenia Kaleris. Chandler (Travels in As. Min. p. 216) relates that the island on which the town was built is now united to the mainland by a small isthmus. Part of the city walls still exist, and are of a regular, solid, and handsome structure. In the side of the rock a theatre with many rows of seats still remains, and several inscriptions and coins have been found there. (Comp. Spon and Wheler, Voyages, vol. i. p. 361.)

A second town of the name of Iassus existed in Cappadocia or Armenia Minor (Polyb. v. 7. § 6), on the north-east of Zoruvka (L. S. 26).

IASTAE (Iaros, Poly. vii. 13), a Scythian tribe, whose position must be sought for in the neighbourhood of the river Iastus. [E. B. J.]

IASTUS (Iaros), a river which, according to Ptolemy (vi. 12), was, like the Polymetrias (Kokis), an affluent of the Caspian basin, and should in fact be considered as such in the sense given to a denomination which at that time embraced a vast and complicated hydraulic system. [Jaxartes.] Von Humboldt (Asia Centrale, vol. ii. p. 263) has identified it with the Kiesel-Deriv, the dry bed of which may be traced on the barren wastes of Kiesel-Koun in W. Turkistan. It is an unusual circumstance in the sandy steppes of N. Asia for rivers to change their course, the system is entirely to disappear. Thus the Kiesel-Deriv, which was known long before till the commencement of this century, no longer exists. (Comp. Leclercq, Hordes et Steppe des Kirghiz Kazakhs, p. 456.) [E. B. J.]

IASTUS, a river mentioned by Ptolemy (vi. 14, § 2) as falling into the Caspian between the Jaik and the Oxus. It is only safe to call it one of the numerous rivers of the Independent Tartary. [R. G. L.]

IASUS. [Orium.]

IATII (Iaros, Poly. viii. 12, § 4), a people in the northern part of Sogdia. They are also mentioned by Pliny (vi. 16 a. 18); but nothing certain is known of their real position. [V.]

IATINUM (Iaros), according to Ptolemy (ii. 8, § 15) the city of the Meldi, a people of Galia Lupidumensis. It is supposed to be the same place as the Fistminum of the Table [Fistxminum], and to be represented by the town of Moscos on the Marne. Walckenaer, who trusts more to the accuracy of the distances in the Table than we safely can do, says that the place Fistminum has not in the Table the usual mark which designates a capital town, and that the Meldi do not carry the position of Fistminum as far as Moscos, only as ‘Mosbaut. He conjectures that the word Fistminum may be a corruption of Fines Latiornum, and accordingly must be a place on the boundary of the little community of the Meldi. This conjecture might be good, if the name of the people was Liatini, and not Meldi. [G. L.]

IATRIPPA. [Lathrippa.]

IATRA or IATRUM (Tarpea), a town in Moeia, situated at the point where the river Iatrus or Iantrus empties itself into the Danube, a few miles to the east of Ad Novas. (Procop. de Aed. iv. 7; Theophlat. vii. 2; Notit. Imp. 39, where it is erroneously called Latra; Geogr. Rav. iv. 7, where, as in the Pest. Tab. Laton. [L. S.]

IATRUS (in the Pest. Tab. Iantrus), a river traversing the central part of Moeia. It has its sources in Mount Haemus, and, having in its course to the north received the waters of several tributaries, falls into the Danube close by the town of Iatrus. (Plin. iii. 29, where the common reading is Iteorus; Jornand. Get. 18; Geogr. Rav. iv. 7.) It is probably the same as the Arhro (Aphro) mentioned by Herodotus (iv. 49). Its modern name is Iantra. [L. S.]
JAXARTES.

JAXARTES, JAXARTES (Ἰάξαρτης), the river of Central Asia which now bears the name of Syr-Daria, or Yellow River (Daria is the generic Tartar name for all rivers, and Syr—yellow)—and which, watering the barren steppes of the Kirghiz-Cossacks, is known to the civilized world in the most remote ages.

The exploits of Cyrus and Alexander the Great have inscribed its name in history many centuries before our era. If we are to believe the traditionary statements about Cyrus, the left bank of this river formed the N. limit of the vast dominion of that conqueror, which built a town, deriving its name from the founder [Cyraxanthas], upon its banks; and it was upon the right bank that he lost his life in battle with Tomyris, Queen of the Massagetae. Herodotus (i. 201—216), who is the authority for this statement, was aware of the existence of the Syr-Daria; and although the name Jaxartes, which was a denomination adopted by the Greeks and followed by the Romans, does not appear in his history, yet the Araxes of Herodotus can be no other than the actual Syr, because there is no other great river in the country of the Massagetae. Much has been written upon the mysterious river called Araxes by Herodotus; M. De Guignes, Fosse, and Gatterer, suppose that it is the same as the Oxus or Amus-Daria; M. De la Neuze sees in the Araxes of Armenia with Baraj, St. Croix, and Larcher, a conceit that under this name the Volga is to be understood. The true solution of the enigma seems to be that which has been suggested by D'Anville, that the Araxes is an appellative common to the Amous, the Armenian Aras, the Volga, and the Syr. (Comp. Araxes, p. 268; Mem. de l'Acad. des Inscr. vol. xix.—Heeren, Asiatic Nations, vol. ii. p. 19, trans.) From this it may be concluded, that Herodotus had some vague acquaintance with the Syr, though he did not know it by name, but confounded it with the Araxes; nor was Aristotle more successful, as the Syr, the Volga, and the Don, have been recognised in the description of the Araxes given in his Meteorologies (i. 13, § 15), which he recomposed, as the more correct, before Alexander's expedition to India. (Comp. Iderel, Meteorologia Vet. Graecor. et Rom. ad loc. Berol., 1832; St. Croix, Examen Critique des Hist. d'Alex. p. 703.)

A century after Herodotus, the physical geography of this river-basin became well known to the Greeks, from the expedition of Alexander to Bactria and Sogdiana. In a. c. 299, Alexander reached the Jaxartes, and, after destroying the seven towns or fortresses upon that river the foundation of which was ascribed to Cyrus, founded a city, bearing his own name, upon its banks, Alexandria Sogdiana. In a. c. 320, Alexander reached the Jaxartes, and, after destroying the seven towns or fortresses upon that river the foundation of which was ascribed to Cyrus, founded a city, bearing his own name, upon its banks, Alexandria Sogdiana. (Q. Curt. vii. 6; Arrian, Anat. iv. 1, § 5.)

The Macedonian conquest, the Syr is found in all the ancient geographers under the form Jaxartes: while the country to the N. of it bore the general name of Scythia, the tracts between the Syr and Amous were called Transoxiana. The Jaxartes is not properly a Greek word, it was borrowed by the Greeks from the Barbarians, by whom, as Arrian (Anat. iii. 36, § 13) asserts, it was called Oxartes (Os'farrē). Various etymologies of this name have been given (St. Croix, Examen Critique des Hist. d'Alex. § 6), but they are too uncertain to be relied on: but whatever be the derivation of the word, certain it is that the Syr appears in all ancient writers under the name Jaxartes. Some, indeed, confounded the Jaxartes and the Tanais, and that purposely, as will be seen hereafter. A few have confounded it with the Oxus; while all, without exception, were of opinion that both the Jaxartes and the Oxus discharged their waters into the Caspian, and not into the Sea of Aral. It seems, at first sight, curious, to those who know, the true position of these rivers, that the Greeks, in describing their course, and determining the distance of their respective "embochures," should have taken the Sea of Aral for the Caspian, and that their mistake should have been repeated up to very recent times. Von Humboldt (Asia Centrale, vol. ii. pp. 162—297) —to whose extensive inquiry we owe an invaluable digest of the views entertained respecting the geography of the Caspian and Oxus by classical, Arabian, and European writers and travellers, along with the latest investigations of Russian scientific and military men—arrives at these conclusions respecting the ancient junction of the Aral, Oxus, and Caspian:

1st. That, at a period before the historical era, but nearly approaching to those revolutions which preceded it, the great depression of Central Asia — the concavity of Turan—may have been one large interior sea, connected on the one hand with the Euxine, and on the other hand, by channels more or less broad, with the Aral Sea, and the Baku Kas and its adjoining lakes.

2nd. That, probably in the time of Herodotus, and even so late as the Macedonian invasion, the Aral was merely a bay or gulf of the Caspian, connected with it by a lateral prolongation, into which the Oxus flowed.

3rd. That, by the preponderance of evaporation over the supply of water by the rivers, or by diluvial deposits, or by Pericoccal convulsions, the Aral and Caspian were separated, and a bifurcation of the Oxus developed,—one portion of its waters continuing its course to the Caspian, the other terminating in the Aral.

4th. That the continued preponderance of evaporation over the supply of water from the Aral and the Caspian was once the bed of an united and continuous sea, and that the Caspian of the present day is the small residue of the once mighty Aralo-Caspian Sea.

At present it must be allowed that, in the absence of more data, the existence of this great Aralo-Caspian basin within the "historic period," must be a moot point; though the geographical appearances prove by the equable distribution of the same peculiar organic remains, that the tract between the Aral and the Caspian was once the bed of an united and continuous sea, and that the Caspian of the present day is the small residue of the once mighty Aralo-Caspian Sea.

Strabo (xi. pp. 507—517) was acquainted with the true position of this river, and has exposed the errors committed by the historians of Alexander (p. 508), who confounded the mountains of the Paropamisus—or Paropamisus, as all the good MSS. of Ptolemy read (Asia Centrale, vol. i. pp. 114—118)—with the Caucasus, and the Jaxartes with the Tanais. All this was imagined with a view of exalting the glory of Alexander, so that the great conqueror might be supposed, after subjugaing Asia, to have arrived at the Don and the Caucasus, the scene of the legend where Hercules unbound the chains of the fire—bearing Titan.

The Jaxartes, according to Strabo (p. 510), took its rise in the mountains of India, and he determines it as the frontier between Sogdiana and the nomad Scy-
JAXARTES.

The principal tributaries of the Jaxartes (pp. 514, 517), which were the Sacae, Dahae, and Massagetae, and added (p. 518) that its "embouchure" was, according to Ptolemy, a NW. course through the sandy steppes of Kakti-Kouos and Kara-Kouos, unites its waters with those of the Sea of Aral, on its E. shores, at the gulf of Kamechou-Bachi.

[By B. J.]

JAXAMATAE (Iz'aj-ma'ta'i, Ta'ja-ma'ta'i, Ta'jydam-va, Exzomatae, Amm. Marc. xxii. 8 § 81; Exzomatae, Val. 44, 566) a people who first appear in history during the reign of Bopyros III, king of Bosporus, who waged war with Tigrat-5oi, their queen. (Polyen. vii. 55.) The ancients attribute them to the Sarmatian stock. (Socym. Fr. p. 140; Anon. Perip. Eux. p. 23) Pomponius Mela (i. 19 § 17) states that they were distinguished by the peculiarity of the women being as tried warriors as the men. Ptolemy (v. 9) has placed them between the Don and Volga, which agrees well with the position assigned to them by the authors mentioned above. In the second century of our era they disappear from history. Schafarik (Slav. Alt. vol. i. p. 340), who considers the Sarmatians to belong to the Median stock, connects them with the Median "word" "mat" a "people," as in the termination Sur-romatae; but it is more probable that the Jaxamatae were Slavonians.

[E. B. J.]

JAZYGES, JAZYGES (Ita'gives, Steph. B. Iazxy, a people belonging to the Sarmatian stock, whose original settlements were on the Palus Maced. (Ptol. iii. 5 § 19; Strab. vii. i. p. 306; Arrian, Ass. 1, 5; Amm. Marc. xxii. 8 § 31.) They were originally tributaries to the Kings of Bithynia. (Appian, Mith. 59; during the banishment of Ovid they were found on the Danube, and in Bessarabia and Wallachia (Ep. ex Pont. i. 2, 79, iv. 7, 9, Trist. ii. 19.1.) In a.d. 50, either induced by the rich pastures of Hungary, or forced onwards from other causes, they no longer appear in their ancient seats, but in the plains between the Lower Theiss and the mountains of Transylvania, from which they had driven out the Dacians. (Tac. Ann. xii. 29; Plin. iv. 12.) This migration, probably, did not extend to the whole of the tribe, as is implied in the surname "Mestanatae," henceforward history speaks of the Jaiznoba Meta-matae (Ita'gives of Mestana), who were the Sarmatians who were driven from Bithynia and came in collision with the Scythians. (Comp. Gibson, c. xvii.) In the second century of our era, Ptolemy (iii. 7) assigns the Danube, the Theiss, and the Carpathians as the limits of this warlike tribe, and enumerates the following towns as belonging to them:—Uncusium (Oke'ros); Borganumur or Gormanumur (Odi'na, al. Ode'na); Arietta or Abinta (A'gena, al. A'panta); Trigumur (Trigowre); Gandanumur (Ko'na); Parca (Pi'ra); Pessinum (Par'mae); and Partasium (Par'tas). These towns were, it would seem, constructed not by the Iazyges themselves, who lived in tents and wagons, but by the former Slave inhabitants of Hungary; and this supposition is confirmed by the fact that the names are partly Slavish. (Mannert and Reischard, Farbiges, vol. iii. p. 1111) have guessed at the modern representatives of these places, but Schafarik (Slav. Alt. vol. i. p. 514) is of opinion that no conclusion can be safely drawn except as to the identity of Pessinum with Pesserium, and of Pessina to Partasium.

The Iazyges lived on good terms with their neighbours on the W., the German Quadi (Tit. Hist iii. 8), with whom they united for the purpose of subjugating...
gating the native Slaves and resisting the power of Rome. A portion of their territory was taken from them by Decebalus, which, after Trajan’s Dacian conquests, was incorporated with the Roman dominions. (Dion Cass. xxvii. 11.) Pannonia and Moesia were constantly exposed to their inroads; but, 121 A.D., they were at length driven from their last holds in the province, and pushed across the Danube, by M. Aurelius. In mid-winter they returned in great numbers, and attempted to cross the frozen stream; the Romans encountered them upon the ice, and inflicted a severe defeat, 122 A.D. (Dion Cass. lxvii. 3; Flor. iv. 12.) At a later period, as the Roman Empire hastened to its fall, it was constantly exposed to the attacks of these wild hordes, who, beaten one day, appeared the next, plundering and laying waste whatever came in their way. (Amm. Marcell. xii. 13, xix. 6.) The word “peace” was unknown to them. (Flor. iv. 12.)

They called themselves “Sarmatiae Limitantes,” and were divided into two classes of freemen and slaves, “Sarmatiae Liberi,” “Sarmatiae Servi.” Ammianus Marcellinus (xxvii. 13. § 1) calls the subject class “Limitantes” (a word which has been falsely explained by “Limitanei”), and St. Jerome (“Chron.”) says that the ruling Sarmatians had the title “Arcagigantes.” By a careful comparison of the accounts of Ammianus, Suidas, Florus, St. Jerome, and the writer of the Life of Constantine, it may be clearly made out that the Sarmatian Iazyges, besides subjugating the Getae in Dacia and on the Lower Danube, had, by force of arms, enslaved a people distinct from the Getae, and living on the Theiss and at the foot of the Carpathians. Although the nations around thought them allied, both the ruling and the subject race, Sarmatians, yet the free Sarmatians were entirely distinct from the servile population in language, customs, and mode of life. The Iazyges, wild, bold riders, secured over the plains of the Danube and Theiss valleys on their unbroken horses, while their only dwellings were the waggons drawn by oxen in which they carried their wives and children. The subject Sarmatians, the Getae, lived in small houses and villages, such as those enumerated by Ptolemy (L.c.); they fought more on foot than on horseback, and were daring seamen, all of which peculiarities were eminently characteristic of the ancient Slaves. (Schaafarak, vi. p. 250.)

The Slaves often rose against their masters, who sought an alliance against them among the Victorians and Quadi. (Ammian. L.c.; Euseb. Vit. Constant. iv. 6.) The history of this obscure and remarkable warfare (A.D. 334) is given by Gibbon (c. xviii.; comp. Le Beaux, Bas Empire, vol. i. p. 337; Manse, Leben Constantins, p. 195.) In A.D. 357—359 a new war broke out, in which Constantius made a successful campaign, and received the title “Sarmatiae Liberi.” (Gibbon, c. xlix.; Le Beaux, vol. ii. pp. 245—273.) In A.D. 471 two of their leaders, Benga and Babal, were defeated before Singidunum (Belgrade) by Theodoric the Ostrogoth. (Jornand. de Reb. Get. 55; comp. Gibbon, c. xlix.; Le Beaux, vol. vii. p. 44.) The hordes of the Huns, Gepidae, and Goths broke the power of this wild people, whose descendants, however, concealed themselves in the desert districts of the Theiss till the arrival of the Magyars.

Another branch of the Sarmatian Iazyges were settled behind the Carpathians in Podolia, and were known in history at the end of the 10th century of our era; it is probable that they were among the northern tribes vanquished by Hermannic in A.D. 352—350, and that they were the same people as those mentioned by Jornandes (de Reb. Get. 5) under the corrupt form IAINXEXES.

There is a monograph on this subject by Henning (Comment de Rebus Iazygum S. Iasinorum, Regiomont, 1812); a full and clear account of the fortunes of these peoples will be found in the German translation of the very able work of Scharf, the historian of the Slavish races.

In 1799 a golden dish was found with an inscription in Greek charactar, now in the imperial cabinet of antiquities at Vienna which has been referred to the Iazyges. (Von Hammer, Osman. Gesch. vol. iii. p. 726.)

IBAN ("θέαν, Cedren. vol. ii. p. 774), a city which Cedrenus (L.c.) describes as the metropolis of Vazouragoun (μηγερώοι καὶ αὐτῆς τοῦ Βαρτα-μανδού). The name survives in the modern Vdo. St. Martin, the historian of Armenia (Mém. sur l’Arménie, vol. i. p. 117), says that, according to native traditions, Vdo is a very ancient city, the foundation of which was attributed to Semiramis. Ruined in course of time, it was rebuilt by a king called Van, who lived a short time before the expedition of Alexander. Vdo was ere long deserted, and who gave it its name; but, having again called into life the valiant arms of the king Vagh-Arashag (Valarassen), brother to Arsaces, and first king of Armenia of the race of the Arsacides. In the middle of the 4th century after Christ it was captured by Sapor II. (Ritter, Erdkunde, vol. ix. pp. 787, 981; London Geog. Journal, vol. viii. p. 66.)

[ABREHITA UBUNA.] [E. B. J.]

IBERA, a city of Hispania Citerior, mentioned only by Livy, who gives no explicit account of its site, further than that it was near the Iberus (Ebro), whence it took its name; but, from the connection of the narrative, we may safely infer that it was not far from the sea. At the time referred to, namely, in the Second Punic War, it was the wealthiest city in those parts. (Livy, xii. p. 50.) The name in which Livy mentions it seems also to warrant the conclusion that it was still well known under Augustus. Two coins are extant, one with the epigraph MUN. HIBERIA JULIA on the one side, and IERECASVONIA on the other; and the other with the head of Tib. on the reverse, and on the reverse the epigraph M. H. J. IERECASVONIA; whereas it appears to have been made a municiplum by Julian, or by Augustus in his honour, and to have been situated in the territory of the IERECASVONI.

The addition DERT, on the latter of these coins led Harduin to identify the place with Dertosa, the site of which, however, on the left bank of the river, does not agree with the probable position of Ibera. Flores supposes that the municiplum was founded by the Iazygei Ibera and Dertosa. The ships with spread sails on both coins, indicate its maritime site, which modern geographers seek on the S. side of the delta of the Ebro, at S. Carlos de la Rápida, near Amposta. Its decay is easily accounted for by its lying out of the great high road, amidst the malaria of the river-delts, where it was abandoned, and which is now choked by the alluvial deposits of the Ebro. It seems probable that the port is now represented by the Salinas, or lagoon, called Puerto de los Aljufaeres, which signifies Port of the Jones, i. e. of the river. (Plin. iii. 3. a. 4; Harduin, ad loc.; Marc. Hisp. ii. 8; Flores, Med. de Esp. vol. ii. p. 453; Sestini,
IBERIA.

[Plate 8]

IBERIA (ἐβρηία), the extensive tract of country which lies between the Ezine and Caspian seas, to the S. of the greater chain of the Caucasus, and which, bounded on the W. by Colchis, on the E. by Albania, and the S. by Armenia, is watered by the river Cyrus (Κύρος). (Strab. xi. p. 499, comp. i. pp. 43, 69; Pompon. Mel. iii. 5. § 6; Plin. vii. 11; Pol. v. 11.) From these limits, it will be seen that the Iberia of the ancients corresponds very nearly with ancient Georgia, or Græcia, as it is called by the Russians. Strabo (p. 500) describes it as being hemmed in by mountains, over which there were only four passes known. One of these crossed the Moschichi Pontes, which separated Iberia from Colchis, by the Colchian fortress Sarapana (Scharapenta), and is the modern road from Mingrelia into Georgia over Suram. Another, on the N., rises from the country of the Nomades in a steep ascent of three days' journey (along the valley of the river Terek) and finally passes through the defile of the river Aragus, a journey of four days, where the pass is closed at the lower end by an impregnable wall. This, no doubt, is the pass of the celebrated Caucasian Gates (Causcasiar Portae), described by Pliny (vi. 12) as a prodigious work of nature, formed by abrupt precipices, and having the intervale closed by gates of iron bars. Beneath ran a river which emitted a strong smell ("Subter medias fores, amne diri odoris fluente," Plin. l. c.). It is identified with the great central road leading from the W. of Georgia by the pass of Dargel, so named from a fortress situated on a rock washed by the river Terek, and called by the Georgians Judge Kari, or the Gate of Shavi. The third pass was from Albania, which at its commencement was cut through the rock, but afterwards went through a marsh formed by the river which descended from the Caucasus, and is the same as the strong defile now called Derbend or "narrow pass," from the chief city of Dagestani, which is at the extremity of the great arm which branches out from the Caucasus, and, by its position on a steep and inaccessible coast, commands the Caspian sea, at once commanding the coast-road and the Albanian Gates. The fourth pass, by which Pompeus and Canidius entered Iberia, led up from Armenia, and is referred to the high road from Erevan, through Kara, to the N. (Aragus).

The surface of the country is greatly diversified with mountains, hills, and valleys; the best portion of this rich province is the basin of the K’ar, with the valleys of the Aragasi, Alaza, and other tributary streams. Strabo (p. 499) speaks of the numerous cities of Iberia, with their houses having tiled roofs, as well as some architectural pretensions. Besides this, they had market-places and other public buildings.

The people of the Iberes or Iberi (Ἰβηρείς, Steph. B. c. c.) were somewhat more civilised than their neighbours in Colchis. According to Strabo (p. 500), they were divided into four castes:—

1. The royal horde, from which the chiefs, both in peace and war, were taken.
2. The priests, who acted also as arbitrators in their quarrels with the neighbouring tribes.
3. Soldiers and hus-bands, who were slaves to the king.
4. The masses of the population, who were slaves to the Roman.

The people of the plain were peaceful, and cultivated the soil; while their dress was the same as that of the Armenians and Medes. The mountaineers were more warlike, and resembled the Scythians and Sarmatians. As, during the time of Herodotus (iii. 9), Colchis was the N. limit of the Persian empire, the Iberians were probably, in name, subjects of that monarchy. Afterward they acknowledged the supremacy of Mithridates. The Romans became acquainted with them in the campaigns of Lucullus and Pompeius. In B.C. 65, the latter general commenced his march northwards in pursuit of Mithridates, and had to fight against the Iberians, whom he compelled to sue for peace. (Plin. Posp. 54.) A.D. 35, when Iberia set up Tithrates as a claimant to the Parthian throne, he induced the Iberian princes, Mithridates and his brother Pharnasannes, to invade Armenia; which they did, and subdued the country. (Asam. vi. 33 —36; comp. Dict. of Biog. Pharnamasses.) In A.D. 115, when Armenia became a Roman province under Trajan, the king of Iberia made a form of submitting himself to the imperium (Ep. 5); but was received in Neander (Allgemeine Gesch. der Christl. Relig. vol. iii. pp. 234—336; comp. Milman, Hist. of Christianity, vol. ii. p. 480), is Rufinus (x. 10), from whom the Greek church historians (Socrat. i. 30; Sozom. ii. 7; Thad. i. 24; Mos. Chronic. ii. 83) have borrowed it. In A.D. 365—578, by the ignominious treaty of Jovian, the Roman renounced the sovereignty and alliance of Armenia and Iberia. Sapor, after subjugating Armenia, marched against Sarmataeum, who was king of Iberia by the permission of the emperors, and, after expelling him, reduced Iberia to the state of a Persian province. (Amm. Marc. xxvi. 12; Gibbon, c. xxv; Le Beau, Bas Empire, vol. iii. p. 357.)

During the wars between the Roman emperors and the Sasanian princes, the IBERIAN GATES had come into the possession of a prince of the Huns, who offered this important pass to Anastasius; but when the emperor built Darus, with the object of keeping the Persians in check, Codobas, or Cobol, seized upon the defiles of the Caucasus, and fortified them, though less a precaution against the Romans than against the Huns and other northern barbarians. (Procop. B. P. 10; Gibbon, c. xlii; Le Beau, vol. vi. pp. 269, 442, vol. vii. p. 398.) For a curious history of this pass, and its identification with the fabled wall of Gog and Magog, see Humboldt, Asia Centra, vol. ii. pp. 93—104; Eichwald, Peripl. des Cap. Mong., vol. i. pp. 125—132. On the decline of the Persian power, the Iberian frontier was the scene of the operations of the emperors Maurice and Heraclius. Iberia is now a province of Russia.

The Georgians, who do not belong to the Indo-European family of nations, are the same race as the ancient Iberians. By the Armenian writers they are still called Verk, a name of perhaps the same original as Ἰβηραίος, and derive their origin, according to their national traditions, from an eponymous ancestor, Kartlos. Like the Armenians, with whom however, there is
IBERIA INDIAE.

no affinity either in language or descent, they have an old version of the Bible into their language. The structure of this language has been studied by Adelung (Mitth. vol. i. pp. 430, foll.) and other modern philologists, among whom may be mentioned Broset, the author of several learned memoirs on the Georgian grammar and language; Klaproth, also, has given a long vocabulary of it, in his Asia Polyglotta.

Armenian writers have supplied historical memoirs to Georgia, though it has not been entirely wanting in domestic chronicles. These curious records, which have formed the style and appearance of the half-legendary monkish histories of other countries, are supposed to be founded on substantial truth. One of the most important works on Georgian history is the memorials of the celebrated Orpelian family, which have been published by St. Martin, with a translation. Some account of these, along with a short sketch of the History of the Georgians and their literature, will be found in Prichard (Phys. Hist. Memb., vol. iv. pp. 261—276). Dubois de Montpéreux (Voyage autour du Caucase, vol. ii. pp. 8—169) has given an outline of the history of Georgia, from native sources; and the maps in the magnificent Atlas that accompanies his work will be found of great service.

[EB. J.]

IBERIA INDIAE (Iberia, Porcell. M. 8. 54, ed. Horsley) is a district placed by the author of the Periplus between Larica and the Scythians. It was doubtless peopled by some of the Scythian tribes, who gradually made their descent to the S. and SE. part of Scinde, and founded the Indo-Scythic empire, on the overthrow of the Greek kings of Bactria, about n. c. 156. The name would seem to imply that the population which occupied this district had come from the Caucasus.

IBE'RICUM MARE. [HisPANum MARE.]

IBE'RES, IBE'Ri, IBE'RiA. [HisPANiA.]

IBLENGAEC (Ibélium, Poti. vii. 2. 18), a people placed by Ptolemy between the Beptyrus Mons (Naraka M'ta) and the Montes Damaseni, in Indian phrase, Sangen, near the Brooksmoerwa. [VT.]

IBERUS in gen. is of 'témph, often Liberus (Ebro), one of the chief rivers of Spain, the basin of which includes the NE. portion of the peninsula, between the great mountain chains of the Pyrenees and Ibubeda. [HisPANiA.] It rises in the mountains of the Cantabri, not far from the middle of the chain, near the city of Julibrige (the sources lies 12 miles W. of Rayatose), and, flowing with a nearly uniform direction to the SE., after a course of 450 M. (340 miles), falls into the Mediterranean, in 40° 42' lat., and 0° 50' E. long., forming a considerable delta at its mouth. It was navigable for 260 M. from the town of Varia (Varso, in Burgos). Its chief tributaries are: on the left, the Sevora (Segre) and the Galluclos (Galileo), and on the right the Salo (Xalom). It was long the boundary of the two Spain (HisPANiA), whence perhaps the error of Appian (His. 6), which makes it divide the peninsula into two equal parts. There are some other errors not worthy of notice. The origin of the name is disputed. Dismissing derivations from the Phoenician, the question seems to depend very much on whether the Iberians derived their name from the river, as was the belief of the ancient writers, or whether the river took its name from the people, as W. von Humboldt contends. If the former was the case, and if Niebuhr's view is correct, that the popu-

lization of NE. Spain was originally Celtico (HisPANiA), a natural etymology is at once found in the Celtic aiber, i.e. watere. (Polyb. ii. 13, iii. 34, 40 et alibi.; Scll. p. 1.; Strab. ii. pp. 156, et seq.; Steph. B. v. s.; Meis. ii. 6. § 5; Cass. R. C. I. 60; Liv. xxxv. 6, 19, 22, 43, 98, 272; Plin. iii. 3. 4. iv. 20. 34, 54; Lucas. iv. 23; Cato, Orig. VII. ap. Nonius, s. v. Pieciumentum.)

[PS.]

IBETTES. [Samos.]

IBES, a town in the SE. of Hisp. Citerior, mentioned by Livy (xxviii. 21, where the MSS. vary in the reading), is perhaps the modern Ibi, NE. of Barbados. (Province Com., op. Seutinii, p. 156. Utin. iii. p. 293.)

[PS.]

IBIONES, VIBIONES ('Ibiones, al. Olitibores, Potl. iii. 5. § 23), a Slavonian people of Sarmatia Europaeae, whom Schafarik (Slova. Atq. vol. i. p. 213) looks for in the neighbourhood of a river Jea-Ivieniska, of which there are several in Russia deriving their name from the "iva=" = "Gallus Albus," or the common white poplar. [EB. J.]

IBLIODURUM, in Gallia Belgica, is placed by the Antoinite Itini, on the road between Virodunum (Verdun) and Divodurum (Mets). The termination (durum) implies that it is on a stream. The whole distance in the Itin. between Verdus and Mets is 23 Gallic leagues, or 344 M. P., which is less than even the direct distance between Verdun and Mets, in the Itin. vol. ii. p. 293.

ICARUSA.

99; Ptol. v. 2. § 30; P. Mela, ii. 7.) Modern writers derive the name of Icara from the Ionic word ἵκαρα, a pasture (Hesych. s. v. ὕκαρα), according to which it would mean "the pasture land." In earlier times it is said to have been called Delische (Plin. l. c.; Callim. Hymn. in Dion. 187), Macris (Plin. l. c.; Eustath. ad Dionys. Per. 19), and Icthyoeussa (Plin. l. c.). Respecting the present condition of the island, see Tournefort, Voyage du Levant, ii. lett. 9, p. 94; and Ross, Reisens auf den Griech. Inseln, vol. ii. p. 164, fol. [L. S.]

ICHTHYOPHAGI.

11

ICH ("Ich"), a river of Central Asia which only occurs in Menander of Byzantium (Hist. Legat. Barbarorum ad Romanos, p. 300, ed. Niebuhr, Bonn, 1822), was known in antiquity as the "Protector," and contemporary with the emperor Hadrian, in the latter part of the 2nd century a.d. After Christ, to whom comparative geography is indebted for much curious information about the basin of the Caspian and the rivers which discharge themselves into it on the E. Niebuhr has recognised, in the passage from Menander to which reference has been made, the first intimation of the knowledge of the existence of the river Ich or Dyen, which rises in the mountain range Alarunuk, not far from the sources of the Or, and, after traversing the sandy steppes of Sokhiz and Balasun, falls into the Caspian at its NE. corner. (Comp. Lycleline, Hordes et Steppe des Soussous de Kazakhs, p. 65.) [E. B. J.]

ICHANAE (Ἰχαναία: Ech. Ίχαναίος), a city of Sicily, which, according to Stephanus of Byzantium, held out for a long time against the arms of the Syracusans, whence he derives its name (from the verb ἰχνάω, a form equivalent to ἱχναίω), but gives us no information as to the period of its existence. This statement refers. The Ichanenses, however, are mentioned by Pliny (iii. 8. 14) among the stipendiary towns of the interior of Sicily, though, according to Silius (ad loc.), the true reading is Ipanenses. [Hipp.]. In either case we have no clue to the position of the city, and it is a mere matter of conjecture to identify it with Icena, to give the name of Icana to the ruins of a city which still remain at a place called Vindicari, a few miles N. of Cape Pachynum, and which were identified (with still less probability) by Fazello as those of Iamachera. [Iamachera.]

ICHNAEA (Ἰχναία), a city of Bottiae, in Macedonia, which Herodotus (vii. 128) couples with Pella. (Lakos, Travels in Northern Greece, i. 1. 61, p. 268.) [E. B. J.]

ICHNEUMON (Ὑψόφωνος, Lid. Char. p. 5; Steph. B. s. v.), a small fortified town, or castle, in Mopsotium, situated on the river Bilecho, which itself flowed into the Euxine. It is said by Isidorus to have owed its origin to the Macedonians. There can be little doubt that it is the same place as is called in Dion Cassius "Ὑψόφων" (xii. 12), and in Pline i. 52.15.25. (Curs. c. 25). According to the former writer, it was the place where Cassius overcame Tymmenus: according to the latter, that to which the younger Cassius was persuaded to fly when wounded. Its exact position cannot be determined; but it is clear that it was not far distant from the important town of Carrhaea. [V.]

ICCIUS PORTUS. [Ιτυύα.]

ICHTHYOPHAGI. (Ὑψόφωνας, Diod. iii. 15; Herod. iii. 19; Pausan. i. 33. § 4; Plin. vii. 30. s. 32), were one of the numerous tribes dwelling on each shore of the Red Sea which derived their appellation from the principal article of their diet. Fish-eaters, however, were not confined to one region: in the present day, savages, whose only diet is fish cast ashore and cooked in the sun, are found on the coasts of New Holland. The Ethiopian Icthyophagi, who appear to have been the most numerous of these
tribes, dwelt to the southward of the Regio Triglo-
dyctia. Of these, and other more inland races, con-
cerning whose strange forms and modes of life
curious tales are related by the Greek and Roman
writers, a further account is given under Trogo-
dyttes.

ICTHYOPHAGORUM SINUS [Lythvovdvos ἱκτύων υμνος, Ptol. vi. 7. § 13], was a deeply
embayed portion of the Persian gulf, in lat. 25ŏ N.,
situated between the headlands of the Sun and Asabad
on the eastern coast of Arabia. The inhabitants of its
borders were of the same mixed race — Aethiopo-
Arabian — with the Ichthyophagi of Aethiopia. The
bay was studded with islands, of which the prin-
cipal were Aradus, Tylus, and Tithyma. [W. B. D.]

ICTHYUS. [Isla. p. 817, b.]

ICIANI, in Britain, mentioned in the Itinerary
as a station on the road from London to Carriana
(Luguballium). As more than one of the stations on each side
(Villa Faustini, Caphoricon, &c.) are uncertain,
the locality of the Iciani is uncertain also. Chest-
erford, Icstebi, and Thetford are suggested in the
itineraries. [R. G. L.]

ICIDMAGUS, a town of Gallia Lugdunensis,
is placed by the Table on a road between Ravesiunum
(supposed to be St. Paulum) and Aquae Segeta.
[AQUAE SEXTIE.] Icidmagus is probably Isen-
geauze or Issinanyae, which is SSW. of St. Etienne,
on the west side of the mountains, and in the basin
of the river Levez. The resemblance of name of
the chief reason for fixing on this site. [G. L.]

ICONII (Icdnooai), an Alpine people of Gallia.
Strabo (p. 185) says: “Abore the Cavares are the
Vocontii, and Tricori, and Iconii, and Peduli;” and
again (p. 203): “Next to the Vocontii are the Si-
conii, and Tricori, and after them the Medalli (Me-
dulli) who inhabit the highest summits.” These
Iconii and Siconii are evidently the same people,
and the sigma in the name Siconii seems to be merely
a repetition of the final sigm a of the word ικινοτατος.
The Peduli of the first passage, as some editions
have it, is also manifestly the same Medulli.
The ascertained position of the Cavares on the east side
of the Rhone, between the Durance and Jauer, and
thence to the Vocontii and the Cavares, combined
with Strabo’s remark about the position of the Me-
dulli, show that the Tricori and the Iconii are be-
 tween the Vocontii and the Medulli, who were on the
High Alps; and this is all that we know. [G. L.]

ICONIUM (Icdnooum : Eth. ικινους : Cogni, Konia, or Konjoc), was regarded in the time of
Xenophon (Anab. i. 2. § 19) as the easternmost
town of Phrygia, while all later authorities describe
it as the principal city of Lycaonia. (Cic. ad Fam.
iii. 6, 8, xxv. 3.) Strabo (xii. p. 568) calls it αυ-
τιηνως, whence we must infer that it was then
still a small place; but he adds that it was well
peopled, and was situated in a fertile district of
Lycaonia. Pliny (v. 27), however, and the Acts of
the Apostles, describe it as a very populous city, in-
habited by Greeks and Jews. Hence it would ap-
pear that, within a short period, the place had greatly
risen in importance. In Pliny’s time the territory
of Iconium formed a tetrarchy comprising 14 towns,
of which Iconium was the capital. On coins belong-
ing to the reign of the emperor Gallienus, the town is
called a Roman city, which was, probably, only an
assumed title, as no author speaks of it as a colony.
Under the Byzantine emperors it was the metropolis
of Lycaonia, and is frequently mentioned (Hierol. p. 672); but it was wrested from them first by the

Saracen, and afterwards by the Turks, who made it
the capital of an empire, the sovereigns of which
took the title of Sultans of Iconium. Under the
Turkish dominion, and during the period of the Cru-
sades, Iconium acquired its greatest celebrity. It is
still a large and populous town, and the residence
of a pasha. The town contains a number of ancient
remains and inscriptions, but they appear almost all
to belong to the Byzantine period. (Comp. Amm.
Marci xiv. 2; Steph. B. s. v.; Ptol. v. 6. § 16;
Leake, Asia Minor, p. 48; Hamilton, Researches,
vol. ii. p. 205, fol.; Eckhel, vol. iii. p. 31; Sestini,
Geo. Num. p. 48.) The name Iconium led the an-
cients to derive it from εἰκών, which gave rise to
the fable that the city derived its name from an image
of Moduss, brought thither by Persius (Eustath. ad
Dionys. Per. 856); hence Stephanus B. maintains
that the name ought to be spelt ηκτωρ, a form
actually adopted by Eustathius and the Byzantine
writers, and also found on some coins. [L. S.]

ICORIGIUM. [EOCRIGIUM.]

ICONIS. [EOCRIGIUM.]

ICOSITANI. [Tclcl.]

ICOSIOMI (Icdnooim : Aigion), a city on the coast
of Mauretania Caesariensis, E. of Caesarea, a colony
under the Roman empire, and presented by Vespasian
with the jus Latium. (Tin. Ant. p. 15; Mele, i.
6. § 1; Plin. v. 2. s. 1; Ptol. iv. 2. § 6.) Its site,
already well indicated by the names of Icositani,
who places it 30’ W. of the mouth of the Savas,
has been identified with certainty by inscriptions
discovered by the French. (Pollister, in the Explora-
Many modern geographers, following Mannert, who
was misled by a confusion in the numbers of the
Itinerary, put this and all the neighbouring places
very far west. [Comp. Iol.]

ICTIMULI or VICTIMULI (Ictiuoula, Strab.), a people of Cisalpine Gaul, situated at the
foot of the Alps, in the territory of Vercellae. They
are mentioned by Strabo (v. p. 218), who speaks of
a village of the Ictimuli, where there were gold mines,
which he seems to place in the neighbourhood of
Vercellae. The modern passage is so confused that it
would leave us in doubt. Pliny, however, who
notices the gold mines of the Victimuli among the
most productive in Italy, distinctly places them in
agro Vercellensis.” We learn from him that they
were at one time worked on so large a scale that a
law was passed by the Roman censors prohibiting
the employment in them of more than 3000 men at
once. (Plist. xxvii. 4. s. 21.) Their site is not
more precisely indicated by either of the above
authors, but the Geographer of Ravenna mentions the “civitas, quae dictur Victimula” as situated
“near Eporedia, not far from the foot of the Alps”
(Geogr. Rav. iv. 30); and a modern writer has
traced the existence of the “Castellum Victimula”
during the Roman period. The ancient passages have
been situated between Ictes and Bidentia on the
banks of the Etne. Traces of the ancient gold
mines, which appear to have been worked during the
middle ages, may still be observed in the neigh-
bouring mountains. (Durandi, Alpi Graiae e Pen-
nisse, p. 110—113; Walckenaer, Geogr. des Gaules,
vol. ii. p. 68.)

ICTIS, in Britain, mentioned by Diodorus Siculus
(v. 22) as an island lying off the coast of the tin
districts, and at low tides, becoming a peninsula,
whither the tin was conveyed in waggons. St.
Michael’s Mount is the suggested locality for Ictis
ICIODURUM.

Probably, however, there is a confusion between the Isle of Wight, the Isle of Portland, the Scilly Isles, and the Isle just mentioned; since the name is suspiciously like Vectis, the physical conditions being different. This view is confirmed by the text of Pline (iii. 30), who states a mistaken identification of the island in question, and Strabo (xii. 606) mentions a mountain belonging to the range of Ida, near Antiochia, which bore the name of Alexandria, where Pausanias (iv. 13. 2) believed to have pronounced his judgment as to the beauty of the three goddesses. (Comp. Clarke's Travels, ii. p. 134; Hunter's Journal in Wawole's Turkey, i. p. 120; Cramer's Asia Minor, i. 120.)

ICIODURUM, in Gallia. The Antonine Itin. places Catuvigera (Chorges) on the road between Cenabum (Vindonissa) and Vapnicum (Gap); and the Table adds Ictodurum between Cethegumagus, which is also Chorges, and Vapincum. We may infer from the name that Ictodurum is some stream between Chorges and Gap; and the Table places it half-way. The road distance is more than the direct line. By following the road from either of these places towards the other till we come to the stream, we shall ascertain its true position. D'Anville names the small stream the Vences; and Wallkonser names the site of Ictodurum, La Bastide Vielle.

ICULISMA, a place in Gallia, mentioned by Anconius (Ep. xii. 22) as a retired and lonely spot where his friend Tetradius, to whom he addresses this poetical epistle, was at one time engaged in teaching:—

"Quondam docendi munere adstrictum gravi illesum cum esse assequerat."

It is assumed to be the place called Civitas Ecclissinum in the Notitia Prov. Gall., which is Angousium, in the French department of Chorges, on the river, which is not known in its historicus name. The village names the small stream the Vences; and Wallkonser names the site of Ictodurum, La Bastide Vielle.

ICUS (Ἰκος: Eth. "ικες"), one of the group of islands off the coast of Magnesia in Thessaly, lay near Pelethus, and was colonised at the same time by the Chiosians of Crete. (Seym. Chin. 582; Strab. ix. p. 436; Appian, B. C. v. 7.) The fleet of Attalus and the Rhodians sailed past Sicyrus to Icus. (Liv. xiv. 45.) Sicyrus is asserted as the name of this insignificant island. (Steph. B. s. v.) It is now called Sarakino. (Leake, Northern Greece, vol. iii. p. 312.)

IDA, IDAEUS MONS (ἡ Ἰδα, Ἰδα: Ἰδα), a range of mountains of Phrygia, belonging to the system of Mount Taurus. It traverses western Asia Minor in many branches, whose terminus was by the ancients to the scogliera or nullipilum (Strab. xiii. p. 583), its main branch extending from the southeast to the north-west; it is of considerable height, the highest point, called Gargarus or Gargaron, rising about 4650 feet above the level of the sea. The greater part is covered with wood, and contains the sources of innumerable streams and many rivers and smaller torrents. (Steph. B. s. v.) It contains several springs. In the Homeric poems it is also described as rich in wild beasts. (Comp. Strab. xiii. pp. 602, 604; Hom. Il. ii. 824, vi. 283, viii. 170, x. 153, 196; Athen. xv. 8; Hor. Od. iii. 20, 15; Ptol. v. 2. § 13; Plin. v. 32.)

The highlands about Zela formed the northern extremity of Mount Ida, while Leuctum formed its southern extremity. Two other subordinates range, parting from the principal summit, the one at Cape Rhoeumel, the other at Sigemum, may be said to enclose the territory of Troy in a crescent; while another central ridge between the two, separating the valley of the Scamander from that of the Simiae, gave to the whole the form of the Greek letter Σ. (Ciem. ap. Strab. xiii. p. 597.) The principal rivers of which the sources are in Mount Ida, are the Simiae, Scamander, Gurganus, Aesonus, Rhodos, Careus, and others. (Hom. Il. xii. 20, foll.) The highest peak, Garagarus (p. 504), is traversed in antique times over the Hellasport, Propontis, and the whole surrounding country. Besides Gargarus, three other high peaks of Ida are mentioned: viz. Cotylos, about 3500 feet high, and about 150 stadia above Scopia; Pytus; and Dictae. (Strab. xiii. p. 472.) Timothothes (ap. Steph. B. s. v. "Αλθαβοτησα") and Strabo (xiii. p. 608) mention a mountain belonging to the range of Ida, near Antiochia, which bore the name of Alexandria, where Paris (Alexander) was believed to have pronounced his judgment as to the beauty of the three goddesses. (Comp. Clarke's Travels, ii. p. 134; Hunter's Journal in Wawole's Turkey, i. p. 120; Cramer's Asia Minor, i. 120.)

IDA (Ἰδα, Ptol. iii. 17, § 9; Pomp. Mela, ii. § 13; Plin. iv. 12, xvi. 33; Virg. Aen. iii. 105; Solin. ii. Avien. 676; Prisc. 590), the central and loftiest point of the mountain range which traverses the island of Crete throughout the whole length from W. to E. In the middle of the island, where it is broadest (Strab. x. pp. 472, 475, 476), Mt. Ida lifts its head covered with snow. (Theophr. Hist. H. P. iv. 1.) The lofty summits terminate in three slopes, and like the range of which it is the nucleus, the offshoots to the N. slope gradually towards the sea, enclosing fertile plains and valleys, and form by their projections the numerous bays and gulfs with which the coast is indented. Mt. Ida, now called Taurus, sinks down rapidly towards the SE. into the extensive plain watered by the first streams from the mountain, which looks down upon the plain of Messara, is covered with cypress (comp. Theophrastus, de Vent. p. 405; Dion. Perig. 503; Eustath. ad loc.), pines, and junipers. Mt. Ida was the locality assigned for the legends connected with the history of Zeus, and there was a cavern in its slopes sacred to that deity. (Diod. Sic. v. 2.)

The Cretan Ida, like its Trojan namesake, was connected with the working of iron, and the Idaean Dactyl, the legendary discoverers of metallurgy, are assigned sometimes to the one and sometimes to the other. Wood was essential to the operations of smelting and forging; and the word Ida, an appellative for any wood-covered mountain, was used perhaps, like the German berg, at once for a mountain and a mining work. (Kenrick, Aggyp of Herodotus, p. 278; Hübck, Krete, vol. i. p. 4.)

IDACUS (Ἰδακος), a town of the Thracian Chersones, mentioned by Thucydides (viii. 104) in his account of the manoeuvres before the battle of Cynossema, and not far from Arhimna. Although nothing whatever is known of these places, yet, as the Athenians were sailing in the direction of the Propontis from the Aigaean, it would appear that Idaeus was nearest the Aigaean, and Arhimna further up the Hellespont, towards Sestus and the Propontis. (Arnold, ad loc.)

IDALIA, IDALIUM (Ἰδαλια, Eth. Ἰδαλεις, Steph. B.; Plin. v. 31), a town in Cyprus, adjoining to which was a forest sacred to Apollo, on the coast of which place this with her worship, give no indications of the precise locality. (Theod. H. xvi. 100; Virg. Aen. i. 681, 682, x. 51; Catull. Pol. et Thet. 96; Propert. ii. 13; Lucan, vii. 17.) Engel (Kyprios, vol. i. p. 153) identifies it with Dalia, de-
IDIUMUM. scribed by Marli (Viaggi, vol. i. p. 304), situated to the south of Lencois, at the foot of Mount Olympus. [E. B. J.]

IDIUMUM, a town in Lower Pannonia, on the east of Sirmium, according to the Pent. Tab.; in the Ravenna Geographer (v. 19) it is called Idiumnum. Its site must be looked for in the vicinity of Mediana. [L. S.]

IDIUM, a town of uncertain site in Upper Moesia, probably on the Morava in Servia. (It. Ant. 134; Tab. Pent.) [L. S.]

DISTAVISUS CAMPUS, the famous battle-field where Germanicus, in A. D. 16, defeated Arminius. The name is mentioned only by Tacitus (Ann. ii. 16), who describes it as a "campus medius inter Vinsurgim et colles," and further says of it, that "ut ripae fluminae cedent aut prominencia montium resistant, inaequaliter sinuatur. Pone tergum insurget Silva, editis in altum ramis et pura humo inter arborum troncos." This plain between the river Weser and the hills has been the subject of much discussion among the modern historians of Germanicus, whose places it has been at different times pointed out as answering the description of Tacitus' Distavisus. It was formerly believed that it was the plain near Vespeck, below Bremen; more recent writers are pretty unanimous in believing that Germanicus went up the river Weser to a point beyond the modern town of Minden, and crossed it in the neighborhood of Hausberge, whence the battle probably took place between Hausberge and Rinseln, not far from the Porta Westphalica. (Ledeher, Land u. Volk der Bructer, p. 288.) As to the name of the place, it used to be believed that it had arisen out of a Roman asking a German what the place was, and the German answering, "It is a wood." (it is a meadow); but Grimm (Deutsche Mynol. p. 372. 2nd edit.) has shown that the place was probably called Idischeis, that is, "the maidens' meadow" (from idia, a maiden). [L. S.]

IDOMEUM (Iouáëv, Ptol. iii. 13. § 39; Idomenia, Pent. Tab.), a town of Macedonia which the Tabular Itinerary places at 12 M. P. from Stena, the pass now called Desmokopi, or Iron Gate, on the river Vardar. Strabo, on his return from Thessaly to the Euxine, crossed Mt. Cercine, leaving the Persians on his right, and the Sinti and Masdi on his left, and descended upon the Axios at Idomeum. (Thuc. ii. 98.) It probably stood upon the right bank of the Axios, as it is included by Ptolemy (L. c.) in Emathia, and was near Doberus, next to which it is named by Hierocles among the towns of Comular Macedonia, under the Byzantine empire. (Leake, North Greece, vol. iii. p. 444.) [E. B. J.]

IDOMENI. [Argos Amphibolichum.]

IDRAE (Iphoi, Ptol. iii. 5. § 23), a people of Sarmatia Europaea, whose position cannot be made out from the indications given by Ptolemy. (Schafarik, Sitn. Alt. vol. i. p. 213.) [E. B. J.]

IDRAE (Iphoi), according to Strabo, was a town in Caria which had formerly borne the name of Chrysaoris. Herodotus (v. 118) describes the river Marysas as flowing from a district called Idras; and it is conjectured that Stratonicia, founded by Antiochus Soter, was built on the site of the ancient town of Idras. (Comp. Leake, Asia Minor, p. 253; see Laodica.) [L. S.]

IDUBEDA (Thebeata, misspelt by Agath., Θεοθάτα, ii. 9; Sierra de Oca and Sierra de Lorenzo), a great mountain chain of Hispiania, running in a S.E. direction from the mountains of the Cantabri to the Mediterranean, almost parallel to the Ebro, the basin of which it borders on the W. Strabo makes it also parallel to the Pyrenees, in conformity with his view of the direction of that chain from N. to S. (Strab. iii. p. 161; Ptol. ii. 6. § 21.) Its chief offsets were:—M. CAUDES, near the Bilibus (Mart. i. 49, iv. 28), the CAUDES MANNIANUS (Liv. xl. 39: probably the Sierra Mollina), and, above all, M. Orompida, which strikes off from it to the S. long before it reaches the sea, and which ought perhaps rather to be regarded as its principal prolongation than as a mere branch. [P. S.]

IDUMEA (Idomoea), the name of the country inhabited by the descendents of Edom (or Esau), being, in fact, only the classical form of that ancient Semite name. (Joseph. Ant. ii. 1. § 1.) It is otherwise called Mount Seir. (Gen. xxxii. 3, xxxvi. 8; Deut. ii. 5; Joshua, xxiv. 4.) It lay between Mount Horeb and the southern border of Canaan (Deut. i. 2), extending apparently as far south as the Gulf of Akaba (Deut. ii. 8—9), as indeed its ports, Edom-gar and Ezion-geber, are expressly mentioned in the Book of Isaiah (Isaiah xlv. 17). The country was inhabited in still more ancient times by the Horites (Deut. ii. 12, 22), and derived its more ancient name from their patriarch Seir (Gen. xxxvi. 20; comp. xiv. 6), as is properly maintained by Reland, against the fanciful conjecture of Josephus and others. (Palaestina, pp. 68, 69.) The Jewish historians extend the name of Idumea so far to the north as to comprehend under it great part of the south of Judaea; as when he says that the tribe of Simeon received as their inheritance that part of Idumea which borders on Egypt and Arabia. (Ant. v. 1. § 22) He elsewhere calls Hebron the first city of Idumea, i.e. reckoning from the north. (B. J. iv. 9. § 7.) From his time the name Idumea disappears from geographical descriptions, except as a historical appellation of the country that was then called Gebalene, or the southern desert (I ιδου, πολύς κάρπος, Euseb. Onom. e. τ. Ἀλάμως, or Arabia). The historical records of the Idumeans, properly so-called, are very scanty. Saul made war upon them; David subdued the whole country; and Solomon gave to the Edomites a part of the land of Edom (1 Samuel x. 7, 2 Samuel viii. 14; 1 Kings, xi. 26). The Edomites, however, recovered their national independence under Jobam, king of Judah (2 Kings, xiv. 7), and avenged themselves on the Jews in the cruelest which they practised at the capture of Jerusalem by Nebuchadnezzar. (Psalms, cxxxix. 7.) It was probably during the Babylonian captivity that they extended themselves as far north as Hebron, where they were attacked and subduèd by Judas Maccabæus. (1 Maccab. v. 65—68; Joseph. Ant. xii. 8. § 6.) It was on this account that the whole of the south of Palestine, about Hebron, Gaza, and Eleutheropolis (Besit Jobris), came to be designated Idumæa. (Joseph. B. J. iv. 9. § 7, c. Apion, i. 5; J. Jerom, Comment. in Os. c. 12.) Meanwhile, the ancient title of the children of Edom had been invaded and occupied by another tribe, the Nabathaesians, the descendents of the Labimeliea patriarch Nebaioth [Nabatah], under which name the country and its capital [Petra] became famous among Greek and Roman geographers and historians, on which account their description of the district is more appropriately given under that head. St. Jerome's brief but accurate notice of its general features may here suffice:——"Omnis australis regio Idumaeorum de Eleuther-
IERNÉ.

15

having first confined in the hippodrome the most illustrious men of the country, with the intention that they should be massacred after his death, that there might be a general mourning throughout the country on that occurrence. (B. J. i. 35. § 6.)

Josephus further mentions that Jericho was visited by Vespasian shortly before he quitied the country, where he left the tenth legion (B. J. iv. 8. § 1, 9. § 1); but he does not mention its destruction by Titus on account of the perjury of its inhabitants; a fact which is supplied by Eusebius and St. Jerome. They state that a third city had been built in its stead; but that the ruins of both of the former were still to be seen (Onomast. s. e.). The existing ruins can only be referred to this latest city, which is frequently mentioned in the mediæval pilgrimages. They stand on the skirts of the mountain country that shuns the valley of the Jordan on the west, about three hours distant from the river. They are very extensive, but present nothing of interest. The waters of the fountain of Eliaha, now D'es-sullam, well answer to the glowing description of Josephus, and still fertilise the soil in its immediate neighbourhood. But the palms, balsam, sugar-canes, and roses, for which this Paradise was formerly celebrated, have all disappeared, and the modern Rûs consists only of the tents of a Bedouin encampment. (G. W.)

IERNÉ, a better form for the ancient springs of Ireland than Hibernia, Ibernia, Ivernia, &c., both as being nearer the present Gaelic name Éire, and as being the oldest form which occurs. It is the form found in Aristotle. It is also the form found in the poem attributed to Orphus on the Argonautic expedition, which, spurious as it is, may nevertheless be as old as the time of Onomacritus (i. e. the reign of the first Darius):

—vheroue ἱππαρχον ἱππαρχον.

(Orph. 1164, ed. Leipzig, 1764.)

Aristotle (de Mundo, c. 3) writes, that in the ocean beyond the Pillars of Hercules "are two islands, called Britannia, very large, Albion and Ierne, beyond the Celts." In Diodorus Siculus (v. 38) the form is Iberia; the name is also left unaccompanied by Britania, who were cannibals. Strabo (ii. p. 107) makes Ierne the farthest voyage northwards from Celticia. It was too cold to be other than barely habitable, the parts beyond it being absolutely uninhabited. The reported distance from Celticia is 500 stadia. The same writer attributes cannibalism to the Irish; adding, however, that his authority, which was probably the same as that of Diodorus, was insufficient.

The form in Pomponius Mela is Ierma. In Iverna the luxuriance of the herbage is so great as to cause the cattle who feed on it to burst, unless occasionally taken off. Pliny's form is Hibernia (iv. 30). So- limus, whose form is Hibernia, repeats the statement of Mela as to the pasture, and adds that no snakes are found there. Warlike beyond the rest of the world, the Hibernian mother, on the birth of a male child, places the first morsel of food in his mouth with the point of a sword (c. 22). Avienus, probably from the similarity of the name to Tepa, writes:

"As in doibus in Sacravm, sic insulam Dixeris prisci, solibus cursora rata est. Haec inter undas multa coaptum jacit Eamque late gena Hibernorum colit." (Ora Marit. 109—113.)

Avienus's authorities were Carthaginian. More im-
PORTANT THAN THESE SCANTY NOTICES, AND, INDEED, MORE IMPORTANT THAN ALL THE NOTICES OF IRELAND PUT TOGETHER, IS THE TEXT OF PTOLEMY. IN THIS AUTHOR THE DETAILS FOR IRELAND (Teloepus) ARE FULLER, RATHER THAN SCANTIER, THAN THOSE FOR GREAT BRITAIN. YET, AS IRELAND WAS NEVER REDUCED, OR EVEN EXPLORED BY THE ROMANS, HIS AUTHORITIES MUST HAVE BEEN OTHER THAN LATIN. ALONG WITH THIS FACT MUST BE TAKEN ANOTHER, VIA., THAT OF THE Earliest Notice Of Ireland (Teloepus) Being Full As Early As The Earliest Of Britain; Earlier, If We Attribute The Argonautic Poem To Onomacritus; Earlier, Too, If We Suppose That Hanno Was The Authority Of Avienus. IN THE CASES OF IRENE, THE AUTHORITIES FOR IRENE Must Have Been Greek, Or Phoenician.—GREEK FROM Marseilleilles, Phoenician From Either The Mother-Country Or Carthage. The Probabilities Are In Favour Of The Latter. On The Other Hand, Early As We May Make The First Voyage From Carthage (Via Spain) To IRELAND, We Find No Trace Of Any Permanent Occupancy, Or Of Any Intermixture Of Blood. The Name Ierne Was Native; Though It Need Not Necessarily Have Been Taken From The Iermans Themselves. It May Have Been Iberian (Spanish) As Well. Some Of The Names In Ptolemy—A Large Proportion—Are Still Current, E.g. Libolinus, Sennus, Oboca, Birgus, Elanata, Nagonatae, &c., Leify, Shannon, Arcoa, Barrow, Dubinis, Connaught, &c.—Ptolemy Gives Us Chieflv The Names Of The Irish Rivers And Promontories, Which, Though Perhaps Not Always Susceptible Of Accurate Identification, Are Still Remarkably True In The General Outline. What Is More Of Importance, Inasmuch As It Shows That His Authorities Had Gone inland, Is The Fact Of Seven Towns Being Mentioned:—The Island Towns Are Rio, Rathmore, Bridgetown, Bhaesa, Lavers, Macallum, Dunam, Another Bigha, Turin. THE POPULATIONS Are The Vennienni And Rhobogidi, In Ulster; The Nagonatae, In Connaught; The Erdini And Erpedibani, Between The Nagonatae And Vennienni; The Uerni And Vodiae, In Munster; And The Uerni And Vodiae, In Munster; The Astri, Ganguini, The Vellborns (Or Elebris), Between The Uerni And Nagonatae. This Leaves Leinster For The Brigantes, Cresti, Menapii, Cauiri, Belnus, Volunti, And Darnii, The Latter Of Which May Have Been In Ulster. Besides The Inland Towns, There Was A Menapias (In Dids) And An Ebana (Eibs) On The Coast. Tacitus Merely States That Agricola Meditated The Conquest Of Ireland, And That The Irish Were Not Very Different From The Britons.—"INGENIA, CULCUSQUE HOMINUM HAE TERRAE BRITTANNIAE Differunt." (Agric. 24.) IT Is Remarkable That On The Eastern Coast One British And Two German Names Occur.—Briantes, Cauiri, And Menapii. It Is More Remarkable That Two Of These Names Are More Or Less Associated On The Continent. The Cauiri Lie North Of The Menapii In Romano—Though Not Directly. The Difference From This Is By No Means Easy. Accident Is The Last Resource To The Ethnographical Philologist; So That More Than One Writer Has Assumed A Colonisation. Such A Fact Is By No Means Improbable. It Is Not Much More Difficult For Germans To Have Been In Wexford In The Second Century Than It Was For Northerners To Have Been In The Eighth, Ninth, And Tenth. On The Other Hand, The Root *N-*P Seems To Have Been Celtic, And To Have Been A Common, Rather Than A Proper, Name; Since Pliny Gives Us The Island Menapiis = Anglesea. No Opinion Is Given As To The Nature Of These Coincidences. Of None Of The Irish Tribes Mentioned By Ptolemy Do We Meet Any Separate Substantive Notice, A Notice Of Their Playing Any Part In History, Or A Notice Of Their Having Come In Contact With Any Other Nation. They Appear Only As Details In The List Of The Populations Of Ierne. Neither Do The Iermi Appear Collectively In History. They Lay Beyond The Pale Of The Classical (Roman Or Greek) Nations, Just As Did The Tribes Of Northern Germany And Scandinavia; And We Know Them Only In Their Geography, Not In Their History. But They May Have Been Tribes Unmentioned By Ptolemy, And Attacotti Do Appear In History For The Latter Names Of Ptolemy May Have Been Changed. Ptolemy Says Nothing About Any Scoti; But Claudian Does. He Also Connects Them With Ireland:—

"MADERUNT SAXOEO FUSC OROADES; INCAEIT PICTORUM SANGINIE THULE SCTORUS CUMULOS FLEVIT GLACIALIS IERNE." (De Terr. Consul. Honori, 72-74.) AGAIN:—

The Name By Which This Ancient Capital Is Most Commonly Known Was Not Its Original Appellation, But Apparently Compounded Of Two Earlier Names,
Jerusalem.

Attached, perhaps, to two neighbouring sites afterwards incorporated into one. The sacred narrative, by implication, and Josephus, explicitly, recognizes from the first a distinct form between the Upper and the Lower city, the memorial of which is supposed to be retained in the first a distinctive form of the Hebrew name דֵּיתִי. The learned are divided in opinion as to whether the Salem of Meshchisedek is identical with Jerusalem. St. Jerome, who cites Josephus and a host of Christian authorities in favour of their identity, himself maintaining the opposite conclusion, adds the alleged restitutive relics of the palace of Meshchisedek were shown in his day in the neighbourhood of Scythopolis, and makes the Salem of that patriarch identical with the "city of Shechem." (Gen. xxxii. 18) the same, no doubt, with the Salim near to Amon (St. Iulio, iii. 23), where a village of the same name still exists in the mountains east of Nablus. Certain, however, it is that Jerusalem is intended by this name in Psalm cx. 2, and the almost universal agreement of Jews and Christians in its identity with the city of Meshchisedek is still further confirmed by the religious character which seems to have attached to its governor at the time of the coming in of the children of Israel, when we find it under the rule of Adonis, to the exact equivalent to the sacred Lodi. (Clav. of the old Testament). Recalling then, the letter half of the name as the representative of the ancient Salem, we have to inquire into the origin of the former half, concerning which there is considerable diversity of opinion. Josephus has been understood to derive it from the Greek word Ἰερουσαλήμ, prefixed to Salem. In the obscure passage (Ant. vii. 3. § 3) he is understood not to be understood St. Jerome, but Isaac Vitianus defends him from this imputation, which certainly would not raise his character as an etymologist. Lightfoot, after the Rabbis, and followed by Whitson, regards the former half of the name as an abbreviation of the latter part of the title Jehovav-Jered, which this place seems to have received on occasion of Abgar appearing up his son on one of the mountains of "the land of Moriah." (Gen. xxiv. 6, 14.) Reland, followed by Baumer, adopts the root בֶּן יְהוָה, yered, and supposes the name to be compounded of בֶּן and יְהוָה, which would give a very good sense, "hereditis," or "possession hereditary pacis." Lastly, Dr. Wells, followed by Dr. Lee, regards the former part of the compound name as a modification of the name Jebus, בֶּן יְהוָה, one of the earlier names of the city, from which its Canaanitish inhabitants were designated Jebusites. Dr. Wells imagines that the מ was changed into מ for the sake of euphony; Dr. Lee, for euphony, as Jerusalem would mean "the trampling down of peace" a name of illomen. Of these various interpretations, it may be said that Lightfoot's appears to have the highest authority; but that Reland's is otherwise the most satisfactory. Its other Scripture name, Sion, is merely an extension of the name of one particular quarter of the city to the whole. There is a further question among critics as to whether by the city Cadyz, mentioned in Herodotus, Jerusalem is intended. It is twice alluded to by the historian: once as a city of the Syrians of Palestine, not much smaller than Sardis (iii. 5); again, as having been taken by Pharaoh-Necho, king of Egypt, after his victory in Magdolus (ii. 12). These comments urge against the identity of Cadyz and Jerusalem is these passages, are, that in the former passage, Herodotus is apparently confining his survey to the sea-border of Palestine, and that the fact narrated in the second is not alluded to in the sacred text in the case of Jerusalem. But, on the other hand, there is no mention in sacred or profane history of any other city, maritime or inland, that could at all answer to the description of Cadyz in respect to its site; and the capture of Jerusalem by Nebuchadnezzar after the battle of Megiddo, which is evidently corrupted by Herodotus into Magdolus, the name of a city on the frontier of Egypt towards Palastine, with which he was more familiar, though not expressly mentioned, is implied in Holy Scripture; for the deposition and deportation of Jehonah, and the substitution and subjugation of Jehoahaz, could not have been effected, unless Nebuchadnezzar held possession of the capital. (2 Kings, xxvii. 29-35; comp. 2 Chron. xxxvii. 3.) It may, then, safely be concluded that Cadyz is Jerusalem; and it is remarkable that this earliest form of its classical name is nearly equivalent to the modern name by which alone it is now known to its native inhabitants. El-Khadeh signifies "the Holy city," and this title appears to have been attached to it as early as 497 B.C., (civ. vi. 1.,) and is of frequent recurrence after the Captivity, and even on coins of the Sasanian emperors. (xi. 1, 18; St. Matt. iv. 5, xxvii. 53.) Its pagan name Colonisa Asia Capitolina, like those imposed on many other ancient cities in Palastine, never took any hold on the native population of the country, nor, indeed, on the classical historians or ecclesiastical writers. It probably existed only in state papers, and on coins, on which it is preserved to this day. (See the end of the article.)

II. General Situ.

Jerusalem was situated in the heart of the mountain district which commences at the south of the great plain of Edom and is continued throughout the whole of Moab and Judaea, quite to the southern extremity of the Promised Land. This country is almost equidistant from the Mediterranean and from the river Jordan, being about thirty miles from each, and situated at an altitude of 2000 feet above the level of the Mediterranean. Its site is well defined by its circumjacent valleys.

Valleys. — (1) In the north-west quarter of the city is a shallow depression called by an ancient pool. This is the head of the Valley of Hinnom, from which this point takes a southern course, confining the city on the western side, until it makes a sharp angle to the east, and forms the southern boundary of the city to its south-east quarter, where it is met by another considerable valley from the north, which must next be described.

(2) At the distance of somewhat less than 1500 yards from the "upper pool" at the head of the Valley of Hinnom, are the "Tombs of the Kings," situated at the head of the Valley of Jehoshaphat, which runs at first in an eastern course at some distance north of the modern city, until, turning sharply to the south, it skirts the eastern side of the town, and meets the Valley of Hinnom in a southern and east angle, as already described, from whence they run off together in a southerly direction to the Dead Sea. Through this valley the brook Kidron is supposed once to have run; and, although no water has been known to flow through the valley within the annals of history, it is unquestionably entitled to the name of the Valley of Kidron

The space between the basin at the head of the Valley of Hinnom and the head of the Valley of
JERUSALEM.

Jehoshaphat is occupied by a high rocky ridge or swell of land, which attains its highest elevation a little without the north-west angle of the present town. The city, then, occupied the termination of this broad swell of land, being isolated, except on the north and south, by the two great valleys already described, towards which the ground declined rapidly from all parts of the city. This rocky promontory is, however, broken by one or two subordinate valleys, and the declivity is not uniform.

(3) There is, for example, another valley, very inferior in magnitude to those which encircle the other parts of the Upper City; and in a topographical view, as being the main geographical feature mentioned by Josephus in his description of the city. This valley of the Tyropeon (cheese-makers) meets the Valley of Hinnom at the Pool of Siloam, very near its junction with the Valley of Jehoshaphat, and can be distinctly traced through the city, along the west side of the Temple enclosure, to the Damascen gate, where it opens into a small plain. The level of this valley, running as it does through the midst of a city that has undergone such constant vicissitudes and such repeated destruction, has of course been greatly raised by the desolations of so many generations, but is so marked a feature in modern as in former times, that it is singular it was not observed in the attempt to distribute the ancient Jerusalem from the descriptions of Josephus. It would be of out of place to enter into the arguments for this and other identifications in the topography of ancient Jerusalem; the conclusions only can be stated, and the various hypotheses must be sought in the works referred to at the end of the article.

(4) The Antonia, that division of the Antonia, attended by Josephus, occupied "two eminences, which fronted each other, and were divided by an intervening ravine, at the brink of which the closely-built houses terminated." This ravine is the Tyropeon, already referred to, and this division of the city, which the historian observes from the earliest period, is of the utmost importance in the topography of Jerusalem. The two hills and the intermediate valley are more minutely described as follows:

(1) The Upper City.—"Of these eminences, that which had upon it the Upper City was by much the loftier, and in its length the straiter. This eminence, then, for its strength, used to be called the stronghold by king David,... but by us it was called the Upper Antonia by Josephus.

(2) The Lower City.—"The other eminence, which was called Acra, and which supported the Lower City, was in shape gibbous (ἀγκυλός).

(3) The Temple Mount.—"Opposite to this latter was a third eminence, which was naturally lower than Acra, and was once separated from it by another broad ravine: but afterwards, in the times when the Antonia was raised on the Lower, reaches to Siloam; so we call the spring, both sweet and abundant. But on their outer sides the two eminences of the city were hemmed in within deep ravines, and, by reason of the precipices on either side, there was no approach to them from any quarter." (B. Jud. v. 4, 5.)

JERUSALEM.

This, then, was the disposition of the ancient city, on which a few remarks must be made before we proceed to the new city. The two-fold division, which, as has been said, is recognised by Josephus from the first, is implied also in the sacred narrative, not only in the account of its capture by the Israelites, and subsequently by David, but in all such passages as mention the city of David or Mount Zion as distinct from Salem and Jerusalem. (Comp. Josh. xv. 63; Judges, i. 8, 31; 2 Sam. v. 6—9; Psalms, lixiv. 2, &c.) The account given by Josephus of the taking of the city is this: that "the Israelites, having entered the city, left the Lower City, but the Upper City was hard to be taken by reason of the strength of its walls, and the nature of its position" (Ant. v. § 2); and subsequently, that "David laid siege to Jerusalem, and took the Lower City by assault, while the citadel still held out" (vii. 3. § 1). Having at length got possession of the Upper City also, "he encircled the two within one wall, so as to form one body" (§ 2). This could only be effected by taking in the intermediate valley, which is apparently the part called Millo.

(4) But when in process of time the city overflowed its old boundaries, the hill Bezeloth, or Nea City, was added to the ancient hills, as is thus stated in the description in the Antonia, now so abundant in population, began gradually to creep beyond its old walls, and the people joining to the city the region which lay to the north of the temple and close to the hill (of Acra), advanced considerably, so that even a fourth eminence was surrounded with habitations, viz. that which is called Bezeloth, situated opposite to the Tyropeon, and defended by a deep ditch; for the ground had been cut through on purpose, that the foundations of the Antonia might not, by joining the eminence, be easy of approach, and of inferior height.

The Antonia, it is necessary here to add, in anticipation of a more detailed description, was a castle situated at the north-western angle of the outer enclosure of the Temple, occupying a precipitous rock 50 cubits high.

It is an interesting fact, and a convenient one to facilitate a description of the city, that the several parts of the ancient city are precisely coincident with the distinct quarters of modern Jerusalem: for that, 1st, the Armenian and Jewish quarters, with the modern Cemeteries of Mount Zion, now excluded from the walls, composed the Upper City; 2dly, the Mahommedan quarter corresponds exactly with the Lower City; 3dly, that the Haram-es-Sherif, or Noble Sanctuary, of the Moslems, occupies the Temple Mount; and 4thly, that the Haret (quarter) Bab-el-Hitta is the declivity of the hill Bezeloth, which attains its greatest elevation to the north of the existing city wall, but was entirely included within the wall of Agrippa, together with a considerable space to the north and west of the Lower City, including all the Christian quarter.

The several parts of the ancient city were enclosed by distinct walls, of which Josephus gives a minute description, which must be noticed in detail, as furnishing an exact scale of the city as it existed during the Roman period; a description which, as far as it relates to the Old city, will serve for the elucidation of the ante-Babylonian capital,—as it is clear, from the account of the rebuilding of the walls by Nehemiah (iii. vi.), that the new fortifications followed the course of the ancient enceinte.
The towers were constructed of white marble, in blocks of 30 cubits long, 10 wide, and 5 deep, so exactly joined together that each tower appeared to be one mass of rock.

Now, the modern citadel of Jerusalem occupies the NW. angle of Mount Zion, and its western wall rises from a deep fosse, having towers at either angle, the bases of which are protected on the outside by massive masonry sloping upward from the fosse. The NW. tower, divided only by the trench from the Jaffa gate, is a square of 45 feet. The NE., commonly known as the Tower of David, is 70 feet 3 inches long, 60 feet 4 inches in height, and its sloping bulwark is 40 feet high from the bottom of the trench; but this is much chocked up with rubbish. To the tower part there is no known or visible entrance, either from above or below, and no one knows of any room or space in it. The lower part of this platform is, indeed, the solid rock merely cut into shape, and faced with massive masonry, which rock rises to the height of 43 feet. This rock is described as the least of the hill described by Josephus as 30 cubits or 45 feet high. Now, if the dimensions of Hipicus and Phassellus, as already given, are compared with those of the modern towers on the north side of the citadel, we find that the dimensions of that of the NW. angle—three of whose sides are determined by the fosse—agreed with Phassellus so nearly agree with those of Hipicus, and the width of the NE. tower—also determined by the cut rock—so nearly with the square of Phassellus, that there can be no difficulty in deciding upon their identity of position. Marianne has entirely disappeared.

(4) "The Royal Palace, surpassing all powers of description. It was entirely surrounded by a wall 30 cubits high, with decorated towers at equal intervals, and contained enormous banqueting halls, besides numerous chambers richly adorned. There were also many porches encircling another, with different colonnades; the superstructure is generally of two stories, with courts, planted with a variety of trees, having long avenues through them; and deep channels and reservoirs everywhere, filled with bronze statues, through which the water flowed; and many towers of tame pigeons about the fountains."

This magnificent palace, unless the description is exaggerated beyond all licence, must have occupied a larger space than the present fortress, and must probably its gardens extended along the western edge of Mount Sion as far as the present garden of the Armenian Convent; and the decorated towers of this part of the wall, which was spared by the Romans when they levelled the remainder of the city, seem to have transmitted their name to modern times, as the west front of the city wall is generally called Abrutha Ghamsa, i.e. The Towers of Gassa.

(5) As the Xystus is mentioned next to the Hipicus by Josephus, in his description of the north wall of the Upper City, it may be well to proceed at once to that; deserving the consideration of the Gate Gnnath, which obviously occurred between the two, and still comes up in the search. The Xystus is properly a covered portico attached to the Greek Gymnasium, which commonly had uncovered walks connected with it. (Dict. Ant. p. 580.) As the Jerusalem Xystus was a place where public meetings were occasionally convened (Bell. Jud. ii. 6. § 3), it must be understood to be a wide public
Jerusalem.

promenade, though not necessarily connected with a gymnasium, but perhaps rather with another palace which occupied this extremity of the Upper City; for the name was given also to a terrace walk with colonnades attached to Roman villas. (Vitr. v. 11.)

(6) The House of the Amonaeans was above the Xystus, and was apparently occupied as a palace by the Younger Agrippa; for, when he addressed the multitude assembled in the Xystus, he placed his sister Bernice in the house of the Amonaeans, that she might be visible to them. (2 Pet. 2. 1 c.)

(7) The Temple was approached (γύρωθηκε) joined the Temple to the Upper City, and one of the Temple gates opened on to this causeway. That the γύρωθηκε was a causeway and not a bridge, is evident from the expression of Josephus in another passage, where he says that the valley was interrupted or filled up, for the passage (τὸν χώρον ἐτάφθη αὐτὸν ἐκεῖ ἢ ἐν αὐτῷ νεκρός ἀναστὰς, Ant. xvi. 11. § 3). As the Tyropeon divided the Upper from the Lower City, and the Temple Mount was attached to the Lower, it is obvious that the Tyropeon is the valley here mentioned. This earth-wall or embankment, was the work of Solomon, and is the only monument of that great king in Jerusalem that can be certainly said to have escaped the war. It is said to exist at present, and it serves the same purpose to the Mahometans as formerly to the Jews: the approach to the Mosque enclosure from the Bazaar passes over this causeway, which is therefore the most frequented thoroughfare in the city. (Williams, Holy City, vol. ii. pp. 392—397, and note, pp. 601—607.)

(8) The Council-Chamber (βουλῆ, Bouleuter- rion) is the next place mentioned on the northern line of wall, as the point where it joined the western portico of the Temple. And it is remarkable that the corresponding office in the modern town occupies the same size; the Meiketemel, or Council-Chamber of the Judicial, is now, being now found immediately outside the Gate of the Chain, at the end of the causeway, corresponding in position to the Shallecheth of the Scriptures.

We have now to trace the wall of the Upper City in the opposite direction from the same point, viz. the Hippie Tower at the NW. angle. The points noticed are comparatively few. It first ran southward (i.e. with a western aspect) through a place called Bethso, to the Gate of the Esseens; then, turning E., it ran (with a southern aspect) above the fountain of Siloam; thence it bent northward, and ran (with an eastern aspect) to the Pool of Solomon, and extending as far as a place called Ophah, was joined to the eastern cloister of the Temple Mount.

ii. On the West Front neither of the names which occur are found again in the notices of the city; but Bethso may safely be assigned to the site of the garden of the Armenian Convent, and the Gate of the Esseens may be fixed to a spot not far very far from the SW. corner of the modern city, a little to the W. of the Tomb of David, near which a remarkable ridge seems still to indicate the foundations of the ancient city wall.

iii. Along the south face of the Upper City the old wall may still be traced, partly by scarped rock and partly by foundations of the ancient wall, which have served as a quarry for the repairs of the neighbouring buildings for many ages. Its course from this point to the Temple is very difficult to determine, as the steep declivity to the Tyropeon would make it extremely inconvenient to carry the wall in a straight line, while, on the contrary, the absence of all necessary descent from a direct line makes a description in which the angles are uniformly noted, would seem to imply that there was no such deflection in its course. As it is clear, however, that the Upper City was entirely encompassed with a wall of its own, nowhere noticed by Josephus, except so far as it was coincident with the outer wall, it may be safely conjectured that this east wall of the Upper City followed the brow of the ridge from the south-east angle of the Hill Sion, along a line nearly coincident with the aqueduct; while the main wall continued its easterly course down the steep slope of Sion, across the valley of the Tyropeon, not far from its mouth,—a little above the Pool of Siloam,—and then up the ridge Ophel, until it reached the Temple Mount. To support this supposition, I must venture this theory to observe, that in the account of this wall in Nehemiah there is mention of "the stairs that go down from the city of David," by which stairs also the procession went up when encompassing the city wall. (iii. 15, xii. 37.)

The Pool of Siloam has been sometimes identified with the Fountain of the Virgin, from which the Pool of Siloam is supplied, and sometimes with that very pool. Both solutions are unsatisfactory, for Siloam would scarcely be mentioned a second time in the same passage under another name, and the fountain in question cannot, with any propriety, be called a pool.

The phrase "a looking tower"—in Scripture Ophel—is commonly supposed to be the southern spur of the Temple Mount, a narrow rocky ridge extending down to Siloam. But it is more certain that it is used in a restricted sense in this passage, than that it is ever extended to the whole ridge. (See Holy City, vol. ii. p. 365, note 7.) It was apparently a large fortified building, to the south of the Temple, connected with an E. tower (Neh. iii. 27, 28), and probably situated near the southern extremity of the present area of the Mosque of Omar. And the massive angle of ancient masonry at the SE. corner of the enclosure, "over the Valley of Jehoelaphat, which here actually bends south-west round the corner, having a depth of about 150 ft., and evidently have belonged to the "out NT. gate," as it presents that appearance within the enclosure which the word would indicate, by being at the SE. of "a looking tower," as it presents that appearance within the enclosure (H. C. vol. ii. pp. 311, 317). It is clear, in any case, that the wall under consideration must have joined the eastern cloister of the Temple Somewhere to the north of this angle, as the bend in the valley indicated by Dr. Robinson would have precluded the possibility of a junction at this angle.
JERUSALEM.

2. The Second Wall, and the Lower City.—The account of the second wall in Josephus, is very meagre. He merely says that it began at the Gate Gezareth, a place in the old wall; and, after encompassing the Lower City, had its termination at the Fortress Antonia. There is here no clue to the position of the Gate Gezareth. It is, however, quite certain that it was between the Hippicus Tower and the Xystus; and the north-west angle of the Upper City was occupied by the extensive palace of Herod the Great, and its imposing towers stood on the north front of this old wall. It has been proposed that, beyond the north-west wall of about three cubits, which would of course preclude the possibility of an exit from the city for some distance to the east of the tower. Other incidental notices make it clear that there was a considerable space between the third and the second wall at their southern quarter, comparatively free from buildings, and, consequently, a possible haven of refuge, north wall of the Upper City unprotected by the second wall; — e.g. Cestius, having taken the outer wall, encamped within the New City, in front of the Royal Palace (Jus. i. 19. § 5); Titus attacked the outer wall in its southern part, "both because it was lower there than elsewhere, inasmuch as this part of the New City was thing and not a tower, and there is a direct way to the third (or inward) wall, through which Titus had hoped to take the Upper City" (v. 6. § 2). Accordingly, when the legions had carried the outer and the second wall, a bank was raised against the northern wall of Sion at a pool called Amygdalas, and another about thirty cubits from it, at the high-priest's monument. The Almond Pool is no doubt intended by this, and it is in the city of Jerusalem, at a short distance from the modern fortress; and the monument must, therefore, have been some 50 feet to the east of this, also in the angle formed by the north wall of the Upper City and the southern part of the second wall.

There is the head of an old archway still existing at the junction of the two walls, as a point about half way between the Hippicus Tower and the north-west angle of Mount Sion, where a slight depression in that hill brings it nearly to a level with the declivity to the north. This would afford a good starting-point for the second wall, traces of which may still be discovered in a line north of this, quite to the Damascus gate where are two chambers of ancient and very massive masonry, which appear to have flanked an old gate of the second wall at its weakest part, where it crossed the valley of the Tyropoön. From this gate, the second wall probably followed the line of the present city wall to a point near the Gate of Herod, now blocked up; whence it was carried along the brow of the hill to the north-east angle of the fortress. The fortress, then, occupied a considerable space on the north-west of the Temple area, in connection with which it will be described below.

3. The Third Wall, and the New City.—The third wall, which enclosed a very considerable space to the north of the old city, was the work of Herod Agrippa the elder, and was only commenced about thirty years before the destruction of Jerusalem, and never completed according to the original design, in consequence of the jealousy of the Roman government. The following is Josephus's account: — "This third wall Agrippa drew round the super-added city, which was all exposed. It commenced at the Tower Hippicus, from whence it extended to the northern quarter, as far as the Tower Paphlagon; then, passing opposite to the Monuments of Helen, and being produced through the Royal Caves, it bent, at the angular tower, by the monument called the Fuller's, and, joining the old wall, terminated at the mouth of the valley of the Kedron." It was commenced with stones 30 cubits long and 10 wide, and was raised by the Jews to the height of 25 cubits, with the battlements.

(1) As, the site of the Hippicus Tower has been already fixed, the first point to be noticed in this third wall is the Papsiphine Tower, which, Josephus informs us, was the most wonderful part of this great work, since it was already at this point hostile against Hippicus, octagonal in form, 70 cubits in height, commanding a view of Arabia towards the east, of the Mediterranean towards the west, and of the utmost limits of the Hebrew possessions. The site of this tower is still marked, by its massive foundations, at the spot indicated in the plan; and considerable remains of the wall that connected it with the Hippicus Tower are to be traced along the brow of the ridge that slants in the upper part of the valley of Hinnom, and almost in a line with the modern wall. At the highest point of that ridge the octagonal ground-plan of the tower may be seen, and a large cistern in the midst of the ruins further confirms their identity, as we are informed that the towers were furnished with reservoirs for the rain water.

(2) The next point mentioned is the Monuments of Helen, which, we are elsewhere told, were three pyramids, situated at a distance of 3 stadia from the city. (Jos. ii. 19. § 3.) About a century later (A. D. 174) Panormius speaks of the tomb of Helena, which was the octagonal building which, he states, was constructed as to be open by mechanical contrivance, at a certain hour, one day in the year. Being thus opened, it closes again of itself after a short interval; and, should you attempt to open it at another time, you would break the door before you could succeed. (Paus. viii. 16.) The pyramids are next mentioned by Eusebius, Hist. Eccl. ii. 13. 11, as remarkable monumental pillars still shown in the suburbs of Jerusalem; and St. Jerome, a century later, testified that they still stood. (Epist. ad Evagriam, Op. tom. iv. pars ii. p. 673.) The latest notice is that of an Armenian writer in the 5th century, who describes the tomb as a remarkable monument before the gates of Jerusalem. (Hist. Armeniæ, lib. ii. cap. 58.) Notwithstanding these repeated notices of the sepulchral monuments of the queen of Adiabene, it is not now possible to fix their position with any degree of certainty, some archaeologists assigning them to the Tombs of the Kings (Robinson, Bib. Res. vol. i. pp. 465, 555—558), others to the Tombs of the Martyrs, about ½ of a mile to the west of the Jerusalem road. (Schnitzer, loc. cit. p. 65—67; Sealey, tom. ii. pp. 356, 327.) A point halfway between these two monuments would seem to answer better to the incidental notices of the monuments, and they may with great probability be fixed to a rocky crag on the right of the road to Nebi Samwil, where there are several elevated tombs. Opposite the Monuments of Helen was the celebrated church of the Women in the third wall, which is mentioned more than once, and must have been between the Nablus road and the Paphlagon Tower.

(3) The Royal Caves is the next point mentioned on the third wall. They are, doubtless, identical with the remarkable and extensive excavations still called the Tombs of the Kings, most probably..."
the same which are elsewhere called the Monument of Herod, and, from the character of their decorations, may very well be ascribed to the Herodian period. M. de Salcy has lately added to our previous information concerning them, and, by a kind of exhaustive process, he endeavoured to prove that they could have been no other than the tombs of David and the early kings of Judah, which have always hitherto been placed on Mount Zion, where the traditional site is still guarded by the Moslems. (Voyage en Syrie, tom. ii. pp. 228—361.)

The Fuller's monument is the one mentioned in the New wall, and, as an angular tower occupied this site, the monument must have been at the north-east angle of the New City; probably one of the many rock graves cut out in the perpendicular face of the Valley of Jehoshaphat, near one of which Dr. Schulte has described the foundations of a tower. (Jerusalem, pp. 85, 64.) The Monument of the Fuller, probably gave its name to the Fuller's field, which is mentioned by the prophet Isaiah as the spot near which the Assyrian army under Rabshakeh encamped (xxxvi. 2, vii. 3); and the traditional site of the camp of the Assyrians, which we shall find mentioned by Josephus, in his account of the siege, was certainly situated in this quarter. From this time the third wall followed the brow of the Valley of Jehoshaphat until it reached the wall of the Outer Temple at its north-east angle.

Having thus completed the circuit of the walls, as described by Josephus, and endeavoured to fix the various points mentioned in his description (which furnishes the most numerous topographical notices now extant of ancient Jerusalem), we shall be in a condition to follow the most important historical facts of its interesting and chequered history, when we have further taken a brief survey of the Temple. But, first, a singular and perplexing discrepancy must be noticed between the general and the detailed statements of the historian, as to the extent of the ancient city; for, while he states the circuit of the entire city as being not more than 33 stadia, or 4 Roman miles plus 1 stadium, the specification of the measure of the wall of Agrippa alone gives, on the lowest computation, an excess of 13 stadia, or 1 $\frac{1}{4}$ mile, over that of the entire city—for it had 90 towers, 20 cubits wide, at intervals of 200 cubits. No satisfactory solution of this difficulty has yet been discovered.

IV. THE TEMPLE MOUNT.

The Temple Mount, called in Scripture the Mountain of the Lord's House, and Moriah (2 Chron, iii. 1), is situated at the south-east of the city, and is easily identified with the site of the Dome of the Rock in modern Jerusalem. It was originally a third hill of the Old City, over which the Agrippa was separated from it by a broad ravine, which, however, was filled up by the Amonian princes, so that these two hills became one, and are generally so reckoned by the historian. (P. J. v. 4.)

1. The Outer Court.—The Temple, in the widest signification of the word (v. tepé), consisted of two courts or porches; the inner one is sometimes subdivided, and distributed into four other courts. The area of the Outer Court was in great part artificial, for the natural level space on the summit of the mount being found too confined for the Temple, with its surrounding chambers, courts, and cloisters, was gradually increased by mechanical expedients. This extension was commenced by Solomon, who raised from the depth of the eastern valley a wall of enormous stones, bound together with lead, within which he raised a bank of earth to a level with the native rock. On this was erected a cloister, which, with its successors, always retained the name of "Solomon's Porch." (σωλομόνδος, St. John, x. 33; Acts, iii. 11, v. 12.)

This process of enlarging the court by artificial embankments was continued by successive kings; but particularly by Herod the Great, who, when he reconstructed the Temple Proper (ræd), enlarged the space of the Outer Court, and handed it over to the Cloisters, thus giving new dignity and sacredness to this act with its stately cloisters. (Act. xi. 11, § 5.) Of these, the Royal Porch, on the south, was the most remarkable of all his magnificent works. It consisted of four rows of Corinthian columns, distributed into a central nave and lateral aisles; the aisles being 30 feet in width and 50 in height, and the nave half as wide again as the aisles, and double their height, rising into a clerestory of unusually large proportions. The other cloisters were double, and their total width only 30 cubits. To this Outer Court there were four gates on the west, towards the city, and one on each of the other sides; of which that on the east is still remaining, commonly called the Golden Gate.

2. The Inner Court.—The Inner Temple (tepóy) was separated from the Outer by a stone wall (pólyz, see Ephes. ii. 14) 3 cubits in height, on which stood pillars at equal distances, with inscriptions, in Greek and Latin, prohibiting aliens from access. To this court there was an ascent of fourteen steps, then a level space of 10 cubits, and then a further ascent of five steps to the gates, of which there were four, the north and south, and two on the east, but none on the west, where stood the Sanctuary (ræd).

The place of the Altar, in front of the ræd, is determined with the utmost precision by the existence in the Sacred Rock of the Moslems, under their venerated dome, of the very censopium and drain of the Jewish altar, which is a key to the restoration of the whole Temple, the dimensions of which, in all its parts, are given in minute detail in the treatise called Middoth (i.e. measures), one of the very ancient documents contained in the Mishna. The drain communicating with this censopium, through which the blood ran off into the Koriun, was at the south-west angle of the Altar; and there was a trap connected with this case, 1 cubit square (commonly closed with a marble slab), through which a man occasionally descended to cleanse it and to clear obstructions. Both the drain and the trap to be seen in the rock at this day.

The Altar was 33 cubits square at its base, but gradually contracted, so that its hearth was only 24 cubits square. It was 8 cubits high, and had an ascent by an inclined plane on the south side, 92 cubits long and 16 wide. Between the Altar and the porch of the Temple was a space of 22 cubits, rising in a gentle ascent by steps to the vestibule, the door of which was 40 cubits high and 20 wide. The total length of the Holy House itself was only 100 cubits, and this was subdivided into three parts: the Propylæa 11, the Sanctuary 40, the Holy of Holies 20, allowing 29 cubits for the partition walls and a small chamber behind it (i.e. west of) the Most Holy Place. The total width of the building was 70 cubits; of which the Sanctuary only occupied 30, the remaining being distributed into side chambers, in three stories, as—
Said to various uses. The Pronaos was, however, 30 cubits wider, 15 on the north, and 15 on the south, giving it a total length of 100 cubits, which, with a width of only 11 cubits, must have presented the proportions of a Narthex in a Byzantine church. Its interior height was 90 cubits, and, while the chambers on the sides of the temple rose only to the height of 60 cubits, there was an additional story of 40 cubits above the Sanctuary, also occupied by chambers, rising into a clerestory of the same elevation as the vestibule.

The front of the Temple was plated with gold, and reflected back the beams of the rising sun with dazzling effect; and, where it was not encrusted with gold, it was exceedingly white. Some of the stones of which it was constructed were 45 cubits long, 5 deep, and 6 wide.

East of the Altar was the Court of the Priests, 133 cubits long and 11 wide; and, east of that again, was the Court of Israel, of the same dimensions. East of this was the Court of the Women, 133 cubits square, and considerably below the level of the former, to which there was an ascent of 15 semicircular steps to the magnificent gates of Corinthian brass, 50 cubits in height, with doors of 40 cubits, so ponderous that they could with difficulty be shut by 20 men, the spontaneous opening of which was one of the portents of the approaching destruction of the Temple, mentioned by Josephus (Bell. Jud. vi. § 9), and repeated by Tacitus (Hist. v. 19).

Thus much must suffice for this most venerated seat of the Hebrew worship from the age of Solomon until the final destruction of the Jewish polity. But, in order to complete the survey, it will be necessary to notice the Acropolis, which occupied the northwest angle of the Temple enclosure, and which was, says the historian, the fortress of the Temple, as the Temple was of the city. Its original name was Bari, until Herod the Great, having greatly enlarged and beautified it, changed its name to Antonia, in honour of his friend Mark Antony. It combined the strength of a castle with the magnificence of a palace, and was like a city in extent, comprehending four great courts, besides courts and camping grounds for soldiers. It was situated on an elevated rock, which was faced with slabs of smooth stone, upon which was raised a breastwork of 3 cubits high, within which was the building, rising to a height of 40 cubits. It had turrets at its four corners, three of them 50 cubits high, but that at the south-east angle was 70 cubits, and commanded a view of the whole Temple. It communicated with the northern and western cloisters of the Temple at the angle of the area, by flights of steps for the convenience of the garrison which usually occupied this commanding position; and it is a remarkable and interesting coincidence, that the site of the official residence of the Roman governor and his guard is now occupied by the Saraiagh, or official residence of the Turkish Pasha and his guard; for there can be no question of the identity of the site, since the native rock here, as at Hippicus, still remains to attest the fidelity of the Jewish historian. The rock is here "cut perpendicularly to an extent of 20 feet in some parts; while within the area also, in the Monastery, a considerable portion of the rock has been cut away" to the general level of the enclosure (Barlett, Walks about Jerusalem, pp. 156, 174, 175); so that the Saraiagh, or government house, actually "rests upon a precipice of rock which formerly swept down abruptly, and has obviously been cut away to form the level below, which also bears marks of having been scarped."

The fortress was protected towards Bethania by an artificial fosse, so as to prevent its foundations from being assailed from that quarter. This fosse has only lately been filled in.

It is certain from several passages, that the fortress Antonia did not cover the whole of the northern front of the Temple area; and, as the second wall, that encircled the Lower City, ended at the fortress, it is clear that this wall could not have coincided with the modern wall at the north-east quarter of the modern city. It is demonstrated, from several allusions and historical notices, that there must have been a considerable space between the second and third wall on the northern front of the Temple area. (Williams, Holy City, vol. ii. pp. 348—353.)

V. HISTORY.

The ancient history of Jerusalem may be conveniently divided into four periods. 1. The Canaanitish, or Amorite. 2. The Hebrews, or Anti-Babylonian. 3. The Jewish, or Post-Babylonian. 4. The Roman, or classical.

1. Of these, the first may claim the fullest notice here, as the sources of information concerning it are much less generally known or read than those of the later periods, and anything that relates to the remote history of a venerable city cannot but be of interest to the antiquarian, no less than to the Christian student.

It has been said that the learned are divided in opinion as to the identity of the Salem of Melchizedek with the Jerusalem of Sacred History. The writer of a very learned and interesting Review of the Second Edition of this work in the Christian Remembrancer (vol. viii. October, 1849), may be said to have demonstrated that identity by a close critical analysis of all the passages in which the circumstances are alluded to; and has further shown it to be highly probable that this patriarch was identical, not with Shem, as has been sometimes supposed, but with Heber, the son of Peleg, from whom the Hebrews, to whom the land of the Hebrews or Heberites, as early as the days of Joseph's deportation to Egypt. (Gen. xl. 15.)

But the elucidation which the early history of Jerusalem receives from the monuments of Egypt is extremely important and valuable, as relating to a period which is passed over in silence by the sacred historian; and these notices are well collected and arranged in the review referred to, being borrowed from Mr. Osburn's very interesting work entitled Egypt, her Testimony to the Truth. After citing some monuments of Sethos, and Seesertis his son, relating to the Jebusites, the writer proceeds:

"What glimpse, then, do we obtain, if any, of the existence of such a city as Jerusalem, at least as it was recorded period? Under that name, of course, we must not expect to find it; since even in the days of Joshua and the Judges it is so called by anticipation. (Holy City, vol. i. p. 3, note.) But there is a city which stands forth with a very marked and peculiar prominence in these wars of the kings of Egypt with the Jebusites, Ammon, and Moab, without nation. We meet with it first as a fortress of the Amorites. Sethos II. is engaged in besieging it. It is situated on a hill, and strengthened with two tiers of ramparts. The inscription sets forth that it is the
land of Amor, or the Amorite; and that the conqueror had made bare his right arm to overcome the chiefs of many walled cities. This implies that the fort in question, the name of which is inscribed upon it, was the chief stronghold of the nation. That name, when translated from the hieroglyphics into Coptic, and thence into Hebrew, is Chadasha. The next notice of Chadasha belongs to the reign of Sesostris, and connects it with the Jebusite nation. The Ammonites had laid siege to the city, and a joint embassy of the Jebusites and Hitites, who were then tributary to Sesostris, entreat him to come to their aid. The Egyptians having accordingly sailed over the Dead Sea, met with another embassy, from the Ammonites, which gave further particulars of the siege. The enemy had seized on the fortified camps erected by the Egyptians to secure their hold over the country, and spread terror to the very walls of Chadasha. A great battle is fought on a mountain to the south of the city of Chadasha. The inscription further describes Chadasha as being in the land of Beth. What then, do we derive from these combined notices? Plainly this, that Chadasha was a city of the first importance, both in a military and civil point of view; the centre of interest to three or four of the most powerful of the Canaanite nations; in a word, their metropolis. We find it moreover placed, by one inscription, in the territory of the Amorites, by another in that of the Hitites, while it is observed in others, by the same, to the right of the Jebusites. Now, omitting for the present the consideration of the Hitites, this is the exact character and condition in which Jerusalem appears in Scripture at the time of Joshua's invasion. Its metropolitan character is evinced by the lead which Adoni-zedek, its king, takes in the confederacy of the five kings, which gave further terror to the Jebusites. Now, omitting for the present the consideration of the Hitites, this is the exact character and condition in which Jerusalem appears in Scripture at the time of Joshua's invasion. accounts for the firm hold with which they maintained their possession of their stronghold, the capital of their tribe, for upwards of five centuries after the coming in of the children of Israel under Joshua (cir. n. c. 1585); during which period, according to Josephus, they held uninterrupted and exclusive possession of the Upper City, while the Israelites (whether of the tribe of Judah or of Benjamin) are uncertain) seem only to have occupied the Lower City for a time, and then to have been expelled by the garrison of the Upper City. (Joseph. Ant. v. 2. §§ 2, 5, 7; comp. Joseph. Ant. v. 1, 21, xix. 10—12.)

2. It was not until after David, having reigned seven years in Hebron, came into undisputed possession of the kingdom of Israel, that Jerusalem was finally subjugated (cir. n. c. 1049) and the Jebusite garrison expelled. It was then promoted to the dignity of the capital of his kingdom, and the Upper and Lower Cities were united and encircled by one wall. (1 Chron. xi. 8; comp. Joseph. Ant. vi. 3. § 3.)

Under his son Solomon it became also the ecclesiastical head of the nation, and the Ark of the Covenant, and the Tabernacle of the Congregation, after having been long disused, met on the threshing-floor of Araamah the Jebusite, on Mount Moriah. (1 Chron. xxvi. 15; 2 Chron. iii. 1.) Besides erecting the Temple, king Solomon further adorned the city with palaces and public buildings. (1 Kings, v.) It was a third time besieged by Nebuchadnezzar (cir. 586) during the period are very scanty. Threatened by Shishak, king of Egypt (n. c. 972), and again by the Arabsians under Zerah (cir. 950), it was sacked by the combined Philistines and Arabs during the disastrous reign of Jehoram (884), and subsequently by the Israelites, after their victory over Amaziah at Bethoron (cir. 841), that the invasion of the confederate armies of Pekah of Israel and Resin of Syria, during the reign of Ahaz, the capital barely escaped (cir. 780; comp. Joseph. Ant. vii. 9—19, and 2 Kings, xvi. 5, with 2 Chron. xxviii. 5); as it did in a still more memorable manner in the following reign, when invested twice, as it would seem, by the general of Semmacher, king of Assyria (n. c. 713). The garrison of the city would seem to intimate that the city was captured by the Chaldeans as early as 650; but the fact is not recorded expressly in the sacred narrative. (2 Chron. xxxiii.) From this period its disasters thickened pace. After the battle of Megido it was taken by Pharaoh Necho, king of Egypt (n. c. 690), who held it only about two years, when it passed, together with the whole country under the sway of the Chaldeans, and Jehoiakim and some of the princes of the blood royal were carried to Babylon, with part of the sacred vessels of the Temple. A futile attempt on the part of Jehoiakim to regain his independence after his restoration, resulted in his capture; his son had only been seated on his tottering throne three months when Nebuchadnezzar again besieged and took the city (598), and the king, with the royal family and principal officers of state, were carried to Babylon, Zedekiah having been appointed by the conqueror to the nominal dignity of king. Having held it nearly ten years, he revolted, when the city was for a third time besieged by Nebuchadnezzar (n. c. 587). The Temple and all the buildings of Jerusalem were destroyed by fire, and its walls completely demolished.

3. As the entire desolation of the city does not appear to have continued more than fifty years, the "seventy years" must date from the first deportation; and its restoration was a gradual work, as the desolation had been. The first commission issued in favour of the Jews in the first year of Cyrus (B. C. 538) contemplated only the restoration of the Temple, which was prohibited in consequence of numerous vexatious interruptions, for 120 years — i. e. until the eighth year of Darius Nethus (B. C. 418). According to the most probable chronology it was his successor, Artaxerxes Mneson, who issued the second commission to Ezra, in the seventh year of his reign, and a third to Nehemiah in his twelfth year (n. c. 525). It was only in virtue of the decree of Artaxerxes that the Temple was re-erected by the authority with which he was armed as the civil governor of Palestine, that the restoration of the city was completed; and it has been before remarked that the account of the rebuilding of the walls clearly intimates that the limits of the restored city were identical with that of the pre-existing period; but the topographical notices are not sufficiently clear to enable us to determine with any degree of accuracy or certainty the exact line of the walls. (See the attempts of Schulte, pp. 82—91; and Williams, Memoir, 111—121.) Only fifty years after its restoration Jerusalem passed into the power of a new master (B. C. 332), when, according to Josephus, the conqueror visited Jerusalem, after the triumph of the subjugation of Egypt. He accorded the inhabitants several important privileges (Josephus, Ant. xi. 8). On the death of Alexander, and the division of his conquests among his generals, it was the ill-fortune of Judeas to become the frontier province of the rival kingdoms of Egypt and Syria; and it was consequently seldom free from the miseries of war. Ptolemy Soter was the first to sustain it, but by treachery, according to Josephus (n. c. 305), who adds that he ruled over it with violence. (Ant. xli. 1.) But the distinctions which he conferred upon such of its inhabitants as he carried into Egypt, and the privileges which he granted to their high priest, Simon the son of Onias, do not bear out this representation (Jos. Ant. i. 2). But his successor, Ptolemy Philadelphus, of Macedon, did him full justice in his munificence, and the embassy of his favourite minister Aristeas, in conjunction with Andreas, the chief of his body-guard, to the chief priest Eleazar, furnishes us with an apparently authentic, and certainly genuine, account of the city in the middle of the third century before the Christian era, of which an outline may be here given. "It was situated in the midst of mountains, on a lofty hill, whose crest was crowned with the magnificent Temple, girt with three walls, seventy cubits high, of proportionate thickness and length corresponding to the extent of the building. . . . The Temple had an eastern aspect; its spacious courts, paved throughout with marble, covered immensely by holding large supplies of water, which rushed out by means of trivium to wash away the blood of the numerous sacrifices offered there on the festivals. . . . The foreigners viewed the Temple from a strong fortress on its north side, and describe the appearance which the city presented. . . . It was of moderate extent, being about forty furlongs in circuit. . . . The disposition of its towers resembled that of a theatre; some of the streets ran along the brow of the hill; others, lower down, but parallel to these, followed the course of the valley, and they were connected by cross streets. The city was built
on the sloping side of a hill, and the streets were furnished with raised pavements, along which some of the passengers walked on high, while others kept the lower path—a precaution adopted to secure those who were purified from the pollution which contact with anything unclean could have occasioned. . . . The place, too, was well adapted for mercantile pursuits, and abounded in artificers of various kinds. Here wine was sold, and spicery by the Jewish literature (Ant. xvi. 11). The erection of a theatre and circus, and the institution of quinquennial games in honour of the emperor, was to conform his city to a pagan capital. On the death of Herod and the banishment of his son Archelaus, Judea was reduced to a Roman province, within the prefecture of Syria, and subject to a subordinate governor, to whom was intrusted the power of life and death. His ordinary residence at Jerusalem was the fortress Antonia; but Caesarea now shared with Jerusalem the dignity of a metropolis. Coponius was the first procurator (A.D. 7), under the praefect Cyrenius. The only permanent monument left by the procurators is the aqueduct of Pontius Pilate (A.D. 26—36), which was built in the time of Herod the Great for that purpose. This aqueduct still exists, and conveys the water from the Fossus of Solomon to the Musa at Jerusalem (Holy City, vol. ii. pp. 498—501). The particulars of the siege by Titus, so fully detailed by Josephus, can only be briefly alluded to. It occupied nearly 100,000 men little short of five months; events have been commenced on the 14th of Xysticus (Ant. xi. 3), and terminated on the 2nd of October (September). This occurrence and confutation of the Upper City on the 8th of Gorpaeus (September). This is to be accounted for by the fact that, not only did each of the three walls, but also the fortress and Temple, require to be taken in detail, so that the operations involved five distinct sieges. The general's camp was established close to the Paphlagonian ridge, called the three legions, the twelfth; the tenth was encamped near the summit of Mount Olivet; the fifth opposite to the Hippo Tower, two stadia distant from it. The first assault was made apparently between the towers Hippicus and Paphlagonia, and the outer wall was carried on the fourteenth day of the month. This was led by Agrrippa I. He immediately demolished, and Titus encamped within the New City, on the traditional camping-ground of the Assyrians. Five days later, the second wall was carried at its northern quarter, but the Romans were repulsed, and only recaptured it after a stout resistance of three days. Four banks were then raised,—two against Antonia, and two against the northern wall of the Upper City. After seventeen days of incessant toil the Romans discovered that their banks had been undermined, and their engines were destroyed by fire. It was then resolved to surround the city with a wall, so as to form a complete block. The line of circumvaliation, 39 furlongs in circuit, with thirteen redoubts equally spaced, to accommodate 10,000 furlongs, was completed in three days. Four fresh banks were raised in two or three days, and the Antonia was carried two months after the occupation of the Lower City. Another month elapsed before they could succeed in gaining the Inner Sanctuary, when the Temple was accidentally fired by the Roman soldiers. The Upper City still held out. Two banks were next raised against its eastern wall over against the Temple. Twenty-eight days, and the Upper City was at length carried, a month after the Inner Sanctuary.
JERUSALEM.

This memorable siege has been thought worthy of special mention by Tacitus, and his lively abridgment, as it would appear, of Josephus's detailed narrative, must have served to raise his countrymen's ideas, both of the military prowess and of the powers of endurance of the Jews.

The city was wholly demolished except the three towers Hipposis, Phasaelis, and Mariamne, and no more than a western wall as would serve to protect the legions left there to garrison the place, and prevent any fresh insurrectionary movements among the Jews, who, soon returned and occupied the ruins. The palace of Herod on Mount Sion was probably converted into a barracks for their accommodation, as it had been before used for the same purpose. (Bell. Jud. viii. 1. § 1, 2. 15. § 5, 6. §§ 8-9.)

Sixty years after its destruction, Jerusalem was visited by the emperor Hadrian, who then conceived the idea of rebuilding the city, and left his friend and kinsman Aquila there to superintend the work. A.D. 130. (Epiphan. de Pont. et Mose. §§ 14, 15.) He had intended to colonise it with Roman veterans, but his project was defeated by the outbreak of the revolt headed by Barcocebas, his son Rufus, and his grandson Romulas. The insurgents first occupied the capital, and attempted to rebuild the Temple; they were speedily dislodged, and then held out in Bethar for nearly three years. [Bethan.] On the suppression of the revolt, the building of the city was proceeded with under the superintendence of Hadrian, with other public buildings, fitted it for a Roman population. The Chronicon Alexandrinum mentions τὸ δώδεκαμια καὶ τὸ Σιτεραν καὶ τὸ Ταμναρος καὶ τὸ Τραδμοναρος καὶ τὸ Βασδεμπουκαν καὶ τὸ Χαβμοναμιακαν καὶ τὸν Κοραιον. A temple of Jupiter Capitolinus, from whom the city derived its new name, once stood as a part of the Temple, and a tetrapyle of Venus was raised over the site of the Holy Sepulchre. The ruined Temple and city furnished materials for these buildings. The city was divided into seven quarters (ἡμιομοροι), each of which had its own warden (ἡμιομορος). Part of Mount Zion was excluded from the city, as at present, and was "ploughed as a field." (Jennerom, loc.; Itinerarium Hierosol. p. 592, ed. Wesseling.) The history of Asia Capitoline has been made the subject of distinct treatises by C. E. Dyling, "Aeliae Capitolineae Origines et Historia" (appended to his father's Observationes Sacrae, vol. v. p. 433, &c.), and by Dr. Münster, late Bishop of Copenhagen (translated by W. Walden Turner, and published in Dr. Robinson's Bibliotheca Sacra, p. 393, &c.), who have collected all the scattered notices of it as a pagan city. Its coins also belong to this period, and extend from the reign of Hadrian to Severus.

One of the former emperors (IMP. CAES. TRAIAN. M. A. N. A. AVG.), which exhibits Jupiter in a tetraestyle temple, with the legend COL. AEL. CAP., corresponds with that of the Temple of Venus in a similar temple, with the legend C. A. C. O. COL. AEL. CAP., no less distinctly confirms the Christian tradition that a shrine of Venus, on Mount Zion, was the Sepulchre of our Lord. (Vallant, Numismata Aen. Imper. in Cod. pr. i. p. 239; Eckhel, l. c. p. 442.) Under the emperor Constantine, Jerusalem, which had already become a favourite place of pilgrimage to the Christians, was furnished with new attractions by that emperor and his mother, and the erection of the Martyr of the Resurrection inaugurated a new era of the Holy City, which now recovered its ancient name, after it had apparently fallen into complete oblivion among the government officers in Palestine itself. (Euseb. de Marty. Palaeist. cap. ii.) The erection of the church was completed after the Council of Nicea, and occupied ten years. It was dedicated on the tricennalia of the emperor, A. D. 336. (Euseb. Vita Constantini, iii. 30-40, iv. 40-47.) Under the emperor Julian, the city again became an object of interest to the pagans, and the account of the defeat of Julian's attempts to rebuild the Temple is preserved by Ammianus Marcellinus, an unworthy witness (xxiii. 1: all the historical notices are collected by Bishop Warburton, in his work on the subject, entitled Julian.) In 451, the see of Jerusalem was erected into a patriarchate; and its subsequent history is chiefly occupied with the conflicting opinions of its incumbents on the subject of the heresies which troubled the church at that period. In the fourth century (cir. 358) the emperor Justinian emulated the zeal of his predecessor Constantine by the erection of churches and hospitals at Jerusalem, a complete account of which has been left by Procopius. (De Aedificiis Justiniani, v. 6.) In A. D. 614, the city with all its sacred places was desolated by the Persians under Chosroes II., burned, and conflagrations, with other public buildings, contemporary records, 90,000 Christians, of both sexes and of all ages, fell victims to the relentless fury of the Jews, who, to the number of 26,000, had followed the Persians from Galilee to Jerusalem to gratify their hereditary malice by the massacre of the Christians. The churches were immediately restored by Theodore and the city was visited by Heraclius (A. D. 629) after his defeat of the Persians. Five years later (A. D. 634) it was invested by the Saracens, and, after a defence of four months, capitulated to the khalif Omar in person; since which time it has followed the vicissitudes of the various dynasties that have swayed the destinies of Western Asia.

iii. It remains to add a few words concerning the modern city and its environs.

V. THE MODERN CITY.

El-Kodeh, the modern representative of its most ancient name Kadesnah, or Cadtryss, is "surrounded by a high and strong cut-stone wall, built on the solid rock, loop-holed throughout, varying from 25 to 60 feet in height, having no ditch." It was built by the sultan Suliman (A. D. 1542), as is declared by many inscriptions on the wall and gates. It is in circuit about 23 miles, and has four gates facing the four cardinal points. 1. The Jaffa Gate, on the west, called by the natives Bab-el-Hallil, i.e. the Hebron Gate. 2. The Damascus Gate, on the north, Bab-el-Img, the Gate of Jerusalem. 3. The Stephen's Gate, on the east, Bab-Sitti-Miriam, St. Mary's Gate. 4. The Sion Gate, on the south, Bab-em-Nebi Dalth, the Gate of the Prophet David. A fifth gate, on the south, near the month of the Tyropeon, is sometimes opened to facilitate the introduction of the water from a neighbouring well. A line, drawn from the Jaffa Gate to the Moak, along the course of the old wall, and another, cutting this at right angles, drawn from the Sion to the Damascus Gate, could divide the
city into the four quarters by which it is usually distinguished.

These four quarters are:—(1) The Armenian Quarter at the SW.; (2) the Jew’s Quarter at the SE.—both these being on Mount Zion; (3) the Christian Quarter at the NW.; and (4) the Mahometan Quarter, occupying the remainder of the city on the west and north of the great Haram-es-Sherif, the noble Sanctuary, which represents the ancient Temple area. The Moab, which occupies the grandest and once most venerated spot in the world, is, in its architectural design and proportions, as it were, the Temple itself. By the site of its site. It was built for Abd-el Melik Ibn-Marwan, of the house of Ommanyyah, the tenth khalif. It was commenced in A. D. 688, and completed in three years, and when the vicissitudes it has undergone within a space of nearly 1200 years are considered, it is perhaps rather a matter of astonishment that the fabric should have been preserved so entire that the adornment should exhibit in parts marks of ruinous decay.

The Church of Justinian,—now the Monastery El-Aksa,—to the south of the same area, is also a conspicuous object in the modern city; and the Church of the Holy Sepulchre, with its appendages, occupies a considerable space to the west. The eastern part of the remaining space is occupied by the Colleges or Hospitals of the Moslems, in the vicinity of the Monks, and with the Monasteries of the several Christian communities, of which the Patriarchal Convent of St. Constantin, belonging to the Greeks, near the Church of the Holy Sepulchre, and that of the Armenians, dedicated to St. James, on the highest part of Mount Zion, are the most considerable.

The population of the modern city has been variously estimated, some accounts stating it as low as 10,000, others as high as 30,000. It may be safely assumed as about 12,000, of which number nearly half are Moslems, the other half being composed of Jews and Christians in about equal proportions. The city is defended by a thick wall of masonry and is held by a small garrison. Most of the European nations are there represented by a consul.

VI. ENVIRONS.

A few sites of historical interest remain to be noticed in the environs of Jerusalem; as the valleys which surround the city have been sufficiently described at the commencement of the article, the mountains may here demand a few words.

The Scopus, which derived its name, as Josephus informs us, from the extensive view which it commanded of the surrounding country, is the high ground to the north of the city, beyond the Tomb of the Kings, 7 stadia from the city (B. J. ii. 19, § 4, v. 2, § 3), where both Cestius and Titus first encamped on their approach to the city (I.I. appt.). This range is now occupied by a village named Sakhul, the Semitic equivalent to the Greek scopus. On the east side of the city is the Mount of Olives, extending along the whole length of its eastern wall, composed of the three summits, of which the central is the highest, and is crowned with a pile of buildings occupying the spot where Helena, the mother of Constantine, built a Basilica in commemoration of the Ascension of our Lord (Eusebius, Vita Constantini, iii. 12, Laudes, § 9). A little below the southern summit is a remarkable gallery of sepulchral chambers arranged in a semi-
circle concentric with a circular funnel-shaped hall 24 feet in diameter, with which it is connected by three passages. They are popularly called “the Tombs of the Prophets,” but no satisfactory account has been given of these extensive excavations. (Plans are given by Schulz, Kraft, and Tobler, in the works referred to below.) Dr. Schulte was inclined to identify this with the rock esaepow, mentioned by Josephus in his account of the Wall of Circumvallation (B. J. v. 12), which he supposed to be a translation of the Latin Columbarium. (See Dict. art. Pessae, p. 561, b.)

A little to the south of this, still in the bed of the valley, are two remarkable monolithic sepulchral monuments, ascribed to Abaselm and Zechariah, exhibiting in their sculptured ornaments a mixture of Doric, Ionic, and Corinthian, which may possibly indicate a change in the original design in conformity with later taste. Connected with these are two series of sepulchral chambers, one immediately behind the Pillar of Abaselm, called by the name of Jehoshaphat; the other between the monoliths, named the Cave of St. James, which last is buried in a vault beneath the Doric temple called General View in Holy City, vol. ii. p. 449, and detailed plans, &c. in pp. 157, 158, with Professor Willia’s description.)

To the south of Mount Olives is another rocky eminence, to which tradition has assigned the name of the Mount of Offence, as “the hill before Jerusalem” where King Solomon erected altars for idolatry (I. Kings, i. 26). In the time of our Lord, of this mount, overhanging the Kedron, is the rock-hewn village of Siloam, chiefly composed of sepulchral excavations, much resembling a Columbarium, and most probably the rock Peristerion of Josephus. Immediately below this village, on the opposite side of the valley, is the intermitting Fountain of the Virgin, at a considerable depth below the bed of the valley, with a descent of many steps hewn in the rock. Its supply of water is very scanty, and what is not drawn off here runs through the rocky ridge of Ophel, by an irregular passage, to the Pool of Siloam in the month of the Tyropeon. This pool, which is mentioned in the New Testament (St. John, xi. 3, &c.) is now filled with earth and cultivated as a garden, a small tank with columns built into its side serves the purpose of a pool, and represents the “quadriporticum” of the Bordeaux Pilgrim (A. D. 333), who also mentions Alia piscina grandis foras.” This was probably identical with Hezekiah’s Pool “between the two walls of Jerusalem’” (xxii. 11), as it certainly is with “the Pool of Siloam” by the king’s garden in Nehemiah (iii. 15, iv. 14; comp. 2 Kings, xxv. 4). The arguments are fully stated in the Holy City, vol. ii. pp. 474—480. M. de Saulcy accepts the identification. (The king’s gardens are still represented in a verdant spot, where the concurrence of the three valleys, Hinnom, Jehoshaphat and Tyropeon,
forms a small plain, which is cultivated by the villagers of Siloam.

In the mouth of the southern valley which forms the continuation of these three valleys towards the Dead Sea, is a deep well, variously called the Well of Nahaniah, or Job, or Joshua; supposed to be identical with Enrogel, "the well of the spies," mentioned in the borders of Judah and Benjamin, and elsewhere (Josh. xv. 7, xvii. 16; 2 Sam. xvii. 17; 1 Kings, i. 9).

On the opposite side of the valley, over against the Mount of Olives and the hills which face it, Mount Sion, called the Hill of Evil Counsel, from a tradition that the house of Annas the high-priest, father-in-law to Caiphas (St. John, xviii. 13, 24), once occupied this site. There is a curious coincidence with this in a notice of Josephus, who, in his account of the wall of circumvallation, mentions the monument of Ananas in this part (v. 12, § 27); which monument has lately been identified with an ancient rock-grave of a higher class,—the Acolada of ecclesiastical tradition,—a little below the ruins on this hill; which is again attested to be "the Potter's Field," by a stratum of white clay, which is still worked. (Schults, Jerusalem, p. 39.)

This grave is one of a series of sepulchres excavated in this hill, which are several bearing Greek inscriptions, of which all that is clearly intelligible are the words THC. ATTAC. C10,10, indicating that they belonged to inhabitants or communities in Jerusalem. (See the Inscriptions in Kraft, and the comments on his decipherments in the Holy City, Memoir, pp. 56 — 57.)

Higher up the Valley of Hinnom is a large and very ancient pool, now called the Sultan's (Birket-es-Salim), from the fact that it was repaired, and adorned with a handsome fountain, by Sultan Suliman Ibn-Selem, 1520—1566, the builder of the present city-wall. It is, however, not only mentioned in the medieval notices of the city, but is connected by Niahmiah with another antiquity in the vicinity of David's Tomb. On Mount Sion, immediately above, and to the east of the pool, is a large and irregular mass of building, supposed by Christians, Jews, and Moslems, to contain the Tomb of David, and of his successors the kings of Judah. It has been said that M. de Sanjcy has attempted an elaborate proof of the identity of the Tomb of the Kings, at the head of the Valley of Jehoshaphat, with the Tomb of David. His theory is inadmissible; for it is clear, from the notices of Niahmiah, that the Sepulchres of David were not far distant from the Pool of "Siloh," close to "the pool that was made," and, consequently, on that part of Mount Sion where they are now shown. (Neh. iii. 16—19.) The memory of David's tomb was still preserved until the destruction of Jerusalem (Josephus, Ant. xiii. 8, § 4, xvi. 7, § 1; Acts, ii. 29), and is noticed occasionally in the middle ages. (See Holy City, vol. ii. pp. 505—513.) In the same pile of buildings, now occupied by the Moslems, is shown the Conoculum cum quo in the Liber community in which our Lord is said to have instituted the Last Supper. Ephraimus mentions that this church was standing when Hadrian visited Jerusalem. (Pond. de Mens. cap. xiv.), and that St. Cyril delivered some of his catechetical lectures (Catech. xvi. 4). It was in this part of the Upper City that Titus spared the houses and city wall to form barracks for the soldiers of the garrison. (Vide supra.)

Above the Pool of the Sultan, the Aqueduct of Pontias Pilate, already mentioned, crosses the Valley of Hinnom on nine low arches; and, being carried along the side of Mount Sion, crosses the Tyropoeon by the causeway into the Haram. The water is conveyed from Ethan, or the Pool of Solomon, about two miles south of Bethlehem. (Josephus, B. J. ii. § 4.)

The mention of this aqueduct recalls a notice of Strabo, which has been perpetually illustrated in the history of the city; viz., the fact that it was μην ἐθνος ἡμῶν ἔσοδον ἐδοτε ἐπὶ πατέλιοι ἄθροισιν . . . . αὐτός μην ἐθνος, οὗτος τό ἀτόκες γέροντας ἄγαμοι λατρείαν καὶ δέοντας. (xvii. p. 720.) Whence this abundant supply was derived it is extremely difficult to imagine; and, of course, the aqueduct just mentioned would be immediately cut off in case of siege; and, without this, the inhabitants of the modern city are almost entirely dependent on rain-water. But the accounts of the various sieges, and the other historical notices, as well as existing remains, all testify to the fact that there was a copious source of living water introduced into the city from without, by extensive subterranean aqueducts. The subject requires, and would repay, a more accurate and careful investigation. (See Holy City, vol. ii. p. 453—505.)

Besides the other authorities cited or referred to in the course of this article, the principal modern sources for the topography of Jerusalem are the following:—Dr. Robinson's Biblical Researches i. and ii; Williams's Holy City; Dr. Wilson's Land of the Bible; Dr. E. G. Schults, Jerusalem; W. Kraft, Die Topographie Jerusalem; Carl Ritter, Die Erdkunde von Asien, &c., Palastina, Berlin, 1852, pp. 297—508; Dr. Titus Tobler, Golgota, 1851; Die Siloakquelle und die Ostberg, 1852; Dunkelh. aus Jerusalem, 1853; F. de Sanjcy, Voyages autour du Mar Mort, tom. 2.

[G. W.]

COINS OF AELIA CAPITOLINA (JERUSALEM).

IESPUS. [JACOBANI.]

JEZREEL. [EDRAKIA.]

IGILGILI [Iyelgil, Ptol. Ιγιλι] a sea-port of Mauretanitiae Caesariensis, on the Sinus Numidicus, made a Roman colony by Augustus. It stands on a headland, on the E. side of which a natural roadstead is formed by a reef of rocks running parallel to the shore; and it was probably in ancient times the emporium of the surrounding country. (Itin. Ant. p. 18; Plin. v. 2. a 1; Ptol. iv. 2. § 11; Ammian. Marc. xxix. 6; Tab. Ptolem. Shaw, Travels, p. 45; Barth, Wanderungen, &c. p. 66.) [P. S.]

IGILIJUM (Cipillo), an island off the coast of
IGELIUS.

IGELIUS, IGNETES. [R. G. L.]

IGUVIUM (Iuvium; Etr. Iuvirinus; Gubbio), an ancient and important town of Umbria, situated on the W. slope of the Apennines, but not far from their central ridge, and near the mouth of the river Umbra, on the Via Postumia. It is sufficiently attested by its coins, as well as by a remarkable monument presently to be noticed; but we find no mention of it in history previous to the period of its subjection to Rome, and we only learn incidentally from Cicero that it enjoyed the privileged condition of a "federata civitas." It appears that the terms of its treaty were of a highly favourable character. (Cic. pro Balb. 20, where the reading of the older editions, "Fulgiatium," is certainly erroneous: see Orell, ad loc.) The first mention of its name occurs in Livy (xlv. 43, where there is no doubt we should read Iguvium for "Iltuvium") as the place selected by the Roman senate for the confinement of the Illyrian king Tetricus, and to which the people of Spoleto refused to receive them. Its natural strength of position, which was evidently the cause of its selection on this occasion, led also to its bearing a conspicuous part in the beginning of the civil war between Caesar and Pompey, when it was occupied by the praetor Minucius Thermus with five cohorts; but on the approach of the enemy, Thermus, who was apprehensive of a revolt of the citizens, abandoned the town without resistance. (Cass. B. C. i. 12; Cic. ad Att. vii. 18, b.) Under the Roman dominion Iguvium seems to have lapsed into the condition of an ordinary municipal town: we find it noticed in an inscription as one of the "xx populi Umbriae" (Orell. Inscr. 98), as well as by Pliny and Ptolomy (Plin. iii. 14. s. 19; Ptol. iii. 1. § 33), and it is probably that in Strabo also we should read "Iuguvium" ("Iuguvium") for the corrupt name "Iuropium" of the MSS. and earlier editions. (Strab. v. p. 327; Clever. Ital. p. 326.) But its best and most important position in the mountains, and at a distance of some miles from the line of the Via Flaminia, was probably unfavourable to its prosperity, and it does not seem to have been a place of much importance. Silius Italicus speaks of it as very subject to fogs (viii. 459). It early became the see of a bishop, and probably the first to be consecrated to three dioceses, with which that general sailed for Massilia. (Cass. B. C. i. 34; Plin. iii. 6. s. 12; Mele. ii. 7. § 19.) It is evident, therefore, that it was inhabited in ancient as well as modern times. [E. H. B.]

IGUVIUM.

ETURIA, directly opposite to the Mons Argentarius and the port of Cassa. It is, next to Ilva, the most considerable of the islands near the coast of Etruria, being 6 miles long by about 5 in breadth, and consists of a group of mountains of considerable elevation. Hence Hirtius speaks of its "silvosa castrina." (Istn. i. 925.) From that author we learn that, when Rome was taken by Alaric (A. D. 410), a number of fugitives from the city took refuge in Igelium, the insular position of which afforded them complete security. Caesar also mentions it, during the Civil War, in conjunction with the neighbouring ports. Hence it is in the thoroughfare presented to Diocletian, with which that general sailed for Massilia. (Cass. B. C. i. 34; Plin. iii. 6. s. 12; Mele. ii. 7. § 19.) It is evident, therefore, that it was inhabited in ancient as well as modern times. [H. R. B.]

IGELIUS, IGNETES, in European Sarmatia, mentioned by Ptolemy as lying between the Stavani and Cossobon, and to the east of the Vesdii (iii. 5. § 31). Now the Stavani lay south of the Galindae and Sudini, populations of which the locality is known to be that of the Galindae and Sudoviae of the middle ages, i.e., the parts about the Scripading see in East Prussia. This place would place the Iguiliones in the southern part of Lithuania, or in parts of Grodno, Podolie, and Volhynia, and in the north of the Prussians of the thirteenth century, — there or thereabouts. Zeus has allowed himself to consider some such form as "Iugryiones" as the true reading; and, so doing, identifies the names, as well as the localities, of the two populations ("Iugryiones, Jaseniac," — the varieties of form being very numerous. The Jaseniaci — Lithuanians — Lithuanians and as opposed to the Slavonians, and in this lies their ethnological importance, inasmuch as the southward extension of that branch of the Sarmatic stock is undetermined. (See Zeus, s. e. Jaseniac.) [R. G. L.]

IGUVIUM (Iuvium; Etr. Iuvirinus; Gubbio), an ancient and important town of Umbria, situated on the W. slope of the Apennines, but not far from their central ridge, and near the mouth of the river Umbra, on the Via Postumia. It is sufficiently attested by its coins, as well as by a remarkable monument presently to be noticed; but we find no mention of it in history previous to the period of its subjection to Rome, and we only learn incidentally from Cicero that it enjoyed the privileged condition of a "federata civitas." It appears that the terms of its treaty were of a highly favourable character. (Cic. pro Balb. 20, where the reading of the older editions, "Fulgiatium," is certainly erroneous: see Orell, ad loc.) The first mention of its name occurs in Livy (xlv. 43, where there is no doubt we should read Iguvium for "Iltuvium") as the place selected by the Roman senate for the confinement of the Illyrian king Tetricus, and to which the people of Spoleto refused to receive them. Its natural strength of position, which was evidently the cause of its selection on this occasion, led also to its bearing a conspicuous part in the beginning of the civil war between Caesar and Pompey, when it was occupied by the praetor Minucius Thermus with five cohorts; but on the approach of the enemy, Thermus, who was apprehensive of a revolt of the citizens, abandoned the town without resistance. (Cass. B. C. i. 12; Cic. ad Att. vii. 18, b.) Under the Roman dominion Iguvium seems to have lapsed into the condition of an ordinary municipal town: we find it noticed in an inscription as one of the "xx populi Umbriae" (Orell. Inscr. 98), as well as by Pliny and Ptolomy (Plin. iii. 14. s. 19; Ptol. iii. 1. § 33), and it is probably that in Strabo also we should read "Iuguvium" ("Iuguvium") for the corrupt name "Iuropium" of the MSS. and earlier editions. (Strab. v. p. 327; Clever. Ital. p. 326.) But its best and most important position in the mountains, and at a distance of some miles from the line of the Via Flaminia, was probably unfavourable to its prosperity, and it does not seem to have been a place of much importance. Silius Italicus speaks of it as very subject to fogs (viii. 459). It early became the see of a bishop, and probably the first to be consecrated to three dioceses, with which that general sailed for Massilia. This is represented in the Tabula Peutingeriana as existing at the highest point of the pass by which it crosses the main ridge of the Apennines, some vestiges of an ancient temple are still visible, which are supposed with good reason to be those of the temple of Jupiter Apenninus. This is represented in the Tabula Peutingeriana as existing at the highest point of the pass, and is noticed also by Claudian in describing the progress of the army on the Via Flaminia. (Claud. de VI. Cons. Hom. 504; Tab. Peut.) The oracle consulted by the emperor Claudius « in Apennino » (Trebb. Poll. Claud. 10) may perhaps have reference to the same spot. Many bronze idols and other small objects of antiquity have been found near the ruins in question; but a far more important discovery was made in 1844, when a series of the celebrated tables of bronze, commonly known as the Tabulae Eugubinae, which are still preserved in the city of Gubbio. These tables, which are seven in number, contain long inscriptions, four of which are in Etruscan characters, two in Latin, and one partially in Etruscan and partially in Latin characters; but the language is in all cases apparently the same, and is what is known as the language of the genuine Etruscan monuments on the one hand, as well as from Latin on the other, though exhibiting strong traces of affinity with the older Latin forms, as well as with the existing remains of the Oscan dialects. There can be no doubt that the language which we here find is that of the Umbrians themselves, who are represented as the leading writers on the ancient national life of the Etruscans and the Sabellian races. The ethnological and linguistic inferences from these important monuments will be more fully considered under the article UMBRIA. It is only of late years that they have been investigated with care; early antiquaries having formed the most extravagant theories as to their meaning: Lanzl had elaborated one of the first pointing out that the mythologically related only to certain sacrificial and other religious rites to be celebrated at the temple of Jupiter by the Iguianae themselves and some neighbouring communities. The interpretation has since been carried out, as far as our imperfect knowledge will permit, by Lepsius, Grotefend, and still more recently in the works of the distinguished scholar Kirchhoff. (Lanzer, Saggio di Lingua Etrusca, vol. iii. pp. 657—768; Lepsius, de Tabulis Eugubinis, 1833; Inscriptiones Umbriacae et Oscas, Lips. 1841; Grotefend, Rudimenta Linguas Umbriacae, Hannov. 1835—1839; Aufrecht u. Kirchhoff, Die Umbrianische Sprach. Penkmler, 4to. Berlin, 1849.) In the still im-
perfect state of our knowledge of the inscriptions in question, it is somewhat hazardous to draw from them positive conclusions as to proper names; but it seems that we may fairly infer the mention of several small towns or communities in the immediate neighborhood of Iguvium. These were, however, in all probability, independent communities, or villages dependent upon Iguvium itself. Of this description were: Aueranu or Acerronia (probably answering to the Latin Aquilonia), Clavernia (in Lat. Clavenia), Curia or Cureia, Casium, Juvisium, Muscia, Pietrum (7), Tarrane, and Trebia or Trevla. The last of these evidently corresponds to the Latin name Trebia or Trevla, and may refer to the Umbrian town of that name; the Curiates of the inscriptions are evidently the same with the Curiates of Pliny, mentioned by him among the extinct communities of Umbria (Plin. iii. 14. s. 19); while the names of Muscia and Casium are said to be still retained by two villages called Muspet and Casilio in the immediate neighborhood of Gabbius. Chenaenia, another neighboring village, is perhaps the Claverna of the Table.

The coins of Iguvium, which are of bronze, and of large size (so that they must be anterior to the reduction of the Italian Aes), have the legend IUVVNI, which is probably the original form of the name, and is found in the Tables, though we here meet also with the softened and probably later form "Iuvvina," or "Iuvvina." [E. B. J.]

ILA, in Scotland, mentioned by Ptolemy (iii. 3. § 5) as the first river south of the Berubium Promontorium. [R. C. G. L.]

ILAUGATAE. [HISPANIA; ILERGETES.]

ILACURIS. [CARTHAG.]

ILAGUS, a river of Rheta Secunda, flowing, and emptying itself into the Danube. (Ptolemy, loc. cit. 386, where the common reading is Irgus; others read Irugas, and regard it as the same as the river Atagis ("Arages") mentioned by Strabo, iv. p. 207, with Græck's note, vol. i. p. 356.) It would, however, appear that Irgus and Irugas were two different rivers, and in the latter case Irgus find, with a slight change of name, a river "Irgus Lillas" ("Utas M. Flavius"). In the modern Iler, and another, Yarache (Act. S. Cassiani, ap. Reuchl. Annal. Sabion. iv. 7), the modern Iesach, which flows in a southern direction, and empties itself into the Alseus. [L. S.]

ILAT'TIA ("Aitria, Polyb. op. Steph. B. a. e.), a town of Crete, which is probably the same as the Elatus of Pindar (iv. 12). Some editions read Catus, incorrectly classed by him among the inland towns. (Hec. Kret., vol. i. p. 432.) [E. B. J.]

ILDUM. [EDETANI.]

ILEI. [HEREMONCE.]

ILEOSCA. [OCASE.]

ILERCA'ONES ("Alercaones", Pol. ii. 6. §§ 16, 64; Beroeennes, Liv. xxii. 21; Illurivones, Cass. B. C. i. 80; 75; in this, as in so many other Spanish names, the e and g are interchangeable), a people of Hispania Tarraconensis, occupying that portion of the sea-coast of Edetania which lay between the rivers Ubius and Iliricus. Their exact boundaries appear to have been a little to the N. of each of these rivers. They possessed the town of Dertona on the left bank of the Iberus, and it was their chief city. [DERTORA.] Their other towns, according to Ptolemy, were: — ADEBA ("Adbea; Auguste P."); Tiarullia ("Tiarovilia"); Tari Julenes, ap. Pinn. iii. s. 4. t. Trajannus).
ILICL.

ILETIANDI ET CELTHIBERI S. S. VHERONES on the W., on the N. and NE. the small peoples at the foot of the Pyrennes, as the JACTETANI, CASTETANI, AURIBONI, and CERRETANI, and on the SE. the COSITANI. Besides IERADA, their chief cities were:—the colony of CELMA (Melisa, near Xeta), OSCA (Huesca), famous in the story of SERTORIUS; and ATHANAGALA, which LIVY (XXI. 61) makes their capital, but which no other writer names. On the great road from Italy into the N. of Spain, recorded from TARRACO, 92 M. P.; TOLUSD, 32 M. P., in the conventus of CASARASGUNA, and with the civitas ROMANA (Plin.); PERUTUS, 18 M. P. (Pertusa, on the Alosadre); OSCA, 19 M. P., whence it was 46 M. P. to CASARASGUNA (Hist. Ant. p. 391).

On a loop of the same road, starting from CASARASGUNA, were:—GALLICUM, 15 M. P., on the river Gallicus (Zumara, on the Galligot); BORTINIANI, 18 M. P. (Botrientina, Pot.; Torino); OSCA, 12 M. P.; CAUS, 29 M. P.; MENDICULIA, 19 M. P. (probably Monzon); IERADA, 22 M.P. (Hist. Ant. pp. 451, 452). On the road from CASARASGUNA, up the valley of the Gallicus, to BENEZNUM (Ordesa) in Gallus, were, FORUM GALICUM, 33 M. P., and COMMELIUM, 22 M. P. (Reiria), whence it was 24 M. P. to the summit of the pass over the Pyrenes (Hist. Ant. p. 452).

Besides these places, Ptolemy mentions BERGUSIA (Berga) or Balaguer), on the Soricia; BERGIDIUM (Bardenas), EROGA (Erga); SUCOCA (Soucesorca); GALICIA FLAVIA (pulchar Flavia; Fraga) and one or more other names, a name also found on coins (Sestini, Med. Jap. 1899), while the same coins bear the name of ARESNES, and inscriptions found near the Soricia have AERESNICA and JESERESNICA (Muratori, Not. Thea. p. 1021, Noa. 2, 3; Spon, Misc. Erud. Ant. p. 188), with which the BERMESNES or Pines may perhaps have some connection. BERSAL is mentioned on coins (Sestini, p. 107), and OCTOPUSCA (prob. La Granja, at the confluence of the Segre and the Ebro) by Caesar (B. C. i. 61; Ubert, vol. ii. pt. 1. pp. 450—453).

ILICLII. [ELEUSIUM.]

ILICLII or ILICLII (Hist. Ant. p. 401; Tacitus § 1; Asteris, Pot. ii. 6. § 63; Echela), an inland city of the Celtiberians, on the river Ares, a part of the (Alemavica Ares, Pot. l. c. § 14), lying just in the middle of the bay formed by the Pr. Saturni and Diana, which was called Ilici-Tanzus Sinus. The city itself stood at the distance of 59 M. from Carthago Nova, on the great road to TARRACO (Hist. Ant. p. 401), and was a Colonia sinuata, with the jus Italicum (Plin. iii. ill. 3. 4; Paulinus, Dig. viii. de Com.). Its coins are extant of the period of the empire (Flores, Med. de Esp. vol. ii. p. 458; Sestini, p. 186; Monelet, vol. i. p. 45, Suppl. vol. i. p. 90; Echelin, vol. i. p. 51). Pliny adds to his mention of the place: eos somnium victorius Scultani. (Ubert, vol. ii. pt. 1. pp. 402, 403. T. S.)

ILESINES ('Laves, Paus.), a people of the interior of Sardinia, who appear to have been one of the most considerable of the mountain tribes in that island. Mela calls them "antiquissimo in ea populorum," and Pliny also mentions them among the "celeriberrimi populorum" of Sardinia. (Mel. ii. 7. § 19; Plin. iii. 7. s. 13.) Pausanias, who terms them 'Laves, distinctly ascribes to them a Trojan origin, and derives them from a portion of the com-
ILIPLA.

2. [ILIPLA.]

ILIPLA (Coeus; ILIPIA, Ilium. Ant. p. 432; probably the ΙΛΙΠΛΑ of Ptol. ii. 4. § 12: Nicols), a city of the Tartedani, in the W. of Hispania Baetica, on the high road from Hispania to the mouth of the Anas. (Caro, Antiq. Hisp. iii. 1. 18. 1; Caro, Observ. ibid. p. 471, vol. ii. p. 374.)

ILIPLA. 1. Surnamed LIMUS by Pliny (iii. 1. 3.5) and MAGNA by Ptolemy (᾿ΙΛΙΠΛΑ ΜΕΓΑΛΗ, ii. 4. § 12), a city of the Tardulii, in Baetica, between the Basilus and the coast, perhaps also Loca, Eckel, vol. ii. p. 22.

ILIPLA MONS (‘ΙΛΙΠΛΟΣ), a range of mountains in Baetica, S. of the Basilus, mentioned only by Ptolemy (ii. 4. § 12), specialized by I. L. S. 1.9.24, and by Strabo (xiv. p. 817; Ἐπισκόπης, Ptol. iv. 5. § 73), a city of the Egyptian Heptanomia, 30 miles NE. of Apollonia Magna. It was situated on the eastern bank of the Nile, in lat. 23° 7′ N. According to Plutarch (Isae et Oor. c. 78), Ilithyia contained a temple dedicated to Bubasta, to whom, as to the Taurian Artemis, human victims were even, at a comparatively recent period, sacrificed. A bas-relief (Minot, p. 394, seq.) discovered in the temple of Bubasta at El-Kab representing such a sacrifice, seems to confirm Plutarch's statement. The practice of human sacrifice among the Aegyptians is, indeed, called in question by Herodotus (ii. 4. 32); yet that it once prevailed among them is rendered probable by Manetho's statement of a king named Amosis having abolished the custom, and substituted an ox image for the human victim. (Porphyry. de Abstinent. ii. p. 223; Euseb. Prorp. Euchen. iv. 16; comp. Ovid, Fast. v. 631.) The singularity in Plutarch's story is the recent impotence of the impotent sacrifices. [W. B. D.]

ILIURGIS. [Iliuirijs.]

ILIUM, ILIUS (Ἰλιος, Ἡ Ιλιος; Εἴκ. Ιλιός, f Ἡ Ιλία), sometimes also called Troja (Τροία), whence the inhabitants are commonly called Troes, and in the Latin writers Trojani. The existence of this city, to which we commonly give the name of Troy, cannot be doubted any more than the simple fact of the Trojan War, which was believed to have ended with the capture and destruction of the city after a war of ten years, B. C. 1184. Troy was the principal city of the country called Troas. As the city has been the subject of curious inquiry, both in ancient and modern times, it will be necessary, in the first instance, to collect and analyse the statements of the ancient writers; and to follow up this discussion by an account of the investigations of modern scholars and travellers to identify the site of the famous city. Our most ancient authority are the Homeric poems; but we must at the very outset remark, that we cannot place too much respect as a careful and accurate topographer; but that, admitting his general accuracy, there may yet be points on which he cannot be taken to account as if it had been his professed object to communicate information on the topography of Troy.

The city of Ilium was situated on a rising ground, called Eryx, which is somewhat above the sea-level. (Strabo, xii. p. 472; Ptolemy, iv. 16. § 28; Sestini, p. 58; Eckel, vol. ii. p. 22.)

ILIUM. 1. Surnamed LIMUS by Pliny (iii. 1. 3. 5) and MAGNA by Ptolemy (ἫΙΠΛΑ ΜΕΓΑΛΗ, ii. 4. § 12), a city of the Tardulii, in Baetica, between the Basilus and the coast, perhaps also Loca. (Eckel, vol. ii. pt. 1. p. 362.)

2. ILISSUS (Ἀττικα, p. 382, a.)

ILISTRA (Ἰλίστρα: Ἰλίστρος), a town in Lycaonia, on the road from Laranda to Issaura, which is rill in existence. (Hieroc. p. 675; Concil. Ephes. p. 542; Concil. Chalcedon p. 674; Hamilton, Researches vol. ii. p. 238.)

ILITCHIA (Ἐλιθτεία, Strab. xviii. p. 817; Ἐλιζτιας, Ptol. iv. 5. § 73), a city of the Egyptian Heptanomia, 30 miles NE. of Apollonia Magna. It was situated on the eastern bank of the Nile, in lat. 23° 3′ N. According to Plutarch (Isae et Oor. c. 78), Ilithyia contained a temple dedicated to Bubasta, to whom, as to the Taurian Artemis, human victims were even, at a comparatively recent period, sacrificed. A bas-relief (Minot, p. 394, seq.) discovered in the temple of Bubasta at El-Kab representing such a sacrifice, seems to confirm Plutarch's statement. The practice of human sacrifice among the Aegyptians is, indeed, called in question by Herodotus (ii. 4. 32); yet that it once prevailed among them is rendered probable by Manetho's statement of a king named Amosis having abolished the custom, and substituted an ox image for the human victim. (Porphyry. de Abstinent. ii. p. 223; Euseb. Prorp. Euchen. iv. 16; comp. Ovid, Fast. v. 631.) The singularity in Plutarch's story is the recent impotence of the impotent sacrifices. [W. B. D.]

ILIURGIS. [Iliuirijs.]

ILIUM, ILIUS (Ἰλιος, Ἡ Ιλιος; Εἴκ. Ιλιός, f Ἡ Ιλία), sometimes also called Troja (Τροία), whence the inhabitants are commonly called Troes, and in the Latin writers Trojani. (Porphyry. de Abstinent. ii. p. 223; Euseb. Prorp. Euchen. iv. 16; comp. Ovid, Fast. v. 631.) The singularity in Plutarch's story is the recent impotence of the impotent sacrifices. [W. B. D.]
ILILUM.

It is also certain that in the time of Alexander New Ililum did exist, and was inhabited by Aeolians. (Debustm. c. Aristotel. p. 671; Arrian, Abol. i. 11. § 7; Strab. xiii. p. 593, foll.) This new town, which is distinguished by Strabo from the famous ancient city, was not more than 42 stadia, or less than two English miles, distant from the sea, and was built upon the spur of a projecting edge of Ida, separating the basins of the Scamander and Simois. It was at first a place of not much importance (Strab. xiii. pp. 593, 601), but increased in the course of time, and was successively extended and embellished by Hiero of Magnesia, and Julius Caesar. During the Mithridatic War New Ililum was taken by Fimbria, in B.C. 85, on which occasion it suffered greatly. (Strab. xiii. p. 594; Appian, Mithrid. 53; Liv. Epit. lxxiii.) It is said to have been once destroyed before that time, by one Charidemus (Plut. Sertor. 1.; Polygen. iii. 14): but we neither know when this happened, nor who this Charidemus was. Solla, however, favoured the town extremely, in consequence of which it rose, under the Roman dominion, to considerable prosperity, and enjoyed exemption from all taxes. (Plin. v. 33.) These were the advantages which the place owed to the tradition that it occupied the identical site of the ancient and holy city of Troy: for, it may here be observed, that not only of Corcyra or Rome ever doubted the identity of the site of Old and New Ililum until the time of Demetrius of Scæpsis, and Strabo, who adopted his views; and that, even afterwards, the popular belief among the people of Ililum itself, as well as throughout the world generally, remained as firmly established as if the criticism of Demetrius and Strabo had never been heard of. These critics were led to look for Old Ililum farther inland, because they considered the space between New Ililum and the coast far too small to have been the scene of all the great exploits described in the Iliad; and, although they are obliged to own that not a vestige of Old Ililum was to be seen anywhere, yet they assumed that it must have been situated about 42 stadia from the sea coast. They accordingly fixed upon a spot which at the time bore the name of Tavonus, near this view, with its assumption of Old and New Ililum as two distinct places, does not in any way remove the difficulties which it is intended to remove: for the space will still be found far too narrow, not to mention that it demands of the poet what can be demanded only of a geographer or an historian. On these grounds we, in common with the general belief of all antiquity, which has also found able advocates among modern critics, assume that Old and New Ililum occupied the same site. The statements in the Iliad which appear irreconcilable with this view will disappear if we bear in mind that we have to do with an entirely legendary story, which is little concord in geographical accuracy. The site of New Ililum (according to our view, identical with that of Old Ililum) is acknowledged by all modern inquirers and travellers to be the spot covered with ruins now called Kissaúrâ, between the villages of Kum-koi, Kalli-fâtik, and Töbhâlk, a little to the west of the last-mentioned place, and not far from the point where the Simois once joined the Scamander. Those who maintain that Old Ililum was situated in a different locality cannot, of course, be expected to agree in their opinions as to its actual site, it being impossible to fix upon any one spot agreeing in every particular with the poet's description. Respecting the nationality of the inhabitants of Ililum, we shall have to speak in the article Troas. (Comp. Sph. de Agro Trojan. Lipseis, 1814, 8vo; Rennell, Observations on the Topography of the Plain of Troy, London, 1814, 4to; Choiseul-Gouffier, Voyage Philologique de la Grèce, Paris, 1820, vol. ii. p. 177, foll.; Leake, Asia Minor, p. 275, foll.; Grote, Hist. of Greece, vol. i. p. 436, foll.; Eckenbrecher, über die Lage des Homeriischen Ilium, Rhein. Mus. Nene Folge, vol. ii. pp. 1—49, where a very good plan of the district of Ilium is given. See also, Welcker, Kleine Schriften, vol. ii. p. 1, foll.; M. Cicareni, Dissertations sur la Topographie du Trojan War, Edinburgh, 1822; Mauduit, Découvertes dans le Trocadé, &c., Paris & Londres, 1840.) [L.S.]

ILLIBERIS.

ILLIBERIS (Τιλιβερίς, Ptol. ii. 4. § 11), or ILLIBERI LIBERINI (Pill. iii. i. 3.), one of the four divisions of the Taurulus, in Hispasia Baetica, between the Baeticus and the coast, is identified by inscriptions with Granada. It is probably the Elibyres (Ἐλιβύρης) of Stephanius Byzantinus. (Isocr. Gruter, p. 277, No. 3; Flores, Exp. S. vol. v. p. 4, vol. xii. p. 81; Mentelle, Geogr. Comp. Exp. Med. p. 163; Coins ap. Flores, Med. vol. iii. p. 75; Mionnet, vol. i. p. 15, Suppl. vol. i. p. 28 Ekhel, vol. i. p. 22.) [P.S.]

COIN OF ILLIBERIS (IN SPAIN).

ILLIBERIS or ILLIBERIS (Τιλιβερίς), a town in the country of the Sordones, or Sordones, or Sordi, in Gallia Aquitania. The first place that Hannibal came to after passing through the Eastern Pyrenees was Illiberis. (Liv. xxii. 24.) He must have passed by Bellegarde. Illiberis was near a small river Illiberis, which is south of another small stream, the Ruscino, which had also on it a town named Ruscino. (Strab. p. 162.) Mela (i. 5) and Pliny (iii. 4) speak of Illiberis as having once been a great place, but in their time being decayed. The road in the Antonins Itin. from Aurelia (Arses) through the Pyrenees to Juncaria passes from Ruscino (Castell-Roussillon) to Ad Centuriones, and omits Illiberis; but the Table places Illiberis between Ruscino and Ad Centurarium, which is the same place as the Ad Centuriones of the Itin. [CENTURIONES, AD. ] Illiberis is Elmes, or the river Lekh (L thumbs) Illiberis, or Illiberis is an Iberian name. There is another place, Climberis, on the Gallic side of the Pyrenees, which has the same termination. [AUSRI.] It is said that berri, in the Basque, means a town. The site of Illiberis is fixed at Elmes by the Itin.; and we find an explanation of
The name Elee in the fact that either the name of Illiberis was changed to Helena or Elena, or Helena was a camp or station near it. Constans was murdered by Magnentius “not far from the Hispanicae, in a castrum named Helena.” (Epist. x. 9.) Victor’s Epitome (c. 41) describes Helena as a town very near to the Spanishae, and so it is said (x. 42; and Orosius, vii. 29). It is said by some writers that Helena was so named after the place was restored by Constantine’s mother Helena, or by Constantine, or by some of his children; but the evidence of this is not given. The river of Illiberis is the Ticmar of Mela, and Tacitus of Fliny, now the Tejo. In the text of Ptolemy (ii. 10) the name of the river is the river Illiberis.

Some geographers have supposed Illiberis to be Collosa, near Port Vendres, which is a plain mistake. [G. L.]

ILLICII. [ILLICII.

ILLITURGIS, ILLITURGI, or ILLITURGI, or preser. ILLITURGIA of Ptolemy, ii. 4, § 9, as well as the ILLITURGA of Polybius, ap. Steph. B. a. r., and the ILITURGA of Appian, H史. 32; EIA. Illigratini), a considerable city of Hispania Baetica, situated on a steep rock on the N. side of the Baetis, on the road from Corduba to Castulo, 20 M. P. from the latter, and five days’ march from Carthago Nova. In the Second Punic War, it was given over to the Romans, like its neighbours, Castulo and Mentosa, and endured two sieges by the Carthaginians, both of which were raised; but, upon the overthrow of the two Scipios, the people of Illiturgis and Castulo revolted to the Carthaginians, the former adding to their treason the crime of betraying and putting to death the Romans who had fled to them for refuge. At least such is the Roman version of their offence, for which a true Roman vengeance was taken by Publius Scipio, a. d. 206. After a defence, such as might be expected when despair of mercy was added to national fortune, the city was stormed and burnt over the slaughtered corpses of all its inhabitants, children and women as well as men. (Livy xxliii. 49, xxix. 14, 17, 41, 42, 18, 16, 20.) Ten years later it was subverted “as being the most impomptuous and dangerous by the Romans, and taken with the slaughter of all its adult male population.” (Livy xxxiv. 10.) Under the Roman empire it was a considerable city, with the surname of Forum Julium. Its site is believed to have been in the neighbourhood of Anchoniar, where the church of St. Potenciana now stands. (Ina. Ant. p. 403; Plin. iii. 1. s. 3; Priscian, vi. p. 689; et Ptolem. Morales, Antig. p. 56; b.; Montellet, Exp. Med. vol. i. p. 183; Labarde, Ina. vol. ii. p. 113; Florez, Exp. S. vol. xii. p. 369; Cohn, ap. Flores, Med. vol. iii. p. 81; Miomnet, vol. i. p. 16; Sestini, p. 58; Eckhel, vol. i. p. 33; Eckhel, vol. ii. p. 1; Sestini, Med. Imp. v. p. 77; Sestini, Miomnet, vol. i. p. 23; [F. S.]

ILLURIA. [ILLURICUM.

ILLURICA. [ILLURICOMES.

ILLURICUM: (Rv. I'LLAVERI: Add. I'LLAVERI, I'LLAVERI, ILLURIUS, ILLURIUS) the eastern coast of the Adriatic sea.

1 The Name:—The Greek name is ILLYRIUS
ILLYRICUM.

Inferior, Moesia Superior, Moesia Inferior, Dacia, and Thrace. This division continued till the time of Constantine, who severed it from Lower Moesia and Thrace, but added to it Macedonia, Thessaly, Achaea, Old and New Epirus, Praevalitana, and Crete. At this period it was one of the four great divisions of the Roman empire under a "Praefectus Pontis," and it is in this signification that it is used by the later writers, such as Sextus Rufus, the "Auctor Notitiae Dignitatum Imperii," Zosimus, Jornandes, and others. At the final division of the Roman empire, the so-called "Illyricum Orientalis," containing the provinces of Macedonia, Thessaly, Epirus, Epelea, New Epirus, Crete, and Praevalitana, was incorporated with the Lower Empire; while "Illyricum Occidental" was united with Rome, and embraced Noricum, Pannonia, Dalmatia, Savia, and Valeria Ripensis.

A. Illyrùs barbara rìmànà, was separated from Istria by the small river Ara (Avia), and bounded S. and E. by the Drilo, and on the N. by the Savus; Consequently, it is represented now by part of Croatia, all Dalmatia, the Herzegovina, Montenegro, nearly all Bosnia, and part of Albania.

Illyria Romana was divided into three districts, the northern of which was Iapydia, extending S. as far as the Tedanisia (Zemunica); the strip of land extending from the Aris to the Titius (La Kerka) was called Liburnia, or the whole of the north of what was once Venetian Dalmatia; the territory of the Dalmatae was at first comprehended between the Naro and the Tituns or Nestus: it then extended to the Titius. A list of the towns will be found under the several heads of Iapydia, Liburnia, and Dalmatia.

B. Illyria Graeca, which was called in later times Illyria Nova, descended from the river Drilo to the SE., up to the Ceramian mountains, which separated it from Epirus Proper. On the N. it was bounded by the Roman Illyricum and Mount Scorbutus, on the W. by the Ionian sea, on the S. by Epirus, and on the E. by Macedonia; comprehending, therefore, nearly the whole of modern Albania. Next to the frontier of Chazia is the small town of Amanthus, and the people of the Amanthians and Butlares. They are followed by the Taulantii, who occupied the country N. of the Aoos—the great river of S. Macedonia, which rises in Mount Laccon, and discharges itself into the Adriatic—as far as Epidamnum. The chief towns of this country were Apollonia, and Epidamnum or Dyrrhachium. In the interior, near the Macedonian frontier, there is a considerable lake, Lagus Lycusitis, from which the Drilo issue. Ever since the middle ages there has existed in this part the town of Achrida, which has been supposed to be the ancient Lychnides, and was the capital of the Bulgarian empire, when it extended from the Exuia as far as the interior of Astilia, and comprised S. Illyricum, Epirus, Acaetania, Astilia, and a part of Thessaly. During the Roman period the Dassaretan dwelt there; the neighbouring country was occupied by the Actabates, who are said to have been driven from their country in the time of Cossander, when they removed as fugitives with their women and children into Macedonia. The Ardiae and Pangaeae dwelt N. of the Aoos, the latter lasting at the same time, but only during the Roman period. Scodra (Senturia), in later times the capital of Praevalitana, was unknown during the flourishing period of Greek history, and more properly belongs to Roman Illyricum; as Lysitza, which was situated at the mouth of the Drilo, was fixed upon by the Romans as the border town of the Illyrians in the S., beyond which they were not allowed to sail with their privateers. Internal communication in this Illyricum was kept up by the Via Caudovia or Enza, the great line which connected Italy and the East—Rome, Constantinople, and Jerusalem. A road of such importance, as Colonel Leake remarks (North. Greece, vol. iii. p. 311), and on which the distance had been marked with milestones soon after the Roman conquest of Macedonia, we may believe to have been kept in the best order as long as Rome was the centre of a vigorous authority; but it probably shared the fate of many other great establishments in the decline of the empire, and especially when it became as much the concern of the Byzantine as of the Roman government. This fact accounts for the discrepancies in the Itineraries; for though Lychnides, Heraclea, and Edessa, still continued, as on the Caudovian Way described by Pausanias (Strabo, vii. pp. 322, 323), to be the three principal points between Dyrrochthion and Thessalonica (nature, in fact, having strongly drawn that line in the valley of the Geussus), there appears to have been a choice of routes over the ridges which contained the boundaries of Illyricum and Macedonia. By comparing the Antonine Itinerary, the Peutingerian Table, and the Jermaische Landaufnahme, the following account of stations in Illyricum is obtained:

Dyrrochthion or Apollonia.
Clodiana — — Skambi.
Scampae — — Eubasen.
Tragetus Genui — —
Ad Dianam — —
Candavia — —
Treu Tabernae — —
Pons Serviliu et Claudianum — —
Patrae — —
Lychnides — — Atriadha.
Brucida — — Prepea.
Sciriiana — —
Castra — —
Nismella et Butlares — —
Heraclia — —

3. Physical Geography. — The Illyrian range of mountains, which traverses Dalmatia under the name of Mount Prolog, and partly under other names (Mons Albium, Beline), branches off in Cniola from the Julian Alps, and then, at a considerable distance from the sea, stretches towards Venetia, approaches the sea beyond Aquilia near Tricaste, and forms Istria. After passing through Istria as a lofty mountain, though not reaching the snow line, and traversing Dalmatia, which it separates from Bosnia, it extends into Albania. It is a limestone range, and, like most mountains belonging to that formation, much broken up; hence the bold and picturesque coast runs out into many promontories, and is flanked by numerous islands.

These islands appear to have originated on the breaking up of the lower grounds by some violent action, leaving their limestone summits above water. From the salient position of the promontory terminating in Punta della Pindosa, they are divided into two distinct groups, those of the Greek geography called Ametistus and Liburnisser. They trend NW. and SE., greatly longer than broad, and form various fine channels, called canali, and named from the nearest adjacent island: these being bold,
ILLYRICUM.

with scarcely a hidden danger, give ships a secure passage between them. Cherso, Gerro, Lussa, Samoza (Abayrtides), abound with fossil bones. The bone-brecia of these islands appears to be the same conglomerate with those of Gibraltar, Corinto, and other places in the Mediterranean. The Liburnian group (Apetrreps fioro), Strab. ii. p. 124, vii. pp. 315, 317; “Liburnica Insulae,” Fim. iii. 30; Lima (Grossa), Eubratta, Sovala, Lusa (Lusana), Melita (Melidea), Corcyra Nigra (Corcyra), Pharae (Lesma) and Olympea (Solde), have good ports, but are badly supplied with drinkable water, and are not fertile. The mountains tracts, though industriously cultivated towards the shore, is for the most part, as in the days of Strabo (I. c.), wild, rugged, and barren. The want of water and the soil will make Dalmatia unfit for agriculture; and therefore of old, this circumstance, coupled with the excellency and number of the harbours, made the natives more known for piracy than for commercial enterprise. A principal feature of the whole range is that called Monte-Negro (Ccerragor), consisting chiefly of the cretaceous or Mediterranean limestone, so extensively distributed in the Adriatic to the Archipelago, and remarkable for its craggy character. The general height is about 3000 feet, with a few higher summits, and the slopes are gentle in the direction of the inclination of the strata, with precipices at the outcappings, which give a fine variety to the scenery. There is no sign of volcanic action in Dalmatia; and the Euphrates, near Apollonia, celebrated for the flames that rose continually from it, has probably no references to anything of a volcanic nature, but is connected with the beds of asphaltum, or mineral pitch, which occur in great abundance in the nummulitic limestone of Albania.

The coast of what is now called Middle Albania, or the Illyrian territory, N. of Epirus, is, especially in its N. portion, of moderate height, and in some places even low and unwholesome, as far as Aulon (Valos or Avlona), where it suddenly becomes rugged and mountainous, with precipices cliffs descending rapidly towards the sea. This is the Kiasmone range, upwards of 4000 feet high, dreaded by ancient mariners as the Acro-Cerinian promontory, and by classical writers as the boundary prior to N. of Illyricum in productivity; though mountainous, it has more valleys and open plains for cultivation. The sea-ports of Epidamnus and Apollonia introduced the luxuries of wine and oil to the barbarians; whose chiefs learnt also to value the woven fabrics, the polished and carved metallic work, the tempered weapons, and the pottery which was furnished them by Grecian artisans. Salt fish, and, what was of more importance to the inland residents on lakes like that of Lychnitis, salt itself, was imported. In return they supplied the Greeks with those precious commodities, cattle and slaves. Silver mines were also worked at Damarthum. Wax and honey were probably articles of export; and it is a proof of the intercourse of the Illyrians with the Grecians, that salt was carefully sought out, when we find a species of iris peculiar to the country collected and sent to Corinth, where its root was employed to give the special flavour to a celebrated kind of aromatic ointment. Grecian commerce and intercourse not only tended to civilise the S. Illyrians beyond their northern brethren, who shared with the Thracian tribes the custom of tattooing their bodies and of offering human sacrifices; but through the introduction of Grecian arts, made them acquainted with Hellenic ideas and legends, as may be seen by the tale of Cadmus and Harmonia, from whom the chiefs of the Illyrian Encheles, professed to trace their descent. (Comp. Grote, Hist. of Greece, vol. iv. pp. 1—10, and the authorities quoted there; to which may be added, Wilkinson, Dalmatia and Montenegro, vol. i. pp. 38—43; J. F. Neigebour, Die Suiphusen, Leipzig, 1851; Niebuh, Lect on Ethnog. and Geog., vol. i. pp. 347—314; Hahn, The Mediterranean, pp. 40—45; Hahn, The Illyrian language, and constitute a particular race, which is very distinct from the Slavonian inhabitants who border on them towards the N. The ancients, as has been observed, distinguished the Illyrians from the Epirots, and have given no intimations that they were in any way connected. But the Albanians, who inhabit both Illyria and Epirus, are one people, whose language is only varied by slight modifications of dialect. The Illyrians appear to have been pressed southwards by Slavonian hordes, who settled in Dalmatia. Driven out from their old territories, they extended themselves towards the S., where they now inhabit many districts which never belonged to them in former times, and have swallowed up the Epirots, and extinguished their language. According to Schafarik (Slav. Alt. vol. i. p. 31) the modern Albanian population is 1,200,000.

Ptolemy is the earliest writer in whose works the name of the Albanians has been distinctly recognised. He mentions (vii. 13. § 23) a tribe called ALBANI (‘Aulane) and εσπρετας (‘Espreteas) in the region lying to the E. of the Ionian sea; and from the names of places with which Albanopolis is connected, it appears clearly to have been in the S. part of the Illyrian territory, and in modern Albania. There are no means of forming a conjecture how the name of this obscure tribe came to be extended to so considerable a nation. The latest work upon the Albanian language is that of F. Bitter von Xylander (Die Sprache der Albaner oder Skipetaren, 1835), who has elucidated this subject, and established the principal facts upon a firm basis. An account of the positions at which Xylander arrived will be found in Prichard (The Physical History of Mankind, vol. iii. pp. 477—482).

As the Dalmatian Slaves have adopted the name Illyrians, the Slavonian language spoken in Dalmatia, especially at Ragusa, is also called Illyrian; and this designation has acquired general currency; but it must always be remembered that the ancient Illyrians were in no way connected with the Slave races. In the practice of tattooing their bodies, and offering human sacrifices, the Illyrians resembled the Thracians (Strab. vii. p. 315; Herod. v. 6): they
ILLYRICUM.

custom of one of their tribes, the Dalmatians, to have a new division of their lands every eighth year (Strab. l.c.), resembled the well-known practice of the Germans, only advanced somewhat further towards civilized life. The author of the Periplus (l.c.) speaks of the great influence enjoyed by their women, whose lives, in consequence, he describes as highly licentious. The Illyrian, like the modern Albanian Skiptar, was always ready to fight for hire; and rushed to battle, obeying only the instinct of his own love of fighting, or revenge, or love of bloodipoverty. But as soon as the feeling was satisfied, or overcome by fear, his rapid and impetuous rush was succeeded by an equally rapid retreat or flight. (Comp. Grote, Hist. of Greece, vol. vi. p. 609.) They did not fight in the phalanx, nor were they merely ψαλαντες; they rather formed an intermediate class between them and the phalanx. Their arms were short spears and light lances and shields (pelαταται); the chief weapon, however, was the μύκωνας, or Albanian knife. Dr. Arnold has re-marked (Hist. of Rome, vol. i. p. 495), "the eastern coast of the Adriatic is one of those ill-fated portions of the earth which, though placed in immediate contact with civilization, have remained perpetually in sameness, as one great Roman province, the Chios (comp. above, vol. iii. p. 477), writing of the Illyrians about a century before the Christian era, calls them "a religious people, just and kind to strangers, loving to be liberal, and desiring to live orderly and soberly." After the Roman conquest, and during its dominion, they were as civilized as most other peoples reclaimed from barbarism. The emperor Diocletian's were both Illyrians. And the palace at Spalato is the earliest existing specimen of the legitimate combination of the round arch and the column; and the modern history of the eastern shores of the Adriatic begins with the relations established by Heracleius with the Serbs or W. Slaves, who moved down from the Carpathians into the plains near the mouth of the Danube. The states which they constituted were of considerable weight in the history of Europe, and the kingdoms, or banats, of Croatia, Servia, Bosnia, Rascia, and Dalmatia, occupied for some centuries a political position very like that now held by the secondary monarchal states of the present day. The people of Narenta, who had a republican form of government, once disputed the sway of the Adriatic with the Venetians; Ragusa, which sent her Argosies (Ragiosies) to every coast, never once succumbed to the winged Lion of St. Mark; and for some time it seemed probable that the Servian colonies established by Heracleus were likely to take a prominent part in advancing the progress of European civilization. (Comp. Finlay, Greece under the Romans, p. 409.)

5. History.—The Illyrians do not appear in history before the Peloponnesian War, when Brasidas and Perdiccas retreated before them, and the Illyrians, for the first time, probably, had to encounter Grecian troops. (Thuc. iv. 124—125.) Nothing is heard of these barbarians afterwards, till the time of Philip of Macedon, by whose vigour and energy their incursions were first repressed, and their country partially conquered. Their collision with the Macedonians appears to have risen under the following circumstances. During the 4th cent. before Christ a large immigration of Gallic tribes from the westward was taking place, invading the territory of the more northerly Illyrians, and driving them further to the south. Under Bardylis the Illyrians, who had formed themselves into a kingdom, the origin of which cannot be traced, had extended themselves to the towns, villages, and the inland plains of W. Macedonia (Diod. xvi. 4; Theopomp. Fr. 35, ed. Didot.; Cic. de Off. ii. 11; Phot. Bibl. p. 530, ed. Bekker; Liban. Orig. xxxvii. p. 632). As soon as the young Philip of Macedon came to the throne, he attacked these hereditary enemies b. c. 360, and pushed his successes so vigorously, as to reduce to submission all the Gallic tribes. (Curt. Hist. of Greece, vol. xli. pp. 308—304.) A state was formed the capital of which was probably near Ragus, but the real Illyrian pirates with whom the Romans came in collision, must have occupied the N. of Dalmatia. Rhodes was still a maritime power; but by b. c. 233 the Illyrians had become formidable in the Adriatic, ravaging the coasts, and disturbing the navigation of the allies of the Romans. Envoys were sent to Tents, the queen of the Illyrians, demanding reparation: she replied, that piracy was the habit of her people, and finally had the envoys murdered. (Polyb. vi. 8; Appian, Illyr. vii. 3; Zonar. viii. 19; comp. Plin. xxxiv. 11.) A Roman army for the first time crossed the Ionian gulf, and con- cluded a treaty with the queen of the Illyrians, who promised to stop piracy, but continued to violate all the terms, while the Greek states of Corcyra, Apollonia, and Epidamnus, received their liberty as a gift from Rome.

On the death of Tents, the traitor Demetrius of Pharsa made himself guardian of Pineus, son of Agron, and usurped the chief authority in Illyri- cum; thinking that the Romans were too much occupied in Italy, and thus would not inter- fere with his piratical acts. This led to the Second Illyrian War, b. c. 219, which resulted in the submission of the whole of Illyricum. Demetrius fled to Macedonia, and Pineus was restored to his kingdom. (Polyb. iii. 16, 18; Liv. xxx. 33; App. Illyr. 7, 8; Flor. ii. 5; Dion Cass. xxxiv. 46, 151; Zonar. viii. 20.) Pineus was succeeded in the allies of the Romans, by a descendant of the elder L. F. blood—a certain Nepos—callidus by his son Pleuratus, who, for his fidelity to the Roman cause during the Macedonian War, was rewarded at the peace of 196 by the addition to his territory of Lychnitus and the Parthini, which had before belonged to Macedonia (Polyb. xviii. 30, xxi. 9, xxi. 4; Liv. xxx. 28, xxxii. 14.) In the reign of Gentius, the last king of Illyricum, the Dalmatians revolted, b. c. 180; and the praetor L. Asinius, entering Illyricum, finished the war within thirty days, by taking the capital Scodra (Scutari), into which Gentius had thrown himself, b. c. 168. (Polyb. xxx. 13; Liv. xiv. 30—32, xlv. 43; Appian, Illyr. 9; Eutrop. iv. 6.) Illyricum, which was divided into three parts, became annexed to Macedonia. (Liv. xiv. 36.) On the history of the Roman wars with Dalmatia, Laptidia, and Liburnia, is given under those heads.

In b. c. 27 Illyricum was under the rule of a proconsul appointed by the senate (Dion Cass. liii. 12); but the frequent attempts of the people to recover their liberty showed the necessity of maintaining a strong force in the country; and in b. c. 11 (Dion Cass. liv. 24) it was made an imperial province, with P. Cornelius Dolabella for legatus ("leg. pro. pr.", Orelli, Inscr. no. 2365, comp. no. 3128; Tac. Hist. ii. 86; Marquardt, in Becker's Rom. Alt. vol. iii. pt. i. pp. 110—115.) A large region, extending far inland towards the valley of the Save and the Drave, contained bodies of solildary
LIYRICUM.

who were stationed in the strong links of the chain of military posts which was scattered along the frontier of the Danube. Inscriptions are extant on which the records of its occupation by the 7th and 11th legions can still be read. (Orelli, nos. 3492, 3553, 4995, 4996; comp. Josephus, B. J. ii. 16; Tac. Ann. iv. 5; Hist. ii. 11. 85.) There was at that time no seat of government or capital; but the province was divided into regions called "conventus": each region, of which there were three, named from the towns of SCARDORA, SALONIA, and NAROBA, was subdivided into numerous "decuriae." The last mentioned word comes from the Greek "decuria," (Plin. iii. 26.) JADERA, SALONA, NAROBA, and EPIANIBUS, were Roman "colonies;" APOLLONIA and CORBITA, "civitates liberae." (Appian, Ilugr. 8; Polyb. ii. 11.) The jurisdiction of the "pre-praetor," or "legatus," does not appear to have extended throughout the whole of Ilyricum, but merely over the maritime portion. The inland districts, although it had its own governor, or was under the prefecture of Pannonia. Salona in later times became the capital of the province (Procop. B. G. i. 15; Hierocles), and the governor was styled "praeses." (Orelli, nos. 1098, 3399.) The most notable of these were Dion Cassius the historian, and his father Cassius Aprianus.

The death of Pannonia and Dalmatia affected an inexhaustible supply of recruits to the legions stationed on the banks of the Danube; and the peoples of Ilyricum, who had already given Claudius, Aurelian, and Probus to the sinking empire, achieved the work of rescuing it by the elevation of Diocletian and Maximian to the imperial power (A.D. 284.)

After the final division of the empire, Marcellinus, "Patrician of the West," occupied the maritime portion of W. Ilyricum, and built a fleet which claimed the dominion of the Adriatic. [Dalmatia.] E. Ilyricum appears to have suffered so much from the hostilities of the Goths and the oppressions of Alaric, who was declared, a. D. 396, its master general (Sagallius in the Table of Fell.) E. 216, de Bell. Got. 535), that there is a law of Theodosius II which exempts the cities of Ilyricum from contributing towards the expenses of the public spectacles at Constantinople. (Theod. cod. x. tit. 8. a. 7.) But though suffering from these invasions, casual encounters often showed that the people were not destitute of courage and military skill. Attila himself, the terror of both Goths and Romans, was defeated before the town of Azimus, a frontier fortress of Ilyricum. (Piriscius, p. 143, ed. Bonn; comp. Gibbon, c. xxxiv; Finlay, Greece under the Romans, p. 203.) The coasts of Ilyricum were considered of great importance to the court of Constantine. The rich produce transported by the caravans from the coast to the Black Sea, was then conveyed to Constantinople to be distributed through W. Europe. Under these circumstances, it was of the utmost consequence to defend the two points of Thessalonica and Dyrrhachium, the two cities which commanded the extremities of the usual road between Constantinople and the Adriatic. (Tafel, de Theod. Hist. 291; Thurnmann, Geschichte des Byzantinischen Reiches, p. 76.)

The open country was abandoned to the Abans and the E. Slaves, who made permanent settlements even to the S. of the Via Egnatia; but none of these settlements were allowed to interfere with the lines of communication, without which the trade of the West would have been lost to the Greeks. Heracleus, in his plan for circumsterning the ravages of the northern enemies of the empire, occupied the whole interior of the country, from the borders of Istria to the territory of Dyrrhachium, with colonies of the Serbs or W. Slaves. From the year 699 B.C. the illusion of the Servian Slavonians within the bounds of the empire we may therefore date, as has been said above, the earliest encroachments of the Illyrian or Albanian race on the Hallanic population of the south. The singular events which occurred in the reign of Heraclius are not among the least of the elements which make up the condition of the modern Greek nation. [E. B. J.]

Ilorci. [Illococba.]

Lucia. [Lucernae.]

Luratus (Turépur, Plut. iii. 6 § 6), a town in the interior of the Tauric Chersonese, probably somewhat to the N. of Kafir. [E. B. J.]

Lurcianae. [Lurcianae.]

Lurcis. [Gracuritain.]

Lurigela. [Lurigul.]

Lurutae. [Lurgetae.]

Luro, in Gallia Aquitania, is placed by the Antonine Itin. on the road from Caesareaugusta, in Spain, to Beneharnum. [Beneharnum.] Luro is between Aspaluca (Aspaluca) and Beneharnum. The modern site of Luro is Oléron, a village of the same name. Oléron is in the department of Boyaux Pyrénees, at the junction of the Gave d’Aspe, the river of Aspaluca, and the Gave d’Ossau, which by their union form the Gave d’Oléron. Gave is the name in these parts for the rivers-valleys of the Pyrenees. In the Notitia of Gallia, Luro is the Civitas Ellerorum. The place was taken by the Franks in the commencement of the sixth century. [G. L.]

2. [Larretaini.]

Luzza (v Lutza), a town in Phrygia Pacatiana, which is mentioned only in very late writers, and is probably the same as the Lutz in the Table of Pentinger; in which case it was situated between Sebaste and Acmonia, 25 Roman miles to the east of the latter town. It was the see of a Christian bishop. (Hierocles. p. 667; Concil. Constant. iii. p. 834.)

ILVA. (Ilva, Plut.: Ilia), called by the Greeks Athalida (Athalia, Dioc.; Athalia, Pa. Aria, Philist. ap. Steph. B.), an island in the Tyrrhenian Sea, lying off the coast of Etruria, opposite to the headland and city of Populonium. It is much the most important of the islands in this sea, situated between Corsica and the mainland, being about 18 miles in length, and 12 in its greatest breadth. Its outline is extremely irregular, the mountains are steep and abrupt, and which rise in some parts to a height of above 3000 feet, being indented by deep gullies and inlets, so that its breadth in some places does not exceed 3 miles. Its circuit is greatly overestimated by Pliny at 100 Roman miles: the same author gives its distance from Populonium at 10 miles, which is just about correct; but the width of the strait which separates the nearest point of the mainland (near Piombino) does not much exceed 6, though estimated by Diodorus as 100 stadia (124 miles), and by Strabo, through an enormous error, at not less than 300 stadia. (Strab. v. p. 223; Diod. v. 13; Plin. iii. 6. a. 12; Mel. ii. 7. 19; Sicily. p. 2. § 6; Apoll. Rhod. D 4
ILVATES.

Ivares was celebrated in ancient times, as it still is at the present day, for its iron mines; these were probably worked from a very early period by the Tyrrhenians of the opposite coast, and were already noticed by Hecataeus, who called the island Althadai; indeed, its Greek name was generally regarded as derived from the smoke (a thodai) of the numerous furnaces employed in smelting the iron. (Diod. v. 13; Steph. B. s. v.) In the time of Strabo, however, the iron ore was no longer smelted in the island itself, the want of fuel compelling the inhabitants (as it does at the present day) to transport the ore on the coast, and there smelt it, which process it was smelted and wrought so as to be fitted for commercial purposes. The unfailling abundance of the ore (alluded to by Virgil in the line

"Inula inaesthetic Chalybun genero metallica"

led to the notion that it grew again as fast as it was extracted from the mines. It had also the advantage of being extracted with great facility, as it is not sunk deep beneath the earth, but forms a hill or mountain mass of solid ore. (Strab. l. c.; Diod. l. c.; Virg. Aen. x. 174; Plin. iii. 5. s. 12, xxiv. 14. s. 41; Pseud. Arist. de Mirab. 95; Ptol. Hist. i. 351-356; Str. Ital. viii. 616.) The mines, which are still extensively worked, are situated at a place called Rio, near the E. coast of the island; they exhibit in many cases unequivocal evidence of the ancient workings.

The only mention of Ivara that occurs in history is in n. c. 453, when we learn from Diodorus that it was ravaged by a Syracusan fleet under Flaminius, in revenge for the piratical expeditions of the Tyrrhenians at that time, as is also said. A second fleet was sent under Apelles, who is said to have made himself master of the island; but it certainly did not remain subject to Syracuse. (Diod. xi. 88.) The name is again incidentally mentioned by Livy (xxx. 39) during the expedition of the consul Tib. Claudius to Corsica and Sardinia.

Ivare has the advantage of several excellent ports, one of which, near the SW. end of the island, now called Porto Ferraio, was known in ancient times as the Portus Argous ("Agerus lamius"); from the circumstance that the Argonauts were believed to have touched there on their return voyage, while sailing in quest of Circe. (Strab. v. p. 224; Diod. iv. 56; Apollon. Rhod. iv. 656.) Considerable ruins of buildings of Roman date are visible at a place called La Grotta, near Porto Ferraio, and others are found near Cape Castello, at the NE. extremity of the island. The quarries of granite near S. Piero, in the SW. part of Elba, appears also to have been extensively worked by the Romans, though no notice of them is found in any ancient writer; but numerous columns, basins for fountains, and other architectural ornaments, still remain, part hewn out of the adjacent quarry. (Hoare, Class. Tour. vol. i. pp. 23-29.)

ILVATES, a Ligurian tribe, whose name is found only in Livy. He mentions them first as taking up arms in n. c. 260, in concert with the Gaulish tribes of the Insubres and Cemomani, to destroy the Roman force of Placentia and Cosa. They are again noticed three years later as being still in arms, after the submission of their Transpadane allies; but in the course of that year's campaign (n. c. 197) they were reduced by the consul Q. Minucius, and their name does not again appear in history. (Livy. xxx. 10, xxxi. 29, 30.) From the circumstances here related, it is clear that they dwelt on the N. slopes of the Apennines, towards the plains of the Padus, and apparently not very far from Casilidium (Cassiglio); but we cannot determine with certainty either the position or extent of their territory. Their name, like those of most of the Ligurian tribes mentioned by Livy, had disappeared in the Augustan age, and is not found in any of the geographers. (Liguria.) Walckenaer, however, supposes the Ilvates over whom the consul M. Fulvius Nobilior celebrated a triumph in n. c. 159 (Cic. Phil. l. c. 35; Strabo. l. c. 397), and asserts in all probability that the people with the Vetuloni of Pliny (Vetulio), to be identical also with the Ilvates of Livy; but this cannot be assumed without further proof. (Walckenaer, Géog. des Gaulois, vol. i. p. 154.)

IMACHARA ("Imachara" or "Myachara", Ptol.: Eth. Macarenais, Cit.: Imacarenos, Plin.:) a city of Sicily, the name of which does not appear in history, but which is repeatedly mentioned by Cicero among the municipal towns of the island. There is great discrepancy in regard to the form of the name, which is written in many MSS. "Macarensis" or "Macharaens," and the same uncertainty is found in those of Pliny, who also notices the town among those of the same region. (Ptol. iii. 18, 42, v. 7; Zumpt, ed loc.; Plin. iii. 8. 14. 155.) From the manner in which it is spoken of by Cicero, it would seem to have been a town of some consideration, with a territory fertile in corn. That writer associates it with Herbita, Assora, Agrymum, and other towns of the interior, in a manner that would lead us to suppose it situated in the same region. It was probably a small town, like that of Ptolemy, who places Himichara or Himichara (evidently the same place) in the NE. of Sicily, between Capituni and Centuria. (Ptol. iii. 4. § 12.) Hence Cluverius conjectures that it may have occupied the site of Trinaca, but this is wholly uncertain. Fazio and other Sicilian writers have supposed the ruins of an ancient city, which are still visible on the coast almost opposite the site of the town of Castiglione, now called Vindiscari, to be those of Imachara; but though the name of Macarea, still borne by an adjoining headland, gives some colour to this opinion, it is wholly opposed to the data furnished us by ancient authors, who all agree in placing Imachara in the interior of the island. The ruins in question, which indicate the site of a considerable town, are regarded by Cluverius (but equally without authority) as those of Ichana. (Oliver, Sicilia, p. 356; Fazello de Reb. Sic. iv. 2, p. 217; Amico, Not. ad Fazell. pp. 417, 447; Hoare's Classical Tour, vol. ii. p. 301.)

IMAU'S, the great mountain chain, which, according to the ancient authors, divided Northern Asia into "Scythia interna Iassum" and "Scythia externa Iassum." This was the "causae" of Strabo (p. 659; Plin. vi. 13. § 1; v. "Imauis" l. c. 429, Strab. ii. p. 129; 6 "Imauis", Agathem. ii. 9: although all the MSS. of Strabo (p. 516) have Iassmus ("Iassmus") in the passage describing the expedition of the Gracco-Bactrian king Menander, yet there can be no doubt but that the text is corrupt, and the word Iassmus should be substituted for the connected with the Samarcit hindus," snowly" (comp. Plin. vi. 17; Bohlen, das Alte Indien, vol. i. p. 11; Lassen, Ind. Alt. vol. i. p. 17), is one of those many significant expressions which have been used for mountain masses upon every zone of the earth's surface (for instance, Mont Blanc, in Savoy, Sierra
IMBOS.

41

IMBROS.

IMBROS (Ἴμβρος: Etr. Ἴμβρος), an island in the Aegean sea, between the Thracian Chersonese, and near the islands of Samos and Lemnos. According to Pliny (iv. 12. a. 23), Imbros is 63 miles in circumference; but this is nearly double its real size. It is mountainous and well wooded, and its highest summit is 1845 feet above the level of the sea. It contains, however, several fertile valleys, and a river named Ilius in antiquity. (Plin. i. c.) Its town on the northern side was called by the same name, and there are still some ruins of it remaining. Imbros was inhabited in early times by the Pelasgians, and was, like the neighbouring island of Samothrace, celebrated for its
worption of the Cabari and Hermes, whom the Car
rians called Imbrasus. (Steph. B. z. v. "Idippos"). Both the island and the city of Imbras are mentioned by Homer, who gives to the former the epithet of wára
káko.bóm. (H. xiv. 29, xiv. 281, xiv. 78. Emps. de Maires); but the numbers will not agree. The real distance is much less than xii. M. P., which is the distance in the Itin.; and D'Anville, applying his usual remedy, alters it to vii. But Waackenier well objects to fixing on a little island or rock as the position of Immadrus, and then charging the Itinerary with being wrong. He finds the distance from a little bay west of Cap Mergion to Marseille to agree with the Itin. measure of 12 M. P. [G. L.]

IMMUNDUS SINUS (áxados kóros, Strab. xiv. p. 770; Diet. lli. 39; Ptol. iv. 5. § 7; Plin. vi. 29. s. 83., the modern Fosail Bay, in lat. 22° N., presents no.appellation from the habitual anchorage, and the difficulty of navigating vessels among its numerous reefs and breakers. In its further west recess lay the city of Berenice, founded, or rather enlarged, by Ptolemy Philadelphus, and so named by him in honour of his mother, the widow of Ptolemy Soter; and opposite its mouth was the island Ophiodes, famous alike for the reptiles which infested it, and its quarries of topaz. The latter was much employed by Egyptian artisans for ornamenting rings, scarabaei, &c., &c. [Bähr.

IMUS PYRENAEUS, a station in Aquitania, at the northern base of the Pyrenees, on the road from Aquas Tarbellicae (Duce) to Pompellum (Pampelina) in between Pyreneus is between the Ebro (Garis) and the Summus Pyrenaeus. The Summus Pyrenaeus is the Sommet de Castel-Pinnore; and the Imus Pyreneus is St. Jean-Pied-de-Port, "at the foot of the pass." The distance in the Itin. between Summus Pyreneus and Imus Pyreneus is, which D'Anville would alter to x., to fit the real distance. Waackenier takes the measure to be Gallic leagues, and therefore the x. will be equivalent to 7 l. M. P.

INA (Ima, Ptol. 4. Eub. Ineisem,) a town of Sicily, the position of which is wholly unknown, except that Ptolemy reckons it among the inland towns in the south of the island. (Ptol. iii. 4. § 15.) That author is the only one of the geographers that mentions it, and the name has been thought corrupt; but it is supported by the best MSS. of Ptolemy, and the reading "Eneseis" is equally well supported in Cicero (Verr. iii. 43), where the old editions had "Ennesas." (Zumpt, ad loc.) The orator appears to rank them among the minor communities of the island which had been utterly ruined by the invasions of Verres.

INACHORIUM (Ivanýorh, Ptol. iii. 17. § 2), a city of Crete, which, from the similarity of sound, Mr. Pashley (Trav. vol. ii. p. 78) is inclined to believe was situated in the modern district of Emei
khórdi, on the W. coast of Crete. (Hick, Krétas, vol. i. p. 379.)

INACHUS (Ivanýorh). 1. A river of the Argelia. [Armeria, 200, b.]
2. A river in the territory of Argos Amphilosich. [Argos Amphiloch, p. 208, b.]

INARIME. [Armeria.]

INATUS (Ivanýorh, Ptol. iii. 17. § 2), a city of Crete, the same, no doubt, as Einaus (Euvóres, Steph. B.; Hesych. Etym. Magn. s. v.), situated on a mountain and river of the same name. The Peu
tinger Table puts a place called Inata on a river 34 M. P. E. of Lixia, and 39 M. P. W. of Hierapýnta. These distances agree well with the three or four hamlets known by the name Kastelina, derived from the Venetian fortress, Castle Belvedere, situated on a hill a little to the N. of the villages. The
INCARUS.  

India.  

Incarius, on the coast of Gallia Narbonensis, is placed by the Itin. next to Massilia. It is west of Massilia, and the distance is 12 M. P. The place is Cervy, which retains its name. The distance of the town was probably estimated by a boat rowing along the coast, and a good map is necessary to show how far it is correct. (Ptol. v. 2. 23.)

INCUSIUM (Τρικόλιον), a tribe of the Sisygambri, mentioned only by Ptolemy (ii. 11. § 9). They apparently occupied the southernmost part of the territory inhabited by the Sisygambri. Some believe them to be the same as the Juhones of Tactius (Ass. xiii. 57.), in whose territory an extensive configuration of the soil occurred in a. d. 59. Some place them near the mouth of the river Laxis and the little town of Enagora; while others, with less probability, regard Ingerusae, on the Neacr, as the place once inhabited by the Incusii. (L. S.)

INDAPRATHAE (Ινδαπραθέα), a people occupying nearly the same portion of the land as the Parasaei. (Plut. viii. 2. § 18, a name, doubtless, connected with the Sanscrit Indra-pratā, a people occupying nearly the same portion of the land as the Parasaei. (Plut. viii. 2. § 18, a name, doubtless, connected with the Sanscrit Indra-pratā.)

INDIA (Ἰνδία, Polyb. iv. 3. § 30; Plin. vi. 17. a. 20; τὰ των Ῥώμων γῆν, Arrian, Anab. v. 4; τὰ ἤβο, Strab. xi. p. 514: Ed. ἤβο), a country of great extent in the southern part of Asia, bounded on the north by the great chain of the Hindōkō mountains, which extend, under various modified names, from the Brahmaputra river on the E. to the Indus on the W., and which are known in ancient times under the names Eumodus and Ismaus. (Esqyq. Intro.)

These mountains separated the plain country of India to the S. of them from the steppes of Täistāry on the N., and formed the water-shed of most of the great rivers with which India is so plentifully supplied. On the E. the Brahmaputra, which separates it from Assu and Burma, is its principal boundary; though, if the definition of India be adopted which was in vogue among the later classical geographers, those countries as far as the commencement of the Chinese empire on the S. must be comprehended within the limits of India. On the S. it is bounded by the Bay of Bengal and the Indian Ocean, and on the W. by the Indus, which separates it from Gedrosia, Arachosia, and the rest of the Persian sazles. Some writers, indeed (as Lassen, Pentap. Indic. Bom., 1827), have considered the districts along the southern spurs of the Paropamisus (or Hindō-Kusā) as part of India; but the passage of Pliny on which Lassen relies would make India comprehend the whole of Afghanistan to Belutschia on the Indian Ocean; a position which can hardly be maintained as the deliberate opinion of any ancient author.

It may, indeed, be doubted whether the Indians themselves ever laid down any accurate boundary of their country westward (Laws of Mino, ii. v. 22, quoted by Lassen, Pentap. Indic. p. 8); though the Sāvarād (Hydrates) separated their sacred land from Western India. Generally, however, the Indus was held to be their western boundary, as is clear from Strabo's words (xv. p. 689), and may be inferred from Pliny's description (vi. 20. a. 23).

It is necessary, before we proceed to give the principal divisions, to mention ranges, rivers, and cities of India, to trace very briefly, through the remains of classical literature, the gradual progress of the knowledge which the ancient world possessed of this country; a land which, from first to last, seems to have been to them a constant source of wonder and admiration, and therefore not unnaturally the theme of many strange and fabulous relations, which even their most critical writers have not failed to record.

Though the Greeks were not acquainted with India in the heroic ages, and though the name itself does not occur in their earliest writers, it seems not unlikely that they had some faint idea of a distant land in the far East, and that it was very perfectly fruitful. The occurrence of the names of objects of Indian merchandise, such as καστονιας, κασας, and others, would seem to show this. The same thing would seem to be obscurely hinted at in the two Aethiopias mentioned by Homer, the one towards the setting, and the other in the direction of the rising sun (Od. i. 26, 24); and a similar inference may probably be drawn from some of the early notices of the Aethiopians whose separate histories are perpetually confounded together, many things being predicated of the African nation which could be only true of an Indian people, and vice versa. That there were a people whom the Greeks called Aethiopis in the neighbourhood of, if not within the actual boundaries of India, is clear from Herodotus (vii. 70), who states in another place that all the Indians (except the Daradas) resembled the Aethiopians in the dark colour of their skins (iii. 101); while abundant instances may be observed of the intermixture of the accounts of the African and Indian Aethiopians, as, for example, in Ctesias (Indic. 7, ed. Bähr. p. 354), Pliny (viii. 90. 9), who quotes Ctesias, Sclavus, in his description of Scythia (vi. 14), and in his account of the Atrebati (iii. 14), Tactees (Chil. vii. 144), Arrian (H. Am. xvi. 31), Agatharchides (de Rubro Mari. p. 44, ed. Hud.), Pollux (Onomast. v. 5), and many other writers. Just in the same way a confusion may be noticed in the accounts of Libya, as in Herodotus (iv. 168—199; cf. Ctesias, Indic. 13), where he intermixes Indian and African tales. Even so late as Alexander's invasion, we know that the same confusion prevailed, Alexander himself believing that he would find the sources of the Nile in India. (Strab. xv. p. 696; Arrian, Exp. Alex. vi. 1.)

It is not remarkable that the Greeks should have had but little knowledge of India or its inhabitants till a comparatively late period of their history, and that neither Herodotus, Pindar, Pindar's dramatists Sophocles and Euripides, should mention by its name either India or any of its people. It is probable that, at this early period, neither commerce nor any other cause had led the Greeks beyond the shores of Syria eastward, and that it was not till the Persian wars that the existence of vast and populous regions to the E. of Persia itself became distinctly known to them. Some individual names may have reached the ears of those who inquired; perhaps some individual travellers may have heard of these far distant realms; such, for instance, as the physician Democedes, when residing at the court of Dareius, the son of Hystaspes (Herod. iii. 127), and Democritus of Abdera (s. c. 460—400), who is said by several authors to have travelled to Egypt, the great geog-
INDIA.

1831), the Indi and the Indus (Procym. 174 and 178), the Argente (Procym. 176), the people of Opius on the banks of the Indus (Procym. 175), the Callatian, (Procym. 177; Herod. iii. 38; or Calatianes, Herod. iii. 97), Gandara and the Gandarian Gulf (Procym. 178) and their city Casparyr (Procym. 179; Casparyrns, Herod. iii. 102, iv. 44), are mentioned, in company with other Eastern places. Further, it appears, from the testimony of Herodotus, that Scylax of Caryanda, who was sent by Darius, navigated the Indus to Casparyrns in Pacytis, and thence along the Erythraean Sea to the Arabian Gulf (Procym. 179) and its coast (iv. 44); and the course of which voyage he must have seen something of India, of which he is said to have recorded several marvels (cf. Aristot. Polit. vii. 14; Philosdr. Vit. Apoll. Tyms. iii. 114; Tstax. Chil. vii. 144); though Klausen has shown satisfactorily, in his edition of the fragments which remain, that the Periplos usually ascribed to this Scylax is as at least as late as the time of Philip of Macedon.

The notices preserved in Herodotus and the remains of Ctesias are somewhat fuller, though having had opportunities, the one as a great traveller, the other as a resident for many years at the court of Ariaees, which no previous writers had had. The knowledge of Herodotus (in his Rh. c. 434, 435) is, however, limited to the account of the satraps of Dareius; the twentieth of which, he states, comprehended that part of India which was tributary to the Persians (iii. 94), the country of the most Eastern people with whom he was acquainted (iii. 95—102). To the S. of them, along the Indian Ocean, were, according to his view, the Asiatic Corinthians (Procym. 40); and he knew that the Indians were the greatest and wealthiest people known; he speaks of the Indus (on whose banks, as well as on those of the Nile, crocodiles were to be seen) as flowing through their land (iv. 44), and mentions by name Casparyrs (a town of Pacytis), the nomadic Fadi (iii. 99), and the Calatiai (iii. 38) or Calatianes (iii. 97). He places also in the seventh satrapy the Gandari (iii. 91) [Gandaran], a race who, under the name of Gandaei, are known as a genuine Sanskrit-speaking tribe, and who may therefore be considered as connected with India, though their principal seat seems to have been on the W. side of the Indus, probably in the neighbourhood of the present Com- dar. Ctesias (about B.C. 400) wrote twenty-three books of Persica, and one of Indica, with other works on Asiatic subjects. These are all lost, except some fragments preserved by Photius. In his Persica he mentions some places in Bactria (Procym. 5, ed. Bühr) and Cyrtisca, on the Erythraean Sea (Procym. 40); and in his Indica he gives an account of the Indus, of the manners and customs of the natives of India, and of its productions, some of which bear the stamp of a too credulous mind, but are not altogether unintelligible or valueless.

On the advance of Alexander through Bactria to the banks of the Indus, a new light was thrown on geographical and ethnographical knowledge of the Greeks, for the first time acquired with tolerable accuracy some knowledge of the chief features of this remarkable country. A number of writers—some of them officers of Alexander's army—devoted themselves to a description of different parts of his route, or to an account of the events which took place during his progress from Babylon to the Hyphasis; and to the separate narratives of Belon and Diogenes, Nearcocus, Oeseicritus, Aristobulus, and Callisthenes, condensed and extracted by Strabo, Pliny, and Arrian, we owe most of our knowledge of India as it appeared to the ancients. None of the original works of these writers have been preserved, but the voyage of Nearcocus (the most important of them, though the places in India he names are few in number) has been apparently given by Arrian (in his Indica) with considerable minuteness. Nearcocus seems to have kept a day-book, in which he entered his own reflections on the course of the events which took place on the Indus (from which he started), and Corsestis (perhaps the present Kowstdi). Pliny, who calls this voyage of Nearcocus and One- sicritus, adds some few places, not noticed by Arrian (vi. 33. a. 36). Oneesicritus himself considered the land of the Indians to be one-third of the whole inhabited world (Strab. xv. p. 691), and was the first writer who noticed the Pregonc (Ceylon). (Ind. p. 691.) Both writers appear, from Strabo, to have left interesting memorials of the manners and customs of the natives (Strab. xi. p. 517, xv. p. 726) and of the natural history of the country. (Strab. xv. pp. 693, 705, 716, 717; Aelian, Hist. Am. xv. 39, xvi. 6; Plin. vii. 32. a. 34, vii. 22. a. 2; Tstax. Chil. iii. 13.) Arrian (vii. 22) quotes a passage from Arrian as Strabo, that it is not improbable that he may have written a distinct work on India; he is mentioned as noticing the swelling and floods of the rivers of the Pam'k, owing to the melting of the snow and the rain (Strab. xvi. p. 694), the mouths of the Indus (p. 701), the Brahmanes at Taxila (p. 714), the trees of Hyrcania and India (cf. Strab. xvi. p. 702), the fish of the Nile and Indus, respectively (xv. p. 707, xvi. p. 804).

Subsequently to these writers,—probably all in the earlier part of the third century B.C.,—were some others, as Megasthenes, Daimachus, Patrocles and Timostrenes, who contributed considerably to the increasing stock of knowledge relative to India. Oneesicritus and the additional additions were those acquired by Megasthenes and Daimachus, who were respectively ambassadors from Seleucus to the Courts of Sandrocottus (Chandragupta) and his successor Allotrochades (Strab. ii. p. 70, xv. p. 702; Plin. vi. 17. 6. 21), or, as it perhaps ought to be written, Allotrochades. Megasthenes wrote a work often quoted by subsequent writers, which he called a· Inuced (Athén. iv. p. 158; Clem. Alex. Strom. i. p. 132; Joseph. c. Apion. i. 30, Antiq. x. 11. § 1), in which he probably embodied the results of his observations. From the fragments which remain, and which have been carefully collected by Schwabeck (Megasthenes Indicus, Bonn, 1848), it appears that he was the first to give a tolerably accurate account of the breadth of India, making it about 16,000 stadia (Arrian, ii. 7, 8; Strab. i. p. 68, xvi. p. 689)—to mention the Ganges by name, and to state that it was larger than the Indus (Arrian, v. 6. 10, Indica. 4, 15), and to give, besides this, some notices of no less than fifteen tributaries of the Indus, and of the nations of the Ganges, for the first time, and of the 118 nations, and so many cities that they could not be numbered (Arrian, Indica. 10); and observed (the first among the Greeks) the existence of castes among the people (Strab. xv. p. 703; Arrian, Ind. 11, 12; Diod. ii. 40, 41; Solin. c. 59), with some peculiarities of the Indian religious system, and of the Brahmanes (or Bro-
INDIA.

(Strob. xv. pp. 711—714; Clem. Alex. Str. i. 151.) Again Daimachus, who lived for a long time at Palmyra (Strab. ii. p. 70), wrote a work upon India, which, though according to Strabo full of fables, must also have contained much valuable information. Patrocles, whom Strabo evidently designates a writer of his own time (Strab. ii. p. 70), the admiral of Seleucus, sailed upon the Indian Ocean, and left an account, in which he stated his belief that India was the same breadth that Megasthenes had maintained (Strab. ii. p. 69. xv. p. 689); but also that it could be circumnavigated—an erroneous view, which seems to have arisen from the idea, that the Caspian Sea and the Northern Ocean were connected. (Strab. ii. p. 74. xi. p. 518.)

With the establishment of the mathematical schools at Alexandria, commenced a new era in Greek geography; the first systematic arrangement of the divisions of the earth's surface being made by Eratosthenes (b.c. 376—161), who drew a series of parallels of latitude—at unequal distances, however—through a number of cities, and wrote a book of thirty-six books, under the title Geography. (Strab. ii. p. 59.) His work, however, was not the first or the best of its kind. Ptolemy, on the other hand, wrote a book of thirteen books, and was the first to give a systematic account of the geography of the world. (Strab. ii. p. 59.)

The Ganges (about b.c. 150), the father of Greek astronomy, followed Patrocles, Daimachus, and Megasthenes, in his view of the shape of India; making it, however, not so wide at the S. as Eratosthenes had made it (Strab. ii. pp. 77, 81), but much wider towards the N., even to the extent of from 20,000 to 30,000 stadia (Strab. ii. p. 68). Taphrobanes held not to be an island, but the commencement of another continent, which extended upward to the S. and W.,—following, probably, the idea which had prevailed since the time of Aristotle, that Africa and SE. India were connected on the other side of the Indian Ocean. (Mela, iii. ii. 7. § 7; Plin. vi. 22. § 24.)

Artemidorus (about a.c. 100) states that the Ganges rises in the Mounts Emadi, flows S. till it arrives at Ganges, and then E. by Palmyra to its mouth (Strab. xv. p. 719): Taphrobanes held the Ganges to be about 500 stadia long and 500 broad (Steph. B.). The whole breadth of India, from the Ganges to the Indus, he made to be 16,000 stadia. (Plin. vi. 19. § 22.)

The greater part of all that was known up to his time was finally reduced into a consistent shape by Strabo (b.c. 66—A. D. 26). His view of India was not materially different from that which had been the received opinion since Eratosthenes. He held that it was the greatest and most eastern land in the world, and the Ganges its greatest stream (U. ii. p. 130. xv. pp. 690, 713); that it stretched S. as far as the parallel of Merv, but not so far N. as Hipparchus thought (ii. pp. 71, 73, 75); that it was in shape like a lense, the S. and E. being the longest sides. Its greatest breadth was 16,000 stadia on the E., its least 13,000 on the W.; its greatest length on the S., 19,000 stadia. Below the S. coast he placed Taphrobanes, which was, in his opinion, not less than Great Britain (ii. p. 130, xv. p. 690). Pliny the Elder and Pomponius Mela, who were contemporaries, added somewhat to the geographical knowledge previously acquired, by incorporating into their works the results of different expeditions sent out during the earlier emperors. Thus, Pliny follows Agrippa in making India 3800 M. P. long, and 2000 wide, though he himself suggests a different and shorter distance (vi. 17. a. 21); while, after Seneca, he reckoned that it contained 118 peoples and 60 rivers. The Emodus, Ianaus, Paropamissus, and Caucausus, he connected in one continued chain from E. to W., stating that S. of these great mountains, the land was, like Egypt, one vast plain (vi. 18. 8. 23), comprising many wastes and much fruitful land (vi. 20. 8. 23). For fuller notice of Taphrobanes than had been given by previous writers, he was indebted to the ambassadors of the emperor Claudius, from whom he learnt that it had towards India a length of 10,000 stadia, and 500 towns,—one, the capital, Palaestinum, of vast size. The sea between it and the continent is, he says, very shallow, and the distance from the nearest point a journey of four days (vi. 22. a. 24). The measurements of the distances round the coast of India he gives with some minuteness, and in some instances with less exaggeration than his predecessors.

With Marinus of Tyre and Claudius Ptolemaeus, in the middle of the second century, the geographical knowledge of the world may be said to terminate. The latter, especially, has, in this branch of knowledge, exercised an influence similar to that of Aristotle in the domain of the moral and physical sciences. Both writers took a more comprehensive view of India than had been taken before, owing in some degree to the journey of a Macedonian trader named Titianus, whose travels extended along the Aequator from the capital of China (Ptol. i. 11. § 7), and to the voyage of a sailor named Alexander, who found his way across the Indian Ocean to Cattigara (Ptol. i. 14. § 1), which Ptolemy places in lat. 8° S., and between 170° and 180° E. long. Hence, his idea that the Indian Ocean was a vast central sea, with land towards S. and E. four times as big as it really is (vi. 4), and the largest island in the world; and he mentions a cluster of islands to the N.E. and S. (in all probability, those now known as the Maldives and Laccadives). In the most eastern part of India, beyond the Gulf of Bengal, which he terms the Golden Chersonesus, he speaks of the names of Unniyadan and Mannolad; the first of which is probably that now known as Jawa, while the name of the second has been most likely preserved in Manilla. The main divisions of India into India untri, Ganges, and India extra Ganges, have been adopted by the
majority of subsequent geographers, from Ptolemy. Subsequent to this date, there are few works which fall within the range of classical geography, or which have added any information of real value on the subject of India; while most of them have borrowed from Ptolemy, whose comprehensive work was soon a text-book in the hands of learned men. From Agathemerus (at the end of the second century) and Dionysius Periegetes (towards the end of the third century) some few particulars may be gleaned:—as for instance, from the latter, the establishment of the banks of the Indus, in Scinde and Cisaurat; and, from a work known by the name of Peripius Maris Erysthrei (the date of which, though late, is not certainly determined), some interesting notices of the shores of the Indian Ocean. Festus Avienus, whose paraphrase of Dionysius Periegetes supplies some lacunae in other parts of his work, adds nothing of interest to his medical account of Indian Geography.

Such may serve as a concise outline of the progress of knowledge in ancient times relative to India. Before, however, we proceed to describe the country itself under the various heads of mountains, rivers, provinces, and cities, it will be well to say a few words on the origin of the name India, with some notice of the subject-matter to which we were in use amongst the earlier geographers, but which we have not thought it convenient in this place to perpetuate.

The names Indus, Indus India, are no doubt derived from the Sanscrit appellation of the river, Sindus, which, in the plural form, means also the people who dwelt along its banks. The adjoining countries have adopted this name, with slight modifications: thus, Abissinia in Ethiopia; the land of perch; Arusca in the Hebrew (Ester, i. 1., viii. 9). The Greek language softened down the word by omitting the ś, hence Ἱνδος, Ἰνδος; though in some instances the native name was preserved almost unchanged, as in the Χερός of the Peripius Maris Erysthrei. Pliny bears testimony to the native form, when he says, "Indus incollis Sindus appellationem" (vi. 20. a. 23). The names of India, derived from this, which have been usually adopted are those of Ptolemy (vii. 1. § 1), into,—(1) India intra Gangas, a vast district, which was bounded, according to that geographer, on the W. by the Paropamisades, Arachosia, and Gedrosia; on the N. by the Imaus, in the direction of the Sagdian and Sacas; on the E. by the Ganges, and on the S. as part of the Indian Ocean: and (2) India extra Gangas (Ptol. vii. 2. § 1), which was bounded on the W. by the Ganges; on the N. by Scythia and Serica; on the E. by the Imaus, and by a line extended from their country to the Merydos κανον (Gulf of Siam); and on the S. by the Indian Ocean, and a line drawn from the island of Menuthias (Ptol. vii. 2. § 1), whence it appears that Ptolemy considered that the Ganges flowed nearly due N. and S. We have considered that this division is too arbitrary to be adopted here; we merely state it as the one proposed by Ptolemy and long current among geographers.

The later ecclesiastical writers made use of other terms, as Τὸ Μερύδος ἔχθρα (Indian Ocean, in which they included even Arabia (Socrat. H. E, i. 19; Theod. i. 23; Theoph. i. 25); and Τὸ Ῥωμαίον ἤλιον (Solomon, ii. 23)."

The principal mountains of India (considered as a whole) were:—the eastern portion of the Paropamisades (or Hindii-Kush), the Imaus (Haimana), and the Emoos (now known by the generic name of the Hinduja). To the extreme E. were the Montes Semantheini, the boundary of the land of the Sinus the Montes Damasi, and the Berypphus M. (probably the present Naurdes M.). An extension of the M. Damasi is the Massenandre M. (now Masin-Ibrea). In India infra Gangas Ptolemy mentions many mountains, the names of which can with difficulty be supplied with their modern representatives: as the Orbidi M. in the S. extremity of the land between the Tyndis and the Chaberaus; the Uexenus M., to the N. of them; the Alisathares M.; the Bitingo M. (probably the range now known as the Othin); and the M. Indus (cuneus) which extend NE. and SW. along the N. bank of the Nerbudda; M. Sardonix (probably the present Saurus); and M. Apoops (perhaps the present Aravalli).

The principal promontories in India are:—in the extreme E., Promontorium Magnus, the western side of the Sinus Magnus; Malsal Colon, on the S. coast of the golden peninsula; Promontorium Aurea Chersonesii, the southern termination of the Sinus Sabaracus, on the western side of the Chersonesus; Cory or Calligicum, between the S. Argaricus and the S. Colchicins, near the SW. end of the peninsula of Hindostan; Comaria (now C. Comoros), the most southern point of Hindostan; Calas Carias (or Calliis), a cape to the east of Mount Pagodas; Simylla (or Semylla, the southern end of the S. Barragazanis, perhaps the present C. St. John's), and Maleem.

In the same direction from E. to W. are the following gulfs and bays:—the Sinus Magnus (now Gulf of Siam); S. Perimulcimus, and Sabaracus, on the E. and W. side of the Chersonesus Aurea; S. Gangetis, and the Togvin M., probably the present Aravakos; the mouths of the river Tephrosb (probably Patas Bay); S. Colchicins (Bay of Manial); S. Barragazanis (Gulf of Cambay), and S. Cantos (most likely the Gulf of Cutch).

The rivers of India are very numerous, and many of them of great size. The most important (from E. to W.) are the Daris (Sailas) and Doanas (Arabian Sea). The Paropamisades, or Araxes, is the Tocomas (probably the present Arvaunys), and the Catabela (now Curnef), the Ganges, with many tributaries, themselves large rivers. [Ganeges.] Along the W. side of the Bay of Bengal are the Adamas (Brasimini), Dosor (Madambali), Massolus (Godrevy), Tyndis (Kittana), and the Chaberas or Chaberaus (the Citera). Along the shores of the Indian Ocean are the Namguas (Tamy), the Namadas (Narmadis or Nerbuda), and lastly the Indus, with its several tributaries. [Indus.]

The towns in India known to the ancients were very numerous; yet it is remarkable that but few details have been given concerning them in the different authors of whose works fragments still remain. The moderns are content with a simple list of the names, adding, in some instances, that such a place was an important mart for commerce. The probability is, that, even so late as Ptolemy, few cities had reached sufficient importance to command the productions of an extensive surrounding country; and that, in fact, with one or two exceptions, the towns which he and others enumerate were little more than the head places of small districts, and in no sense capitals of great empires, such as Ghauma, Delhi, and Calcutta, have become in later periods of Indian history. Beginning from the extreme E., the principal states and towns mentioned in the ancient writers are: Perimula,
in the E. coast of the Golden Chersonesus (in the neighbourhood of Malacca); Tascia or Triglyphon, in the district of the Cyrrho-
dae, at the mouth of the Brahmaputra (now Tiripura or Tripura); and Castigara, the exact position of which has been much disputed among geographers, but which Lassen has placed conjecturally in Borneo.
Northward of Triglyphon are a number of small dis-

INDIA.

Again, from the line of coast from E. to W., the first people along the western mouths of the Ganges are the Gangaridai, with their chief town Ganga (in the neighbourhood of the modern Cal-

the Maesol and Mesola, occupying nearly the same range of coast as that now called the Ganges, with the capital Pitynda, and Conta-
cosa (Mamisipottama or F) and Alesgus on the sea-

in the neighbourhood of Mangalore, with its chief towns Camara (most likely Cochin), where a great quantity of Roman coins have been dug up during the last years) and Tyndis (in the neighbourhood of Goa); and then Musopale, Nitrae, and Mandagra; all places on the sea-coast, or at great distance from it.

Peripl. ii. § 6, 82; cf. Peripl. p. 30), with its chief town Hippeura (Namdera or Hydraab, if not, as Bitter has imagined, the sea-port Mangalore); Baetisiana, Simillia (on the coast near Bassein), Omensagana (undoubtedly in the neighbourhood of Mandirage), and Pandara (Peripl. p. 19), the present Dighir. Further N., the rich commercial state of Larice appears to have extended from the Namadga (Namadati or Ner-

budda) to Barygaza (Beroach) and the Gulf of Cambay. Its chief town was, in Polotnem's time, Ozenia (Onioa or Ujagavasa), a place well known to the antiquaries of India for the vast numbers of the earliest Indian coins constantly found among its ruins: Minnagama, the position of which is doubtful, and Barygaza, the chief emporium of the commerce of Western India. North of Larice was Systrana (Sarasvatika), to the west of the Gulf of Cambay; and still further to the westward, at the mouths of

the Indus, Pattalaene (Lower Scinde, and the neigh-

the Indus, Pattalaene (Lower Scinde, and the neigh-

bouchorh of Kurdic), with its capital Pattala (Potala).

It is much more difficult to determine the exact

of the various tribes and nations mentioned in

ancient authors as existing in the interior of the
country, than it is to ascertain the corresponding modern localities of those which occupied the sea-

coast. Some, however, of them can be made out with sufficient certainty, by comparison of their

classical names with the Sanscrit records, and in

some instances with the modern native appellations.

Following the Indus, Pattalaene, Coromandel, and the Ganges, we find, at least in the times of Ptolemy and of

the Periplus, a wide-spread race of Scythian origin, occu-
powering both banks of the river, in a district called,

from them, INTO-SCYTTHA. The exact limits of their country cannot now be traced; but it is pro-

bable that they extended from Pattalaene on the S.
as far as the lower ranges of the Hindu-Kush.—In fact,

that their empire swayed over the whole of modern

Scinde and the Pomijia; a view which is borne out by the extensive remains of their Tepes and

coinage, which are found throughout these dis-

tricts, and especially to the northward, near the head

waters of the three western of the Five Rivers. A
great change had no doubt taken place by the suc-
cessful invasion of Scythian tribes from the North

wards the close of the second century n. c., as they are

known to have overthrown the Greek kingdom of

Bactrians, at the same time effacing many of the

names of the tribes whom Alexander had met with

two centuries before, such as the Aspasii, Ase-

ceni, Masisani, Hissapii; with the towns of Aca-

da, Daedala, Massaga, and Emboloma, which are

preserved in Arrian, and others of Alexander's his-
torians.

Further N., along the bases of the Paropamisus,

Imaus, and Emumus, in the direction from W. to

E., we find mention of the Sampsatae, the district

Suastene (now Seosia, and Gorysa, with the cities

Gorysa and Dystroyopolis, or Nagara (now Nagar),

and further N. by the sea, between the Suastane and

the Indus, the Gandaran (one, doubtless, of the or-

iginal seats of the Gandharas). Following the

mountain-range to the E., we come to Caspia (now

Causmâr, in earlier times known, as we have seen,

Herodotus, under the name of Casmatra). South-

ward of Casmâr was the territory of Vara, with its

capital Taxila, a place of importance so early as the

time of Alexander (Arrian, v. 8), and probably indi-

cated now by the extensive remains of Manikyala

(Burnes, Travels, vol. i. p. 65), if, indeed, these are

not too much to the eastward. A little further S.

was the land of Pandous (Pandoua or Pandous, the

representative of one of the Pandava dynasties of

early Hindu history), during the time of Alexander

the territory of the Trach갖. Further W., between the Suastane and

the Indus, the Cylindro, with the sources of

the Sulide, Junma, and Ganges; and the Gangani,

whose territory extended into the highest range of

the Himalaya.

Many small states and towns are mentioned in the

biographies of Alexander's campaigns along the upper

Pomei, which he cannot have more than glanced at,

as Peneleotis (Penthalapa), Nissana, Bucephala, the

Galanitae, and the Sibbie or Sibi. Following next the

course of the Ganges, we meet with the Daichan, the

Nanichae, Prasiaca; and the Mandala, with its cele-

brated capital Falibothra (beyond all doubt the present

Patilaputra, or Patna), situated at the junction of
of the Eranoboca (Hermoplochus) and the Ganges; with some smaller states, as the Surasena, and the towns Methora and Clisoba, which were subject to the Prasii. Southward from Falibothri, in the interior of the plain country, dwelt the Cocomonagas, on the banks of the Adamas, the Sabrae, the Sala-
ceni, the Drillophilisae, the Aedelastri, with their capital Segida (probably the present Sakkapura), si-
tuated on the northern spur of the Vindhyas, at no great distance from the sources of the Sonas. Be-
tween the Segida and the Ganges were the Bolin-
gas. NW. direction, beyond the Sonas and the Vindhyas, we find a territory called Srandrabati, and the Gymnobosphitae, who appear to have oc-
cupied the country now called Surdhid, as far as the river Sutledja. The Caspeinai (at least in the time of Ptolemy; see Ptol. vi. § 47) seem to have extended over a considerable breadth of coun-
try, as their sacred town Modara (Mithapura, Μιθαπόρος) was situated, apparently, at no great distance from the Nerbudda, though its exact position has not been identified. The difficulty of identification is much, indeed, increased by the error of reckoning which prevails throughout Ptolemy, who held that the coast of India towards the Indian Ocean was in a straight line E. and W. from Taprobana and the littoral Naugama, by what Naugama we are to understand in the same parallel of latitude. On the southern spur of the Vindhyas, between the Namadus and Nanaguna, on the edge of the Deccas, were the Phyllitae and Goudali; and to the E. of them, be-
tween the Bitiggo and the river Chabaras (Gireot), the nomad Sores (Σορας ορυκτοί), with a chief town Ruskex, and of M. Bitigio. To the southward of these, on the Chabaras and Solen, were several smaller tribes, the Brachmani Magi, the Amb-
bastas, Bettgi or Bitti, and the Tabassi.

All the above-mentioned districts and towns of any importance are more fully described under their respective names.

The ancients appear to have known but little of the islands which are now considered to form part of the East Indies, with the exception of Taprobana or Ceylon, of which Pliny and Ptolemy have left some considerable notices. The reason is, that it was not till a much later period of the world's his-
tory that the Indian Archipelago was fully opened out by its commercial resources to scientific inquiry. Besides Ceylon and Taprobana, which Ptolemy mentions, in its neighbourhood, a remarkable cluster of small islands, doubtless (as we have remarked before) those now known as the Laccadives and Maldives; the island of Jabaus (Jave), below the Cherronessa Aures; and the Satyroon Insulas, on the same parallel with the S. end of this Cherronessa, which may perhaps answer to the Anambo or Niasa islands.

The government of India, as considered as a whole, comparatively little was known to the Greek writers; indeed, with the exception of occasional names of 

silent. Previous, indeed, to Alexander, we have nothing on which we can rely. There is no evidence that Darius himself invaded any part of India, though a portion of the NW. provinces of Bactria may have paid him tribute, as stated by Herodotus. The ex-peditions of Dionysus and Hercules, and the wars of Sesostris and Semiramis in India, can be considered as nothing more than fables too credulously recorded by Ctesias. At the time of the invasion of Alex-
ander the Great, there can be no doubt that there was a settled monarchy in the western part of India, and probably with it is very closely connected out. In the north of the Pangiš was the town or district Taxila (probably Manikyula, or very near it), which was ruled by a king named Taxiles; it being a frequent Indian custom to name the king from the place he ruled over. His name in Dio-
dorus is Mophis (xvii. 86), and in Curtius, Ompis (vii. 12), which was probably the real one, and is itself of Indian origin. It appears that Alexander left his country as he found it. (Strab. xv. pp. 698, 699, 716.) The name of Taxiles is not mentioned in any Indian author. The next ruler Alexander met with was Porus (probably Pâs싸ra Sancs, a change which Strabo indicates in that of Asapampras into Asapavos), with whom Taxiles had been at war. (Arrian, viii. 19.) Alex. never proceeded in recompensing them, and to have increased the empire of Porus, so as to make his rule comprehen-sive of the whole country between the Hydaspe and the Acesines. (Arrian, v. 20, 21, 39.) His country is not named in any Indian writer. Shortly afterwards, Alexander received an embassy and presents from several states (probably in the kingdom of the Aghisce), as has been shown by Prof. Wilson from the Aesac of Casamr, must have been in the mountains in the southern part of that province. (AsString. xi. v. p. 116.) There had been previously a war be-
tween this ruler and the Malli, Oxydracae, and the people of the Lower Pangiš, which had ended in nothing. Alexander confirmed Abisaris in the pos-
session of his own territory, made Philip satrap of the Malli and Oxydracae, and Pytho of the land be-
tween the confines of the Indus and Acesines and the sea (Arrian, v. 15); placing, at the same time, Oxyraes over the Paropsamisae. (Arr. vi. 15.) It may be observed that, in the time of Ptolemy, the Cashmirians appear to have held the whole of the Fasis, so far as the Indus mountains, a portion of the southern country being, however, in the hands of the Malli and Cathessi.

The same state of things prevailed for some time after the death of Alexander, as appears by a decree of Perdiccas, mentioned in Diodorus (xviii. 3), and with little material change under Anti-
pater. (Diod. xvii. 39.) Indeed, the provinces remained true to the Macedonians till the com-
 mencement of the rule of the Prasii, when San-
drocotus took up arms against the Macedonian governors. (Justin. xvi. 4.) The origin of this re-
bellion is clearly traceable. Porus was slain by Eu-
damus about b.c. 317 (Diod. xii. 14); hence San-
drocotus must have been on the throne about the time of Diodorus, which is c. 312, 311, 310. That the attempt of the Indians to recover their freedom was probably aided by the fact that Porus had been slain by a Greek. Sandrocotus, as king of the Prasii (Sancs. Prochya) and of the nations on the Ganges, made war with Seleucus Nicator, who penetrated far into India. Plutarch says he was ruled over all India, but this is not likely. (Plut. Alex. 63.) It appears
that he crossed the Indus, and obtained by marriage Andishza, Gedrosis, and the Paropamisadze, from Selevcas. (Strab. x.v. p. 724; Appian, Syk. 55.) It was to this court that Megasthenes (as we have before stated) was sent. Sandrocutus was succeeded by Antiochus (Samne), which is almost certainly the true form of the name, though Strabo calls him Allitirodaches. He was the contemporary of Antiochus Soter. (Athen. xiv. 67.) It is clear, from Athenæus (1. c.), that the same friendship was maintained between the two descendants as between the two fathers. Dalmachus was sent as ambassador to Ptolemaios. (Strab. ii. p. 70.) Then came the wars between the Parthians and Bactrians, and the more complete establishment of the Graeco-Bactrian kingdom, under Menander, Apollodotus, Eucratides, and their successors, to which we cannot here do more than allude. The effect, however, of these wars was to interrupt communication between the East and the West; hence the meagre nature of the historical records. The foundation of Antiochus the Great to bring to light the name of another king, Sophagæanæ (Polyb. xi. 39), who was, in all probability, king of the Braii. The Scythians finally put an end to the Bactrian empire about B.C. 136. (De Guignes, Mém. de l'Acad. d. Insér. xxv. p. 17.)

This event is noticed in the Periplus (p. 28), where, however, the author must have very much understated the fact. (See also Peripl. p. 24; Dionys. Perieg. v. 1087—1088.) Eustathius adds, in his commentary on Dionysius: "Οὐκ οἶδα κανεὶς συμβόλιον λεγομένου."

Mimaga was their chief town, a name, as appears from Isaid. Chav. (p. 9), which was partly Scythian and partly Sanscrit. (Cf. also De Guignes, I. c.)

The Scythians were in their turn driven out of India by Vima MEDIAKTES, about B.C. 35 (Colesbrooke, Ind. Algebra, Lond. 1817, p. 43), who established his seat of empire at Oyiænas (Ujiasan). At the time when the Periplus was compiled, the capital had been again changed, as we here read, 'Ουιζαον, οὐδεὶς οἶκος τῆς Βασιλείας ὑπερετής ἦσαν.'

This product of the early literature has been found in any of the early literatures of the Hindos to Alexander the Great; but the effect of the later expeditions of the Bactrian kings is apparently indicated under the name of the Vasa. In the astronomical works, the Vaasa are barbarians who understood astronomy, whence it has been conjectured by Colesbrooke that the Alexandrians are referred to. (Ind. Algebra, p. 80.) Generally, there can be no doubt that the Vaasa mean nations to the W. of India. Thus, in the Mahabhârata, they make war on the Indians, in conjunction with the Fâradi (i.e. Parthi), and the Saca or Scythians. (Lassen, Periplus. p. 60.) In the Drama of the Madra-Mâsaka, which refers to the war between Chandragupta and another Indian King, it is mentioned that he was greatly impressed by the ruby, sapphire and other precious stones, which were sent to him by the ruler of the Hyphasis, by the ruler of the Chorases, by Yavani, Cambogi, Perae, Bactrians, and the other forces of Chandragupta, and the king of the Mountain Regions. Lassen thinks, with much reason, that this refers to Seleucus, who, in his war with Chandragupta, reached, as we know, Pailothia. (Pilm. vi. 17.)

The commerce of India, the commerce of ancient India, which we have every reason to suppose was very extensive, is in this place to do more than indicate a few of the principal facts. Indeed, the commerce of India, including the northern and the southern districts, may be considered as an epitome of the commerce of the world, there being few pro-

The principal directions in which the commerce of ancient India floured were, between Western India and Africa, between the interior of the Deccan and the outports of the Red Sea, and western coast of the Indian Ocean, between Cyplon and the ports of the Coromandel coast, between the Coromandel coast and the Aures Chersonesus, and, in the N., along the Ganges and into Tétyar and the territory of the Sinae. There appears also to have been a remarkable trade with the opposite coast of Africa, along the district now called Zangeboor, in sennaeum, rice, cotton goods, car-bohor (sugar), which were regularly sent from the interior of Ariaea (Concaos) to Barygaza (Berasoç), and thence westward. (Periplus. p. 8.) Arab sailors are mentioned who lived at Muza (Moaca), and who traded with Barygaza. (Periplus. p. 12.) Banians of India had established themselves on the N. side of Soostra, called the island of Diconia (Periplus, p. 17); and, even so early as Agatharchides, there was evidently an active commerce between Western India and Yemen. (Agatharch. p. 66, ed. Hudson.) Again, the rapidity with which Alexander got his fleet together seems to show that there must have been a considerable commerce by boats upon the Indus. At the time of the Periplus there was a chief port on the west coast—Barygaza (Berasoç), Musi, and Lochara. (Mangalore), Nelykuda (Nelorens), Pattala (once supposed to be Tatta, but much more probably Hydroid, and Calliene, now Galliâem (Periplus. p. 36): while there were three principal emporia for merchandise— Oxæa (Ojëna), the chief mart of foreign commerce, (vide an interesting account of its ruins, Asia, p. 36), and, next, the place of the transmission of the goods to Barygaza; Tagara, in the interior of the Deccan (almost certainly Deogir or Deomanagari near Etora), whence the goods were conveyed by difficult roads to Barygaza and Pluthana or Pithana, a place the exact position of which cannot now be determined, but, from the character of the products, the place, must have been somewhere in the Ghita.

Along the Regio Paroëlia to the S., and on the Coromandel coast, were several ports of consequence; and extensive pearl fisheries in the kingdom of king Pandion, near Colehi, and near the island of Epicoroë, where the wœvva (a silky thread spun from the pinna-fish) is produced. (Periplus, p. 39.) Further to the N. were, Masaka (Mâsâka) famous for its cotton goods (Periplus. p. 35); and, Gange, a great mart for muslin, betel, pearls, &c., somewhere near the mouth of the Ganges, its exact locality, however, not being now determinable. (Periplus. p. 36.) The commerce of Ceylon (Sailamûd, i.e. Sihulaka-diesu) was in pearls of the best class, and precious stones of all kinds, besides the ruby and the emerald. The notices in Ptolemy and Pliny show that its shores were well furnished with commercial towns (Ptol. vii. 4, §§ 3, 4, 5), while we know from the narrative of Cosmas Indicopleustes (ap. Montfaucon, Coll. Novae Bibl. Pair. vol. ii.) that it was, in the sixth century A.D., the centre of Hindoo commerce. Besides this, we learn that there was an emporium upon the Coromandel coast, whence the merchant ships crossed over to Chrysye (in all probability Malacca), in the Aures Chersonæus; the name of it, however, is not specified.

It is probable, however, that the greatest line of commerce was from the N. and W. along the
Ganges, commencing with Taxila near the Indus, or Lahore on that river, and passing thence to Pataliputra. This was called the Royal Road. It is remarkable that the Ramayana describes a road from Ayodhya (Oude), over the Ganges and the Jamna, to Hastinapura and Lahore, which must be considered a road which the ancients traced in the Greek geographers. The commerce, which appears to have existed between the interior of Asia, India, and the land of the Sinae and Scirca, is very remarkable. It is stated that from Thina (the capital of the Sinae) fine cottons and silk were sent on foot to Bactria, and thence down the Ganges to Linyrica. (Peregr. p. 96.) The Peripatian speaks of a sort of annual tribute of which was held within the territory of the Thinae, to which malabathron (betal) was imported from India. It is not easy to make out whereabouts Thina itself was situated, and none of the modern attempts at identification appear to us at all satisfactory: it is clearly, however, a northern town, in the direction of Lashk in Tihath, and not, as Ptolemy placed it, at Wildeans in Tarsassarea, or, as Vincent (Voyage of Nearchus, vol. ii. p. 732) conjectured, at Abyzna. It is curious that silk should be so constantly mentioned as an article of import from other countries, especially Scirca, as there is every reason to suppose that it was indigenous in India; the name for silk throughout the whole of the Sinae or Archipela is being the Sanscrit word suatra. (Culebrooke, Asiat. Res. vol. v. p. 61.)

It is impossible to give in this work any details as to the knowledge of ancient India exhibited in the remains of native poems or histories. The whole of this subject has been examined with great ability by Lassen in his Indianische Alterthums-krande, and to his pages, to which we are indebted for full accounts of the names which we have from time to time inserted, we must refer our readers. From the careful comparison which has been made by Lassen and other orientalists (among whom Pott deserves especial mention) of the Indian names preserved by the Greek writers, a great amount of evidence has been adduced in favour of the general identity of those which we record in the neighbourhood of Caspary's (Cassarid) in the Regio Pacifica. Herodotus places that part of India which was subject to Dareius in the 20th satrapy, and states that the annual tribute from it amounted to 360 talents (iii. 94). Xenophon speaks of the Indians as a great nation, and one worthy of alliance with Cyzaxes and the Medes (i. 5. § 3, iii. 2. § 25, vi. 2. § 1), though he does not specify under what circumstances he refers. Thus, however, it was nearly the same as that which Herodotus describes, no one can doubt.

From the writers subsequent to Alexander, the following particulars relative to the people and their manners may be gathered. The ancients considered that they were divided into seven castes;—1. Pristai, the royal councillors, and nearly connected with, if not the same as, the Brahmins. (Strab. x. pp. 712—716; Arrian, Ind. i.) With these Strabo (l. c.) makes another class, whom he calls Periopides. These, as Grosskund (iii. p. 158) has suggested, would seem, from the description of their habits, to have been Fakhirs, or penitents, and the same as the Gymnosophists so often mentioned by Strabo and Arrian. They raised the land of the tax in war. 2. Husbandmen, who were free from war-service. They were the most numerous of the seven castes. (Strab. x. p. 704.) The land itself was held to belong to the king, who farmed it out, leaving to the cultivator one-fourth of the produce as his share. 3. Hunters and shepherds, leading a wandering life, seeking the rearing of cattle and beasts of burden: the horse and the elephant were held to be for the kings only. (Strab. l. c.) 4. Artisans and handcraftsmen, of all kinds. (Strab. x. p. 707.) 5. Warriors. (Strab. l. c.) 6. Political officers (epopoioi, Strab.
INDIA.

(c) who looked after affairs in the towns, &c., and most secretly to the king. 7. The Royal Councills, who presided over the administration of justice (Strab. l.c.), and kept the archives of the realm. It was a matter of interest to the Macedonian kings to keep pace between any of these classes, nor for any one to perform the office allotted to another, except in the case of the first caste (called also that of the φωσφόροι, to which class a man might be raised from any of the other classes. (Strab. l.c.; Arrian, Ind. c. 12; Diod. ii. 41; Plin. vi. 19. a. 29.) We may remark that the Indians, on the other hand, recognise only four castes, called respectively Brahmanes, Kshatriyas, Vaisyas, and Sudras—a division which Heeren has suggested (w think without sufficient evidence) to indicate the remains of distinct races. (Asiat. Nat. vol. ii. p. 220.)

The lowest of the people (now called Pariahs), as belonging to none of the above castes, are nowhere distinctly mentioned by ancient writers (but cf. Strab. xv. p. 705). The general description of the Indians, drawn from Megasthenes and others who had lived with them, is very pleasing. Theft is said to have been unknown, so that houses could be left unfastened. (Strab. xv. p. 709.) No Indian was known to speak falsehood. (Strab. l.c.; Arrian, Ind. c. 12.) They were extremely well built, and their bodies were covered with very little fat; their abdomen was much smaller than that of the Greeks. (Strab. l.c.),—their hatred of drunkenness being so great that any girl of the harem, who should see the king drunk, was at liberty to kill him. (Strab. xv. p. 710.) No class eat mola (Hered. ii. 100), their chief sustenance being rice, which afforded them also a strong drink, i.e. arrak. (Strab. xv. p. 712.) They are still free from all debts and long lives; though maturity was early developed, especially in the female sex, girls of seven years old being deemed marriagable. (Strab. xv. pp. 701—706; Arrian, Ind. c.) The women are said to have been remarkable for their chastity, it being impossible to tempt them with any smaller gifts than that of an elephant (Arrian, Ind. c. 17), which was not excepted by Herodotus, ii. 92, nor by Dionysius of Hira. (Strab. l.c.) and the usual custom of marriage was for the father to take his daughter's and to give them in marriage to the youths who had distinguished themselves most in gymnastic exercises. (Arrian, l.c.; Strab. xv. p. 717.) To strangers they ever showed the utmost hospitality. (Diod. ii. 42.) As warriors they were notorious. (I. c.) Than the rest of the people (Strab. xv. p. 709; Arrian, Exp. Alex. vii. 3); and juggling and slight of hand were then as now, among their chief amusements. (Arrian, viii. 7; Juven. vi. 582.) Their manner of dressing was, to tuck up the lower part of the white linen (Philost. VIt. Apoll. ii. 9) or of cotton-stuff (Strab. xv. p. 719; Arrian, Ind. c. 16); their heads and shoulders partially covered (Arrian, l.c.; Curt. viii. 9, 15) or shaded from the sun by umbrellas (Arrian, l.c.); with shoes of white leather, with very thick and many-coloured soles. (Arrian, l.c.) Gold and ivory rings and ear-rings were in common use; and they were wont to dye their beards, not only black and white, but also red and green. (Arrian, l.c.) In general form of body, they were thin and elegantly made, with great litheness (Arrian, Ind. c. 17; Strab. ii. p. 108, xv. p. 699), but were larger than other Asiatics. (Arrian, Exp. Alex. v. 4; Plin. vili. 2.)

Some peculiar customs they had, which have lasted to the present day, such as self-immolation by water or fire, and throwing themselves from precipices (Strab. xv. pp. 716, 718; Curt. viii. 9; Arrian, Exp. Alex. viii. 5; Lucian. iii. 42; Plin. vi. 19. a. 20), and the burning of the widow (custom) not indeed, according to any fixed law, but rather according to custom (Strab. xv. pp. 699—714; Diod. xiv. 91, aix. 33; Cin. Tusc. Disp. vii. 27.) For writing materials they used the bark of trees (Strab. xv. p. 717; Curt. ix. 15), probably much as the modern Cinghalenese use the leaf of the palm. Their houses were generally built of wood and thatched with leaves, and were in the cold mountain districts, of clay. (Arrian, Ind. c. 10.) It is a remarkable proof of the extent to which civilisation had been carried in ancient India, that there were, throughout great part of the country, high roads, with stones set up (answering to our milestones), on which were inscribed the name of the place and the distance that the road was distant. (Strab. xv. pp. 699—708; Arrian, Ind. c. 3.)

INDICUS OCEANUS (ο Ἰνδικὸς Ὠκεανός, Agath. ii. 14; το Ινδικὸς Ὠκεανός, Ptol. vii. 1. § 5.) The Indian Ocean of the ancients may be considered generally as that great sea which washed the whole of the southern portion of India, extending from the parallel of loincloth of the mouths of the Indus to the shores of the Chersonesos Aurea, and, indeed, to have been held by them as part, however, of a yet greater extent of water, the limits of which were undefined, at least to the southwards, and to which they gave the generic name of the Southern Sea. Thus Herodotus speaks of a νερός Σάλασα in this sense (iv. 37), as does also Strabo (ii. p. 121); Diodorus calls it νερός Σάλασα (iv. 38), while the Erythraean sea, taken in its most extended meaning, doubtless conveyed the same sense. (Hered. ii. 102, iv. 37; compared with Strab. i. p. 33.) Ptolemy gives the distances across this sea as stated by seafaring men; at the same time he guards against their over-statements, by recording his own opinion in the following manner: Euxinus (iv. 4; Ptol. Alex. c. 59, 65), the weapons of the foot-soldiers being bows and arrows, and a great two-handed sword; and of the cavalry, a javelin and a round shield (Arrian, Ind. c. 16; Strab. xv. p. 717; Curt. viii. 9.) In the Panath, it is said that the Macedonians encountered poisoned arrows. (Diod. xvii. 105.) Macedonians of all kinds were in vogue among them. The chase was the peculiar privilege of royalty (Strab. xv. pp. 709—712; Ctes. Ind. c. 14; Curt. viii. 9, seq.) gymnastics, music, and dancing, of the rest of the people (Strab. xv. p. 709; Arrian, Exp. Alex. vi. 3); and juggling and slight of hand were then as now, among their chief amusements. (Arrian, viii. 7; Juven. vi. 582.) Their manner of dressing was, to tuck up the lower part of the white linen (Philost. Vit. Apoll. ii. 9) or of cotton-stuff (Strab. xv. p. 719; Arrian, Ind. c. 16); their heads and shoulders partially covered (Arrian, l.c.; Curt. viii. 9, 15) or shaded from the sun by umbrellas (Arrian, l.c.); with shoes of white leather, with very thick and many-coloured soles. (Arrian, l.c.) Gold and ivory and rings and ear-rings were in

x 2
INDIGETES, or INDIGETAE (Ἰνδιγέται, Strab.; Ἰνδιγέται, Plut.), a people of Hispanic Tartessomaeis, in the extreme N.E. corner of the peninsula, who were the earliest settlers of the Straits of Malacca; the Sinus Sarcacius (Plut. vii. 2 § 4), now the Gulf of Martaban; and the Sinus Ganggeticus, or Bay of Bengal. [V.]

INDIGETES, or INDIGETAE (Ἰνδιγέται, Strab.; Ἰνδιγέται, Plut.), a people of Hispanic Tartessomaeis, in the extreme N.E. corner of the peninsula, who were the earliest settlers of the Straits of Malacca; the Sinus Sarcacius (Plut. vii. 2 § 4), now the Gulf of Martaban; and the Sinus Ganggeticus, or Bay of Bengal. [V.]

INDUS. The opinion of Eustathius (Strab. i. p. 64). The Indian Ocean contains at its eastern and three principal gulfs, which are noticed in ancient authors,—the Sinus Parnamucus (Plut. vii. 2 § 5), in the Chinese writers, the Strait of Siam; the Sinus of Macallos; the Sinus Sarcacius (Plut. vii. 2 § 4), now the Gulf of Martaban; and the Sinus Ganggeticus, or Bay of Bengal. [V.]

They were divided into four tribes. Their chief cities besides Emporiai and Rhoda, were: Juncaria (Ἰονόγηλα, Plut. ii. 6 § 73: Junqueria, or, as some suppose, Figueras), 16 M.P. south of the summit of the Pyrenees (Summum Pyrenaeum, ibid.), on the high road to Tarraco (Ibid. Ant. pp. 390, 397); Cartmania (Cornua), 15 M.P. further S. (Js. Tab. Pust.); and Diciania, near the entrance of the Pyrenees (Ibid. 6 § 72). On the monument mentioned by the Etruscan tributaries of Pyreneae (C.Creata), was a temple of Venus, with a small sea-port on the N. side (Ἀφροδίτες, Steph. B.; Ἀφροδίτες lepas, Plut. ii. 6 § 20; Pyreneae Venus, Plin. iii. 3. 3. a. 4; Portus Venusia, Mens, ii. 6 § 5; Portus Pyrenei, Liv. xxxix. 8: Portus Venetiae), which some made the boundary of Gaul and Spain, instead of the Tarragona, near Salt, which was the seat of two small rivers as falling into the gulf of Emporiae, the Claudiunus (Κλαυδιώνος: Fluvius) and the Sambocia (Σαμβοκία εὐκλής): Pliny names the Ticinum, which is the small river flowing past Rosas. The district round the gulf of Emporiae was called Juncariarum Campus (Ἰονόγηλων κήπων), from the abundant vines which grew upon its sandy soil. (Strab. iii. pp. 155, 163; Steph. B. s. v. Ἰονόγηλα, ibid: Eustath. ad l. i. p. 191; Avien. Or. Mar. 523; Ukert, vol. ii. pt. i. pp. 315, &c.) [P. S.]

INDOSCITHIA (Ἰνδοσκίθεια, Ekt. Ινδο- σκίθεια), a district of wide extent along the Indus, which probably comprehended the whole tract watered by the Lower Indus, Chenab, Guzerat, and Sowar-Khan, a name derived from the Scehtian tribes, who gradually pressed onwards to the south and the sea-coast after they had overthrown the Scytho-Bactrian empire, about 3. 1. 136. It is first mentioned in the Periplo M. E. (p. 22) as occupying the banks of the Indus; while in Ptolemy is a fuller description, with the names of some of its principal sub-divisions, as Pattala, Abiria, and Sarchanak, with an extensive list of towns which belonged to it (vii. 1. §§ 55—61). Some of them, as Binagara (properly Minigarra), have been recognized as partially Scythic in form. (Lassen, Pentap. p. 56; cf. Isidor. Char. p. 9.) In Dionysius Periegetae (v. 1085) the same people are described as being the citizens of Emporiae, out of the middle of the sixth century A.D., Coemus Indicophilus speaks of White Huns, or Mongolians, as the inhabitants of the Pusib (ii. p. 338). These may be considered as the remains of the same Scythic tribe, the predecessors of the hordes who subsequently poured down from the north under Jenghiz Khan. (Ritter, Erzaute, vol. i. p. 558.) [V.]

INDUS (Ἰνδός), one of the principal rivers of Asia, and the boundary westward of India. It is mentioned first in ancient authors by Hecataeus of Miletus (P荷ργα. 144, ed. Klauser), and subsequently by Herodotus (v. 44), who, however, only describes the lower course. Strabo (v. 6 § 6), Strabo (v. 6 § 690), Curtius (vii. 9 § 3), and other writers. It was, in Arrian's opinion, a vast stream, even from its first sources, the largest river in the world except the Ganges, and the recipient of many tributaries, themselves larger than any other known stream. It has been conjectured, from the descriptions of the Indians which Arrian has preserved that the writers from whom he has condensed his narrative must have seen it at the time when its waters were at their highest, in August and September. Quoting from Ctesias (v. 4. 11), and with the authority of the other writers (v. 30), Arrian gives 40 stadia for the mean breadth of the river, and 15 stadia with it most contracted; below the confluence of the Ganges the breadth may be 100 stadia, and more even than this when much flooded (v. 14). Pliny, on the other hand, considers that it is nowhere more than 50 stadia broad (v. 20. a. 23); which is clearly the same opinion as that of Strabo, who states, that though those who had not measured the breadth put it down at 100 stadia, the other hand, who had measured it, asserted that 50 stadia was its greatest, and 7 stadia its least breadth (v. v. 700). Its depth, according to Pliny (l.c.), was nowhere less than 15 fathoms. According to Diodorus, it was the greatest river in the world after the Nile (ii. 35). Curtius states that its waters were cold, and of the colour of the sea (v. 7 § 9). Its current is backed by some to have been slow (as by Meis, iii. 7 § 6); by others, rapid (as by Eustath. in Dionys. Perieg. v. 1088). Its course towards the sea, after leaving the mountains, was nearly SW. (Plin. vi. 20. a. 33); on its way it received, according to Strabo (v. 700) and Arrian (v. 6), 15, according to Pliny, 19 tributary rivers (l.c.). About 2500 stadia from the Indian Ocean, it was divided into two principal arms (Strab. v. p. 701), forming thereby a Delta, like that of the Nile, though not so large, called Pattala, from its chief town Pattala (which Arrian asserts meant, in the Indian tongue, Delta (v. 4)); though this statement may be questioned. (Cf. also Arrian, Jud. 2; Dionys. Perieg. v. 1088.) The flat land at the mouths of rivers which flow from high mountain-ranges with a rapid stream, is ever changing: hence, probably, the different accounts which we receive of the mouths of the Indus from those who recorded the history of Alexander, and from the works of later geographers. The former (as we have stated), with Strabo, gave the Indus for a boundary of India, out of the middle of the Indian Ocean,—at a distance, the one from the other, according to Aristobulus (ap. Strab. v. 690), of 1000 stadia, but, according to Nearchus (l.c.), of 1800 stadia. The latter mention more than two mouths: Meis (iii. 7 § 6) speaking of "πιέρα άειτα," and Ptolemy giving the names of seven (vii. 1. § 20), in which he is confirmed by the author of the Periplus Maris Erythraei (p. 22). The names
INDEUS.

c of these months, in a direction from W. to E., are:
1. Myrta στεμά (the Patti or Lobari), not improbably in the arm of the stream by which Alexander's fleet gained the Indian Ocean; 2. Βίσυνον στέμα (the Bihala); 3. Κρυστόνον στέμα (the Hagenaro or Kalabari); 4. Myrta στεμά (the Mala); 5. Να-

INGENA. Strabo and Pliny; but we have no means of fixing the extent or limits of their territory, which evidently comprised a considerable portion of the seacoast on each side of their capital city, and probably extended on the W. till it met that of the Intenicelli. It must have included several minor towns, but their capital, of which the name is variously written Gaulium Ingamanum and Albinganum, is the only town expressly assigned to them by ancient writers. [ALBUM INGAUNUM.] (Strab. v. p. 208; Plin. iii. 5. 6.)

[Aberratul.] INGENIA. [Aberratul.]

INICERUM, a town in Lower Pannonia, in the neighbourhood of which there was a praetorium, or place of rest for the emperors when they travelled in those parts. (Itin. Ant. pp. 260, 265.) Some identify it with the modern Posenega. [L. S.]

INOPUS. [Delors.]

INSANI MONTES (or Manciwenus, Ptol. iii. 3. 7), a range of mountains in Sardinia, mentioned by Livy (xxx. 95) in a manner which seems to indicate that it lay in the E. part of the island; and this is confirmed by Claudian, who speaks of them as rendering the northern part of Sardinia rugged and savage, and the adjoining seas stormy and dangerous to navigators. (Claudian, B. Gid. 513.) Hence, it is evident that the name was applied to the lofty and rugged range of mountains in the E. part of the island; and, if we add, as is doubtless the case, that to them Roman navigators, on account of the sudden and frequent storms to which they gave rise, (Livy l. c.) Ptolemy also places the Manciwenus or Manciwenus — a name which is obviously translated from the Latin one — in the interior of the island, and though he would seem to consider them as nearer the W. than the E. coast, the position which he assigns them may still be referred to the same range or mass of mountains, which extends from the neighbourhood of Olbia (Terra Nova) on the E. coast, to that of Coronus on the W. [SARDINIA.]

[E. H. B.]

INSUBRES, a people both in Gallia Transalpina and Gallia Cisalpina. D'Anville, on the authority of Livy (v. 84), places the Insubres of Gallia Transalpina in that part of the territory of the Aedui where there was a town Mediolanum, between Forum Segusiarum [FORUM SEGUSIARUM] and Lugdunum (Lyons). This is the only ground that there is for supposing that there existed a people or a pagus in Gallia Transalpina named Insubres. Of the Insus, Insus, or Insus, a name is given elsewhere. [Vol. I. p. 936.]

[G. L.]

INSULÀ, or INSULA ALLOBROGUM, in Gallia Narbonensis. Livy (xxii. 31), after describing Hannibal's passage of the Rhone, says that he directed his march on the east side towards the inland parts of Gallia. At his fourth encampment he came to the Insula, "where the rivers Arga and the Rhodanus, flowing down from the Alps by two different directions, comprise between them some tract of country, and then unite: it is the level country between which is called the Insula. The Allobroges dwell near." One might easily see that there must be some error in the word Arga; for Hannibal could not have reached the latitude of Lugdunum (Lyons) in four days from the place where he crossed the Rhone; and this is certain, though we do not know the exact place where he did cross the Rhone. Nor, if he had got to the junction of the Arag and Rhodanus, could Livy say that he reached a place near which the Allobroges dwell; for, if he had marched from the Insula (Isere) to the junction of the Sadus and Rhone, he would have passed through the country of the Allobroges. [ALLOBROGES.] Nor does the Arag (Sadus) flow from the Alps, though the Insula does. Besides this, if Hannibal had gone so far north as the part between the Sadus and Arag, he would have had a much further north than was necessary for his purpose, as Livy describes it. It is therefore certain, if we look to the context only, that we must read "Isara" for "Arag," and there is a reading of one MS., cited by Gronovius, which shows that Isara may have once been in the text, and that it has been corrupted. (Walckenaer, Géog. dc. vol. i. p. 135.) Livy in this passage copied Polibius, in whose MSS. (iii. 49) the name of the river is Scaras or Scara; a name which the editors ought to have kept, instead of changing it into Isara (Isé) as Bekker and others before him have done, though the Isara or Isère is certainly the river. In the latest editions of Polibius the name is applied in the form Isar (l. 10. § 6) in the same manner as in the MSS. of the Intenicelli in the MSS. of Polibius, and in the editions. Walckenaer (vol. i. p. 134) says that the edition of Ulf of 1482 has Sicarius, and that there is a Sicarios in the Strasbourg editions of 1513, 1520, 1522. The edition princeps of 1475 has "Cissar;" and others have "Tissar" and "Tisara." The problem, whence is the Isar or the Arag of the name, is which is as genuine a Celtic form as "Isar" or "Isara," the form in Cicero (ad Fam. x. 15, 5). "Iscara" may be compared with the British forms "Isa" (the Eaxa), Isca, and Ischalia; and Is-ara with the names of the Italian rivers Ausar and Assis. Polibius compares the country in the angle between the Rhone and the Isara (Isère) to the Delta of Egypt in extent and form, except that in the Delta the sea unites the one side and the channels of the streams which form the two other sides; but here mountains almost inaccessable form the third side of this Isara. He describes it as populous, and a corn country. The junction of the Isar, as Strabo calls the river (p. 182), and the Rhone, was, according to him, opposite the place where the Cluses comes near to the banks of the Rhone. The Isère, one of the chief branches of the Rhone, rises in the high Pennine Alps, and flows through the valleys of the Alpine region by a very winding course past St. Maurice, Montres, Conflans, Montclus, Montmaur, Joinville, the Roman Cularo or Gratianopolis, and joins the Rhone a few miles north of Valentia (Valence). Its whole course is estimated at about 160 miles. Hannibal, after staying a short time in the country about the junction of the Rhone and the Isère, commenced his march over the Alps. It is not material to describe his whole route and the Rhodanus, flowing down from the Alps by two different directions, comprise between them some tract of country, and then unite: it is the level country between which is called the Insula. The Allobroges dwell near." One might easily see that there must be some error in the word Arga; for Hannibal could not have reached the latitude of Lugdunum (Lyons) in four days from the place where he crossed the Rhone; and this is certain, though we do not know the exact place where he did cross the Rhone. Nor, if he had got to the junction of the Arag and Rhodanus, could Livy say that he reached a place near which the Allobroges dwell; for, if he had
INGELM, the name of a small province of Armenia near the sources of the Tigris mentioned by Epiphanius (Echos. L. X. vol. i. p. 505, ed. Valesius; comp. S. Martin, Mémo. sur l'Arménie, vol. ii. pp. 23, 37.)

INTERMELI (ィンテミリ), a maritime people of Liguria, situated to the W. of the Ingauni, at the foot of the Maritime Alps. They are but little known in history, being only once mentioned by Livy, in conjunction with their neighbours, the Ingauni, as addicted to piratical habits, to repress which they were compelled by a Roman squadron in a.c. 186 (Liv. xl. i. 37), to hand over to them as still existing tribe (Strab. iv. p. 202); and their capital, called Albium Internelium or Albintelium, now corrupted into Vastimiglis, was in his time a considerable city. [ALBION INTERMELIUM.]

We have no means of determining the extent or limits of their territory; but it seems to have bordered on that of the Ingauni on the E., and the Ventiadiz on the W.: at least, these are the only tribes mentioned as existing in this part of Liguria by writers of the Roman Empire. It probably comprised also the whole valley of the Buvuca or Boja, one of the most considerable of the rivers, or rather mountain torrents, of Liguria, which rises at the source of the Col di Tenda, and falls into the sea at Vastimiglis. [E. H. B.]

INTERAMNA (ィンターマナ: Etr. Internamna, -stia), was the name of several cities in different parts of Italy. Its obvious etymology, already pointed out by Varro and Festus, indicates their position at the confluence of two streams ('inter amnes,' Varr. L. L. v. 28, Fest. s. Amnes, p. 17, Mill.;) which is, however, barely more than a conjecture. The form INTERAMNium (ィンターイマニュウム), and the ethnic form Interamnis, are also found, but more rarely.

1. A Roman colony on the banks of the Liris, hence called, for distinction's sake, INTERAMNA LI- RINAS. It was situated on the left or northern bank of the Liris, near the junction of the little river which flows from the Ingauni on the E., and the Ventiadiz on the W. (with the Melphis, a much more considerable stream), and was distant 6 miles from the latter city, and 7 from Casinum. Its territory, which was included in Latium, according to the more extended use of that name, must have originally belonged to the Volscians, but we have no mention of Interamna as a Volscian city, nor indeed any evidence of its existence previous to the establishment of the Roman colony there, in a.c. 313. This took place at the same time with that at the neighbouring town of Casinum, the object of both being obviously to secure the fertile valley of the Liris from the attacks of the Samnites. (Liv. ix. 28; Dion. xix. 105; Vell. Pat. i. 14.) Hence we find, in a.c. 294, the territory of Interamna engaged by the Samnites, who did not, however, venture to attack the city itself; and, at the opening of the following campaign, it was from Interamna that the consul Sp. Carrius commenced his operations against Samnium. (Liv. x. 36, 39.) Its territory was at a later period laid waste by Hannibal during his march by the Via Lemna from Capua upon Rome, and later still by the Wurmbergi (Liv. xxii. 9); and only afterwards the name of Interamna appears among the twelve refractory colonies which declared themselves unable to furnish any further supplies, and were subsequently (in a.c. 204) load with heavier burdens in consequence (Id. xxvii. 9, xxx. 15). After the Social War it passed, in common with the other Latin colonies, into the state of a municipium; and we find repeated mention of it as a municipal town, apparently of some consequence. (Cic. Phil. ii. 41, pro Mil. 17; Strabv. v. p. 237; Plin. iii. s. 29.) It received a colony under the Second Triumvirate, but does not appear to have enjoyed colonial rank, several inscriptions of imperial times giving it only the title of a municipium. (Lüb. Col. p. 284; Orell. Inscr. 3357, 3828.) Its position at some distance from the line of the Via Latina was probably unfavourable to its prosperity in later times; from the same cause its name is not found in the Itineraries, and we have no means of discovering its existence after the fall of the Roman Empire. The period at which it was ruined or deserted is unknown; but mention is found in documents of the middle ages of a 'Castrum Terane,' and the site of the ancient city, though now entirely uninhabited, is still called Teranea. It presents extensive remains of ancient buildings, with vestiges of the walls, streets, and aqueducts; and numerous inscriptions and other objects of antiquity have been discovered there, which are preserved in the neighbouring villages. (Romanelli, vol. iii. p. 584; Cluver, Ital. p. 1039. The inscriptions are given by Mommsen, Inscr. Regn. Neap. pp. 221, 222.) Flury calls the citizens of this Interamna, 'Interamnenses Succearii,' or 'quos ex Libratinas vocantur.' The former appellation was evidently bestowed from their situation in the neighbourhood of Casinum, but is not adopted by any other author. They are called in inscriptions 'Interamnenses Libratinas,' and sometimes 'Libratinas' alone; hence it is probable that we should read 'Libratinum' for 'Larinatum' in Silini Italicius (viii. 403), where he is enumerating the Volscian cities and hence the mention of Latinum would be wholly out of place.

2. (Termini), a city of Umbria, situated on the river Nar, a little below its confluence with the Velinus, and about 8 miles E. from Narnia. It was surrounded by a branch of the river, so as to be in fact situated on an island, whence it derived its name. The inhabitants are termed by Cassius the 'Umbrienses cognomine Nar tes,' to distinguish them from those of the other towns of the name, and we find them designated in inscriptions as Interamnenses Nartes and Nahartes; but we do not find this epithet applied to the city itself. No mention is found of Interamna in history previous to its passing under the Roman yoke; but there is nothing to show in what manner it was made an integral part of an Umbrian city, and an inscription of the time of Tiberius has preserved to us the local tradition that it was founded in a.c. 672, or rather more than 80 years after Rome. (Orell. Inscr. 689.) When we first hear of Interamna in history it appears as a flourishing municipal town, deriving great wealth from the fertility of its territory, which was irrigated by the river Nar. Hence it is said to have been, in early as the civil wars of Marius and Sulla, one of the 'forentissimia Italica municipia' (Florus, iii. 21); and though it suffered a severe blow upon that occasion, its lands being confiscated by Sulla and portioned out among his soldiers, we still find it mentioned by Cicero in a manner that proves it to have been a province, but desolate (Cic. off. 5. 15). Its inhabitants were frequently engaged in litigation and disputes with their neighbours of Baste, on account of the regulation of the waters of the Velinus, which joins the Nar a few miles above Interamna; and under the reign of Tiberius they were obliged to enter an energetic protest against a project that had been started for turning aside the
course of the Nar, so that it should no longer flow into the Tiber. (Tac., Ann. i. 79.) In the civil war between the two; and in the year 49, when the troops of the former while their head-quarters were at Narina, but was taken with little resistance by Arrius Varus. (Id. Hist. iii. 61, 63.) Inscriptions sufficiently attest the continued municipal importance of Interamna under the Roman empire; and, though its position was some miles to the right of the Nar, the Via Flaminia, which began in Narina direct to Menturah (Strab. v. p. 227; Tac. Hist. ii. 64), a branch line of road was carried from Narina by Interamna and Spoleatum to Forum Flamini, where it rejoined the main highroad. This line, which followed very nearly that of the present highroad from Rome to Perugia, appears to have latterly become the more important of the two, and is given in the Antonine and Jerusalem Itineraries to the exclusion of the true Via Flaminia. (Itin. Ant. p. 125; Itin. Hier. p. 618; Tab. Peut.) The great richness of the meadows belonging to Interamna on the banks of the Nar is celebrated by Pliny, who tells us that they were cut for hay no less than seven times in the year (Plin. xviii. 28. a. 67); and Tacitus also represents as among the most fertile in Italy (Tac. Ann. i. 79). That great historian himself is generally considered as a native of Interamna, but without any distinct authority: it appears, however, to have been subsequently the patrimonial residence, and probably the birthplace, of his descendants, the two emperors Trajan and Hadrian. (Varr. L. R. i. 6.) In A.D. 193, it was at Interamna that a deputation from the senate met the emperor Septimius Severus, when on his march to the capital (Spartian. Sertor. 6); and at a later period (A.D. 253) it was there that the two emperors, Trebonianus Gallus and his son Volusianus, who were on their march to oppose Aemilius in Africa, were assassinated by their own soldiers. (Enop. i. 5; Vict. Cass. 31, Epit. 31.)

Interamna became the seat of a bishop very early times, and has subsisted without interruption through the middle ages on its present site; the name being gradually corrupted into its modern form of Terme. It is still a flourishing city, and retains various relics of its ancient importance, including the remains of a theatre of two stories, which has been dedicated to the sun and to Hercules, and some portions of the ancient Thermes. None of these ruins are, however, of much importance or interest. Many inscriptions have also been discovered on the site, and are preserved in the Palazzo Publico.

About 3 miles above Terme is the celebrated cascades of the Vellinus, which owes its origin to the Roman M. Curius; it is more fully noticed under the article Vellinus.

3. (Teramo), a city of Piacenza, in the territory of the Piacenti, and probably the chief place in the district of that people. The name is omitted by Pliny, but is found in Ptolemy, who distinctly assigns it to the Piacenti, and it is mentioned also in the Liber Colonarium among the "Civitates Piaceni." It bears the epithet of "Paestina," or, as the name is elsewhere written, "Palestina;" the origin and meaning of which are wholly unknown. (Ptol. iii. 1. § 53; Lib. Col. pp. 226, 355.) In the genuine fragments of Frontinus, on the other hand, the city is called Terme, and is mentioned also in the Liber Colonarium among the "Civitates Piaceni." (Frontin. l. 18, ed. Lachm.) Being situated in the interior of the country, at a distance from the highroads, the name is not found in the Itineraries, but we know that it was an episcopal see and a place of some importance under the Romans. (MSS. of the Liber Colonarium in Teramo, whence its modern form of Teramo.) But in the middle ages it appears to have been known also by the name of Aprutium, supposed to be a corruption of Praetutium, or rather of the name of the people Praetutii, applied (as was so often the case in Gaul) to the towns they inhab.ited, who were well known to the Romans. Praetutium probably was a name applied to Utica, a city of Piacenza enumerated by the Geographer of Ravenna (iv. 31); and under the Lombards we find mention of a "comes Aprutii." The name has been retained in that of Abruzzo, now given to the two northernmost provinces of the kingdom of Naples, of one of which, called Abruzzo Ulteriore, the city of Teramo is still the capital. In thenewline Vestiges of the ancient theatre, of baths and other buildings of Roman date, as well as statues, altars, and other ancient remains, have been discovered on the site: numerous inscriptions have been also found, in one of which the citizens are designated as "Interamnenses Praetutiani." (Romanelli, vol. iii. pp. 292-300; Masseni, J. R. X. pp. 282-284.)

There is no foundation for the existence of a fourth city of the name of Interamna among the Frentani, as assumed by Romanelli, and, from him, by Cramer, on the authority of a very apocryphal inscription. (Frentani.)

[FRENTANI.] [E. H. B.]

INTERAMNÉSIA (Plégon. de Longueville 1: Exc. Interamnenses, Plin. iv. 21. a. 35), a stipendary town of the other side of the region of Acetomarca, and supposed by Ukert to have been situated between the Coa and Tourora, near Castel Rodrigo and Almeida. (Ukert, vol. ii. pt. 1. p. 295.)

INTERAMNIUM. [Arturès.] INTERCÁTIA. (Vaccarì.) INTERCÍSCA, or M. Teram, is the name given in the Itineraries to a station on the Via Flaminia, which evidently derives this name from its being situated at the remarkable tunnel or gallery hewn through the rock, now known as the Passo del Parco. (Itin. Hier. p. 614; Tab. Peut.) This passage, which is still traversed by the modern highway from Rome to Fermo, is a work of the emperor Hadrian, as we are informed when the arch which gives it its name was constructed in the seventh year of his reign, a.d. 175. (Inscr. ap. Cluver, Ital. p. 619.) It is also noticed among the public works of that emperor by Aurelius Victor, who calls it Petra Pertusa; and the same name (Πέτρα ψευδώνια) is given to it by Procopius, who has left us a detailed and accurate description of the locality. (Vic. Cass. 9, Epit. 9; Procop. B. G. p. 11.)

The valley of the Cantiaco, a tributary of the Metaurus, which is here followed by the Flaminian Way, is at this point so narrow that it is only by cutting the road out of the solid rock that it can be carried along the face of the precipice, and, in addition to the rock cut by the ancient, there is also one constructed by an arched gallery or tunnel, which gave rise to the name of Petra Pertusa. The actual tunnel is only 126 feet long, but the whole length of the pass is about half a mile. Claudian alludes to this remarkable work in terms which prove the admiration that it excited. (Claud. de P. Cons. Rom. 502.) At a later period, and after the invasion of Praetutii, which, from its completely commanding the Flaminian Way, became a military post of importance, and is repeatedly mentioned during the wars of the Goths
with the generals of Justinian. (Procop. B. C. ii. 11, iii. 6, iv. 28, 54.) The Jerusalem Itinerary places the station of Intercess 9 M. P. from Calles (Caph), and the same distance from Forum Sempronii (Fussumbron), both of which distances are just about correct. (D’Anville, Analyse de l’Italie, p. 153.)

**INTERNUM MARE.** The great inland or Mediterranean Sea, which washes the coasts of Southern Europe, Northern Africa, and Asia Minor.

1. Name.—In the Hebrew Scriptures, this sea, on the W. of Palestine, and therefore behind a person facing the E., is called the "Hinder Sea" (Des. xli. 34; Jos. ii. 20), and also the "Sea of the Philistines" (Ezech. xxvii. 21), because they people occupied the largest portion of its shores. Presumably it was the "Great Sea" (Nev. xxxiv. 6, 7; Jos. i. 4, x. 47; Ezech. xlix. 10, 15, 20), or simply "the Sea" (1 Kings, v. 9; comp. 1 Macc. xiv. 34. xv. 11). In the same way, the Homeric poems, Hesiod, the Cyclic poets, Aesopus, and Pindar, call it emphatically "Ocean", the Hoggaro-Heptanais speaks of it as "the Great Sea" (Fr. 349. ed. Klaem.). Nor did the historians and systematic geographers mark it off by any peculiar denomination. The Roman writers call it Mare Internum (Pomp. Mela, i. 1. § 4; Plin. iii. 3) or Interitum (Sall. Jug. 17; Flor. iv. 2; Verg. Aen. xiv. 399; Ovid. Am. vi. 121; Strabo. i. p. 121, iii. p. 139; Ovid. Met. iii. i). or more frequently, Mare Nostrum (Sall. Jug. 17, 18; Cass. B. G. v. 1; Liv. xxxvii. 40; Pomp. Mela, i. 5. § 1; Ovid. Met. vii. 15). The epithet "Mediterranean" is not used in the classical writers, and was first employed for this sea by Solinus (c. 23; comp. Isid. Orig. xiii. 16.). The Greeks of the present day call it the "White Sea" (Hespera), to distinguish it from the Black Sea. Throughout it is known as the Mediterranean.

2. Extent, Shape, and Admeasurement.—The Mediterranean Sea extends from 6th W. to 36th E. of Greenwich, while the extreme limits of its latitude are from 30° to 46° N.; and, in round numbers, its length, from Gibraltar to its furthest extremity in Syria,即 from 1,800 to 2,000 miles, and its breadth from 80 to 500 miles, and, including the Euxine, with a line of shores of 4500 leagues. The ancients, who considered this sea to be a very large portion of the globe, though in reality it is only equal to one-seventeenth part of the Pacific, assigned to it a much greater length. As they possessed no means for critically measuring horizontal angles, and were unaided by the compass and cloumnometer, correctness in great distances was unattainable. On this account, while the E. shores of the Mediterranean approached a tolerable degree of correctness, the relative positions and forms of the W. coasts are erroneous. Strabo, a philosophical rather than a scientific geographer, set himself to rectify the errors of Eratosthenes (ii. pp. 105, 106), but in many respects; though he gave a much better "contour" of the Mediterranean, yet he distorted the W. parts, by placing Massilia 130° to the S. of Byzantium, instead of 24° to the N. of that city. Ptolemy also fell into great errors, such as the flattening-in of the N. coast of Africa, to the amount of 43° to the S., in the latitude of Carthage, while Byzantium was placed 3° to the N. of its true position; thus increasing the breadth in the very part where the greatest accuracy might be expected. Nor was this all; for the extreme extent of the Internal Sea was carried upwards of 20° beyond its true limits. The maps of Agathodemon which accompany the Geography of Ptolemy, though indifferently drawn, preserve a much better outline of this sea than is expressed in the Theodosian or Peutingerian Table, where the Mediterranean is so reduced in breadth as to resemble a canal, and the site, form, and dimensions of its islands are displaced and disfigured.

The latitudes were estimated by the ancient observers in stadia reckoned from the equator, and are not so discordant as might be expected from such a method. The length between the equinoctial line and Syrana, or rather the place which they called the "Strait of Sicily," is given as follows:—

In Admiral Smyth’s work (The Mediterranean, p. 375) will be found a tabular view of the above-mentioned admmeasures of the elder geographers, along with the determination resulting from his own observations; assuming, for a reduction of the numbers, 700 stadia to a degree of latitude, for a plane projection in the 36th parallel, and 555 for the corresponding degree of longitude (Comp. Cassell, Geographie des Grecs, 1 vol. Paris, 1780; Geographie des Anciens, 3 vols. Paris, 1813; Mesures Itinéraires, 1 vol. Paris, 1813.)

3. Physical Geography.—A more richly-varied and broken outline gives to the N. shores of the Mediterranean an advantage over the S. or Libyan coast, which was first indicated by Eratosthenes (Strabo, ii. p. 109.). The three great peninsulas—the Iberian, the Italic, and the Hellenic,—with their sinuous and deeply indented shores, form, in combination with the neighbouring islands and opposite coasts, many straits and isthmuses. Exclusive of the Euxine (which, however, must be considered as part of it), this sheet of water is naturally divided into two vast basins; the barrier at the entrance of the straits marks the commencement of the W. basin, which descends to an abysmal depth, and extends as far as the central part of the sea, where it flows over another barrier (the subsequent Advenetura Bank, discovered by Admiral Smyth), and again falls into the yet unainted Levant basin.

Strabo (ii. pp. 106—107) marked off this expency by three smaller closed basins, or Tyrrhenian basin, comprehended the space between the Pillars of Hercules and Sicily, including the Iberian, Ligurian, and Sardinian seas; the waters to the W. of Italy were also called, in reference to the Adriatic, the "Lower Sea," as that gulf bore the name of the "Upper." The second was the Tyrrhenian, E. of Sicily, including the Ausanian or Sicilian, the Ionian, and the Libyan seas; on the N. this basin runs up into the Adriatic, on the S. the gulf of Libya penetrates deeply into
the African continent. The E. part of this basin is interrupted by Cyprus alone, and was divided into the Carpathian, Pamphylian, Cilician, and Syrian seas.

The third or Aegean portion is bounded to the W. by a curved line, which, commencing at the coast of Crete, in Asia Minor, is formed by the islands of Rhodes, Crete, and Cythera, joining the Peloponnesus not far from Cape Malea, with its subdivisions, the Thracian, Myrtoan, Icarian, and Cretan seas.

From the Aegean, the "White Sea" of the Turks, the channel of the Hellespont leads into the Propontis, connected by the Thracian Bosporus with the Euxine; to the N.E. of that sheet of water lies the Palaus Messoit, with the strait of the Cimmerian Bosporus. The configuration of the continents and of the islands (the latter either severed from the main or volcanically elevated in lines, as if over long fissures) led in very early times to cosmological views respecting eruptions, terrestrial revolutions, and uppourings of the swollen higher seas into those which were lower, the Hellespont, the straits of Gadez, and the Internal Sea, with its many islands, were well fitted to originate such theories. Not to speak of the floods of Ogyges and Claudian, or the legendary cleaving of the pillars of Heracles by that hero, the Samothracian traditions recounted that the Euxine, once an inland lake, swollen by the rivers that flowed into the Hellespont, had broken through the center of the world and afterwards the Hellespont. (Diod. v. 47.) A reflexion of these Samothracian traditions appears in the "Suiice Theory" of Straton of Lamprocus (Strab. i. pp. 49, 50), according to which, the swellings of the waters of the Euxine first opened the passage of the Hellespont, and afterwards caused the outlet through the Pillars of Heraclea. This theory of Straton led Eratothenes of Cyrene to examine the problem of the equality of level of all external seas, or seas surrounding the continents. (Strab. l.; comp. ii. p. 104.) Strabo (i. pp. 51, 54) rejected the theory of Straton, as insufficient to account for all the phenomena, and proposed one of his own, the profoundness of which modern geologists are only now beginning to approximate; "for," he says (§ 5), "the plains covered by seas were originally at different altitudes, that the waters have risen, or subsided, or receded from some parts and inundated others. But the reason is, that the same land is sometimes raised up and sometimes depressed, so that it either overflows or returns into its own place again. We must therefore ascribe the cause to the ground, either to that ground which is under the sea, or to that which becomes flooded by it; but rather to that which lies beneath the sea, for this is more moveable, and, on account of its wetness, can be altered with greater quickness." (Lyell, Geology, p. 17; Humboldt, Cosmos, vol. ii. p. 118, trans.; Aspects of Nature, vol. ii. pp. 73—83, trans.)

The fluvial system of the Internal Sea, including the rivers that fall into the Euxine, consists, besides many secondary streams, of the Nile, Danube, Borysthenes, Tanais, Po, Rhone, Ebro, and Tiras. The general physics of this sea, and their connection with ancient speculations, do not fall within the scope of this treatise; it will be sufficient to say that the theory of the tides was first studied on the coast of this, which can only in poetical language be called "a tideless sea." The mariner of old had his charts and sailing directories, was acquainted with the bewildering currents and counter-currents of this sea,—the "Typhon" (τυφών), and the "Pretor" (πριτορ), the destroyer of those at sea, of which Lucrètius (vi. 432—448) has given so terrible a description,—and hailed in the hour of danger, as the "Discuri" who played about the head of his vessel (Plin. ii. 437; Sen. Nat. Quæst. ii.), the fire of St. Elmo, "sacred to the seaman." Much valuable information upon the winds, climate, and other atmospheric phenomena, as recorded by the ancients, and compared with modern investigations, is to be found in Smyth (Mediævænsae, pp. 310—302). Forbiger's section upon Physical Geography (vol. i. pp. 576—655) is useful for the references to the Latin and Greek authors. Some papers, which appeared in Fraser's Magazine for the years 1859 and 1853, upon the fish known to the ancients, throw considerable light upon the ichthyology of this sea. Recent inquiry has confirmed the truth of many instructive and interesting facts relating to the fish of the Mediterranean by Aristotle, Pliny, Archestratus, Aslian, Ovid, Oppian, Athenæus, and Anænus.

4. Historical Geography.—To trace the progress of discovery on the waters and shores of this sea would be to give the history of civilisation,—"nullem sine nomine saxum." Its geographical position has eminently tended towards the intercourse of nations, and the extension of the knowledge of the world. The three peninsulas—the Iberian, Ilyric, and Hellenic—run out to meet at that of Asia Minor projecting from the E. coast, while the islands of the Aegean have served as stepping stones for the passage of the peoples from one continent to the other; and the great Indian Ocean advances by the fissure between Arabia, Assyria, and Abyssinia, under the name of the Red Sea, so as only to be divided by a narrow isthmus from the Delta of the Nile valley and the S. coast of the Mediterranean.

"We," says Plato in the Phædo (p. 109, b.), "who dwell from the Phaës to the Pillars of Hercules, inhabit only a small portion of the earth in which we have settled round the (interior) seas, like the aphelion of the sun, and yet the margin of this contracted basin has been the site where civilisation was first developed, and the theatre of the greatest events in the early history of the world. Religion, intellectual culture, law, art, and manners—nearly everything that lifts us above the savage, have come from these coasts.

The earliest civilisation on these shores was to the S., but the national character of the Assyrians was opposed to intercourse with other nations, and their navigation, such as it was, was mainly confined to the Nile and Arabian gulf. The Phoenicians were the first great agents in promoting the communion of peoples, and their flag waved in every part of the waters of the Internal Sea. Carthage and Carthage, though of less importance than Phoe- nicia in commencing nations and extending the geographical horizon, exercised great influence on commercial intercourse with the W. coast of Africa and the N. of Europe. The progressive movement propagated itself more widely and enduringly through the Greeks and Romans, especially after the latter had broken the Phœnicio-Carthaginian power.

In the Hellenic peninsula the broken configuration of the coast-line invited early navigation and commercial intercourse, and the expeditions of the Samians (Herod. iv. 162) and Phœceans (Herod.
INTEROCREA.

1. 163 laid open the W. coast of this sea. During the period of the Roman Universal Empire, the Mediterranean was the lake of the imperial city. Soon after the conclusion of the First Mithridatic War, piracy, which has always existed from the earliest periods of history to the present day in the Greek regions, was carried on systematically by large armed vessels, the strength of which was Glicia and Crete. From these stations the pirates directed their expeditions over the greater part of the Mediterranean. (Appian, Bell. Mith. 92: Plut. Pomp. 24.) Piracy, crushed by Pompeius, was never afterwards carried on so extensively as to merit a place in history, but was not entirely extirpated even by the fleet which the Roman emperors maintained in the East, and that case still occurred is proved by inscriptions. (Böckh, Corp. Inscrip. Graec. n. 3235, 2347.) The Romans despised all trade, and the Greeks, from the time of Hadrian, their great patron, till the extinction of the Roman power in the East, possessed the largest share of the commerce of the Mediterranean. Even after the fall of the Roman Empire, the routes by which the vessels sailed and the ports in which they were held open to Constantinople, never succeeded in forming a maritime power; and their naval strength declined with the numbers and wealth of their Christian subjects, until it dwindled into a few piratical squadrons. The emperors of Constantinople really remained masters of the sea. On all points connected with this subject see Admiral Smyth, The Mediterranean, London, 1854.

[EBJ.]

INTEROCREA (,['prov.], Strab.), a small town or village of the Sabines, between Amaterrum and Resta. It was placed on the Via Salaria, at the junction of its two branches, one of which led eastwards to Amaterrum, the other, and principal one, up the valley of the Velino, to Asculum. It is now called Ambrodeo, and is a position of great military importance, from its commanding the entrance to the two passes just mentioned, which must in all ages have formed two of the principal lines of communication across the Apennines. It seems, however, to have been in ancient times but a small place: Strabo calls it a village; and its name is otherwise found only in the Itineraries, which place it at 14 M. F. from the Colossae (a local station); and is that of Antrodoco. (Strab. v. p. 928; Itin. Ant. p. 807; Tab. Peut.) Its ancient name is evidently derived from its position in a deep valley between rugged mountains; for we learn from Festus (p. 181, ed. MiiH.) that Ocris was an ancient word for a mountain: and it is interesting to find this form still preserved in the name of the Montagna di Ocri, a lofty and rugged group of the Apennines, near Aquilia. (Zannoni, Carta del Regno di Napoli, 3. fol.)

[BHB.]

INTEROPRIUM, a village of the Marrucini, forming a station on the Via Claudia Valeria between Corfinium and Tuscula. It is repeatedly mentioned in the Itineraries, but the distances are variously given. (Itin. Ant. pp. 102, 310; Tab. Peut.) The line of the ancient highroad is, however, well ascertained, and the position of Interoprium is fixed by ancient remains, as well as medial records, at a place on the right bank of the Aternum, just below the narrow gorge through which that river flows below Popoli. The site is now marked only by a tavern called the Osteria di S. Valentino, from the little town of that name, upon the hill above; it is distant 12 Roman miles from Corfinium (S. Pellico), and 13 from Tuscum (Ostia), or 31 from Secoura, at the mouth of the Aternum. (Holsten. Not. ad Chor. p. 143; D'Anville, Analyses de l'Italie, p. 178; Romanelli, vol. iii. p. 117.) An inscription also mentions Interoprium under the name of Pagus Interoprium (Orell. Insct. 144; Romanelli, L.), and it is called "Interoprium vicus" in the Itinerary of Antoninus (p. 102), and was evidently a mere village, probably a dependency of Tusculum. [EHB.]

INTIBILL. 1. [EDICTANT.] 2. A town of Hispania Baetica, near Illiturgia, the scene of a battle gained by the Romans over the Carthaginians in the Second Punic War. (Liv. xxviii. 49; Front. Stratag. iii. 3.)

INUI CASTRUM. [CASTRUM INUI.]

INYCuM or INYCUS ("Iynwos, Steph. B., but Ἰνύως, Herod.: Phot. Ἰνύως), a town of Sicily, situated in the SW. of the island, on the river Hypasia. It is principally known from its connection with the mythical legends concerning Minos and Dædalus; the capital of the Sicanian prince Cocalus, who afforded a shelter to the fugitive Dædalus against the Cretean priests, being placed by name writers at Iynycus, and by other authors at Callama (Paus. vii. 4. 6; Charax, ep. Steph. B. v. Koytoas.) It is mentioned in historical times by Herodotus as the place of confinement to which Scytheus, the ruler of Cachu, was sent by Hippocrates, who had taken him prisoner. (Herod. vi. 23, 24.) The Latin, who copies the narrative of Herodotus, represents Scytheus as a native of Iynycus; but it is more probable that he was a mistake. (Ael. V. H. viii. 17.) Plato speaks of Iynycus as still in existence in his time, but quite a small place (χαλκοῦρα σημαίμενον); notwithstanding which he makes the sophist Hipparis boast that he had derived it from a sum of 20 minae. (Plat. Hipp. M. p. 262, e.) It is evident that it always continued to be an inconsiderable place, and was probably a mere dependency of Selinus. Hence we never again meet with its name, though Stephannus tells us that this was still preserved on account of the excellence of its wines. (Steph. B. e. v. Ἰνύως; Hesych. x. v.) Vibia Sequester is the only author that affords any clue to its position, by telling us that the river Hypasia (the modern Belice) flowed by it (Vib. Sequest. p. 13, according to Cluver's emendation); but further than this its site cannot be determined. [EHB.]

IOBACCHIL [MARMARICA.]

IOL, afterwards CAESAREA ("Ιάος Καισαρειας, Ptol. ii. 4. 5; Χαλκάρεια, Strab. &c.), originally an obscure Phoenician settlement on the N. coast of Africa, became afterwards famous as the capital of Bocchus and of Juba II. [MAURETANIA.]

The latter king enlarged and adorned the city, and gave it the name of Cesararia, in honour of his patron Augustus. Under the Romans it gave its name to the province of Mauretania Cæsariensis, of which it was the capital. It was made a colony by the emperor Claudius. Under Valens it was burnt by the Moors; but it was again restored; and in the 6th century it was a populous and flourishing city. It occupied a favourable position midway between Carthage and the Straits, and was conveniently situated with reference to Spain, the Balearic islands, and Sardinia; and it had a natural harbour, protected by a small island. To the E. of the city stood the royal mausoleum. (Strab. xvii. p. 881; Dion Cass. ix. 9; Mela, iv. 6; Plin. Hist. Nat. v. 1; Entrop. vii. 5; Itin. Ant. pp. 5, 15, 25, 31; Oros. viii. 35; Ammian. xxix. 5; Procop. B. Vand. ii. 5.)
Caesarea is now identified, beyond all doubt, with the magnificent ruins at Zerkael on the coast of Algier, in a little more than 2° E. long. The Arabic name is simply an abbreviation of Caesarea Jol; a fact clear to the intuitive sagacity of Shaw, and which, in connection with the statement of the ancients, led that incomparable traveller to the truth. Unfortunately, however, nearly all subsequent writers preferred to follow the thick-headed Mannert, who was misled by an error in the Antonine Itinerary, whereby all the places along this coast, for a considerable distance, are thrown too far to the W.; until the position which, with the statements of French and of Italian ambassadors and consuls of the country revealed inscriptions which set the question at rest for ever. There exist few stronger examples of that golden rule of criticism: — "Ponderandum sunt testimonia, non seme- randa." (Shaw, Travels, vol. i. pt. 1. c. 3; Barth, Wanderungen, p. 56; Pallisier, in the Exploration Scientifique de l'Algérie, vol. vi. p. 549.) [P. S.]

OLOLAI or IOLOLASE (Ἰολόλαιις, Plin. iv. 225), a people of Sardinia, who appear to have been one of the indigenous or native tribes of the island. According to Strabo, they were the same people who were called in his day Diagresians or Diaegreians (Διαγρέις or Δαιαγρέις), a name otherwise unknown: and he adds that they were a Tyrrhenian people, a statement which is not improbable. The generally received tradition, however, represents them as a Greek race, composed of emigrants from Attica and Thebes, who had settled in the island under the command of Iolalus, the nephew of Hercules. (Pana. x. 17. § 5; Diod. iv. 50. v. 13.) It is evident that this legend was derived from the resemblance of the Greek form in which it assumed according to the Greek pronunciation) to that of Iolali, what the native form of the name was, we know not; and it is not mentioned by any Latin author, though both Pausanias and Diodorus affirm that it was still retained by the part of the island which had been inhabited by the Iolali. Hence, modern writers have assumed that the name is in reality the same as that of the tribe of the Iloli, and would seem probable enough; but Pausanias, the only writer who mentions them both, expressly distinguishes the two. That author speaks of Olbia, in the NE. part of the island, as one of their chief towns. Diodorus represents them, on the contrary, as occupying the plains and most fertile portions of the island, while the district adjoining Olbia is one of the most rugged and mountainous in Sardinia.

[Ε. Ε. Β.]

IOLCUS (Ἰολκός, Ep. i. 1. 11; Dor. Ἰωλκός: Ἐθ. Ἰαλκοῖς, ἑμ. Ἰαλκίς, Ἰαλεία), an ancient city of Magnesia in Thessaly, situated at the head of the Pagassan gulf and at the foot of Mt. Pelion (Πέλιον) and celebrated in the heroic ages as the residence of Jason, and the place where the Argonauts assembled. [See Dict. of Biog. artt. Jason and Argonautae.] It is mentioned by Homer, who gives it the epithets of ὀργυσμένον and ἄφροφος (H. ii. 712, Od. xi. 256). It is said to have been founded by Cretheus (Apollod. l. 9. § 11), and is also mentioned by Hyginus from Orchomenos. (Strab. iv. p. 414.) Iolcus is rarely mentioned in historical times. It was given by the Thessalians to Hippasus, upon his expulsion from Athens. (Herod. v. 94.) The town afterwards suffered from the depredations of its inhabitants, but it was finally ruined by the foundation of Demetrias in n. c. 290, when the inhabitants of Iolcos and of other adjoining towns were removed to this place. (Strab. i. p. 436.) It seems to have been no longer in existence in the time of Strabo, since he speaks of the place where Iolcos stood (δὲ γὰρ Ἰαλείᾳ τόποις, ib. l. p. 423.)

The position of Iolcos is indicated by Strabo, who says that it was on the road from Beoe to Demetrias, and at the distance of 7 stadia from the latter (ib. i. p. 438). In another passage he says that Iolcos is situated above the sea at the distance of 7 stadia from Demetrias (ib. i. p. 438). Pindar also speaks of it having already seen, read in the same fashion of Mt. Paeon, consequent a little island. From these descriptions there is little doubt that Leake is right in placing Iolcos on the steep height between the southernmost houses of Volo and Vlado-makhalai, upon which stands a church called Epiiskopi. There are at present no ancient remains at this place; but some large squared blocks of stone are said to have formerly existed at the foot of the height, and to have been carried away for the construction of buildings elsewhere. Moreover, it is the only spot in the neighbourhood which has any appearance of being an ancient site. It might indeed appear, from Livy (xlv. 13), that Iolcos was situated upon the coast; but in this passage, as well as in Strabo (ib. i. p. 438), the site of Iolcos seems to have been given as part of the coast as well as the city itself. (Leake, Northern Greece, vol. iv. p. 379; Mémoires sur le Pelion et l'Osse, p. 11.)

JOMANES (Plin. vi. 17. a. 21), the most important of the affluents of the Ganges, into which it flows near the city of Allahabad (Fravasthana). There can be no doubt that Arrian means the same river when he speaks of an island formed of stones, and thrown away from Iolcos (Ind. c. 8); and Pliny expresses nearly the same sound, when he names the Diamna (vii. 1. § 29). It is now called the Jumna or Jamuna. The Jamuna rises in the highest part of the Hindalay, at no great distance from the sources of the Sadhga and Ganges, respectively, in the neighbourhood of Jamudsantri (Jamellsantri), which is probably the most sacred spot of the Hindu worship. It enters the Indian plain country at Fysaberk, and on its way to join the Ganges it passes the important cities of Delhi (In- drapurtha) and Agra (Chiramnaura), and receives several large tributaries. These affluents, in order from W. to E., are the Sambus (Arrian, Ind. c. 4), probably the Sarmansiti or Simbal, the Betwa (or Vetravali), and the Caimas (Arrian, l.c.; Plin. vi. 19. a. 21: now Cigama or Cina). The last has been already mentioned as one of the tributaries of the Ganges.

[Y.]

IOMNIUM. [Mauretania.] ION (Ἰόν), a river of Thymbrae in Thessaly, rising in the Cambunian mountains, and flowing into the Gulf of Corinth, near Argos (Strab. viii. p. 357; Leake, Northern Greece, vol. iv. p. 546.)

ION MONS. [Lydia.]

IONES. [Ionia.]

IONIA (Ἰονία), also called Ionis, the country of Asia Minor inhabited by Ionian Greeks, and comprising the western coast of Phocaia in the north to the region of Ephesus in the south. (Herod. i. 142; Strab. xiv. init.; Plin. v. 31.) Its length from north to south, in a straight line, amounted to 800 stadia, while the length of its much indented coast amounted to 3430; and the distance from Ephesus to Smyrna, in a straight line, was only 320 stadia, while along the coast it reached the large number of 3900. (Strab.,
IONIA.

Towards the inland, or the east, Ionia extended only a few miles, the towns of Magnesia, Larissa, Tralles, Abalanda, and others, not belonging to it. Pottery (v. 2) assigns much nearer limits to Ionia than his predecessors, for, according to him, it extended only from the Hermus in Lydia to the Maeander in Caria; so that Phocaea and Miletus would not belong to Ionia. According to a generally received tradition, the Ionia colonies on the Hellespont were added to the confederacy after the death of Codrus, the last king of Attica, about b.c. 1044, or, according to others, as early as b.c. 1060, about 60 years after the conquest of Peloponnesus by the Dorians. The sons of Codrus, Nacles and Androclus, it is said, being dissatisfied with the abolition of royalty and the appointment of their eldest brother Medon to the archonship, emigrated, with large numbers of Attic Ioniens and bands from other parts of Greece, into Asia Minor. (Strab. xiv. p. 633, foll.; Paus. vii. 2.) Here, in one of the most beautiful and fertile parts of the earth, they founded a number of towns, partly expelling and partly subduing the ancient inhabitants, who consisted mainly of Maeonians, Carians, and Pelasgians. (Herod. i. 81; Justin. xvi. 3, 26; Polyb. i. 31; Diod. Sic. i. 49, 26, 27; Diod. Per. 892, &c.) As a great many of the original inhabitants remained in the country as subjects of the conquerors, and as the latter had gone to Asia as warriors, without women, the new colonies were not pure Greek; but still the subdued nations were not so completely different as to render an amalgamation and assimilation of the two nations impossible, or very difficult. This amalgamation, with different tribes also accounts for the fact that four different dialects were spoken by the Ioniens. (Herod. l. c.)

The towns founded by the Ioniens—which, though independent of one another, yet formed a kind of confederacy for common purposes—amounted to twenty (аСεαδωνοι), a number which must not be regarded as accidental. These towns, of which accounts are given in separate articles, were: Phocaea, Erithraea, Cleizomenae, Teos, Lekedon, Colophon, Ephesus, Priene, Myus, Miletus, and Samos and Chios in the neighbouring islands. (Strab. xiv. p. 633; Aelian, V. F. viii. 5.) Subsequently, about b.c. 700, Smyrna, which until then had been subject to Achaea, became by treachery a member of the Ionia confederacy, which now consisted of thirty cities. (Herod. l. c.; Paus. vii. 5; Strab. l. c.) These Ionia colonies soon rose to a high degree of prosperity, and in many respects outrivalled the mother-country; for poets, philosophers, historians, and artists flourished in the Ionia cities long before the mother-country attained to any eminence in these intellectual pursuits. All the cities of Ionia formed independent republics, with democratical constitutions; but their common affairs were discussed at regular meetings held at Panionium (Πανιονίου), the common centre of all the Ionia cities, on the southern slopes of Mount Mycale, near Priene, and about three stadia from the coast. (Herod. l. c.; Strab. xiv. p. 639; Hirta, i. 17; Pinn. v. 29.) These meetings at Panionium appear to have given rise to a permanent town, with a Panionium, in which the meetings were held. (Steph. B. a. v.) The political bond which held the Ionia cities together appears to have been rather loose, and the principal objects of the meetings, at least in later times, were religious worship and the celebration of games. The cities continued to enjoy their increasing prosperity and their independence until the establishment of the Lydia monarchy.

The attacks upon the Ionia colonies began even in the reign of Gyges, so that one city after another was conquered, until, in the reign of Croesus, all of them became subject to the Lydiens. When Lydia became the prey of the Persian conqueror Cyrus, in b.c. 557, Ionia also was obliged to acknowledge the supremacy of Persis; but the new rulers scarcely interfered with the internal affairs of the cities and their confederacy, and just as they were called upon to contribute, to send their contingents to the Persian armies, and to submit to satraps and tyrants, the latter of whom were Greek usurpers who set themselves up in their native cities, and were backed by the Persian monarchs. But the Ioniens, accustomed to liberty, were unable to bear even this gentle yoke for any length of time, and in b.c. 500 a general insurrection broke out against Persis, in which the Atheniens and Eretriens also took part. The revolt had been planned and organised by Histiaeus, tyrant of Miletus, and Aristagoras, his son-in-law. The Ioniens burned and destroyed Sardes, the residence of the Persian satraps, but were then routed and defeated in a bloody battle near Ephesos. In b.c. 494 the Ioniens were again called upon to fight for the Persians, and compelled to assist the Persians with men and ships in the war against Greece. In the battle of Mycale, b.c. 479, the Ioniens deserted from the ranks of the Persians and joined the kinnyen, and thus took the first step to recover their independence, which ten years later was fully secured by the battle on the Eurymedon. They entered into a close league with the Atheniens, who were to protect them against any further aggression from the Persians; but in consequence of this they became more or less dependent upon their protectors. In the unfortunate peace of Antalcidas, the Ioniens, with the other Asiatic Greeks, were again made over to Persis, b.c. 387, and when the Persian monarchy was destroyed by Alexander, they became a part of the Macedonian empire, and finally fell into the hands of the Romans. The highest prosperity of Ionia belongs to the period of the Lydia supremacy; under the rule of Macedonia it somewhat recovered from its previous sufferings. Under the Romans the Ionia cities still retained their importance as commercial places, and as seats of schools of literature, but they lost their political life, and sank down to the condition of mere provincial towns. The last traces of their prosperity were destroyed under the barbarous rule of the Turks in the middle ages. During the period of their greatest prosperity and independence, the Ionia cities sent out numerous colonies to the shores of the Black sea and to the western coasts and islands of the Mediterranean. (Comp. Thirlwall, Hist. of Greece, vol. ii. chap. 12, pp. 94, 115, 120, &c.; Grote, Hist. of Greece, vol. ii. pp. 229—253.)

IONIUM MARE (Ἰονιων τῆλεγος, Phlio), was the name given by geographers to the sea which bathed the western shores of Greece, and separated them from those of Asia Minor. Other appellatives would seem to date from a very early period, when the Ioniens still inhabited the shores of the Corinthian gulf, and the part of the Peloponnesus subsequently known as Achaia; but we have no evidence of its employment in early times. The legends invented by later writers, which derived it from a hero of the name of Ioniens or Ioniens or from the legendary workings of Io (Aesch. Prom. 840; Testa ad Leog. Alex. 830; Steph. B. a. v.; Eustath. ad Dionys. A.).
PERIOD 92), are obviously mere etymological fancies. No trace of the name is found in the Homeric poems; and it occurs for the first time in Asclepius, though, from the poetic diction of that writer, it is not clear in what precise sense he employs the term δειοντα μυθή δειον. (Asch. F. C.) Herodotus evidently employs the term ?deion deion, the Ionian gulf, as synonymous with the Adriatic; and Thucydides likewise uses the term in the same sense, as is evident from his expression, that "Epidauros is a city on the right hand as you sail into the Ionian gulf" (i. 24). He also repeatedly uses the term deion (with adverb understood) in speaking of the passage from Corcyra to the Lephegan promontory (vi. 30, 34, vii. 39); but in all these cases he refers only to the narrow sea, which might be considered as part of the same gulf or inlet with the entrance of the Adriatic.

Sclavus also, and even Scymnus Chiusus, employ the name of the Ionian gulf in the same sense, as synonymous with the Adriatic, or at least with the southern part of it (Sclav. §§ 14, 27, Scymn. Ch. 13, 361) [Adam, Ion. Mares], while the name of the Ionian sea, in the more extended sense given to it by later geographers, as indicated at the commencement of this article, is not found in any early Greek writer. Polybius is the first extant author who uses the term in this sense, and gives the name of deion wpopos to the sea which extended from the entrance of the Adriatic along the coast of Italy as far as the promontory of Capo Corse, which he considers as its southern limit. (Pol. ii. 14, v. 110.)

Even here the peculiar expression of the Ionian strait sufficiently shows that this was a mere extension of the name from the narrow sea or strait at the entrance of the Adriatic to the more open sea to the S. of it. Hence we have no proof that the name was ever one in common use among the Greeks until it came to be adopted by the geographers; and even Strabo, who on these points often follows earlier authors, gives the name only of the Ionian gulf to the part of the sea near the entrance of the Adriatic, while he extends the appellation of the Sicilian sea (Mewuwv wpopov) from the eastern shores of Sicily to those of the Peloponnesus. He, as well as Polybius and Scymnus Chiusus, uses the Acrocorinthian promontory as the limit between the Ionian and the Adriatic seas. (Strab. p. 123, vii. pp. 316, 317.)

Pliny uses the name of Ionium Mare very widely, or rather very vaguely; including under that appellation the Mare Siculum and Creticum of the Greeks, as well as apparently the lower part of the Adriatic (Plin. iii. 8. 14, 26. 29, 30, iv. 11. a. 18), and this appears to have been the usage common in his day, and which is followed by the Latin poets. (Virg. Aen. iii. 211, 671; Ovid. Fast. iv. 565, etc.)

Mela distinguishes the Ionian sea from the Sicilian, and applies the former name, in the sense now generally adopted by geographers, as that portion of the broad sea between the shores of Greece and Italy, as far as the nearest to the former. (Mel. ii. 4. 1.)

But all these names, given merely to portions of the Mediterranean which had no natural limits, were evidently used very vaguely and indefinitely; and the great extension given at a later period to the name of the Adriatic swallowed up altogether those of the Ionian and Sicilian seas [ADRIATICUM MARIS], or led to the employment of the former name in a vague and general sense, wholly different from that in which it was originally applied. Thus Servius, commenting on the expression of Virgil, "vulnus Ionio in magnum," where the true Ionium Mare is meant by the poet, says:—

"Sciendum, Ionium enim esse immensus, ab Ionia usque ad Sicilian, et hius partes esse Adriaticum, Achaeicum et Epitropicum." (Serv. ad Aen. iii. 211.)

On the other hand, the name of the Ionian gulf (δυνομοδωρ ecnus) was often given in later times (at least by geographers), in a very limited sense, as a portion of the Adriatic immediately within the strait at its entrance. (Eustath. ad Dion. Per. 92, 389.)

Potomene even applies the name of the Ionian sea (Tinos wpopov, iii. 1. §§ 14, 15) in the same restricted manner.

From the name of the Ionian sea has been derived that of the Ionian islands, now given to the group of seven principal islands (besides several smaller ones) which constitute an independent republic under the protection of Great Britain; but there is no ancient authority for this appellation. [E. H. B.]

JOFFA (Ἰωφα, Ιωφα; Strab. xvi. p. 759; Plin. v. 16. § 2). The form Ἰωφα, Steph B.; Diónya, v. 910; Joseph. Antiq. ix. 10. § 2; Solin. 34, better suits the Phoenician, while which signifies "an eminence;" comp. Mover's Phoen. i. p. 177; Hitzig, Die Philister, pp. 131—134: Eth. ἱωφο, ἱωφά, ἱωφά, ἱωνία, ἱωνία, ἱωνίς, ἱωνίς. The Hebrew name יפוח is still preserved in the Arabic יפוח or יפוח). A seaport town and haven on the coast of Palestine, situated on an eminence. The ancients asserted that it had existed before the Deluge (Pomp. Mela, i. 11. § 1; Plin. v. 14), and according to legend it was on this shore that Aegronomus was rescued by Perseus (Strab. l. c.; Plin. l. c.; comp. Hieron. et Jos. i.) from the monster, whose skeleton was exhibited at Rome by M. Ae- milianus Scaurus during his famous curule sedileship (Plin. iv. 4). When the Israelites invaded Canaan it is mentioned as lying on the border of the tribe of Dan (Josh. xix. 40), and was the only port possessed by the Jewish people, till Herod made the harbour at Cesarea. The timber from Lebanon intended for both the first and second temples was landed here (1 Kings. v. 9; 2 Chron. ii. 16; Ezra, iii. 7); and Jonah went to Joppa to find a ship going to Tarshish (Jon. i. 3). Judas Maccabæus set up a temple of Zeus from Joppa, and three continents having drowned 500 Jews (2 Macc. ii. 7—7).

The town was afterwards taken by Jonathan (1 Macc. x. 74—76), but was not long retained, as it was again captured by Simon (xii. 34), and was strongly fortified by him (xiv. 5, xv. 28).

It was annexed by Pompeius to the Roman province of Syria, along with other towns which the Jews had held by grants from the predecessors of Anc- tiocbus (Joseph. Antiq. xiv. 4. § 4, comp. xiii. 9, § 9), and was afterwards given to Herod by Julius Caesar (xv. 7. § 9), and remained part of the dominions of Archelaus (xvii. 11. § 4).

In the New Testament Joppa is mentioned in connection with the Apostle Peter (Acts, iv. 36—43, 5, 16, xi. 5.). During the Jewish war, this place, which was a constant resort of the pirates (Strab. xvi. p. 759), was taken by Cestius, and 8400 of the inhabitants were put to the sword. (Joseph, B. J. ii. 18. § 10.) Vesuvian afterwards utterly demolished the ruins of Joppa, to which great numbers of persons had fled, and taken to piracy for subsistence. (B. J. iii. 9. §§ 2—5.) In the time of Constantine it became the conquest of a bishop, as well as when taken by the Arabsians under Omar, A. D. 636; the name of a bishop occurs in the council held at Jerusalem A. D. 356. At the period
JOVIA.

JORDANES.

of the Crusades, Joppa, which had already taken the name of Jaffa (Ἰάφεα, Anna Comm. Alexand. p. 329), was alternately in the hands of the Christians and Moslems. After its capture by Saladin (Wilken, Die Kreuzz., vol. iv. pp. 537, 539) it fell into the hands of our own Richard (p. 545), was then sacked by Saladin, al-Afdal (vol. v. p. 545), was again rebuilt by Frederick II (vol. vi. p. 471) and Louis IX. (vol. vii. p. 516), when it was taken by Sultan Bihai (vol. viii. p. 517). As the landing-place for pilgrims to Jerusalem, from the first Crusade to our own day, it occurs in all the itineraries and books of travels, which describe the locality and natural beauties of Jaffa for a haven, in terms very similar to those employed by the ancients. For coins of Joppa see Eckhel, vol. iii. p. 435. (Reland, Palest. p. 864; Von Ranmer, Palestina, p. 201; Winer, Reussworterbuch, s. v.; Robinson, Researches, vol. iii. p. 31; Ritter, Erdkunde, vol. xvi. pt. i. pp. 374—500, Berlin, 1852). [E. B. J.]

JORDANIANA. [Palastina.]

105 (Jord. Est. xi. 329), an island in the Aegean Sea, one of the Sporades, and falsely called by Stephanus one of the Cyclades, lay north of Thera and south of Paros and Naxos. According to Pliny, it was 25 miles in length, and was distant 18 miles from Naxos and 25 from Thera. (Plin. iv. 12. a. 23.) Both Pliny and Stephanus state that it was originally called Phoinice. It possessed a town of the same name (Ptol. iii. 15. § 38), situated upon a height on the western side of the island. It has an excellent harbour, of a circular form, like the Piraeus: its month faces the south-west, and is opposite the island of Sicania. The island is now called Nio (νηό); and when Ross visited it, in 1836, it contained 505 families or 2500 souls. The modern town is built upon the site of the ancient one, of which there are still remains.

Ios was celebrated in antiquity as the burial-place of Homer, who is said to have died here on his voyage from Smyrna to Athens. Long afterwards, when the name of the poet had filled the world, the inhabitants of Ios are reported to have erected the following inscription upon his tomb—

Εἰος ἄπλαν χωρὶς καὶ πόλιν ἔδραμεν ἄλοιπον καὶ πάντα τὰς ἐν μιαίν οὐσίας τινα χρησμοῦ, θέου ὁμοίου.

(Pseudo-Herod. Vit. Homer. 34, 35; comp. Sozomen, p. 22; Strab. x. p. 494; Paus. x. 24. § 2; Pliny, Stephens. B. C.)

It was also stated that Clymene, the mother of Homer, was a native of Ios, and that she was buried in the island (Paus., Stephan. B. C.), and, according to Gallini (ii. 11), Aristotle related that Homer himself was born in Ios. In 1771 a Dutch nobleman, Graf Pasch van Kriemen, asserted that he had discovered the tomb of Homer in the northern part of the island; and in 1773 he published an account of his discovery, with some inscriptions relating to Homer which he said he had found upon the tomb. Of this discovery a detailed account is given by Ross, who is disposed to believe the account of Pasch van Kriemen; but the original inscriptions have never been produced, and most modern scholars regard them as forgeries. (Ross, Reise um den Griech. Inseln, vol. i. pp. 54, 154, seq.; Welcker, in Zeitschr.für die Alterthums- wissen., 1844, p. 582, seq.)

JOTABE (Ἰόταβη), an island in the Erythraean Sea, not less than 1000 stadia from the city of Aegina, inhabited by Jews who, formerly independent, accepted the yoke of the Empire during the reign of Justinian (Procop. B. P. i. 19). It is now called Tyrus, or Dyscretius Tyras of Burkhardt (Trav. p. 501), the island at the entrance of the Gulf of Akhuba. (Comp. Jour. of Geog. Soc. vol. viii. pp. 54, 55.) The modern name recalls the "Genis Tyras" of Pliny (v. 33). placed by him in the interior of the Arabian gulf. (Ritter, Erdkunde, vol. xii. pp. 223—225, vol. xiv. pp. 19, 263.) [E. B. J.]

JOTAPATA (Ἰόταπα), a town near Galilea, standing on the summit of a lofty hill, rising abruptly on all sides, from the deep and impassable ravines which surrounded it. Josephus, who manfully defended it against Vespasian, has told the story of its siege and capture: 1200 prisoners were taken, and, 40,000 men fell by the sword during its protracted siege: Vespasian gave orders that the city should be razed to the ground, and all the defences burned. When deserted, it was called Eranus, and was, according to Pliny, inhabited by Eranus, who, according to Josephus, were buried in the town. The modern name of the place is Eranus. (Ptol. v. § 6; Strab. x. 24. § 2; Pliny, v. 59; Voss, Chalcis.)

JOTAPE (Ἰόταπα),  a small town of Galilea and its fortified caves. [E. B. J.]

JOTAPATA (Ἱόταπα), a small town of Cilicia, in the district called Seleneitis, not far from Selinum. It is perhaps the same place as Laeret, the native city of Diogenes Laertius. It is identified with the modern fort Lambardo. (Ptol. v. § 6; Strab. x. 24. § 2; Pliny, v. 59; Voss, Chalcis.)

The coins of Iotape belong to the emperors Philip and Valerian. [L. S.]

JOVALIA, a town of Lower Pannonia, on the southern bank of the river Dravus. (Itin. Hieros. p. 563.) In the Pent. Tab. it is called Iovallium, while Ptolomy (ii. 16. § 5) calls it Iotaphi or Iotaphius, and the Geog. Eiv. (iv. 19), Ioballos. It occurred, in all probability, the site of the modern village of Volpo. [L. S.]

JOVEM, AD, in Gallia Aquitanis, a Mutatio on the road from Burgidaga (Bordeaux) to Tolosa (Toulouse); and between Bucconia and Tolosa. This Mutatio was seven leagues from Tolosa. D'Anville conjectures it to be at a place which he names Draviens or Guerres. Waiczekers fixes the Mutatio of Bucconia near the Bois du Bouconne. [G. L.]

JOVIA, a town in Lower Pannonia, south of the river Dravus, on the road from Postovium to Murass. (Itin. Hieros. p. 561; Itin. Ant. p. 130; Tab. Pent.) The site is generally identified with some ruins found at Toplica. Another place of the same name is mentioned in Upper Pannonia, on the same road (Itin. Ant. p. 264), and is identified with some ruins found at Iovinece. [L. S.]
JOVIACUM. a town in Noricum, where a "praefectus secundae Italicae militum Liburnarium" had his head-quarters; a circumstance suggesting that the town, though situated some distance from the Danube, was yet connected with its navigation. ([Geogr. Ant. p. 249; Not. Imp.; Tab. Pesci.] [L.S.])

JOVIS MONS (Monori, near Aequaria), a spur of the Pyrenees in Spain, running out into the Mediterranean near the frontier of Gaul. The steep-like terraces which its face presented were called Scala Heroulis. (Mel. ii. 6 § 5.) [P.S.]

IPASTURGI. [Isturgi.]

IPHITIADAE. [Attica, p. 286, b.]

IPNIUS (Ipukos or Ipacer), a small town of Phrygia, a few miles below Synnada. The place itself was of no particular note; but it is celebrated in history for the great battle fought in its plains, a.c. 301, by the aged Antigonus and his son Demetrius against the combined forces of Cassander, Lysimachus, Ptolemy, and Seleucus, in which Antigonus lost his conquest and his life. (Plut. Pyrrh. 4; Appian, Syrac. 55.) From Hierocles (p. 677) and the Acts of Councils (Concil. Niceanii, ii. p. 161), we learn that in the seventh and eighth centuries it was the see of a Christian bishop. Some moderns identify Ipnu with Ipali Hissar. [L.S.]

IRNA. [Ip. 1.]

1. A town of Messenia, mentioned by Homer (Ili. i. 150, 292), usually identified with the later Abia on the Messenian gulf. [Arist.]

2. Or EIRA (Iera), a mountain in Messenia, which the Messenians fortified in the Second Messenian War, and which Aristomenes defended for ten years against the Spartans. It was in the north of Messenia, near the river Neda. Leake places it at no great distance from the sea, under the side of the mountain on which now stands Sidiriastro and Ademnaro; but there are no ancient remains in this spot. More to the east, on the left bank of the Neda, near Kakalutri, are the remains of an ancient fortress, which was, in all probability, Iera; and the lofty mountain above, now called Tetras, was probably the highest summit of Mount Erim. (Paus. iv. 17 § 10, iv. 20 §§ 1-5; Strab. viii. p. 360; Steph. B. s. v. 'Ipa; Leake, Morea, vol. i. p. 486; Gell, Itiner. of the Morea, p. 84; Ross, Reisen im Peloponnes, p. 95, seq.)

IRENOPOLIS (Irenoepolis), a town of the district Lacinii, in the north-east of Cilicia. It was situated not far from the river Calycadnus, and is said to have once borne the name of Neropia (Neproia). (Theodoret. Hist. Eccles. i. 7, ii. 8; Socrati. ii. 26; Plut. v. 8 § 5.) [L.S.]

IRENOPOLIS. [Beren.]

IRENAEA. [Gallacia.]

IREA FLAVIA. [Gallacia.]

IREA (Iepia, Plol. III: Eth. Irenias: Voghera), a considerable town of the interior of Liguria, mentioned both by Pliny and Ptolemy; as well as in the Itineraries, which place it 10 miles from Dertona, on the road to Placentia. (Plin. iii. 5; Strab. iii. § 5; Plut. iii. 1 § 5; Ptolemy p. 288; Tab. Pesci.) This distance agrees with the site of the modern town of Voghera, which appears to have been called in the middle ages Vicos Iris, a name gradually corrupted into its modern appellation. It is situated on the little river Staffara, which would seem to have borne in ancient times the same name with the city; it is called Hira or Iria by P. Diaconus, who tells us that the embassy sent by Magnes to Rome to demand its Sanks. (Hist. Misc. iv. p. 554.) Ptolemy places Iria within the territory of the Taurini; but this would seem to be a mistake: that people could never have extended so far to the eastward. An inscription (of which the reading is, however, a matter of controversy) has "Coloniae Foro Iulium Ireniunum," from which it would seem that Iria, as well as the neighbouring Dertona, became a colony after the death of Cesar, and obtained the name of Forum Julli; but this is very doubtful. No other trace is found either of the name of the colony. (Maffei, Misc. Ver. p. 371; 4; Murat. Inscr. p. 1108, 4; Orell. Inscr. 73.) [E. B. L.]

IRINE, an island in the Argolic gulf, supposed by Leake to be Upsil. (Plin. iv. 12. s. 19; Leake, Journals i. p. 194.)

IRINUS SINUS. [Cantius Sinus.]

IRIPPOL, a town of hispania Baetica (Plin. iii. 1. 3), which Ukert supposed to have been situated in the Sierra de Ronda, near Zara or Pinal. (Florez, Esp. S. vol. xii. p. 303; Coins, ap. Flores, Med. vol. ii. p. 647; vol. iii. p. 85; Mionnet, vol. i. p. 56, Suppl. vol. i. p. 113; Sentini, Med. vol. i. p. 111; Ukert, vol. ii. p. 1. p. 398.) [P.S.]

IRIS (Ires: Xerxes), a town of the Locri Ozaile, of uncertain site. (Thuc. iii. 101; Steph. B. s. c.)

ISAAC ('Isaac, Iskak, Ksakim), a considerable river of Pontus, which has its sources in the heights of Anti- taurus in the south of Pontus. It flows at first in a north-western direction, until reaching Cernana it takes a western turn: it thus passes by the towns of Meyra and Gazitura. A little above Arini it receives the Scylax, and turns eastward; near Empatoria the Lykos empties itself into it. After this it flows due north, and, traversing the plain of Themiscyra, it empties itself into the Euxine by four mouths, the westernmost of which is the most important. (Strab. xil. p. 556.) The Iris is smaller than the Halys (Apollon. Rhod. ii. 368), but still a considerable river, flowing through a vast extent of country, and, according to Xenophon (Ileox. vi. 6 § 3), was three stadia in breadth. (Comp. Strab. l. p. 59, xili. 547; Scylax, p. 32; Plut. v. 6 § 2; Xenoph. v. 6 § 9, vi. 2 § 1; Apollon. Rhod. ii. 965; Dionys. Per. 783; Plin. vi. 3. 4.) The part near its mouth is
ISARIA. 65

word as the English Osca. D'Anville says that the name Isara in the middle ages became Keia or Ascia. Vibius Sequester mentions a river Eisa which flows into the Sequana; but D'Anville suspects the passage to be an interpolation, though it is impossible to judge what is interpolation in such a strange book as Vibius Sequester. Oberlin, the editor of Vibius Sequester, maintains the passage to be genuine (p. 111).}

3. [LOLA]

ISAICI, a Rhaetian tribe dwelling about the mouth of the river Isara (Plin. iii. 24), from which it appears to have derived its name. [L. S.]

ISARGUS. [ILARGUS.]

ISARUS (\/r:apas: the Isar), a river of the Rhaetian Alps, flowing from an Alpine lake, and in a southern direction until it joins the Albia near Pons Drusi. (Strab. iv. p. 207, where the "\r:apas (or e) is said to receive the Atagis (Atësis); either a mistake of Strabo himself, or by a transcriber transposing the names. Comp. IARUS.) [L. S.]

ISARUS (\r:rapas: E"ia \r:rapas), the capital of Isarinsus, situated in the south-west of the Rhaetian country; it was a wealthy and probably the latter name for, as well as place for, place. In the Geographer of Ravenna the form is Isaca, which is preferable. [ISACA.]

ISADICI (Eldébana), a people whom Strabo (xi. p. 506) couples with the Troglytidae and other tribes of the Cynocephala. The name may imply some Hellenic name about the Euboean wars. [CROLL.] [G. G. L.]

ISAEMNIUM, in Ireland, mentioned by Ptolemy (ii. 2 § 8) as a promontory north of the Baydena (river Baydena) = St. John's Foreland, Clocher Head, Demony Point, Ballyshon Point (?). [B. L.]

ISANNAVATIA, in Britain, mentioned in the 6th Itinerary as lying between Lactodorum and Triponium. It is a name of some difficulty, since neither of the places on each side of it has been identified. (See ev.) In the Geographer of Ravenna we find a Bannavallum, and in the 6th Itinerary a Bannovantum. Probably these two names are identical. At any rate, Bannovantum = Isannavatia, since each is 28 miles from Maggiornium. Thus, in the 6th Itinerary, we have:

Bannovantum M. P.
Lactodoro M. P.
Isannavatia xii--xviii.
And in the 8th: M. P.
Bannavanto
Maggiornio xxviii.

It is only safe to say that Isannavatia was a town in the southern part of Northumbria, probably

Denvastere. The Itinerary in which it occurs has only two names beyond doubt, viz. Verulamium and Lindum (St. Albans and Lincoln). Denvastere, however, is Horsley's identification. In more than one map of Roman Britain, Bannovantum is placed in Lincolnshire. This is because it is, in the first place, separated from Bannovantum, and then fixed on the river Rea, a Lincolnshire river. This is the meaning of Horncastle being given as its equivalent. The change, however, and the assumption, are equally gratuitous. [B. G. L.]

ISARA, the river. 1. [INULA.]

2. The Isara, which was a branch of the Sequana, has its name preserved in the Celtic name of a place which was on it, named river Isara. [BRIVA ISAIREA]. The Celtic element Is has become Oise, the modern name of the river, which is the same

VOL. II.
mountains, though the capital, Isauria, was in the south. Strabo, in a somewhat obscure passage (xii. p. 568), seems to distinguish between 'Isaura, the northern part, and 'Isauria, the southern and less known part, which he regards as belonging to Ly西亚a. Later writers, too, designate by the name Isauria only the northern part of the country, and take no notice of the south, which was to them almost a terra incognita. The inhabitants of that secluded mountainous region of Asia Minor, Isauri or Isaurians generally appear to have been a kindred race of the Pisidiens. Their principal means of living were derived from plunder and rapine; from their mountain fastnesses they used to descend into the plains, and to ravage and plunder wherever they could overcome the inhabitants of the valleys in Cilicia, Phrygia, and Pisidia. These marauding habits rendered the Isaurians, who also took part in the piracy of the Cilicians, so dangerous to the neighbouring counties that, in a. c. 78, the Romans sent against them an army under P. Servilius, who, after several dangerous campaigns, succeeded in conquering most of their strongholds and reducing them to submission, in consequence of which he received the surname of Isauricus. (Strab. l. c.; Dio. Sic. xviii. 29; Zosim. v. 25; Mela. i. 2; Plin. H. N. vii. 36; Hist. Rom. Cass. xiv. 16; Flor. iii. 6; Plut. vi. 4; Oros. i. 23; Amm. Marc. xiv. 2, xxv. 9.) The Isaurians after this were quite distinct from the Ly西亚ians, for Cicero (ad Att. v. 21; comp. ad Fam. xv. 2) distinguishes between the Forum Ly西亚ium and the Isauricum. But notwithstanding the severe measures which had been taken against them, the Isaurians frequently broke through the surrounding line of fortifications, and thus rendered the power of Rome, and the Romans, unable to protect their subjects against the bold mountaineers in any other way, endeavoured to check them by surrounding their country with a ring of fortresses. (Treb. Poll. XXX. Tyr. 25.) In this, however, the Romans succeeded but imperfectly, for the Isaurians frequently broke through the surrounding line of fortifications; and their successes emboldened them so much that, in the third century of our era, they united themselves with their kinsmen, the Cilicians, into one nation. From that time the inhabitants of the highlands of Cilicia also are comprised under the name of Isauri, and the two united undertook expeditions on a very large scale. The strongest and most flourishing cities were attacked and plundered by them, and they remained the terror of the surrounding nations. In the third century, Trebellianus, a chief of the Cilician Isaurians, even assumed the title and dignity of Roman emperor. The Romans, indeed, conquered and put him to death; but were unable to reduce the Isaurians. The emperor Probus, for a time, succeeded in reducing them to submission; but they soon shook off the yoke. (Vopisc. Prov. 16; Zosim. i. 69, 70.) To the Greek emperors they were particularly formidable, for whole armies are said to have been cut to pieces and destroyed by them. (Suid. s. v. Βρούσης and Ηδάης-σος; Philostorg. Hist. Eccles. xi. 8.) Once the Isaurians even had the honor of giving an emperor to the East in the person of Zeno, who assumed the name Isaurian; but they were subsequently much reduced by the emperor Anastasius, so that in the time of Justinian they had ceased to be formidable. (Comp. Gibbon, Hist. of the Decline, g.c., chap. x1.) The Isaurians are described as an ugly race, of low stature, and badly armed; in the open field they were bad soldiers, but as hardened mountaineers they were irresistible in what is called guerrilla warfare. Their country, though for the most part consisting of rugged mountains, was not altogether barren, and the vine was cultivated to a considerable extent. (Amm. Marc. xiv. 8.) Traditions originating in the favourite pursuits of the ancient Isaurians are still current among the present inhabitants of the country, and an interesting specimen is related in Hamilton's Travels in the Tropics, vol. ii. p. 331. (L. S.)

ISCA, the name of two towns in Britain. The criticism of certain difficulties connected with their identification is given under Muridium. Here it is assumed that one is Exeter, the other Caerleon-on-Usk.

1. ISCA = Es-eter, mentioned by Ptolemy (ii. 3 § 30). In the 12th and 17th Itineraries this appears as Eseter, 18 miles from Muridium. The word Damnionorum shows that Devonshire is the county in which it is to be sought. Name for name, Exeter suggests itself. Nevertheless, Horsey gives Uxela as the Roman name for Exeter, and placed Isca D. at Chiselborough. After remarking on Isca, that "it is universally supposed to be the river Exeter," and that to be Exeter, he adds, therefore, to Esmouth, he adds, "Isca Damnionorum has been universally taken for Exeter; I have placed it near Chiselborough and South Petherton, near the borders of Somersetshire" (p. 371). His objections (p. 483) lie in the difficulty of fixing Muridium (q. v.); but, beyond this, he considers himself free to claim Uxela (q. v.) as Exeter. For considering Isca D., I believe the better reason than "general opinion and some seeming affinity of names." Yet the "affinity of names" has been laid great stress on in the case of Isca Estacat. The Isca of Ptolemy must be about 20 or 30 miles north-east of the mouth of the Exe, "on which river Exeter stands. This reaches to the A.x." Hence he suggests Ischneter as Isca Dunn.; but, as he admits that that town has a claim to be considered Iscaheila (q. v.), he also admits that some of the localities about Hampsden Hill (where there are the remains of a Roman camp), South Petherton (where Roman coins have been found), and Chiselborough (not far from the A.x.), have better claims. Hence, in his map, Uxela = Exeter, and Isca D. = Chiselborough. Assuming that some, if not all, these difficulties are explained, we still have Muridium, and the positive evidence in favour of Exeter is something more than mere opinion and similarity of name.

(1) The form Isca is nearer to Es than A.x., and that Isca = Esse is admitted. The Ux. in Ux.-ela may better be A.x.

(2) There is no doubt as to the other Isca = Caerleon-on-Usk. Now, Roger Hovedan, who wrote whilst the Cornish was a spoken language, states that the name of Exeter was the same as that of Caerleon, in British, i.e. Caereinc = civitas aquae. (3) The statement of Horsey, that "he could never hear of any military way leading to or from" Exeter, misleads. In Polwele (p. 182) we have a
ISCA.

most distinct notice of the road from Seaton, and, nine miles from Exeter, the locality called Streetway limit; the name street is road (unless not through a town or village) being strong evidence of the way being Roman. Tessellated pavements and the foundations of Roman walls have been found at Exeter, as well as other remains, showing that it was not only a Roman town, but a Roman town of importance, as it continued to be in the Saxon times, and as it had probably been in the British.

2. ISCA. LEGIONIS = Caerleon-on-Wye, is mentioned in the 19th Itinerary, i.e. in the one where Iceni remained in stone. It is founded by Ptolemy to the Silures, the population of the parts to which Iceni (sometimes called later writers Iceni Silurum) belongs, is Balaersarn. This = Burrium of the Itinerary, 8 Roman miles from Iceni (= Usk, about 6 English miles from Caerleon). Hence, Iceni may have been a military station of comparatively recent date. But there is a further complication. It is the Devanish Iceni to which Ptolemy gives the Second Legion (Aedilav severa Iceni) in confirmation of this, remarks Hosley (and, perhaps, with truth), on the part of Ptolemy, is, "in my opinion, the only manifest and material error committed by him in this part of England" (p. 462).

Again, several inscriptions from the Wall (per linearum Valli) show that, when that was built, the second Legion was on the Scottish border, taking part in the work; the previous history of the legion being, that it came into Britain under the reign of Claudius, commanded by Vespasian. (Tac. Hist. iii. 44.) On the other hand, an inscription mentioned by Hosley, but now lost (p. 78), indicates their presence at Caerleon in the time of Severus. As the Itinerary places them there also, we must suppose that this was their quarters until the time approaching the evacuation of Britain. When the Notice was made, they were at Rutupiae (Richborough): Profectus Legions XI. AUGUST. RU-TUPIAE.

The Roman remains found at Caerleon are considerable. A late excavation for the parts about the Castle Mound gave the remains of a Roman villa, along with those of a medieval castle, built, to a great extent, out of the materials of the former. In some cases the stucco preserved its colour. There was abundance of pottery,—Saxon ware, ornamented with figures of combatant gladiators, keys, bowls, bronze ornaments, and implements. At Ff Plasch, near Caerleon, tessellated pavements have been found, along with the following inscription—

DIEI MA-NIEVS TADIA VELLAVIUS. VIXIT ANNOS EXAGINTA QUISEIV. ET TADIVX Exxuperi PILVS.

VIXIT ANNO TRIINTA SEPTEM. DEPVTVS (sic) EXPEDIENTE GERMANICA. TADIA Exxuperata PILIA MATHI ET PATRI PISIBEA BECVS TV-RVKLI PISIBEA FOYSTI.

Others of less length, to the number of twenty, have also been found in the neighbourhood. (See Archaeologia Cambrensis; Journal of British Archaeological Association (passim); and Delineations of Roman Antiquities found at Caerleon, J. E. Loc.).

[ R. G. L.]

ISCA. river. [ISACA.]

ISCADIA (Evelavia), a town in the W. of Britain, between the Baeatic and the Anaatic, not far from Taerio (Apsidal, Hist. Gr.).

ISCHAILIS, in Britain, mentioned by Ptolemy (ii. 3. § 28) as one of the towns of the Belgae, Bath and Winchester ("Thames oppidi, or Aquae Solis, and Venta") being the other two; identified, in the Monumenta Britannica, with Tichester. [ISCA DUMNO-MORUM.]

[ R. G. L.]

ISCHOPYLOS (Istrypolos), a small town on the coast of Penthe near Pharmacia, was in ruins even in the time of Strabo (xiv. p. 548), but is still noticed by Ptolemy (v. 6. § 5).

[ L. S.]

ISIACOBUM FORTUS (Istiacum loci, Arrian, Peripil. p. 21, Aesou. Peripil. p. 9), a harbour on the Exe river, 380 stadia from the island at the mouth of the Rorysthenes, and 1200 stadia from the Falun (Salina) mouth of the Danube. (Arrian, i. c.) It has been identified with Caesarea (Caesar Salinorum) ii. 360) with Odesa. There is some difficulty in adjusting the discrepancies in detail; but the aggregate distance appears to be clearly enough made out. Thus, from the island to Odesa Arrian allows a distance of 80 stadia, and from Odesa to the port of the Istrians ('Istrwouketai) 350 stadia, and thence to that of the Iasci 50 stadia. The Oregent ('Oregentos) of Arrian (for he places Odesa at 'Armos) is probably a false reading, and is the same as the Oregenta ('Oregenta) of Ptolemy (ili. 5. § 29) and Pliny (iv. 12), situated upon the river Axiarch, or the modern Tekhni, a large estuary which receives a river of the same name. As the interval in Arrian between Odesa and the island is too short, so the sea is too large; but the errors balance one another, and the harbour of the Iasci agrees with that of Odesa within three quarters of a mile; the port of the Istrians may have lain to the N. of the bay of Odesa. [E. B. J.]

ISIDIS OPFIDUM (Plin. v. 10. s. 11). Near the city of Busiris, in the Egyptian Delta, was situated a splendid temple of Isis, around which, besides the ordinary dwellings of the priests within the sacred precinct, gradually clustered a large and flourishing village, inhabited by the artisans and husbandmen who supplied the wants or tilled the lands of the inmates of the temple. These buildings formed probably the hamlet or town of Iasia mentioned by Pliny. The modern village of Bahbeer, N. of the ancient city of Busiris, is supposed to cover the ruins of the Templum Isidis (Ptolemais, S. to the East, vol. i. p. 34; Minuto, p. 304.). [Bu-siris.]

[ W. B. D.]

ISINISCA, a place in Raetae Secunda, on the ancient road between Augusti and Salamisury. (Itin. Ant. pp. 236, 251, 257; Tab. Peut., where it is called Insites). It is identified by some with Iesae, and by others with a place near Helfendorf. [L. S.]

ISIONDA (Irideso), a town in the south-west of Phidias, a few miles to the north-west of Ternessos. (Polib. Exc. de Leg. 31; Liv. xxxvi. 15.) Skrabo (xii. p. 570), in enumerating the Phidian towns, mentions one which he calls Sinda, a name which some editors believe to be a corrupt reading for Isodas; but, as there existed a town of the name of Sinda near Cilbyra in Phidian Phrygia, it would be hazardous to decide anything, see Note on Strab. l. c.) Sir C. Fellowes (Asia Minor, p. 194) found extensive remains of an ancient town on the top and side of one of the many isolated hills of the district, which he supposes to be the ruins of Isodas, but he does not mention any coins or inscriptions in support of his conjecture. [L. S.]

ISIS (i Thor), a navigable river on the south coast of the Acinasion and Mognus, from each of which its distance amounted to 90 stadia, while its mouth was 180 stadia south of that of the Phasis. (Arrian, Peripil. p. 7; Plin. vi. 41;
ISIUM.

Sclayx, p. 32, where the common reading *Ips has been corrected by Gail.) This river is believed to be the modern Teshorok. [L. S.]

ISIUM (Isia, *Isia Anton., p. 167; Isiai, Not-Impr., 7), a fort situated on the borders of the Thebaid and Thebantonia in Egypt, in lat. 32° 7' N., and on the eastern bank of the Nile. Isiun was about 20 miles SE. from the castle of Hieracon, and nearly 24 miles NE. from that of Muthia. Under the Roman empire a troop of British infantry (ala Britannorum) was stationed there. [W. B. D.]

ISIUS MUNIS (πολις Ἰσίους, Ptol. iv. 7, § 5), a mountain, or rather a ridge of highlands rising gradually on its western side, but steep and escarped towards the east, on the coast of Aethiopia, and in the Regio Troglydatica. It was situated in lat. 20° 1' N., a little to the southward of the headland Meinemum (Μηνειμενη ἴσιος, Ptol. iv. 5, § 7), and SW. of Berenice and the Sinus Immunundus (Ποιλ Βασιλαί). Mons Isius answers to the modern Ras-al-Duwar. Strabo, indeed (xvii. p. 770), places this eminence further to the south, and says that it was so called from a temple of Isis near its summit. [W. B. D.]

ISMARIS (Τιμαρις Αἰμωρ), a small lake on the south coast of Thrace, a little to the east of Maronea. (Herod. vii. 169; Steph. B. s. v. *Tymaros). On its eastern shore stands the town of Ismarus. [L. S.]

ISMARUS (Τιμαρις), a mountain rising on the east of lake Ismaris, on the south coast of Thrace (Vig. Ecl. vii. 30, Georg. ii. 37; Propert. ii. 13. 5. iii. 12. 25; Lucret. v. 31, where it is called Ismaras, as in Vig. Aen. x. 351.) Homer (Od. ix. 40, 198) speaks of Ismarus as a town of the Cicones, or on the foot of the mountain (Comp. Marcell. 39). The name of the town also appears in the form Ismaron. (Plin. iv. 18.) The district about Ismarus produced wine which was highly esteemed. (Athen. i. p. 30, Ov. Met. ix. 641; Steph. B. s. v.)

ISMENIUS. [Therae.]

ISONDEAE (Ἰσώνεδε, Ptol. v. 9, § 23), a people whose position must be sought for in the valley of the river Tered or Kuma, in Lycidattis, to the W. of the Caspian. [E. B. J.]

ISPINUM. [Carpetae.]

ISRAEL. [Palastina.]

ISSA (Ἰσσα, Ptol. ii. 16, § 14; Agathem. i. 5; Pomp. Mela, ii. 7, § 13; Pllin. iii. 26; Steph. B.; Istit. Anton., Poes. Sub.; Isia, Geog. Bar.; Cosm. Porph. de Ada, Imp. 36; Edd. and Adj. 

Herodotus, Iasus, Isassae, Isassaeus, Issus), one of the most well known of the islands in the Adriatic, off the coast of Liburnia. (Strab. vii. p. 315.) It is mentioned by Sclayx (p. 8) as a Grecian colony, which, according to Scymnus of Chios (I. 421), was sent from Smyrna. Diodorus (xv. 13) relates that in n. c. 337 Dionysius the elder, in his attempts to secure to himself the sovereignty of the Adriatic, assisted the Parians in founding colonies at Issa and Pharos. The island was besieged by Agron, king of Illyria, and the inhabitants applied to Rome for protection, when a message was sent by the Romans to Agron, requiring him to desist from molesting the friends of the republic. In a short time, n. c. 332, Agron died; and his widow Tenta, having succeeded to the throne, resolved on pressing the siege of Issa. The Roman envoys required her to cease from hostilities, when, in defiance of the law of nations, she put one of them to death. This brought on the First Illyrian War, n. c. 229; one of the consequences of which was the liberation of Issa. (Polyb. ii. 8; App. Hist. vii.) That Issa remained free for a long time is proved by its coins, which also show that the island was famous for its wine (comp. Athen. i. p. 229), bearing, as they do, an "amphora" on one side, and on the other a vine with leaves. (Eckhel, vol. ii. p. 156.) The inhabitants were expert seamen, and their beaked ships, "Lembi Issacii," rendered the Romans especial service in the war with Philip of Macedon. (Liv. xxxi. 45, xxxvii. 16, xiii. 46.) They were exempted from the payment of tribute (Liv. xlii. 8), and were reckoned as Roman citizens (Plin. iii. 21.) In the time of Caesar the chief town of this island appears to have been very flourishing.

The island now called Lissa rises from the sea, so that it is seen at a considerable distance; it has two ports, the larger one on the NE. side, with a town of the same name; the soil is barren, and wine forms its chief produce. Lissa is memorable in modern times for the victory obtained by Sir W. Hoste over the French squadron in 1811. (Sir G. Wilkinson, Dalmatia and Montenegro, vol. i. p. 110; Neigerbaur, Die Sudslaven, pp. 110—118.) [E. B. J.]

[ILL. 7.)

COIN OF ISSA.

ISSA. [Lesbos.]

ISSACHAR. [Palastina.]

ISSEDEONES (Ἱσσηδεόν, Steph. B. s. v.; in the Roman writers the usual form is "Iseones"), a people living to the E. of the Argippasi, and the most remote of the tribes of Central Asia, with whom the Hellenic colonies on the Euxine had any communication. The name is found as early as the Spartan Alcman, n. c. 671—631, who calls them "Aseones" (Fr. 94, ed. Weckler), and Hepotae (Fr. 168, ed. Klaussen). A great movement among the nomadic tribes of the non. had taken place in very remote times, following a direction from NE. to S.; the Arimaspi had driven out the Issedones from the steppes over which they wandered, and they in turn drove out the Scythians, and the Scythians the Cimmerians. Traces of these migrations were indicated in the poem of Aristes of Proconnesus, a semi-mythical personage, whose pilgrimage to the land of the Issedones was strangely disfigured after his death by the fables of the Milesian colonists. (Herod. iv. 13.) The Issedones, according to Herodotus (iv. 26), have a custom, when any one loses his father, for the kinsfolk to kill a certain number of sheep, whose flesh they heap up together with that of the dead man, and make merry over it. This done, they peel and clean out his skull, after which it has been gilded becomes a kind of idol to which yearly sacrifices are offered. In all other respects they are a righteous people, submitting to the rule of women equally with that of men; in other words, a civilized people.

Heeren (Arist. Nat. vol. ii. p. 15, trans.) upon Dr. Leyden's authority (Arist. Rev. vol. ix. p. 202), illustrates this way of carrying out the duties of
ISSIDENES.

It may be remarked that a similar story is told of the Indian Padma. (Herod. iii. 29.) Pomponius Mela (i. 1. § 13) simply copies the statement of Herodotus, though he alters it so far as to assert that the Issedones used the skull as a drinking cup.

The name occurs more than once in Pliny (iv. 26, vi. 7, 19); and Ptolemy, who has a town Issedon in Asia (εἰσιδών, vi. 16, § 7, viii. 24, § 5), mentions another place (viii. 24. § 3) the Scythian Issedon. (Comp. Steph. B. s. c.; Amm. Marc. x. 311. § 65.)

Von Humboldt (Asia Centrale, vol. i. pp. 390—412) has shown that, if the relief of the countries between the Dous and the Irtysh be compared with the itinerary traced by Herodotus from the Thysanodora to the Issedones, it will be seen that the Father of History was acquainted with the existence of vast plains separating the Ural and Issid, chains which modern geographers have been in the habit of uniting by an imaginary range passing between the steppe of the Kirghis. This route (Herod. iv. 23, 24) recognizes the passage of the Ural from W. to E., and indicates another chain more to the E. and more elevated — that of the Alai. These chains, it is true, are not designated by any specific names, but Ptolemy was more accurate in Europe, with the names of the Alps and Rhipean mountains; and a comparison of the order in which the peoples are arranged, as well as the relief and description of the country, shows that much definite information had been already attained. Advancing from the Pains Melos, which was supposed to be of far greater importance than it really is, and coming to the ancient city of Cyrrhus in [ ] direction towards the N.E., the first people found occupying the plains are the "Black-clothed" Hsiamsiu, then the Budhini, Tzapragatans, the Ibucar (who have been falsely identified with the Turks), and finally, towards the E., a colony of Scythians, who had separated themselves from the "Royal Scythians" (perhaps to barter gold and skins). Here the plains end, and the ground becomes broken, rising into mountains, at the foot of which are the Aroiptan, who have been identified from their long chins and flat noses with the Kalmucks or Mongolians by Niebuhr, Böckh, and others, to whom reference is made by Mr. Grote. (Hist. of Greece, vol. ii. p. 390.)

The description is then continued by the Roman (Compa Coasid, vol. i. p. 353 note, 440, vol. ii. p. 141 note, 202, tracts), who refers these tribes to the Finnish stock, assuming as a certain fact, on evidence which it is difficult to make out, that the Mongolians who lived around Lake Balkol did not move into Central Asia till the thirteenth century.

Where the data are so few, for the language (the principle upon which the families of the human race are marked off) may be said to be unknown, ethnographic analogies become very hazardous, and the more so in the case of nomad tribes, the same under such wide differences of time and climate. But if there be considerable difficulty in making out the analogy of race, the local bearings of these tribes may be laid down with tolerable certainty. The country up to the Arhippas was well known to the traders; a barrier of impassable mountains blocked up the way beyond. (Hybrebokei.) The position of the Issedones, according to the indications of the E. of Ichim in the steppes of the central horde of the Kirghis, and of the Arimsap on the N. declivity of the Alai. The communication between the two peoples for the purpose of carrying on the gold trade was probably made through the plains at the NW. extremity of the Alai, where the range juts out in the form of a huge promontory. (E. B. J.)

ISSUS. [Issus.]

ISSUS (Ἰσσος and Ἰσσαία) was a town in Asia Minor, and on the south of Issus (Ἰσσαία κατάρα), formerly Alexandria ad Issum, on the east side. It is the only large gulf on the southern side of Asia Minor and on the Syrian coast, and it is an important place in the systems of the Greek geographers.

This gulf runs in a NE. direction into the land to the distance of 47 miles, measured nearly at right angles to a line drawn from the promontory Megarum (Cape Karadash), on the Cilician coast, to the Rhianos Scopus (Rdei-dei-khnmar, or Hymen, as it has sometimes been written), on the Syrian coast; for these two capes are respectively the limits of the gulf on the west and east, and 25 miles from one another. The width immediately north of the capes is somewhat less than 10 miles, but it diminishes much till we approach the northern extremity of the gulf. It seems certain that the ancient outlet of the Pyramus was west of and close to Cape Karadash, where Beaufort supposed it to have been; and this is consistent with the old prophecy [Vol. i. p. 620], that the mouth of the Pyramus would at some time reach to the same place of Cyprus, and that the river had entered the gulf where it does now, 23 miles further east, the prophecy would have been that it would fill up the gulf of Issus. For the earth that the river formerly discharged into the sea is now sent into the gulf, where it has produced a plain of sand along the side of the gulf, somewhat similar in shape, and equal in size, to that formed by the Giah Shoco [CALYCOAD charm, Vol. i. p. 483]; but the elbow where the current that sets round the gulf quits it, is obtuse and without any shoals. Perhaps the disappearance of the Scopus of Ptolemy from the coast, may be accounted for by the progressive advance of the shore into the gulf, which has left the ruins of that town some miles inland. (Beaufort, Correlate, p. 296.) Ptolemy's Serrapoli (Σερραπολες), which he calls a small place (εσκοιρος), is between Mallus, which is a little east of Cape Megarum, and Aegae or Aysae. (Aysae.) The next city to Aegae on the coast is Issus, and this is the remotest city in this part of Cilicia which Ptolemy mentions. Xenophon also speaks of it as the last city of Cilicia on the road to Syria.

The mountains which bound the gulf of Issus are described in the article AMANUS. The bold Rhianos Scopus (5400 feet high), where the Syrian Amanus terminates on the coast, may be distinctly seen by the sailor when he is abreast of Seleucia (Seleucia), at the mouth of the Calycadmus, a distance of 35 geographical miles (Beaufort). A small stream flows into the head of the gulf of Issus, and a few from the Amanus enter the east side, one of which, the Minus, is the Deli Tchak; and the other, the Carus of Xenophon, is the Merkha. The Amanus which descends to the Rhianos Scopus, and the other branch of the Amanus which shuts in the gulf of Issus on the
NW, and forms Strabo's Amanides Pyla, units in the interior, as Strabo says (p. 355); and our modern maps represent it so. There is a plain at the head of the gulf. Strabo gives a greater extent to the Issio gulf than we do to the gulf of Scanderbou, for he makes it extend along the Cilician coast as far as Cilicia Trachos, and certainly to Soli (pp. 534, 664). In another passage (p. 125) he shows what extent he gives to the gulf of Issus, by placing Cypria in the Pamphylian sea east in the gulf of Issus,—the west part of the island being in the Pamphylian, and the east in the Issio gulf. The gulf of Iskenderbou was surveyed by Lt. Murphy in the Ephrathas expedition under the command of Colonel Chesney.

The ancient geographers did not agree about the position of the isthmus of the country which we call Asia Minor; by which isthmus they meant the shortest distance across the eastern part of the peninsula from the Euxine to the Mediterranean. Strabo (p. 673) makes this shortest distance lie along a line joining Amisus and Tarus. If he had said Amisus and the head of the gulf of Issus, he would have been quite right. He was nearly correct as to the head of the gulf of Issus, which he places in the meridian of Amisus and Theophilus (p. 138); and in another passage he says that the head of the gulf of Issus is a little more east than Amisus, or not at all more east (p. 619). Amisus is, in fact, a little further east than the most eastern part of the gulf of Issus. The longest direction of the inhabited world, according to Strabo's system (p. 118), from west to east, is measured on a line drawn through the Stelae (Strati o Gibratour), and the Sicilian strait (Strati o Messina), to Rhodus and the gulf of Issus, whence it follows the Taurus, which divides Asia into two parts, and terminates on the eastern sea. Those ancient geographers who made the isthmus of the Asiatic peninsula extend from Issus to the Euxine, considered the shortest line across the isthmus to be a meridian line, and the dispute whether it ran to Sinope or Amisus (Strab. p. 678). The choice of Issus as the point on the Mediterranean to reckon from, shows that Issus was the limit, or most eastern point, on the south coast of the peninsula, and that it was not on that part of the bay of Issus where the coast runs south. Consequently Issus was on or near the head of the gulf of Issus, and when we reach the head of the gulf of Issus, or seven miles to the north of the head of the bay of Issus, we have reached the head of the gulf of Issus, and the outlet of the river Halys. The distance from the mouth of the Halys to the gulf of Issus is about 12 miles. The mouth of the Halys lies about 30 miles to the north of the head of the gulf of Issus.

The next stage was five parasangs to Myriandrus, a town in Syria on the sea, occupied by Phoenicians, a trading place (Δωροποίος), where many merchant ships were lying. Carsten Niebuhr, who went through the Pyla Cilicienses to Tarus, has some remarks on the probable site of Issus, but they lead to no conclusions (vol. i. p. 116), except that we cannot certainly determine the site of Issus from Xenophon; and yet he would give us the best means of determining it, if we knew where he crossed the Pyrrhus, and if we were also certain that the numbers in the Greek text are correct.

The nearest road to Susa from Sardis was through the Cilician plains. The difficulties were the passage into the plains by the Ciliciense Pyla or pass (Vol. i. p. 563); and then the passage from the Cilician Pyla across the gulf of Issus into Syria. The great road to Susa which Herodotos describes (v. 49, 52), went north of the Tauros to the Ephrathes. The land forces in the expedition of Datis and Artaphernes, b. c. 490, crossed the Syrian Amamna, and went as far as the Aeolian plain in Cilicia; and there they embarked. (Herod. vi. 43.) They did not march by land through the Cilician Pyla over the Tauros into the interior of the peninsula; but Mardonius (Herod. vi. 43), in the previous expedition had led his troops into Cilicia, and sent them on by land to the Hellespontus, while he took ship and sailed to Ionia. The land force of Mardonius must have passed out of Cilicia by the difficult pass in the Tauros. [Vol. I. p. 619.]

Shortly before the battle of Issus (b. c. 333) Alexander was at Mallos, when he heard that Darius with all his force was at Sochi in Assyria; which place was distant two marches from the Assyrian Pyla. (Arrian, Anab. ii. 7.) "Assyria" and "Assyrian" here mean "Syria" and "Syrian." Darius had crossed the Ephrathes, probably at Thapsacae, and was encamped in an open country in Syria, which place is about five days journey from the sea, to the north-west of Samsar, where Sochi is unknown; but it may be the place which Curtius calls Uchina. (Q. Curt. iv. 1.) Arrian says that Alexander left Mallos, and on the second day he passed through the Pyla and reached Myriandrus; he does not mention Issus on this march. Now the shortest distance that Alexander could march from Mallos to Scanderbou is at least 70 miles, and if Mardonius was south of Scanderbou, it was more than 70 miles. This statement of Arrian as to time is therefore false. Curtius (iii. 8) says that Alexander only reached Casabalaun [Casabalaun] on the second day from Mallos; that he went through Issus, and there deliberated whether he should go on or halt. Darius crossed the Amamna, which separates Syria from the bay of Issus, by a pass called the Amamna Pyla (Arrian, ii. 7.), and advancing to Issus, was in the rear of Alexander, who had passed through the Cilician and Syrian Pyla. Darius came to the pass in the Amamna, says Curtius, on the same night that Alexander came to the pass (fauces) by which Syria is entered. The place where Darius crossed the Amamna was
as situated that he came to Issus first, where he climbed the neck of the Macedonians who had been left there. The next day he moved from Issus to pursue Alexander (Arrian; Curtius, iii. 8); that is, he moved towards the Pytas, and he came to the banks of the river Pinarus, where he halted. Issus was, therefore, north of the Pinarus, and some little distance from it. Kiepert's map of Asia Minor marks a pass in the range of the Syrian Amanus, which is the pass by which Darius crossed over the same mountains from the east to Baine (Bainas), and nearly due east of the head of the gulf of Issus. He calls it the Pytas Amanides, by which he means the Pytas Amanides of Arrian, not the Amanides of Strabo; and it takes it to be the pass by which Darius crossed the Syrian Amanus and came down upon the gulf. This may have been his route, and it would bring him to Issus at the head of the gulf, which he came to before turning south to the Pinarus (Deti Tectae). It is certain that Darius crossed by some pass which brought him to Issus before he reached the Pinarus. Yet Kiepert has placed Issus south of the Pinarus, or rather between the two branches of this river, which he represents as uniting near the coast. Kiepert also marks a road which passes through the Amanus (Amanus, Vol. I. p. 114) and runs to Mesala, which he supposes to be Germanicia. This is the dotted road marked as running north from the head of the gulf of Issus in the plan (Vol. I. p. 115); but even if there be such a road, it was not the road of Darius, which must have been the pass above mentioned, in the latitude of the head of the gulf of Issus; which is not marked in the above plan, but ought to be. This pass is probably the Amanides Pytas of Ptolemy, which he places 5' further south than Issus, and 10' east of Issus.

Alexander, hearing that the Persians were in his rear, turned back to the Pytas, which he reached at midnight, and halted till daybreak, when he moved on. (Arrian, Anab. ii. 8.) So long as the road was narrow, he led his army in column, but as the pass widened, he extended his column into line, part towards the mountain and part on the left towards the sea. When he came to the wide part (ελούτιον), he arranged his army in order of battle, which Arrian describes very particularly. Darius was posted on the north side of the Pinarus. It is plain, from this description, that Alexander did not match very far from the Pytas before he reached the wider part of the valley, and the river. As the sea was on his left, and the mountains on his right, the river was a stream which ran down from the Syrian Amanus; and it can be no other than the Deti Tectae, which is about 13 miles north of the Carpus (Merope), direct distance. Polybius (xiii. 17), who consultation of the battle, states on his authority, that Darius descended into Cilicia through the Pytas Amanides, and encamped on the Pinarus, at a place where the distance between the mountains and the sea was not more than 14 stadia; and that the river ran across this place into the sea, and that in its course through the level part "it had abrupt and difficult summits (Λήθαργες)." This is contained in a long description of the banks of the river being steep in many parts on the north side. (Anab. ii. 10.) Callisthenes further said, that when Alexander, after having passed the defile (rath), heard of Darius being in Cilicia, he was 180 stadia from him, and, accordingly, he marched back through the defile. It is not clear, from the extract in Polybius, whether the 180 stadia are to be reckoned to Issus or to the Pinarus. According to Arrian, when Alexander heard of Darius being behind him, he sent some men in a galley back to Issus, to see if it was so; and it is most consistent with the narrative to suppose that the men saw the Persians at Issus before they had advanced to the river; but this is not quite certain. The Persian army was visible, being near the coast, as it would be, if Issus were near Issus.

Strabo (p. 676), following the historians of Alexander, adds nothing to what Arrian has got from them. Alexander, he says, led his infantry from Soli along the coast and through the Mallotis to Issus and the forces of Darius; an expression which might mislead, if we had no other narrative. He also says, after Mallos is Aegeae, a small town with a harbour, then the Amanides Pytas (Amanides Pylae), where there is a harbour; and after Aegeae is Issus, a small town with a harbour, and the river Pinarus,"where the fight was between Alexander and Darius. Accordingly he places Issus north of the Pinarus. Cicero, during his proconsulship of Cilicia, led his forces against the mountainers of the Amanus, and he was saluted as imperator at Issus, "when two days after his arrival from you, Ciltarchus told you that Darius was defeated by Alexander." There is nothing to be got from this. (Ad Fam. ii. 10.) In another passage, he says that he occupied for a few days the same camp that Alexander had occupied at Issus against Darius. (Ad Att. v. 26.) And again (ad Fam. xiv. 26), he says that, "he encamped for four days near the roots of the Amanus, as far as Issus." If this is the same fact that he mentions in his letter to Atticus, the Arasa were at Issus, and Issus was near the foot of the Amanus.

The battle between Septimius Severus and Niger was fought (A. D. 194) somewhere about Issus; but nothing can be collected from the description of Herodian (iii. 12), except that the battle was not fought on the same ground as Alexander's, though it was fought on the gulf of Issus. Stephanus (A. D. 194) describes it as "a city between Syria and Cilicia, where Alexander defeated Darius, which was called, for this reason, Nicopolis by him; and there is the bay of Issus; and there, also, is a river named Pinarus." Strabo, after speaking of Issus, mentions, on the Isus gulf, Rhomae, and Myriandrus, and Alexandri, and Nicopolis, and Mopsuestia, in which description he proceeds from the Syrian side of the gulf, and terminates with Mopsuestia on the Pyramus. According to this enumeration, Nicopolis would be between Alexandria (Scanderouos) and Mopsuestia; and it may be near Issus, or it may not. Ptolemy (v. 6. § 7, 12. § 2) places Nicopolis exactly one degree south of Alexandria and 50' south of Issus. He describes Issus and Rhomae in the same longitude, and Nicopolis, Alexandria, and Myriandrus 10' further east than Issus. The absolute truth of his numbers is immaterial. A map constructed according to Ptolemy would place Issus at the head of the gulf, and Nicopolis inland. Nicopolis is one of the cities which he enumerates among the inland cities of Cilicia Proconsularis.

Issus, then, being at the head of the gulf, and Tarsus being a fixed point in the march of Cyrus, we may now see how the matter stands with Xenophon's distances. Cyrus marched 10 parasang from Tarsus to the river Pdas (Sarrai), Sidamas, and crossed at a place where it was 300 feet wide.
From the Sarus the army marched 5 parasangs to the Pyramus, which was crossed where it was 600 Greek feet wide; and the march from the Pyramus to Issus was 15 parasangs. Accordingly, the whole distance marched from Taras to Issus was 30 parasangs. The direct distance from Taras to the head of the gulf is about 56 geographical miles; and these two facts are very nearly in the same latitude. The modern road from Taras, through Andana on the Sarus, and Mopsuestia on the Pyramus, to the head of the gulf, has a general direction from W. to E. The length of Cyrus's march, from Taras to the Sarus, exceeds the direct distance on the map very much, if we reckon the parasang at 8 geographical miles; for 10 parasangs are 30 geographical miles, and the direct distance to Adana is not more than 16 miles. Mr. Ainsworth informs us that the Sarus is not fordable at Adana; and Cyrus probably crossed at some other place. The march from the Sarus to the Pyramus was 5 parasangs, or 15 geographical miles; and this appears to be very nearly the direct distance from Adana to Mopsuestia (Map A). But Cyrus may have crossed some distance between these, and, proceeding along his march from the Sarus to the Pyramus; and he may have done this even if he had to go lower down the Sarus than Adana to find a ford. If he did not go higher up the Pyramus to seek a ford, for the reasons which Mr. Ainsworth mentions, he must have crossed lower down than Mopsuestia. The distance from the point where the supposed old bed begins to turn to the south, to the NE end of the Gulf of Issus, is 40 geographical miles; and thus the distance of 15 parasangs from the passage of the Pyramus to Issus, is more easily reconciled with the real distance than the measurement from Taras to the Sarus.

The place not absolutely determined on or near the gulf of Issus, are: Myriandrus, Nicopolis, Epiphanelia (Epiphanelis). Arnae Alexanderi, and Issus, though we know that Issus, must have been at the head of the gulf and on it. The following extract from Colonel Gisney contains the latest information on these sites:—"About 7 miles south-eastward from the borders of Syria are the remains of a considerable city, probably those of Issus or Nicopolis, with a temple, a part of the Acropolis, an extensive aqueduct, generally with a double row of arches, running ESE. and WNW. These, in addition to the walls of the city itself, are entirely built of lava, and still exist in considerable perfection. Nearly 14 miles southward from thence, the Defé Chaff quits the foot of the Amann in two branches, which, after traversing the Isca plain, unite at the foot of the mountain just previously to entering the sea. The principal of these branches makes a deep curve towards the NE, so that a body of troops occupying one side might see behind and outflank those posted on the opposite side, in which, as well as in other respects, the stream appears to answer to the Pinarus of Alexander's historians. A little southward of this river are the castle, khan, bead, baths, and other ruins of Byáta, once Baisa, with the three villages of Kuruet in the neighbourhood, situated in the midst of groves of orange and palm trees. Again, 5 miles southward, is the pass, above noticed, of Sükál-totán, and at nearly the same distance onward, the fine bay and anchorage of Lukaandri with an open but convenient landing-place on a bold beach; but, in consequence of the accumulation of the sand by which the mouths of the streams descending from this part of the Amann are choked, a pestilential swamp extends from the very edge of the sea almost to the foot of the mountain. In the march towards the latter are some trifling ruins, which may possibly be the site of ancient Myriandrus; and within a mile of the shore are the remains of a castle and bridge constructed by Godfrey of Bouillon. (Expedition for Survey of the Rivers Euphrates and Tigris, vol. i. p. 408.)

There is no direct proof here that these remains are those of Issus. The aqueduct probably belongs to the Roman period. It seems most likely that the remains are those of Nicopolis, and that Issus on the coast has disappeared. Colonel Gisney's description of the bend of one of the branches of the Defé Tackel corresponds to Arrian's (ii. 2. § 10), who says, "Darías placed at the foot of the mountain, which was on the Persian left and opposite to Alexander's right, about 20,000 men; and some of them were on the rear of Alexander's army. For the mountain where they were posted in one place opened to some depth, and so a part became of the form of a bay on the sea. Darías then, by advance guard, brought the men who were posted at the foot of the mountain, in the rear of the right wing of Alexander." There still seems some doubt about the site of Myriandrus, which Mr. Ainsworth (Travels in the Trench of the Ten Thousand, p. 60) places about half way between Scourfewoos and Rhanis (Arras); and he has the authority of Strabo, in his enumeration of the places on this coast, and that of Ptolemy, who places Myriandrus 15's south of Alexandria ad Issum. As to Arnae, he observes,—"there are many ruins, and especially a long aqueduct leading from the foot of the mountains." [G. L.]

Istae Avoneses. [Germania and Hillevervones.

Istae. [Danubius.

Isthrum. [Disthmus.

Isthrum. [Corintius.

Istotium. [Ciliciberia.

Istria (Terpia) or Histria, was the name given by the Greeks and Romans to the country which still bears the same appellation, and forms a strip of coast between the triangular form of the head of the Adriatic sea, running out from the coast of Liburnia, between Tergestes (Trieste) and the Sinus Flancus, or Gulf of Quarnero. It is about 50 G. miles in length, and 35 in breadth, while the isthmus or strip of land between the two gulfs of Trieste and Quarnero, by which it is united to the mainland, is about 27 G. miles across. The name is derived both by Greek and Latin authors from the fabulous notion entertained at a very early period that one branch or arm of the Danube (the latter of the Greeks) flowed into the Adriatic sea near its head. (Strab. i. p. 57; Plin. iii. 18. s. 22.) The deep inlets and narrow channels with which the coasts of the Adriatic are intersected for a considerable distance below the peninsula of Istria, they have contributed to favour this notion so long as those coasts were imperfectly known; and hence we cannot wonder at Sclavon speaking of a river named Istria (which he identifies with the Danube) as flowing through the land of the Istrians (Sclav. p. 6. § 20); but it seems incredible that an author like Meis, writing in the days of Augustus, should not only speak of a river later as flowing into this part of the
Adriatic should assert that its waters entered that sea with a turbulence and force similar to those of the Po. (Med. ii. 3. § 13, 4. § 4.) In point of fact, there is no river of any magnitude flowing into the upper part of the Adriatic on its eastern shore which could afford even the slightest compensation to such a notion; the rivers in the peninsula of Istria itself are very trifling streams, and the dry, calcareous ridges which hem in the E. shore of the Adriatic, all the way from Trieste to the southern extremity of Dalmatia, do not admit either of the formations or the outlets of any considerable body of water. It is not easy to ascertain the account for the origin of such a fact; but if the inhabitants of Istria were really called Istriai (Istrii), as their native name, which is at least highly probable, this circumstance may have first led the Greeks to assume their connection with the great river later, and the existence of a considerable amount of traffic up the valley of the Savus, and from thence by land across the Julian Alps, or Mount Orco, to the head of the Adriatic (Strab. vii. p. 314), would tend to perpetuate such a notion.

The Istrians are generally considered as a tribe of Illirian race (Appian, Hisp. 8; Strab. vii. p. 314; Liv. xiv. 6. 23, 25), and the fact that they are immediately surrounded by other Illirian tribes is made by them a strong argument in favor of this view. Scythius Chrais alone calls them a Thracian tribe, but on what authority we know not. (Scurm. Ch. 39.) They first appear in history as taking part with the other Illiriens in their piratical expeditions, and Livy ascribes to them this character as early as B.C. 301 (Liv. x. 2); but the first occasion on which they are distinctly mentioned as joining in these enterprises is just before the Second Punic War. They were, however, severely punished; the Roman consuls M. Minucius Rufus and P. Cornelius were sent against them, and they were reduced to complete submission. (Entrop. iii. 7; Oros. iv. 18; Scarr. viii. 20; Appian, Hisp. 8.) The next mention of them occurs in B.C. 183, when the consul M. Claudius Marcellus, after a successful campaign against the Carthaginians, obtained permission to lead his legions into Istria. (Liv. xxxix. 55.) It is not, however, apparent that this invasion produced any considerable result; but their piratical expeditions, together with the opposition offered by them to the foundation of the Roman colony of Aquileia, soon became the pretext of a fresh attack. (Id. xliii. 18, 26, xliii. 1.) In B.C. 178 the consul A. Manlius invaded Istria with two legions; and though he at first sustained a disaster, and narrowly escaped the capture of his camp, he recovered his position before the arrival of his colleague, M. Junius, who had been sent to his support. The two consulae now attacked and defeated the Istrians; and their successor, C. Claudius, following up this advantage, took in succession the towns of Nesactium, Mutilla, and Faveria, and reduced the whole people to subjection. For this success he was rewarded with a triumph, B.C. 177. (Liv. xili. 1—5, 8—13; Flor. ii. 10.) The subjection of the Istrians on this occasion seems to have been real and complete; for, though a few years after we find them joining the Carpi and Lapiodes in complaining of the exactions of C. Cominius (Liv. xliii. 5), we hear of them no more in their own country, and the district appears to have continued tranquil under the Roman yoke, until it was incorporated by Augustus, together with Venetia and the land of the Carni, as a portion of Italy. (Strab. v. p. 218; Plin. iii. 19. a. 23.) It continued thenceforth to be always included under that name, though geographically connected much more closely with Dalmatia and Illyricum. Hence we find, in the Notitia Dignitatum, the "Consularia Venetiae et Histriae" placed under the jurisdiction of the Virtutum Italianas. (Not. Dign. ii. pp. 5, 65.)

The natural limits of Istria are clearly marked by those of the peninsula of which it consists, or by a line drawn across from the Gulf of Trieste to that of Quarnaro, near Piran; but the political boundary was fixed by Augustus, when he included Istria in Italy, at the river Vergonza, which falls into the Gulf of Quarnaro about 15 miles from the southern extremity of the peninsula. This river has its sources in the group of mountains of which the Monte Maggiore forms the highest point, and which constitutes the heart or nucleus of the peninsula, from which there radiate ranges of great calcareous hills, gradually declining as they approach the western coast, so that the shore of Istria along the Adriatic, though hilly and rocky, is not of any considerable elevation, or picturesque in character. But the calcareous rocks of which it is composed are indented by deep inlets, forming excellent harbours; of these, the beautiful land-locked basin of Pola is particularly remarkable, and was noted in ancient as well as modern times. The northern point of Istria was fixed by Augustus as the river Vergonza, a small stream falling into the Gulf of Trieste between that city and Capo d'Istria. Pliny expressly excludes Tergeste from Istria; but Ptolemy extends the limits of that province so as to include both the river Forno and Tergeste (Ptol. iii. 1. § 87); and Strabo also appears to consider the Timavo as constituting the boundary of Istria (Strab. v. p. 518), though he elsewhere calls Tergeste a "village of the Carni" (vii. p. 314). Pliny, however, repeatedly alludes to the Formico as having constituted the boundary of Italy before that name was officially extended so as to include Istria also, and there can be no doubt of the correctness of his statement. Istria is not a country of any great natural fertility; but its calcareous rocky and mountainous surface is well adapted for raising olives, and its oil was reckoned by Pliny inferior only to that of Venta (Ptol. xvi. 2. 3.) In the later ages of the Roman empire, when the seat of government was fixed at Ravenna, Istria became of increased importance, from its facility of communication by sea with that capital, and furnished considerable quantities of corn, as well as wine and oil. (Casiod. Var. xii. 23, 24.) This was probably the most flourishing period of its history. It was subsequently ravaged in succession by the Lombards, Avars, and Slavians (P. Dia. iv. 25, 43), but appears to have continued permanently subject to the Lombard kingdom of Italy, until its destruction in A.D. 774.

The towns in Istria mentioned by ancient writers are not the most important. Much the most important was Pola, near the extreme southern promontory of the peninsula, which became a Roman colony under Augustus. Proceeding along the coast from Tergeste to Pola, were AEVIDA (Copo d'Istria), subsequently called Justinopolis, and PARENTRUM (Porezeno); while on the E. coast, near the mouth of the river Arza, was situated NERACTUM, which was noticed by Livy among the towns of the independent Istrians. The two other towns, Mutilla and Faveria, mentioned by him in the same passage (xii. 11), are otherwise unknown, and cannot be identified. Pto-
lemly also mentions three towns, which he places in the interior of the country, and names Fucinum, Fingerprintat (Thauesonwar), and Almum or Alvon ("Aiono"). Of these, Fingerprintat may be probably identified with Fingvente, a considerable place in the heart of the mountain district of the interior; and Alvon with Albona (called Alvosa in the Tabula), which is, however, E. of the Araus, and therefore not strictly within the Roman province of Istria. In like manner the Fucinum of Ptolemy is evidently the same as the "fucinum, nobile vino," Fucinum of Pliny (vii. 18. a. 22), which the latter places in the territory of the Carni, between the Timavo and Tergeste, and was perhaps the same with the modern Osine. Ningum, a place mentioned in the Antonine Itinerary (p. 271) between Tergeste and Parentium, cannot be determined with any certainty. The Tabula also gives two names in the NW. part of the peninsula, Quersi and Silvo (Silvum), both of which are wholly unknown. The same authority marks three small islands off the coast of Istria, to which it gives the names of Sepona (?), Orsaria, and Pullaria: the last is mentioned also by Pliny (iii. 26. a. 30), and is probably the rocky island, or rather group of islets, off the harbour of Pola, now known as Li Brioni. The other two are not to be identified with the Ciesa of Pliny (L. c.); the Aegypturdes of the same author are the larger islands in the Golfo di Quarnervo, which belong rather to Liburnia than to Istria. [Assyntides.]

The extreme southern promontory of Istria, now called Punta di Promontore, seems to have been known to the ancients as the Promontorium Poliaticum (Ακρωτηριον Παλαιακον, Steph. B. s. v. Παλαια). Immediately adjoining it is a deep bay or harbour, now known as the Golfo di Medolino, which must be the Portus Planiatus (probably a corruption of Planatus) of the Tabula. The Geographer of Ravenna, writing in the seventh century, but from earlier authorities, mentions the names of many towns in Istria unformed by earlier geographers, but which may probably have grown up under the Roman empire. Among these are Humago, still called Umago, Napolis (Città Nuova), Ruvgigno (Ruvgino), and Pirano (Pirano), all of them situated on the W. coast, with good ports, and which would naturally become places of some trade during the flourishing period of Istria above alluded to. (Anon. Ravn. iv. 20. 31.) [E. H. B.]

ISTRIANORUM PORTUS. [Isiaconum Portus.]

ISTRIANUS ("Ieropous, Ptol. iii. 6. § 3), a river of the Tauric Chersonese, which has been identified with the Kikik Tep. (Forbiger, vol. iii. pp. 1117, 1121.) [E. B. J.]

ISTROPOLIS, ISTROPOLIS, ISTYRIOPO- LIS (Istrudilis, lstruíla, or simply Istrous: Istova), a town of Lower Moesia, at the southern extremity of lake Halmyris, on the coast of the Euxina. It was a colony of Miletes, and, at least in Strabo's time, a small town. (Strab. vii. p. 319; Plin. iv. 18. 24; Mela, II. 2; Strabo, vi. 8; Herod. i. 36.) Ptolemy, Pto. iv. p. 93; Ptolemy, Ph. iv. 12; Geogr. Rav. iv. 6; Lycoth. 74; Ptol. iii. 10. § 8; Strabo, iv. 22; Steph. B. s. v.; Amm. Marc. xxii. 8; Hieroc. p. 637.) But the frequent mention of the place shows that it must have been a commercial town of some importance; of its history, however, nothing is known. Some modern writers have identified it with Kistenos or Kostianeis, the ancient Constantians, which, however, was in all probability situated to the south of Istrropolis.

COIN OF ISTRIUS.

ISTURGI (Antevar la Via), a city of His- pania Baetica, in the neighbourhood of ILLITURGUS. (Inscr. op. Flor. Exp. S. vol. vii. p. 137.) The inscription of TRIUMPHAEFUS of Pliny (iii. 1. a. 3) is probably in the same place. (Ucchi, vol. ii. pt. iii. pp. 380, 381.)

ISUBRIGANTUM. [ISURIM.]

ISURIUM, in Britain, first mentioned by Ptolemy (ii. 8. § 16) as a town of the Brigantes. It then occurs in two of the Itineraries, the 1st and 2nd. In each, it lies between Cataractonium and Eboracum (Catterick Bridge and York). Isubrigantum, in the 5th Itinerary, does the same. In the time of the Saxon Saxons it had already taken the name of Eadb-bury (Old Town), out or which has come the present name Aldborough, near Boroughbridge, with which it is undoubtedly identified.

Roman remains, both within and without the walls, are abundant and considerable at Aldborough; the Stochart (or Studforth), the Red Hill, and the Borough Hill, being the chief localities. Tesselated pavements, the foundations of large and spacious buildings, ornaments, implements, Samian ware, and coins with the names of nearly all the emperors from Vespasion to Constantine, have been given to Isurium an importance equal to that of York, Chester, and other towns of Roman importance. [R. G. L.]

ISUS (Iersus), a spot in Beocia, near Anthedon, with vestiges of a city, which some commenta- tors identified with the Homeric Nisa. (Strab. i. p. 405; Horn. ii. p. 508.) There was apparently also a town Isus in Megara; but the passage in Strabo in which the name occurs is corrupt. (Strab. i. c.)

ITALIA (Itraia), was the name given in an- cient as well as in modern times to the country still called Italy; and was applied, from the time of Augus- tus, both by Greek and Latin writers, in almost exactly the same sense as at the present day. It was, however, at first merely a geographical term; the countries comprised under the name, though strongly defined by natural limits, and common na- tural features, being from the earliest ages peopled by different races, which were never politically united, till they all fell under the Roman yoke, and were gradually blended, by the pervading influence of Roman institutions and the Latin language, into one common nationality.

ITALIA. [R. G. L.]
ITALIA.

I. NAME.

The name of Italy was very far from being originally applied in the same extensive signification which it afterwards obtained. It was confined, in the first instance, to the extreme southern point of the Italian peninsula, not including even the whole of the modern Calabria, but only the southern peninsula portion of that country, bounded on the N. by the narrow isthmus which separates the Tere-

naean and Scyliestian gulfs. Such was the distinct

statement of Antiochus of Syracuse (ap. Strab. vi.
p. 253); nor have we any reason to reject his testi-
mony upon this point, though it is certain that this
usage must have ceased long before the time of that
historian, and is not found in any extant ancient
author. At a subsequent period, but still in very
careful times, the appellation was extended to the
whole tract along the shores of the Tarentine gulf,
as far as Metapontum, and from thence across to the
gulf of Poseidonia on the western sea; though, ac-
cording to other statements, the river Liris was its
northern limit on this side. (Strab. v. p. 209, vi.
p. 254; Antiochus, op. Dionys. i. 73.) This appears to
have been the same "vitaselline" form in which the
name was used in the fifth century a. c. Antiochus expressly ex-
cluded the Iapygian peninsula from Italy, and Thucy-
dides clearly adopts the same distinction (vii. 53).

The countries on the shores of the Trryrrhenian sea,
north of the Poseidonian gulf, were then known only
by the names of Opca and Tyrrhenia; thus Thucy-
dides calls Cumae a city in Opica, and Aristotle
spoke of Latium as a part of Opica. Even Theop-
archus preserves the distinction, and speaks of the
pine-trees of Italy, where those of the Brut-
tian mountains only can be meant, as opposed to
those of Latium. (Thuc. vi. 4; Arist. op. Dionys.
iv. 72; Theophr. B. F. v. 8.)

The name of Italy, as thus applied, seems to have
been synonymous with that of Oenotria; for Antio-
chus, in the same passage where he assigned the
narrowest limits to the former appellation, confined
that of Oenotria within the same boundaries, and
spoke of the Oenotri and Itali as the same people
(ap. Strab. vi. p. 254; op. Dionys. i. 12). This is in
perfect accordance with the statements which re-

present the Oenotrians as assuming the name of Italy.

The name of this country is supposed to have been

first given by Dion. (Dionys. i. 12, 35; Virg. Aen.
iv. 583; Arist. Pol. vii. 10), as well as with the mythical
genealogy accor-
ding to which Italius and Oenotrus were brothers.
(Serv. ad Aen. l. c.) Thucydides, who represents
Italians as coming from Arcadia (vi. 2), probably
adopted this last tradition, for the Oenotrians were
generally represented as of Arcadian origin. Whe-

ther these two names were originally applied to the
same people, or (as is perhaps more probable) the
Itali were merely a particular tribe of the Oenotrians,
whose name gradually prevailed till it was extended
to the whole people, we have no means of deter-
ing.

But in this case, as in most others, it is clear that
the name of the people was antecedent to that
of the country, and that Italy, in its original signi-

fication, meant merely the land of the Itali; though
at a later period, by its gradual extension, it had
altogether lost this national meaning. It is im-
possible for us to trace with accuracy the suc-
cessive steps of this extension, nor do we know at
what time the Romans first adopted the name of

Italy as that of the whole peninsula. It would be

still more interesting to know whether they received

this usage from the Greeks, or found it already pre-
vailing among the nations of Italy; but it is difficult
to believe that tribes of different races, origin, and
language, as the Etruscans, Umbrians, Sabellians,
and Oenotrians, would have concurred in calling the
country they inhabited by one general appellation.

If the Greek account already given, according to
which the name was first given to the Oenotrian part
of the peninsula, is worthy of confidence, it must
have been a word of Pelasgic origin, and subsequently
adopted by the Sabellian and Ocean races, as well
as by the Romans themselves.

The etymology of the name is wholly uncertain.
The current tradition among the Greeks and Romans,
as already noticed, derived it from an Oenotrian or
Pelasgic chief, Italus; but this is evidently a mere

fiction, like that of so many other eponymous heroes.

A more learned, but scarcely more trustworthy, ety-

mology derived the name from Italos or Italus, which,
in Tyrrhenian or old Greek, is said to have
signified an ox; so that Italy would have meant

"the land of cattle." (Timaeus, ap. Gell. xi. 1; Var.
Varr. R. R. ii. 1 § 8.)

The ancient form here cited is evidently connected
with the Latin "vi-

taeus" and it was probably that the name of the
people was originally Vitulus, or Vitales, in its Pe-

lasgic form; we find the same form retained by the
Sabellians as late as the first century a. c.,
when the Samnite denarii (struck during the Social
War. n. c. 90—88) have the inscription "Vitellu-

" for Italy,

It is probable that the rapid extension of the
Roman power, and the successive subjugation of the
different nations of Central and Southern Italy by
its victorious arms, tended also to promote the ex-

tension of the one common name to the whole;

and there seems little doubt that as early as the time
of Pyrrhus, this was already applied in nearly the same
sense as afterwards continued to be the usage,—as
comprising the whole Italian peninsula to the fron-
tiers of Cisalpine Gaul, but excluding the latter
country, as well as Liguria. This continued to be
the customary and official meaning of the name of
Italy from this time till the close of the Republic;
and hence, even after the First Triumvirate, Gallia
cisalpina, as well as Transalpina, was allotted to
Caesar as his province, a term which was never ap-
plied but to comprehending all Italy, except the
land of the Cenis (Gallia Cisalpine), and repeatedly
describes Hannibal as crossing the Alpes into Italy,
and designates the plains on the banks of the Padus
as in Italia. (Pol. i. 6, ii. 14, iii. 39, 54.)

The natural limits of Italy are indeed so clearly marked
and so obvious, that as soon as the name came to be
once received as the designation of the country in
general, it was almost inevitable that it should ac-
quire this extension; hence, though the official dis-

ITALIA.

us, in n. c. 43, distinctly uses the phrase of quitting Italy, when he crosses the Alps. (Cicad. Rom. xii. 20.) So also both Cassius and Cicero, in his Philippics, repeatedly used the name of Italy in the wider and more general sense, though the necessity of distinguishing the province of Cisalpine Gaul, leads the latter frequently to observe the official distinction. (Cass. B. C. v. 1, vii. 44, vii. 1; Cic. Phil. iv. 4, v. 12.) But, indeed, had not this use of the name been always carefully watched, it is certain that circumstance alone would scarcely have rendered it so familiar as we find it in the Latin writers of the Augustan age. Virgil, for instance, in celebrating the praise of Italy, never thought of excluding from that appellation the plains of Cisalpine Gaul, or the lakes at the foot of the Alps. From the time, indeed, when the rights of Roman citizens were extended to all the Cisalpine Gauls, no real distinction any longer subsisted between the different parts of Italy; but Cisalpine Gaul still formed a separate province under D. Brutus in n. c. 43 (Cic. Phil. iii. 4, 5, iv. 4, v. 9, &c.), and it is probable, that the union of that province with Italy took place in the following year. (Dion Cassius speaks of it in n. c. 41, as an already established arrangement. (Dion Cassius, v. 49; Suet. Claud. ii. 56; see also Sest. ii. p. 316.)

From the time of Augustus onwards, the name of Italy continued to be applied in the same sense throughout the period of the Roman empire, though with some slight modifications of its frontiers on the side of the Alps; but during the last ages of the Western empire, a singular change took place, by which the name of Italy was specially applied (in official language at least) to the northern part of what we now call Italy, comprising the five provinces of Aemilia, Flaminia, Liguria, Venetia, and Istria, together with the Cottian and Rhaetian Alps, and thus excluding nearly the whole of what had been included under the name of the days of Cicero. This usage probably arose from the division of the whole of Italy for administrative purposes into two great districts, the one of which was placed under an officer called the "Vicarius Urbis Romae," while the other, or northern portion, was subject to the "Vicarius Italicae." (Not. Dij. ii. 18; Gothofr. ad Cod. Theod. xi. 1, leg. 6; Niebuhr, vol. i. p. 21.) The practice was confirmed for a time by the circumstance that this part of Italy became the seat of the Lombard monarchy, which assumed the title of the kingdom of Italy ("Regnum Italium"); but the ancient signification still prevailed, and the name of Italy was applied throughout the middle ages, as it still is at the present day, within the boundaries established by Augustus.

The other names applied by ancient writers, especially by the Latin and Greek poets, to the Italian peninsula, may be very briefly disposed of. Dionysius tells us that in very remote ages Italy was called by the Greeks Hesperia, or Ausonia, and by the natives Saturnia. (Dionys. i. 35.) Of these three names, Hesperia (Erepeia), or the Land of the West, was evidently a mere vague appellation, employed in the infancy of geographical discovery, and which was sometimes limited to Italy, sometimes used in a much wider sense as comprising the whole West of Europe, including Spain. (Hesperia) But there is no evidence of its having been employed in the more limited sense, at a very early period. The name is not found at all in Homer or Herodotus; but, according to the Iliad Table, Statius represents Ausonia as departing from Troy for Hesperia, where in all probability Italy is meant; though it is very uncertain whether the poet conducted Auson to Latium. (Schwegler, Rome. Gesch. vol. i. p. 296.) But even in the days of Statius the appellation was probably one confined to the poets and logographers. At a later period we can trace it as used by the Alexandrian poets, from whom in all probability it passed to the Romans, and was adopted, as we know, by Ennius, as we have seen, before it came to be socially adopted, by that circumstance alone would scarcely have rendered it so familiar as we find it in the Latin writers of the Augustan age. (Agath. &p. Dion. i. 49; Apollon. Rhod. iii. 311; Ennius, Ann. Fr. p. 18; Virg. Aen. i. 530, iii. 185, &c.)

The name of Aenonia, on the contrary, was one derived originally from one of the races which inhabited the Italian peninsula, the Aurunci of the Romans, who were known to the Greeks as the Aunos. These Ausonians were a tribe of Opician or Ocean race, and it is probable that the name of Aunus was at first applied much as that of Opicia or Opica was by Thucydides and other writers of the fifth century n. c. But, as applied to the whole peninsula of Italy, the name is, as far as we know, purely poetical; nor can it be traced farther back than to one of the Alexandrian writers Lyophon and Apollonius Rhodius. (Dion. Cassius xiy. 565.) It was probably in fact first used by the Latin poets in imitation of them, as a poetical equivalent for Italy. (Aenonia.)

As for the name of Saturnia, though it is found in a pretended Greek oracle cited by Dionysius (Serr. 8. avar. Dions. i. 19), it may well be doubted whether it was ever an ancient appellation at all, and the obvious derivation from the name of the Latins god Saturn is perhaps the native name of Italy, and not of Greek invention, and probably this was the only authority that Dionysius had for saying it was the native name of Italy. But all the traditions of the Roman mythology connect Saturnus so closely with Latium, that it seems almost certain the name of Saturn (if it was ever more than a poetical fabrication) originally belonged to Latium only, and was thence gradually extended by the Romans to the rest of Italy. Ennius seems to have used the phrase of "Saturnia terrae" only in reference to Latium; while Virgil applies it to the whole of Italy. (Ennius, ap. Var. L. L. v. 42; Virg. Georg. ii. 176.) It is never used in either sense by Latin prose writers, though several authors state, as Dionysius does, that it was the universal name of Italy. (Festus, s. Saturnia, p. 332; Justin. xiii. 1.)

II. Boundaries and Physical Geography.

There are few countries of which the boundaries are more clearly marked out by nature than those of Italy. It is well described by one of its modern poets as the land "Chi 'Apennin parte e 'I mar circonda e l'Alpe;" and this single line at once enumerates all the principal physical features that impart to the country its peculiar physiognomy. Italy consists of a great peninsula, projecting in a SE. direction into the Mediterranean sea, and bounded on the W. by the portions of that sea known as the Tyrrhenian and Sicilian seas, but comprised by the Romans under the name of Mare Inferior, or the Lower Sea; on the E. by the Adriatic, or the Upper Sea (Mare Superum), as it was commonly termed by the Romans; while to the N. it spreads out into a broad expanse, forming, as it were, the base or root by which it adheres to the continent of Europe, and
ITALIA.

around which sweeps the great chain of the Alps, forming a continuous barrier from the shores of the Mediterranean near Massilia to the head of the Adriatic at Trieste (Tergeste). From the western extremity of this vast mountain chain, where the ranges of the Maritime Alps abut immediately on the sea-shore, branches off the inferior, but still very considerable, chain of the Apennines, which, after sweeping round the Ligurian gulf, stretches in an unbroken line directly across to the shores of the Adriatic, and then, turning abruptly to the SE., divides the whole peninsula throughout its entire length, until it ends in the promontory of Lencopetra, on the Sicilian sea. [APENNINUS.]

The precise limits of Italy can thus only be doubtful on its northern frontier, where the massive ranges of the Alps, though presenting, when viewed on the large scale, a vast natural barrier, are in fact indented and penetrated by deep and irregular valleys, which render it often difficult to determine the natural boundary; nor has this been always adopted as the political one. Along the coast of Liguria, between Massilia and Genua, the Maritime Alps send down successive ranges to the sea, forming great headlands, of which the two largest and the most remarkable are 

between Noli and Finale, commonly regarded by modern geographers as the termination of the Maritime Alps; and the promontory immediately W. of Monaco, which still bears the remains of the Tropaeus Augusti, and the passage of which presents the greatest natural difficulties to the construction of a road along this coast. This mountain headland would probably be the best point as the natural limit of Italy on this side, and appears to have been commonly regarded in ancient times as such; but when Augustus first extended the political limits of Italy to the foot of the Alps, he found it convenient to carry them somewhat further W., and fixed on the river Varus as the boundary; thus including Nicaea, which was a colony of Massilia, and had previously been considered as belonging to Gaul. (Strab. iv. pp. 178, 184, v. p. 209; Plin. iii. 4. a. 5, 5. a. 6, 7; Mela, ii. 4. § 9; Ptol. iii. 1. § 1; Lucan, i. 404.)

Though this demarcation does not appear to have been always followed; for in the Itinerary of Antoninus (p. 296) we again find the Alpes Maritimas (meaning the mountain headland above described) fixed as the boundary between Italy and Gaul: it was generally adopted, and has continued without alteration to the present day.

The extreme NE. limits of Italy, at the head of the Adriatic Gulf, is equally susceptible of various determination, and here also Augustus certainly transgressed the natural limits by including Istria within the confines of Italy. (Plin. iii. 18. a. 32; Strab. v. p. 209, vii. p. 514.) But here also, the reasons of political convenience were adduced in favor of this extension, which gave rise to this extension, have led to its subsequent adoption, and Istria is still commonly reckoned a part of Italy.

The little river Formico, which flows into the Adriatic between Trieste and Copo d'Istria, was previously established as the boundary of Italy on this side; but the range of the Julian Alps, which, after sweeping round the two extremities of the Friaul, and densely approaches close to the Adriatic, near the sources of the Timisus, and presents a continuous mountain barrier from thence to Trieste, would seem to constitute the true natural limit.

Even between these two extremities, the chain of the Alps does not always form so simple and clearly-marked a frontier as might at first be expected. It would not, indeed, be difficult to trace geographically such a line of boundary, by following the water-ashed or line of highest ridge, throughout; but the imperfect knowledge of the Alps possessed by the ancients was scarcely sufficient for such a purpose; and this line was not, in ancient, any more than in modern times, the actual limit of different nationalities. Thus, the Rhetians, who in the days of Strabo and Plny were not comprised in Italy, inhabited the valleys and lower ridges of the Alps on the S. side of the main chain, down quite to the borders of the plains, as well as the northern declivities of the same mountains. Hence, a part of the Southern Tirol, including the valley of the Adige above Trent, and apparently the whole of the Val-d'Isère, though situated on the southern side of the Alps, were at that time excluded from Italy; while, at a later period, on the contrary, the two provinces of Rhaetia Prima and Rhaetia Secunda were both incorporated with Italy, and the boundary, in consequence, carried far to the N. of the central line of geographical limit. In like manner the Cottian Alps, which formed a separate district, under a tributary chieftain, in the days of Augustus, and were at that time only incorporated with Italy by feeble settlements in the valleys on both sides of the main chain; and the provinces established in the latter periods of the Empire under the names of the Alpes Cottiae and Alpes Maritimas, appear to have been constituted with equally little reference to this natural boundary.

While Italy is bounded on the N. by the great natural barrier of the Alps, it is to the chain of the Apennines, by which it is traversed in its entire length, that it mainly owes its peculiar configuration. This great mountain chain may be considered as the back-bone or vertebral column of the Italian peninsula, which sends down offsets or lateral ridges on both sides to the sea, while it forms, throughout its whole course, the water-ashed or dividing ridge, from which the rivers of the peninsula take their rise. A detailed description of the Apennines has already been given under the article APENNINUS: they are here noticed only as far as they are connected with the general features of the physical geography of Italy.

I. NORTHERN ITALY.—The first part of the chain of the Apennines, which extends from the point of their junction with the Maritime Alps along the N. shore of the Gulf of Genoa, and from thence across the whole breadth of Italy to the Adriatic near Ariminum, constitutes the southern boundary of a great valley or plain, which extends, without interruption, from the foot of the Apennines to that of the Alps. This immense expanse of perfectly level country, consisting throughout of alluvial soil, is watered by the great river Po, or Po, and its numerous tributaries, which bring down the waters from the flanks both of the Alps and Apennines, and render this extensive plain one of the most fertile tracts in Europe. It extends through a space of above 2000 geo. miles in length, but does not exceed 50 or 60 in breadth, until it approaches the Adriatic, where the Alps beyond Fiesole tend away rapidly to the northward, sweeping in a semicircle round the plains of the Friuli (which are a mere continuation of the great plain of the Po), until they again approach the Adriatic near Trieste. At the same time the Apennines also, as they approach towards the Adriatic, gradually recede from the
banks of the Padus; so that Ariminum (Rimini), where their lowest slopes first descend to the seashore, is distant nearly 60 geog. miles from the mouth of that river, and it is as much more from thence to the foot of the Alps. It is this vast plain, together with the hill-country on each side of it, formed by the lower slopes of the mountains, that constituted the country of the Cisalpine Gauls, to which the Romans gave the name of GALLIA CISALPINAE. The westernmost part of the same tract, including the lower slopes of the Alps, and the extensive hilly district, now called the Mons Ferrari, which stretches from the foot of the Apennines to the south bank of the Po, was inhabited from the earliest periods by Ligurian tribes, and was included in Liguria, according to the Roman use of the name. At the opposite extremity, the portion of the great plain E. and N. of the Adriatic (Athesia), as well as the district now called the Frisia, was the land of the Veneti, and constituted the Roman province of Venetia. The Romans, however, appear to have occasionally used the name of Gallia Cisalpina, in a more lax and general sense, for the whole of Northern Italy, or everything that was not comprised within the limits of Italy as that name was understood prior to the time of Augustus. At the present day the name of Lombardy is frequently applied to the whole basin of the Po, including both the proper Gallia Cisalpina, and the adjacent parts of Liguria and Venetia.

The name of Northern Italy may be conveniently adopted as a geographical designation for the same tract of country; but it is commonly understood as including the whole of the peninsula, from the sea-coast; though this, of course, lies on the S. side of the dividing ridge of the Apennines. In this sense, therefore, it comprises the provinces of Liguria, Gallia Cisalpina, Venetia and Istria, and is limited towards the S. by the Macra (Magnus) on the W. coast, and by the Rubicon on that of the Adriatic. In like manner, the name of Central Italy is frequently used to the middle of the peninsula, covering the northern half of the peninsula, and extending along the W. coast from the mouth of the Macra to that of the Silarus, and on the E. from the Rubicon to the Frento; while that of Southern Italy is given to the remaining portion of the peninsula, including Apulia, Calabria, Lucania, and Bruttium. But it must be borne in mind that these names are merely geographical distinctions, for the convenience of description and reference, and do not correspond to any real divisions of the country, either natural or political.

2. Central Italy.—The country to which this name is applied differs essentially from that which lies to the N. of the Apennines. While the latter presents a broad level basin, bounded on both sides by mountains, and into which the streams and rivers converge from all sides, the centre of the Italian peninsula is almost wholly filled up by the broad mass of the Apennines, the offsets and lateral branches of which, in some parts, descend quite to the sea, in others leave a considerable intervening space. In this country, therefore, the largest of these level tracts is insignificant as compared with the great plains of Northern Italy. The chain of the Apennines, which from the neighbourhood of Ariminum assumes a generally SE. direction, is very far from being uniform and regular in its character. Nor can it be regarded, like the Alps or Pyrenees, as forming one continuous ridge, from which there branch off lateral arms or ranges, separated by deep intervening valleys. This is, indeed, the case, with tolerable regularity, on the eastern side of the mountains, and hence the numerous rivers which descend to the Adriatic pursue nearly parallel courses at right angles to the direction of the main chain. But the central mass of the mountains, which comprises all the loftiest summits of the Apennines, is broken up and intersected by deep longitudinal valleys, sometimes separated only by narrow ridges or canyons, sometimes by rugged ranges rising abruptly to a height equal to that of the loftiest summits of the chain. The number of these valleys, occurring in the very heart of the Apennines, and often almost entirely enclosed by the mountains, is a feature in the physical geography of Italy which has in all ages exercised a material influence on its fortunes. The upland valleys, with their fine summer pasturage, were a necessary resource to the inhabitants of the dry plains of the south; and the peculiar configuration of these valleys opened out routes through the heart of the mountain districts, and facilitated mutual communication between the nations of the peninsula.

It is especially in the southern part of the district that the formation of the valleys becomes very complicated and irregular structure. Between the parallels of 44° and 49° 30' N. lat. they may be regarded as forming a broad mountain chain, which has a direction nearly parallel with the line of coast of the Adriatic, and the centre of which is nowhere distant more than 40 geog. miles from the shore of that sea, while it is nearly double the same distance from either of the other coasts of Italy. At the W. side of the mountains an extensive tract of country, constituting the greater part of Etruria and the S. of Umbria, which is wholly distinct from the mountain regions, and consists in part of fertile plains, in part of a hilly, but still by no means mountaneous, district. The great valleys of the Arno, of the Tiber, the two principal rivers of Central Italy, which have their sources near one another, but flow the one to the W. the other to the S., may be considered as the key to the geography of this part of the peninsula. Between them lies the hilly tract of Etruria, which, notwithstanding the elevation attained by some isolated summits, has nothing of the character of a mountain country, and a large part of which, as well as the district of Umbria bordering on the valley of the Tiber, may be deservedly reckoned among the most fertile districts in Italy. South of the Tiber, again, the broad volcanic plains of Latium expand between the Apennines and the sea; and though these are interrupted by the isolated group of the Alban hills, and still more by the rugged mountains of the Volscians, which, betweenProcessEventce and Gaeta, descend quite to the sea-shore, as soon as these are passed, the mountains again recede from the sea-coast, and leave a considerable interval which is filled up by the luxuriant plains of Campania.

Nothing can be more striking than the contrast presented by different parts of the countries thus described. In the valley of Central Italy the snow still lingers in the upland pastures of Sannio, and the Abruzzi, when the corn is nearly ripe in the plains of the Roman Campagna. The elevated districts of the Pelfigi, the Vestini, and the Marsi, were always noted for their cold and cheerless climate, and were better adapted for pasture than the growth of corn. Even at Casselii, only 40 miles
DISTANT FROM THE Tyrrhenian sea, the olive would no longer flourish (Ovid, Fast, iv. 688); though it grows with the utmost luxuriance at Tibar, at a distance of little more than 15 miles, but on the southern slope of the Apennines. The richness and fertility of the Campanian plains, and the beautiful shores of the Bay of Naples, were proverbial; while the Semite valleys, hardly removed more than a day's journey, seemed to belong to the character of highland scenery. Nor was this contrast confined to the physical characters of the regions in question; the rude and simple mountaineers of the Sabine or Marsic valleys were not less different from the luxurious inhabitants of Etruria and Campania; and their frugal and homely habits of life are constantly alluded to by the Roman poets of the empire, when nothing but the memory remained of those warlike virtues for which they had been so distinguished at an earlier period.

Central Italy, as the term is here used, comprised the countries known to the Romans as Eturiae, Umbria (including the district adjoining the Adriatic previously occupied by the Galli Sessones), Vicenza, Apulia, Lucania, Bruttium, Messapia, Bruttium, Calabria, and Fremantile, all Semitum, together with Latium (in the widest sense of the name) and Campania. A more detailed account of the physical geography of these several regions, as well as of the people that inhabited them, will be found in the respective articles.

3. SOUTHERN ITALY, according to the distinction above established, comprises the southern part of the peninsula, from the river Silurus on the W., and the Frento on the E., to the Iapygian promontory on the Ionian, and that of Lencopetra towards the Sicilian, sea. It thus includes the four provinces or districts of Apulia, Calabria, in the Roman sense of the name, Lucania, and Bruttium. The physical geography of this region is in great part determined by the chain of the Apennines, which, from the frontiers of Samitum, is continued through the heart of Lucania in a broad mass of mountains, which is somewhat narrowed as it enters the Bruttian peninsula, but soon spreads out again sufficiently to fill up almost the whole of that district from shore to shore. The extreme southern part is continued by a detached mountain range, which in its physical characters and direction is more closely connected with the mountains in the NE. of Sicily than with the proper chain of the Apennines (Apenninus); so that the notion entertained by many ancient writers that Sicily had formerly been joined to the mainland at Rhugium, though wholly false with reference to historical times, is undoubtedly true in a geological sense. The name of the Apennines is, however, universally given by geographers to the whole range which terminates in the bold promontory of Lencopetra (Capo dell'Armi).

East of the Apennines, and S. of the Frento, there extends a broad plain from the foot of the mountains to the sea, forming the greater part of Apulia, or the tract now known as Paglia plains; while, S. of this, an extensive tract of hilly country (not, however, rising to any considerable elevation) branches off from the Apennines near Venosa, and extends along the frontiers of Apulia and Lucania, till it approaches the sea between Egna and Brundusium. The remainder of the peninsula of Calabria or Messapia, though it may be considered in some degree as a continuation of the same tract, presents nothing that can be called a range of hills, much less of mountains, as it is erroneously represented on many maps. [Calabria.] Between the central mass of the Apennines (which occupies the heart of Lucania) and the gulf of Taranto, is another broad hilly tract, gradually descending as it approaches the shores of the gulf, which are bordered by a strip of alluvial plain, varying in breadth, but nowhere of great extent.

The Apennines do not attain so great an elevation in the southern part of the Italian peninsula as in its more central regions; and, though particular summits rise to a considerable height, we do not here meet with the same broad mountain tracts or upland valleys as further northward. The centre of Lucania is, indeed, a rugged and mountainous country, and the lofty groups of the Monti della Madoniea, S. of Potenza, the Mtn. Pollino, on the frontiers of Bruttium, and the Sila, in the heart of the latter district, were evidently, in ancient as well as modern times, wild and secluded districts, almost inaccessible to civilisation. But the coasts both of Lucania and Bruttium were regions of the greatest beauty and fertility, as is shown by the shores of the Tarantine gulf, though now wild and desolate, is cited in ancient times as an almost proverbial instance of a beautiful and desirable country. (Arch. op. Athen. xii. p. 523.)

The peninsula of Calabria or Messapia, as already remarked by Strabo, notwithstanding the absence of streams and the apparent aridity of the soil, is in reality a district of great fertility, as is shown by the tract which extends along the coast of the Adriatic from Egna to the mouth of the Aurundus; and, though the plains in the interior of Apulia are dry and dusty in summer, they produce excellent corn, and are described by Strabo as "bringing forth all things in great abundance." (Strab. vi. p. 284.)

The general form and configuration of Italy was well known to the ancient geographers. Polybius, indeed, seems to have had a very imperfect notion of it, or was singularly unhappy in his illustration; for he describes it as of a triangular form, having the Alps for its base, and its two sides bounded by the sea, the Ionian and Adriatic on the one side, the Tyrrhenian and Sicilian on the other. (Pol. il. 14.)

Strabo justly observes that "this triangle cannot be called a triangle, without allowing a degree of curvature and irregularity in the sides, which would destroy all resemblance to that figure; and that it is, in fact, wholly impossible to compare it to any geometrical figure." (Strab. v. p. 310.) There is somewhat more truth in the resemblance suggested by Plineus,—and which seems to have been commonly adopted, as it is referred to also by Eutilinus (Plineus iii. v. 6; Rutil. Sis. ii. 17) — to the leaf of an oak-tree, though this would imply that the projecting portions or promontories on each side were regarded as more considerable than they really are. With the exception of the two great peninsulas or promontories of Calabria (Messapia) and Bruttium, which are attached to its limits, the remainder of Italy, from the Padus and the Macra southwards, has a general oblong form; and Strabo truly enough describes it, when thus considered, as much about the same shape and size with the Adriatic Sea. (Strab. v. p. 311.)

Its dimensions are very variously stated by ancient writers. Strabo, in the companionship of the Cythraeus, calls it little less than 6000 stadia (600 geo. miles) long, and about 1300 stadia in its greatest breadth.
ITALIA.

of these the latter measurement is almost exactly correct, but the former much overstated, as he is speaking there of Italy exclusive of Cisalpine Gaul. The total length of Italy (in the wider sense of the word), from the foot of the Alps near Aosta (Augusta Praetoria) to the Iapygian promontory, is about 620 geog. miles, as measured in a direct line on a map; but from the same point to the promontory of Leucopetra, which is the extreme southern point of Italy, is about 660 geog. miles. Pliny states the distance from the same starting-point to Rhegium at 1020 M. P., or 816 geog. miles, which is greatly overstated, unless we suppose him to follow the windings of the road instead of measuring the distance geographically. (Plin. iii. 5. s. 6.) He also states the greatest breadth of Italy, from the Vareus to the Aearia, at 416 M. P., which is very nearly correct; the actual distance from the Vareus to the head of the Adriatic, measured in a straight line, being 300 geog. miles (375 M. P.), while from thence to the Aearia is about 50 geog. miles. Pliny adds, that the breadth of the peninsula, from the mouths of the Tiber to those of the Aternus, is 136 M. P., which considerably exceeds the truth for that particular point; but the widest part of the peninsula is the Sinus Aenaria and the Sinus Argesianus, is 130 geog., or 162 Roman, miles.

III. CLIMATE AND NATURAL PRODUCTIONS.

Italy was not less renowned in ancient than in modern times for its beauty and fertility. For this it was indebted in great part to its climate, combined with the advantages of its physical configuration. Extending from the parallel of 30° N. lat. to 46° 30', its southern extremity enjoyed the same climate with Greece, while its northern portions were on a par with the S. of France. The lofty range of Apennines extending throughout its whole length, and the sea which bathes its shores on both sides, contributed at once to temper and vary its climate, so as to adapt it for the productions alike of the temperate and the warmest parts of Europe. Hence the variety as well as abundance of its natural produce, which excited the admiration of so many ancient writers. The fine burst of enthusiasm with which Virgil sings the praises of his native land is too well known to require notice (Virg. Georg. ii. 135—175); but even the prosaic Dioscorides and Strabo are kindled into almost equal ardour by the same theme. The former writer remarks, that of all countries with which he was acquainted Italy united the most natural advantages: for that it did not, like Egypt or Babylonia, possess a soil adapted for agriculture only; while the Campanian plains rivalled, if they did not surpass, in fertility all other arable lands, the olives of Messape, the citrus and the Sabines, were not excelled by any others; and the vineyards of Etruria, the Falernian and the Alban hills, produced wines of the most excellent quality, and in the greatest abundance. Nor was it less favourable to the rearing of flocks, whether of sheep or goats; while its pastures were of the richest description, and supported innumerable herds both of sheep and cattle. Mountains on its southern side were clothed with magnificent forests, affording abundance of timber for ship-building and all other purposes, which could be transported to the coast with facility by its numerous navigable rivers. Abundance of warm springs in different parts of the country supplied not only the means of luxurious baths, but valuable medical remedies. Its seas abounded in fish, and its mountains contained mines of all kinds of metals; but that which was the greatest advantage of all was the excellent temperature of its climate, free alike from the extremes of heat and cold, and adapted for all kinds of plants and animals. (Diosyn. i. 36, 37.) Strabo dwells not only on these natural resources, but on its political advantages as a seat of empire; defended on two sides by the sea, on the third by almost impenetrable mountains; possessing excellent ports on both seas, yet not affording too great facilities of access; and situated in such a position, with regard to the great nations of Western Europe, on the one side, and to Greece and Asia, on the other, as seemed to destine it for universal dominion. (Strab. vi. p. 286.) Pliny, as might be expected, is not less enthusiastic in favour of his native country, and Varro adds that of all countries it was that in which the greatest advantage was derived from its natural fertility by careful cultivation. (Plin. iii. 5. s. 6, xxxvii. 13. s. 77; Var. R. R. i. 5.)

It is probable that the climate of Italy did not differ materially in ancient times from what it is at the present day. The praisés bestowed on it for its freedom from excessive heat in summer may surprise the reader who has come to know the climate of the northern climates; but it is to be remembered that ancient writers spoke with reference to the countries around the Mediterranean, and were more familiar with the climate of Africa, Syria, and Egypt, than with those of Gaul or Germany. On the other hand, there are passages in the Roman writers that seem to indicate a degree of cold analogous to that found at the present time, especially in the neighbourhood of Rome. Horace speaks of Soracte as white with snow, and the Alban hills as covered with it on the first approach of winter (Hor. Carm. i. 9, Ep. i. 7. 10); and Juvenal even alludes to the Tiber being covered with ice, as if it were an ordinary occurrence (vi. 323). Some allowance may be made for poetical exaggeration; but still it is probable that the climate of Italy was somewhat colder, or rather that the winters were more severe than they now are, though this remark must be confined within narrow limits; and it is probable that the change which has taken place is far less than in Gaul or Germany.

Great stress has also been laid by many modern writers upon the fact that populous cities then existed, and a thriving agriculture existed. Nothing has been found, on sites and in districts now desolated by malaria; and hence it is inferred that the climate has become much more unhealthy in modern times. But population and cultivation have in themselves a strong tendency to repress the causes of malaria. The fertile districts on the coasts of Southern Italy once occupied by the flourishing Greek colonies are now pestilential; and though they have become almost desert from other causes before they grew so unhealthy. In the case of Paestum, a marked diminution in the effects of malaria has been perceived, even from the slight amount of population that has been attracted thither since the site has become the frequent resort of travellers, and the partial cultivation that has resulted from it. Nor can it be asserted that Italy, even in its most flourishing days, was ever free from this scourge, though particular localities were undoubtedly more healthy than at present. Thus, the Maremma of Tuscany was noted, even in the time of Pliny, for its unsalubrity (Plin. Ep. v. 6); the neighbourhood of Adea was almost uninhabited from the same cause, at a still earlier
The volcanic district of Rome, as we may term the more northern of the two, is about 100 miles in length, by 30 to 35 in breadth; while that of Campania is about 60 miles long, with an average, though very irregular, breadth of 20. North of the former lie the detached summits of Mts. Avemis and Radiofani, both of them composed of volcanic rocks; while at a distance of 60 miles E. of the Campanian basin, and separated from it by the intervening mass of the Apennines, is situated the isolated volcanic peak of Mt. Vultur (Volturno), a mountain whose regular conical form, and the great crater-shaped basin on its northern flank, are proofs of its volcanic character; though this also, as well as the volcanoes of Latium and Etruria, has displayed no signs of activity within the historical era. (Daubeney, On Volcanoes, ch. ii.)

It is scarcely necessary to enumerate in detail the natural productions of Italy, of which a summary view has already been given in the passages cited from ancient authors, and the details will be found under the heads of the several provinces. But it is worth while to observe how large a portion of those productions, which are at the present day among the chief objects of Italian cultivation, and even impart to its scenery some of its most peculiar characters, are of quite modern introduction; and were, wholly unknown when the Greek and Roman writers extolled its varied resources and inexhaustible fertility. To this class belong the maize and rice so extensively cultivated in the plains of Lombardy, the oranges of the Ligurian coast and the neighbourhood of Naples, the aloe and cactuses which clothe the rocks on the sea-shore in the southern provinces; while the meadows, forests, and trees, so well known in ancient times, never became an important object of culture until after the introduction of the silk-worm in the 13th century. Of the different kinds of fruits known to the ancient Romans, many were undoubtedly of exotic origin, and of some the period of their introduction was recorded; but almost all of them were well in Italy, and the gardens and orchards of the Roman towns assumed all others then known in the variety and excellence of their produce. At the same time, cultivation of the more ordinary descriptions of fruit was so extensive, that Varro remarks: " Arboribus consit Italia est, ut tota pomarium videtur." (R.R. i. 2, 5.)

Almost all ancient writers concur in praising the metallic wealth of Italy; and Pliny even asserts that it was, in this respect also, superior to all other lands; but it was generally believed that the government intentionally discouraged the full exploration of these mineral resources. (Plin. H.N. 20. s. 24, xxxvii. 13. s. 77; Strab. vi. p. 266; Dionys. i. 57; Virg. Georg. ii. 168.)

It is doubtful whether this policy was really designed to husband their wealth or to conceal their poverty; but it is certain that Italy was far from being really so rich in metallic treasures as was supposed, and could bear no comparison in this respect with Spain. Gold was unquestionably found in some of the streams which flowed from the Alps, and in some cases (as among the Taurins and Salsiti) was extracted from them in considerable quantities; but these workings, or rather washings, appear to have been rapidly exhausted, and the gold-works on the frontiers of Noricum, celebrated for their richness by Polybius, had ceased to exist in the days of Strabo. (Strab. iv. p. 208.) Silver is enumerated, also, among the metallic treasures of
ITALIA.

Italy; but we have no specific account of its production, and the fact that silver money was unknown to the ancient nations of Italy sufficiently shows that it was not found in any great quantity. The early coinage of Italy was of copper, or rather bronze; and this metal appears to have been extracted in large quantities and applied to a variety of purposes by the Etruscans, from a very early period. The same people were the first to explore the iron mines of Ilva, which continued to be assiduously worked by the Romans; though the metal produced was thought inferior to that of Noricum. Of other minerals, cinabae (minium) and calamine (cadmium) are noticed by Pliny. The white marble of Luna, also, was extensively quarried by the Romans, and seems to have been recognised as a superior material for sculpture to any of those derived from Greece.

IV. RIVERS, LAKES, AND MOUNTAINS.

The configuration of Italy is unfavourable to the formation of great rivers. The Po is the only stream which deserves to rank among the principal rivers of Europe; even the Arno and the Tiber, celebrated as are their names in history, being inferior in magnitude to many of the secondary streams, which are mere tributaries of the Rhine, the Rhone, or the Danube. In the north of Italy, indeed, the rivers which flow from the perpetual snows of the Alps, such as the Ticino and the Adda, are copious and constant, and supply water; but the greater part of those which have their sources in the Apennines, though large and formidable streams when swollen by heavy rains or the snows of winter, dwindle into insignificance at other times, and present but scanty streams of water, winding through broad beds covered with stones and boulders. It is only by comparison with Greece that Italy (with the exception of Cilasipane Gaii) could be praised for its abundance of navigable rivers.

The Po, or Arno, is by far the most important river of Italy, flowing from W. to E. through the very midst of the great basin or trough of Northern Italy, and receiving, in consequence, from both sides, all the waters from the southern declivities of the Alps, as well as from the northern slopes of the Apennines. Hence, though its course does not exceed 380 geog. miles in length, and the direct distance from its sources in the Mount Vesuvius (Monte Vico) to its mouth in the Adriatic is only 230 miles, the body of water which it brings down to the sea is very large. Its principal tributaries are as follows, beginning with those on the N. bank, and proceeding from W. to E.:—(1) the Tiber Minor (Doria Latina), which joins the Po near Trevi-Augusta Tarinorum; (2) the Stura (Stora); (3) the Ogrove (Orco); (4) the Duara Major, or Dora Baltea; (5) the Sesia (Soria); (6) the Ticino (Tecino); (7) the Lambro (Lambró); (8) the Adda (Adade); (9) the Ollia (Ypiolo); (10) the Mincio (Minchõ). Equally important, if less important in volume and magnitude, are its tributaries from the S. side, the chief of which are:—(1) the Tanaro (Tanaro), flowing from the Maritime Alps, and much the most considerable of the southern feeders of the Po; (2) the Trebia (Trebës); (3) the Tarus (Toro); (4) the Incisa (Imesa); (5) the Gabellus (Socolis); (6) the Scuolena (Scuoléna); (7) the Benaco (Benaco); (8) the Verzasca (Verasca). (Plin. ill. 16. s. 90.)

The first river which, descending from the Alps, does not join the Padus, is the Atheus or Adige, which in the lower part of its course flows nearly parallel with the greater river for a distance of about 50 miles. E. of this, and flowing from the Alps direct to the Adriatic, come in succession, the Me- docus or Brenna, the Plavis or Piave, the Tis- semtus (Tysiasimento), and the Santina (Tosna), besides many smaller streams, which will be noticed in the article VENETIA.

Liguria, S. of the Apennines, has very few streams worthy of notice, the mountains here approaching so close to the coast as to leave but a short course for their waters. The most considerable are, the Varus (Vor), which forms the western limit of the province; the Rutunion (Rojon), flowing through the land of the Intemelii, and the Macra (Moro), which divides Liguria from Etruria.

The rivers of Central Italy, as already mentioned, all take their rise in the Apennines, or the mountain groups dependent upon them. The two most important of these are the Arno (Arno) and Tiber (Tiber). The Ausar (Serrchio), which now pursues an independent course to the sea a few miles N. of the Arno, was formerly a confluence of that river. Of the smaller streams of Etruria, which have their sources in the group of hills that separate the basin of the Arno from that of the Tiber, the most considerable are the Cacchino (Cecino), the Umbro (Umbro), and the Arminia (Fiora). The great valley of the Tiber, which has a general southerly direction, from its sources in the Apennines on the confines of Tuscany and Umbria to its mouth at Ostia, is a distance in a direct line of 140 geog. miles, is the most important physical feature of Central Italy. That river receives in its course many tributary streams, but the only ones which are important in a geographical point of view are the Calaone, the Naro, and the Arno. Of these the Naro brings with it the waters of the Velinus, a stream at least as considerable as its own.

South of the Tiber are the Liris (Liró) or Lirone, which has its sources in the central Apennines near the lake Fucinum; and the Vulturine (Volturno), which brings with it the collected waters of almost the whole of Samnium, receiving near Beneventum the tributary streams of the Calor (Caló), the Sele (Sélio), and the Tamaro (Tamara). Both of these rivers flow through the plain of Campania to the sea: south of that province, and separating it from Lucania, is the Silarus (Sélio), which, with its tributaries the Calore (Caló) and Tanagro (Nagro), drains the western valleys of the Lucanian Apennines. This is the last river of any magnitude that flows to the western coast of Italy: further to the S. the Apennines approach so near to the shore that the streams which descend from them to the sea are mere mountain torrents of trifling length and size. One of the most considerable of them is the Lais (Laió), which forms the limit between Lucania and Bruttium. The other minor streams of those two provinces are enumerated under their respective articles.

Returning now to the eastern or Adriatic coast of Italy, we find, as already noticed, a large number of streams, descending from the Apennines to the sea, but few of them of any great magnitude, though those which have their sources in the highest parts of the range are formidable torrents at particular seasons of the year. Beginning from the frontiers of Cilasipane Gaii, and proceeding from N. to S., the most important of these rivers are:—(1) the Ariminus (Marcoccio); (2) the Crustumius (Costo); (3) the Pisaurus (Foglio); (4) the Metaurus (Metare);
ITALIA.

(3) the Aesils (Esinus); (5) the Potenlia (Potiamas); (7) the Flusco (Chiennari); (8) the Trentinus (Trento); (9) the Vomadnas (Vosmeo); (10) the Atenas (Ateneo or Pescaseo); (11) the Sagra (Sanrovo); (12) the Trinitus (Trigno); (13) the Tiferbus (Biferno); (14) the Fento (Fentore); (15) the Cerbulas (Cercoaro); (16) the Asidaus (Ostuano), which has much the longest course of all the rivers falling into the Adriatic.

Beyond this, not a single stream worthy of notice flows down the Apennines, which have their sources in the central Apennines of Lucania all descending towards the Tarentine gulf; these are, the Bradanus (Branaco), the Casentus (Darieto), the Azaria (Agrri), and the Siris (Sisno). The only rivers of Brittanum worthy of mention are the Crathis (Crati) and the Nesiotes (Nesto).

(The minor streams and those noticed in history, but of no geographical importance, are enumerated in the descriptions of the several provinces.)

The Italian lakes may be considered as readily arranging themselves into three groups:—1. The lakes of Northern Italy, which are on a far larger scale than any of the others, are all basins formed by the rivers which descend from the high Alps, and the streams which are arrested as they flow from the mountains. Hence they are, as it were, valleys filled with water, and of elongated form and considerable depth; while their superfuse waters are carried off in deep and copious streams, which become some of the principal feeders of the Po. Such are the Lacus Verbanus (Lago Maggiore), formed by the Ticino; the Lacus Lura (Lago di Como), by the Lepontica; the Lacus Lugus (Lago d'Iseo), by the Ollis; and the Lacus Benevus (Lago di Garda), by the Bucicrus. To these Pliny adds the Lacus Rubiana, from which flows the Lambro or Lambro, a very thriving sheet of water (Plin. iii. 19. a. 23); while neither he, nor any other ancient writer, mentions the Lago di Lagano, situated between the cities of Como and Lago Maggiore, though it is inferior in magnitude only to the three great lakes. It is first mentioned by Gregory of Tours in the 6th century, under the name of Cerereus Lacus, an appellation probably ancient, though not now found in any earlier author. 2. The lakes of Central Italy are, with few exceptions, of volcanic origin, and occupy the craters of long extinct volcanoes. They are of oval form, of great extent, and not being fed by perennial streams, either require no natural outlet, or have their surplus waters carried off by very inconsiderable streams. The largest of these volcanic lakes is the Lacus Vulnainemns, or Lago di Bolsena, in Southern Etruria, a basin of about 30 miles in circumference. Of similar character and origin are the Lacus Sabellus (Lago di Bracciano) and Lacus Ciminus (Lago di Vico), in the same district; the Lacus Albamus (Lago d'Albano) and Lacus Nemoresus (Lago di Nemi), in Latium; and the Lake Avernus in Campania. 3. Wholly differing from the preceding are the two most considerable lakes in this portion of Italy, the Lacus Traianumus (Lago dell'Ferregio) and Lacus Fusco (Lago Fusco or Lago di Colano); both of which are basins surrounded by hills or mountains, leaving no natural outlet for their waters, but wholly unconnected with volcanic agency.

The mountains of Italy belong almost exclusively either to the great chain of the Alps, which bounds it on the N., or to that of the Apennines. The principal summits of the latter range have been already noticed under the article APENNINES. The few overlooking or detached summits, which do not properly belong to the Apennines, are (1) the Monte Alfiero or Monte di Santa Fiora, in the heart of Etruria, which rises to a height of 5794 feet above the sea; (2) the Mons Ciminus, a volcanic group of very inferior elevation; (3) the Mons Albanus, rising to above 3000 feet; (4) the Mons Veronius, in Campania, attaining between 3000 and 4000 feet; (5) the Mons Soracte, opposite the coast of the Apennines, which measures 4433 feet; and (6) the Mons Garabani, an isolated mass, but geologically connected with the Apennines, while all the preceding are of volcanic origin, and therefore geologically, as well as geographically, distinct from the neighbouring Apennines.

To these may be added the two isolated mountain summits of the Mons Argentarius (Mons Argentarius) on the coast of Etruria, and Mons Circeus (Mons Circeo) on that of Latium,—both of them rising like rocky islands, joined to the mainland only by low strips of alluvial soil.

IV. ETHNOGRAPHY OF ANCIENT ITALY.

The inquiry into the origin and affinities of the different races which peopled the Italian peninsula before it fell altogether under the dominion of Rome, and the national relations of the different tribes with which the rising republic came successively into contact, is a problem which has more or less attracted the attention of scholars ever since the revival of leters. But it is especially of late years that the impulse given to the study of these topics, and the effort made with the spirit of historical criticism, has directed their researches to this subject. Yet, after all that has been written on it, from the time of Niebuhr to the present day, it must be admitted that it is still enveloped in great obscurity. The scantiness of the monuments that remain to us of the languages of these different nations; the various and contradictory statements of ancient writers concerning them; and the uncertainty, even with regard to the most apparently authentic of these statements, on what authority they were really founded; combine to embarrass our inquiries, and lead us to mistrust our conclusions. It will be impossible, within the limits of an article like the present, to enter fully into the discussion of these topics, or examine the documents that have been brought forward by different writers upon the subject. All that can be attempted is to give such a summary view of the most probable results, as will assist the student in forming a connected idea of the whole subject, and enable him to follow with advantage the researches of other writers.

Many of the particular points here briefly referred to will be more fully investigated in the several articles of the different regions and races to which they relate.

Leaving out of view for the present the inhabitants of Northern Italy, the Gauls, Ligurians, and Veneti, the different nations of the peninsula may be grouped under five heads:—(1) the Pelasgi; (2) the Osci; (3) the Sabellians; (4) the Umbrians; (5) the Etruscans.

1. PELASGIANS.—All ancient writers concur in ascribing a Pelasgic origin to many of the most ancient tribes of Italy, and there seems no reason to doubt that a large part of the population of the peninsula was really of Pelasgic race, that is to say, that it belonged to the same great nation or family.
which formed the original population of Greece, as well as that of Epirus and Macedonia, and of a part at least of Thrace and Asia Minor. The statements and arguments upon which this inference is based are more fully discussed under the article PE拉萨。 It may here suffice to say that the general fact is put forward prominently by Dionysius and Strabo, and has been generally adopted by modern writers from Niebuhr downwards. The Pelasgian population of Italy appears in historical times principally, and in its unmixed form solely, in the southern part of the peninsula. But it is not improbable that it had, as was reported by traditions still current in the days of the earliest historians, at one time extended much more widely, and that the Pelasgian tribes had been gradually pressed towards the south by the successively advancing waves of population, which appear under the name of the Oscans or Ausonians, and the Sabellans. At the time when the first Greek colonies were established in Southern Italy, the whole of the country subsequently known as Lucania and Bruttium was occupied by a people who were generally represented by modern writers as Pelasgians (Oevros)， and who are generally represented as a Pelasgian race. Indeed we learn that the colonists themselves continued to call this people, whom they had reduced to a state of servitude, Pelasgi. (Steph. B. s. v. Εορος) We find, however, traces of the tradition that this part of Italy was at one time peopled by a tribe called Siculi, who are represented as passing over from hence into the island to which they gave the name of Sicily, and where alone they are found in historical times. (SICILIA.) The name of these Siculi is found also in connection with the earliest population of Latium (Latium): both there and in Oenotria they are represented by some authorities as a branch of the Pelasgian, while others regard them as a distinct people. In the latter case we have no clue whatever to their origin or national affinities.

Next to the Oeniots come the Messapians or Iapygians, who are represented by the Greek legends and traditions as of Pelasgic or Greek descent: and there seem reasonable grounds for assuming that the conclusion was correct, though no value can be attached to anything in the legends connected with it by the logographers and early Greek historians. The tribes to whom a Pelasgic origin is thus assigned are, the Messapians and Salentine, in the Iapygian peninsula; and the Peucetians and Daunians, in the country called by the Romans Apulia. A strong confirmation of the inference derived in this case from other authorities is found in the traces still remaining of the Messapian dialect, which appears to have borne a close affinity to Greek, and to have differed from it only in much the same degree as the Macedonian and other cognate dialects. (Mommsen, Unter Italienische Dialekten, pp. 41-98.)

It is far more difficult to trace with any security the Pelasgian population of Central Italy, where it appears to have been very mixed with other national elements, and did not anywhere subsist in an unmixed form within the period of historical record. But various as have been the theories and suggestions with regard to the population of Etruria, there seems to be good ground for assuming that one important element, both of the people and language, was Pelasgic, and that this element was predominant in the southern part of Etruria, while it was more feeble, and had been comparatively effaced in the more northern districts. (ETRURIA.) The very name of Tyrrhenians, universally given by the Greeks to the inhabitants of Etruria, appears indisputably connected with that of Pelasgians; and the evidence of language affords some curious and interesting facts in corroboration of the same view. (Donaldson, Pervromainas, 2d edit. pp. 166-170; Lepsius, Tyrrhenen. Pelasgen, pp. 40-43.)

If the Pelasgian race was prevalent in Southern Etruria, it might naturally be expected that its existence would be traceable in Latium also; and accordingly we find abundant evidence that one of the component ingredients in the population of Latium was of Pelasgic extraction, though this did not subsist within the historical period in a separate form, but was already indissolubly blended with the other elements of the Latin nationality. (LATIUM.) The evidence of the Latin language, as pointed out by Niebuhr, in itself indicates the combination of a Greek or Pelasgic race with one of a different origin, and closely akin to the other nations which we find predominant in Central Italy, the Umbrians, Oscans, and Sabellans.

The evidence to be also sufficient proof that a Pelasgic or Tyrrhenian population was at an early period settled along the coasts of Campania, and was probably at one time conterminous and connected with that of Lucania, or Oenotria; but the notices of these Tyrrhenian settlements are rendered obscure and confused by the circumstance that the Greeks applied the same name of Tyrrhenians to the Etrusans, who subsequently made themselves masters for some time of the whole of this country. (CAMPAHIA.)

The notices of any Pelasgic population in the interior of Central Italy are so few and vague as to be scarcely worthy of investigation; but the traditions collected by Dionysius from the early Greek historians definitely represent them as having been at one time settled in Northern Italy, and especially point to Spina on the Adriatic as a Pelasgic city. (Dionysius, i. 17-21; Strab. v. p. 214.) Nevertheless it hardly appears probable that this Pelasgic race formed a permanent part of the population of those regions. The traditions in question are more fully investigated under the article PE拉萨。 There is no certainty in the representations which are limited, by the logographers, to the very indefinite, of the existence of a Pelasgic population on the coast of the Adriatic, especially on the shores of Picenum. (These notices are collected by Niebuhr, vol. i. pp. 49, 50, and are discussed under PECNENUM.)

"2. OSCANS. At a very early period, and certainly before the commencement of historical record, a considerable portion of Central Italy appears to have been in the possession of a people who were called by the Greeks Opicians, and by the Latins Oscans, and whom we are led to identify also with the Ausonians (AUSONIANS) of the Greeks, and the Auruncans of Roman writers. From them was derived the name of Opicio or Opicia, which appears to have been very extended, in the north, with both of Thucylides and Aristotle, for the central portion of the peninsula, or the country north of what was then called Italy. (Thuc. vi. 4; Arist. Pol. vii. 10.) All the earliest authorities concur in representing the Opicans as the earliest inhabitants of Carpinia, and they were still in possession of that fertile district when the Greek colonies were planted there. (Strab. v. p. 242.) We find also statements, which have every character of authenticity, that this same people then occupied the mountainous region after-
wards called Samnium, until they were expelled, or rather subdued, by the Sabine colonists, who assumed the name of Sammites. (Id. v. p. 250.)

[Samnium.] Whether they were more widely extended we have no positive evidence; but there seems a strong presumption that they had already spread themselves through the neighbouring districts of Italy. Thus the Hirpini, who are represented as a Samnite or Sabellian colony, in all probability found an Ocean population established in that country, as did the Sammites proper in the more northern provinces. There is also strong argument for regarding the Volscians as of Oceanic race, as well as their neighbours and inseparable allies the Aequians. (Niebuhr, vol. i. pp. 70–73; Donaldson, Varro-viennae, pp. 4, 5.) It was probably also an Ocean tribe that was settled in the highlands of the Apennines about Reate, and which from thence descended into the plains of Latium, and constituted one important element of the Latin nation. [Latium.] It is certain that, if that people was, as already mentioned, in part Pelasgic origin, it contained also a very strong admixture of a non-Pelasgic race; and the analogy of language leads us to derive this latter element from the Ocean. (Donaldson, i.e.) Indeed the extant monuments of the Ocean language are sufficient to prove that there was a very close relation to the oldest elements of the Latin and Sabellian languages. Justly remarks, that, had a single book in the Ocean language been preserved, we should have had little difficulty in deciphering it. (Niebuhr, vol. i. p. 68.) It is difficult to determine the precise relation which this primitive Ocean race bore to the Sabines or Sabei. The latter are represented as conquered and subdued by the Volscians themselves, who occupied the countries previously occupied by the Oscans; but, both in Samnium and Campania, we know that the language spoken in historical times, and even long after the Roman conquest, was still called Ocean; and we even find the Sammites carrying the same language with them, as they gradually extended their conquests, into the furthest recesses of Bruttium. (Fast. a. Bruttiums Britanniæ, p. 35.) There seems little doubt that the Samnite conquerors were a comparatively small body of warriors, who readily adopted the language of the people whom they subdued, like the Normans in France, and the Lombards in Northern Italy. (Niebuhr, vol. i. p. 67.) But, at the same time, there are strong reasons for supposing that the language of the Sabines themselves, as therefore that of the conquering Samnian race, was not so radically distinct from that of the Oscans, but that they were in fact cognate dialects, and that the two nations were members of the same family or race. The questions concerning the Ocean language, so far as it is known to us from existing monuments, are more fully adverted to under the article Ocean; but it must be borne in mind that all such monuments are of a comparatively late period, and represent only the Sabello-Ocean, or the language spoken by the combined people, long after the two races had been blended into one; and that we are almost wholly without the means of distinguishing what portion was derived from the one source or the other.

3. The Sabei.—This name, which is sometimes used by ancient writers as synonymous with that of the Sabines, sometimes to designate the Samnites in particular (Plin. iii. 12. a. 17; Virgil, Georg. ii. 167; Her. Hist. i. 9. 29, ii. 1. 38; Haen- dorf, ad loc.), is commonly adopted by modern historians as a general appellation, including the Sabines and all those races or tribes which, according to the distinct tradition of antiquity, derived their origin from them. These traditions are of a very different character from most of those transmitted to us, and have apparently only recently come into fashion as historical. And though we have no means of fixing the date of the migrations to which they refer, it seems certain that these cannot be carried back to a very remote age; but that the Sabellian races had not very long been established in the extensive regions of Central Italy, where we find them in the historical period. Their extension still further to the S. belongs distinctly to the historical age, and did not take place till long after the establishment of the Greek colonies in Southern Italy.

The Sabines, properly so called, had their original abodes, according to Cato (ap. Dionys. ii. 49), in the lofty ranges of the central Apennines and the upland valleys about Ametrum. It was from thence that, descending towards the western seas, they first began to press upon the Sabellian tribes, whom they expelled from the valleys about Reate, and thus gradually extended themselves into the country which they inhabited under the Romans, and which still preserves its ancient name of La Sabina. But, while the nation itself had thus shifted its quarters nearer to the Tyrrhenian Sea, it had sent out at different periods colonies or branches of itself, which had established themselves to the E. and S. of their original abodes. Of these, the most powerful and celebrated were the Sammites (Zawvirai), a people who are universally represented by ancient historians as descended from the Sabines (Strab. v. p. 250; Fest. s. Samnites; Var. L. L. vii. § 29); and this tradition, in itself sufficiently trustworthy, derives the strongest confirmation from the fact already noticed, that the Romans applied the name of Sabellai (obviously only another form of Sabini) to both nations indiscriminately. It is even probable that the Sammites called themselves Sabini, or Savini, for the Ocean name "Sabinum" is found on coins struck during the Social War, which in all probability belonged to the Sammites, and certainly not to the Sabines proper. Equally distinct and uniform are the testimonies to the Sabine origin of the Piceni or Picentes (Plin. iii. 13. a. 18; Strab. v. p. 240), who are found in historical times in possession of the fertile district of Picenum, extending from the central chain of the Apennines to the Adriatic. The Peligni also, as we learn from the evidence of their native poet Ov. Fast. i. 31, were claimants of Sabellian descent; and the same may fairly be assumed with regard to the Vestini, a tribe whom we find in historical times occupying the very valleys which are represented as the original abodes of the Sabines. We know nothing historically of the origin of this people, any more than of their neighbours the Marrucini; but we find them both associated so frequently with the Peligni and the Marsi, that it is probable the four constituted a common league or confederation, and this in itself raises a presumption that they were kindred races. Cato already remarked, and without doubt correctly, that the name of the Marrucini was directly derived from that of...
ITALIA.

The Marsi (Cato, ap. P. Furiac. ix. 9); and there can be no doubt that the same relation subsisted between the two nations: we are wholly in the dark as to the origin of the Marsi themselves. Several circumstances, however, combine to render it probable that they were closely connected with the Sabines, so that whether as a distinct offshoot from this people, or that the two proceeded from one common stock, we have no means of determining. [Marsi.]

The Frentani, on the other hand, are generally represented as a Samnite race; indeed, both they and the Hirpini were so closely connected with the Samnites, that they are often considered as forming only a part of that people, though at other times they figure as independent and separate nations. But the traditions with regard to the establishment of the Hirpini and the origin of their name [Hirpini], seem to indicate that they were the result of a separate migration, subsequent to that of the body of the Samnites. South of the Hirpini, again, the Lucanians are universally described as a Samnite colony, or rather a branch of the Samnites, who extended their conquering arms over the greater part of the country called by the Greeks Oenotria, and thus came into direct collision with the Greek colonies on the southern coast of Italy. [Magna Graecia.]

At the height of their power the Lucanians even made themselves masters of the Bruttian peninsula; and the subsequent revolt of the Bruttii is not clear that country of these Sabellian invaders, the Bruttian people being apparently a mixed population, made up of the Lucanian conquerors and their Cenotrian serfs. [Bruttii.]

While the Samnites and their Lucanian progeny were thus extending their power on the S. to the Sicilian strait, they did not omit to make themselves masters of the fertile plains of Campania, which, together with the flourishing cities of Capua and Cumae, fell into their hands between 440 and 420 B.C. [Campania.]

The dominion of the Sabellian race was thus established from the neighbourhood of Ancona to the southern extremity of Bruttium; but it must not be supposed that throughout this wide extent the population was composed exclusively of the same Sabellian. That people appears rather to have been a race of conquering warriors; but the rapidity with which they became blended with the Oscan populations that they found previously established in some parts at least of the countries they subdued, seems to point to the conclusion that there was no very wide difference between the two. Even in Samnium itself (which probably formed their stronghold, and where they were doubtless more numerous in proportion) we know that they adopted the Oscan language; and that, while the Romans speak of the people and their territory as Sabellian, they designate their speech as Oscan. (Liv. viii. 1, x. 19, 20.) In like manner, we know that the Lucanian invaders carried in their tongue the same language into the wilds of Bruttium; where the double origin of the people was shown at a late period by their continuing to speak both Greek and Oscan. (Fest. p. 35.)

The relations between these Sabellian conquerors and the Oscan inhabitants of Central Italy render it, on the whole probable, that the two nations were only branches from one common stock (Niebuhr; vol. i. p. 104), related to one another very much like the Normans, Danes, and Saxons. Of the language of the Sabines themselves we have unfortunately scarce any remains: but there are some words quoted by an- cient authors as being at once Sabine and Oscan; and Varro (himself a native of Reate) bears distinct testimony to a connection between the two. [Yarr. L. L. vil. § 98, ed. Müller.] On the other hand, there are evidences that the Sabine language had considerable affinity with the Umbrian (Donaldson, Foren. p. 98); and this was probably the reason why Zeuctocut of Troesgen (ap. Dionys. ii. 49) derived the Sabines from an Umbrian stock. But, in fact, the Umbrian and Oscan languages were themselves by no means so distinct as to exclude the supposition that the Sabine dialect may have been intermediate between the two, and have partaken largely of the characters of both.

4. UMBRIANS.—The general tradition of antiquity appears to have fixed upon the Umbrians as the most ancient of all the races inhabiting the Italian peninsula. (Plin. iii. 14. a. 19; Flor. i. 17; Dionys. i. 19.) We are expressly told that at the earliest period of which any memory was preserved, they occupied not only the district where we find them in historical times on the central part of Etruria also; while, across the Apennines, they held the fertile plains (subsequently wrested from them by the Etruscans and the Gauls) from the neighbourhood of Ravenna to that of Ancona, and apparently a large part of Picenum also. Thus, at this time, the Umbrians extended from the Adriatic to the Tyrrhenian sea, and from the mouths of the Po to the banks of the Tiber. Of their origin or national affinities we learn but little from ancient authors; a notion appears to have arisen among the Romans at a late period, though not alluded to by any writer of authority, that they were a Celtic or Gaulish race (Solin. 2. § 11; Serv. ad Aen. xii. 753; Isidor. Orig. ix. 2); and this view has been adopted by many modern authors. (Wackenroder, Gloger, des Gauls, vol. i. p. 10; Thierry, Hist. des Gaulois, vol. i.) But, in this instance, we have a much safer guide in the still extant remains of the Umbrian language, preserved to us in the celebrated Tabulæ Enguinaæ [Iovium]; and the researches of modern philologers, which have been of late years especially directed to that interesting monument, have been so far successful as to enable us even to speak with the Celtico as to lead us to derive the Umbrians from a Gaulish stock. On the other hand, these inquiries have fully established the existence of a general resemblance between the Umbrian, Oscan, and oldest Latin languages; a resemblance not confined to particular words, but extending to the grammatical forms, and the whole structure of the language. Hence we are fairly warranted in concluding that the Umbrians, Oscans, and Latins (one important element of the nation at least), as well as the Sabines and their descendants, were only branches of one race, belonging, not merely to the same great family of the Indo-Teutonic nations, but to the same subdivision of that family. The Umbrian may very possibly have been the native tongue of the Romans, the most ancient branch of these kindred tribes; and its language would thus bear much the same relation to Latin and the later Oscan dialects that Moeso-Gothic does to the several Teutonic tongues. (Donaldson, Varr. pp. 78, 104, 105; Schweger, Römische Geschichte, vol. i. p. 176.)

5. ETRUSCANS.—While there is good reason to suppose a general and even close affinity between the nations of Central Italy which have just been reviewed, there are equally strong grounds for regarding the Etruscans as a people of wholly dif-
forest race and origin from those by which they were 
survived. This strongly marked distinctness from 
the other Italian races appears to have been recog-
nized both by Roman and Greek writers. Dionysius 
even affirms that the Etruscans did not resemble, 
either in language or manners, any other people 
whatever (Dionys. l. 50); and, however we may 
question the generality of this assertion, the fact in 
regard to their language of being to be borne out by 
the still existing remains of it. The various theories 
that have been proposed concerning their origin, and 
the views of modern philologers in regard to their 
language, are more fully discussed under the article 
Etruria. It may suffice here to state that two 
points may be considered as fairly established:—

1. That a considerable part of the population of 
Etruria, and especially of the more southern portions 
of that country, was (as already mentioned) of 
Pelasgic extraction, and continued to speak a dialect 
closely akin to the Greek. 2. That, besides this, 
there existed in Etruria a people (probably a con-
quering race) of wholly different origin, who were 
the proper Etruscans or Tuscanls, but who called 
themselves by the name of Etruria, and were still 
distinct from the other nations of Central Italy. 

As to the ethical affinities of this pure Etruscan 
race, we are almost as much in the dark as was 
Dionysius; but recent philological inquiries appear 
to have established the fact that it may be referred 
to the same great family of the Indo-European 
nations, though widely separated from all the other 
branches of that family which we find settled in 
Italy. There are not wanting, indeed, evidences of 
many points of contact and similarity, with the 
Umbrians on the one hand and the Pelasgians on 
the other; but it is probable that these are no more 
than would naturally result from their close juxta-
position, and that mixture of the different races 
which had certainly taken place to a large extent 
before the period from which all our extant monu-
ments are derived. It may, indeed, reasonably be 
assumed, that the Umbrians, who appear to have 
been at one time in possession of the greater part, if 
not the whole, of Etruria, would never be altogether 
exploded, and that there must always have remained, 
especially in the N. and E., a subject population of 
Umbrian origin, there was in the more southern 
districts of Pelasgian.

The statement of Livy, which represents the 
Rhaetians as of the same race with the Etruscans 
(v. 33), even if its accuracy be admitted, throws 
but little light on the national affinities of the latter; 
for we know, in fact, nothing of the Rhaetians, either 
as to their language or origin.

It only remains to advert briefly to the several 
branches of the population of Northern Italy. Of 
these, by far the most numerous and important were 
the Gauls, who gave to the whole basin of the Po 
the name of Gallia Cisalpina. They were universally 
admitted to be of the same race with the Gauls who 
inhabited the countries beyond the Alps, and their 
migration and settlement in Italy were referred by 
the Roman historians to a comparatively recent 
period. The history of these is fully given under 
GALLIA CISALPINA. Adjoining the Gauls on the 
SW., both slopes of the Apennines, as well as of the 
Maritime Alps and a part of the plain of the Po, 
were occupied by the Ligurians, a people as to 
whose national affinities we are almost wholly in 
the dark. [LIGURIA.] It is certain, however, from 
the positive testimony of ancient writers, that they 
were a distinct race from the Gauls (Strab. ii. p. 192), 
and there seems no doubt that they were established 
in Northern Italy long before the Gallic invasion. 
Nor were they by any means confined to the part 
of Italy which ultimately retained their name. At a 
very early period we learn that they occupied the 
whole coast of the Mediterranean, from the foot of 
the Pyrenees to the frontiers of Etruria, and the 
Greek writers uniformly speak of the people who 
occupied the neighbourhood of Massilia, or the modern 
Provence, as Ligurians, and not Gauls. (Strab. iv. 
p. 203.) At the same period, it is probable that 
they were more widely spread also in the basin of the 
Po than we find them when they appear in 
Roman history. At that time the Taurini, at 
the foot of the Cottian Alps, were the most northern of 
the Ligurian tribes; while S. of the Padus they ex-
tended probably as far as the Trebia. Along 
the shores of the Mediterranean they possessed in 
the time of Polybius the whole country as far as Pisae 
and the mouth of the Arno, while they held the 
fastnesses of the Apennines as far to the E. as the 
frontiers of the Arretine territory. (Pol. ii. 16.) 
It was not till the next period that they became 
the established boundary between the Roman pro-
vinces of Liguria and that of Etruria.

Bordering on the Gauls on the E., and separated 
from them by the river Athasia (Adige), were the 
Veneti, a people of whom we are distinctly told 
that their language was different from that of the 
Gauls (Pol. ii. 17), but of whom, as of the Ligurians, 
we know rather what they were not, than what they 
were. The most probable hypothesis is, that they 
were an Illyrian race (Zeman, Die Deutschen, p. 251), 
and there is good reason for referring their neigh-
bours the Istilrians to the same stock. On the 
other hand, the Carni, a mountain tribe in the 
extreme N. of Italy, who immediately bordered 
both on the Venetians and Istilrians, were more proba-
bly a Celtic race (Carni).

Another name which we meet with in this part 
of Italy is that of the Euganei, a people who had 
dwindled into insignificance in historical times, 
but whom Livy describes as once great and power-
ful, and occupying the whole tracts from the Alps 
to the sea. (Liv. i. 1.) Of their national affinities 
we know nothing, but it is probable that they 
spoke of other Alpine races besides the Rhaetians, 
as being of common origin with the Etruscans (v. 
33), that he had the Euganeans in view; but this is 
merely conjecture. He certainly seems to have re-
garded them as distinct both from the Venetians 
and Gauls, and as a more ancient people in Italy 
than either of those races.

V. HISTORY.

The history of ancient Italy is for the most part 
 inseparably connected with that of Rome, and cannot 
be considered apart from it. It is impossible here 
to attempt to give even an outline of that history; 
but it may be useful to the student to present at one 
view a brief sketch of the several races that occupied 
the Alps, and the period at which the several nations 
of Italy successively fell under their yoke, as well as 
the measures by which they were gradually con-
solidated into one homogeneous whole, in the form 
that Italy assumed under the rule of Augustus. The 
few facts known to us concerning the history 
of the several nations, before their conquest by the 
Romans, will be found in their respective articles; 
that of the Greek colonies in Southern Italy, and
At this time, therefore, only seventy years before the First Punic War, the Roman dominion still comprised only Latium, in the more limited sense of the name (for the Aequi and Hernici were still independent), together with the southern part of Etruria, the territory of the Volsciens, and a part of Campania. During the next fifty years, and the period of the great extension of the Roman arms and influence, the contest between Rome and Samnium was the main point of interest; but almost all the surrounding nations of Italy were gradually drawn in to take part in the struggle. Thus, in the Second Samnite War (n. c. 326—304), the names of the Lucanians and Apulians—nations with which (as Livy observes, viii. 25) the Roman people bad, up to that period, had nothing to do—appear as taking an active part in the contest. In another part of Italy, the Marsi, Vestini, and Feligni, all of them, as we have seen, probably kindred races with the Samnites, took up arms at one time or another in support of that people, and were thus for the first time brought into collision with Rome. It was not till a. c. 311 that the Etruscans on their side joined in the contest: but the Etruscan War at once assumed a character and dimensions scarcely less formidable than that with the Samnites. It was now that the Romans for the first time carried their arms beyond the Ciminian Hills; and the northern cities of Etruria, Perusia, Cortona, and Arezzo, now first appeared as taking part in the war. (Etruriam vide.) Before the close of the contest, the Umbrians also took up arms for the first time against the Romans. The peace which put an end to the Second Samnite War (n. c. 304) added nothing to the territorial extent of the Roman power; but nearly contemporary with it, was the revolt of the Hernicians, which ended in the complete subjugation of that people (n. c. 306); and a few years later the Aequians, who followed their example, shared the same fate, a. c. 302. About the same time (n. c. 304) a truce was concluded with the Marsi, Marrucini, Feligni, and Frenzani, by which those nations appear to have passed into the condition of dependent allies of Rome, in which we always subsequently find them. A similar truce was granted to the Vestini in n. c. 301.

In n. c. 298, the contest between Rome and Samnium was renewed, but in this Third Samnite War the people of that name was only one member of a powerful confederacy, consisting of the Samnites, Etruscans, Umbrians, and Gauls; nevertheless, their united forces were defeated by the Romans, who, after several successful campaigns, compelled both Etruscans and Samnites to sue for peace (n. c. 290). The same year in which this was concluded witnessed also the subjugation of the Sabines, who had been so long the faithful allies of Rome, and now appear, for the first time after a long interval, in arms: they were admitted to the Roman franchise. (Liv. Epit. xi.; Vell. Pat. i. 14.) The short interval which elapsed before hostilities were generally renewed, afforded an opportunity for the subjugation of the Gaull Senones, whose territory was wasted with fire and sword by the consul Delabella, in 283; and the Roman colony of Sena (Sena Gallica) established there, to secure their permanent submission. Already in n. c. 292, the war was renewed both with the Etruscans and the Samnites; but this Fourth Samnite War, as it is often called, was soon merged in one of a more extensive character. The Samnites were at first assisted by the Lucanians.
and Bruttiens, the latter of whom now occur for the first time in Roman history (Liv. Epic. xii.); but circumstances soon arose which led the Romans to declare war against the Tarentines; and these called in the assistance of Pyrrhus, king of Epirus. The war with that monarch (the first in which the Romans were engaged with any non-Italian enemy) was at the same time decisive of the fate of the Italian peninsula. It was, indeed, the last struggle of the nations of Southern Italy against the power of Rome: on the side of Rome stood the Latins, besides the Tarentines and their mercenaries, the Samnites, Lucanians, and Bruttians; while the Latins, Campanians, Sabines, Umbrians, Volscians, Marrucini, Peligni, and Frentani, are enumerated among the troops which swelled the ranks of the Romans. (Dionys. xx. Fr. Didot.) Hence, the final defeat of Pyrrhus near Beneventum (m. c. 275) was speedily followed by the complete subjugation of Italy. Tarentum fell into the hands of the Romans in m. c. 272, and, in the same year, the consuls Sp. Cavilius and Papirius Cursor celebrated the last of the many Roman triumphs over the Samnites, as well as the Lucanians and Bruttians. Few particulars have been transmitted to us of the petty wars which followed in the wake of these expeditions. The Epictetes, who were throughout the Samnite wars on friendly terms with Rome, now appear for the first time as enemies; but they were defeated and reduced to submission in m. c. 268. The subjection of the Sallentinenses followed, m. c. 266, and the same year records the conquest of the Samnites, probably including the other mountain tribes, and the Roman tyrants among the Volsci, in the following year (m. c. 265), apparently arising out of civil dissensions, gave occasion to the last of these petty wars, and earned for that people the credit of being the last of the Italians that submitted to the Roman power. (Florus, i. 21.)

It was not till after that the nations of Northern Italy shared the same fate. Cisalpine Gauls and Ticinenses were regarded as foreign provinces; and, with the exception of the Senones, whose territory had been already reduced, none of the Gaulish nations had been assailed in their own abodes. In m. c. 239 the distribution of the "Gallicus ager" (the territory of the Senones) became the occasion of a great and formidable war, which, however, ultimately ended in the submission of the Romans, who immediately proceeded to plant the two colonies of Placentia and Cremona in the territory of the Gauls, m. c. 218. The history of this war, as well as of those which followed, is fully related under Gallia Cisalpina. It may here suffice to mention, that the final conquest of the Boii, in m. c. 191, completed the subjection of Gaul north of the Po, and that of the Transpadane Gauls appears to have been accomplished soon after, though there is some uncertainty as to the exact period. The Venetians had generally been the allies of the Romans during these contests with the Gauls, and appear to have passed gradually and quietly from the condition of independent allies to that of dependents, and ultimately of subjects. The Frisians, on the contrary, were reduced by force of arms, and submitted in m. c. 177. The last people of Italy that fell under the yoke of Rome were the Ligurians. This hardy race of mountaineers was not subdued till after a long series of campaigns; and, while the Roman arms were overthrowing the Macedonian and Syrian empires in the East, they were still constantly engaged in an inglorious, but arduous, struggle with the Ligurians, on their own immediate frontiers. Strabo observes, that it cost them eighty years of war to secure the coastline of Liguria for the space of 12 stadia in width (iv. p. 203); a statement nearly correct, for the first triumph over the Ligurians was celebrated in m. c. 286, and the last in m. c. 158. Even after this last period it appears to have been a long time before the people were finally reduced to a state of tranquillity, and exposed to the condition of ordinary Roman subjects.

2. Italy under the Romans. — It would be a great mistake to suppose that the several nations of Italy, from the periods at which they successively yielded to the Roman arms and acknowledged the supremacy of the Republic, became her subjects, in the strict sense of the word, or were reduced under any uniform system of administration. The relations of every people, and often even of every city, with the supreme head, were regulated by special agreements or decrees, arising out of the circumstances of their conquest or submission. How various and different these relations were, is sufficiently seen by the instances of the Latins, the Campanians, and the Hernici. (Liv. vii. 11 —14, i. 43.) From the loss of the annexed area of that author, we are unfortunately deprived of all similar details in regard to the other nations of Italy; and hence our information as to the relations established between them and Rome in the third century n. c., and which continued, with little alteration, till the outbreak of the Social War, n. c. 90, is unfortunately incomplete. Nevertheless, we may, however, clearly distinguish two principal classes into which the Italians were then divided; those who possessed the rights of Roman citizens, and were thus incorporated into the Roman state, and those who still retained their separate national existence as dependent allies, rather than subjects properly so called. The first class comprised all those communities which had received the Roman arms or separate cities, the gift of the Roman franchise; a right sometimes conferred as a boon, but often also imposed as a penalty, with a view to break up more effectually the national spirit and organisation, and bring the people into closer dependence upon the supreme authority. In these cases the citizenship was conferred, without the right of suffrage; but in most, and perhaps in all such instances, the latter privilege was ultimately conceded. Thus we find the Sabines, who in n. c. 290 obtained only the "civitas sine suffragio," admitted in m. c. 268 to the full enjoyment of the franchise (Vell. Pat. i. 14): the same was the case also, though at a much longer interval, with Formiae, Fundi, and Arpinum, which did not receive the gift of suffrage till n. c. 188 (Liv. vii. 41, x. 1, xxvii. 36), though they had borne the title of Roman citizens for more than a century. To the same class belonged those of the Roman colonies which were called "coloni civium Romanorum," and which, though less numerous and powerful than the Latin colonies, were scattered through all parts of Italy, and included some wealthy and important towns. (A list of them is given by Malvign, de Coloniae, pp. 295—303, and by Marquardt, Handb. der Römischen Alterthümer, vol. iii. pt. i. p. 18.)

To the second class, the "Socii" or "Civitates Foederatae," which, down to the period of the Social War, included by far the largest part of the Italian
people, belonged all those nations that had submitted to Rome upon any other terms than those of citizenship; and the treaties (foedera), which determined their relations to the central power, included almost every variety, from a condition of nominal equality and independence (seuquam foedusa), to one of the most complete subjection. Thus we find Hand and other tribes in Lucania, Neapolis in Campania, and the Cametenses in Umbria, noticed as possessing particularly favourable treaties (Cic. pro Balb. 8, 30, 22); and even some of the cities of Latium itself, which had not received the Roman civitas, continued to maintain this nominal independence long after they had become virtually subject to the power of Rome. Thus, even in the days of Polybius, a Roman citizen might retire into exile at Tibur or Praeneste (Pol. vi. 14; Liv. xii. 32), and the poor and decayed town of Laurentum went through the form of annually renewing its treaty with Rome down to the close of the Republic. (Liv. viii. 11.) Nor was this independence merely nominal: though politically dependent upon Rome, and compelled to follow her lead in their external relations, and to furnish their contingent of troops for the wars, of which the dominant republic alone reaped the benefit, many of the cities of Italy continued to enjoy the absolute control of their own affairs and internal regulations; the troops which they were bound by their treaty to furnish were not enrolled with the legions, but fought under their own standards as auxiliaries; they retained their own laws as well as courts of judicature; and, even when the Lex Julia conferred upon all the Italian allies the privileges of the Roman civilitas, it was necessary that each city should adopt it by an act of its own. (Cic. pro Balb. 8.) Nearly in the same position with the dependent allies, however different in their origin, were the so-called "Coloniae Latine;" that is, Roman colonies which did not enjoy the rights of Roman citizenship, but stood in the same relation to the Roman state that the cities of the Latin League had formerly done. The name was, doubtless, derived from a period when these colonies were actually sent out in common by the Romans and Latins; but settlements on similar terms seem to be founded by the Romans alone, long after the dissolution of the Latin League; and, before the Social War, the Latin colonies included many of the most flourishing and important towns of Italy. (For a list of them, with the dates of their foundation, see Madvig, de Colonii, l. c.; Mommsen, Römische Münzen, pp. 230—234; and Marquardt, l. c. p. 35.) These colonies are justly regarded by Livy as one of the main supports of the Republic during the Second Punic War (Liv. xxv. 9, 10), and, doubtless, proved one of the most effectual means of consolidating the Roman dominion in Italy. After the dissolution of the Latin League, b. c. 338, these Latin colonies (with the few cities of Latium that, like Tibur and Praeneste, still retained their separate organisation) formed the "nomen Latium," or body of the Latins. The close connection of these with the allies explains the frequent recurrence of the phrase "socii et nomen Latum" throughout the later books of Livy, and in other authors in reference to the same period.

A great and general change in the relations previously subsisting between the Italian states and Rome was introduced by the Social War (b. c. 90—89), and the settlement which took place in consequence of it. Great as were the dangers with which Rome was threatened by the formidable coalition of those who had so long been her bravest defenders they would have been still more alarming had the whole Italian people taken part in it. But the allies who then rose in arms against Rome were almost exclusively the Sabellians and their kindred race. The Etruscans and Umbrians stood aloof, while the most complete subjection. Thus we find Hand and other tribes who had already received the Roman franchise, supported the Republic, and furnished the materials of her armies. But the senate hastened to secure those who were wavering, as well as to disarm a portion at least of the openly disaffected, by the gift of the Roman franchise, including the full privileges of citizens; and this was subsequently extended to every one of the allies in succession as they submitted. There is some uncertainty as to the precise steps by which this was effected, but the Lex Julia, passed in the year 90 b. c., appears to have conferred the franchise upon the Latinis (the "nomen Latinum," as above defined) and all the allies who were willing to accept the boon. The Lex Plautia Papiria, passed the following year, n. d., confirmed the arrangement thus begun. (Cic. pro Balb. 8, pro Arch. 4; A. Gell. iv. 4; Appian, B. C. i. 49; Vell. Pat. ii. 16.)

By the change thus effected the distinction between the Latinis and the allies, as well as between those two classes and the Roman citizens, was entirely done away with; and the Latin colonies lapsed into the condition of ordinary municipia. Since all the free inhabitants of Italy, as the term was then understood (i. e. Italy S. of the Macrè and Rubicon), thus received the full rights of Roman citizens, the same boon was granted to the inhabitants of Gallia Cispadana, while the Transpadani appear to have been at the same time raised to the condition and privileges of Latinis, that is to say, were placed on the same footing as if all their towns had been Latin colonies. (Ammon. in Pison. p. 3, ed. Orell.; Saviugny, Vermischte Schriften, voll. iii. pp. 290—308; Marquardt, Handsch vol. iii. pt. 1. p. 48.) This peculiar arrangement, by which the Jews had been revived at the very time that it became naturally extinct in the rest of Italy, is more fully explained under Gallia Chalypina. In n. c. 49, after the outbreak of the Civil War, Caesar bestowed the full jurisdiction in the province also, (Dion Cass. xiii. 36.); and from this time all the free inhabitants of Italy became united under one common class as citizens of Rome.

The Italians thus admitted to the franchises were all ultimately enrolled in the thirty-five Roman tribes. The principle on which this was done we know not; but we learn that each municipium, and sometimes even a larger district, was assigned to a particular tribe: so that every citizen of Arpinum, for instance, would belong to the Cornelian tribe, of Beneventum to the Stellatine, of Brixia to the Fabian, of Tickenum to the Papian, and so on. But in so doing, all regard to that geographical distribution of the tribes which was undoubtedly kept in view in their first constitution was lost; and we have not sufficient materials for attempting to determine how the distribution was made. A knowledge of it must, however, have been of essential importance so long as the Republic continued; and
in this sense we find Cicero alluding to "Italia tributum descripta" as a matter of interest to the candidates for public offices. (Q. Cic. de Petit. Cons. 8.)

3. Italy under the Roman Empire. — No material change was introduced into the political condition of Italy by the establishment of the imperial authority at Rome; the constitutions and regulations that existed before the end of the Republic continued, with only a few modifications, in full force. The most important of these was the system of municipal organization, which pervaded every part of the country, and which was directly derived from the days of Italian freedom, when every town had really possessed an independent government. Italy, as it existed under the Roman Empire, may be still regarded as an aggregate of individual communities, though those last all pretensions to national independence, and retained only their separate municipal existence. Every municipality had its own internal organization, presenting very nearly a miniature copy of that of the Roman republic. It had its senate or council, the members of which were elected by the citizens of the Decuriones, and the council itself Ordo Decurionum, or often simply Ordo; its popular assemblies, which, however, soon fell into disuse under the Empire; and its local magistrates, of whom the principal were the Duumviri, or sometimes Quattuorviri, answering to the Roman consuls and praetors: the Quinquennales, with functions analogous to those of the censors; the Vestals and Patres, whose duties nearly corresponded with those of the same magistrates at Rome. These different magistrates were annually elected, at first by the popular assembly, subsequently by the senate or Decuriones: the members of the latter body held their offices for life. Nor was this municipal government confined to the town in which it was resident: every such Municipium possessed a territory or Ager, of which it was as it was the capital, and over which it exercised the same municipal jurisdiction as within its own walls. This district of course varied much in extent, but in many instances comprised a considerable territory, including many smaller towns and villages, all which were dependent, for municipal purposes, upon the central community. We are not informed, indeed, that many of the tribes that inhabited the Alpine valleys bordering on the plains of Gallia Cisalpina, were by the Lex Pompeia assigned to certain neighboring municipia (Leges Pompeia attributi municipii, Plin, ii. 26. a. 24), that is to say, they were included in their territory, and subjected to their jurisdiction. Again, we know that the territories of Cremona and Mantua adjoined one another, though the cities were at a considerable distance. In like manner, the territory of Beneventum comprised a large part of the land of the Hirpini. It is this point which gives a great importance to the distinction between municipal towns and those which were not so; that the former were not only themselves more important places, but were, in fact, the capitals of districts, into which the whole country was divided. The villages and minor towns included within these districts were distinguished by the terms fora, conciliabula, vici, castella, and were dependent upon the chief town, though sometimes possessing a subordinate and imperfect local organization of their own. In some cases it even happened that, from local circumstances, one of these subordinate places would rise to a condition of wealth and prosperity far surpassing those of the municipality, on which it nevertheless continued dependent. Thus, the opulent watering-place of Baise always remained, in a municipal sense, a mere dependency of Cunae.

The distinction between coloniae and municipia, which had been of great importance under the Roman republic, lost its real significance, when the citizens of both alike possessed the Roman franchise. But the title of colonia was still retained by those towns which had received fresh colonies towards the close of the Republic under Caesar or the Trinivirate, as well as under the Empire. It appears to have been regarded as an honorary distinction, and as giving a special claim upon the favour and protection of the founder and his descendants; though it conferred no real political superiority. (Gell. xvi. 13.) On the other hand, the Praefectura — a name also derived from the early republican period — were distinguished from the colonies and municipia by the circumstance that the juridical functions were there exercised by a Praefectus, an officer sent direct from Rome, instead of by the Duumviri or Quattuorviri (whose legal title was Iufriri or Iufriri juris dicundo) elected by the municipality. But these distinctions were comparatively unimportant, the name of "municipia" is not unfrequently applied in a generic sense, so as to include all towns which had a local self-government. "Oppida" is sometimes employed with the same meaning. Pliny, however, generally uses "oppida" as equivalent to "municipia," but exclusive of colonies: thus, in describing the eighth region, he says "Coloniae Romanae, Brixillum, Mutina, etc. . . . Oppida Casena, Claterna, Forum Clodi, etc." (iii. 15. a. 20, et passim). It is important to observe that, in all such passages, the list of "oppida" is certainly meant to include only municipal towns; and the lists thus given by Pliny, though disfigured by corruption and carelessness, were probably in the first instance derived from official sources. Hence the marked agreement which may be traced between them and the lists given in the Liber Coloniarum, which, notwithstanding the corruptions it has suffered, is unquestionably based upon good materials. (Concerning the municipal institutions of Italy, see Savigny, Fernhutsche Schriften, vol. ii. pp. 279—412, and Gesch. des Röm. Rechts, vol. i.; Marquardt, Homer, d. Röm. Alterthümer, i. p. 206; Hoeck, Röm. Geschichte, book 5, chap. 3; and the article Gallia Cisalpina.)

The municipal organization of Italy, and the territorial distribution connected with it, lasted throughout the Roman empire, though there was always a strong tendency on the part of the central authority and its officers to encroach upon the municipal powers; and in one important point, that of their legal jurisdiction, those powers were materially circumscribed. But the municipal constitution itself naturally acquired increased importance as the central power became feeble and disorganized: it survived the fall of the Western Empire, and continued to subsist under the Gothic and Lombard conquerors, until the cities of Italy gradually attained the condition of independence, and the municipal constitutions which had existed under the Roman empire, became the foundation of the free republics of the middle ages. (Savigny, Gesch. des Römischen Rechts im Mittelalter, vol. i.)

The ecclesiastical arrangements introduced after the establishment of Christianity in the Roman empire, appear to have stood in close connection with the municipal limits. Almost every town which was then a flourishing municipality became the see of a
bishops, and the limits of the dioceses in general coincided with those of the municipal territory. But in the period of decay and confusion that followed, the episcopal see often remained after the city had been ruined or fallen into complete decay: hence the ecclesiastical records of the early ages of Christianity are often of material assistance in enabling us to trace the existence of ancient cities, and identify ancient localities.

4 Political and Administrative Division under the Roman Empire.—It is not till the reign of Augustus that any division of Italy for administrative purposes occurs, and the reason is obvious. So long as the different nations of Italy preserved the semblance of independence, which they maintained till the period of the Social War, no uniform system of administration was possible. Even after that period, when they were all merged in the condition of Roman citizens, the municipal institutions, which were still in full force, appear to have been regarded as sufficient for all purposes of internal management; and the general objects of the State were confined to the ordinary Roman magistrates, or to extraordinary officers appointed for particular purposes.

The first division of Italy into eleven regions by Augustus, appears to have been designed in the first instance merely to facilitate the arrangements of the census; but, as the taking of this was closely coupled with the levying of taxes, the same divisions were soon adopted for financial and other administrative purposes, and continued to be the basis of all subsequent arrangements. The divisions established by Augustus, and which have fortunately been preserved to us by Pliny (the only author who mentions their institution), were as follows:—

I. The First Region comprised Latium (in the more extended sense of that name, including the land of the Hernicans and Velescians), together with Campania, and the district of the Picentini. It thus extended from the mouth of the Tiber to that of the Silarus; and the Anio formed its boundary on the N.

II. The Second Region, which adjoined the preceding on the SE., included Apulia, Calabria, and the land of the Hirpini, which was thus separated from the rest of Samnium.

III. The Third Region contained Lucania and Bruttium: it was bounded by the Silarus on the NW., and by the Bradua on the NE.

IV. The Fourth Region contained all Samnium, except the Hirpini, together with the Frontani, Marrucini, Marsi, Peligni, Aquilicii, Vestini, and Sabini. It thus extended from the Anio to the frontier of Picenum, and from the boundary of Umbria on the N. to Apulia on the S. It was separated from the latter district by the river Tiberus, and from Picenum by the adriatic.—

V. The Fifth Region was composed solely of the ancient Picenum (including under that name the territory of Hadria and of the Praetutii), and extended along the Adriatic from the mouth of the Aternum to that of the Aesis.

VI. The Sixth Region contained Umbria, together with the land N. of the Apennines, once occupied by the Senonians Gauls, and which extended along the coast of the Adriatic from the Aesis to the Ariminum. On the W. it was separated from Etruria by the Tiber, along the left bank of which it extended as far as Curiicum.

VII. The Seventh Region consisted of the ancient Etruria, and preserved the ancient limits of that country: viz. the Tiber on the E., the Apennines on the N., and the Tyrrhenian sea on the W., from the mouth of the Tiber to that of the Umbia.

VIII. The Eighth Region, or Gallia Cispadana, extended from the frontiers of Liguria near Placentia, to Ariminum on the Adriatic, and was bounded by the Apennines on the S., and by the Padus on the N.

IX. The Ninth Region comprised Liguria, extending along the sea-coast from the Macra to the Varus, and inland as far as the Padus, which formed its northern boundary from the confluence of the Trebia to its sources in Mt. Vesuvius.

X. The Tenth Region was composed of Venetia, including the land of the Carni, with the addition of Istria, and a part of Gallia Cisalpina, previously occupied by the Cenomani, extending as far W. as the Arve.

XI. The Eleventh Region comprised the remainder of Gallia Transpadana, or the whole tract between the Alps and the Padus, from the sources of the latter river to its confluence with the Addus. It is probable, both from the silence of Pliny, and from the limited scope with which these divisions were first instituted, that the regions had originally no fixed names applied to them; but these would be gradually adopted, as the division acquired increased political importance. No difficulty could arise, where the limits of the Region coincided (or nearly so) with those of a previously existing people, as in the cases of Etruria, Liguria, Picenum, &c. In other instances the name of a part was given to the whole: thus, the first region came to be called Regio Campaniae; and hence, in the Liber Coloniarum, the "Civitates Campaniae" includes all Latium also. [CAMPANIA.] The name of Regio Samnii or Samnium was in like manner given to the fourth region, though perhaps not till after the northern part of it had been separated from the rest under the name of Valeria.

The division introduced by Augustus continued with but little alteration till the time of Constantinian. The changes introduced by Hadrian and M. Aurelius regarded only the administration of justice in Italy generally (Spartian. Hadr. 22; Capit. M. A. 11); but in this, as well as in various other regulations, there was a marked approach to the assimilating the government of Italy to that of the provinces; and the term "Consularis," applied to the judicial officers appointed by Hadrian merely to denote their dignity, soon came to be used as an official designation for the governor of a district, as we find it in the Notitia. But the distinction between Italy and the provinces is still strongly marked by Ulpius, and it was not till the fourth century that the term "Provincia" came to be applied to the regions or districts of Italy (Mommsen, ad Lib. Col. pp. 193, 194.)

The changes introduced into the divisions of Augustus, either before the time of Constantinian or under that emperor, were the following:—1. The fourth region was divided into two, the southern
ITALIA.

5. Tuscia et Umbria.
6. Picenum Suburbicarium.
7. Campania.
8. Sicilia.
10. Lucania et Bruttii.
11. Alpes Cottiae (Liguria).
12. Raetia Prima.
13. Raetia Secunda.
15. Valeria.
17. Corsica.

This list substantially agrees with that in the Libellus Provinciae (published by Gronovius, Lugd. Bat. 1758), a document of the time of Theodosius I, as well as with that given by Paulus Diaconus in his geographical description of Italy (Hist. Lang. ii. 14—22), though he has added an eighteenth province, to which he gives the name of "Alpes Appennini," which can be no other than the northern part of Etruria, or Tuscia Annonaria. Of the seventeen provinces enumerated in the Notitia, eight were properly under governors who bore the title of Consulares, seven under Praesiades, and the two southernmost under Correctores, a title which appears to have been at one time common to them all.

(For further details on the administrative divisions of Italy during the latter period of the Roman Empire, see the Notitia Dignitatum in Partibus Occidentalis, Bonn, 1840, with Böcking's valuable commentary; Mommaen, über die Lib. Colos. in the Schriften der Römischen Feldmesser, vol. ii. Berlin, 1852; Marquardt, Handb. der Röm. Alterthümer, vol. iii. pt. i. pp. 55—71.)

The divisions thus established before the close of the Western Empire, were continued after its fall under the Gothic monarchy, and we find them frequently alluded to as subsisting under their old names in Caesodorus and Procopius. It was not till the establishment of the Lombards in Italy that this division gave place to one wholly different, which became the foundation of that subsisting in the middle ages. The Lombards divided the part of Italy in which they established their power, including the whole of Campania, the territories of the Umbrarum, and the episcopal see of Bologna, between the dioceses of Rome, of Pisa, of Cremona, and of Vicenza. The dioceses of Benevento, of Frosinone, of Verona, of Piacenza, and of Pavia, were added to the Lombard duchies, as well as the cities of Otranto and Gallipoli. After the fall of the Lombard kingdom, in A.D. 774, though they had now lost their possessions in the N., the Exarchate and the Pentapolis, the Byzantine emperors...
for a long time extended their dominion over a considerable part of the S., and wrested from the dukes of Benevento the districts to which they gave the names of the Coppiacce and the Baselinea (a part of the ancient Apulia and Lucania), and of which they retained possession till the 11th century. It was then that a new enemy first appeared on the scene, and the Normans, under Robert Guiscard, completed the final expulsion of the Greek emperors from Italy.

The capture of Bari in 1071, and of Salerno in 1077, destroyed the last vestiges of the dominion that had been founded by the genera of the last kings of the Byzantine emperors (D'Anville, E'Etats formes en Europe après la Chute de l'Empire Romain, 4to. Paris, 1771.)

VI. POPULATION OF ITALY UNDER THE ROMANS.

The statements transmitted to us from antiquity concerning the amount of the population in different cities and countries are for the most part of so vague a character and such uncertain authority as to be little worthy of consideration; but we have two facts recorded in connection with that of Italy, which may lead us to form at least an approximate estimate of its numbers. The first of these data is the statement given by Polybius, as well as by several Roman writers on the authority of Fabius, and which states that he estimated the numbers which are based on authentic documents, of the total amount of the forces which the Romans and their allies were able to oppose to the threatened invasion of the Gauls in B.C. 225. According to the detailed enumeration given by Polybius, the total number of men capable of bearing arms which appeared on the registers of the Romans and their allies, amounted to above 700,000 foot and 70,000 horsemen. Pliny gives them at 700,000 foot and 80,000 horse; while Eutropius and Orosius state the whole amount in round numbers at 800,000. (Pol. ii. 24; Plin. iii. 20. s. 24; Eutrop. iii. 5; Oros. iv. 13.) It is evident, from the precise statements of Polybius, that this was the total amount of the free population of military age (vrbg frisorum huic maxime sunt, &c.) and not that which could be actually brought into the field. If we estimate the proportion of those to the total free population as 1 to 4, which appears to have been the ratio currently adopted in ancient times, we should obtain a total of 3,200,000 for the free population of the Italian peninsula, exclusive of the greater part of Gaul and the whole of Liguria; and even if we adopt the proportion of 1 to 5, more commonly received in modern times, this would still give a total of only 4,000,000, an amount by no means very large, as the population of the same parts of Italy at the present day considerably exceeds 9,000,000. (Serristori, Statistiche d'Italia.) Of the amount of the servile population we have no means of forming an estimate; but it was probably not large at this period of the Roman history; and its subsequent rapid increase was contemporaneous with the diminution of the free population.

The complaints of the extent to which this had taken place as early as the time of the Gracchi, and their lamentations over the depopulation of Italy (Plut. T. Gracch. 8), would lead us to suppose that the number of free citizens had greatly fallen off. If this was the case in B.C. 133, the events of the next half century — the sanguinary struggle of the Social War, which swept off, according to Velleius Paterculus (iii. 15), more than 300,000 men in the vigour of their age, and the cruel devastation of Samnium and Etruria by Sulla — were certainly not calculated to repair the deficiency. But, notwithstanding these events, we find that in B.C. 70, which included all the new citizens recently admitted to the Roman franchise, and did not yet comprise any population out of Italy, nor even the Transpadane Gauls, gave a result of 910,000 Roman citizens (capita civium); from which we may fairly infer a free population of at least 4,500,000. (Liv. Epit. xcviii. ed. Jahn, compared with Plutarch, ap. Phot. Bibl. p. 84. ed. Bekker.) The rapid extension of a Roman population in Gallia Cispadana, as well as Venetia and Liguria, had evidently more than compensated for the diminution in the central provinces of the peninsula.

Of the population of Italy under the Empire, we have no data on which to found an estimate. But there are certainly no reasons to suppose that it increased. Indeed the events which followed the fall of the Empire have tended greatly to aggravate the evil. Augustus seems to have used every means to recruit the exhausted population: but that his efforts were but partially successful is evident from the picture which Strabo (writing in the reign of Tiberius) gives us of the state of decay and desolation to which the cities and principal towns of Samnium, Apulia, and Lucania, were in his day reduced; while Livy confirms his statement, in regard even to districts nearer Rome, such as the land of the Aequeans and Velascians. (Strab. v. p. 249, vi. pp. 253, 251; Liv. vi. 12.) Pliny, writing under Vespasian, speaks of the "laezfundia," as having been "the ruin of Italy," and there seems no reason to suppose that this evil was afterwards checked in any material degree. The splendour of many of the municipal towns, and especially the magnificent public buildings with which they were adorned, is apt to convey a notion of wealth and opulence which it seems hard to combine with that of a declining population. But it must be remembered that these great works were in many, probably in most instances, erected by the munificence of the emperors or of private individuals; and the vast wealth of a few nobles was so far from being the sign of general prosperity, that it was looked upon as one of the main causes of decay. Many of the towns and cities of Italy were, however, no doubt very flourishing and populous; but numerous testimonies of ancient writers seem to prove that this was far from being the case with the country at large; and it is certain that no ancient author lends any countenance to the notion entertained by some modern writers, of "the incredible multitudes of people with which Italy abounded during the reigns of the Roman emperors" (Ad-
ITALIA.

(See this question fully discussed and investigated by Zumpt, über den Stand der Bevölkerung im Altertum. 4to. Berlin, 1841.)

Gallia Cisalpina, including Venetia and the part of Liguria N. of the Apennines, seems to have been by far the most flourishing and populous part of Italy under the Roman Empire. Its extraordinary natural resources had been brought into cultivation at a comparatively late period, and were still unexhausted: nor had it suffered so much from the civil wars which had given a fatal blow to the prosperity of the rest of Italy. It would appear also to have been comparatively free from the system of cultivation by slave labour which had proved so ruinous to the more southern regions. The younger Pliny, indeed, mentions that his estate near Comum, and all those in its neighbourhood, were cultivated wholly by free labourers. (Plin. Ep. iii. 19.) In the latter ages of the Empire, also, the establishment of the imperial court at Mediolanum (which continued from the time of Maximian to that of Honorius) greatly augmented the prosperity of this favoured region. But when the Empire was no longer able to guard the barrier of the Alps against the invasions of barbarians, it was on Northern Italy that the first brunt of their devastations naturally fell; and the numerous and opulent cities in the plains of the Padus were plundered in succession by the Goths, the Huns, and the Lombards.

VII. AUTHORITIES.

Considering the celebrity of Italy, and the importance which it enjoyed, not only under the Romans but during the middle ages, and the facility of access which has rendered it so favourite a resort of travellers in modern times, it seems strange that our knowledge of its ancient geography should be still very imperfect. Yet it cannot be denied that this is the case. The first disadvantage under which we labour is, that our ancient authorities themselves are far from being as copious or satisfactory as might be expected. The account given by Strabo, though marked by much of his usual good sense and judgment, is by no means sufficiently ample or detailed to meet all our requirements. He had also comparatively little interest in, and was probably himself but imperfectly acquainted with, the early history of Rome, and therefore did not care to notice, or inquire after, places which had figured in that history, but were in his time sunk into decay or oblivion. Mela dismisses the geography of Italy very hastily, as being too well known to require a detailed description (ii. 4. § 1); while Pliny, on the contrary, apologizes for passing but lightly over so important and interesting a subject, on account of the impossibility of doing it justice (iii. 5. s. 6). His enumeration of the different regions and the towns they contained is nevertheless of the greatest value, and in all probability based upon authentic materials. But he almost wholly neglects the physical geography, and enumerates the inland towns of each district in alphabetical order, so that his mention of them gives us no assistance in determining their position. Ptolemy's lists of names are far less authentic and trustworthy than those of Pliny; and the positions which he professes to give are often but little to be depended on. The Itineraries afford valuable assistance, and perhaps there is no country for which they are more useful and trustworthy guides; but they fail us exactly where we are the most in want of assistance,—in the more remote and unfrequented parts of Italy, or those districts which in the latter ages of the Empire had fallen into a state of decay and desolation. One of the most important aids to the determination of ancient localities is unquestionably the preservation of the ancient names, which have often been transmitted almost without change to the present day; and even where the name is now altered, we are often enabled by ecclesiastical records to trace the ancient appellation down to the middle ages, and prove both the fact and the origin of its alteration. In numerous instances (such as Alethium, Sipontum, &c.) an ancient church alone records the existence and preserves the name of the decayed city. But two circumstances must guard us against too hasty an inference from the mere evidence of name: the one, that it not unfrequently happened, during the disturbed periods of the middle ages, that the inhabitants of an ancient town would migrate to another site, whether for security or other reasons, and transfer their old name to their new abode. Instances of this will be found in the cases of Arelinium, Aquidena, &c., and the most remarkable of all in that of Capua. Another source of occasional error is that the present appellations of localities are sometimes derived from erroneous traditions of the middle ages, or even from the misapplication of ancient names by local writers on the first revival of learning.

One of the most important and trustworthy auxiliaries in the determination of ancient names and localities, that of inscriptions, unfortunately requires, in the case of Italy, to be received with much care and caution. The perverted ingenuity or misguided patriotism of many of the earlier Italian antiquaries frequently led them either to fabricate or interpolate such documents, and this with so much skill and show of learning, that many such fictitious or apocryphal inscriptions have found their way into the collections of Gruter, Muratori, and Orelli, and have been cited in succession by numerous modern writers. Mommsen has conferred a great service upon the student of Italian antiquities by subjecting all the recorded inscriptions belonging to the kingdom of Naples to searching scrutiny, and in his valuable collection (Inscriptiones Regni Neapolitanorum Latinae, fol. Lips. 1852) all those of dubious authenticity. It is much to be desired that the same task may be undertaken for those of the rest of Italy.

The comparative geography of ancient and modern Italy had more or less engaged the attention of scholars from the first revival of learning. But of the general works on the subject, those before the time of Cluverius may be regarded more as objects of curiosity than as of much real use to the student. Biondo Flavio (Blondus Flavus) is the earliest writer who has left us a complete and connected view of Italian topography, in his Italia Illustrata (first published in 1474, afterwards with his other works at Basle, in 1531 and 1559); after him came Leandro Alberto, whose Descrizione di tutta Italia (Venice, 1551) contains some valuable notices. But the great work of Cluverius (Italia Antiqua, 2 vols. fol. Lugd. Bat. 1634) altogether superseded those which had preceded him, and became the foundation of all subsequent inquiries. Cluverius has not only brought together, with the most praiseworthy diligence, all the passages of
ancient authors bearing upon his subject, but he had himself travelled over a great part of Italy, noting the distances and observing the remains of ancient towns. It is to be regretted that he has not left us more detailed accounts of these remains of antiquity, which have in many cases since disappeared, or else have not been visited by any recent traveller. Lucas Holstenius, the contemporary and friend of Claver, who had also visited in person many of the more unfrequented districts of Italy, has left us, in his notes on Claverius (Adnotationes ad Cluverii Italiam Antiquam, 8vo. Rome, 1668), a valuable supplement to the larger work, as well as many important corrections on particular points.

It is singular how little we owe to the researches of modern travellers in Italy. Not a single book of travels has ever appeared on that country which can be compared with those of Leake or Dodwell in Greece. Swinburne's Travels in the Two Sicilies is one of the best, and greatly superior to the more recent works of Keppel Craven on the same part of Italy (Tour through the Southern Provinces of the Kingdom of Naples, 4to. Lond. 1821; Excursions in the Abruzzi and Northern Provinces of Naples, 2 vols. 8vo. Lond. 1838). Eastace's well-known book (Classical Tour through Italy in 1802) is almost wholly worthless in an antiquarian point of view. Sir R. Hoare's Classical Tour, intended as a sort of supplement to the preceding, contains some valuable notes from personal observation. Dennis's recent work on Etruria (Città e Cimiterie di Etruscan, 3 vols. 8vo. Lond. 1848) contains a far more complete account of the antiquities and topography of that interesting district than we possess concerning any other part of Italy. Sir W. Gell's Topography of Rome and its Vicinity (2 vols. 8vo. Lond. 1834; 2nd edition, 1834), taken in conjunction with the more elaborate work of Nibby on the same district (Analisi della Carta dei Distorni di Roma, 3 vols. 8vo. Rome, 1849), supplies much valuable information, especially what is derived from the personal researches of the author, but is far from fulfilling all that we require. The work of Westphal on the same subject (Die Römische Kaiserzeit, 1817) is both more perfect, though valuable enough for the cars which the author bestowed on tracing out the direction and remains of the ancient roads throughout the district in question. Abecken's Mittel Italien (8vo. Stuttgart, 1843) contains a good sketch of the physical geography of Central Italy, and much information concerning the antiquities of the different nations that inhabited it; but enters very little into the topography of the regions he describes. The publications of the Instituto Archeologico at Rome (first commenced in 1829, and continued down to the present time), though directed more to archaeologial than topographical researches, still contain many valuable memoirs in illustration of the topography of certain districts, as well as the still existing remains in ancient localities.

The local works and histories of particular districts and cities in Italy are innumerable. But very few of them will be found to be of any real service to the student of ancient geography. The earlier works of this description are with few exceptions characterised by very imperfect scholarship, an almost total want of criticism, and a blind credulity, or still blind partiality to the native city of each particular author. Even on those points on which their testimony would appear most likely to be valuable,—such as notices of ruins, inscriptions, and other remains of antiquity,—it must too often be received with caution, if not with suspicion. A striking exception to this general remark will be found in the treatise of Galateo, De Sitis Iapygiac (8vo. Basel, 1551; republished by Graevius in the Theaurus Antiquitatum Italiarum, vol. ii. part v.), those of Barrio on Calabria (the modern province of the name) and Antonini on Lucania (Barrio, de Antiquitate et Situ Calabriae, fol. Rome, 1737; Antonini, De Lucano, 4to. Naples, 1741), though not without their merits of far inferior value. The results of these local researches, and the conclusions of their authors, will be for the most part found, in a confessed form, in the work of the Abate Romanei (Antica Topografia Istorica del Regno di Napoli, 3 vols. 4to. Naples, 1815), which, notwithstanding the defects of imperfect scholarship and great want of this general work, will still be found of the greatest service to the student for the part of Italy to which it relates. Cramer, in his well-known work, has almost implicitly followed Romanelli, as far as the latter extends; and as far as the rest of Italy he has done little more than abridge the work of Claverius, with the corrections of his commentator Holstenius. Biondi, on the contrary, appearing to have composed his Geography of Italy without consulting any of the local writers at all, and consequently without that detailed acquaintance with the actual geography of the country which is the indispensable foundation of all inquiries into its ancient topography. Reichard's work, which appears to enjoy some reputation in Germany, is liable to a still greater degree to the same charge;* while that of Forbiger is a valuable index of references both to ancient and modern writers, but aspires to little more.

Kramer's monograph of the Lake Fucius (Der Fuciner See, 4to. Berlin, 1839) may be mentioned as a perfect model of its kind, and stands unrivalled as a contribution to the geography of Italy. Niebuhr's Topography of Athens in his Vorträge über Alte Länder u. Volker-Elemente, pp. 318-576) contain many valuable and important views, especially of the physical geography in its connection with the history of the inhabitants, and should be read by every student of antiquity, though by no means free from errors of detail. [E. H. B.]}

* Some severe, but well meritied, strictures on this work are contained in Niebuhr's Lectures on Roman History (vol. iii. p. xxiv. 2d edit.).
ITALICA.

Its coins, all of the imperial age, bear military emblems which attest the story of its origin, and on some of them is the title JULIA AUGUSTA. The city flourished under the Goths, and, for some time, under the Moors, who preserved the old name, in the form Tailbas or Talca; but, in consequence of a change in the bed of the river, its inhabitants abandoned it, and migrated to Sevilla. Hence, in contradiction to the city which (although far more ancient, see Hierapolis) became thus its virtual successor, Italicus received the name of Old Sevilla (Sevilla la Vieja), under which name its ruins still exist near the wretched village of Santo Polo, while the surrounding country retains the ancient name, los campos de Talca. The chief object in the ruins is the amphitheatre, which was in good preservation till 1774, "when it was used by the corporation of Sevilla for river dikes, and for making the road to Badosos." (Forci.) Mr. Ford also states, that "on Dec. 12, 1799, a fine mosaic pavement was discovered, which a priest monk, named Jose Moscoso, to his honour, enclosed with a wall, in order to save it from the usual fate in Spain. Didot, in 1802, published for Laborde a splendid folio, with engravings and description. . . . Now, this work is all that remains, for the soldiers of Souti converted the enclosure into a goat-pen." The only other portion of the ruins of Italicus to be seen above-ground consists of a small temenos called La Casa de los Boves, which were the reservoirs of the aqueduct brought by Adrian from Tajo de la, 7 leagues distant. (Cas. B. E. ii. 20; Bell. Alex. 53; Gall. Not. Att. xv. 13; Oros. v. 23; Geog. Rav.; Flores, Exp. S. xii. pp. 227, fol.; Coins, ap. Flores, Med. de Esp. vol. ii. p. 477; Minnet, vol. i. p. 17, Suppl. vol. i. p. 31; Sebastiani, 61; Eckhel, vol. i. p. 23; Ueters, vol. ii. pt. 1. p. 372; Ford, Handbook of Spuris, pp. 63, 64.)

[ITALICA.

[CONCORDIUM.]

ITANUM PL. [ITANUS.]

ITANUS (I'ανος, Ptol. iii. 17. § 4; Steph. B. : Ekh 'I'drawos), a town on the E. coast of Crete, near the pronounctious which bore the name of Itanos. (Ptol. iv. 12.) In Cornovii's map there is a place called Itanum and a Paleokastros or the neighbourhoud, which is probably the site of Itanus; the position of the headland must be looked for near Iacrum Iasione (Hocking, Kreta, vol. i. p. 426), unless it be placed further N. at Capo Salomon, in which case the Gradaes islands would correspond with the Onisilia and Lycus of Phily (i. c.; comp. Mom. Class. Antiq. vol. ii. p. 303).

According to Herodotus (iv. 151), the Theraeans, when founding Cyrene, were indebted for their knowledge of the Libyan coast to Corobus, a seller of purple at Itanus. Some of the coins of this city present the type of a woman terminating in the tail of a fish. (Eckhel, vol. ii. p. 314.) This type, recalling the figure of the Syrian goddess, coupled with the trade in purple, suggests a Phoenician origin.

[Ε. Β. Τ.]

ITARGUS. [ILARGUS.]

COIN OF ITANUS

ITHACA.

(Ιθάκη; Eth. 'Itarqouros and 'Ithōtēr.) Ithacensis and Ithacus: Thákē, Osen, vulgarly; but this is merely an alteration, by a simple metathesis of the two letters, from Ιδήν, which is known to be the correct orthography by the Ithacans themselves, and is the name usually used by all educated Greeks. Leake, Northern Greece, chap. xxii.) This island, so celebrated as the scene of a large portion of the Homeric poems, lies off the coast of Arcania, and is separated from Cephallenia by a channel about 3 or 4 miles wide. Its name is said by Enstatius (ad ill. ii. 532) to have been derived from the eponymous hero Ithacus, mentioned in Od. xviii. 207. Strabo (x. 3) reckons the confinement of Ithaca at only 80 stadia; but this measurement is very short of the truth; its extreme length is from north to south being about 17 miles, its greatest breadth about 4 miles, and its area nearly 45 sq. miles. The island may be described as a ridge of limestone rock, divided by the deep and wide Gulf of Molo into the nearly equal parts, connected by a narrow isthmus not more than half-a-mile across, and on which stands the Paleokastro of Aitolos (Aerōs), traditionally known as the "Castle of Ulysses." Ithaca everywhere rises into rugged hills, of which the chief is the mountain of Anogos (Anōgas: It. Ando), in the northern division, which is identified with the Neareos of Virgilius (Aen. iii. 271) and the Nebiros of Euripides (I. x. 21). Its forests have now disappeared; and this is, doubtless, the reason why rain and dew are not so common here in the present as in Homer's age, and why the island no longer abounds in hogs fattened on acorns like those guarded by Eumaeus. In all other points, the poet's descriptions (Od. iv. 603, seq., xill. 242, seq.; ix. 27, seq.) exhibit a perfect picture of the island as it now appears, the general aspect being one of ruggedness and sternness, rendered striking by the bold and broken outline of the mountains and cliffs, indented by numerous harbours and creeks (μυαίων ἐπαφομον, Od. xii. 193). The climate is healthy (καλὴς πουρότητος, Od. ix. 27). It may here be observed, that the expressions applied to Ithaca, in Od. ix. 25, 26, have puzzled all the commentators ancient and modern:

αὐτὴ ἐν χρυσαλήν χειμαρρὴν ἐπὶ ἄλτοι καίρων πέρα ζησομένη, ἀλλ' ἐν θερήμα πέρα στὰ μέλαν ταύ τε.

(Cf. Nitzsch, ad loc.; also Od. x. 166.) Strabo (x. 3) gives perhaps the most satisfactory explanation: he supposes that by the epithet χειμαρρής the poet intended to express how Ithaca lies under, as it were, the neighbouring mountains of Arcania; while by that of χειμαρρὴν he meant to denote its position at the extremity of the group of islands formed by Zacynthus, Cephalenia, and the Echinades. For another explanation, see Wordsworth, Greece, Pictorial, &c., pp. 355, seq.

Ithaca is now divided into four districts (Bașū, 'Aerōs, 'Anogos, 'Erythra, i.e. Deep Bay, Eagle's Cliff, Highland, Outland); and, as natural causes are likely to produce in all ages similar effects, Leake (i. c.) thinks it probable, from the peculiar constellation of the island, that the four divisions of the present day nearly correspond with those noticed by Heracleion, an author cited by Stephanus B. (i.e. v. Kerk.) The name of one of these districts is lost by a defect in the text; the others were named Neum, Crocylemum, and Agurium. The Argilipes of Homer (Il. ii. 633) is probably the same with Agurium, and is placed by Leake at the modern village of Anogia;
while he believes the modern capital town of Bathy to occupy the site of Croceylea. (I. L. C.) It is true that Strabo (pp. 376, 453) places Aegilips and Croceylea in Leucias; but this appears inconsistent with Homer and other ancient authorities. (See Leake, l. c.)

Plutarch (Quaest. Graec. 43) and Stephano B. (v. c.) state that the proper name of the ancient city of Ithaca was Alacoemæ or Alacomenæ, and that Ulysses bestowed this appellation upon it from his having been himself born near Alacomenæ in Boeotia. But this name is not found in Homer; and a passage in Strabo tends to identify it with the ruins on the isthmus of Aitol, where the fortress and royal residence of the Ithacan chieftains probably stood, on account of the advantages of a position so easily accessible to the sea both on the eastern and western sides. It is argued by Leake (l. c.) that the Homeric capital city was at Polis, a little harbour on the SW. coast of the island, where some Hellenic remains may still be traced. For the poet (Od. iv. 844, seq.) represents the suitors as lying in wait for Telemachus on his return from Pylos, to attack a small island in the channel between Ithaca and Samos (Cephalonias), where the only island is that now called Antirhous, situated exactly opposite the entrance to Port Polis. The traditional name of Polis is alone a strong argument that the town, of which the remains are still visible there, was that which Scylax (in Ascorb.), and still more expressively Polyeni (vii. 14), mentions as having borne the same name as the island. It seems highly probable that ᾲ ὅτιος, or the city, was among the Ithacans the most common designation of their chief town. And if the Homeric capital was at Polis, it will follow that Mt. Neum, under which it stood (Ib. Ætes [- Ætes], Od. vii. 81), was the mountain of Epige (Ibid. Ixii), at the northern extremity of the island, and that one of its summits was the Hermesian hill (Ἡρμεσιάν Λόφος, Od. xvi. 471) from which Eumaeus saw the ship of Telemachus entering the harbour. It becomes probable, also, that the harbour Rheithrum (Ῥῄθρου) which was “under Neum” but “apart from the city,” (ὦ χεῖρος κατασκέψις, Od. i. 183), may be identified with one of the harbours of Aitol or Frisias. Near the village of Frisias may be observed the remains of an ancient building, probably a temple, with several steps and niches cut in the rock. These remains are now called by the neighbouring peasants “the School of Homer.”

The Homeric “Fountain of Arethusa” is identified with a very spouted spring which rises at the foot of a cliff trenching the sea near the SE. extremity of Ithaca. This cliff is still called Asoris (Ἀσώρις) and is, doubtless, that alluded to at Od. xii. 607, seq., xii. 8, seq., xiv. 338. (See especially on this point, Leake, l. c., and More, Ithaca in Greece, vol. i. p. 67, seq.)

The most remarkable natural feature of Ithaca is the river, or Mela, that inlet of the sea which nearly divides the island into two portions; and the most remarkable relic of antiquity is the so-called “Castle of Ulysses,” placed as has been already intimated, on the cape and summit of the steep hill of Athos, on the eastern extremity. None may be traced several times of uncertain antiquity, being the highest antiquity in the rude structure of massive stones which compose them. The position of several caves is still marked, there are also tracts of a brook and of large subterranean caves.

There can be little doubt that this is the spot to which Cicero (de Orat. i. 44) alludes in praising the patriotism of Ulysses—‘‘ut Ithaca in asperrimis saxis tamquam nudanum aures sapientissimus vir immortalitatis anteposat.” The name of Athos, moreover, recalls the striking scene in Od. i. 146, seq. At the base of this hill there have been discovered several ancient inscriptions, sepulchral inscriptions, vases, rings, medals, etc., and for the coins of Ithaca usually bear the head of Ulysses, with the piloan, or conical cap, and the legend: Ἰθακεια; the reverse exhibiting a cock, an emblem of the hero’s vigilance, Athena, his tutelar deity, other devices of like import. (See Eckel.)

The Homeric port of Phocury (Od. viii. 440) is supposed to be represented by a small cove called Desiex (probably because it is on the right) the entrance to the harbour of Bathly, or by a small creek now called Skionas, both on the southern side of the Gulf of Molo. (Leake, l. c.) At a safe the side of Mount Stephanos or Meroupa, since this gulf, and at some short distance from the sea at the point of the Grotto of the Nymphs, in which the Phocuys, as Homer relates, were brought who brought him from Scheria. (Od. viii. 136, seq.) Leake (l. c.) considers this to be “the city point in the island exactly corresponding to the poet’s data.”

The modern capital of Ithaca extends in a narrow strip of white houses round the southern extremity of the harbour, forming a deep (Βάθος) bay, from which it derives its name, and which is itself, but a little of the Gulf of Molo, often mentioned already. Attic passing through similar vicissitudes to those of its neighbours, Ithaca is now one of the seven Ionian Islands under the protectorate of Great Britain, and contains a population exceeding 10,000 souls, an industrious and prosperous community. It is truly observed that there is, perhaps, no spot in the world where the influence of classical association is more lively or more pure; for Ithaca is indebted for part of its interest to the rival distinctions of modern annals,—so much as its name scarcely occurs in the page of any writer of historical ages, unless with reference to its poetical celebrity. Indeed, in A.D. 1504, it was nearly, if not quite, uninhabited; and been depopulated by the incursions of Corsairs; and record is still extant of the privileges accorded by the Venetian government to the settlers (probably from the neighbouring islands and from the mainland of Greece) by whom it was repopulated. (Leake, l. c.; Bowen, Ithaca in 1850, p. 1.)

It has been assumed throughout this article that the island still called Ithaca is identical with the Homeric Ithaca. Of that fact there is ample testimony in its geographical position, as well as in its internal features, when compared with the Odyssey. To every novice we may say, in the words of Athena to Ulysses: (Od. vii. 344).
ITHECESIAE INSULAE.

-74, but they have been successfully confuted by Rithae von Liljestern, Uber das Homeriche Illyrica. The fullest authorities on the subject of this article are Geil, Geography and Antiquities of Illyrica, London, 1897; Leake, Northern Greece, vol. iii. pp. 24–33; More, Trav in Greece, vol. i. pp. 38–51; Bover, Illyria in 1830, London, 1852.) [G. F. B.]

ITHECESIAE INSULAE, is the name given by Pliny (iii. 7. 12) to some small islets opposite to Vibo on the W. coast of Bruttium. These can be no other than some mere rocks (too small to be marked as ordinary mappa) which lie just opposite to the Illyrian coast. Illyria was an Illyrian state, and on which some traces of ancient buildings (probably connected with that port) were still visible in the days of Barron. (Barron, de Situ Calabr., ii. 13: Emanueli, vol. i. p. 57.) [E. H. B.]

ITHOME (Ἰθώμη; Eth. Ιθωμη, Ιθωμοια), I. A town of Elis in Thessaly, described by Herod. as the "rudest town of Illyria" (Ἰθώμη ἄνεκοντον, II. ii. 729), is placed by Strabo within a quadrangle formed by the four cities, Tricca, Metropolis, Polinna, and Gomphi. (Strab. ix. p. 457.) It probably occupied the site of the castle which stands on its summit above the village of Fanari. Leake observed, near the north-western face of the castle, some remains of a very ancient Heelenian wall, consisting of a few large masses. In 1843, he had joined the town from the outside, but accurately joined to one another without cement. (Leake, Northern Greece, vol. iv. p. 310.)

2. A mountain fortress in Messenia, where the Messenians long maintained themselves against the Spartans in the First Messenian War. It was afterwards the capital of Messenia, when this city was funded by Epaminondas. For details, see Messenia.

ITHORIA (Ἰθωρία), a town in Aetolia, near the Argosae, and a short distance south of Conope. It was situated at the entrance of a pass, and was strongly fortified both by nature and by art. It was taken by Philip V., and levelled to the ground, c. 213 B.C.

ITIUM PROMONTORIIUM, is placed by Ptolemy (C. B. § 1) in Cicolagalis. After the months of the Steire, he mentions the outlet of the river Phrusa, and here lies, Ithome (Ἰθώμη ἄνεκοντον), and then Geosiaecum (Προσοιακόν εἴρεινα), which is Boulöne. One of the old Latin versions of Ptolemy has Ilium Promontorium, and others may have it too. It places Geosiaecum and Ilitum in the same latitudes, and Ilitum as west of Geosiaecum. This is a great mistake, for Ilitum being Cap Grimes, the relative position of the two places is north and south, instead of east and west. There is no promontory on this part of the French coast north or south of Boulöne or Cape Grimes, at which point the coast changes its direction from south to north, and runs in a general E.N.E. direction to Calvi, Groues, and Le Cap. It is therefore certain that there is a great mistake in Ptolemy, both in the direction of the coast and the relative position of Geosiaecum and Ilitum. Cap Grimes is a chalk cliff, the termination of the town of the chalk hills which cross the department of Var. The chalk cliffs extend a few miles on each side of Cap Grimes, and are clearly seen from the English coast on a fine day. This cape is the nearest point of the French coast to the western coast of Kraut. [G. L.]

ITIUS PORTUS (Ἴτιος πόρος, Strab. p. 199). When Caesar was preparing for his second British ex-

pedition (c. s. 54), he says (B. G. v. 2) that he or- dered his forces to meet at "Portus Ilius, from which port he had found that there was the most conver- gent passage to Britannia,—about 30,000 passarum." In his first expedition, c. 55, he says that he marched, with all his forces, into the country of the Morini, because the passage from that coast to Brit- tannia was the shortest (B. G. iv. 21); but he does not name the port from which he sailed in his first expe- dition; and this is an omission which a man can easily understand who has formed a correct no- tion of the Commentaries. It seems a plain conclu- sion, from Caesar's own words (c. 55) that he sailed from the Ilitium on his first expedition; for he marched into the country of the Morini, in order to make the shortest passage (iv. 21); and he made a good pas- sage (iv. 32). In the fifth book he gives the distance from the Ilitium to the British coast, but not in the fourth book; and we conclude that he ascended this distance in his first voyage. Drummian (Ge- schichte Romes, vol. iii. p. 299) thinks that the pas- sage in the fifth book rather proves that Caesar did not sail from Ilitium on his first voyage. We must ac- cordingly suppose that, having had a good passage on his first voyage to Britannia, and back to the place from which he had sailed, he chose to try a different passage the second time, which passage he had learned (cogono) to be the shortest (commodissime). Yet he landed at the same place in Britannia in both his voyages (v. 8); and he had ascertained (cogono) in the first voyage, as he says, that this was the best landing-place. So Dru- mann, in his way, may prove, if he likes, that Caesar did not land at the same place in both voyages. The name Ilitium gives no reason for supporting that Portus Ilius was near the Promontorium; and the opinion now generally accepted is, that Portus Ilius in Wiesent or Wiesent, a few miles east of Cap Grimes. The critics have fixed Portus Ilius at vari- ous places; but not one of these guesses, and they are all guesses, is worth notice, except the guess that Ilius is Geosiaecum or Boulöne. But the name Geosiaecum is not Ilitium, which is one objection to the supposition. The only argument in favour of Boulöne is, that it was the usual place from which the Romans sailed for Britannia after the time of Claudius, and that it is in the country of the Morini. Geosiaecum was the best spot that the Romans could choose for a regular place of embarkation, for it is adapted to be the site of a town and a fortified place, and has a small river. Accordingly it became the chief Roman position on this part of the French coast. [Geosiaecum.]

The distance of Portus Ilius from the nearest port of Britannia, 30 M.P., is too much. It seems to be a just conclusion, that Caesar estimated the distance from his own experience, and therefore that he esti- mated it either to the coast from Conope, where he anchored, or to the place seven or eight miles (for the MSS. of Caesar vary here) further along the coast, where he landed. It is certain that he first approached the British coast under the high chalk cliffs between Folkestone and Walmer. It is a disputed point whether he went from his anchorage under the cliffs northwards to Deal, or southwards to Sandwich or Hythe. This matter does not affect the position of Ilitium, and it is not discussed here; but the writer maintains that Caesar landed on the beach at Deal. There are difficulties in this question, which the reader may examine by referring to the autho- rites mentioned at the end of this article. The pas-
sage in the fifth book (v. 8), in which Caesar describes his second voyage, shows very clearly where he landed. He sailed from Portus Itius, on his second expedition, at sunset, with a wind about SW. by W.; about midnight the wind failed him, he could not keep his course, and, being carried too far by the tide, at daybreak, when he looked about him, he saw Britannia on his left hand behind him. Taking advantage of the change of the tide, he used his oars to reach "that part of the island where he had found in the previous summer that there was the best landing." He had been carried a few miles past the Cantium Promontorium, or North Foreland but not out of sight, and he could easily find his way to the beach at Deal. There are many arguments to show that Deal was Caesar's landing-place, as it was for the Romans under the empire, who built near it the strong place of Rutupiae (Richborough), on the Stour, near Sandwich.

D'Anville makes out Caesar's distance of 30 M. P. thus. He reckons 28 or 34 M. P. at most, from Portus Itius to the English cliffs, and 8 miles from his anchorage under the cliffs to his landing-place make up 30. Perhaps Caesar means to estimate the whole distance that he sailed to his landing-place; and if this is so, his estimate of "about 30 Roman miles" is not far from the truth, and quite as near as we can expect. Strabo (p. 199) makes the distance 380 stadia, or only 300, according to a note of Eustathius on Dionysius Periegetes (v. 566), who either found 300 in his copy of Strabo, or made a mistake about the number; for he derived his information about Caesar's passage only from Strabo. It may be observed here that Strabo mentions two expeditions of Caesar, and only one port of embarkation, the Itius. He understood Caesar in the same way as all people do who can draw a conclusion from premises. But even 300 stadia is too great a distance from Wissant to the British coast, if we reckon 8 stadia to the Roman mile; but there is good reason, as D'Anville says, for making 10 stadia to the mile here. Pliny gives the distance from Boulogne to Britannia, that is, we must assume, to the usual landing place, Rutupiae, at 50 M. P., which is too much; but it seems to be some evidence that he could not suppose Boulogne to be Caesar's place of embarkation.

Caesar mentions another port near Itius. He calls it the Ulterior Portus (v. 22, 23, 35), or Superior, and it was 8 M. P. from Itius. We might assume from the term Ulterior, which has reference to Itius, that this port was farther to the north and east than Itius; and this is proved by what he says of the wind. For the wind which carried him to Britannia on his first expedition, his direct course being nearly north, prevented the ships at the Ulterior Portus from coming to the place where Caesar embarked (v. 23). The Ulterior, or Superior, Portus is between Wissant and Boulogne, and may be Boulogne, and may be too far off. When Caesar was returning from his first expedition (v. 36, 37) two transport ships could not make the same ports—the Itius and the Ulterior or Superior—that the rest of the ships did, but were carried a little lower down (perit in 37) that is, further south, which we know to be Caesar's meaning by comparing this with another passage (v. 9). Caesar says that those two were landed at a "portus" as I interpret cognito (v. 36, p. 344), who makes a port unknown to Caesar, and gives it the name "Upton." D'Anville, Castracane, and others, certainly think that of two middle age Latin writers who mention the passage of Alfred, brother of St. Edward, to England, one calls Wissant Portus Icicus, and the other Portus Wisamisi. D'Anville conjectures that Wisamisi means "white sand," and accordingly its promontory Icicum would be the White, a very real name for it. But the word "white," and its various forms, is Teutonic, and not a Celtic word, so far as we know; and the word "Icicum" existed in Caesar's time on the coast of the Morini, a Celtic people, where we do not expect to see a Teutonic name.

Wissant as known to the Romans, for there are traces of a road from it to Tarcentum (Therescum). It is no port now, and never was a port in the modern sense, but it was very well suited for Caesar to lay his ships up on the beach, as he did when he landed in England; for Wissant is a wide, sheltered, sandy bay. Frisson's speaks of Wissant as a large town in 1346.

A great deal has been written about Caesar's voyages. The first and the best attempt to explain it, though it is not free from some mistakes, is in Dr. Hiley's, of which an exposition is given in the General Museum, No. 16, by G. Long. D'Anville, with his usual judgment, saw that Itius must be Wissant; but he supposed that Caesar landed at Hythe, south of Dover. Wackenroder (Geog. de Géants, vol. i. pp. 148, 458) has some remarks on Itius, which he takes to be Wissant; and there are remarks on Portus Itius in the Gentleman's Magazine for September, 1846, by H. L. Long, Esq. Perhaps the latest examination of the matter is in G. Long's edition of Caesar, Note on Caesar's British Expansions, pp. 240—258. What the same German geographers and critics, Uert and others, have said of these voyages is of no value to us.
ITON.

ITON or ITONUS (from Homer, "Ithraos, Strat."); a town of Phthiotis in Thessaly, called by Homer "mother of flocks" (Od. ii. 696), was situated 60 stadia from Alus, upon the river Caurius or Corialis, and above the Crocan plain. (Strab. iv. p. 435.)

Leake supposes the Kh二手l to be the Caurius, and places Ionius near the spot where the river issues from the mountains; and as, in that case, Ion posseoned a portion of the pastoral highlands of Oltys, the epithet "mother of flocks" seems to have been well adapted to it. (Leake, Northern Greece, vol. iv. pp. 356, 357.)

Iton had a celebrated temple of Athena, whose worship, under the name of the Roman Athena, was carried by the Boeotians, when they were expelled from Thessaly, into the country named after them. (Strab. E. c. ; Steph. B. s. c.)

Apollod. ii. 7. 7.; Apollon. i. 551, with Schol.; Callim. Hymn. in Bacch. 74.; Paus. i. 13. ii. 9. 9.; 13. ix. 34. 1. 9. 11. 10.; Plut. Peric. 26.

ITONE (Itrone), a town in Lydia of unknown site. (Dionys. Per. 465; Steph. B. s. c.) [L. S.]

ITTUCI (Plin. iii. 1. 3. or ITUCI (Coins; Itrone, Apian, Hist. 66, 68), a city in the W. of Hispania Baetica. Under the Romans, it was a colonia with the title of Domus, with a forum and a capitolium; and it belonged to the conventus of Hispilia. Its probable site, in the opinion of Uberti, was between Maria and Espojo, near Villanueva. (Uberti, vol. ii. pt. 1. p. 369; Coins, esp. Flores. Med. de Esp. vol. ii. p. 487; Mionnet, vol. i. p. 18, Suppl. vol. i. p. 52; Sestini, p. 63; Eckhel, vol. i. p. 24.) [P. S.]

ITUAE (ITUAE, ap. Steph. B. c. 200), a district in the NE. of Palestine (Strab. xvi. p. 755; Plin. v. 19), which, with Trachonitis, belonged to the tetarchia of Phrygia. (St. Luke, iii. 1.; comp. Joseph. Ant. xv. 10. § 1.)

The name is so loosely applied by the ancient writers that it is difficult to fix its boundaries with precision, but it may be said roughly to be traversed by a line drawn from the Lake of Tibareis to Damascus. It was a mountainous district, and full of caverns (Strab. E. c.): the inhabitants, a wild race (Cic. Phil. ii. 24), favoured by the natural features of the country, were in the habit of robbing the traders from Damascus, and even of attacking the caravans. (Verg. Georg. i. 448; Lucan. vii. 530, 514.)

At an early period it was occupied by the tribe of Jetur (1 Chron. v. 19; 19; ITUAE, LXX.), whose name is connected with that of Jetur, a son of Iahmael. (1 Chron. i. 31.) The ITuarees—either the descendants of the original possessor, or, as is more probable, of new comers, who had occupied this district after the exile, and assumed the original name—were eventually subdued by king Aristobulus, n. c. 100, who compelled them to be circumcised, and incorporated them in his dominions. (Joseph. Ant. xiii. 11. § 3.)

The mountain district was in the hands of Potameneus, tetarch of Chalcis (Strab. xvi. p. 753); but when Pompeius came into Syria, ITuarees was ceded to the Romans (Appian. Mithr. 108), though probably it retained a certain amount of independence under native vassal princes: M. Antonius imposed a heavy tribute upon it. (Appian. B. C. v. 7.) Finally, under Claudius, it became part of the province of Syria. (Tac. Ann. xxii. 23; Dion Cass. ix. 12.)

The district El-Djebir, to the E. of Hermon (Djebel-catt-Scheib), and lying W. of the Holy road, which according to Burchardt (Trans. p. 286) now contains only twenty inhabited villages, comprised the whole or the greater part of ancient ITUAREES. (Münter, de Rob. Ituarees. Havn. 1824 ; comp. Winer, Realwörterbuch, i. ii.; Bitter, Erdkunde, vol. xv. pt. ii. pp. 354—357, 899.) [B. E. B.]

JULIACUUM.

JUTRISIA. [TURISMA.]

JUTICA. [ITUCCI.]

JUTIS, in Britain, mentioned by Ptolemy (ii. 3. § 1) as a river lying near the epidian promontory (Mull of Cunnerness), with the river Longus between. As this latter = Loch Leinie, the Jutis is probably the Sound of Skye, between the Isle of Skye and the mainland. In the Monuments Britannicae we have Loch Torridon, Loch Duich, Loch Ewe. [R. G. L.]

JUDEA. [PALARISTHNA.]

JUDEAH. [PALARISTHNA.]

IVERNIA. [IRENE.]

IVERNIS (Ivernus), mentioned by Ptolemy (ii. 2. § 10) as one of the island towns of Ireland, the others being Bhigis, Rhaesa, Laberus, Macolium, another Rhaesa, Dunum. Of these, Dunum has been identified with Doss, and Macolium with Mallo, on the strength of the same names. Laberus, on similar but less satisfactory grounds, = Kilur, in Limerick. Ivernia is identified by O'Conor with Dun-kerg, on the Kemsare river; but the grounds on which this has been done are unsteady. [R. G. L.]

IVIA or JUVIA. [GALLACIA.]

JULIA CONSTANTI. [OSMET.]

JULIA FIDENIA. [ULLA.]

JULIA, i.e. Julia Agrippa (44 A.D.), a city on the coast of Hispania Baetica, between Gades and Belon, colonized by a population of Romans mixed with the removed inhabitants of the town of Zela, near Tingia, on the Libyan shore of the Straits. Thus far Strabo (iii. p. 140) : later writers speak of a place named JULIA TRANSDUCTA, or simply TRANSDUCTA (Tou-Mia Troupewóktu, Ptol. ii. 4. § 6). Marcianus, Herac. p. 39; Geog. Ebro., E. of Mellaria; and coins are extant with the epigraph JULIA TRANSDUCTA (Flores. Med. de Esp. vol. ii. p. 596, Esp. S. vol. i. p. 50; Mionnet, vol. i. p. 26, Suppl. vol. i. pp. 19, 45; Sestini, Med. Esp. p. 99; Num. Goth.; Eckhel, vol. i. pp. 29—31). Mela does not mention the place by either of these names; but, after speaking of Carthia, he adds the following remarkable words: et quum transact in Asia Phoeniciae residentes, atque undo nos vixerunt, Tingenentera. (Mela, ii. 6.)

It can hardly be doubted that all these statements refer to the same place; nay, the very names are identical, Trans ducta being only the Latin translation of the word Josa (from wv, ephemera vel) used by the Phoenician inhabitants to describe the origin of the city. It must have been at or near Tarif, in the middle of the European shore of the Straits, and on the S.-most point of the peninsula. (Mém. de l'Acad. des Inscr. p. 103; Philos. Trans. xxx. p. 919; Montelle, Geog. Comp. Esp. Anc. p. 229; Uberti, ii. 1. p. 344.) [P. S.]

JULIA LIBCA. [CHEERSTANI.]

JULIA MYRTILIA. [MYRTILIS.]

JULIA NOBILIS. [MYRTILIS.]

JULIA TRANSDUCTA. [JULIA JOZA.]

JULIA VICTRIX. [TARAKOS.]

JULIACUM, a town in Gallia Belgica. In the Antonine Itin. a road runs from Castellum (Caesarea) through Tonga to Juliacum, and thence to Colonia (Cologne). Juliaca is 18 leagues from Colonia. Another road runs from Colonia Trajana to
JULIOCAE.

Juliacum, and from Juliacum through Tiberiusc trium to Cologne. On this road also Juliacum is placed 18 leagues from Cologne. Juliacum is Julii, or Julich, as the Germans call it, on the river Roser, on the carriage road from Cologne to Aix-la-Chapelle.

The first part of the word seems to be the Roman name Julii-, which is rendered more probable by finding a Juliius among the towns of Gallia Cis-Rheni. Acissa is a common ending of the names of towns in North Gallia.

[GL.]

JULIANOPOLIS (Iouvianopolis), a town in Lydia which is not mentioned until the time of Hierocles (p. 670), according to whom it was situated close to Macedonia, and must be looked for in the southern parts of Mount Tmolus, between Philadippus and Tralles. (Comp. Plin. v. 29.) [L. 5.]

JULIUS. [RETREAD.]

JULIOBOONA (Ioulobonon), a town in Gallia Belgica, is the city of the Caleti, or Calatia as Ptolemy writes the name (ii. 8. § 5), who occupied the Pagie de Gauss. [CALETI.]

The place is Lilebonna, on the river of Lilebonna, near the Seine, between Hesves and Cambodge, in the present department of Seine Inferieures. The Itinera show several roads from Juliioba; one to Rotomagus (Roemen), through Breviodarum; and another through Breviodarum to Noviomagus (Lutetiam), on the south side of the Seine. The road from Juliioba to the west terminated at Caroctotinum. [CAROCOTTINUM.]

The name Juliioba is the name Juliiobona in the inscription of the middle age writings. It was a favourite residence of the dukes of Normandy, and William, named the Conqueror, had a castle here, where he often resided.

The name Juliioba is one of many examples of a word formed by a Roman prefix (Julio) and a Celto-Celtic termination (Bona), like Augusbona, Juliumagus. The name Divona or Bibona [Divona] has the same termination. It appears from a middle age Latin writer, cited by D'Amvile (Noticia, etc., Juliioba), that the place was then called Ilebona, from which the modern name Lilebonna has come by prefixing the article; as the river Otis in the south of France has become l'Oit, and Lot.

The name Juliioba, the traces of the old roads, and other remains discovered on the site of Juliioba prove it to have been a Roman town. A Roman theatre, tombs, medals, and antiquities, have been discovered.

[GL.]

JULIOBRIGA (Iouilbriga), the chief city of the Cantabrini, in Hispania Tarraconensis, belonging to the conventus of Clunia, stood near the sources of the Ebro, on the eminence of Retortello, S. de Reytes. Five stones still mark the bounds which divided its territory from that of Legio IV. It had its port, named Portus Victorii Juliiobrigensium, at Santomma. (Plin. iii. 3. 4, iv. 20. 34; Ptol. ii. 6. § 51; Insocr. ap. Gruter, p. 354; Morales, Antig. p. 68; Florus, Exp. S. vol. vi. p. 417; Constaur. p. 64; Uhart, vol. ii. p. 1. p. 448.) [P. S.]

JULIOCAE (Iouioce), a town of the Andecavi, in Gallia Lugdunensis, and their capital. (Ptol. ii. 5. § 8.) It is named Julimagnus in the Table, and marked as a capital. It is now Angers. [ANDACAVI.] [GL.]

JULIOCAE.

JULIO-CAE.

JULIOPOLIS. [GORDIUM AND TARSUS.]

JULIOPOLIS AEGYPTI. Pliny (vi. 23. 26) alone among ancient geographers mentions this place among the towns of Lower Egypt. From the silence of his predecessors, and from the name itself, we may reasonably infer its recent origin. According to Pliny, Juliiopolis stood about 80 miles distant from Alexandria, upon the banks of the canal which connected that city with the Canopic arm of the Nile. Some geographers suppose Juliiopolis to have been no other than Nicopolis, or the City of Victory, founded by Augustus Caesar in B. C. 30, partly to commemorate his reduction of Aegypt to a Roman province and partly to give the Alexandrians for their adherence to Octopatra and M. Antonius. Mamert, on the contrary (x. i. p. 626), believes Juliiopolis to have been merely that suburb of Alexandria which Strabo (xvii. p. 792) calls Eleusis. At this place the Nile-boats, proceeding up the river, took in cargoes and passengers.

[W. B. D.]

JULIUM. [CAGCE.]

JULIUM CARENUM (Iouius Carenum, Ptol. Zuglio), a town of the Carni, situated at the foot of the Julian Alps, which, from its name, would seem to have been a Roman colony founded either by Julius Caesar, or in his honour by Augustus. If Paulus Diaconus is correct in ascribing the foundation of Forum Julii to the dictator himself (P. Diacon., ii. 20), we have no doubt that Julium Carnicum dates from the same period; but we have no account of its foundation. Ptolemy in one place distinctly describes it as in Noricum (vii. 7. § 4), in another more correctly as situated on the frontiers of Noricum and Italy (meruq 8 πυρ 'περαται και Ναυπακτοὺς, ii. 13. § 4). But Pliny expressly includes it in the territory of the Carni and the tenth region of the provinces of Carnuntum (iu. 19. 23), and its position on the S. side of the Alps clearly entitles it to be considered in Italy. Its position is correctly indicated by the Itinerary of Antoninus (p. 219), which places it 60 M. P., from Aquileia, on the road leading nearly due N. from that city over the Julian Alps. The first stage on this road, "Ad Triscianum," still retains the name of Trigezio, and the site of Jessanum, in the Itinera of the middle age writings, is marked by the village of Zuglio (where some Roman remains have been discovered), in a side valley opening into that of the Tagliamento, about 4 miles above Tolmezzo. The pass from thence over the Monte di Sta. Croce into the valley of the Gail, now practicable only for miles, follows the line of the ancient road, and the two roads probably met in the Itinerary, or were probably a frequented pass under the Romans. [ALPES, p. 110, No. 7]; but the inscription on the faith of which the construction of this road has been ascribed to Julius Caesar is a palpable forgery. (Olivier. Ital. p. 200.) [E. H. B.]

JUNCIARIA, JUNCIARIUS CAMPUS. [DEIUGET.] JUNONIA INSULA. [FORTUNATAE ISLA.]

JURA. [HELVETIÆ; GALLIA, p. 951.]

JUBCAE (Ioucaeo), mentioned by Herodotus (iv. 22) as lying contiguous to the Thessagetas, who lay beyond the Budini, who lay beyond the Sauromatae of the Palus Mastis and Lower Tanais. Their country was well-watered. They were hunters, and had hares. This points to some portion of the lower Ursilans range. They were probably a tribe of the Ugrian stock, akin to the present Morimini, Tcherimis, Tchovoakes, of which they were the most southern portion. The reason for this lies in the probability of the name being a derivative from the root -ark- (as in Ugrine and Curin-thio) - border, or boundary, some form of which gave the Slavonic population their equivalent to the Germanic name Morromanci = Morchmen. [R. G. L.]

JUTHUNGI (Ἰούθωνγος), a German tribe dwelling on the banks of the Danube. They are described by some ancient writers as a part of the Alemanni (Ann. Marc. xvii. 6); but they belonged more probably to the Gothic race; even their name seems to be only another form for Gothi or Gothones. (Ambros. Epist. 20.) Desipprus, from whom we learn most about their history, calls them a Scythian tribe, which, however, clearly means that they were Goths.

In the reign of the emperor Aurelian the Juthungi invaded Italy, and, being defeated, they sued for peace, but were obliged to return without having effected their purpose: afterwards they made preparations for another invasion. (Desip. pp. 11, 12, 18, 19, 21, ed. Niebuhr and Bakker.) In these wars, however, they never appear alone, but always in conjunction with others, either Alemanni, Suevi, or Goths. (See Eisesen Schmidt, de Origine Ostrogenae, p. 26; Lateran. Conc. Greg. Epist. p. caixii.) [L. S.]

JUTTAH (Ṭurda, LXX.), a town of Judah (Jos. xv. 55), appropriated to the priests; according to Eusebius (Onomast. s. v. Τυττα) it was 18 M. P. from Knehelopotamus. (Pol. v. 1870) supposes this to have been the residence of Zacharias and Elisabeth, and the birthplace of John the Baptist. The present town is now写作, or a corruption or a softer pronunciation, instead of νόες Ἱούτα. The modern Yatta, on the site of the old town, in which there are said to be indications of old remains, preserves the ancient name. (Robinson, Bib. Hist. vol. ii. pp. 190, 195, 635; Ritter, Erdkunde, vol. xvii. p. 1.) [L. I.]

JUVUM, JUVAY'VA, a town in the interior of Nicomia, on the left bank of the river Ivarus. It is the modern city of Salebury, situated in an extensive and fertile valley, on the slope of a range of a high mountain. It is chiefly known from inscriptions: one of which (Orelli, no. 496) describes the place as a colony planted by the emperor Hadrian; but its genuineness is disputed. (Orelli, Inscriptiones, vol. i. p. 138.) Juvanum was the head-quarters of the fifth cohort of the first legion (Nexit. Imper.) and the residence of the governor of the province. At an earlier period it seems to have been the residence of the native kings of Nicomia. In the second half of the fifth century it was destroyed by the Heruli; but was restored as early as the seventh century, as may be seen from many beautiful remains of antiquity, especially mosaics. (Comp. Orelli, Inscriptiones, nos. 496, 497; Itin. Ant. p. 235, where it bears the erroneous name of Jovisia; Eugipp. Vit. S. Severi 13, 24, where it is called Iopia; Vit. S. Rustici, ap. Bannaggi, tom. iii. p. 2. p. 273; Eginhard, Vit. Caroli M. 33; Jovisia, oder Nachrichten von Zustande der Gegenen und Stadt Juvenici, Salzburg, 1784, fol.) [L. S.]

K.

KADESH (Καδήσ, LXX.), or KADESH-BARNEA, a site on the SE. of Palestine, with a fountain, En-

MIMAPHT (Gen. xiv. 7, xvi. 14), where the Israelites encamped with the intention of entering the Promised Land (Num. xxxii. 8), and the point from which the spies were sent. (Num. xiii. 40, 41, xxxi. 1—3; Deut. i. 41—44; comp. Judg. i. 17.) The supposition that the Kadesh-Barnaa, to which the Israelites first came, is different from the Kadesh-Meribah, which formed their later encampment, where the wants of the people were miraculously supplied from the smitten rock (Num. xx. 14), reconciles with the idea that there were two places of this name, the first Kadesh and its localities agrees very well with the spring of 'Atia Kâdes or ka'dâs, lying to the E. of the highest part of Djebel Halâl, towards its N. extremity, about 12 miles from Mustâkî Bakâdar. (Beer-Jalahi-roi, Gen. xvi. 14), and something like dâs. S. from Khalaat (Cheil, Josh. xvi. 30), which has been identified by Mr. Howland (Williams, Holy City, vol. i. App. pp. 466—468) with the rock struck by Moses.

The second Kadesh, to which the Israelites came with a view of passing through the land of Edom, coincides better with the more easterly position of 'Atia el-Weibeh which Dr. Robinson (Bib. Res. vol. ii. pp. 450, 451) has selected for it (comp. Kitz. Scripturae Lemata, p. 89). Ritter (Erdkunde, vol. xiv. pp. 1077—1089), who refers to the latest discoveries in this district, does not determine whether one Kadesh would sufficiently answer all the conditions required. [E. B. J.]

KADMONITES (Κάδμωνες, LXX.), a nation of Canaan at the time that Abraham sojourned in the land (Gen. xiv. 18). "The sons of the east" (Judg. vi. 3; comp. Isa. xi. 14), was probably not distinctive of, but collectively applied to various peoples, like the Saracens in the middle ages, and the Beduins in later times. (Ritter, Erdkunde, vol. xv. p. 138. [E. B. J.]

KAMON (Kauzer, LXX.), a town in Gilead, belonging to the tribe of Manasseh, whose territory this was. (Judges, x. 5; comp. Joseph. Ant. v. 7. § 6.) The Kamona (Kauze redes) of Eusebius, which lay 6 M. P. to the N. of Lagi (Onomast. s. v.), must have been another place of the same name; but the city which Polybius (v. 70) calls Kamous (Kauzeras), and which was taken, with other places in Perea, by Antiochus, is identical with the town in Gilead. (Roland, Palast. 649; Winer, s.v.; Ritter, Erdkunde, vol. xiv. p. 242; Ritter, Erdkunde, vol. xvi. p. 1026.) [E. B. J.]

KANAH (Kaard, LXX.). 1. A town in the N. district of Asher. (Josh. xix. 26.) Dr. Robinson recognises it in the large village of Kana, on the brow of the Wady-Ashur, near Tyre. 2. A river which divided the district of Manasseh from that of Ephraim (Josh. xvi. 8, xvii. 9, 10), probably the river which appears itself into the Sea between Caesarea and Apolloonia (Arundinelis; comp. Schwartz's, Vita Saladin. pp. 191, 193), now the Nahal Abu-Zubara. [E. B. J.]

KAPHARABIS (Καπχαράβις), a fortified place, in Idumaea, taken with Kaphethra, by Ceresias, A. D. 69. (Joseph. B. J. iv. 9. § 9.) [E. B. J.]

KEDEMOTH (Kezdhalameh, LXX.), a city in the tribe of Reuben (Josh. xiii. 18), which gave its name to the wilderness of Kedemoth, on the borders of the river Arnon, from whence Moses sent messengers of peace to Sihon king of Heshbon (Deut. ii. 26). Its site has not been made out. (Ritter, Erdkunde, vol. xv. pt. i. pp. 574, 1208; Winer, s. v.) [E. B. J.]

K.
KEDESH.  (Keḏeh, LXX.)  1. A town of Naphtali, 20 M. F. from Tyre. (Euseb. Onomast. s. v. Cade.) Its Canaanitish ethnarch (judging from Jos. xvi. 63—75) was slain at the conquest of the land. (Jos. xii. 22;) afterwards it belonged to the Levites, and was one of the cities of refuge. (Jos. xx. 7, xxxi. 32; 1 Chron. vi. 76.) Barak was born here (Judges, iv. 6;) and Teglath-Pileser made the conquest of it (2 Kings, xx. 29.) It was the scene of the victory of Jonathan Maccabeus over the principal Hasmonean aristocracy (1 Macc. iv. 52—73), and was the birthplace of Tobias (See P. v. Nefedovĉa, Tobit, i. 2.) In Josephus, Kēbara (Antiq. ix. 11. § 1) or Kēbara (Antiq. xiii. 5. § 1) is spoken of as being on the borderland between Tyre and Galilee; during the war it appears to have been hostile to Galilee (B. J. i. 18. § 1.) The strongly fortified post in this district, called Kōrsōv or by the same writer (B. J. ix. 3. § 2), is probably the same as Kedes. A village on the hills opposite the marshes of Hulea-Bashita, still called Kedes, is identified as by Dr. Robinson with the ancient city. (Bibl. Res. vol. iii. p. 355.) Kodes was visited in 1844 by the Rev. Eli Smith, who has a full account of it in MS. (Bibl. Sacra, vol. iii. p. 203.)

2. A town in the S. districts of the tribe of Judah. (Jos. v. 23.)

KEDRON. [JERUSALEM.]

KEILA (Keiā, LXX.; Keîa, Joseph, Antiq. vi. 27., v. S. 8, 9, a city in the tribe of Judah. (Jos. xiv. 44), 8 M. F. from Eleutheropolis. (Euseb. Onomast. s. v.) When the city was besieged by the Philistines, David relieved it, but the thankless inhabitants would have delivered him into the hands of Saul. (1 Sam. xxiii. 1—13.) It assisted in the building of the walls of Jerusalem (Neh. iii. 17, 18); and, according to tradition, the prophet Habbakuk was buried here. (Sosenon, H. E. vii. 29; Niechp. H. E. xii. 48; Reland, Paletas p. 698; Winer, Bibl. Realwörter s. v.; Von Raumer, Palest. p. 207.) [E. B. J.]

KENITES (Kēiānē, LXX.), a semi-nomad tribe of Midianites, dwelling among the Amalekites. (Gen. xv. 19; Num. xxiv. 21; 1 Sam. xv. 6.) Hobab (Jehro), the father-in-law of Moses, was a Kenite, who slew Sierra. (Judg. i. 16, iv. 11,) belonged to this race. The Robehabites are mentioned, with other families, as belonging to the Kenites. (1 Chron. ii. 55; Jer. xxxv. 2; Winer, s. v.; Ritter, Erdkunde, vol. xv. pp. 135—138; Ewald, Gesch. des Volkes Israel. vol. i. p. 337, vol. ii. p. 31.) [E. B. J.]

KENIZITES (Kēiēnīō, LXX.), a Canaanitish tribe. (Gen. xv. 19.) Caleb, the son of Jephunneh, is called a Kenite. (Num. xxiii. 12; Josh. xiv. 6.), and Othniel, his younger brother, is also called a son of Kenaz. (Judg. i. 13, iii. 9; comp. Josh. xvi. 17; 1 Chron. iv. 13.) Another branch of this race are referred to the Edomites. (Gen. xxvii. 11; Winer, s. v.; Böck. Erdkunde, vol. xv. p. 188; Ewald, Gesch. des Volkes Israel. vol. i. p. 538.) [E. B. J.]

KERIOTH (Ke˘rion, LXX.). 1. A town of the tribe of Judah. (Jos. xxv. 25.) It was probably the birthplace of the traitor Judas, who owed his surname (ten ropes) to this place. (Comp. Winer, s. v. Judas.) Dr. Robinson (Bibl. Res. vol. ii. p. 473) has suggested that it may be represented by El-Kerjeyet, situated at the foot of the mountain ridge S. of Hebron, where there are sites of ruins visible.

2. A town of Moab. (Jer. xliv. 24, 41; Amos, ii. 2.) [E. B. J.]

KIRJATH, a word signifying in Hebrew "town," or "city;" the following are the principal places to which this term is attached.

1. KIRJATHAIM (Kīrjāwâîm, LXX.), or "the double city," one of the most ancient towns in the country E. of the Jordan, and was in the hands of the Emims (Gen. xiv. 8; comp. Ewald, Gesch. des Volkes Israel. vol. i. p. 308), who were expelled from it by the Moabites. (Deut. ii. 9, 11.) Kirjathaim was afterwards assigned to the children of Reuben (Num. xxxvii. 37; Josh. xiii. 19;) but during the exile the Moabites recovered this and other towns. (Jer. xxxviii. 1, 23; Ezek. xxv. 9.) Eusebius and Jerome (Onomast. s. v. Kipāwâl) describe it as being full of Christians, and lying 10 M. P. W. of Medeba. Burckhardt (Trav. p. 367) heard of ruins called El-Teim, half an hour W. of the site of Medeba, which he conjectures to have been this place, the last syllable of the name being retained. This does not agree with the distance in the Onomasticon, but Jerome is probably wrong in identifying "the ancient city" with the modern Kirjatisham. As the former is no doubt, from the data assigned by him, the modern Ksweyedet, S. of the Wady Zârâs Mâris, and the latter the El-Teim of Burckhardt, to the N. of the Wady. (Comp. Ritter, Erdkunde, vol. xv. pp. 1185, 1186.) There was another place of this name in the tribe of Naphtali. (1 Chron. ii. 66.)

2. KIRJATH-ARRA, the ancient name of Hebron, still used in time of Nehemiah (xxi. 25.) [HEBRON.]

3. KIRJATH-BAAL. [KIRJATH-JEARIM.]

4. KIRJATH-HIZOOTH, or "city of streets," a town of Moab. (Num. xxxii. 38.)

5. KIRJATH-JEARIM, or "city of forests," one of the four towns of the Gibonites (Jos. ix. 17), and not far distant from Beeroth (El-Birk). (Ezra, ii. 25.) At a later period the ark was brought here from Beth-Shemesh (1 Sam. vii. 1, 2), and remained there till it was removed to Jerusalem (1 Chron. xiii. 6.) The place was rebuilt and inhabited after the exile (Ezra, i. c.; Neh. vii. 29.) Josephus (Ant. vi. 1.) says Moses and Heber, the son of Ishmael, dwelt here. (Eusebius, and Jerome (Onomast. s. v. Bascil-Caracharium) speak of it, in their day, as a village 9 or 10 M. F. from Jerusalem, on the way to Diospolis (Lydda).) Dr. Robinson (Bibl. Res. vol. ii. pp. 334—337) has identified it with the present Kureyset-el-Enab, on the road to Ramleh. The monks have found the AETHOOTH of Jeremiah (1. 1.; comp. Hieron. Onomast. s. v. Joseph. Ant. x. 7. § 3), which is now represented by the modern 'Andets at Kureyset-el-Enab, but the ecclesiastical tradition is evidently incorrect. There was formerly here a convent of the Minoreites, with a Latin church. The latter remains entirely deserted, but not in ruins; and is one of the largest and most splendidly situated churches in Palestine. (Ritter, Erdkunde, vol. xvii. pp. 108—110.)

6. KIRJATH-SEPHER, or "city of the book." (Jos. xv. 15, 16; Judg. li. 11), also called KIRJATH-SANNAH, "city of palms." (Jos. xv. 49.) Afterwards it took the name of Derib (Astdah, LXX.), a "word" or "oracle." Debir was captured by Joshua (xvii. 38), but being afterwards taken by the Canaanites, Caleb gave his daughter Achsa to Othniel, for his
bravery in carrying it by storm (Jos. xvn. 16—30). It belonged afterwards to the priests. (Jos. xxi. 15; 1 Chron. vi. 58.) Debir is afterwards lost sight of; but from the indications already given, it appears to have been near Jericho,—but the site has not been made out. There was a second Debir in the tribe of Gad. (Jos. xiii. 26.) (Von Ranmer, Peis. p. 182; Winer, s. v.) [E. B. J.]

KIR-MOAB (תֶּרֶם תַּחַת מֹאָב, LXX.), “the stronghold of Moab.” (Jos. xxi. 3), called also Kir-Heres (Jos. xiii. 7, 11; Jer. xlix. 31). In the land of Moab, the border of the Amorites, it appears in the form of Jerakka-Moab, and in the Druse and, Macc. xii. 17.) Under this name, more or less corrupted, it is mentioned by Ptolemy (Xaparwmaq., v. 17. 5; comp. Χαρσαμαχωτα, Steph. B.) and other writers, both ecclesiastical and profane, down to the centuries before the Crusades. (Abr. i-ijda, Tab. Syr., p. 89; Schul- lers, Index ad Vit. Salac. a. v.) The Crusaders found the name extinct, and erected the fortress still known as Kerak, which, with that of Shaibek, formed the centre of operations for the Latins E. of the Jordan. With the capture of these, after a long siege by Saladin, A.D. 1188, the dominion of the Franks over this territory terminated. (Wilken, die Kreuzz., vol. iv. pp. 264—647.) The whole of this district was unknown till A.D. 1806, when the American Mission (Zachs, Monatl. Chr. xviii. pp. 453, foll.) penetrated as far as Kerak. A fuller account of the place is given by Burckhardt (Trav. pp. 379—387), by whom it was twice visited in 1813; and another description is furnished by Iby and Mangles (Trav. pp. 361—370), who followed in the same direction in 1816. (Robinson, Bibl. Itin. vol. ii. pp. 566—571; Bitter, Erdmuth., vol. xv. pp. 916, 1215.) [E. B. J.]

KISHON. [Cron.]

L.

LABANAE AQUAE. [AQUAE LABANAE.]

LABATEAS. [LABATRA LACUS.]

LABATIS LACUS, a large lake of Roman Illyricum, situated to the N. of Scodra, the chief city of the Labates (Livy. xiii. 31, xlv. 31, xlv. 36) or Labatea. (Plin. iii. 26.) It is now called the lake of Scodra, famous for the quantity of fish, especially of the “Cyprinus” family. The rivers, which drain the rocky district of Monte-Negro, discharge themselves into this lake, which communicates with the sea by the river Barbana. (Wilkinson, Deltamia, vol. i. pp. 411, 415, 476.) [E. B. J.]

LABICUM or LAVICUM, sometimes also (Livy. iii. 39, iv. 45) LAVICI, (תֶּרֶם לָכָעַב, Ex. LXX., Lacinianus and Lavinianus: La Colonna), an ancient city of Lavinus, situated at the foot of the north-eastern slope of the Alban hills, and distant about 15 miles from Rome. Its foundation was ascribed, according to a tradition reported by Servius (ad Aen. v. 796), to Glanucus, a son of Minos and Virgil (l.c.) mentions it among the cities which sent assistance to king Lattus against Aeneas, so that he must have regarded it as more ancient than the Trojan settlement in Latium. But the present site, adopted by Dionysius, represented Labicum, in common with so many other Latin cities, as a colony of Alba. (Dionys. viii. 19; Didier, op. Euclid. Arm. p. 185.) Whatever was its origin, we know with certainty that it was one of the cities of the Latin League, and as such retained, down to a late period, the right of participating in the sacrifices on the Alban Mount. (Dionys. v. 61; Cic. pro Piso. 9.) It first appears in history as taking part in the leagues of the Latins against Rome previous to the battle of Regillus (Dionys. l. c.), and is afterwards mentioned among the cities which are represented as taken in succession by Cortolania, during his campaign against the Romans. (Liv. ii. 39; Dionys. viii. 19.) It is not improbable that this legend represents the historical fact that the Latins, on the return from Bolsena, Petum, and other places which figure in the same narrative, actually fell about that time into the hands of the Aequians, as Satricum, Corioi, and other towns further to the S., did into those of the Volscians. (Nis.Laughs., vol. ii. p. 259.) But during the subsequent wars of the Romans with the Aequians, Labicum always appears as a Latin city; and from its position on the frontier of Latium adjoining the Aequians, its name repeatedly occurs in the history of those events. Thus, in a. c. 458, its territory was ravaged by the Aequian general Gracchanus: and in 418 we find the Labicans themselves abandoning the Roman alliance, and joining the Aequians, together with whom they established a camp on Mount Algidus. Their combined forces were however worsted by the Roman general Q. Servilius, and the territory was again ravaged by the Praemontii, at that time on hostile terms with Rome (Liv. vi. 21); and after a long interval, in a. c. 311, it once more sustained the same fate from the army of Hannibal. (Liv. xvi. 9.)

From this time the name of Labicum disappears from history, but we learn that it still existed as a municipium, though in a very poor and depopulated condition, in the days of Cicero. (Cic. pro Piso. 9, de Leg. Agr. ii. 35.) Strabo, however, speaks of the town as in ruins, and Flivy mentions the population “ex agro Labicano” in a manner that seems to imply that, though they still formed a “populous” or community, the city no longer existed. (Strab. v. pp. 230, 237; Plin. iii. 5. a. b.) In like manner we find the “agari Labinenses” elsewhere mentioned, but no further notice of the town. (Suet. Cas. 83.) The inhabitants seem to have, under the Roman empire, congregated together aghresh in the neighbourhood of the station on the Via Labicana, called Ad Quintanas, and hence assumed the name of Labicanorum. (Orell. Inscr. 115, 9997.) The territory appears to have been one of the great possessions of the Labicans, and was noted for the excellence of its grapes. (Sil. Itald. v. 366; Jul. Captit. Cod. Ib. 11.)

The position of Labicum has been a subject of much dispute, having been placed by different writers at Valmontone, Zagarolo, and Legnano. But the precise statement of Strabo (v. p. 237) as to the course of the Via Labicana, together with the fact that he describes the ancient city as situated on a hill to the right of that road, about 120 stadia (15 Roman miles) from Rome, ought to have left no difficulty on the subject: and Holstenius long ago correctly placed the ancient city on the hill now
occupied by the village of La Coloma; a height a
little in advance of the Tuscanian hills, and com-
manding the adjoining portion of the plain. It is
about a mile from the 15th milestone on the Roman
road, where, as we have seen, the suburb Ad Quin-
tanas afterwards grew up, and is certainly the only
position that accords with Strabo's description. No
ruins are visible; but the site is one well calculated
for an ancient city, of small magnitude, and the
discovery of the inscriptions already noticed in its
immediate neighbourhood may be considered con-
clusive of the point. The modern village of La
Coloma dates only from the 11th century. (Holtem.
Not. ad Chon. p. 194; Palbret. de Aqueduetec.
—164.) Ficorici, in his elaborate work (Memorie
della Prima e Seconda Città di Labico, 4to. Roma,
1745), has laboured to prove, but certainly without
success, that Labicum was situated on the Cole dei
Quadrì, near Lagunano, about 5 miles beyond La
Coloma. The remains there discovered and de-
scribed by him render it probable that Lagunano
was an ancient site, probably that of Bola [Bolà]; but
the distance from Rome excludes the supposition
that it was that of Labicum.

The Via Labicana, which issued from the Porta
Esquilina at Rome together with the Via Prae-
estina, but separated from the latter immediately
afterwards, held a course nearly parallel with it as
far as the station Ad Quintanias; from whence it
turned round the foot of the Alban hills, and fell
into the Via Latina at the station Ad Pictas, where
the latter road had just descended from Mt. Algidus.
(Strab. v. p. 237; Itin. Ant. pp. 304, 305.) It is
strange that the Itinerary gives the name of La-
vciana to the continuation of the road after their
junction, though the Via Latina was so much the
more important of the two. The course of the ancient
Via Labicana may be readily traced from the
gates of Rome by the Torre Pignataro, Cento
Colle, Torre Nuova, and the Osteria di Pinciochìo
to the Osteria della Coloma, at the foot of the hill
of that name. This Osteria is 16 miles from Rome
and a mile beyond the ancient station Ad Quintanias.
From Romagna to Pignataro, and soon after, quitting the line of the modern road to
Valmontone, struck off direct to join the Via La-
tina; but the exact site of the station Ad Pictas
has not been determined. (Westphal, Röm. Komp.
pages, pp. 78—80; Gell's Topogr. of Rome, p. 379.)

On the left of the Via Labicana, about thirteen
miles and a half from Rome, is a small crater-formed
lake, which has often been considered as the ancient
Lacus Regillus; but the similar basin of the Lago
di Corvafelle, near Tusculum, appears to have a
better claim to that celebrated name. [Regillus
Labuci.]

The course of the Via Labicana in the immediate
neighbourhood of Rome was bordered, like the other
highways that issued from the city, with numerous
sepulchres, many of them on a large scale, and of
massive construction. Of these, the one now known as
the Torre Pignataro, about three miles from the
Porta Maggiore, is represented by very ancient
tradition, but with no other authority, as the ma-
usoleum of Helen, the mother of Constantine the
Great. (Nibby, vol. iii. p. 243.) We learn, also,
that the family tomb of the emperor Didius Julianus
was situated on the same road, at the distance of
5 miles from Rome. (Spartian.狄. Jul. 8.)
LACHISH.

Their pathless forests " (devia et silviculta genes, Liv.) by S. of the CHERITHAIM, W. of the ERINTHITES, and N. of the LALETAIN. (It is impossible to avoid the suspicion that these names are identical, especially as we have the intermediate form LALETAIN, and that Lecetana is only the N. part of Lactetania. Moreover, the name is confounded with the LACTETAIN in the MSS. of Cas. B. C. i. 60.) Only one town is mentioned as belonging to them, and that without a name, but simply as having been taken by M. Cato. (Plut. Cat. Maj. 11; Liv. xxii. 23, 26, 60, et seq., xxviii. 24, 26, et seq., xxxii. 34, xxxiv. 20; Dion Cass. xlv. 10; Martianus Capella, i. 49. 22.)

LACIADAE. [Attica, p. 336, s.]

LACENA. [LANTIDIA.]

LACINIUM (νεον ΑΛΑΤΙΝΟν ἔργα: Cupo della Colonna), a promontory on the E. coast of the Brutian peninsula, about 6 miles S. of Crotone. It formed the southern limit of the gulf of Tarcentum, as the Iapygian promontory did the northern one: the distance between the two is stated by Strabo, on the authority of Polibius, at 700 stadia, while Pliny apparently (for the passage in its present state is obviously corrupt) reckons it at 75 Roman miles, or 600 stadia: both of which estimates are a fair approximation to the truth, the real interval being 65 geo. miles, or 650 stadia. (Strab. vi. p. 261; Plin. iii. 11. a. 15; Mel. ii. 4. § 8.) The Lacinian promontory is a bold and rocky headland, forming the termination of one of the offshoots or branches of the great range of the Apenines (Lucan. ii. 434; Plin. iii. 5. s. 6): it was crowned in ancient times by the celebrated temple of the Lacinian Juno, the ruins of which, surviving through the middle ages, have given to the promontory its modern appellation of Capo delle Colonne. It is also known by that of Cape Naso, a name evidently derived from the Greek Nasa, a term signifying "a nose," which might be applied to the promontory in the early period, as the promontory is already designated in the Maritime Itinerary (p. 490) by the name of Nasus. That itinerary reckons it 100 stadia from thence to Crotone; Strabo gives the same distance as 150 stadia; but both are greatly overrated. Livy correctly says that the temple (which stood at the extreme point of the promontory) was situated about 6 miles from the city. (Liv. xxiv. 3.) For the history and description of this famous temple, see CROTONE.

Pliny tells us (iii. 10. s. 15) that opposite to the Lacinian promontory, at a distance of 10 miles from the land, was an island called Diescorum (the island of the Dioscuri), and another called the island of Calypo, supposed to be the Ogygia of Homer. Scylax also mentions the island of Calypo immediately after the Lacinian promontory (§ 13, p. 5). But there is at the present day no island at all that will answer to either of those mentioned by Pliny: there is, in fact, no islet, however small, off the Lacinian cape, and hence modern writers have been reduced to seek for the abode of Calypso in a small and barren rock, close to the shore, near Cape Rissaeto, about 12 miles S. of Laciniwm. Swinburne, who visited it, remarks how little it corresponded with the idea of the Homeric Ogygia: but it is difficult to believe that so trifling a rock (which is not even marked on Zannoni's elaborate map) could have been that meant by Scylax and Pliny. 1 The statement of the latter regarding the island which he calls Diescorum is still more remarkable, and still more difficult to account for. On the other hand, he adds the names of three others, Tiria, Eranus, and Melosia, which he introduces somewhat vaguely, as if he were himself not clear of their position. Their names were probably taken from some poet now lost to us. [E. H. B.]

LACIPPLE. [LUCIATANIA.]

LACIPPO (Anacarsis, Post. ii. 4. § 11; Laciippo, coin of Sestini, Med. Sep. p. 57; Miommet, Suppl.]

* The different positions that have been assigned to the island of Calypo, and the degree of probability of their claims, will be discussed under the article Ogygia.
LACMON

vol. i. p. 34), a tributary town of the Taurdii in Hispania Baetica, near the shore of the Mediterranean, where its ruins are still seen at Alcipepe, near Carmona. Phoebus places it too far inland. (Mel. ii. 6. § 7; Plin. v. iii. 1. s. 2; Carter, Travels, p. 128; Ucrt, vol. ii. pt. 1. p. 348.) [F. S.]

LACMON (Λακμον). Hecat. Fr. 70; Hерod. ix. 92; Steph. B. s. e.) or LACMUS (Λακμος, Strab. vi. p. 271, vii. p. 316), the highest summit of Mount Pindus, the Zygus or ridge of Meteora. This is geographically the most remarkable mountain in Greece; situated in the heart of Pindus as to its breadth, and centrally also in the longitudinal chain which pervades the continent from Ν. to Σ.: it gives rise to five principal rivers, in fact to all the great streams of Northern Greece except the Spercheius; north-eastward to the Haemonion, south-eastward to the Peneius, southward to the Acheloos, south-westward to the Argasius, and north-westward to the Aoos. (Leake, Northern Greece, vol. i. pp. 294, 411—415, vol. iv. pp. 240, 261, 276.)

[Ε. Β. Ε.]

LACOBRIGA. [I. LUSITANIA; 2. VACCARI.] LACONIA, LACONICA, or LACEDAEMON, the south-eastern district of Peloponnese. I. NAME.

Its most ancient name was Lacedaemon (ΛακεΔαιμον), which is the only form found in Homer, who applies this name as well to the country, as to its capital. (II. ii. 581, iii. 339, 244, &c.) The usual name in the Greek writers was Lachonice (Λαχονις, λαχονις), though the form Lacedaemon still continued to be used. (Hерod. vi. 58.) The Romans called the country LACONICA (Plin. vii. 8. a. 53; Lachonice, Mela, i. 3) or LACONIA (Plin. vi. 34. a. 39, xvii. 18. a. 30), the latter of which is the form usually employed by modern writers. Mela (Lc.) also uses LACON, which is borrowed from the Greek (Σαλοις or Sabiones, Hom. Hymn. in Apollo. 410.) The Ethnic names are Adakos, -anos, ΛακεΔαιμωνας, Lat. Laco or Lacoon, -nis, Lacedaemonian; fem. Aduaca, Aduaca, Lacon, Laconia. These names are applied to the whole free people of Lacon, both to the Spartan citizens and to the Perioeci, spoken of below (for authorities, see Clinton, F. H. vol. ii. pp. 405, 406). They are usually derived from a mythical hero, Lacoon or Lacedaemon; but some modern writers think that the root LAC is connected with Adakos, Adakos, lacus, lacus, and was given originally to the central district from its being deeply sunk between mountains. (Curtius, Peloponnesia, vol. ii. p. 209.)

II. GENERAL DESCRIPTION OF THE COUNTRY.

The natural features of Lacedaemon are strongly marked, and exercised a powerful influence upon the history of the people. It is a long valley, surrounded on all sides by mountains, and open only on the fourth to the sea. On the north it is bounded by the southern barrier of the Arcadian mountains, from which run in a parallel direction towards the south, the two lofty mountain ranges of Taygetus and Parnon,—the former dividing Laconia and Messenia, and terminating in the promontory of Taenarum, now C. Mataposa, the southernmost extremity of Greece, and of Europe, the latter stretching along the eastern coast, and terminating in the promontory of Malea. The river Eurotas flows through the entire length of the valley lying between these mountain masses, and falls into the sea, which was called the Laconian gulf. Laconia is well described by Euripides as a country "hollow, surrounded by mountains, rugged, and difficult of access, an enemy. (Ep. Strab. viii. p. 366;) and the difficulty of invading it, made even Epaminondas hesitate to enter it with his army. (Xen. Hell. v. 5. § 10.) On the northern side there are only two natural passes by which the plain of Sparta can be invaded. (See below.) On the western side the lofty mass of Taygetus form an almost insurmountable barrier; and the pass across them, which leads into the plain of Sparta, is so steep as scarcely to be practicable for an army. On the eastern side the rocky character of the coast protects it from invasion by sea.

III. MOUNTAINS, RIVERS, AND PLAIS.

MOUNT TAYGETUS (Ταυγητος, το Ταυγητος λαιος, the common forms; Ταυγητος, Λοκις, Λακαμος. 19; το Ταυγητος, Πολυσον, vii. 49; Tadjeta, Virg. Georg. ii. 487: the first half of this word is said by Heerschys to signify great). This mountain is the loftiest in Peloponnesus, and extends in an almost unbroken line for the space of 70 miles from Leonardi in Arcadia to C. Metaposis. Its vast height, unbroken length, and majestic form, have been celebrated by both ancient and modern writers. Homer gives it the epithet of φυσικος (Od. vi. 105), and a modern traveller remarks that you feel from its real height, from the grandeur of its outline, or the abruptness of its rise from the plain, it created in his mind a stronger impression of stupendous bulk and loftiness than any mountain he had seen in Greece, or perhaps in any other part of Europe. (Mure, Tour in Greece, vol. ii. p. 221.) Taygetus rises to its greatest height immediately above Sparta. Its principal summit was called TALANTUM (Ταλαντομ) in antiquity: it was sacred to the Sun, and horses and other victims were here sacrificed to this god. (Paus. iii. 20. § 4.) It is now called S. Elias, to whose chapel on the summit an annual pilgrimage is made in the middle of the summer. Its height has been ascertained by the French Commission to be 6680 feet. Its highest summit near Teleum was called EYORAS (Eikopas, Beodere, Paus. l. c.), which Leake identifies with M. Pazimadedhi, the highest summit next to S. Elias, from which it is distant 5½ geographical miles. The ancient names of none of the other heights are mentioned.

By the Byzantine writers Taygetus was called ПЕНТАДАКTYЛΗ (Πενταδακτυλιος), or the "Five Fingers," on account of its various summits above the Spartan plain. (Constant. Porphy. de Asm. Imp. c. 50.) In the 13th century it bore the name of МЕЛЯНТΑ (Ταυγητος, Μελιγιαν, see Leake, Peloponnesiana, p. 138). At the base of Taygetus, immediately above the Spartan plain, there is a lower ridge running parallel to the higher summits. This lower ridge consists of huge projecting masses of precipitous rocks, some of which are more than 2000 feet high, though they appear insignificant when compared with the lofty barrier of Taygetus behind them. After attaining its greatest elevation, Mt. Taygetus sinks gradually down towards the south, and sends forth a number of lofty conical peaks. The Eurotas, now called LYOBOOS (Λυβοβος, Wolf's mountain), which bounds the Spartan plain on the south. It there contracts again, and runs down, as the back-bone of a small peninsula, to the southernmost ex-
LAONIA.

This mountainous district between the Laconian and Messenian gulfs is now called Mani, and is inhabited by the Maniotes, who always maintained their independence, while the rest of Greece was subject to the Turks; the southern part of the peninsula, as well as the promontory, bore the name of Tessaaron in antiquity. [TARKARID.] Although there is no trace of any volcanic action in Mt. Taegetus, many of its chasms and the rent forms of its rocks have been produced by the numerous and violent earthquakes to which the district has been subjected. Hence Laconia is called by Herodotus "full of hollows" (Herod. de R. ii. 105, Od. iv. 1), and Strabo describes it as a country easily shaken by earthquakes (Strab. viii. p. 367). In the fearful earthquake, which laid Sparta in ruins in B.C. 464, and killed more than 20,000 Lacedemonians, immense masses of rocks were rolled down from the highest peaks of Taegerus. (Plut. Cim. 18.)

On the sides of Mt. Taegetus are forests of deep green pine, which abounded in ancient times with game and wild animals, among which Pausanias mentions goats, wild boars, stars, and bears. The district between the summits of Taegetum and Eversus was called Theras (Ophiis), or the hunting ground. (Paus. iii. 20. §§ 4, 5.) Hence Taegetus was generally called Euerus. The race of the unhappy Laconian hero Artemis (Od. vi. 103), and the excellence of the Laconian dogs was proverbial in antiquity. (Aristot. Hist. An. vi. 20; Xen. de Ven. 10. § 1; Virg. Georg. iii. 405; Hor. Epod. vi. 5.) Modern travellers tell us that the dogs of the country still support their ancient character for ferocity and courage. (Mure, vol. ii. p. 231.)

The southern part of Mount Taegetus is rich in marble and iron. Near Croesea there were quarries of green porphyry, which was extensively employed by the Romans. [CROCEAE.] There was also another kind of marble obtained from quarries more to the south, called by the Romans Taenarum marble. The whetstones of Mount Taegetus were likewise in much request. (Strab. viii. p. 367; "Tessaaron lapiti," Plut. R. ii. 22. s. 43.) The site of the ancient city of Taegetus monte," Plin. xxxvi. 22. s. 47.) The iron found in the mountain was considered very good, and was much used in the manufacture of warlike weapons and agricultural instruments. (Steph. B. s. v. Ανθεγαμας; Xen. Hell. iii. 3. § 7; Plut. vii. 57; Eustath. ad II. ii. 298, ed. Rom.)

MOUNT PARMON (Μύθραμ, Paus. ii. 38. § 7) is an entirely different character from the opposite range of Taegetus. It does not form one uninterrupted line of mountains, but is broken up into various detached masses of less elevation, which form a striking contrast to the unbroken and majestic barrier of Taegetus. The mass to which the name of Parnon was more especially applied was the range of mountains, now called Malevad, forming the natural boundary between Arcadia, Laconia, and Argolis. It is 6355 feet high, and its summit is nearly equidistant from the Eurotas and the eastern coast. This mountain is continued in a general south-easterly direction, but how far southwards it continued to bear the name of Parnon is unknown. Its eastern declivities, which extend as far as the coast at a considerable elevation, contain the district now called Tezokamia, a corruption of the word Laconia, the inhabitants of which speak a dialect closely resembling the ancient Greek: of this an account has been given elsewhere. [Vol. I. p. 728.] On its western side Mt. Parnon sinks down more rapidly, and divides itself into separate hills, which bear the names of BARBOTHENES, ORIMUS, ORION, THORAX, and MONELEAUM; the two last are opposite Sparta, and a modern observer describes Meneleum as not remarkable either for height or variety of outline, but rising gradually in a succession of gentle ridges. (Mure, vol. ii. p. 223.) In its southern continuation, Mt. Parnon still continues of moderate height till near the commencement of the peninsula of the Myrotoan and Laconian gulfs, where it rises under the name of Mount ZARAX (Σαρακος), and runs along the eastern coast at a considerable elevation, till it reaches the promontory of Malea.

The EUROTA (Εὐρώτας) flows, as already observed, throughout the entire length of the valley between the ranges of Taegetus and Parnon. Its more ancient names were BOMYTAS (Βομυτας, Eyn. M. s. v.) and IRMELUS (Ιρμελος, Plut. de Flor. 17); it is now called Iri and Nitra in its upper and middle course, and Basilil-hotemos from the time it leaves the Spartan plain till it reaches the sea. In its course the three districts may be distinguished;—the vale of the upper Eurotas; the vale of the middle Eurotas, or the plain of Sparta; and the vale of the lower Eurotas, or the maritime plain. 1. The headwaters of the upper Eurotas rise in the mountains which form the southern boundary of the Arcadian plains of Asea and Megalopolis. It was believed by both Pausanias and Strabo that the Alpheius and the Eurotas had a common origin, and that, after flowing together for a short distance, they sank under ground; the Alpheius reappearing at Pegae, in the territory of Megalopolis in Arcadia, and the Eurotas in the Blemnistan in Laconia; but for a fuller account of their statements upon this subject the reader is referred to the article ALPHEUS. All that we know for certain is that the Eurotas is formed by the union of several copious springs rising on the southern side of the mountain above mentioned, and that it flows from a narrow glen, which gradually opens towards the sea. The river Eurotas is kept close to the mountains, while on the western side there is a little level ground and some mountain slopes between the river and the heights of Taegetus. At the distance of little more than a mile from Sparta, the Eurotas receives the OCMUS (Οχυς, Polyb. ii. 65, 66; Athen. i. p. 31; Liv. xxxiv. 28), now called Tekhinos, which rises in the watershed of Mt. Parnon, and flows in a general south-westerly direction: the principal tributary of the Ocmus was the GORULTUS (Γορυλτος, Polyb. ii. 66), probably the river of Vrestendi. (Leake, Polonopomastica, p. 547.) Nearly opposite the union of the Ocmus and the Eurotas, the mountains of Taegetus press close upon the river, but again almost immediately withdraw to a greater distance than before, and the river emerges into the Spartan plain.

2. The Vale of the Middle Eurotas. Sparta is situated at the commencement of this vale on the right bank of the Eurotas. Between the river and Mt. Taegetus the plain is of considerable extent. Its soil is particularly adapted for the growth of olives, which are in the present day preferred to those of Athens; and the silk of the Spartan plain is superior to the silk of every other district of Greece. (Mure, vol. ii. p. 224.)
plain, and hence Euripides, in contrasting the two countries, describes Laconia as a poor land, in which there is a large tract of arable, but of laborious tillage (ap. Strab. viii. p. 366). This is in accordance with the account of Leake, who says that the soil of the plain is in general a poor mixture of white clay and stones, difficult to plough, and better suited to olives than to grain. (Morea, vol. i. p. 148.) The vale, however, possesses a genial climate, being sheltered on every side by mountains, and the scenery is of the most beautiful description. Hence Lacedaemon has been aptly characterised by Homer as a "a hollow pleasant valley" (κοιλὴν σπαραγκή, IL ii. 581, iii. 443, Od. iv. 1). The climate is favourable to beauty; and the women of the Spartan plain are at present taller and more robust than the other Greeks, have more colour in general, and look healthier; which agrees also with Homer's Λακεδαιμωνα καλλιγυναι (Leake, Morea, vol. iii. p. 149). The security of the Spartan plain against hostile attacks has been briefly alluded to. There were only two roads practicable for an invading army; one by the upper Eurotas, leading from southern Arcadia and Stenylcurian; the other by the long and narrow valley of the Oenus, in which the roads from Taygetus and Argos united near Sellasia.

3. Vale of the Lower Eurotas. At the southern extremity of the Spartan plain, the mountains again approach so close, as to leave scarcely space for the passage of the Eurotas. The mountains on the western side are the long and lofty counterfork of Mt. Taygetus, called Λησχοδεῖον, which has been already mentioned. This gorge, through which the Eurotas issues from the vale of Sparta into the maritime plain, is mentioned by Strabo (6 Ελβρατας — βετίων αυλίνω των μαυρων, viii. p. 543). It is about 12 miles in length. The maritime plain, which is sometimes called the plain of Helos, from the town of this name upon the coast, is fertile and of some extent. In the lower part of it the Eurotas flows through marshes and sandbanks into the Laconian gulf.

The banks of the Eurotas and the dry parts of its bed are overgrown with a profusion of reeds. Hence the epithets of Βοσκυρόφες and Βοσκεδές are frequently given to it by the poets. (Theogn. 789; Emp. Iphig. in Aul. 179, Hellen. 207.)

The only tributary of the Eurotas, which possesses an independent valley, is the Oenus already mentioned. The other tributaries are mere mountain torrents, of which the two following names have been preserved, both descending from Mt. Taygetus through the Spartan plain: Τλατα (Tiara, Paus. iii. 18. § 6; Ath. iv. p. 189), placed by Pausanias on the road from Amyclae to Sparta, and hence induced by Leake to be identified with the Πανθελεθαυμα; Φελλία (Phelaea, iii. 20. § 3), the river between Amyclae and Pharis. The Κάσιον (Kasivus), mentioned in one of the ordinances of Lycurgus, was identified by later writers with the Oenus. (Plut. Lyg. 6. § 6.)

The streams Τσέκας and Στράς, flowing into the sea on the western side of the Laconian gulf, are spoken of below. [See p. 114, b.]

Before leaving the rivers of Laconia, a few words must be said respecting an ancient Laconian bridge still existing, which has been assigned to the remotest antiquity. This is the bridge of Χεροκάμπο, built over a tributary of the Eurotas, about three hours' ride to the south of Sparta, just where the stream issues from one of the deepest and darkest gorges of Taygetus. It was first discovered by Ross, and has been described by Mure, who supposes it to belong to the same period as the monuments of Mycenae. Even if it does not belong to so early a date, but is a genuine Hellenic work, it would establish the fact that the Greeks were acquainted with the use of the concentric arch at a very early period; whereas it has been usually supposed that it was not known to them till the time of Alexander the Great. The general appearance and character of this structure will be best seen from the annexed drawing taken from Mure. The masonry is of the polygonal species; the largest stones are those of the arch, some of which are from four to five feet long, from two to three in breadth, and between one and two in thickness. From the character of the structure, and from its remote situation, Mure concludes that it cannot be a Roman work; and there are strong reasons for believing that the Greeks were acquainted with the use of the arch at a much earlier period than has been usually supposed.

BRIDGE OF XEROKAMPO.

There are no other plains in Laconia except the three above mentioned in the valley of the Eurotas; but on the slopes of the mountains, especially on those of Parnon, there is a considerable quantity of arable as well as pasture ground. The whole area of Laconia is computed to contain 1896 English square miles.

IV. History.

The political history of the country forms a prominent part of Grecian history, and cannot be narrated in this place at sufficient length to be of value to the student. But as the boundaries of Laconia differ considerably at various periods, it is necessary to mention briefly those facts in the history of the country which produced those changes. It will be seen from the preceding descriptions of the physical features of Laconia, that the plain of Sparta forms the very kernel and heart of the country. Accordingly, it was at all times the seat of the ruling class; and from it the whole country received its appellation. This place is said to have been originally inhabited by the Leleges, the most ancient inhabitants of the country. According to tradition, Lelex, the first king, was succeeded by his son Myles, and the latter by his son Eurotas, who collected into a channel the waters which were spread over the plain, and gave his own name to the river which he had thus formed. He died without male offspring, and was succeeded by Lacedaemon, the son of Zeus and Taygeta, who married Sparta,
LAONIA.

The daughter of his predecessor, Lacedaemon gave to the people and the country his own name, and to the city which he founded the name of his wife. Argos, the son of Lacedaemon, founded the city called after him Amycla. (Paus. iii. 1.) Subsequently Lacedaemon was ruled by Achaeas princes, and Sparta was the residence of Menelaus, the brother of Agamemnon. Menelaus was succeeded by Crete, who married his daughter Hermione, and Crete was by his son Tisamenus, who was reigning when the Dorians invaded the country under the guidance of Malcidas. In the third and largest division of Peloponnese among the descendants of Hercules, Lacedaemon fell to the share of Eurythmene and Procles, the twin sons of Aristodamus. According to the common legend, the Dorians conquered the Peloponnese at once; but there is sufficient evidence that they only slowly became masters of the countries in which we afterwards find them settled; and in Laconia it was some time before they obtained possession even of all the places in the plain of Sparta. According to a statement in Ephorus, the Dorians conquered divided Laconia into six districts; Sparta they kept for themselves; Amycla was given to the Achaean Philomonus, who betrayed the country to them; while Las, Pharis, Eucyd, and a sixth town the name of which is lost, were preserved by the Erechtheans, who were allowed to receive new citizens. (Ephor. ap. Strab. viii. p. 36; on this corrupt passage, which has been happily restored, see Müller, Doriac., vol. i. p. 110, transl.; Niebuhr, Ethnograph., vol. i. p. 56, transl.; Kramer, ad Strab. l. c.) It is probable that this division of Laconia into six provinces was not actual, but was described later period, but there is sufficient evidence to show that, for a long time after the Dorian conquest, the Dorians possessed only a small portion of Laconia. Of this the most striking proof is that the Achaean city of Amycla, distant only 23 miles from Sparta, maintained its independence for nearly three centuries after the Dorian conquest, for it was only subdued shortly before the First Messenian War and under the weak king Tebas. The same king took Pharis and Gerontia, both Achaean cities; and his son and successor, Alcamenes, conquered the town of Helos, upon the coast near the mouth of the Eurotas. (Paus. iii. 2. §§ 6, 7.) Of the subjugation of the other Achaean towns we have no accounts; but there can be little doubt that they were mainly owing to the military organisation and martial spirit which the Spartans had acquired by the institutions of Lycurgus.

By the middle of the eighth century the Dorians of Sparta had become undisputed masters of the whole of Laconia. They now began to extend their dominions at the expense of their neighbours. Originally Arcos was the chief Doric power in the Peloponnese, and Sparta only the second. In ancient times the Arcans possessed the whole eastern coast of Laconia down to Cape Maleae, and also the island of Cythera (Herod. i. 83); and although we have no record of the time at which this part of Laconia was conquered by the Spartans, we may safely conclude that it was before the Messenian wars. The Dorians in Messenia possessed a much more fertile territory than the Spartans in Laconia, and the latter now began to cast longing eyes upon the richer fields of their neighbours. A pretext for war soon arose; and, by two long protracted and obstinate contests, usually called the First and Second Messenian wars (the first from S. c. 743 to 724, and the second from S. c. 685 to 668), the Spartans conquered the whole of Messenia, expelled or reduced to the condition of Helots the inhabitants, and annexed their country to Laconia. The name of Messenia now disappears from history; and, for a period of three centuries, from the close of the Second Messenian War to the restoration of the independence of Messenia by Epaminondas, the whole of the southern part of Peloponnese, from the western to the eastern sea, bore the appellation of Laconia.

The upper parts of the valleys of the Eurotas and the Cennus, the districts of Scirias, Beleministis, Malestis, and Caryatis, originally belonged to the Arcadians, but they were all conquered by the Spartans and annexed to their territory before S. c. 600. (Grote, Hist. of Greece, vol. ii. p. 588.) They thus extended their territories on the north to what may be regarded as the natural boundaries of Laconia, the mountains forming the watershed between the Eurotas and the Alpheus; but when they crossed these limits, and attempted to obtain possession of the plain of Teges, they were overwhelmed by the greatest opposition, and were at last obliged to be content with the recognition of their supremacy by the Tegeants, and to leave theatter in the independent possession of the latter.

The history of the early struggles between the Spartans and Argives is unknown. The district on the coast between the territories of the two states, and of which the plain of Thyreatis was the most important part, inhabited by the Cynurians, a Pisidian people, was a frequent object of contention between them, and was in possession, sometimes of one, and sometimes of the other. On one occasion of this length, in S. c. 547, the Spartans obtained permanent possession of it by the celebrated battle fought by the 300 champions from either nation. [Cynuria.] The dominions of the Spartans now extended on the other side of Mount Parnon, as far as the pass of Amiara.

The population of Sparta was divided into the three classes of Spartan, Perioeci, and Helots. Of the condition of these classes a more particular account is given in the Dictionary of Antiquities; and it is only necessary to remark here that the Spartans lived in Sparta itself, and were the ruling Doric class; that the Perioeci lived in the different townships in Laconia, and, though freemen, had no share in the government, but received all their orders from the ruling class at Sparta; and that the Helots were serfs bound to the soil, who cultivated it for the benefit of the Spartan proprietors, and perhaps of the Perioeci also. After the extension of the Spartan dominions by the conquest of Messenia and Cynuria, Laconia was said to possess 100 townships (Strab. viii. p. 363), among which we find mentioned Anem ther, one of the Cynurian Thyreatis, and Aulen in Messenia, near the frontier of Eria. (Steph. B. s. e. 'Aonidas, Aolad.) According to the common story, Lycurgus divided the territory of Laconia into a number of equal lots, of which 9000 were assigned to the Spartans, and 30,000 to the Perioeci. (Plut. Lyc. 8.) Some ancient critics, however, while believing that Lycurgus made an equal division of the Laconian lands, supposed that the above numbers referred to the distribution of the Lacedaemonian territory after the incorporation of Messenia. And even with respect to the latter opinion, there were two different statements; some maintained that 6000 lots had been
LAONIA.

given by Lycurgus, and that 8000 were added by King Polydorus at the end of the First Messenian War; others supposed that the original number of 4500 was doubled by Polydorus. (Plut. L. C.) From these statements attempts have been made by modern writers to calculate the population of Laconia, and the relative numbers of the Spartans and the Perioeci; but Mr. Grote has brought forward strong reasons for believing that no such division of the landed property of Laconia was ever made by Lycurgus, and that the belief of his having done so arose in the third century before the Christian era, when Agis attempted to make a fresh division of the land of Laconia. (Grote, Hist. of Greece, vol. ii. p. 531.) In any case, it is impossible to determine, as some writers have attempted, the lands which belonged respectively to the Spartans and the Perioeci. All that we know is, that, in the law proposed by Agis, the land bound by the four limits of Pellene, SSELLasia, Maesa, and Taygetus, was divided into 4500 lots, one for each Spartan; and that the remainder of Laconia was divided into 15,000 lots, one for each Perioecus (Plut. Agis, 8.)

With respect to the population of Laconia, we have no precise statement from the ancient writers. Of these the most important is that of Herodotus, who says that the citizens of Sparta at the time of the Persian wars was about 8000 (vii. 324). The number of the Perioeci is nowhere stated; but we know from Herodotus that there were 10,000 of them present at the battle of Plataea, 5000 heavy-armed, and 5000 light-armed (ix. 11, 29); and, as there were 50 Perioeci at each of the five-eighths of the whole number of citizens, we may venture to assume as an approximate number, that the Perioeci at the battle may have been also five-eighths of their whole number, which would give 16,000 for the males of full age. After the time of the Persian war the number of the Spartan citizens gradually but steadily declined; and Cliont is probably right in his supposition that at the time of the invasion of Laconia, in v. c. 369, the total number of Spartans did not exceed 2000; and that Isocrates, in describing the original Dorian conquerors of Laconia as only 2000, has probably adapted to the description the number of Spartans in his own time. (Isocr. Panath. p. 286, c.) About 50 years after that event, in the time of Aristot., they were already 10000 (Aristot. Pol. iv. 6. § 11); and eighty years still later, in the reign of Agis, v. c. 244, their number was reduced to only 700 (Plut. Agis, 5.) The number of Helots was very large. At the battle of Plataea there were 35,000 light-armed Helots, that is seven for every single Spartan (Herod. ix. 28.) On the population of Laconia, see Clinton, Hist. iii. 407, seq.

From v. c. 547 to v. c. 371, the boundaries of Laconia continued to be the same as we have mentioned above. But after the overthrow of her supremacy by the fatal battle of Lefcitra, the Spartans were successively stripped of the dominions they had acquired at the expense of the Messenians, Arcadia, and Argive. Epaminondas, by establishing the independent state of Messenia, confined the Spartans to the country east of Mount Taygetus; and the Arcadian city of Megalopolis, which was founded by the same statesman, encroached upon the Spartan territory in the upper vale of the Eurotas. While the Thebans were engaged in the Sacred War, the Spartans endeavoured to recover some of their territory which they had thus lost; but it was still further circumscribed by Philip, the father of Alexander the Great, who deprived the Spartans of several districts, which he assigned to the Argives, Arcadians, and Messenians. (Polyb. ix. 28; Paus. iv. 36. § 3.) After the establishment of the Achaean League their influence in the Peloponnesus sank lower and lower. For a short time they showed unwonted vigour, under their king Cleomenes, who rescued his country from the Peloponnesian League, and gave a new life to the state. They defeated the Achaean league in several battles, and seemed to be regaining a portion at least of their former power, when they were checked in their progress by Antigonus Doson, whom the Achaean called in to assist in their assistance, and were at length completely humbled by the fatal battle of Sellasia, n. c. 221. (Dict. of Geogr. art. Cleomenes.) Soon afterwards Sparta fell into the hands of a succession of usurpers; and of these Nabis, one of the most sanguinary, was compelled by T. Quinticius Flaminius, to surrender Gythium and the other maritime towns, which had aided with the Romans, and were now severed from the Spartan dominion and placed under the protection of the Achaean League, n. c. 197 (Strab. viii. 329—332; Liv. xxix. 27—44:); but this step was disapproved of by the Romans, who were afraid, that at a future time the five-eighths of the whole number of citizens, which we may venture to assume as an approximate number, that the Perioeci at the battle may have been also five-eighths of their whole number, which would give 16,000 for the males of full age. After the time of the Persian war the number of the Spartan citizens gradually but steadily declined; and Cliont is probably right in his supposition that at the time of the invasion of Laconia, in v. c. 369, the total number of Spartans did not exceed 2000; and that Isocrates, in describing the original Dorian conquerors of Laconia as only 2000, has probably adapted to the description the number of Spartans in his own time. (Isocr. Panath. p. 286, c.) About 50 years after that event, in the time of Aristot., they were already 10000 (Aristot. Pol. iv. 6. § 11); and eighty years still later, in the reign of Agis, v. c. 244, their number was reduced to only 700 (Plut. Agis, 5.) The number of Helots was very large. At the battle of Plataea there were 35,000 light-armed Helots, that is seven for every single Spartan (Herod. ix. 28.) On the population of Laconia, see Clinton, Hist. iii. 407, seq.

From v. c. 547 to v. c. 371, the boundaries of Laconia continued to be the same as we have mentioned above. But after the overthrow of her supremacy by the fatal battle of Lefcitra, the Spartans were successively stripped of the dominions they had acquired at the expense of the Messenians, Arcadia, and Argive. Epaminondas, by establishing the independent state of Messenia, confined the Spartans to the country east of Mount Taygetus; and the Arcadian city of Megalopolis, which was founded by the same statesman, encroached upon the Spartan territory in the upper vale of the Eurotas. While the Thebans were engaged in the Sacred War, the Spartans endeavoured to recover some of their territory which they had thus lost; but it was still further circumscribed by Philip, the father of Alexander the Great, who deprived the Spartans of several districts, which he assigned to the Argives, Arcadians, and Messenians. (Polyb. ix. 28; Paus. iv. 36. § 3.) After the establishment of the Achaean League their influence in the Peloponnesus sank lower and lower. For a short time they showed unwonted vigour, under their king Cleomenes, who rescued his country from the Peloponnesian League, and gave a new life to the state. They defeated the Achaean in several battles, and seemed to be regaining a portion at least of their former power, when they were checked in their progress by Antigonus Doson, whom the Achaean called in to assist in their assistance, and were at length completely humbled by the fatal battle of Sellasia, n. c. 221. (Dict. of Geogr. art. Cleomenes.) Soon afterwards Sparta fell into the hands of a succession of usurpers; and of these Nabis, one of the most sanguinary, was compelled by T. Quinticius Flaminius, to surrender Gythium and the other maritime towns, which had sided with the Romans, and were now severed from the Spartan dominion and placed under the protection of the Achaean League, n. c. 197 (Strab. viii. 329—332; Liv. xxix. 27—44:)

The Spartans were thus confined almost to the valley in which their Dorian ancestors had first settled, and, like them, were surrounded by a number of hostile places. Seven years afterwards, n. c. 188, Sparta itself was taken by Philopoemen, and annexed to the Achaean League (Plut. Phil. 16; Liv. xxxii. 32—34); but this step was disapproved of by the Romans, and produced the further increase of the Achaean League, and accordingly encouraged the party at Sparta opposed to the interests of the Achaean. But the Roman conquest of Greece, which soon followed, put an end to these disputes, and placed Laconia, together with the rest of Greece, under the immediate government of Rome. Whether the Lacedaemonians to whom their benefactors had given independence were placed again under the dominion of Sparta, is not recorded; but we know that Augustus guaranteed to them their independence, and they are henceforth mentioned under the name of Etheleneo-Laconia. Pausanius says there were originally 24 towns of the Lacedaemonians, and in his time there were still 18, of which the most important were Gythium, Teus, Peripherus, Pyrrhus, Canoseolia, Orthus, Leuctra, Thalamus, Alaeonia, Geraea, Asopus, Acraea, Boeae, Zarax, Epidauros Limera, Braiaea, Gerontiaea, Marios. (Paus. iii. 21. § 7.) Augustus showed favour to the Spartans as well as to the Lacedaemonians in general; he gave to Sparta the Messenian town of Cardamyle (Paus. iii. 26. § 7); and he also annexed to Laconia the Messenian town of Pharae (Paus. iv. 36. § 2), and gave to the Lacedaemonians the island of Cythera. (Dion Cass. liv. 7.)

At the end of the fourth century of the Christian era, Laconia was devastated by the Goths under Alaric, who took Sparta (Zosim. v. 6). Subsequently Slavonians settled in the country, and retained possession of it for a long time; but towards the end of the eighth century, in the reign of the empress Irene, the Byzantine court made an effort to recover their dominions in Peloponnesus, and finally succeeded in reducing to subjection the Slavonians in the plains, while those in Laconia who would not submit were obliged to take refuge in the fastnesses of Mt. Taygetus. When the Franks became masters of Laconia in the 13th century, they found upon...
LAOCNIA.

31. § 3. In the neighbourhood of Belemina was AGROΣ, originally an Arcadian town, which was conquered at an early period by the Spartans, and its territory annexed to Laconia. In the upper vale of the Eurotas was the Lacedaemonian Tyris, POLIS. (Liv. xxxv. 37.) Pellana was one of the three cities (Polyb. iv. 81.) : Belemina was undoubtedly another; and the third was either Asyra or Carysia.

The road to Tegea and Argos ran along the vale of the Oenus. (Paus. iii. 10. §§ 6—8.) After crossing the bridge over the Eurotas, the traveller saw on his right hand Mount Thronos, upon which stood a colossal statue of Apollo Pythaeus, looking over the city of Sparta, which lay at his feet. (Comp. Herod. i. 69.; Xen. Hell. vi. 5. § 27.) A little further on in the vale of the Oenus, was SELLASIA, which was the bulwark of Sparta in the vale of the Oenus, as Pellana was in that of the Eurotas. Above Sellasia was a small plain, the only one in the vale of the Oenus. Beyond on the east by Mt. Olympia and on the west by Mt. Evas: a small stream, called Gorgyla, flowed through the western side of the plain into the Oenus. This was the site of the celebrated battle in which Cleomenes was defeated by Antigone. (SELLASIA.) In this plain the road divided into two, one leading to Argos and the other to Tegea. The road to Argos followed the Oenus; and to the west of the road, about an hour distant from the modern ARKHION, lay CALYX. From this place to the confines of the Thry敲is in Argolis, was a forest of oaks, called SCOTTTAS (Xerviras), which derived its name from a temple of Zeus Scytis, about 10 stadia west of the road. (Paus. iii. 10. § 6; Polyb. xvi. 37.) On the ridge of Mt. Parnon the boundaries of Argolis and Laconia were marked by Hermas, of which, three heaps of stones, called of ζωντας (the slain), may perhaps be the remains. (Ros., Reise in Peloponnes, p. 173.) There was also a town OENUS, from which the river derived its name.

The road to Tegea, which is the same as the present road from Sparta to Tivonis, after leaving the plain of Sellasia, passes over a high and mountainous district, called Schweita in antiquity. The territory of Laconia extended beyond the highest ridge of the mountain; and the chief source of the Alpheus, called Σεσποταται, formed the boundary between Laconia and the Tegeas. Before reaching the Arcadian frontier, the road went through a narrow and rugged pass, now called Κλαυς. The two towns in Scytis were SCIRUS and OENUS, called Iun by Xenophon.

3. In the southern part of Laconia.—On the road from Sparta to Gythium, the chief port of the country, Pausanias (iii. 21. § 4) first mentions CROCEAE, distant about 135 stadia from Sparta, and celebrated for its quarries. KYTHUM was 30 stadia beyond Croceae. Above Gythium, in the interior, was ARGOS, to which a road also led from Croceae. Opposite Gythium was the island CRANA. After giving an account of Gythium, Pausanias divides the rest of Laconia, for the purposes of his description, into what lies left and what lies right of Gythium (τo δωροτετ Τειων, iii. 32. § 3—τo έπετετ Τειων, iii. 24. § 6.)

Following the latter, we will first mention the towns to the left or east of Gythium. Thirty stadia above Gythium was TRINAS, situate upon a promontory, which formed the NE extremity of the peninsula terminating in Cape
LACONIA.

Tasmarum. Eighty stadia beyond Trinacria was Helou, also upon the coast. The road from Sparta to Helou followed the Eurotas the greater part of the way; and Leake noticed in several parts of the rock cuts of chariot wheels, evidently the vestiges of the ancient carriage-road. (Leake, Morea, vol. i. p. 194.) Thirty stadia south of Helou on the coast was Achrion; and sixty stadia south of Achrion, Asopus, the later name of Cyparissia. Between Achrion and Asopus, Ptolemy mentions a town Biandina (Βιανδίνα, ii. 16. § 9), the name of which occurs in an inscription in the form of Blandinopolis (Βλανδίνοπολις, Böckh, Inscrip. No. 1336). Between Asopus and Achrion was an inland plain, called Luchos, containing in the interior a town of this name, and in the same neighbourhood was Plemion. Returning to the coast, 50 stadia south of Asopus, was a temple of Asclepius, in a spot called Hyperteleatium. Two hundred stadia south of Asopus was the promontory and peninsula Olympos (Olympos), connected with the mainland by a narrow istmus, which is, however, generally covered with water. Between Ongnathus and Malia is a considerable bay, called Boeotiac Sinus, from the town of Bora, situated at its head. In this neighbourhood were three ancient towns, called Etej, Ephyndias, and Sidra, which were founded by the Dorian; the two former on the Boeotiac Sinus, and the other on the eastern sea north of Cape Malea. Between Boeotia and Malea was Nupheus (Νυφεύς, Νύφευς), with a cave near the sea, in which was a fountain of sweet water. Pausanias (iii. 23. § 2) calls Nymphneas a λιμνη, but, as there is no lake in this neighbourhood, Bollay conjectures (Recherches, loc. p. 99) that we should read λιμνη, and places Nymphneas at the harbour of Sante Marinas, where a fountain of water issues from a grotto. The promontory Malea (Μάλεα, Steph. B. s. v. et alii; Malai, Herod. i. 82; Strab. viii. p. 369), still called Malid, the most southerly point in Greece with the exception of Tasmarum, was much dreaded by the ancient sailors on account of the winds and waves of the two seas, which here meet together. Hence arose the proverb, "after doubling Malea, forget your country" (Strab. viii. p. 376), and the name Malidarius (πατριάρχης Μαλίδ) of a ship's cat or ship's caput (Τακτ. ii. 83). On the promontory there was a statue of Apollo. (Steph. B. s. v. Αλίβος; Αύτάλλων Μαλίδων, Paus. iii. 12. § 8.) South of Malea was the island Cynthera. Following the eastern coast we first come to Sidra, already mentioned; then to Epidaurus, 100 stadia from Malea; next to Epidaurus Limnea, and successively to Zara, Cyphanta, and Praia or Braies, of which the last is near the confines of Argolis. The numbers in Pausanias, giving the distances of these places from one another, are corrupt: see Cyphanta. In the interior, between the Eurotas and the south-western slopes of Parnon, Pausanias mentions Gerontia, situated 120 stadia north of Achrion; Marius, 100 stadia east of Gerontia; Glyptia, also called Glympsa, north of Marius; and Selinus, 20 stadia from Gerontia.

Returning now to Gythium, we proceed to enumerate the towns to the right, that is, west and south, of this place, according to the plan of Pausanias (iii. 24. § 6, seq.): in other words, the towns in the peninsula to which we have just referred. Forty stadia south-west of Gythium was Las upon the coast, which some writers call Asine. Thirty stadia from a hill near Las was Unyss, in the interior; and a little below Las was the river Smenus (Σμήνος), rising in Mt. Taygetus, which Pausanias praises for the excellence of its water, now the river of Pasobon. Immediately south of this river was the temple of Artemis Dictyna, on a promontory now called Agaphrana; and in the same neighbourhood was a village called by Pausanias Aramus or Arunum, where Las, the founder of the city of Las, was said to have been buried. South of the promontory of Agaphrana is a stream, now called the river of Dikhevos, the Scyras (Σχυράς) of Pausanias (iii. 25. § 1), beyond which were an altar and temple of Zeus: there are still some ancient remains on the right side of the river, near its mouth. Further south is the peninsula of Sustari, inclosing a bay of the same name, which is conjectured to be the Sinus Aegleidus of Pliny (iv. s. a. 8); if so, we must place here Aegilla, which is mentioned incidentally by Pausanias (iv. 17. § 1) as a town of Laconia. Inland 40 stadia from the river Scyras lay Pyrrhichus. SE. of Pyrrhichus was the town of Tachymene. Between Tachymene and the Tasmarian peninsula no town is mentioned, but at a place on the coast called Kikonia there are considerable remains of two temples. The Tasmarian peninsula is connected with that of Taygetus by an isthmus half a mile across, and contains two harbours, named Phanathus and Achilleius Podtus [see Taraxum]: the extremity of the peninsula is Cottus. Evidently its latter point, and ascending southwards, we come to the town of Taraxum, afterwards called Carneopolis, 40 stadia above the Tasmarian isthmus. Thirty stadia N. of Carneopolis was the commencement of the promontory Thyidra, nearly as large as the Tasmarian peninsula, but connected with the mainland by a much wider isthmus. On this promontory were the towns of Hippola and Messara. North of Messara was Oetyllus; but the distance of 150 stadia, assigned by Pausanias between the two places, is too much. [Oetyllus.] Eighty stadia north of Oetyllus was Thalamas, situated inland, and 20 stadia from Thalamae was Paphnus, upon the coast. Both these towns were upon the lesser Paphnus, now called the Micles, which the Messenians said was the place where the Phœnicians landed. (Strab. viii. p. 561; Paus. iii. 26. § 8.) The districts north of this river were taken away from the Laconians by Philip in B.C. 338, and granted to the Messenians; but it is probable that the latter did not long retain possession of them. In the time of the Roman empire they formed part of Elenethero-Laconia. (Leake, Peloponnesiacos, p. 179.) Twenty stadia north of Paphnus, upon the coast, was Leuctra or Leuctrum; and 60 stadia north of the latter, Cardamytles, at the distance of 8 stadia from the sea. North of Cardamytles was Gerania, the most northerly of the Elenethero-Laconian towns. Thirti stadia from Gerania, in the interior, was Alagonia.

LACONICUS SINUS. [Laconis.]

LACONIMURGI. [Celtica; Vettones.]

LACRINTI, mentioned by Capitolinus (M. Antonii, c. 22), by Dion Cassius (lxxi. 12), and by Petro Sphyrax (extra Leg. s. c. ed. Bonn), along with the Astingi and Buri. They were either Dacian or on the Dacian frontier, mixed.
LACTARIUS MONS.

as known only from having, in the Marcomannic war, opposed a body of invading Attingia, and, having so done, contracted an alliance with Rome. [E. G. L.]

LACTATORIUS MONS ("Malaxus sp.; Monte S. Angelo"), was the name given by the Romans to a mountain in the neighbourhood of Stabiae in Campania. It was derived from the circumstance that the mountain abounded in excellent pastures, which were famous for the quality of the milk they produced; on which account the mountain was resorted to by invalids, especially in cases of consumption, for which a milk of dandelion was particularly beneficial. (Casual. Ep. xii. 10; Gelen, de Med. Med. v. 12.) It was at the foot of this mountain that Nares obtained a great victory over the Goths under Teias in A.D. 555, in which the Gothic king was slain. (Procop. B. G. iv. 35, 36.) The description of the Mons Lactarius, and its position with regard to Stabiae, leave no doubt that it was a part of the mountain range which branches off from the Apennines near Nocera (Nuceria), and separates the Bay of Naples from that of Paestum. The highest point of this range, the Monte S. Angelo, attains a height of about 5000 feet; the whole range is calcareous, and presents beautiful forests, as well as abundant pastures. The name of Lertiere, still borne by a town on the slope of the mountain side, a few miles above Stabiae, is evidently a revival of this ancient name. [E. B. B.]

LACTORA, in Gallia Aquitania, is placed by the Antonine Itin. on the road between Agium (Agens) and Collimbrem (Asch), and 15 Gallic leagues from each. The distance and name correspond to the position and name of Lectoria. Several Roman inscriptions have been discovered with this name, Lectoria, and Civitas Lectariae; but the place is not mentioned by any extant writer. [G. L.]

LACUS FELICIS, a place in Noricum, on the south of the Danube, 25 miles west of Arsalpe, and 20 miles east of Laurescium (It. Ant. pp. 245, 248). According to the Not. Imper., under which it is called Lacufelicia, it was the head-quarters of Noric horse archers. Its name is generally identified with the town of Niederwaltelson, near the Danube. [L. S.]

LACTYDON. [Marsilia.]

LADE (Adip), the largest of a group of small islands in the Sinus Lematicus, close by Miletus, and opposite the mouth of the Meander. It was a protection to the harbours of Miletus, but in Strabo's time it was one of the haunts and Strongholds of pirates. Lade is celebrated in history for the naval defeat sustained there by the Ionians against the Persians in B.C. 494. (Herod. vi. 8; Thucyd. viii. 17, 24; Strab. iv. p. 635; Pan. i. 35; 6 8; Steph. B. s. l.; Plin. v. 37.) That the island was not quite uninhabited, is clear from Strabo, and from the fact of Stephanus B. mentioning the ethnos form of the name, Lade. [L. S.]

LADICUS, a mountain of Gallaecia, the name of which occurs in ancient inscriptions, and is still preserved in that of the Codex de Lodoco, near Montejerado on the Sil. (Flores, Exp. S. vol. xv. p. 68; Ubert, vol. ii. pt. 1. p. 278.) [F. S.]

LADOCELIA ("Adippia"), a place in Arcadia, in the district Melaen, and, after the building of Megalopolis, a suburb of that city, was situated upon the road from the latter to Pallantium and Tegea. Here a battle was fought between the Mantineans and Tegeans, B.C. 423, and between the Achaeans and Cleomenes, B.C. 226. Tmceydes calls it Laodicium (Adippia) in Orestes. (Paus. viii. 44.

§ 1; Thuc. iv. 134; Vol. ii. 51, 55.) [Orestesian.]

LADON (Adip). 1. A river of Elis, flowing into the Pausias. (Elis, p. 617, a.)

2. A river of Arcadia, flowing into the Alpheius. [Alpheian.]

LAEAEI (Aeaei), a Paonian tribe in Macedonia, included within the dominion of Sitileon, probably situated to the E. of the Strymon. (Thuc. ii. 96.) [E. B. J.]

LAEETA'NI or LEET'ANTI (Leetaunae, Potl. ii. 6. §§ 18, 74; A. Leutaunae, Strab. iii. p. 180), a people on the N. part of the E. coast of Hispia and Taraceunias, above the Costetani. Strabo merely speaks vaguely of the sea-coast between the Eubo and the Pyrenes as belonging to "the Leetani and the Lartolaeatas, and other such tribes" ("των... Αλπικών και Αλπικολαμάτων και Κορίων τωνωτών"), as far as Emporium, while Polteny places them about Barcino (Barcelona) and the river Rubrurcatus (Lobregas); whence it appears that they extended from below the Rubrurcatus on the SW. up to the borders of the Indigetes, upon the bay of Emporium, on the NE. They are undoubtedly the same people as the Laestani of Pliny (iii. 3. 6 a; comp. Inscr. op. Gruter. p. 613, 6) who speaks of their country (Laestania) as producing good wine in abundance. (Flores, Vol. iv. 6. 6 6; Strab. ii. 155, 7 7; Tit. 27, 50, vili. 52; Sil. Ital. iii. 365, xv. 177.) Strabo describes it as a fertile country, well furnished with harbours. Besides their capital Barcino (Barcelona), they had the following towns: (1.) On the east coast, from SW. to NE.: BANTULO (Barouacs, Potl. ii. 6. § 19; Basileia; Muratori, p. 1035, no. 9; Flores, Exp. S. vol. xxiv. p. 66, vol. xxii. p. 31; Marca, Hisp. ii. 15, p. 199, 1. with a small river of the same name (Basa; Mela, ii. 6); ILIBRO or ILIBEO, a city of the convents of Taraco, with the civitas Romana (Mela, ii. 6; Plin. iii. 3. a. 4; Alcuboe, Potl. ii. 6. § 19, where the vulgar reading is Alibwes; prob. Abeluso, Marc. Hisp. ii. 15, p. 199; Flores, Exp. S. vol. xxix. p. 94); BLANDA (Blandinga, Mela, ii. 6); NOVAE, on the NE. of the mouth of the little river Larnum (Tordona: Plin. iii. 3. a. 4): between Bastulo and Iluro Polteny places the LUNARIAN PRA. (Λυναρίων ἐπισαραύνων; probably the headland marked by the Torre de Monge). (2.) On the high road from Taraco to Narbo Martius in Gaul (His. Ant. p. 395): FIGUS, 20 M. P. W. of Bircaco (near Martorell, on the right bank of the Lobregat), marking doubtless the borders of the Laestani and the Costetani; then BIRGACO; next PRATIORUM, 17 M. P. (near Hostoric or La Rossa, where are great ruins; Marca, Hisp. ii. 20); SERRHAEAE or SERRACAE, 15 M. P. (prob. S. Pere de Serca and San Solec); AQUAE VOCOONARI, 15 M. P. (Caludes de Malabenda). (3.) Other inland towns: RUBRICATA (Potl.); EBERA, a municipality; its site is unknown (Inscr. op. Muratori, p. 1106, no. 7), 1107, no. 1); AQUAE CALIDAE, a civitas stipendiaria, in the convents of Taraco (Plin. iii. 3. 4; Acalidenae: Calidas de Monby, N. of Barcelona, Marca, Hisp. ii. 16, p. 167; Flores, Exp. S. vol. xxii. p. 37; Ubert, vol. ii. pt. 1. pp. 423, 484.)

LAEDERATA (Adespera or Aespera, Procop. de Aed. iv. 6), a town in the north of Moesia, on the Danube, and a few miles east of Viminacium. In the Notitia its name is Laedetana; it must have been near the modern Ruma. [L. S.]
PIETY even ascribes the foundation of that city to the Laevi, in conjunction with the Marici, a name otherwise wholly unknown, but apparently also a Ligurian tribe. There can be no doubt that in this part of Italy tribes of Gaulish and Ligurian origin were very much intermixed, and probably the latter were in many cases confounded with the Gauls. [LIGURIA.]

LAGANIA (Aegasia), a village of the Tectosagonii in Galatea, 24 miles to the east of Juliolopolis. It is not mentioned by any of the classical writers, but it must afterwards have increased in importance, for during the Christian period, it was the see of a bishop, and took the name of Anastasopolis (Concil. Chalc. p. 663, and p. 95, where the name is misspelt Aesania ; Hist. Auct. p. 142, where the name is Lagiasia; It. Hiers. p. 574, where we read Agamnia). There is little doubt that the Latania in Potemny (v. 1, § 14) and the Rhyganeagalia of Hierocles (p. 697) are the same as Lagania (comp. Theod. Syr. c. 2). Kiepert, in his map of Asia Minor, identifies it with Beg Basar. [L.S.]

LAGARIA (Aegasia; Eth. Aegaropatzi, Lagarimia), a small town of Lucania, situated between Tarentum and Beneventum, which, according to the commonly received legend, was founded by a colony of Phocian under the command of Epeius, the architect of the wooden horse. (Strab. vi. p. 263; Lycochr. Alex. 930; Tzetza. ad loc.) Strabo, the only geographical writer who mentions it, calls it only a fortress (γαστίμη), and it was probably never a place of any importance; though deriving some security from the excellence of its wines, which was esteemed one of the best in Italy. (Strab. L. c.; Plin. xiv. 6. s. a.) The statement of Strabo, above quoted, is the only clue to its position, which cannot therefore be determined with any certainty. Clavarius places it at Nocera, about 10 miles from the sea, and this conjecture (for it is nothing more) has been adopted by Romanelli. The wines of this neighbourhood are said still to preserve their ancient reputation. (Clucer. Ital. p. 1272; Romanelli, vol. i. p. 248.) [R. H. B.]

LAGECEUM. [LEGEOLOLUM.]

LAGINA (?τα Δανών), a place in the territory of Stratoniceia, in Caria, contained a most splendid temple of Hecate, at which every year great festivals were celebrated. (Strab. vi. p. 650.) Tacitus (Ann. iii. 62), when speaking of the worship of Trivia among the Stratoniceans, evidently means Hecate. The name of Lagina is still preserved in the village of Laka, not far from the sources of the Tebina. Lagina, mentioned by Steph. B. as a ἐνευραρχήν Καπραί, seems to be the same as the Laguna of Strabo. [L.S.]

LAGNI (Aegys), a town of the Arvanacis, in Elis. (Polyb. ii. 13; Hor. Coron. iii. 17; Plin. iii. 5. s. 9; Sil. Ital. vii. 410.) [E.E.B.]

LAEVI or LAI (Aedis), a tribe of Cisalpine Gaul, which dwelt near the sources of the river Padus. This is the statement of Polybios (ii. 17), who associates them with the Libici (Aethiopi), and says that the two tribes occupied the part of the plains of Cisalpine Gaul nearest to the sources of the Padus, and next to them came the Insubrians. He distinctly reckons them among the Gauls' tribes who had crossed the Alps and settled in the plains of Northern Italy; on the other hand, both Livy and Pliny call them Ligurians. (Livy v. 35; Plin. iii. 17. s. 21.)

The reading in the passage of Livy is, indeed, very uncertain; but he would appear to agree with Pliny in placing them in the neighbourhood of Ticinum.
LAGUSA.

in his map, identifies it with Polysagros. (Strab. x. p. 484; Steph. B. s. v.; Eustath. ad Il. ii. 625, p. 306.)

LAGUSA (Adrōs), one of a group of small islands in the bay of Telmessus in Lycia, 5 stadia from Telmessus, and 80 from Cissidae. (Plin. v. 35; Steph. B. s. v.; Stephan. Marx. Mag. § 226, foll.)

This island is generally considered to be the same as the modern Penage of Cordigliana. [L.S.]

LAGUSSAE, a group of small islands off the coast of Troy, to the north of Tenedos (Plin. v. 38; comp. Eustath. ad Hom. Il. ii. p. 306). Their modern name is Tauchos Aδασει.

LAIISH, the more ancient name of Dan. [DAN.]

LALASIS (Δαλᾶς), Potol. v. 8 § 6, where some MSS. have Δαλᾶς, a district in Cilicia, extending along Mount Taurus, above the district called Scelentes. Pliny (v. 23) also mentions a town Lalasia in Isauria, and this town accordingly seems to have been the capital of the district Lalasia, which may have extended to the north of Mount Taurus. It is probable, moreover, that the Isarian town of Lalasa, mentioned by Stephanus B., and which, he says, was in his day called Dailasos, is the same as Lalasia. If this be so, then it is not identical with the Dailasos of Hierocles (p. 710). Basilius of Selevcios informs us that the town stood on a lofty height, but was well provided with water, and not destitute of other advantages. (Wesseling, ad Hieroc. l. c.) From all these circumstances, we might be inclined to consider the reading Δαλᾶς in Pliny to be the correct one, were it not that the coinage of the place and the bear the inscription Aδασει. (Sestini, p. 96.)

LALENESIS (Δαλένσις or Δαλενσις), Potol. v. 7 § 6), a small town in the district of Maienene in Armenia Minor, on the east of Zorapassus. Its site is unknown, and no ancient writer besides Ptolemy mentions it. [L.S.]

LALETANI. [LALETANI.]

LAMBER or LAMBRUS, a river of Northern Italy, in Gallia Transpadana, noticed by Pliny among the affluents of the Padus which join that river on its left or northern bank. (Plin. iii. 19. a. 23.) It is still called the Lamber, and rises in a small lake called the Lago di Posiano (the Epulac Lacus of Pliny), from whence it flows within 3 miles of Milan, and enters the Po about midway between the Ticino and the Adda. Sidonius Apollinaris contrasts its stagnant and weedy stream (salinem Lamberas) with the blue waters of the Adda. (Ep. i. 5.) The Tabula as well as the Geographer of Ravenna gives a town of the name of Lamberum, of which no trace is found elsewhere. It is probably a corruption of a station, Ad Lambrum, at the passage of the river of that name, though the Tabula insensibly transfers it to the S. side of the Padus. (Tab. Pent.; Geogr. Rav. iv. 30.) [E. H. B.]

LAMBESE (Pet. Ant. pp. 33, 34, 40; Tab. Pent.; Adamesa, Potol. iv. 3 § 22; Lambedos, Inscr.; Lambeasa, Augustin. adv. Donat. vi. 13; Lambeisana Colonos, Cypriam. Epis. 55; Lembos or Teosawt, large Ru.), one of the most important cities in the interior of Numidia, belonging to the Massili. It lay near the confines of Mauretania, at the W. foot of the M. Auraius (Jebel Arewa), 102 M.P. from Skerit, 118 from Thysdrus, and 94 from Cirta. It was the station of an entire legion, the Legio III. Augusta (Aurelia Victoriniana, Potol. i. c.; and Inscr.). Its importance was attested by its magnificent ruins, among which are seen the remains of an amphitheatre, a temple of Aesclepius, a triumphal arch, and other buildings, enclosed by a wall, in the circuit of which 40 gates have been traced, 15 of them still in a good state of preservation. The silence of Procopius respecting such a city seems to imply that it had been destroyed before the age of Justinian. (Shaw, Travels, p. 57; Bruce; Paysonell; Pellissier, Exploration Scientifique de l’Algerie, vol. vi. pp. 388, 389.) [P. S.]

LAMBRICA or LAMBRICA, a town of the Cailafi Lucenses in Gallasia, near the confines of the territory of the Cailafi. It is called El-Padron. (Mela. iii. 1 § 8; Uberti, vol. ii. pt. 1, p. 439.) [P. S.]

LAMETTINI (Ἀμηττίνοι), a city of Bruttium, mentioned only by Stephanus of Byzantium (s. e.), on the authority of Hecaleus, who added that there was a river also of the name of Lametritis (Ἀμηττίνος). We find this again alluded to by Lyconius. (Abr. 1085.) There may be no doubt that this was the stream still called Lamato, which flows into the gulf of Sta. Eufemia: and this is confirmed by the authority of Aristotle, who gives to that gulf, otherwise known as the Sinus Terinaeius or Hippopotamos, the name of the LAMETRIS GULF (.getLongitude apodewa, Arist. Pol. viii. 10). Hence there can be little doubt that the city of Lamettini also was situated on the shores of the same bay, though Stephanus vaguely calls it “near Crotona.” (Steph. B. l. c.) No other writer mentions the name (which is evidently an ethnic form like Leontini), and it is probable that the town was destroyed or sunk into a dependent condition at an early period. An inscription, which records it as an existing municipality at the time of Trajan, is certainly spurious. (Mommsen, Inscr. Romae, 1. c. p. 368. App. No. 936.) It is generally supposed to have been situated either at or near the modern village of Sta. Eufemia, but this is mere conjecture. [E. H. B.]

LAMAIA (Λαμαία: Εβα Λαμαία: Ειθής), a town of the Maienene, though afterwards separated from them, situated in the district of Phthiotis in Thessaly. Strabo describes Lamia as situated above the plain which lies at the foot of the Maiaco gulf, at the distance of 30 stadia from the Sparcheius, and 50 stadia from the sea (lxx. pp. 433, 433). Livy says that it was placed on a height distant seven miles from Heraclea, of which it commanded the prospect (xxxvi. 24), and on the route which led from Thermopylae through the passes of Phthiotia to Thammici (xxxii. 4). Strabo further relates that it was subject to earthquakes (l. p. 60). Lamia is celebrated in history on account of the war which the Athenians and the confederate Greeks carried on against Antipater in B.c. 323. Antipater was at first unsuccessful, and took refuge in Lamia, where he was besieged for some time by his allies. From this circumstance this contest is usually called
the Lamian war. Having afterwards received succors from Craterus, Antipater retreated northwards, and defeated the allies at the battle of Crannon in the following year. (Diod. xvii. 9, seq.; Polyb. ix. 29.) In v. c. 208 Philip, son of Demetrius, defeated the Macedonians near Lamia. (Liv. xxvii. 30.) In 192 Lamia opened its gates to Antiochus (Liv. xxxv. 45), and was in consequence besieged in the following year by Philip, who was then acting in conjunction with the Romans. (Liv. xxxvi. 25.) On this occasion Livy mentions the difficulty which the Macedonians experienced in mining the rock, which was so close to the sea (as also implies Antiqu. x. 46. 30).)

In 190 the town was taken by the Romans. (Liv. xxxvi. 4, 5.) Lamia is mentioned by Piny (iv. 7. a. 14), and was also in existence in the sixth century. (Hieroc. p. 642, ed. Wesseling.) The site of Lamia is fixed at Zitiada, both by the description of the ancient writers of the position of Lamia, and by an inscription which Paul Lucas copied at this place. Zitiada is situated on a hill, and is by nature a strongly fortified position. The only remains of the ancient city which Leake discovered were some pieces of the walls of the Acropolis, forming a part of those of the modern castle, and some small remains of the town walls at the foot of the hill, beyond the extreme modern hospital. On the opposite side of the town Leake noticed a small river, which we learn from Strabo (i. p. 434, 450), was called Achelous. The port of Malia was named Phalara (v. d. Aspa, Strab. i. p. 435; Polyb. xi. 11; Liv. xxvii. 30, xxxv. 43; Pint. iv. 7. a. 12), now Styliaska. Zitiada has been compared to Athens, with its old castle, or acropolis, above, and its Piraeus on the Stryika, on the shore below. There is a fine view from the castle, commanding the whole country adjacent to the head of the Malia gulf. (Lucas, Voyage dans la Grèce, vol. i. p. 405; Leake, Northern Greece, vol. ii. p. 2; Stephani, Reise, etc. p. 39.)

**COIN OF LAMIA.**

**LAMIA.**

**LAMMUS.**

***LAMOTIS (Aquaeus).*** A district on the eastern coast of Cilicia Asea, between the rivers Calycadnus and Lamus. Its capital bore the name of Lamus, from which that of the district was derived. (Ptol. v. 8. § 6; comp. Lamus.)

***LAMPAS (Apsa).*** A harbour on the E. coast of the Tauric Chersonese, 800 stadia from Theodosia, and 220 stadia from Cius-Metopon. (Arrian, Perip. p. 20; Anon. Perip. p. 6.) Arrian uses the two names Lampas and Halmitis as if they belonged to the same place, but the Anonymous Coptic-describes speaks of Lampas alone, Halmitis probably took his name from being a haven for sailing fish. The name is preserved in the places now called Biskil-Lambat and Koutchouk-Lambat, Tartar villages at the end of a bay defended by the promontory of Plaka, near which ancient ruins have been found. (Dubois de Montperreux, Voyage autour du Cassanie, vol. v. p. 713, vol. vi. p. 46; Bennell, Cappadocia, Geog. vol. ii. p. 340.)

***LAMPADAE OR LAMPAGAE (Aquaeus or Aquaeus, Olymp. vii. i. § 49),*** a small tribe who lived among the offshoots of the Imaus, in the NW. part of India, about the sources of the Ghous (now Kamen), which is itself a tributary of the Kebet river.

***LAMPE (Aquaeus),*** a town in Crete, also called Lampia. According to this town Stephanes B. (v. d. 79) mentions two other towns of this name, otherwise unknown, one in Arcadia and the other in Argolis.

***LAMPEIA.*** (ESTEMANTHUS.)

***LAMPETIA.*** (CLAMPETIA.)

***LAMPOEIA OR LAMPONIUM (Aquaeus, Aquaeus, Olymp. vii. i. § 49),*** an Aeolian town in the south-west of Tros, of which no particulars are known, except that it was annexed to Persia by the satrap Otanes in the reign of Darius Hytsaspis. It is mentioned only by the earliest writers. (Herod. v. 26; Strab. xiii. p. 610; Steph. B. v. 79.)

***LAMPSACUS (Adaepaeus; Eth. Adaepaeus),*** sometimes also called Lampasacus (Cie. ad Viet. i. 6; Por. i. 17. 19), was one of the most celebrated Greek settlements in Myra on the Halieon. It was known to have existed under the name of Phytus or Fytusus before it received colonies from the Ionian cities of Phocaea and Miletus. (Strab. xii. p. 599; Steph. B. v. 40; Plin. v. 40; Rom. ii. 529; Plin. de Viet. M. 18.) It was situated, opposite to Callipolis, in the Thracian Chersones. It possessed an excellent harbour. Herodotus (v. 37) relates that the elder Miltiades, who was settled in the Thracian Chersonese, made war upon the Lampasaci, but that they took him by surprise, and made him their prisoner. Being threatened, however, by Croesus, who supported Miltiades, they set him free. During the Ionian revolt, the town fell into the hands of the Persians. (Herod. v. 117.)

The territory about Lampasacus produced excellent wine, whence the king of Persia bestowed it upon Themistocles, that he might thence provide himself with wine. (Thucyd. i. 138; Athen. i. p. 29; Diod. xi. 57; Plut. Them. 29; Nepos, Them. 10; Amm. Marc. xxiii. 8.) But even while Lampasacus acknowledged the supremacy of Persia, it continued to be governed by a native prince, being the tyrant, of the name of Hippeios. His son Aresadius married Archelaus, a daughter of Pissistratus, whose tomb, commemorating her virtues, was seen there in the time of Thucydides (vi. 59). The attempt of
LAMPSUS, a town of Histiaeotis in Thessaly, on the borders of Thessalia. (Liv. xxii. 14.)

LAMPITRA. [Artica, p. 331, 4.] 

LAMUS (Aduos), a village of Cilicia, at the mouth of the river Lamus, from which the whole district derived the name of Lamotis. The river is mentioned by Stephanus B. (from Alexander Polyhisteus), and both the river and the village by Strabo (xiv. p. 671) and Ptolemy (v. 8. §§ 4, 6). The river, which is otherwise of no importance, formed the boundary between Cilicia Aspera and Cilicia Propria, and still bears the name of Lamas or Lamous. About the village of Lamus no particulars are known. (Comp. Nonnus, Dionys. xxiv. 50; Hissec. p. 709.)

LANGOBARDI, a great harbour near Cape Hercules, on the coast of Pontus, not far from Thermiscyra. (Anonym. Peripl. Pont. Eux. p. 10.)

LANCIA (Dion. Cass. l. ii. 25, 29; Flor. iv. 12; Oros. vi. 21), or LANCICATUM (Arystauron, Pol. ii. 6 § 29), the chief city of the LANCICATI (Arystauron, Pol. l. c.) or LANCICINES (Plin. liii. 3. a. 4), a tribe of the Astures, in Hispanic Tartessus. It was strongly fortified, and was the most important city of that region, even more so than Legio VII. Gemina, at least before the settlement of the latter by the Romans, by whom Lancia was destroyed, though it was again restored. It lay on the high road from Caesarisangusia to Legio VII. (Leon), only 9 M. P. from the latter, where its name is still to be traced in that of Soldanico or Soldancia. (Flores, Esp. s. vol. vii. 16; Ukert, vol. ii. pt. 1. p. 441.) [F. S.]

LANCIENSES. [LANCIE] 

LANCIENSES OCELENSES OR TRANSCURDANI. [OCLUM.] 

LANGOBARDI, LONGOBARDI (Ariarathes, Ariaorathes, also Ariaorathes, and Ariaorathes, a tribe of German Origin), the first named in the plain, south of the lower Elbe, and who belonged to the Suevi (Strab. vii. p. 290, where Kramer reads Αριαράθης; Pol. ii. 11. §§ 9, 17). According to Paulus Diaconus, himself a Langobard, or Lombard (Hist. Langob. i. 3, 8; comp. Isidor. Orig. ix. 2; Egin. Mnr. n. v. 2; etc.), the tribe derived its name from the long beard, by which they distinguished themselves from the other Germans, who generally shaved their beards. But it seems to be more probable that they derived the name from the country they inhabited on the banks of the Elbe, where Borsa (or Bord) still signifies a fertile plain by the side of a river; and a district near Magdeburg is still called the regio Borsa (Wilhelm, Germanien, p. 266). According to this, Longobardi would signify "inhabitants of the long boro of the river." The district in which we first meet with them, is the left point of the Elbe, from the point where the Saale empties itself into it, to the frontier of the Chauci Minores, so that they were bounded in the north by the Elbe, in the east by the Summiens, in the south by the Chauci, and in the west by the Fosii and Agravirii. Traces of the name of the Langobardi still occur in that country in such names as Bardengau, Bardowick. The earliest writer who mentions the Langobardi as inhabiting those parts, is Valerius Paterculus (iii. 106). But notwithstanding the unanimous testimony of the ancients that they were a branch of the Suevi, their own historian (Paul. Dal. i. c.; comp. Egin. Mnr.) states that the Langobardi originally did not inhabit any part of Germany, but had migrated south from Scandinavia, where they had borne the name of Vimini, and that they assumed the name Langobardi after their arrival in Germany. It is impossible to say what value is to be attributed to this statement, which has found as many advocates as it has had opponents. From Strabo (i. c.) it is clear that they occupied the northern bank of the Elbe, and it is possible that they were among those Germans whom Tiberius, in the reign of Augustus drove across the Elbe (Sust. Aug. 21). In their new country they were soon reduced to submission by Marobodinus, but
afterwards they shook off the yoke, and, in conjunction with the Semones, joined the confederacy of the Chernsacs against the Marcomanni. (Tac. Ann. ii. 45.) When, in consequence of the murder of Arminius, the power of the Chernsacs was decaying more and more, the Langobardi not only oppressed and restored Italus, the king of the Chernsacs who had been expelled, but seem to have extended their own territory in the south, so as to occupy the country between Halle, Magdeburg, and Leipzig. (Tac. Ann. xi. 17.) They were not a numerous tribe, but their want of numbers was made up for by their natural bravery. Italus and Venovius described them as a "genus etiam Germaniae ferocior." Shortly after these events the Langobardi disappear from history, until they are mentioned again by Ptolemy (l.c.), who places them in the extensive territory between the Rhine and Weser, and even beyond the latter river almost as far as the Elbe. They thus occupied the country which had formerly been inhabited by the tribes forming the Chernsacan confederacy. This great extension of their territory shows that their power must have been increasing ever since their liberation from the yoke of Maroboduus. After this time we again hear nothing of the Longobardi for a considerable period. They are indeed mentioned, in an excerpt from the history of Ptolemy (p. 344), as allies of the Obi on the frontiers of Pannonia; but otherwise history is silent about them, until, in the second half of the 5th century, they appear on the north of the Danube in Upper Hungary as tributary to the Herauli (Procop. de Bell. Goth. ii. 15, who describes them as Christians). Whether these Langobardi, however, were the same people whom we last met with between the Rhine and the Elbe, or whether they were only a band of emigrants who had in the course of time become so numerous as to form a distinct tribe, is a question which cannot be answered with certainty, although the latter seems to be the more probable supposition. Their natural love of freedom could not bear to submit to the rule of the Herauli, and after having defeated the king of the latter, they established themselves in the northern country. Quadri, likewise a Suevian tribe, and henceforth they were for a long time the terror of their neighbours and the Roman province of Pannonia. (Paul. Diae. i. 22.) For, being the most powerful nation in those parts, they extended their dominion down the Danube, and occupied the extensive plains in the north of Dacia on the river Thesius, where they first came into conflict with the Geptaei, and entered Pannonia. (Paul. Diae. i. 30.) The emperor Justinian, wanting their support against the Gepidae, gave them lands and supplied them with money (Procop. Bell. Goth. iii. 33), and under their king Andoin they gained a great victory over the Gepidae. (Paul. Diae. i. 23; Procop. Bell. Goth. iii. 34, iv. 18, 22.) Albinus, Andoin's successor, after having, in his first campaign with the Avari, completely overthrown the empire of the Gepidae, led the Langobardi, in a. D. 568, into Italy, where they permanently established themselves, and founded the kingdom from which down to this day the north-east of Italy bears the name of Lombardy. (Exc. de Legat. pp. 303, 304; Marinus Episc. Chron. Romae. ii. 412.) The occasion of their invading Italy is related as follows. When Albinus had concluded his alliance with the Avari, and had ceded to them his own dominions, Nares, to take revenge upon Justin, invited them to quit their poor country and take possession of the fertile plains of Italy. Albinus accordingly crossed the Alps, and as the north of Italy was badly defended, he succeeded in a short time in establishing his kingdom, which continued to flourish until it was overpowered and destroyed by Charlemagne. (Paul. Diae. ii. 6; Eginhard, Vit. Carol. M. 6.) The history of Langobardis or singular people whose name still survives, has been written in Latin by Paulus Diaconus (Variefrid), in the reign of Charlemagne, and by another Lombard of the 9th century, whose name is unknown. (Comp. Wilhelm, Germanien, p. 331, foll.; Zosimus, de Duobus et de Nunciostratunia, p. 109, foll.; P. Duflik, Quene- vitro, Leipzig, 1840, and Venovius described them in Berlin, 1830, Svo.; Koehl-Stefeneld, des Reich der Langobarden in Italien, Munich, 1839; Latham, Tac. Germ. p. 139, and Epit. p. lxxxiv.)

[LANUVIUM.

(LANUVIUM (Aenolivi, Strab.; Aenolivi, Ptol.: Ebst. Aenolivi, Lanuvium: Civita Latina), an ancient and important city of Latium, situated on a lofty hill forming the projecting spur or promontory of the Alban Hills towards the S. It was distant about 20 miles from Rome, on the right of the Appian Way, rather more than a mile from the road. The name is often written in inscriptions, even of a good time, Lanuvium; hence the confusion which has arisen in all our MSS. of ancient authors between it and the city of Lanuvium in Samnium, and the name of the latter has been interchanged as to leave constant doubt which of the two is really meant, and in the middle ages they appear to have been actually regarded as the same place; whence the name of "Civitas Lavini," by which Lanuvium is still known, and which can be traced as far back as the fourteenth century. The foundation of Lanuvium was ascribed by a tradition recorded by Appian (B. C. ii. 40) to Dionysius; a legend probably arising from some fancied connection with the worship of Juno at Arx. A tradition that has a more historical aspect, though perhaps little more historical worth, represented it as one of the colonies of Alba. (Diod. vii. ap. Euseb. Arm. p. 185.) The statement of Caesar (ap. Plineus, iv. 4. § 21) that it was one of the cities which suffered under Titus' persecution is based on misunderstanding, for the celebrated temple of Diana at Aricia, is the first fact concerning it that can be looked upon as historical, and shows that Lanuvium was already a city of consideration and power. Its name appears also in the list given by Dionysius of the cities that formed the league against Rome in B. C. 498, and there is no doubt that it was at once one of the thirty cities of the Latin League. (Dionys. v. 61; Niebuhr, vol. ii. p. 17.) But from this time we hear little of it, except that it was the faithful ally of Rome during her long wars with the Volscians and Aequians (Liv. vi. 21): the position of Lanuvium would indeed cause it to be one of the cities most immediately interested in opposing the progress of the Volscians and Semelens; for it was their chief city and rival of Antium. We have no explanation of the causes which, in B. C. 383, led the Lanuvians suddenly to change their policy, and take up arms, together with some other Latin cities, in favour of the Volscians (Liv. vi. 21). They must have shared in the defeat of their allies near Satricium; but apparently were admitted to submission on favourable terms, and we hear no more of them till the great Latin War in B. C. 340, in which they took an active and important part. At first, indeed, they seem to have hesitated and delayed to take the field; but in the two last campaigns their forces are
LANUVIUM.

particularly mentioned, both among those that fought at Pediae in n. c. 339, and the next year at Astura (Liv. viii. 12, 13). In the general settlement of affairs at the close of the war Lanuvium obtained the Roman civitas, but apparently in the first instance without the right of suffrage; for Festus, in his well-known passage on the position of the Lanuvini among the communities who at one time enjoyed all the other privileges of Roman citizens except the suffrage and the jus magistratum (Liv. viii. 14; Festus, v. Municipium), a statement which can only refer to this period.

We know from Cicero that they subsequently obtained the full franchise and right of suffrage, but the time when they were admitted to these privileges is unknown. (Cic. pro Balb. 13.)

From this time Lanuvium lapsed into the condition of an ordinary municipal town, and is mentioned chiefly in relation to its celebrated temple of Juno Sospita. It did not, however, fall into decay, like so many of the early Latin cities, and is mentioned by Cicero and Pliny as a populous and flourishing municipality of Latium, in the same class with Aricia and Tusculum, which he contrasts with such poor and decayed places as Labicum and Collatia (Cic. de Leg. Agr. ii. 35). Its chief magistracies retained the ancient Latin title of Dictator, which was borne by T. Annius Milo, the celebrated adversary of Cicero, in the days of Augustus. (Cic. pro Mil. 10; Orat. Inser. 3786.) Previous to this period Lanuvium had suffered severely in the civil wars of Marius and Sulla, having been taken by the former at the same time with Antium and Aricia, just before the capture of Rome itself, n. c. 87. (Appian, B. C. i. 69; Liv. Epit. 80.) Nor did it escape in the later civil wars; the treasures of its temple were seized by Octavian, and a part at least of its territory was divided among a colony of veterans by the dictator Caesar. (Appian, B. C. v. 24; Lib. Colon. p. 235.) It subsequently received another colony, and a part of its territory was at one time allotted to the vestal virgins at Rome. (Ibid.) Lanuvium, however, never bore the title of a colony, but continued only to enjoy the municipal authority long after it seems to have been a flourishing place throughout the period of the Roman Empire. It was the birthplace of the emperor Antoninus Pius, who in consequence frequently made it his residence, as did also his successors, M. Aurelius and Commodus: the last of these three is mentioned as having frequently displayed his skill as a gladiator in the amphitheatre at Lanuvium, the construction of which may probably be referred to this epoch. Inscriptions attest its continued prosperity under the reigns of Alexander Severus and Philipinus. (Suet. Aug. 72; Tac. Ann. iii. 48; Capit. Ant. Pius, 1; Lamprid. Commod. 1, 8; Vict. de Caes. 15; Orat. Inser. 884, 3740, &c.)

Lanuvium was the place from which several illustrious Roman families derived their origin. Among these were the Annii, to which Milio, the adversary of Clodius, belonged by adoption, as well as the Papia, from which he was originally descended; the Roesia, and the Thoria (Cic. pro Mil. 10; Ascom. ad Milon. pp. 32, 53; Cic. de Divin. i. 36, ii. 31, de Fis. ii. 20), to which may probably be added, on the authority of coins, the Proculia and Mattea. (Eckhel, vol. v. p. 353, 354, 358, 359.) We learn from Cicero that not only did the Roesia Gens derive its origin from Lanuvium, but the celebrated actor Roesius was himself born in the territory of that city. (Cic. de Divin. i. 36.)

But the chief celebrity of Lanuvium was derived from its temple of Juno Sospita, which enjoyed a peculiar sanctity, so that after the Latin War in n. c. 338 it was stipulated that the Romans should enjoy free participation with the Lanuvians themselves in its worship and sacred rites (Liv. viii. 14): and although at a later period a temple was erected at Rome itself to the goddess under the same denomination, the consuls still continued to repair annually to Lanuvium for the purpose of offering solemn sacrifices. (Liv. xxxii. 5, 53; Liv. Divin. i. 44, ii. 27; Ovid. Fast. vi. 60; Sil. Ital. xiii. 364.) We learn from Appian that a large treasure had gradually accumulated in her temple, as was the case with most celebrated sanctuaries; and Pliny mentions that it was adored with very ancient, but excellent, paintings of Helen and Athena, which the emperor Caligula in vain attempted to remove. (Plin. xxv. 3, s. 6.) It appears from a passage in Cicero (de Fis. ii. 20) that Juno was far from being the only deity especially worshipped at Lanuvium, but that the city was noted as abounding in ancient temples and religious rites, and was probably one of the chief seats of the old Latin religion. A temple of Jupiter adjoining the forum is the only one of which we find any special mention. (Liv. xxiii. 93.)

Though there is no doubt that Cirtius Larimis occupies the original site of Lanuvium, the position of which is well described by Strabo and Silius Italicus (Strab. v. p. 339; Sil. Ital. viii. 860), and we know from inscriptions that the ancient city continued in a flourishing condition down to a late period of the Roman empire, it is curious that scarcely any ruins now remain. A few shapeless masses of masonry, principally substructions and foundations, of which those that crown the summit
of the hill may possibly have belonged to the temple of Sanlo Hospita; and a small portion of a theatre, brought to light by excavations in 1833, are all that are now visible. The inscriptions discovered on the spot belong principally to the time of the Antonines, and exist in the last century brought to light many statues of the same period. (Nibby, *Dintorni di Roma*, vol. ii. pp. 179-187; Abeken, *Mittel Italien*, p. 215.)

Launum, as already observed, was situated at a short distance from the Appian Way, on the right of that road: the station *Sub Lanuvio*, marked in the Tabula Peutingeriana between Aricia and Tres Tabernae, was evidently situated on the high road, probably at the eighteen miles from Rome, from which point a branch road led directly to the ancient city. (Westphal, *Röm. Komp.* p. 28; Nibby, L. c.)

The remains of two other ancient roads may be traced, leading from the W. and S. of the city in the direction of Aesernia and Astura. The existence of this line of communication in ancient times is incidentally referred to by Cicero (ad Att. xii. 41, 43, 46). The tract of country extending S. of Lanuvium in the direction of Antium and the Pontine marshes, was even in the time of Strabo very unhealthful (Strab. v. p. 231), and is now almost wholly depopulated. (E. H. B.)

LAODICEA COMBUSTA (Laodicea aerate-zeugma or aerate-zeugma), one of the five cities built by Seleucus I, and named after his mother Seleuce. Its surname (Lat. Combusta) is derived from Strabo (xii. pp. 576, 579, xiii. pp. 626, 628, 637) from the volcanic nature of the surrounding country, but Hamilton (Researches, ii. p. 194) asserts that there is *not a particle of volcanic or igneous rock in the neighbourhood,* and it may be added that if such were the case, the town would rather have been called *Λ. τυρα ὠρατε-zeugma.* The most probable solution undoubtedly is, that the town was at one time destroyed by fire, and that on being rebuilt it received the distinguishing surname. It was situated on the north-west of Iciumon, on the high road leading from the west coast to Melitene on the Euphrates. It was as early as established in Lycaonia by Antiochus Epiphanes (Steph. B. s. e. ; Strab. xiv. p. 663), and others as a town of Pheidias (Socrat. Hist. Eccl. vi. 18; Hieroc. p. 672), and Ptolemy (v. 4. § 10) places it in Galatia; but this discrepancy is easily explained by recollecting that the territories just mentioned were often extended or reduced in extent, so that at one time the town belonged to Lycaonia, while at another it formed part of Paphlagonia. Its foundation is not mentioned by any ancient writer.

Both Leake (Arias Minor, p. 44) and Hamilton identify Laodicea with the modern Laskil; and the former of these geographers states that at Laskil he saw more numerous fragments of ancient architecture and sculpture than at any other place on his route through that country. Inscribed marbles, altars, columns, capitals, friezes, cornices, were dispersed throughout the streets, and among the houses and burying grounds. From this it would appear that Laodicea must once have been a very considerable town. There are a few imperial coins of Laodicea, belonging to the reigns of Titus and Domitian. (Sestini, sup. Ant. p. 95; comp. Droysen, Gesch. der Hellen. i. p. 663, foll.)

LAODICEA AD LYCUM (Laodicea ἐπὶ τῆς Λύκου Αὐρα: Eski Hisar), a city in the south-west of Phrygia, about a mile from the rapid river Lycus, is situated on the long spur of a hill between the narrow valleys of the small rivers Asopus and Caprus, which discharge their waters into the Lycus. The town was originally called Diospolis, and afterwards Ebroth (Plin. v. 169), and Laodicea, the building of which is ascribed to Antiochus Theseus, in honour of his wife Laodice, was probably founded on the site of the older town. It was not far west from Colossae, and only six miles to the west of Hierapolis. (It. Ant. p. 387; Tab. Pest.; Strab. xiii. p. 629.) At first Laodicea was not a place of much importance, but it soon attained a degree of prosperity. It suffered greatly during the Mithridatic War (Appian, Bell. Mith. 20; Strab. xii. p. 578), but quickly recovered under the dominion of Rome; and towards the end of the Republican and under the first emperors, Laodicea became one of the most important and flourishing commercial cities of Asia Minor, in which large money transactions and an immense trade in wool were carried on. (Cic. ad Fam. ii. 17, iii. 5; Strab. xii. p. 577; comp. Vitr. viii. 8.) The place often suffered from earthquakes, especially from the great shock in the reign of Tiberius, in which it was completely destroyed. But the inhabitants restored it from their own means. (Tac. Ann. xiv. 37.) The wealth of its inhabitants amongst them a taste for the arts of the Greeks, as is manifest from its ruins; and that it did not remain behind-hand in science and literature is attested by the names of the scribes Antiochus and Theodos, the successors of Aeneasidenus (Diog. Laert. ix. 11 § 106, 12, § 116), and by the existence of a great medical school. (Strab. xiii. p. 580.) During the Roman period the city of Laodicea on the river, in Palestine, was the chief city of the Roman conubium. (Cic. ad Fam. iii. 7, ix. 25, xii. 54, 67, xiv. 4, ad Att. v. 15, 16, 20, 31, vi. i. 2, 3, 7, 18, iv. 11.) Many of its inhabitants were Jews, and it was probably owing to this circumstance, that at a very early period it became one of the chief seats of Christianity, and the seat of a bishop. (St. Paul, Ep. ad Coloss. ii. 1, iv. 15, foll.; Apoc. xiii. 14, foll.; Joseph. Ant. vii. 9.) But some of the Larrieu writers often mention it, especially in the time of the Emperor Constantine; (Nicet. Chon. Aem. pp. 9, 81.) During the invasion of the Turks and Mongols the city was much exposed to ravages, and fell into decay, but the existing remains still attest its former greatness. The ruins near Demarit are fully described in Pecocking's Travels, in which it is impossible to view them without interest, when we consider what Laodicea once was, and how it is connected with the early history of Christianity. (....) Its stadium, gymnasion, and theatres (one of which is in a state of great preservation, with its...*)

* Ptolemy (v. 2. § 18) and Philostratus (Vit. Soph. i. 25) call it a town of Caria, while Stephana B. (s. e.) describes it as belonging to Lydia; which arises from the uncertain frontiers of those countries.
LAODICEIA was still perfectly horizontal, though merely laid on the gravel, are well deserving of notice. Other buildings, also, on the top of the hill, are full of interest; and on the east the line of the ancient wall may be distinctly traced, with the remains of a gateway; there is also a street within and without the town, flanked on the north by a colonnade and numerous pedestals, leading to a confused heap of alien ruins as low as the base of the hill, about 200 yards outside the wall. North of the town, towards the ocean, are many sarcophagi, with their covers lying near them, partly imbedded in the ground, and all having been long since rifled.

Among other interesting objects are the remains of an aqueduct, commencing near the summit of a low hill to the south, whence it is carried on arches of small square stones to the edge of the hill. The aqueduct has been much charged with calcareous slates, as several of the arches are covered with a thick incrustation. From this hill the aqueduct passed over a valley before it reached the town, but, instead of being carried over it on lofty arches, as in some other places, it is conveyed down the hill in stone barrel-pipes; one of these also are much incrusted, and some completely choked up. It traversed the plain in pipes of the same kind; and I was enabled to trace the whole way, quite up to its former level in the town. The aqueduct appears to have been destroyed by an earthquake, as the remaining arches lay badly on one side, without being much raveled.

The stadium, which is in a good state of preservation, is near the southern extremity of the city. It is semicircular, almost perfect, and arranged along two sides of a narrow valley, which appears to have been taken advantage of for this purpose, and to have been closed up at both ends. Towards the west are observable remains of a subterranean passage, by which chariots and horses were admitted into the arena with a long inscription over the entrance. The whole area of the ancient city is covered with ruined buildings, and I could distinguish the line of several temples, with the bases of the stumps still in situ. The ruins bear the stamp of Roman extravagance and luxury, rather than of the stern and massive solidity of the Greeks. Strabo attributes the celebrity of the place to the fertility of the soil and the wealth of some of its inhabitants: except when Hiero, having adorned the city with many beautiful buildings, bequeathed it to his heirs, the populace was often a tax of 2000 talents at his death." (Comp. Fellows, Index, p. 280, fol.)

LAODICEA AD LIBANUM (Ἀνατύκαια), mentioned by Strabo (xvi. p. 755) as the commencement of the Marisys Campus, which extended along the west side of the Orontes, near its source. (Marisys Campus.) It is called Cibicus by Ptolemy (Kabékono Anatukia, v. 15), and given as the boundary to a district (Anatuaepsis), in which he places two other towns, Paradurcos (Hadourika) and Jebelra (Jebel Zépouké). Pliny (vii. 191), among other sources of information, reckons "ad orientem Laodiciae, et ad Libanum cognominantur." (L.G.W.)

LAODICEA AD MARE, a city of Syria, south of Hierapolis (Vol. 1. p. 1060), described by Strabo (xiv. p. 751, 752) as admirably built, with an excellent harbor, surrounded by a rich country specially fruitful in vines, the wine of which furnished its chief supply to Alexandria. The vineyards were planted on the sides of gently-sloping hills, which were cultivated almost to their summits, and extended far to the east, nearly to Apameia. Strabo mentions that Dolabella, when he fled to this city before Caesius, distressed it greatly, and that, being besieged there until his death, he destroyed many parts of the city with him, a. d. 43. (Dict. of Bess., Vol. 1. p. 1065.) It was built by Seleucus Nicator, and named after his mother. It was furnished with an aqueduct by Herod the Great (Joseph. B. J. i. 21. § 11), a large fragment of which is still to be seen. (Shaw, Travels, p. 262.)

The modern city is named Llodiikéth, and still exhibits faint traces of its former importance, notwithstanding the frequent earthquakes with which it has been visited. Irby and Mangles noticed that "the Marina is built upon foundations of ancient columns, and 'there are in the town, an old gateway and other antiquities,' as also sarcophagi and sepulchral caves in the neighbourhood. (Travels, p. 232.) This gateway has been more fully described by Shaw (i. c.) and Pococke, as a remarkable triumphal arch, at the west corner of the town, almost entire: it is built with four entrances, like the Forum Jovis at Rome. It is conjectured that this arch was built in honour of Lucius Verus, or of Septimius Severus." (Description of the East, vol. ii. p. 197.) Shaw noticed several fragments of Greek and Latin inscriptions, dispersed all over the ruins, but entirely defaced. Pococke states that it was a very considerable place till within fifty years of his visit, when it opened a tobacco trade with Damascus, and it has now an enormous traffic in that article, for which it is far more celebrated than ever it was for its wine. The port is half an hour distant from the town, very small, but better sheltered than any on the coast. Shaw noticed, a furlong to the west of the town, "the ruins of a beautiful cothurn, in figures like an amphitheatre, and capacious enough to receive the whole British navy. The mouth of it opens to the westward, and is about 40 feet wide." (Shaw, Travels, p. 262.)

COIN OF LAODICEA AD MARE.

LAODICEIA (Ἀνατύκαια). 1. A town in Media, founded by Seleucus Nicator, along with the two other Hellenic cities of Apameia and Hierapolis. (Strab. xi. p. 624; Steph. B. s. v.) Pliny (vi. 29) describes it as being in the extreme limits of Media, and founded by Antiochus. The site has not yet been identified. (Ritter, Erdkunde, vol. viii. p. 599.)

2. A town which Pliny (vi. 30) places along with Seleucia and Arimathea in Mesopotamia. (E. B. J.)

LAPATHUS, a fortress near Mount Olympus. (Aesop.)

LAPATHUS, LAPHETUS (Ἄπαθες, Strab. xiv. p. 682; Βάθης, Ptol. v. 14. § 4; Plin. v. 31; Λαφήθης, Sylv. p. 41; Λαφηθής, Hieroc.: Eth. Λαφηθής, Αφεθής: Λαφίτης, Λαφίτα), a town of Cyprus, the foundation of which was assigned to the Phoenicians (Steph. B. s. v.), and which, according to Nonnus
LAPATHUS.

(Diónys. xiii. 447) owed its name to the legendary Lapathus, a follower of Dionysus. Strabo (i. c.) says that it received a Spartan colony, headed by Praxander. He adds, that it was situated opposite to the town of Nagidus, in Cilicia, and possessed a harbour and docks. It was situated in the N. of the island, on a river of the same name, with a district called Láptíthia (Ἀπατιθία, Ptol. v. 14. § 5.) In the war between Ptolemy and Antigonus, Lapathus, with its king Praxippus, sided with the latter. (Diod. xix. 50.) The name of this place was synonymous with stupidity. (Paus. i. 21. § 1.) The town on the E. of the island, vol. ii. pt. 1. p. 223) saw at Láptikó several walls that were cut out of the rock, and one entire room, over the sea: there were also remains of some towers and walls. (Mariti, Vaggi, vol. i. p. 125; Engel, Kypros, vol. i. pp. 78, 174, 224, 364, 507.)

LAPATHUS, a fortress in the north of TESSALY, near Tempe, which Leake identifies with the ancient castle near Ῥάπανει. (Liv. xlv. 3. 2; Leake, Northern Greece, vol. iii. pp. 397, 418.)

LAPHYSTIUM. [Borotia, p. 412, b.]

LAPIDEI CAMPFI OR LAPIDEUS CAMPUS (ῥήβος λιθόθεμος, ἀκράτως ῥήβος), in Gallia Narbonensis. Strabo (p. 182) says: "Between Massalia and the mouths of the Rhone there is a plain, about 17 English miles in length, and 11 Roman miles in breadth, being of a circular form; and it is called the Stony, from its character, for it is full of stones, of the size of a man's fist, which have grass growing among them, which furnishes abundant food for animals: and in the middle there is standing water, and salt springs, and salt. Now all the country that lies between these cities, but on this plain especially, is Melamborian (La Bise) comes down in squalls,—a violent and chilling wind accordingly, they say that some of the stones are moved and rolled about, and that men are thrown down from vehicles, and stripped both of arms and clothing by the blast." This is the plain called La Cross, near the east side of the east branch of the delta of the Rhone, and near the Montée des Arènes. It is described by Arthur Young (Travels, ed. vol. i. p. 379, 2nd ed.), who visited and saw part of the plain. He supposed that there might be about 136,750 English acres. "It is composed entirely of shingle—being so uniform a mass of round stones, some to the size of a man's head, but of all sizes less, that the newly thrown up shingle of a seashore is hardly less free from soil. Beneath these surface-stones is not so much a sand as a kind of cemented rubble, a small mixture of loam with fragments of stone. Vegetation is rare and miserable." The only use that the uncultivated part is turned to, he says, is to feed, in winter, an immense number of sheep, which in summer feed in the Alps towards Rome and Piemont. When he saw the place, in August, it was very bare. The number of sheep said to be fed there is evidently an exaggeration. Some large tracts of the Cross had been broken up when he was there, and planted with vines, olives, and mulberries, and converted into corn and meadow. Corn had not succeeded; but the meadows, covered richly with "clover, ciony, rib-grass, and sea-foam," converted the soil in natural state. The name Cross is probably a Celtic word. In the Statistique du Départ. des Bouches du Rhone (tome ii. p. 190, quoted in Ucker's Galliens, 422) it is supposed that Cracvs, as it is there written, is a Ligurian word; which may be true, or it may not. What is added is more valuable information: "There is in Provence a number of places which have this name, and one may even say that there is not a village which has not in its territory a Cross."

Antistot (Strabo, p. 189) supposed that earthquakes, of the kind named Bratae threw up these stones to the earth's surface, and that they rolled down together to the hollow places in these parts. Posidonius, who, having travelled in Gallia, had probably seen the Cross, supposed that the place was once a lake. Here the text in Strabo is obscure, and perhaps corrupt; he seems to mean that the action of water rounded the stones, for he adds, after certain words not easy to explain, that (owing to this motion of the water?) "it was divided into many stones, like the pebbles in rivers and the shingle on the sea-shore." Strabo (whose text is here again somewhat corrupted) considers both explanations so far true, that stones of this kind could not have been so made by themselves, but must have come from great rocks being repeatedly broken. Another hypothesis, not worth mentioning, is recorded in the notes of Eustathius (ad Dionys. Perieg. v. 76).

It is a proof of the early communication between the Phocaean colony of Massalia and other parts of Greece, that Aeschylus, whose geography is neither exact or accurate, was acquainted with the existence of this stone plain. In the Iliad (quoted by Strabo) he makes Prometheus tell Hercules that when he comes into the country of the Ligyes, Zeus will send him a shower of round stones, to defeat the Ligyan warrior with. This stony plain was a good ground for mythological figurings. (The following passages of ancient authors refer to this plain: Musaeus, Agesandrus, Boppus, Pindar, Sappho, Iliad, Odyssey, Heraclides, Menander, Seneca, Nat. Quaest. v. 17, who speak of the violent wind in this part of Gallia; and Dionys. Halicarn. i. 41, who quotes part of the passage from the Prometheus Unbound.)

This plain of stones probably owes its origin to the floods of the Rhone and the Durance, at some remote epoch when the lower part of the delta of the Rhone was covered by the sea.

LAPITHEI (Ἀπατιθία), a mythical race in Thessaly. See Dict. of Biogr. and Myth, Vol. II. p. 721.

LAPITHEUM. [Lacoenia, p. 113, a.]

LAPITHAS. [Eliis, p. 817, b.]

LAPPA, LAMPA (Ἄρκα, Ptol. iii. 17. § 10; Adrava, Adrava, Hieroc.; Adrava, Steph. B. i. Elia Arvneas, Aspend.), an inland town of Crete, with a district extending from sea to sea (Scur Agra, 183), and possessing the port Phoenix. (Strabo, p. 475.) Although the two forms of this city's name occur in ancient authors, yet on coins and in inscriptions the word Lappa is alone found. Stephanus of Byzantium shows plainly that the two names denote the same place, when he says that Xenophon, in his Cretica, wrote that all Lampas, Crete, was possessed by Chersones, and was called after one Lampos, a Telebæan; the interpretation of which seems to be that it was a colony of Tarra.

When Lytus were destroyed by the Cnosseans, its citizens found refuge with the people of Lappa (Herod. ii. 155). After the submission of Cydonia, Cnosseus, Lytus, and Eleutherae, to the arms of Melitaus, the Romans advanced against Lappa, which was taken by storm, and appears to have been almost entirely destroyed. (Dion Cass. xxxvi. 1.) Augustus, in consideration of the aid rendered to him by the Lappaeans in his struggle with M. Antonius.
LAPURDUM. 193

states that he found no Greek remains at Laranda nor are there any coins belonging to the place. The ancient name, Lorunda, is still in common use among the Christians, and is even retained in the firms of the Porte; but its more general name, Koruma, is derived from a Turkish chief of the same name; for it was at one time the capital of a Turkish kingdom, which lasted from the time of the partition of the dominion of the Seljukian monarchs of Iconium until 1488, when it was conquered by the emperor Bayazid II. As present town is but a poor place, with some manufactures of coarse cotton and woollen stuffs. Respecting a town in Cappadocia, called by some Loranda, see the article LARANDA.

LARES (Sall. Jug. 90, where Larus in the acc. pl.: Adpo, Plut. iv. 3. § 28: the abl. form Lar means is given, not only, as is so usual, in the Ast. p. 26, and the Tab. P. 26, but also by Augustus, adv. Domit. vi. 20; and that this ablative was used for the nominative, as is common in the Romance languages, is shown by the Greek form Aepatos, Procop. B. V. ii. 23, whence it came at once the modem name, Larinou or Larinais). An important city of Numidia mentioned in the Jugurthine War as the place chosen by Marius for his stores and military chest. (Sall. Jug. i. c.) Under the Romans it became a colony, and belonged to the province of Africa and the district of Byzacena. Ptolemy places it much too far west. It lay to the E. of the Bagrada, on the road from Carthage to Trieves, 63 M. P. from the lake of Lybia, and 60 from the coast of the Empire it had decayed. (Pellissier, Explorations Scientifiques de l'Algérie, vol. vi p. 375.) [P. S.]

LARGA, in Gallia, is placed by the Anton. Rhin. between the two known positions of Epampandodurum (Mondavere) and Moes Briasicius (Vieux Briasch). The distance from Epampandodurum to Larga is 24 M. P. in the Rhin., and in the Table 16 Gallie leagues, which is the same thing. Larga is deserted, and is a ruin on or near the Largues, in the French department of Haut Rhin and in the neighbourhood of Altkirch. [EPAMPANDODURUM.]

LARICA (Lapuri, Plut. vii. 1. §§ 4, 62), a rich commercial district on the extremes of India, described by Ptolemy as being between Syrastrae and Ariaces, and having for its chief town Barygazae (Bihar), was a potent centre in the middle of the 4th century, and must, therefore, have comprehended considerable part of Giresat, and some of the main land of India, between the gulfs of Barygaza and the Namadus or Norbudda. Ptolemy considered Larica to have been part of Indico-Scythia (vii. 1. § 62), the Scythian tribes having in his day reached the sea coast in that part of India. [V.]

LARINUM. (Adpo, Plut. vi. 6, § 26; Eub. Hist. Eccl. vi. 19.) Suida (s. e.) says that Laranda was the birthplace of Nester, an epic poet, and father of Pisander, a poet of still greater celebrity; but when he calls the former Asparvus de Aquitania, he probably mistook Lycaon for Lycaonia. Leake (As. Neg. p. 100)
LARINUM.

mention of Larinum. (Plut. iii. i. § 65; Plin. iii. 11. a. 16; Mol. ii. 4. § 6.) Caesar, on the other hand, distinguishes the territory of Larinum both from that of the Frentani and from Apulia ("per fines Marrucinorum, Frentanorum, Larinatum, in Apulum pervenit," B. C. i. 23). Livy uses almost exactly the same expressions (xxvii. 43); and this appears to be the real solution, or rather the origins of the difficulty, that the Larinates long formed an independent community, possessing a territory of considerable extent, which was afterwards regarded by the geographers as connected with that of their northern or southern neighbours, according to their own judgment. It was included by Augustus in the Second Region of Italy, of which he made the Tifernus the boundary, and thus came to be naturally considered as an appurtenance of Apulia; but the boundary would seem to have been subsequently changed, for the Liber Coloniarum includes Larinum among the "Civitates Regionis Samnitii," to which the Frentani also were attached. (L. C. Colon. p. 360.)

The early history of Larinum has so scarcely any information. Its name is not even once mentioned during the long continued wars of the Romans and Samnites, in which the neighbouring Luceria figures so conspicuously. Hence we may probably infer that it was at this period on friendly terms with Rome, and was one of those Italian states that passed gradually and almost imperceptibly from the condition of allies into that of dependents, and ultimately subjects of Rome. During the Second Punic War, on the other hand, the territory of Larinum became repeatedly the scene of operations of the Roman and Carthaginian armies. Thus in B. C. 217 it was at Gerurnium, in the immediate neighbourhood of Larinum, that Hannibal took up his winter-quarters, while Fabius established his camp at Calale to watch him; and it was here that the engagement took place in which the rashness of Minucius had so nearly involved the Roman army in defeat. (Pol. iii. 101; Liv. xxi. 18, 24, &c.) Again, in B. C. 207, it was on the borders of the same territory that Hannibal's army was attacked on its march by the praetor Hostilius, and suffered many losses. (xxvii. 40.) Shortly after it is again mentioned as being traversed by the consul Claudius on his memorable march to the Metaurus. (Ibid. 43.; Sil. Ital. xv. 565.) In the Social War it appears that the Larinates must have joined with the Frentani in taking up arms against Rome, as their territory was ravaged in B. C. 89 by the praetor C. Osconius, after his victory overTrebatii near Canusium. (Appian, B. C. i. 52.) During the civil wars of Caesar and Pompey, the territory of Larinum was traversed by the former general on his advance to Brundusium (Caes. B. C. i. 23). Pompey seems to have had at one time made it his head-quarters in Apulia, but abandoned it on learning the disaster of Domitius at Corfinium. (Cic. pro Att. vili. 12, 13 b.)

From the repeated mention during these military operations of the territory of Larinum, while none occurs of the city itself, it would appear that the latter could not have been situated on the high road, which probably passed through the plain below it. But it is evident from the oration of Cicero in defence of A. Cluentius, who was a native of Larinum, that it was in his day a flourishing and considerable municipal town, with its local magistrates, senate, public archives, forum, and all the other appurtenances of municipal government. (Cic. pro Cuen. 5, 8, 18, 15, &c.) We learn from the Liber Coloniarum that it received a colony under Caesar (L. F. Lobi. Colon. p. 260); but it appears from inscriptions that it continued to retain its municipal rank under the Roman Empire. (Orell. Inscr. 149; Mommsen, Inschr. Rom. Neu. pp. 272, 273.) The existing remains sufficiently prove that it must have been a large and populous town; but no mention of it is found in history after the close of the Roman Republic. Its name is found in the Itineraries in the fourth century (Itin. Ant. p. 314, where it is corruptly written Aremon; Tab. Pest.) and there is no reason to suppose that it ever ceased to exist, as we find it already noticed as an episcopal see in the seventh century. In A. D. 848 it was ravaged by the Saracens, and it was in consequence of this calamity that the inhabitants appear to have abandoned the ancient site, and founded the modern city of Larino, a little less than a mile to the W. of the ancient one. The ruins of the latter, now called Larino Vecchio, occupy a considerable space on the summit of a hill called Montemore, about three miles S. of the Siferno (Tifernus): there remain some portions of the ancient walls, as well as of one of the gates; the ruins of an amphitheatre of considerable extent, and those of a building, commonly called Il Palezzo, which appears to have stood in the centre of the town, adjoining the ancient forum, and may probably have been the Curia or senate-house. (Vis, Memorie di Larino, i. 10.)

The territory of Larinum seems to have originally extended from the river Tifernus to the Frento (Fortore), and to have included the whole tract between those rivers to the sea. The town of Cilernia, which was situated within these limits, is expressly called by Pliny a dependency of Larinum ("Larinatum Cilerniae," Plin. iii. 11. a. 16); and Teanum, which is placed by him to the N. of the Frento, was certainly situated on its right bank. Hence it is probable that the municipal territory of Larinum under the Roman government still comprised the whole tract between the two rivers. The Tabula places Larinum eighteen miles from Teanum in Apulia, and the shortness is confirmed by an express statement of Cicero. (Tab. Pest.; Cic. pro Cluent. 9.)

There exist numerous coins of Larinum, with the inscription LADINUM in Roman letters. From this last circumstance they cannot be referred to a very early period, and are certainly not older than the Roman conquest. (Eckhel, vol. i. p. 107; Mommsen, Edm. Numismas, p. 385.)

[E. H. B.]

COIN OF LARINUM.

LARISSA. (Άλαισσα, but on coins and inscr Αδαισσα or Δαισσα: Ekh. Δαισσανως, Δαισσαις), a name common to many Pelasgic towns, and probably a Pelasgic word signifying city. (Comp. Strab. xiii. p. 620; Dionys. iv. 21; Niebuhr, Hist. of Rome, vol. i. note 60.) Hence in mythology Larissa is represented as the daughter of Pelagus (Paus. ii. 24

[Image -1x0 to 395x652]
LARISSA.

1. An important town of Thessaly, the capital of the district Pelasgiotis, was situated in a fertile plain upon a gently rising ground, on the right or south bank of the Peneius. It had a strongly fortified citadel. (Diod. iv. 61.) Larissa is not mentioned by Homer. Some commentators, however, suppose it to be the same as the Pelasgic Argos of Homer (II. ii. 681), but the latter was the name of a district rather than of a town. Others, with more probability, identify it with the Arigiae of the poet. (II. ii. 738.) [See Vol. I. p. 209.] Its foundation was ascribed to Actaeon. (Steph. B. s. v.) The plain of Larissa was formerly inhabited by the Phthiotics, who were partly expelled by the Larissaeans, and partly reduced to subjection. They continued subject to Larissa, till Philip made himself master of Thessaly. (Strab. ix. p. 440.) The constitution of Larissa was democratical (Aristot. Pol. v. 6), and this was probably one reason why the Larissaeans were allies of the Aetolians during the Peloponnesian War. (Thuc. ii. 59.) During the Roman wars in Greece, Larissa is frequently mentioned as a place of importance. It was here that Philip, the son of Demetrius, kept all his royal papers during his campaign against Ptolemy Ceraunus in Greece; but after the battle of Cyzicus, in B.C. 197, he was obliged to abandon Larissa to the Romans, having previously destroyed these documents. (Polyb. xviii. 16.) It was still in the hands of the Romans when Antiochus crossed over into Greece, in B.C. 191, and this king made an ineffectual attempt upon the town. (Liv. xxxvi. 10.) In the time of Strabo Larissa continued to be a flourishing town (ix. p. 430). It is mentioned by Hierocles in the sixth century as the first town in Thessaly (p. 642, ed. Wesselen.). It is still a considerable place, the residence of an archbishop and a pasha, and containing 30,000 inhabitants. It continues to bear its ancient name, though the Turks call it Yenişehri, which is its official appellation. Its circumference is less than three miles. Like other towns in Greece, which have been continually inhabited, it presents few remains of Hellenic times. They are chiefly found in the Turkish cemeteries, consisting of plain quadrangular stones, fragments of columns, mostly melted, and a great number of ancient cippi and sepulchral stelae, which now serve for Turkish tombstones. (Leake, North- ern Greece, vol. ii. p. 439, seq.)

COIN OF LARISSA.

2. LARISSA CREMASTE (Ἄλαστρα Κρεμαστή Αἴαρα), a town of Thessaly of less importance than the preceding one, was situated in the district of Phthiotis, at the distance of 20 stadia from the Malacian gulf, upon a height advancing in front of Mount Othrya. (Strab. ix. p. 435.) It occupied the site of the hill, and was hence surnamed Cremaeste, as hanging on the side of Mt. Othrya, to distinguish it from the more celebrated Larissa, situated in a plain. Strabo also describes it as well watered and producing vines (ix. p. 440). The same writer adds that it was named Pelasgia as well as Cremastra (l. c.). From its being situated in the dominions of Achilles, some writers suppose that the Roman poets give this here the surname of Larissaeum; but this epithet is perhaps used generally for Thessalian. Larissa Cremastra was occupied by Demetrios Poliorcetes in B.C. 302, when he was at war with Casander. (Diod. xxi. 110.) It was taken by Apollodorus in the first war between the Romans and Philip, B.C. 200 (Livy xxxi. 46), and again fell into the hands of the Romans in the war with Perseus, B.C. 171. (Livy xiii. 56, 57.) The ruins of the ancient city are situated upon a steep hill, in the valley of Cordikli, at a direct distance of five or six miles from Khamaiko. The walls are very conspicuous on the western side of the hill, where several courses of mausoleum remain. Gell says that there are the fragments of a Doric temple upon the acropolis, but of these Leake makes no mention. (Gell, Itinerary of Greece, p. 252; Dodwell, Travels, vol. ii. p. 81; Leake, North-ern Greece, vol. iv. p. 347.)

COIN OF LARISSA.

LARISSA (Ἄλαστρα). 1. A town in the territory of Ephesus, on the north bank of the Caystros, which, while it flows through a most fertile district, producing an excellent kind of wine. It was situated at a distance of 180 stadia from Ephesus, and 30 from Trales. (Strab. xii. p. 435.) It was, in the time of Strabo's (ix. p. 430) time, that it had sunk to the rank of a village, but it was said once to have been a kolpos, with a temple of Apollo. Cramer (Ae. Mén. i. p. 558) conjectures that its site may correspond to the modern Tierik.

3. A place on the coast of Troas, about 70 stadia south of Alexandria Troas, and north of Ischamitza. It was supposed that this place was the one mentioned by Homer (II. ii. 841), but Strabo (xiii. p. 680) controverts this opinion, because it is not far enough from Troy. (Comp. Steph. B. s. v.) The town is mentioned as still existing by Thucydides (viii. 101) and Xenophon (Hellen. iii. 1 § 15; comp. Seyxas, p. 36; Strab. ix. p. 440, xiii. p. 504). At the distance of 450 stadia, there are some hot springs near Larissa in Troas, which are still known to exist a little above the site of Alexandria Troas. (Voyage Pittoresque, vol. ii. p. 438.)

3. Larissae, surnamed Phricomates, a Pelasgian town in Aolia, but subsequently taken possession of by the Aeolians, who constituted it one of the towns of their confederacy. It was situated near the coast, about 70 stadia to the south-east of Cyme (_sender, Strab. xiii. p. 621; Herod. i. 149). Strabo, apparently for good reasons, considers this to be the Larissae mentioned in the Iliad (ii. 840). Xenophon (Hellen. iii. 1 § 7, comp. Tyr. xvi. ii. § 4) distinguishes this town from others of the same name by the epithet of "the Egyptian," because the elder Cyrus had established there a colony of Egyptian soldiers. From the same historian we must infer that Larissae was a place of considerable strength, as it was besieged in vain by Thimbrom; but in Strabo's time the place was deserted. (Comp. Plin. v. 32; Vell. Pat. i. 4; Vit. Hort. c. 11; Steph. B. s. v.; Ptol. v. 2. § 5.)

LARISSA (Ἄλαστρα, Χαιναβ. iii. p. 27), a town of Asia, at no great distance from the left bank of the Tigris, observed by Xenophon on the
retreat of the Ten Thousand Greeks. It appears to have been situated a little to the north of the junction of the Lycus (Ωδε) and the Tigris. Xenophon describes it as a deserted city, formerly built by the Medes, with a wall 25 feet broad, and 100 high, and extending in circumference two parasanges. The wall itself was constructed of bricks, but had a foundation of stone, 20 feet in height (probably a casing in stone over the lower portion of the bricks). He adds, that when the Persians conquered the Medes, they were not at first able to take this city, but at last captured it, during a dense fog. Adjoining the city on one side the mountain, on the other, a stream ran; and then he describes the site of the modern Villa Servelloni near Belloagge; but there are not sufficient grounds upon which to identify it. The name of Villa Flaminia is given at the present day to a villa about a mile beyond the village of Torno (on the right side of the lake going from Como), where there is a remarkable intermitting spring, which is also described by Pline (Ep. lv. 80); but there is no reason to suppose that this was the site of either of his villas. Claudian briefly characterizes the scenery of the Larius Lacus in a few lines (B. Gét. 319—323); and Cassiodorus gives an elaborate, but very accurate, description of its beauties. The immediate banks of the lake were adorned with villas or palaces (praetoria), above which was situated the town of Sperone, on the left bank of the lake, between Hamak and Kaloa el-Mochak or Apamia. [G. W.]

LARISSA or LARISSUS, a river of Achaea. [Vol. I. p. 14, a.]

LARIUS LACUS (ἡ Λάριας Λίμνη: Lago di Como), one of the largest of the great lakes of Northern Italy, situated at the foot of the Alps, and formed by the river Adda. (Strab. iv. p. 193; Plin. iii. 19. a. 28.) It is of a peculiar form, long and narrow, but divided in its southern portion into two great arms or branches, forming a kind of fork. The SW. of these, at the extremity of which is situated the city of Como, has no natural outlet; the Adda, which carries off the superfluous waters of the lake, flowing from its S.E. extremity, where stands the town of Bellagio, and by the Canale Re, which he is speaking of the great lakes of Northern Italy, gives to the Larius the epithet of "maximus" (Georg. ii. 159); and Servius, in his note on the passage, tells us that, according to Cato, it was 60 miles long. This estimate, though greatly overrated, seems to have acquired a sort of traditional authority; it is repeated by Cassiodorus (Var. Ep. xi. 14.), and even in the Itinerary of Antoninus (p. 278), and is at the present day still a prevalent notion among the ostmen on the lake. The real distance from Como to the head of the lake does not exceed 27 Italian, or 34 Roman miles, to which five or six more may be added for the distance by water to Riva, the Lago di Como being often regarded as only a portion of the larger lake. Strabo, therefore, is not far from the truth in estimating the Larius as 300 stadia (374 Roman miles) in length, and 30 in breadth. (Strab. iv. p. 206.) But it is only in a few places that it attains this width; and, owing to its inferior breadth, it is really much smaller than the Benacus (Lago di Garda) or Planus (Lago di Varese); the waters are of great depth, and surrounded on all sides by high mountains, rising in many places very abruptly from the shore: notwithstanding which their lower slopes were clothed in ancient times, as they still are at the present day, with rich groves of olives, and afforded space for numerous villas. Among these the most celebrated are those of the younger Pliny, who was himself a native of Como, and whose paternal estate was situated on the banks of the lake, of which last he always speaks with affection as "Larius noster." (Ep. ii. 8, vii. 24, viii. 11.) But, besides this, he had two villas of a more ornamental character, of which he gives some account in his letters (Ep. ix. 7): the one situated on a lofty promontory projecting out into the waters of the lake, over which it commanded a very extensive prospect, the other close to the water's edge. The habitation on the former would stand where the site of the modern Villa Servelloni near Bellagio; but there are not sufficient grounds upon which to identify it. The name of Villa Flaminia is given at the present day to a villa about a mile beyond the village of Torno (on the right side of the lake going from Como), where there is a remarkable intermitting spring, which is also described by Pline (Ep. lv. 80); but there is no reason to suppose that this was the site of either of his villas. Claudian briefly characterizes the scenery of the Larius Lacus in a few lines (B. Gét. 319—323); and Cassiodorus gives an elaborate, but very accurate, description of its beauties. The immediate banks of the lake were adorned with villas or palaces (praetoria), above which was situated the town of Sperone, on the left bank of the lake, between Hamak and Kaloa el-Mochak or Apamia. [G. W.]

Cassiodorus repeats the tale told by the elder Pliny, that the course of the Adda could be traced throughout the length of the lake, with which it did not mix its waters. (Plin. ii. 102. a. 106; Cassid. L. c.) The same fable is told of the Lacus Lemnus, or Lake of Genesio, and of many other lakes. (Cassid. L. c.; Var. Ep. xi. 14.) It was difficult to describe more correctly the present aspect of the Lake of Como, the beautiful scenery of which is the theme of admiration of all modern travellers.

Cassiodorus repeats the tale told by the elder Pliny, that the course of the Adda could be traced throughout the length of the lake, with which it did not mix its waters. (Plin. ii. 102. a. 106; Cassid. L. c.) The same fable is told of the Lacus Lemnus, or Lake of Genesio, and of many other lakes. (Cassid. L. c.; Var. Ep. xi. 14.) It was difficult to describe more correctly the present aspect of the Lake of Como, the beautiful scenery of which is the theme of admiration of all modern travellers.

LACIUS or LARIUS, a place on the southern frontier of Noricum, at the foot of the Julian Alps, and on the road from Aquileia to Laurium. The town seems to have owed its name to the forests of larch trees which abound in that district, and its site
LARNUM.

The circuit of the walls is less than a mile. The annexed plan of the remains is taken from Leake.

PLAN OF LARYMNA.

1. A small port, anciently closed in the manner here described.
2. The town wall, traceable all around.
3. Another wall along the sea, likewise traceable.
4. A mole, in the sea.
5. Various ancient foundations in the tower and acropolis.
6. A Souris.
7. The Glyfonderos, or Salt Source.
8. An oblong foundation of an ancient building.

Leake adds, that the walls, which in one place are extant to nearly half their height, are of a red soft stone, very much corroded by the sea air, and in some places are constructed of rough masses.

The ruins of Upper Larymna lie at Banardagi, on the right bank of the Cephissus, at the place where it issues from its subterranean channel, (Leake, Northern Greece, vol. ii. p. 287, seq.; Ulrichs, Reisen in Griechenland, p. 229, seq.)

LAS. 129

LAS (Adas, Hom.; Aė, Scyl., Pana, Strab.; Aē, Stephan. B. a. v.; Eth. Aēos), one of the most ancient towns of Laconia, situated upon the western coast of the Laconian gulf. It is the only town on the coast mentioned by Scylax (p. 17) between Taurus and Gythium. Scylax speaks of its port; but, according to Pausanias, the town itself was distant about 10 stadia from the sea, and 40 stadia from Gythium. (Paus. iii. 24. § 6.) In the time of Pausanias the town lay in a hollow between the three mountains, Asia, Illium, and Crescadium; but the old town stood on the summit of Mt. Asia. The name of Las signified the rock on which it originally stood. It is mentioned by Homer (II. ii.

---

LARYMNA (Adypus), the name of two towns is Boeotia, on the river Cephissus, distinguished as Upper and Lower Larymna. (Strab. iv. pp. 405, 406.) Strabo relates that the Cephissus emerged from its subterranean channel at the Upper Larymna, and joined the sea at the Lower Larymna; and that Upper Larymna had belonged to Phocis until it was annexed to the Lower or Boeotian Larymna by the Romans. Upper Larymna belonged originally to the Opuntian Locris, and Lycochoron mentions it as one of the towns of Ajax Oileus. (Lycochor. 1146.) Pausanias also states, that it was originally Locrian; and he adds, that it voluntarily joined the Boeotians on the increase of the power of the Thebans. (Paus. ix. 23. § 7.) This, however, probably did not take place in the time of Epeiomondas, as Scylax, who lived subsequently, still calls it a Locrian town (p. 23). Ulrichs conjectures that it joined the Boeotian league after Thebes had been rebuilt by Cassander. In n. c. 330, Larymna is described as a Boeotian town, &c. (Strab. xi. 3, where Adypus should be read instead of Adypur.) and in the time of Sulla it is again spoken of as a Boeotian town.

We may conclude from the preceding statements that the more ancient town was the Locrian Larymna, situated at a spot, called Anchise by Strabo, where the Cephissus emerged from its subterranean channel at the base of the hill where the Lower Larymna had a port upon the coast, which gradually rose into importance, especially from the time when Larymna joined the Boeotian League, as its port then became the most convenient communication with the eastern sea for Lebadeia, Chaeroneia, Orchomenus, Copais, and other Boeotian towns. The town was called, from its position, Lower Larymna, to distinguish it from the Upper city. The former may also have been called more especially the Boeotian Larymna, as it became the seaport of so many Boeotian towns. Upper Larymna, though it had joined the Boeotian League, continued to be frequently called the Locrian, on account of its ancient connection with Locri. When the inhabitants of Lower Larymna to Lower Lata and the inhabitants of the former place were probably transferred to the latter; and Upper Larymna was henceforth abandoned. This accounts for Pausanias mentioning only one Larymna, which must have been the Lower city; for if he had visited Upper Larymna, he could hardly have failed to mention the existence of the Cephissus at this spot. Moreover, the ruins at Lower Larymna show that it became a place of much more importance than Upper Larymna. These ruins, which are called Kastris, like those of Delphi, are situated on the shore of the Bay of Larnae, on a level covered with bushes, ten minutes to the left of the mouth of the Cephissus.

---

LARYSIUM. [Gyrthium.]

LAS (Adas, Hom.; Aē, Scyl., Pana, Strab.; Aē, Stephan. B. a. v.; Eth. Aēos), one of the most ancient towns of Laconia, situated upon the western coast of the Laconian gulf. It is the only town on the coast mentioned by Scylax (p. 17) between Taurus and Gythium. Scylax speaks of its port; but, according to Pausanias, the town itself was distant about 10 stadia from the sea, and 40 stadia from Gythium. (Paus. iii. 24. § 6.) In the time of Pausanias the town lay in a hollow between the three mountains, Asia, Illium, and Crescadium; but the old town stood on the summit of Mt. Asia. The name of Las signified the rock on which it originally stood. It is mentioned by Homer (II. ii.
LATHON.

400, the Eleians were obliged to give up Lasi on, conse- quence of its being claimed by the Arcadians. (Xen. Hell. iii. 2. § 30.) In a. c. 366 the Eleians attempted to recover Lasi from the Arcadians; they took the town by surprise, but were shortly afterwards driven out of it again by the Arcadians. (Xen. Hell. vi. 4. § 15, seq.; Diod. xv. 32.) In a. c. 219 Lasi was again a fortress of Eliss, but upon the capture of Paophos by Philip, the Eleian garrison at Lasiion strawberryed the desert place. (Polyl. iv. 72, 73.) Polybius mentions (v. 102) along with Lasi a fortress called Pyrgos, which he places in a district named Perippia. (Leake, Morea, vol. ii. p. 200, seq.; Boblaji, Recherches, p. 135; Curtius, Peloponnesiac, vol. i. p. 41.)

LASSORA, a town of Galatia, mentioned in the Pent. Tab. as 25 miles distant from Eocropolis, whence we may infer that it is the same place as the **Laosperia** of Tolemy (v. 4. § 9). The Antoine itinerary (p. 208) mentions a town Iapara in about the same site.

LATOTGI, a town of Hispania Baetica, belonging to the province of Hispelas (Plin. iii. l. 3.), and one of the cities of which we have coins, all of them belonging to the period of its independence: their type is a head of Mars, with two ears of corn lying parallel to each other. The site is supposed to be at Zakara, lying on a height of the Sierra de Ronda, above the river Guadalete. (Carrter's Traveis. p. 171; Flores, Esp. G. vol. ii. pp. 18, 60, Med. vol. ii. pp. 475, 483; Monnet, Hist. Mus. vol. i. p. 50, Suppl. vol. i. p. 113; Susini, Med. Ist. p. 61; Num. Göth.; Eckhel, vol. ii. p. 25; Ubert, vol. ii. pt. 1. p. 338, 382.)

Laurus, a town of Crete, enumerated by Piny (iv. 12) among his list of inland cities. A coin with the epigraph AATTIGN, the Doric form for Axios, is claimed by Eckhel (vol. ii. p. 316; Sestini, vol. iii. p. 531) for this place.

LATION. [EDURS.]

LATHON (Adoros, Strab. xviii. p. 386, where the vulgar reading is Adros; comp. xiv. p. 647, where he calls it Andros; Ptol. iv. 4. § 4; Adoros, Ptol. Eurg. ap. Ath. ii. p. 71; Fluvius Lethon, Ptol. v. 5; Solin. 27; Lethes Asinas, Lucan, iv. 345; Paus. v. 1. p. 523, 525; Herod. ii. 204; Hesperides or Hebrer, in the Odyssey and Hesperi- naics. It rose in the Herculis Araliae, and fell into the sea a little N. of the city of Hesperides or Be- renice: Strabo connects it with the harbour of the city (Λιμήν Ἡσπερίδων; that there is not the slightest reason for altering the reading, as Grokurd and others do, into Λιμήν, will presently appear); and Scylax (p. 110, Gronov.) mentions the river, which he calls Eocera (Ecoridae), as in close proximity with the city and harbour of Hesperides. Piny distinctly states that the river was not far from the city, and places on or near it a sacred grove, which was supposed to represent the "Gardens of the Hesperides" (Ptol. v. 5: nec procul ante oppidum Fluvius Lethon, lucus sacer, ubi Hesperides horti memoravantur). Athenian quotes from a work of Poleney Eurg. ap. Ath. ii. p. 71, from its scholiast and edil., somewhat inconsistent, especially in the mouth of a luxurious king of Egypt, with the mythical sound of the name. That name is, in fact, plain Doric Greek, descriptive of the character of the river, like our English Mole. So well does it deserve the name, that it "escaped the notice" of commentators and geographers, till it was discovered by Beechey, as it still flows "concealed" from such scholars as depend on vague guesses in place of an accurate knowledge.
of the localities. Thus the laborious, but often most inaccurate, compiler Forbiger, while taking on himself to correct Strabo's exact account, tells us that "the river and lake (Strabo's Barbou've) have now entirely vanished," and yet, a few lines down, he refers to a passage of Beechey's work within a very few pages of the place where the river itself is actually described (Forbiger, *Handbook der alten Geographie*, vol. ii. p. 398, note). The researches made in Beechey's expedition give the following results: —-east of the headland on which stands the ruins of Hesperides or Berenice (now Bensaz) is a small lake, which communicates with the harbour of the city, and has its water of course salt. The water of the lake varies greatly in quantity, according to the season of the year; and is nearly dried up in summer. There are strong grounds to believe that its waters were more abundant, and its communication with the harbour more perfect, in ancient times than at present. On the margin of the lake is a spot of rising ground, nearly insalinated in winter, on which are the remains of ancient buildings. East of this lake again, and only a few yards from its margin, there is a stream of fresh water, which empties itself into the lake, "running along a channel of incomconsiderable breadth, bordered with reeds and rushes," and "might be mistaken by a common observer for an inroad of the lake into the sandy soil which bounds it." Moreover, this is the only stream which empties itself into the lake; and indeed the only one found on that part of the coast of Cyrenaica. Now, even without searching further, it is evident how well all this answers to the description of Strabo (xviii. p. 536): —"There is a promontory called Pseudopenia, on which Berenice is situated, beside a certain Lake of Tritionis (Euphr. *λίμπρια* ανά την Παραλία), in which there is generally *άμυνα* a little island, and a temple of Aphrodite upon it; but there is (or it is) also the Harbour of Hesperides, and the river Lathbon falls into it." It is now evident how much the sense of the description would be impaired by reading *άμυνα* for *λίμπρια* in the last clause; and it matters but little whether Strabo speaks of the river as falling into the harbour because it fell into the lake which communicated with the harbour, or whether he means that the lake, which in ancient time communicated with the Apsinias or Apaminas, or Lathbon (that is, an inner harbour) of the city. But the little stream which falls into the lake is not the only representative of the river Lathbon. Further to the east, in one of the subterranean caves which abound in the neighbourhood of Bensaz, Beechey found a large body of fresh water, losing itself in the bowels of the earth; and the Bey of Bengazi affirmed that he had tracked its subterraneous course till he was quite certain of the safety of proceeding further, and that he had found it as much as 30 feet deep. That the stream thus lost in the earth is the same which reappears in the spring on the margin of the lake, is extremely probable; but whether it be so in fact, or not, we can hardly doubt that the ancient Greeks would imagine the connection to exist. (Beechey, *Proceedings*, 1826, pp. 325, 326, fall; Barth, *Wanderungen*, 291, p. 367.)

**LATRIPPA** (آسفلوانة), an inland town of Arabia Felix, mentioned by Ptolemy (vi, 7. § 31), which there is no difficulty in identifying with the ancient name of the renowned Ei-Medinch, "the city," as it is called by emphasis among the disciples of the false prophet. Its ancient name, Yathrib, still exists in the native geographies and local traditions, which, with the definite article *el* prefixed, is as accurately represented by Litribba as the Greek alphabet would admit. "Medinch is situated on the edge of the great Arabian desert, close to the chain of mountains which traverses that country from north to south, and is a continuation of Lebanon. The great plain of Arabia in which it lies is considerably elevated above the level of the sea. It is ten or eleven days distant from Makkae. It is always considered the principal fortress of the Hedjaz, being surrounded with a stone wall. It is one of the best-built towns in the East, ranking in this respect next to Aleppo, though ruined houses and walls in all parts of the town indicate how far it has fallen from its ancient splendour. It is surrounded on three sides with gardens and plantations, which, on the east and south, extend to the distance of six or eight miles. Its population amounts to 16,000 or 20,000 — 10,000 or 12,000 in the town, the remainder in the suburbs." (Burchhardt, *Arabie*, 321—400; Bitter, *Erkundungen*, vol. i. p. 15, ii. pp. 145, &c.)

**LATIUM.** (§ Aeneas: Eith. and Adj. Latinius), was the name given by the Romans to the region of Central Italy, situated on the Tyrrhenian sea, between Etruria and Campania.

**I. NAME.**

There can be little doubt that Latium meant originally the land of the Latini, and that in this, so as in almost all other cases, the name of the people proceeded, instead of being derived from, that of the country. But the ancient Roman writers, with their usual infidelity in all matters of etymology, derived the name of the Latin from a king of the name of Latinus, while they sought for another origin for the name of Latium. The common etymology (to which we were obviously led by the quantity of the first syllable, and which is derived from it in "latius") and the usual explanation was, that it was so called because Saturn had there *latius hid* from the pursuit of Jupiter. (Virg. *Aeneid* viii. 322; Ovid, *Fasti* i. 328.) The more learned derivations proposed by Sanf audience audio Varro, from the inhabitants having lived *pridruid in caves* (Sanfins, *Serv. ad Aen. i.* 6), or because Latium itself was as it were an upper Varro, *ap. Serv. ad Aen. viii.* 328, are certainly not more satisfactory. The form of the name of Latium would at first lead to the supposition that the ethnic Latinus was derived from it; but the same remark applies to the case of Samnium and the Samitae, where we know that the people, being a race of foreign settlers, must have given their name to the country, and not the converse. Probably Latinus is only a lengthened form of the name, which was originally Latil or Latvi; for the connection which has been generally recognised between Latini and Laviniums, Latins and Lavinias, seems to point to the existence of an old form, Latinnius. (Donkleison, *Vorwissenschaften*, p. 6; Niebuhr, V. d. Y. *Kensel*, p. 543.) Varro himself seems to regard the name as deriving from that of Latinus (I. L. v. § 38); and it was generally regarded as equivalent to "the land of the Latins" is sufficiently proved by the fact that the Greeks always rendered it by Ἑλιτίνια, or Ὑλιτίνια μη. The name of *Adonis* is found only in Greek writers of a late period, who borrowed it directly from the Romans, (Appian, *B. C.* ii. 36; Herodian, i. 15.) From the same cause it must have proceeded that when the Latinus ceased to
have any national existence, the name of Latium is still not infrequently used, as equivalent to "nomem Latitudinum," to designate the whole body of those who possessed the rights of Latins, and were therefore still called Latini, though no longer in a national sense.

The suggestion of a modern writer (Abeken, *Mittal Italien, p. 49*) that Latium is derived from "latuus," broad, and means the broad plain or expanse of the Campagna (i.e. Campania from "Campus"), appears to be untenable, on account of the difference in the quantity of the first syllable, notwithstanding the analogy of *Aervio*, which has the first syllable short.

II. EXTENT AND BOUNDARIES.

The name of Latium was applied at different periods in a very different extent and significance. Originally, as already pointed out, it meant the land of the Latini; and as long as people retained their independent national existence, the name of Latium could only be supplementary, a territory possessed by them, exclusive of that of the Hernici, Aequeani, Volscians, &c., who were at that period independent and often hostile nations. It was not till these separate nationalities had been merged into the common condition of subjects and citizens of Rome that the name of Latium came to be extended to all the territory which they had previously occupied; and was thus applied, first in common parlance, and afterwards in official usage, to the whole region from the borders of Etruria to those of Campania, or from the Tiber to the Liris. Hence we must carefully distinguish between Latium in the original sense of the name, in which alone it occurs throughout the early Roman history, and Latium in this later or geographical sense; and it will be necessary here to treat of the two quite separately. The period at which the latter usage of the name came into vogue we have no means of determining; we know only that it was fully established before the time of Augustus, and is recognised by all the geographers. (Strab. v. pp. 228, 231; Plin. iii. 5. a. 9; Phot. iii. 1. §§ 5, 6.) Pliny describes the original Latium, or Latium properly so called, as Latium Antiquum, to which he opposes the newly added portions, as Latium Adjacentum. It may, however, be doubted whether these apppellations were ever adopted in common use, though convenient as geographical distinctions.

1. LATIUM ANTICUM, or Latium in the original and geographical sense, was a country of small extent, bounded by the Tiber on the N., by the Apennines on the E., and by the Tyrrhenian sea on the W.; while on the S. its limits were not defined by any natural boundaries, and appear to have fluctuated considerably at different periods. Pliny defines it as extending from the mouth of the Tiber to the Circeian promontory, a statement confirmed by Strabo (Plin. iii. 5. a. 9; Strab. v. p. 331); and we have other authority also for the fact that at an early period all the tract of marly plain, known as the Pontine Marshes or "Pomptinus Ager," extending from Velitrae and Antium to Circeii, was inhabited by Latins, and regarded as a part of Latium. (Cato, op. cit. p. 236; Strab. v. p. 331.) Even the adjoining mountain tract, subsequently occupied by the Volscians, a part at least must have been originally Latin, for Cora, Norba, and Setia were all of them Latin cities (Dionys. v. 61);—though, at a somewhat later period, not only had these towns, as well as the plain beneath, fallen into the hands of the Volscians, but that people had made themselves masters of Asculum and Velitrae, which are in consequence repeatedly called Volscian cities. The manner in which the early Roman history has been distorted by patriotic legends and the exaggerations of national vanity renders it very difficult to trace the course of these changes, and the alterations in the frontiers consequent upon the alternate progress of the Volscians and the Roman arms. But there seems no reason to doubt the fact that such changes repeatedly took place, and that we may thus explain the apparent inconsistency of ancient historians in calling the same places at one time Volscian, at another Latin cities. We may also clearly discern two different periods, during the first of which the Volscians were gradually gaining upon those of the Latins and extending their dominion over cities of Latin origin; while, in the second, the Volscians were in their turn giving way before the preponderating power of Rome. The Gaulish invasion (n.c. 390) may be taken, approximately at least, as the turning point between the two periods.

The case appears to have been somewhat similar though to a less degree, on the northern frontier, where the Latins adjoined the Sabines. Here, also, we find the same places at different times, and by different authors, termed sometimes Latin and sometimes Sabine, cities; and though in some instances the discrepancy is traceable to an adversarial error, it is probable that in some instances both statements are equally correct, but refer to different periods. The circumstance that the Anio was fixed by Augustus as the boundary of the First Region seems to have soon led to the notion that it was the northern limit of Latium also; and hence all the towns beyond it were regarded as Sabine, though several of them were, according to the general tradition of earlier times, originally Latin cities. Such was the confusion resulting from this cause that Pliny in one passage enumerates Nomentum, Tufidum, and even Turus among the Sabine towns, while he elsewhere mentions the two former as Latin cities,—and the Latin origin of Turus is too well established to admit of a doubt. (Plin. iii. 5. a. 9.)

In the absence of natural boundaries it is only by means of the names of the towns that we can trace the extent of Latium; and here fortunately the lists that have been transmitted to us by Dionysius and Pliny, as well as those of the colonies of Alba, afford us material assistance. The latter, indeed, cannot be regarded as of historical value, but the former was unquestionably meant to represent the fact, with which their authors were probably well acquainted. The places there enumerated were properly Latin cities, and not of Sabine or Volscian origin. Taking these authorities for our guides, we may trace the limits of ancient Latium as follows:—1. From the mouth of the Tiber to the confluence of the Arno, and the former river constituted the boundary between Latium and Etruria. The Romans, indeed, from an early period, extended their territory beyond the Tiber, and held the Janiculum and Campus Vaticanus on its right bank, as well as the so-called Septum Pagii, which they wrested from the Veientes and it is probable that the Etruscans, on the other hand, had at one period possessed the power over part of the district on the left bank of the Tiber, but that river nevertheless constituted the generally recognised geographical limit between Etruria and Latium. 2. North of the Anio the Latin territorial...
LATIUM.

comprised Fidenae, Crustumerium, and Nomentum, all of which are clearly established as Latin towns, while Etruria, only 3 miles from Nomentum, is equally well marked out to be of Sabine origin. This line of demarcation is confirmed by Strabo, who speaks of the Sabines as extending from the Tiber and Nomentum to the Vestini. (Strab. v. p. 233.) From Nomentum to Tibur the frontier cannot be traced with accuracy, from our uncertainty as to the position of several of the towns in this part of Latium—Corciniullum, Medullia, Cameria, and Amelia; but we may feel assured that it continued the eastern boundary of the Mucian Coritani (Mita. S. Angelo and Monteculiali), and from thence stretched across to the foot of Monte Gemmario (Mons Latretilis), around the lower slopes of which are the ruins or sites of more than one ancient city. Probably the whole of this face of the mountains, fronting the plain of the Campagna, was always regarded as belonging to Latium, although the inner valleys and rear of the same range were inhabited by the Sabines. Tibur itself was unquestionably Latin, though how far its territory extended into the interior of the mountains is difficult to determine. But if Empulium and Sassetula (two of its dependent towns) be correctly placed at Ampugnion and near Sicilium, it must have comprised a considerable tract of the mountain country on the left bank of the Tiber. Volaterrae, on the other hand, and the valley of the Digestus, were unquestionably Sabine. 3. Returning to the Anio at Tibur, the whole of the W. front of the range of the Apenines from thence to Prænestæ (Palestrinæ) was certainly Latin; but the limits which separated the Latins from the Aequians are very difficult to determine. Beneventum, Beneventum, Bologna, and Vitellus, all of which were situated in this neighbourhood, were Latin cities; though, from their proximity to the frontier, several of them fell at one time or other into the hands of the Aequians; in like manner we cannot doubt that the whole group of the Alban Hills, including the range of Mount Algidus, was included in the original Latium, though the Aequians were able to occupy the heights of Algidus at the opening of almost every campaign. Vulsonumone, whether it represent Tellium or Vitalia, must have been about the most advanced point of the Latin frontier on this side. 4. The Volcean frontier, as already observed, appears to have undergone much fluctuation. On the one hand, we find, in the list of the cities forming the Latin League, as given by Dionysius (v. 61), not only Velitrae, which at a later period is called a Volcean city, but Cora, Norba, and Setia, all of which were situated on the western front of the range of mountains which formed in later times the stronghold of the Volcean nation; but looking on the Pontine Marshes. Even as late as the outbreak of the greatest of the wars, B. C. 340, we find L. Aunius of Setia, and L. Numicianus of Circeii, holding the chief magistracy among the Latins, from whom at the same time Livy expressly distinguishes the Volscians (Liv. viii. 3). These statements, combined with those of Pliny and Strabo already cited, seem to leave no doubt that Latium was properly regarded as extending as far as Circeii and the precincts of the same name, and comprising the whole plain of the Pontine Marshes, as well as the towns of Cora, Norba, and Setia, on the E. side of that plain. On the other hand, Tarracina (or Anxur) and Privernum were certainly Volcean cities; and there can be no doubt that during the period of the Volcean power they had wrested a great part of the tract just described from the dominion of the Latins. Antium, which for some reason or other did not form a member of the Latin League, was from an early period a Volcean city, and became one of the chief strongholds of that people during the 4th century B.C. The extent of Latium Antiquum, as thus limited, was far from considerable; the coast-line, from the mouth of the Tiber to the Cisician promontory, does not exceed 52 geographical or 65 Roman miles (Pliny erroneously calls it only 60 Roman miles); while the greatest part of the suitable territory of the Sabine frontier, near Etruscum, is little more than 70 Roman miles; and its breadth, from the mouth of the Tiber to the Sabine frontier, is just about 30 Roman miles, or 240 stadia, as correctly stated by Dionysius on the authority of Cato. (Dionys. ii. 48.) 2. LATIUM NOVUM. The boundaries of Latium in the enlarged or geographical sense of the name are much more easily determined. The term, as thus employed, comprehended, besides the original territory of the Latins, that of the Aequians, the Hernicans, the Volscians, and the Aurunci or Asonians. Its northern frontiers thus remained unchanged, while on the E. and S. it was extended so as to include all the territory of the Aequians or Aequilucani, including Carceoli and the valley of the Cesone. The upper valley of the Anio about Subiaco, on the other hand, together with the mountainous district extending from thence to the valley of the Sacco, constituting the chief abode of the Aequi during their wars with Rome, was wholly comprised in the newly extended Latium. To this was added the greater part of the mountain district, extending nearly to the valley of the Liris, as well as that of the Volsci, who occupied the country for a considerable extent on both sides of the Liris, including the mountain district around Arpinum and Atina, where they bordered on the territory of the Samnites. The limits of Latium towards the S., where its frontiers adjoined those of Campania, are clearly marked by Strabo, who tells us that Castrum was the last Latin city on the line of the Via Latina,—Teanum being already in Campania; while on the line of the Via Appia, near the sea-coast, Sinuessa was the frontier town of Latium. (Strab. v. pp. 231, 233, 237; Plin. ii. 5. a. 9.) Pliny, in one passage, appears to speak of the Liris as constituting the boundary of this enlarged Latium, standing nearly after (§ 59) he terms Sinuessa “oppidum extremum in adjecto Latio,” whereas it has been supposed that the boundary of Latium was at first extended only to the Liris, and subsequently carried a step further so as to include Sinuessa and its territory. (Crantor’s Italy, vol. ii. p. 11.) But we have no evidence of any such successive stages. Pliny in another passage uses the term “adjectum Latium” only as contradistinguished from “Latium antiquum”; and the expression in the previous passage, “unde nomen Latii processerit ad Lirin annum,” need not be construed too stringently. It is certain, at least, that, in the days of Strabo, as well as those of Pliny, Si-
LATIUM.

nnessa was already regarded as included in Latium; and the former author nowhere alludes to the Liris as the boundary.

III. PHYSICAL GEOGRAPHY.

The land of the Latins, or Latium in its original sense, formed the southern part of the great basin through which the Tiber flows to the sea, and which is bounded by the Ciminian Hills, and other ranges of volcanic hills connected with them, towards the N. by the Apennines on the E., and by the Alban Hills on the S. The latter, however, do not form a continuous barrier, being in fact an isolated group of volcanic origin, separated by a considerable gap from the Apennines on the one side, while on the other they leave a broad strip of low plain between their lowest slopes and the sea, which is continued on in the broad expanses of level and marshy ground, commonly known as the Pontine Marshes, extending in a broad band between the Volscian mountains and the sea, until it is suddenly and abruptly terminated by the isolated mass of the Ciceronian promontory.

The great basin-like tract thus bounded is divided into two portions by the Tiber, of which the one on the N. of that river belongs to Southern Etruria, and is in fact a continuation of that great natural barrier between the plains of Latium and Etruria, familiarly known as the Appenine range, running parallel with the Tiber and the sea. The range is separated from the sea by a narrow strip of level ground, the valley of the Tiber, along which the Tiber flows. The central part of the range is occupied by the Tiber valley, and the sea, and the sea is separated from the plain by a narrow strip of level ground, the valley of the Tiber.

Opposite to Praeneste, and separated from it by a breadth of nearly 6 miles of intervening plain, rises the isolated group of the Alban mountains, the form of which at once proves its volcanic origin. [ALBANUS MONS.] It is a nearly circular mass of about 40 miles in circumference; and may be conceived as forming a great crater, the outer edge of which has been broken up into numerous more or less detached summits, several of which were crowned in ancient times by towns or fortresses, such as Tasulum, Corbin, &c.; while at a lower level it throws out detached cones of soft tuff, affording advantageous sites for towns, and which were accordingly occupied by those of Velitrea, Lagunum, Alba Longa, &c. The group of the Alban mountains is wholly detached on all sides; on the S. a strip of plain, of much the same breadth as that which separated from the Apennines of Praeneste, divides it from the subalpine, but very lofty mass of moun-
tains, commonly known as the Monti Lupiarsi, or Volscian mountains. This group, which forms an outstanding mass of the Apennines, separated from the main chain of those mountains by the broad valley of the Tiber, rises in a bold and imposing mass from the level of the Pontine Marshes, which it borders throughout their whole extent, until it reaches the sea at Terracina, and from that place to the mouth of the Liris sends down a succession of mountain streams, constituting a great natural barrier between the plains of Latium and those of Campania. The highest summits of this group, which consists, like the more central Apennines, wholly of limestone, attain an elevation of nearly 5000 feet above the sea; the whole mass fills up almost the entire space between the valley of the Tiber and the Pontine Marshes, a breadth of from 12 to 16 miles; with a length of nearly 40 miles from Monte Fortino at its N. extremity to the sea at Terracina; but the whole distance, from Monte Fortino to the end of the mountain chain near the mouth of the Liris, exceeds 60 miles. The greater part of this rugged mountain tract belonged from a very early period to the Volscians, but the Latins, as already mentioned, possessed several towns, as Signia, Corna, Nuceria, &c., which are marked on projecting points, or underfalls of the main chain.

But though the plains of Latium are thus strongly characterised, when compared with the groups of mountains just described, it must not be supposed that they constitute an unbroken plain, still less a level surface; rather the contrary. The great mass of the plain of Northern Italy. The Campagna of Rome, as it is called at the present day, is a country of wholly different character from the ancient Campania. It is a broad undulating tract, never rising into considerable elevations, but presenting much more variety of ground than would be suspected from the general uniformity of its appearance, and irregularly intersected in all directions by numerous streams, which have cut for themselves deep channels or ravines through the soft volcanic tufo of which the soil is composed, leaving on each side steep and often precipitous banks. The height of these, and the depth of the valleys or ravines which are bounded by them, vary greatly in different parts of the Campagna; but besides these local and irregular fluctuations, there is a general rise (though so gradual as to be imperceptible to the eye) in the level of the plain towards the E. and S.E.; so that, as it approaches Praeneste, it really attains to a considerable elevation, and the river courses which intersect the plain in nearly parallel lines between that city and the Anio become deep and narrow ravines of the most forcible description. Even in the lower and more level portion of the Campagna the sites of ancient cities will be generally found to occupy spaces bounded to a considerable extent — frequently on three sides out of four— by steep banks of tufo rock, affording natural means of defence, which could be easily strengthened by the simple expedient of cutting away the face of the rocky bank, so as to render it altogether inaccessible. The peculiar character of the plains of Latium, separated from these causses is well represented on Sir W. Gell's map, the only one which gives at all a faithful idea of the physical geography of Latium.

The volcanic origin of the greater part of Latium has a material influence upon its physical character and condition. The Alban mountains, as already mentioned, are unquestionably a great volcanic mass.
LATIUM.

which meant at a distant period have been the centre of volcanic eruptions on a great scale. Besides the central or principal crater of this group, there are several minor craters, or crater-shaped hollows, at a much lower level around its ridges, which were in all probability at different times centres of eruption. Some of these have been filled with water, and thus constitute the beautiful basin-shaped lakes of Albano and Nemi, while others have been drained at periods more or less remote. Such is the case with the Valle Aricina, which appears to have at one time constituted a lake [Antica], as well as with the now dry basin of Cornoviglie, below Tusculum, supposed with good reason to be the ancient Lake Regillus, and with the somewhat more considerable Lago di Castigliano, adjoining the ancient Gabii, which has been of late years either wholly or partially drained. Besides these distinct spots of volcanic action, there remain in several parts of the Campagna spots where sulphurous and other vapours are still evolved in considerable quantities, so as to constitute deposits of sulphur available for economic purposes. Such are the Lago di Solforo near Teosti (the Aquae Albula of the Romans), and the Solforo on the road to Ardea, supposed to be the site of the ancient Oracle of Faunus. Numerous allusions to these sulphurous and saline exhalations are found in the ancient writers; there is no probability, however, that they were in ancient times more numerous than at present. But the evidences of volcanic action are not confined to these local phenomena; the whole plain of the Campagna itself, as well as the portion of Southen Etruria which adjoins it, is a deposit of volcanic origin, consisting of the peculiar substance called peperino. The aggregate of these volcanic materials, sand, small stones, and scoriae or cinders, together with pumice, varying in consistence from an almost incoherent sand to a stone exceedingly hard to be well adapted for building purposes. The hardest varieties are those now called piro-piro, to which belong the Lapis Gabirius and Lapis Ammonis of the ancients. But even the common lava is of service for building purposes, as at the Lapidicinæ Rubræ, a few miles from the city, the fires of the bank of the River, and many other spots in the immediate neighbourhood of Rome. (Tores. i. 7.) Beds of true lava are rare, but by no means wanting; the most considerable are two streams which have flowed from the foot of the Alban Mount; the one in the direction of Ascoli, the other on the line of the Appian Way (which runs along the ridge of it for many miles) extending as far as a spot called Capo di Bove, little more than two miles from the gates of Rome. It was extensively carried by the Romans, who derived from these their principal supplies of the hard basaltic lava (called by them asile) with which they paved their high roads. Smaller beds of the same material occur near the Lago di Castigliano, and at other spots in the Campagna. (Concerning the geological phenomena of Latium see Daubeney On Volcanoes, pp. 162—173; and an Essay by Hoffmann in the Beschreibung der Stadt Rom, vol. i. pp. 45—51.)

The strip of country immediately adjoining the sea-coast of Latium differs materially from the rest of the district. Between the borders of the volcanic district just described and the sea there intervenes a broad strip of sandy plain, evidently formed merely by successive accumulations of sand from the sea, and constituting a barren tract, still covered, as it was in ancient times, almost wholly with wood. This broad belt of forest region extends without interruption from the mouth of the Tiber near Ostia to the promontory of Antium. The parts of it nearest the sea are rendered marshy by the stagnation of the streams that flow through it, the outlets of which to the sea are blocked up by the accumulations of sand. The headland of Antium is formed by a mass of limestone rock, forming a remarkable break in the otherwise uniform line of the coast, though itself of small elevation. A bay of about 8 miles across separates this headland from the low point or promontory of Astura; beyond which commences the far more extensive bay that stretches from the latter point to the mountain headland of Circeii. The whole of this line of coast from Astura to Circeii is bordered by a narrow strip of sand-hills, within which the waters accumulate into stagnant pools or lagoons. Beyond this again is a broad sandy tract, covered with denser forest by the stagnation of the sea, almost perfectly level, and in many places marshy; while from thence to the foot of the Volscanian mountains extends a tract of a still more marshy character, forming the celebrated district known as the Pontine Marshes, and noted in ancient as well as modern times for its insalubrity. The whole of this region, which, from its E. extremity at Cisterna to the sea near Terracina, is about 30 miles in length, with an average breadth of 12 miles, is perfectly flat, and, from the stagnation of the waters which descend to it from the mountains on the E., has been in all ages so marshy as to be almost uninhabitable. Pliny, indeed, records a tradition that there once existed no less than 24 cities on the site of what is in his day an unpeopled marsh; but a careful inspection of the locality is sufficient to prove that this must be a mere fable. (Plin. iii. 5. a. 9.) The dry land adjoining the marshes was doubtless occupied in ancient times by the cities or towns of Satricum, Ulubras, and Oscanic Pometia; while on the mountain ridges overlooking them rose those of Cora, Norba, Setia and Frivernum; but not even the name of any town has been preserved as situated in or on the marshy region itself. Equally unfounded is the statement hastily adopted by Pliny, though obviously inconsistent with the fact, that the whole of this alluvial tract had been formed within the historical period, a notion that appears to have arisen in consequence of the identification of the Med. Circius with the island of Circe, described by Homer as situated in the midst of an open sea. This remarkable headland is indeed a perfectly insulated mountain, being separated from the Apenines near Terracina by a strip of level sandy coast above 8 miles in breadth, forming the southern extremity of the plain of the Pontine Marshes; but this alluvial deposit, which alone connects the two, must have been formed at a period long anterior to the time of Homer. The Circius promontory formed the southern limit of Latium in the original sense. On the opposite side of the Pontine Marshes rises the lofty group of the Volscanian mountains already described: and these are separated by the valley of the Trerus or Sacco from the ridges more immediately connected with the central Apenines, which were inhabited by the Aequans and Hernici. All these mountain districts, as well as those inhabited by the Volscanians on the S. of the Liris, around Arpinum and Atina, partake of the same general character: they are occupied almost entirely by masses and groups of
limestone mountains, frequently rising to a great height, and very abruptly, while in other cases their sides are clothed with magnificent forests of oak and chestnut trees, and their lower slopes are well adapted for the growth of vines, olives, and corn. The broad valley of the Teverus, which extends from the foot of the hill of Praeneste to the valley of the Liris, is bordered on both sides by hills, covered with the richest vegetation, at the back of which rise the lofty ranges of the Volscian and Herculan mountains. This valley, which is followed throughout by the course of the Via Latina, forms a natural line of communication from the interior of Latiun to the coast of the Tyrrhenian Sea. 

This part of Latium is not (as compared with some other parts of Italy) a country of great natural fertility. On the other hand, the natural desolate aspect which the Campagna now presents is apt to convey a very erroneous impression as to its character and resources. The greater part of the volcanic plain not only affords good pasturage for sheep and cattle, but is capable of producing considerable quantities of corn, while the slopes of the hills on all sides are well adapted to the growth of vines, olives, and other fruit-trees. The vine of the Alban Hills was celebrated in the days of Horace (Hor. Carm. iv. 11. 2, Sat. ii. 8. 16), while the figs of Tusculum, the hazel-nuts of Praeneste, and the pears of Crustumium and Tibur were equally noted for their excellence.

In the early ages of the Roman history the cultivation of corn must, from the number of small towns scattered over the plain of Latium, have been carried to a far greater extent than we find it at the present day; but under the Roman Empire, and even before the close of the Republic, there appears to have been a continuously increasing tendency to diminish the amount of arable cultivation, and increase that of pasture. Nevertheless the attempts that have been made even in modern times to promote agriculture in the neighbourhood of Rome have sufficiently proved that its decline is more to be attributed to other causes than to the sterility of the soil itself. The tract near the sea-coast alone is sandy and barren, and fully justifies the language of Fabius, who called it "agrum macroerrum, littorisaisimunquem." (Serv. ad Aen. i. 3). On the other hand, the slopes of the Alban Hills are of great fertility, and are still studied, as they were in ancient times, with the villas of Roman nobles, and with gardens of the greatest richness.

The climate of Latium was very far from being a healthy one, even in the most flourishing times of Rome, though the greater amount of population and cultivation tended to diminish the effects of the malaria which at the present day is the scourge of the district. Strabo tells us that the territory of Ardea, as well as the tract between Antium and Lanuvium, and extending from thence to the Pontine Marshes, was marshy and unwholesome (v. p. 231). The Pontine plains themselves are described as "pestiferous" (Sili. Ital. viii. 379), and all the attempts made to drain them seem to have produced but little effect. The unhealthiness of Ardea is noticed both by Martial and Seneca as something proverbial (Mart. iv. 60; Seneca, Ep. 105); but, besides this, expressions occur which point to a much more general diffusion of malaria. Livy in one passage represents the Roman soldiers as complaining that they had to maintain a constant struggle "in arieto acque pestilentibus, circa urbem, solo." (Liv. viii. 98); and Livy (ix. 16) himself describes a room for rhetorical exaggeration, praises the choice of Romulus in fixing his city "in a healthy spot in the midst of a pestilential region." ("Locum delegit in regione pestilentis salubrem," Cic. de Rep. ii. 6.)

But we learn also, from abundant allusions in ancient writers, that it was only by comparison that Rome itself could be considered healthy; even in the city malaria fevers were of frequent occurrence in summer and autumn, and Horace speaks of the heats of summer as bringing in "fresh figs and funerals." (Hor. Ep. i. 7. 1—9.) Frontinus also extols the increased supply of water as tending to remove the causes which had previously rendered Rome notorious for its unhealthy climate ("causa gravissima euaque inveniendi eas town," De Aquaeduct. § 88). But the great accumulation of the population at Rome itself must have operated as a powerful check; for even at the present day malaria is unknown in the most densely populated parts of the city, though these are the lowest in point of position, while the hills, which were then thickly peopled, are but now almost uninhabited, are all subject to its ravages. In like manner in the Campagna, wherever a considerable nucleus of population was once formed, with a certain extent of cultivation around it, this would in itself tend to keep down the mischief; and it is probable that, even in the most flourishing times of the Roman Empire, this evil was considerably greater than it had been in the earlier ages, when the numerous free cities formed so many centres of population and agricultural industry. It is in accordance with this view that we find the malaria extending its ravages with frightful rapidity after the fall of the Roman Empire and the devastation of the Campagna; and a writer of the 11th century speaks of the deadly climate of Rome in terms which at the present day would appear greatly exaggerated. (Peter Damian, cited by Bunsen.) The unhealthiness arising from this cause is, however, entirely confined to the plains. It is found at the present day that an elevation of 350 or 400 feet above their level gives complete immunity; and hence Tibur, Tusculum, Aricia, Lanuvium, and all the other cities that were built at a considerable height above the plain were perfectly healthy, and were restored to during the summer (in ancient as well as modern times) by all who could afford to retreat from the city and its immediate neighbourhood. (See on this subject Tournon, Études Statistiques sur Rome, liv. i. chap. 9; Bunsen, Beschreibung der Stadt Rom, vol. i. pp. 98—108.)

IV. HISTORY.

1. Origin and Affinities of the Latina.—All ancient writers are agreed in representing the Latins, properly so called, or the inhabitants of Latium in the restricted sense of the term, as a distinct people
from those which surrounded them, from the Volsci and Aequians on the one hand, as well as from the Sabines and Etruscans on the other. But the views and traditions recorded by the same writers concur also in representing them as a mixed people, produced by the blending of different races, and not as the pure descendants of one common stock. The legend most commonly adopted, and which gradually became firmly established in the popular belief, was that which represented Latium as inhabited by a people called Latini, who received, shortly after the Trojan War, a colony or band of emigrant Trojans under their king Aeneas. At the time of the arrival of these strangers the Aborigines were governed by a king named Latinus, and it was not till after the death of Latinus and the union of the two races under the rule of Aeneas, that the combined people assumed the name of Latini. (Liv. i. 1, 2; Dionysius i. 45, 60; Strab. v. p. 292; Appian, Rom. i. 1.) But a tradition, which has much more the character of a national one, preserved to us on the authority both of Varro and Cato, represents the population of Latium, as it existed previous to the Trojan colony, as already of a mixed character, and resulting from the union of two races, one, which inhabited the Central Apennines about Brenta, with a people whom they found already established in the plains of Latium, and who bore the name of Siculi. It is strange that Varro (according to Dionysius) gave the name of Aborigines, which must originally have been applied or adopted in the sense of Autochthones, as the indigenous inhabitants of the country [Abor- gines, according to some former writers], by which the name of Cato apparently used it in the more natural signification as applied to the previously existing population, the same which were called by Dionysius and Varro, Siculi. (Varr. ap. Dionys. i. 9, 10; Cato, op. Praec. v. 12, § 65.) But though it is impossible to receive the statement of Varro with regard to the name of the invading population, the fact of such a migration having taken place may be fairly admitted as worthy of credit, and is in accordance with all else that we know of the progress of the population of Central Italy, and the course of the several successive waves of migration that descended along the central line of the Apennines. [Italia, pp. 84, 85.]

The authority of Varro is here also confirmed by the result of modern philological researches. Niebuhr was the first to point out that the Latin language bore in itself the traces of a composite character, and was made up of two distinct elements; the one nearly resembling the Greek, and therefore probably derived from a Pelasgic source; the other closely connected with the Osca and Umbrian dialects of Central Italy. To this idea the ancient observers adhered, that the terms connected with war and arms belong almost exclusively to the latter class, while those of agriculture and domestic life have for the most part a strong resemblance to the corresponding Greek terms. (Niebuhr, vol. i. pp. 82, 83; Donaldson, Varvounias, p. 3.) We may hence fairly infer that the conquering people from the north was a race akin to the Osca, Sabines and Umbrians, whom we find in historical times settled in the same or adjoining regions of the Apennines: and that the inhabitants of the plains whom they reduced to subjection, and with whom they became gradually mingled (like the Normans with the Saxons in England) were a race of Pelasgic extraction. This last circumstance is in accordance with the inferences to be drawn from several of the historical traditions or statements transmitted to us. Thus Cato represented the Aborigines (whom he appears to have identified with the Siculi) as of Hellenic or Greek extraction (Cato, ap. Dionys. i. 11, 13), by which Roman writers often mean nothing more than Pelasgic: and the Siculi, where they reappear in the S. of Italy, are found indisputably connected with the Osca-Umbrians, a race whose Pelasgic origin is well established. [Siculi.]

The Latin people may be regarded as composed of two distinct races, both of them members of the great Indo-Tuscan family, but belonging to different branches of that family, the one more closely related to the Greek or Pelasgic stock, the other to that race which, under the various forms of Umbrians, Osca and Sabellians, constituted the basis of the greater part of the population of Central Italy. [Italia.]

But whatever value may be attached to the historical traditions above cited, it is certain that the two elements of the Latin people had become indisputably blended before the period when it first appears in history: the Latin nation, as well as the Latin language, is always regarded by Roman writers as one organic whole.

We may safely refuse to admit the existence of a third element, as representing the Trojan settlers, who, according to the tradition commonly adopted by the Romans themselves, formed an integral portion of the Latin nation. The legend of the arrival of Aeneas and the Trojan colony is, in all probability, a mere fiction adopted from the Greeks (Schwegler, Röm. Gesch. vol. i. pp. 310-330); though it may have found some adventitious support from the existence of usages and religious rites which, being of Pelasgic origin, recalled those found among the Pelasgic races on the shores of the Aegean Sea. And it is in accordance with this view that we find traces of similar legends connected with the worship of Aeneas and the Penates at different points along the coast of the Aegean and Mediterranean seas, all the way from the Troad to Latium. (Dionysius i. 46-55; Klaman, Aeneas u. die Penaten, book 3.) The worship of the Penates at Lavinium in particular would seem to have been closely connected with the Cabetic worship so prevalent among the Pelasgians, and hence probably that city was selected as the supposed capital of the Trojans on settling in Italy.

But though these traditions, as well as the sacred rites which continued to be practised down to a late period of the Roman power, point to Lavinium as the ancient metropolis of Latium, which retained its sacred character as such long after its political power had disappeared, all the earliest traditions represent Alba, and not Lavinium, as the chief city of the Latins when that people first appear in connection with Rome. It is possible that Alba was the capital of the conquering Osca race, as Lavinium had been that of the conquered Pelasgians, and that there was thus some historical foundation for the legend of the transference of the supreme power from the one to the other: but no such supposition can claim to rank as more than a conjecture. On the other hand, we may fairly admit as historical the fact, that, at the period of the foundation or first origin of Rome, the Latin people constituted a national league, composed of numerous independent cities, at the head of which stood Alba, which exercised a certain supremacy over the rest. This vague superiority, arising probably from its greater actual power, appears to have given rise
Latinum.

Limestone mountains, frequently rising to a great height, and very abruptly, while in other cases their sides are clothed with magnificent forests of oaks and chestnut trees, and their lower slopes are adapted for the growth of vines, olives, etc. The broad valley of the Tresus, which extends from the foot of the hill of Praeneste to the valley of Liris, is bordered on both sides by hills, covered with the richest vegetation, at the back of which rise lofty ranges of the Volcanic and Hercynian mountains. This valley, which is followed throughout by the Tresus, forms a natural line of communication from the interior of Latium to the valley of Liris, and so to Campania; the importance of this in a military point of view is apparent on many occasions in Roman history. The broad valley of Liris itself opens an easy and unbroken passage from the heart of the Apenines of Facinas with the plains of Campania. On one side, the Aonio, which has its sources in the mountains near Tresus, not far from the river, flows in a SW. direction, and in its course abruptly two or three times. The important gorge at Tivoli into the Campagna.

The greater part of Lazio is hilly, with some other parts of Latium with the exception of Ventricus, is destitute of natural fertility. On the whole, the neighborhood of the Tresus appears to have been a desolate aspect which the Tresus was apt to convey a very different impression. Among the character and resources of Latium, the volcanic plain not only Sperlonga, and Corioli, Longa, and Salernum, but also the same group. On the sheep and cattle, built up of beautiful cities of Aecia, Laurentum, and on hills on all sides and north, as far as so much nature permits, is found. But there is also the Alban Hills of Cato (esp. Pio Trinacri, iv. p. 8) (Hor. Carm. iv. 41) which speaks of the celebrated temple of Tresus, with its legends, as founded in common by the four Potenx, Tresus, Ardea, and the Ensuli, that Rome, perhaps, is the existence of a separate, and, as Rome, the greatest league, subsisting at the same time of which Rome was the head. All these errors a result would seem, however, to have ultimately to a form of government of the Romans, Alba was the acknowledged

Another people whose name appears in all the ancient historical traditions of Latium, but who had not been completely merged in the general body of the Latin nation, before we arrive at the historical period, was that of the Ardea. Their capital was Ardea, a city to which a Greek or Argo or Arciveption was assigned [Ardea]: if any value can be attached to such traditions, they may be regarded as pointing to a Pelasgic origin of the Ardea; and Niebuhr explains the tradition of giving credit to the chief city of maritime Latium, while it was still in the hands of the Pelasgiacs. (Niebuhr, vol. ii. p. 44, vol. ii. p. 21.)

One of the most difficult questions connected with the early history of Lazio is the meaning and origin of the term "Prisci Latini," which we find applied by many Roman writers to the cities of the Latin League, and which occurs in a formula given by Livy that has every appearance of being very ancient: (Liv. i. 38.) It may safely be assumed that the term was "Old Latini," and Niebuhr's idea that Prisci was itself a national appellation...

temple of Jupiter Latinaris was the natural end of such a procession, just as that of Jupiter Capitolinus

was at Rome.

Among the deities especially worshipped by the Romans, it may suffice to mention, as apparently

cularly Latin origin, Janus, Saturnus, Faunus, Picus. The latter seems to have been so closely

ased with Mars, that he was probably only ano-

same deity. Janus was originally a god of the sun, answering to Zeus or Diana, the

of the moon. Saturnus was a terrestrial deity ascribed as the inventor of agriculture and of essen-

improvements of life. Hence

to the notion that Alba was in another sense the metropolis of Latium, and that all, or at any rate the greater part, of the cities of Latium were merely colonies of Alba. So far was this idea carried, that we find expressly enumerated in the list of such colonies places like Ardea, Tusculum, and Praeneste, which, according to other traditions generally received, were more ancient than Alba itself. (Liv. i. 52; Dionys. iii 54; Dirol. vii. ap. Euseb. Amm. p. 185; Vict. Orig. Genl. Rom. 17.) (Alba Longa.)

Eros. It was preserved to us a statement of a very different stamp, according to which there were thirty towns or communities, which he terms the "populi Albenses," which were accustomed to share in the sacrifices on the Alban Mount. Many of these names are now obscure or unknown, several others appear to have been always inconsiderable places, while a few only subsequently figure among the well-known cities of Latium. It is therefore highly probable that we have here an authentic record, preserved from ancient times, of a league which actually subsisted at a very early period, before Alba became the head of the more important and better known confederacy of the Latins in general. Of the towns thus enumerated, those whose situation can be determined with any certainty are all (with the remarkable exception of Fidenae) situated in the immediate neighbourhood of the Alban Hills; and thus appear to have been grouped around Alba as their natural centre. Among them we find Bols, Pedum, TPerlia, and Veultia on the N. of the Alban Hills, and Corioli, Longula, and Poliues on the S. of the same group. On the other hand, other powerful cities, such as Lanuvium, and Tusculum, though so much nearer to Alba, are not included in this list. But there is a remarkable statement of Catu (ap. Friscian. iv. p. 629), in which he speaks of the celebrated temple of Diana at Aricia, as founded in common by the people of Tusculum, Aricia, Lanuvium, Laurentum, Cora, Tiber, Pometia, Ardea, and the Rutuli, that seems to point to the existence of a separate, and, as it were, counter league, subsisting at the same time with that of which Alba was the head. All these minor unions would seem, however, to have ultimately been merged in the general confederacy of the Latins, of which, according to the tradition universally adopted by Roman writers, Alba was the acknowledged head.

Another people whose name appears in all the earliest historical traditions of Latium, but who had become completely merged in the general body of the Latin nation, before we arrive at the historical period, was that of the Rutuli. Their capital was Ardea, a city to which a Greek or Argive origin was ascribed [Ardea]; if any value can be attached to such traditions, they may be regarded as pointing to a Pelasgic origin of the Rutuli; and Niebuhr explains the traditional greatness of Ardea by supposing it to have been the chief city of maritime Latium, while it was still in the hands of the Pelasgiacs. (Niebuhr, vol. i. p. 44, vol. ii. p. 21.)

One of the most difficult questions connected with the history of Latium is the meaning and origin of the term "Priets Latini," which we find applied by many Roman writers to the cities of the Latin League, and which occurs in a formula given by Livy that has every appearance of being very ancient. (Liv. i. 32.) It may safely be assumed that the term means "Old Latins," and Niebuhr's idea that Priest was itself a national appellation has been generally rejected as untenable. But it is difficult to believe that a people could ever have called themselves the "old Latins;" and yet it seems certain that the name was so used, both from its occurrence in the formula just referred to (which was in all probability borrowed from the old law books of the Fetialis), and from the circumstance that we find the name almost solely in connection with the wars ofAncus Marcus and Tarquinius Priscus (Liv. i. 32, 33, 38); and it never occurs at a later period, impossible to suppose that it was used as a term of distinction for the Latins properly so called, or inhabitants of Latium Antiquum, as contradistinguished from the Aequeians, Veclians, and other nations subsequently included in Latium: a supposition adopted by several modern writers. On the other hand the name does not occur in the Roman history, prior to the destruction of Alba, and perhaps the most plausible conjecture is that the name was one assumed by a league or confederacy of the Latin cities, established after the fall of Alba, but who thus asserted their claim to represent the original and ancient Latin people. It must be admitted that this explanation seems to agree in no small measure with the supposed connexion of the Priests Latin with the usages of Alba, which is found both in Livy and Dionysius (Liv. i. 3; Dion. i. 45); but this probably meant to convey nothing more than the notion already noticed, that all the cities of Latium were founded by such colonies.

Livy, at least, seems certainly to regard the Priets Latin as equivalent to the whole Latin nation, and a perfect contradiction disfounded from the rest. (Liv. i. 38.)

2. Relations of the Latins with Rome.—As the first historical appearance of the Latins is that of a confederation of different cities, of which Alba was the head, so the fall and destruction of Alba may be regarded as the first event in their annals which can be termed historical. The circumstances transmitted to us in connection with this are undoubtedly poetical fictions; but the main fact of the destruction of the city and downfall of its power is well established. This event must have been followed by a complete derangement in the previously existing relations. Rome appears to have speedily put forth a claim to the supremacy which Alba had previously exercised (Dionys. i. 12); but it is evident that it was not acknowledged by the other cities of Latium; and the Priets Latin, whose name appears in history only during this period, probably formed a separate league of their own. It was not long, however, before the Romans succeeded in establishing their superiority: and the statement of the Roman annals, that the Latin league was renewed under Tarquinius Superbus, and the supremacy of the monarch acknowledged by all the other cities that composed it, derives a strong confirmation from the more authentic testimony of the treaty between Rome and Carthage, preserved to us by Polybius (iii. 22). In this important document, which dates from the year immediately following the expulsion of the kings (B. c. 509), the confusion of the names of people of Ardea, Altim, Laurentum, Circeii, Tarquinia, and the other subject (or dependent) cities of Latium, and even making conditions in regard to the whole Latin territory, as if it was subject to its rule. But the state of things which appears to have been at this time fully established, was broken up soon after; whether in consequence of the revolution at
LATIUM.

Rome which led to the abolition of the kingly power, or from some other cause, we know not. The Latin cities became wholly independent of Rome; and though the war which was marked by the great battle at the lake Regillus has been dressed up in the legendary history with so much of fiction as to render it difficult to attach any historical value to the traditions connected with it, there is no reason to doubt the fact that the Latins had at this time shaken off the supremacy of Rome and that the battle between the two powers was the result. Not long after this, in n. c. 433, a treaty was concluded with them by Sp. Cassius, which determined their relations with Rome for a long period of time. (Liv. ii. 33; Dionys. v. 96; Cic. pro Balb. 23.)

By the treaty thus concluded the Romans and Latins entered into an alliance as equal and independent states, both for offence and defence; all booty or conquered territory was to be shared between them; and there is much reason to believe that the supreme command of the allied armies was to be held in alternate years by the Roman and Latin generals. (Dionys. l. c.; Niebr. vol. ii. p. 40.) The Latin cities, which at this time composed the league, are mentioned by name, and the list of them is given by Dionysius in another passage (v. 61), but which, in all probability, was derived from the treaty in question (Niebr. vol. ii. p. 23).

They were:—Ardea, Aricia, Bor vollae, Rubentum, Cornicum, Carventum, Circeii, Coriolis, Corbio, Cosa, Fortetin (?), Gabii, Laurentum, Lavinium, Larvium, Labicum, Noricum, Praeneste, Pedum, Petranum, Sexentiae, Aventine, Setia, Tellene, Tibur, Tusculum, Toltera, Tricarium (?), Velitrae. The number thirty appears to have been a recognised and established one, not dependent upon accidental changes and fluctuations; the cities which composed the old league under the supremacy of Alba are also represented as thirty in number (Dionys. iii. 34), and the "populi Albenses," which formed the smaller and closer union under the same head, were, according to Pliny's list, just thirty. It is therefore quite in accordance with the usages of ancient nations that the league when formed anew should consist as before of thirty cities, though these could not have been the same as previously composed it.

The object of this alliance between Rome and Latium was to oppose a barrier to the rapidly advancing power of the Aquilans and Volscians. With the same view the Hernicans soon after admitted to participate in it (n. c. 486); and from this time for more than a century the Latins continued to be the faithful allies of Rome, and shared alike in her victories and reverses during her long and arduous struggle with their warlike neighbours. (Liv. vi. 2.) A shock was given to these friendly relations by the Gaulish War and the capture of Rome in n. c. 390; the calamity which then befell the city appears to have incited some of her nearest neighbours and most faithful allies to take up arms against her. (Varr. l. c. vi. 18; Liv. vi. 2.) The Hernians and Ursicines were represented as not only refusing their contingent to the Roman armies, but supporting and assisting the Volscians against them; and though they still avoided as long as possible an open breach with Rome, it seems evident that the former close alliance between them was virtually at an end. (Liv. vi. 6, 7, 10, 11, 17.) But it would appear that the bond of union of the Latin League itself was, by this time, very much weakened. The more powerful cities are found acting with a degree of independence to which there is no parallel in earlier times: thus, in n. c. 383, the Larvians formed an alliance with the Volscians, and Praeneste declared itself hostile to Rome, while Tusculum, Gabii, and Labicum continued on friendly terms with the republic. (Id. vi. 21.) In n. c. 380 the Romans were at open war with the Praenestines, and in n. c. 383 with the Tiburtines; but in neither instance did any of the cities of Latium appear to have joined in the war. (Id. vi. 27—29, vol. ii. 10—12, 18, 19.) The repeated invasions of the Gauls, whose armies traversed the Latin territory year after year, tended to increase the confusion and disorder; nevertheless the Latin League, though much disorganised, was never broken up; and the cities composing it still continued to hold their meetings at the Lucas Feroniae, to deliberate on their common interests and policy. (Id. viii. 25.) In n. c. 358 the league with Rome appears to have been renewed upon the same terms as before; and in that year the Latins, for the first time after a long interval, sent their contingent to the Roman armies. (Liv. viii. 12.) At length, in n. c. 347, the Latins who had adhered faithfully to their alliance during the First Samnite War, appear to have been roused to a sense of the increasing power of Rome, and became conscious that, under the shadow of an equal alliance, they were gradually passing into a state of dependence and servitude. (Id. viii. 4.) Hence, after a vain appeal to Rome for the establishment of a more equitable arrangement, and as witnesses against the Volscians, the Latins, in n. c. 338, took part with the Campanians in the war of that year, and shared in their memorable defeat at the foot of Mount Vesuvius. Even on this occasion, however, the councils of the Latins were divided: the Laurentes at least, and probably the Larvians also, remained faithful to the Roman cause, while Sestia, Setia, Circeii, and Velitrae, though regarded as Roman colonies, were among the most prominent in the war. (Id. viii. 3—11.) The contest was renewed the next year with various success; but in n. c. 338 Furius Camillus defeated the forces of the Latins in a great battle at Pedum, while the other consul, C. Masius, obtained a less decisive victory on the river Astura. The struggle was not at an end: the Latin senate submitted one after the other; and the Roman senate pronounced separately on the fate of each. The first great object of the arrangements now made was to deprive the Latins of all bonds of national or social unity: for this purpose not only were they prohibited from holding general councils or assemblies, but the several cities were deprived of the mutual rights of "communium" and "commercium," so as to isolate each little community from its neighbours. Tibur and Praeneste, the two most powerful cities of the confederacy, and which had taken a prominent part in the war, were deprived of a large portion of their territory, but continued to exist as nominally independent communities, retaining their own laws, and the sole right of "jurisdiction" over the" communitas" as, so to isolate each little community from its neighbours. Tibur and Praeneste, the two most powerful cities of the confederacy, and which had taken a prominent part in the war, were deprived of a large portion of their territory, but continued to exist as nominally independent communities, retaining their own laws, and the sole right of "jurisdiction" over the" communitas" as
more severely punished; but the people of this city also were soon after admitted to the Roman franchise, and the creation shortly after of the Maecian and Scipian tribes was designed to include the new citizens added to the republic as the result of these arrangements. (Liv. viii. 14, 17; Niebuhr, vol. iii. pp. 140—145.)

From this time the Latins as a nation may be said to disappear from history: they became gradually more and more blended into one mass with the Roman people; and though the formula of "the allies and Latin nation" (socii et romanis Latius) is commonly used in the Latin writers from this time forth in the Roman history, it must be remembered that this phrase includes also the citizens of the so-called Latin colonies, who formed a body far superior in importance and numbers to the remains of the old Latin people. [ITALIA, p. 90.]

In the above historical review, the history of the old Latins, or the Latins properly so called, has been studiously kept separate from that of the other nations which were subsequently included under the general appellation of Latium,—the Equians, Her­nicans, Volscians, and Ausonians. The history of these several tribes, as long as they sustained a separate national existence, will be found under their respective names. It may suffice here to mention that the Volscians, after being reduced to complete sub­jection to Rome in n. c. 306, and the Equians in n. c. 304; the period of the final subjugation of the Volscians is more uncertain, but we meet with no mention of them in arms after the capture of Prenum’rum in n. c. 329; and it seems certain that they, as well as the Ausonian cities which joined them, had either left or been made subject before the com­ mencement of the Second Samnite War, n. c. 326. [VOLACLI.] Hence, the whole of the country sub­ sequently known as Latium had become finally subject to Rome before the year 300 n. c.

3. Latium under the Romans.—The history of Latium, properly speaking, ends with the breaking up of the Latin League. Although some of the cities of the League maintained, as already mentioned, a nominal independence down to a late period, and it was not till after the outbreak of the Social War, in n. c. 90, that the Lex Julia at length conferred upon all the Latins, without exception, the rights of Roman citizens, they had long before lost all traces of na­tional distinction. The only events in the interven­ing period which belong rather to the history of Latium are inseparably bound up with that of Rome. Such was the invasion by Pyrrhus in n. c. 280, who advanced however only as far as Praeneste, from whence he looked down upon the plain around Rome, but without venturing to descend into it. (Entrop. ii. 12; Flor. i. 18, § 24.) In the Second Punic War, however, Hannibal, advancing like Pyrrhus by the line of the Via Latina, established his camps within four miles of the city, and carried his ravages up to the very gates of Rome. (Liv. xxvi. 9—11; Pol. ix. 6.) This was the last time for many centuries that Lat­ium witnessed the presence of a foreign hostile army; but it suffered severely in the civil wars of Marius and Sulla, and the tract as these especially was ravaged by the Samnite auxiliaries of the former in a manner that it seems never to have recovered. (Strab. v. p. 232.)

Before the close of the Republic Latium appears to have lapsed almost completely into the condition of the mere suburban district of Rome. Tibur, Tus­calum, and Praeneste became the favourite resorts of the Roman nobles, and the fertile slopes of the Alban Hills and the Apennines were studded with villas and gardens, to which the wealthier citizens of the metrop­olis used to retire in order to avoid the heat or beast of Rome. But the plain immediately around the city, or the Campagna, as it is now called, seems to have lost rather than gained by its prox­imity to the capital. Livy, in more than one pas­sage, speaks with astonishment of the inexhaustible resources which the infant republic appears to have possessed, as compared with the condition of the same territory in his own time. (Liv. vi. 12, vii. 35.) We hear of the abundance of laticlavius, of the com­ monplaces, and Volvisiae at this time sunk into almost complete decay, while even those towns, such as Aricia and Lanuvium, which were in a comparatively flourishing condition, were still very inferior to the opulent municipal towns of Campania. (Cic. pro Pison. 9, de Leg. Agrar. ii. 35.) Nor did this state of things become materially improved even under the Roman Empire. The whole Laurentine tract, or the wavy district adjoining the sea-coast, as well as the adjacent territory of Ardea, had already come to be regarded as unhealthy, and was therefore thinly in­habited. In other parts of the Campagna single farms or villages already occupied the sites of ancient cities, such as Antenaeum, Collatia, Fidenae, &c. (Cic. de Leg. agr. ii. 35.) But by slow degrees the cities of ancient Latium which in his time had all­together ceased to exist. (Plin. iii. 6. a. 9.)

The great lines of highway, the Appian, Latin, Salarian, and Valerian Ways, became the means of collecting a considerable population along their immediate lines, but appear to have had rather a contrary effect in the interior. The whole West of the territory was thinly peopled, and the towns and cities of ancient Latium which in his time had all­together ceased to exist. (Plin. iii. 6. a. 9.)

For many ages its immediate proximity to the capital at least secured Latium from the ravages of foreign invaders; but when, towards the decline of the Empire, this ceased to be the case, and each suc­cessive swarm of barbarians carried their arms up to the very gates and walls of Rome, the district immediately round the city probably suffered more severely than any other. Before the fall of the Western Empire the Campagna seems to have been reduced almost to a desert, and the evil must have been continually augmented after that period by the long continued wars with the Gothic kings, as well as subsequently with the Lombards, who, though they were made themselves masters of the country, repeatedly laid waste the surrounding territory. All the records of the middle ages represent to us the Roman Campagna as reduced to a state of complete desolation, from which it has never more than partially recovered.

In the divisions of Italy under Augustus, Latium, in the narrow sense of the term, together with Cam­pania, constituted the First Region. (Plin. ii. 5. a. 9.) But gradually, for what reason we know not, the name of Campania came to be generally employed to designate the whole region; while that of Latium fell completely into disuse. Hence the origin of the name of La Campagna di Roma, by
which the ancient Latium is known in modern times. [Campaña, p. 494.]

V. political and religious institutions.

It is for the most part impossible to separate the Latin element of the Roman character and institutions from that which they derived from the Sabines; at the same time we know that the connection between the Romans and the Latins was so intimate, that we may generally regard the Roman sacred rites, as well as their political institutions, in the absence of all evidence to the contrary, as of Latin origin. The goddess of the land was, however, a special deity, regarded as the inventor of agriculture and of all the most essential improvements of life. Hence he came to be regarded by the prytanical mythologers of later times as a very ancient king of Latium; and by degrees Janus, Saturnus, Picus, and Fannus became established as successive kings of the earliest Latin or Aborigines. To complete the series Latins was made the son of Fannus. This last appears as a gloomy and mysterious being, probably originally connected with the infernal deities; but who figures in the mythology received in later times partly as a patron of agriculture, partly as a giver of oracles. (Hartung, Religion der Römer, vol. ii.; Schwiegler, A. R. vol. i. pp. 212—234.)

The worship of the Picus also, though not peculiar to Latium, seems to have formed an integral and important part of the Latin religion. The Penates at Lavinium were regarded as the tutelary gods of the whole Latin people, and as such continued to be the object of the most scrupulous reverence to the Romans themselves down quite to the extinction of Janusian. Every Roman consul or praetor, upon his first entering on his magistracy, was bound to repair to Latium, and there offer sacrifices to the Penates, as well as to the Veii, whose worship was closely connected with them. (Macrob. Sat. iii. 4; Varr. L.L. v. 144.) This custom points to Lavinium as having been at one time, probably before the rise of Latium, the sacred metropolis of Latium; and it is very probably to have been, at the same early period, the political capital or head of the Latin confederacy.

VI. topography.

The principal physical features of Latium have already been described; but it remains here to notice the minor rivers which nourish, as well as the names of some particular hills or mountain heights which have been transmitted to us.

Of the several small rivers which have their rise at the foot of the Alban hills, and flow from thence to the sea between the mouth of the Tiber and Antium, the only one of which the ancient name is preserved is the Numicius, which may be identified with the modern Flora, rising at a foot of the Lavinian and Ardea. The Astura, rising also at the foot of the Alban hills near Velleti, and flowing from thence in a SW. direction, enters the sea a little to the S. of the promontory of Astura: it is now known in the lower part of its course as the Fiume di Conca, but the several small streams by the confines of which it is formed are under separate appellation. The Nympharium, mentioned by Pliny (iii. 5. a. 9), and still called La Nasio, rises immediately at the foot of the Volcanic mountains, just below the city of Nocha: in Pliny's time it appears to have had an independent course to the sea, but now loses itself in the Pontine Marshes,
where its waters add to the stagnation. But the principal agents in the formation of those extensive marshes are the Ureason and the Amaseus, both of them flowing from the Volsician mountains and uniting their waters before they reach the sea. They still retain their ancient names. Of the lesser streams of Latium, which flow into the Tiber, we need only mention the cultivated Allea, which falls into that river near the site of what was formerly the Rutul town of Aricia, still a smaller stream, which joins it just below the city, having previously received the waters of the Aqua Feronia (now called the Marina degli Orsi), which have their source at the foot of the Alban Hills, near Marino; and the Rivus Albasinus (still called the Rivo Albano), which carries off the superfluous waters of the Alban lake to the river Tiber, about four miles below Rome.

The mountains of Latium, as already mentioned, may be classed into three principal groups:—(1) the Apennines, properly so called, including the ranges at the back of Tibur and Praeneste, as well as the mountains of the Aquilas and Hernicans; (2) the group of the Alban Hills, of which the central and northern part is the Mons Cornificius; and (3) the Monti Albani, known as the Mons Algidus; (2) the lofty group of the Volsician Mountains, frequently called by modern geographers the Mons Lepini, though we have no ancient authority for this use of the name. The site of Mons Lepinius occurs only in Claudianus (c. 131), as that of a mountain in the neighbourhood of Signia. The Montes Corniculari (τά Κορνικυριά θέρα, Dionys. i. 16) must evidently have been the detached group of outlying peaks, wholly separate from the main range of the Apennines, now known as the Montecelio, situated between the Tiber and the Mons Genusaro. The Mons Sacratus, so celebrated in Roman history, was a mere hill of trifling elevation above the adjoining plain, situated on the right bank of the Anio, close to the Via Nomentana.

It only remains to enumerate the towns or cities which existed within the limits of Latium; but as many of these have disappeared at a very early period, and all trace of their geographical position is lost, it will be sufficient, at the first instance, to give a list to places of which the site is known, approximately at least, reserving the more obscure names for subsequent consideration.

Beginning from the mouth of the Tiber, the first place is Ostia, situated on the left bank of the river, and, as its name imports, originally close to its mouth, though it is now three miles distant from it. A short distance from the coast, and about 8 miles from Ostia, was Laurentum, the reputed capital of the Aborigines, situated probably at Torre di Paterno, or at least in that immediate neighbourhood. A few miles further S. but considerably more inland, being near 4 miles from the sea, was Latium, a site of which must be clearly recognised at Praetoria. S. of this again, and about the same distance from the sea, was Ardea, which retains its ancient name: and 15 miles further, on a projecting point of the coast, was Antium, still called Porto d'Anio. Between 9 and 10 miles further on along the coast, was the town or village of Aurelia, with the islet of the same name; and from hence a long tract of barren sandy coast, without a village and almost without inhabitants, extended to the Ciretian promontory and the town of Ciricia, which was generally reckoned the last place in Latium Proper.

Returning to Rome as a centre, we find N. of the city, and between it and the Sabine frontier, the cities of Antenna, Fidenae, Crucemium, and Nomentum. On or around the group of the Montes Corniculari, were situated Corniculum, Medulla, and Ameriola: Castrinna, also, may probably be placed in the same group; and near the road leading to Nomentum, was Ficulna. At the foot, or rather on the lower slopes and underfalls of the main range of the Appenines, were Tibur, Ascula, and Praeneste, the latter occupying a lofty spur or projecting point of the Apennines, standing out towards the Alban Hills. This latter group was surrounded as it were with a crown or circle of ancient towns, beginning with Consimio (Roccus Prior), nearly opposite to Praeneste, and continued on by Tubulium, Alba, and Aricia, to Lamuvium and Velitrae, the last two situated on projecting outshoots from the central plain, standing out towards the Pontine Plains. On the skirts of the Volsician mountains or Monti Lepini, in the district of Norba, are the last three all standing on commanding heights, looking down upon the plain of the Pontine Marshes. In that plain, and immediately adjoining the marshes themselves, was Ulubium, and in all probability Sibis Fometia also, the city which gave name both to the marshes and plain, but the precise site of which is not precisely known. Places within the marshy tract, such as Forium Apuli, Træs Tabernæ, and Thrupontium, owed their existence to the construction of the Via Appia, and did not represent or replace ancient Latin towns. In the level tract bordering on the Pontine Plains on the N., and extending from the foot of the Alban Hills towards Antium and Ardea, were situated Satricum, Longubula, Polusibra, and Coriolis; all of them places of which the exact site is still a matter of doubt, but which must certainly be sought in this neighbourhood. Between the Laurentine region (Laures tractus), as the forest district near the sea was often called, and the Via Appia, was an open level tract, to which (or to a part of which) the name of Campus Solontius was given; and within this tract, to the north, were the towns of Tusculum and Polistium, as well as probably Apollae and Boivillae, at the foot of the Alban hills, and just on the S. of the Appian Way, was at one extremity of the same tract, while Cyraea stood at the other, immediately adjoining the Tiber. In the portion of the plain of the Campagna extending from the line of the Via Appia to the foot of the Appenines, between the Anio and the Alban Hills, the only city of which the site is known was Gabii, 12 miles distant from Rome, and the same distance from Praeneste. Nearer the Appenines were Scapitta and Pedum, as well as probably Querquetula; while Labicum occupied the hill of La Cosona, nearly at the foot of the Alban group. In the tract which lies between the Appenines at Praeneste and the Alban Hills, so as to connect the plain of the Campagna with the land of the Hernicans in the valley of the Tremsus or Severo, were situated Velleia, Tolernum, and probably also Bola and Ortona; though the exact site of all four is a matter of doubt. Ecratta, which appears in history as a Volsician city, and is never mentioned as a Latin one, must nevertheless have been situated within the limits of the Latin territory.
LATIUM.

LATMICONIUS SINUS.

By the foot of the Mons Lepina, or northern extremity of the Volcanic mountains, [E. M.].

Besides these cities, which in the early ages of Latium formed members of the Latin League, or are otherwise conspicuous in Roman history, we find mention in Pliny of some smaller towns still existing in his time; of which the “Fabienae in Monte Albenus” may certainly be placed at Rocca di Poppa, the highest village on the Alban Mount, and the Castrimontienses at Santa, near the site of Alba Longa. The list of the thirty cities of the League given by Dionysius (B. 61) has been already cited (p. 109). Of the names in this work, which is wholly unknown, and must have disappeared at an early period. Carvintus is known only from the mention of the Arx Carventana in Livy during the wars with the Aquilian (iv. 53, 55), and was probably situated somewhere on the frontier of that people; while two of the names, the Forteini (Fortrinus) and Tri- 

It is not clear what connection these cities had with those in the modern Sermoneta; Norbe, which seems to be an erroneous repetition of the well-known Norba, already mentioned by him among the existing cities of Latium (7b. § 64); and Amittum or Ami- 

These cities are not found elsewhere, except the Castrimontienses, which, with the Albenii, cannot possibly be meant. But, after mentioning these cities as extinct, Pliny adds another list of “populi Albinenses,” and enumerates them as follows: Albanii, Asculani, Acisciones, Abolani, Bubentani, Bolani, Cusentani, Corioloii, Fidenates, Forreti, Hortenses, Latinenses, Longulani, Manates, Macraces, Mutucumenses, Muni- 

The names here given, eleven relate to well-known towns (Alba, Ascula, Bola, Coriolii, Fidenae, Longula, Pedum, Poltusa, Querquetula, Tolerium and Vitellia); the Bubentani are evidently the same with the Bubentani of Dionysius already noticed; the Forreti may perhaps be the same with the Forteini of that author; the Hortenses may probably be the inhabitants of the town called by Livy Oricus; the Munienses are very possibly the people of the town afterwards called Castrimontium; but there still remain sixteen wholly unknown. At the same time there are several indications (such as the agreement with Dionysius in regard to the otherwise unknown Bubentani, and the notice of Assula and Querquetula, towns which do not figure in history) that the list is derived from an authentic source; and was probably copied as a whole by Pliny from some more ancient authority. The conjecture of Niebuhr, therefore, that we have here a list of the subject or dependent cities of Alba, derived from a period when they formed a separate and closer league with Alba itself, is at least highly plausible. The notice in the list of the Venetenses is a strong confirmation of this view, if we can suppose them to be the inhabitants of the hill at Rome called Sulphuretium, which is known to us as bearing an important part in the ancient sacri- 

The work on the topography of Latium, as might be expected from the peculiar interest of the subject, are sufficiently numerous: but the older ones are of little value. Cluverius, as usual, laid a safe and solid foundation, which, with the criticisms and corrections of Holstenius, must be considered as the basis of all subsequent researches. The special works of Kircher (Vetus Latium, fol. Amst. 1671) and Volpi (Vetus Latium Profanum et Sacrum, Rome, 1704–1748, 10 vols. 4to.) contain very little of real value. After the ancient authorities had been carefully brought together and revised by Cluverius, the great requisite was a careful and systematic examination of the localities and existing remains, and the geographical survey of the country. These objects were to a great extent carried out by Sir W. Gell (whose excellent map of the country around Rome is an invaluable guide to the historical inquirer) and by Professor Nibby. (Sir W. Gell, Topography of Rome and its Vicinity; with a large map to accompany it, 2 vols. 8vo. Lond. 1854; 2d edit. 1v. Lond. 1846. Nibby, Analisi Storico-Topografico-Antiquaria della Carta dei Dintorni di Roma, 3 vols. 8vo. Rome, 1837; 2d edit. Ib. 1849.

The former work by the same author, Viaggio Antiquario nei Contorni di Roma, 2 vols. 8vo. Rome, 1819, is a very inferior performance.) It is unfortunate that both their works are deficient in accurate scholarship, and still more that the historical criticism, so absolutely necessary in all inquiries into the early history of Rome. Westphal, in his work (Die Römische Kompagnie in Topo- 

graphischer u. Antiquarischer Hinsicht dargestellt, 4to. Berlin, 1829) published before the survey of Sir W. Gell, and consequently with imperfect geo- 

The recent work of Bormann (Alt-Latinische Chronographia und Stätte- 

Geschichte, 8vo. Halle, 1859) contains a careful review of the historical statements of ancient authors, as well as of the researches of modern inquirers, but is not based upon any new topographical researches. Notwithstanding the labours of Gell and Nibby, much still remains to be done in this respect, and a work that should combine the results of such in- 

[. E. H. B.]

LATMICONIUS SINUS (Δραμηκός κόλπος), a bay on the western coast of Caria, deriving its name from Mount Latmion, which rises at the head of the gulf. It was formed by the mouth of the river Maenander which flowed into it from the north-east. Its breadth, between Miletus, on the southern head- 

land, and Pyrrha in the north, amounted to 30
LATTUS.

LAVIANCARE.

LAVIANNESINE.

stadium, and its whole length, from Miletus to He-
racelia, 100 stadium. (Strab. xiv. p. 635.) The bay
now exists only as an inland lake, its mouth having
been closed up by the deposits brought-down by the
Maeander, a circumstance which has caused some
modern travellers in those parts to confound the
lake of Baffi, the ancient Latmian gulf, with the lake of
Myras. (Leake, Asia Minor, p. 239; Chandler,
c. 53.)

LATOMUS (Λάτωμος), a mountain of Caria, rising
at the head of the Latmian bay, and stretching along
in a westerly direction. (Strab. xiv. p. 635; Apollon.
Rhod. iv. 57; Plin. v. 31; Pomp. Mol. i. 17.)
It is properly the western offshoot of Mount
Albanus or Albacus. This mountain is probably
alluded to by Homer (II. ii. 868), when he speaks
of the mountain of the Phthirians, in the neighbour-
hood of Miletus. In Greek mythology, Mount
Latismus is a place of some celebrity, being described
as the place where Arachne (IUNA) kissed her own
sleeping Endymion. In later times there existed on
the mountain a sanctuary of Endymion, and one tomb
was shown in a cave. (Apollod. i. 7. § 5; Hygin.
Fab. 271; Ov. Trist. ii. 299; Val. Flacc. iii. 28; Paus.
v. i. § 4; Stat. Silv. iii. 4; § 40.) [L. S.]
LATTO. [CAMAERA.]

LAVIUS, or LATO (Λάτο, Strab. xvii. pp. 812, 817; φῶς Λατόω, Plut. iv. 5. § 71; Λάτων, Hieroc. p. 732; Istan. Antonin. p. 160), the modern Emele, was a city of Upper Egypt,
situated on the western bank of the Nile, in lat.
25° 30' N. It derived its name from the fish lato,
the largest of the fifty-two species which inhabit the
Nile (Husseger, Reisen, vol. i. p. 300), and which
appears in sculptures, among the symbols of the
goddess Neith, Pallas-Athena, surrounded by the
oval shield or ring indicative of royalty or divinity
(Wilkinson, M. and C. vol. v. p. 255). The tule-
land of Egypt, which has been so many times
—Keph or Chunphis, Neith or Sekh, and Het, their
offspring. The temple was remarkable for the beauty
of its site and the magnificence of its architecture.
It was built of red sandstone; and its portico con-
sisted of six rows of four columns each, with lotus-
leaf capitals, all of which however differ from each
other. (Demos, Voyage, vol. i. p. 148.) But with
the exception of the jambs of a gateway—now con-
verted into a door-sill—of the reign of Thothmes III.
(19th dynasty), the remains of Latmus belong to
the Macedonian or Roman era. Ptolemy Ever-
geus, the Macedonian, in his maps of Lower Egypt,
was a benefactor to Latmus, and he is painted upon the walls of its temple followed by a
tame lion, and in the act of striking down the chiefs
of his enemies. The name of Tolemy Epiphanes
is found also inscribed upon a doorway. Yet,
although from their scale these ruins are imposing,
their sculptures and hieroglyphs attest the sense
of Egyptian art. The pronos, which alone exists,
resembles in style that of Apollonipolis Magna
(Edofo), and was begun not earlier than the reign
of Claudius (A. D. 41 — 54), and completed in that
of Vespasian, whose name and titles are carved on
the dedicatory inscription over the entrance. On
the ceiling of the pronos is the larger Latopolitan
Zodiac. The name of the emperor Geta, the last
that is read in hieroglyphics, although partially
erased by his brother and murderer Caracalla (A. D.
212), is still legible on the walls of Latmus. Before raising their own edifice, the Romans seem
to have destroyed even the basements of the earlier
Egyptian temple. There was a smaller temple, de-
dicated to a demi-god, about the middle of the 1st and a half N. of Latmus, at a village now called
E'Dowr. Here, too, is a small Zodiac of the age of
Ptolemy Evergetes (A. D. 246—221). This latter
building has been destroyed within a few years,
as it stood in the way of a new canal. The temple
of Emele has been cleared of the soil and rubbish
which filled its area when Denon visited it, and now
stands fitted up as a cotton warehouse. (Lepaute, Einleitung, p. 63.)

The modern town of Emele is the emporium of
the Abyssinian trade. Its camel-market is much
resorted to, and it contains manufactories of cot-
tons, shawls, and pottery. Its population is about
4000.

LATTOVI or LATO (Λάτοβιος, Plut. ii. 15). A small
tribe in the south-western part of Pannonia, on the river
Sava. (Plin. iii. 28.) They appear to have been a
Celtic tribe, and a place Praetorium Latovicorum
is mentioned in their country by the Antonine
Itinerary, on the road from Aemona to Sirmium, perhaps
on the site of the modern Neuasthid, in Illyria.
(Curci, Diction. de Dialectes, p. 252.) [L. S.]
LATTOVIS SINUS. [MAURITANIA.]

LAVIARA. [LUSITANIA.]

LAVATRAE, a station in Britain, on the road
from Londinium to Luguvallum, near the wall of
Hadrian, distant, according to one passage in the
Antonine Itin., 54 miles, according to another, 59
miles, from Eboracum, and 55 miles from Longu-
vallum. (Atm. Itin., p. 165; 472.) Perhaps the
same as Bovos, on the river Greta, in the
North Riding of Yorkshire. The church of Bovos
contained in the time of Camden a hewn slab,
bearing an inscription dedicatory to the Roman
emperor Hadrian, and there used for the communion
table. In the neighbourhood of Bovos, there are
the ruins of a fortress ramp and of an aqueduct.

LAUGONA, the modern Laba, a river of Ger-
many, on the east of the Rhine, into which it empties
itself at Lahnstein, a few miles above Coblenz.
The ancients praise it for its clear water (Venant. Fort.
vii. 7; Geogr. Rav. iv. 24, where it is called
Logos.)

LAVIANNESINE or LAVIANNESINE (Λα-
injured as the Laurentes, though the injury was avenged at Laviniun,—a strong proof of the intimate relations which were conceived as existing between the two cities. The treaty between Rome and Laviniun was said to have been renewed at the same time (Liv. L.), and there is no doubt that both the Roman annals and traditions maintain Laviniun, as well as Laurentum, as almost uniformly on friendly terms with Rome. It was, however, an independent city, as is proved by the statement that Collatinius and his family, when banished from Rome, retired into exile at Laviniun. (Liv. L, v. 39.) The only interruption of these friendly relations took place, according to Dionysius, a few years after this, when he reckoned the Laviniuns among the Latin cities which entered into a league against Rome before the battle of Regillus. (Dionys. v. 61.) There is, however, good reason to believe that the names there enumerated are in reality only those of the cities that formed the permanent Latin League, and who concluded the celebrated treaty with Sp. Cassius in B.C. 493. (Niebuhr, vol. ii. pp. 23, 24.)

Laviniun is next mentioned during the wars of Coriolanus, who is said to have besieged and, according to Livy, reduced the city. (Liv. ii. 30; Dionys. viii. 21.) But, from this time, there is no more of it till the great Latin war in B.C. 340. On that occasion, according to our present text of Livy (viii. 11), the citizens of Laviniun are represented as sending auxiliaries to the forces of the League, who, however, arrived too late to be of service. But no mention occurs of Laviniun in the following campaign of the League, or in the general settlement of the Latin state at the end of the war; hence it appears highly probable that in the former passage Lavaniun, and not Laviniun, is the city really meant; the confusion between these names in the MSS. being of perpetual occurrence. [LAVINIUM.] It is much more probable that the Laviniuns were on this occasion also concerned with the events, who, as we are expressly told, took no part in the war, and in consequence continued to maintain their former friendly relations with Rome without interruption. (L. vi. 2.) From this time no historical mention occurs of Lavaniun till after the fall of the Roman Republic; but it appears to have fallen into decay in common with the rest of the cities of the Latin League; and Strabo speaks of it as presenting the mere vestiges of a city, still retaining its sacred rites, which were believed to have been transmitted from the days of Aeneas. (Strab. v. p. 323.) Dionysius also tells us that the memory of the three animals—the eagle, the wolf, and the fox—which were connected with a well-known legend with the foundation of Laviniun, was preserved by the figures of them still extant in his time in the forum of that town; while, according to Varro, not only was there a similar bronze figure of the celebrated sow with her thirty young ones, but part of the flesh of the sow herself was still preserved in pickle, and shown by the priests. (Dionys. i. 57, 69; Varr. R. R. ii. 4.) The name of the city, however, is still retained in the place where we should have expected to find it, between Laurentum and Ardea, but he enumerates among the existing communities of Latium the "Ilioneae Lavini,"—an appellation evidently assumed by the citizens in commemoration of their supposed Trojan descent. (Plin. iii. 5. a. 9.)

Shortly after the time of Pliny, and probably in the reign of Trajan, Laviniun seems to have re-
ceived a fresh colony, which for a short time raised it again to a degree of prosperity. On this occasion it seems probable that the Latiums and Ausones were united into one community, which assumed the name of LAURO-LAVINIUM, and the citizens that of LAURENTIAE LAVINATES, names which from henceforth occur frequently in inscriptions. As a tribute to its ancient sacred character, though a fresh apportionment of lands necessarily attended this rebuilding of the colony, the territory still retained its old limits and regulations (leges et conscriptions easter manent, Lib. Colon. p. 234.) This union of the two communities into one has given rise to much confusion and misconception. Nor can we trace exactly the mode in which it was effected; but it would appear that Lavinium became the chief town, while the "populus" continued to be often called that of the Laurentes, though more correctly designated as that of the Laurentes Lavinates. The effect of this confusion is apparent in the commentary of Servius on the Aeneid, who evidently confounded the Laurentum of Virgil with the Lauro-Lavinium of his own day, and thence, strangely enough, identifies it with the Lavinium found at the same spot. (See Serv. Aen. i. 2.) But, even at a much earlier period, it would seem as if the "ager Laurentus," or Laurentine territory, was regarded as comprising Lavinium; and it is certainly described as extending to the river Num- licius, which was situated between Lavinium and Ardea. [MUNICUM.] Inscriptions discovered as Pratius, or Praetes, is said to have occupied this new colony, or revived Lavinium, down to the end of the 4th century; and its name is found also in the Itineraries and the Tabula. (Itin. Ant. p. 301; Tab. Pov.; Orell. Inscr. 1063, 3179, 3918, 3921.)

We learn also from a letter of Symmachus that it was still subsisting as a municipal town as late as A.D. 591, and still retained its ancient religious character. Macrobius also informs us that in his time it was still customary for the Roman consuls and praetors, when entering on their office, to repair to Lavinium to offer certain sacrifices there to Vesta and the Penates,—a custom which appears to have been transmitted without interruption from a very early period. (Macrobt. Lib. ii. 4. § 11; Val. Max. i. 2. § 10.) The Howardian story of the decay of Lavinium was probably produced by the fall of paganism, and the consequent extinction of that religious reverence which had apparently been the principal means of its preservation for a long while before.

The position of Lavinium at Praties may be con- sidered as clearly established by the discovery there of the numerous inscriptions already referred to relating to Lauro-Lavinium: in other respects also the site of Praties agrees well with the data for that of Lavinium, which is placed by Dionysius 24 stadia, or 3 miles, from the coast. (Dionys. i. 56.) The Itineraries call it 16 miles from Rome; but this statement is contradictory; the real distance being little, if at all, less than 10 miles. The most direct approach to it from Rome is by the Via Ardeatia, from whence a side branch diverges soon after passing the Solfatara,—a spot supposed to be the site of the celebrated grove and oracle of Faunus, referred to by Virgil [ARDEA], which is about 4 miles from Praties. The site of this latter village, which still possesses a very notable castle of the middle ages, resembles those of most of the early Latin towns: it is a nearly isolated hill, with a level summit of no great extent, bounded by wooded ravines, with steep banks of tufted rock. These banks have probably served to make Lavinium an artificial fortress, and some slight remains of the ancient walls may be still traced in one or two places. Besides the inscriptions already noticed, some fragments of marble columns remain from the Imperial period, when broken pottery and terra cottas of a rude workmanship found scattered in the soil are by no means of great antiquity. (Raspe, vol. ii. pp. 206—237.) [E. B. J.]

LAVISCO or LABISCO, in Gallia Narbonensis, appears on a route from Mediolanum (Milan) through Narbonensis (Montéa en Turané) to Vienna (Vienna) on the Rhine. Lavisco is between Lemnicum (Lemnus, or Chambery sur Mont Lemine) and Augustum (Aosta or Aquae), and 16 M. from D'Anvillo. It was at the head of the little river Laines, near its source; but the distance between Lemnicum and Augustum, 28 M. P. is too much, and accordingly he would alter the figures in the two parts of this distance on each side of Lavisco, from xili. to viili. [G. L.]

LAUSANNEUM (AnagniaNes, Plut. in 1. § 56: L. Poth. § 4; and Aem. i. 2.) But, even at a much earlier period, it would seem as if the "ager Laurentus," or Laurentine territory, was regarded as comprising Lavinium; and it is certainly described as extending to the river Numi- licius, which was situated between Lavinium and Ardea. (MUNICUM.) The most direct approach to it from Rome is by the Via Ardeatia, from whence a side branch diverges soon after passing the Solfatara,—a spot supposed to be the site of the celebrated grove and oracle of Faunus, referred to by Virgil [ARDEA], which is about 4 miles from Praties. The site of this latter village, which still possesses a very notable castle of the middle ages, resembles those of most of the early Latin towns: it is a nearly isolated hill, with a level summit of no
most important in the occurrence of its name (or that of the Laurentini at least), together with those of Ardea, Antinna, Circei, and Tarraconae, among the allies or dependents of Rome, in the celebrated treaty of the Romans with Carthage in B.C. 509. (Pol. iii. 23.) From this document we may infer that Laurentum was then still a place of some consideration as a maritime town, though the proximity of the Roman port and the town of Ostia must have tended much to its disadvantage. Dionysius tells us that some of the Tarquins had retired to Laurentum on their expulsion from Rome: and he subsequently notices the Laurentines among the cities which composed the Latin League in B.C. 496. (Dionys. v. 54, 61.) We learn, also, from an incidental notice in Livy, that they belonged to that confederacy, and retained, in consequence, down to a late period the right of participating in the sacrifices on the Alban Mount. (Livy. xxvii. 3.) It is clear, therefore, that though not a powerful or important city, Laurentum continued to retain its independent position down to the great Latin War in B.C. 340. On that occasion the Laurentines are expressly mentioned as having no share in the war; and, in consequence, the treaty with them which previously existed was renewed without alteration. (Livy. viii. 11.) "From thenceforth" (adds Livy) "it is renewed always from year to year on the 10th day of the Feriae Latine." Thus, the poor and decayed city of Laurentum continued down to the Augustan age to retain the nominal position of an independent ally of the imperial Rome.

No further notice of it occurs in history during the Roman Republic. Lucan appears to reckon it as one of the places that had fallen into decay in consequence of the Civil Wars (vii. 394), but it is probable that it had long before that dwindled into a very small place. The existence of a colony of the name ("opidium Laurentum") is, however, attested by Mela, Strabo, and Pliny (Mal. ii. 4. § 9; Strab. v. 232; Plin. iii. 5. a. 9); and the sea-coast in its vicinity was adorned with numerous villas, among which that of the younger Pliny was conspicuous. (Plin. Ep. ii. 17.) It is remarkable that that author, in describing the situation of his villa and its surroundings, speaks of it as a frontier colony of Ostia itself, though he mentions the neighbouring colony of Ostia, and a village or "vicus" immediately adjoining his villa: this last may probably be the same which we find called in an inscription "Vicus Augustas Laurentum." (Gruter, Inscr. p. 398, No. 7.) Hence, it seems probable that Laurentum itself had fallen into a state of great decay; and this must have been the cause that, shortly after, the two communities of Laurentum and Lavinium were united into one municipal body, which assumed the appellation of Lavoro-Lavinium, and the inhabitants that of Lavoro-Lavinates, or Laurentes Lavinates. Sometimes, however, the united "populus" called itself in inscriptions simply " Saturnales praetorii Lavoro-Latens," and in one case we find mention of a "Colonia Augusta Laurentum." (Orell. Inschr. 124; Gruter, p. 484, No. 3.) Nevertheless it is at least very doubtful whether there was any fresh colony established on the site of the ancient Laurentum: the only one mentioned in the Liber Coloniarum is that of Lauro-Lavinium, which was undoubtedly fixed at the same spot by a Proconsul. (Lav.) The existence of a place bearing the name of Laurentum, though probably a mere village, down to the latter ages of the Empire, is, however, clearly proved by the Itineraries and Tabula (Itin. Ant. p. 301; Tab. Peut.); and it appears from ecclesiastical documents that the locality still retained its ancient name as late as the 8th century (Anastas. Vit. Postif: ap. Nibby, vol. ii. p. 301). From that time all trace of it disappears, and the site seems to have been entirely forgotten.

Laurentum seems to have been from an early period, given name to an extensive territory, extending from the mouth of the Tiber nearly, if not quite, to Ardea, and forming part of the broad littoral tract of Latium, which is distinguished from the rest of that country by very marked natural characteristics. (Latium.) Hence, we find the Laurentine territory much more frequently referred to than the city itself; and the place where Amasia is represented as landing is uniformly described as "in agro Laurenti," though we know from Virgil that he conceived the Trojans as arriving and first establishing themselves at the mouth of the Tiber. But it is clear that, previous to the foundation of Ostia, the territory of Laurentum was considered to extend to that river. (Serv. ad Aen. vii. 661, 662.) The fact that most of the "agri Laurenti" seems to have continued in common use to be applied, even under the Roman Empire, to the whole district extending as far as the river Numicius, so as to include Lavinium as well as Laurentum. It was, like the rest of this part of Latium near the sea-coast, a sandy tract of no natural fertility, whence Amasia is represented as complaining that he had arrived "in agrum maritimum, littoralemisimum." (Fab. Max. ap. Serv. ad Aen. i. 1.) In the immediate neighbourhood of Laurentum were considerable marshes, while the tract a little further inland was covered with wood, forming an extensive forest, known as the Silva Laurentina. (Juli. Obsq. 24.) The existence of this forest at the time of the landing of Amasia is stated by Virgil (Aen. x. 123, 250). Under the Roman Empire it was a favourite haunt of wild-boars, which grew to a large size, but were considered by epicures to be of inferior flavour on account of the marshy character of the ground in which they fed. (Verg. Aen. x. 709; Hor. Sat. ii. 4. 43; Martial, ix. 495.) Varro also tells us that the orator Horatius had a habitation in the Laurentine marshes in the district, with a park stocked with wild-boars, deer, and other game. (Varr. R. R. iii. 13.) The existence of these marshes near Laurentum is noticed also by Virgil (Aen. x. 107) as well as by Martial (x. 37. 5), and it is evident that even in ancient times they rendered this tract of country unhealthy, though it could not have suffered from malaria to the same extent as in modern times. The marshes which, according to Pliny, lised the shore, were built close to the sea, and were probably frequented only in winter. At an earlier period, we are told that Scipio and Labienus used to repair to the seaside on the Laurentine coast, where they amused themselves by gathering shellfish. (Cic. Att. v. 41; Val. Max. viii. 8. § 4.) On the other hand, the bay-trees (launi) with which the Silva Laurentina was said to abound were thought to have a beneficial effect on the health, and on this account the emperor Commodus was advised to retire to a villa near Laurentum during a pestilence at Rome. (Hieron. i. 12.) The name of the villas generally considered to be derived from the number of these trees, though Virgil would derive it from a particular and celebrated tree of the kind. (Vici
LAURENÆUM.

Orig. G. Rom. 10; Vari. L. v. 152; Virg. Aen. vii. 59.)

The precise site of Laurentum has been a subject of much doubt; though it may be placed approxi-

mately without question between Ostia and Praetica, the latter being clearly established as the site of

Lavinium. It has been generally fixed at Torre di

Paternò, and Gell asserts positively that there is no

other position within the required limits "where either ruins or the traces of ruins exist, or where they

can be supposed to have existed." The Itinerary
gives the distance of Laurentum from Rome at 16

M. P. (30, 300), and somewhat less than the truth, if we

place it at Torre di Paternò, the latter being rather

more than 17 M. P. from Rome by the Via Laurent-
tina; but the same remark applies to Lavinium also,

which is placed in the Itinerary 16 miles from Rome,

though it is full 16 miles in real distance. On the other

hand, the distance of 6 miles given in the Table between Lavinium and Laurentum coincides well with the interval between Praetica and Torre di Paternò. Nibby, who places Laurentum at Cape Cotta, considerably nearer to Praetica, ad-

mits that there are no ruins on the site. Those at

Torre di Paternò are wholly of Roman and imperial

times, and may perhaps indicate nothing more than the

site of the town of Nola of 22 sq. km. (27), leading to it that they must have been a place of some

importance. There can indeed be no doubt that

the spot was a part of the dependencies of Lau-

rentum under the Roman Empire; though it may

still be questioned whether it marks the actual site

of the ancient Latin city. (Gell, Top. of Rome, pp.

187—188; Toynbee, Materials for the History of Italy,

p. clxxvi. 5; Not. Imp. in the Tab. Pest. its name is

misapplied Blaboricarcum.) In a doubtful inscription

in Gruter (p. 484. 3) it is called a Roman colony,

with the surname Augusta: Laucrum was the largest

town of Noricum Ripense, and was connected by

high roads with Sirmium and Taurunum in Pannonia.

According to the Antonine Itinerary, it was the

head-quarters of the 3rd legion in Nicaea; and Notitia,

the 5th century, perhaps more correctly, mentions the

second. It was, moreover, one of the chief stations of

the Danubian fleet, and the residence of its praefect,

and contained considerable manufactures of arms,

and especially of shields. As the town is not mentioned

by any earlier writers, it was probably built, or at

least first known, in the reign of M. Aurelius. It was

one of the earliest seats of Christianity in those parts,

a bishop of Lauriacum being mentioned as early as

the middle of the third century. In the fifth century

the place was still so well fortified that the people of

the surrounding country took refuge in it, and

protected themselves against the attacks of the Ale-

americans. But in the 6th century it was destroyed by the Avaren, and although it was

restored as a frontier fortress, it afterwards fell into
decay. Its name is still preserved in the modern

village of Loror, and the celebrated convent of the

same name, around which numerous remains of the

Roman town may be seen extending as far as Ena,

which is about a mile distant. (Comps. Muchiar,

Notae, ii. p. 266, 266, 267, 163, 163, ii. p. 75.)

LAURICUM (Λαυρικός, Herod. vii. 144; Λαυρίων,

Thuc. ii. 55: Adj. Λαυριώτις; hence άλιοπές

Λαυριωτικός, Aristoph. Av. 1106, silver coins,

with the Athenian figure of an owl), a range of

hills in the south of Attica, celebrated for their silver

mines. These hills are not high, and are covered

with an Allahum establishment, as well. Many a name is probably derived from the shafts which were sunk for obtaining the ore, since άλιος in Greek

signifies a street or lane, and Λαυριωτικόν would therefore mean a place formed of such lanes, i.e., a mine of shafts, cut as it were into streets, like a catacomb.

(Wordsworth, Athens and Attica, p. 209.) The

mining district extended a little way north of
LAURUM.

Stimnium to Thrócica, on the eastern coast. Its present condition is thus described by Mr. Dodwell:—

"One hour from Thórócica brought us to one of the ancient shafts of the silver mines; and a few hundred yards further we came to several others, which are of a square form, and cut in the rock. We observed only one round shaft, which was larger than the others, and of considerable depth, as we conjectured from the time that these were thrown in, to reach the bottom. Near this are the foundations of a large round tower, and several remains of ancient walls, of regular construction. The traces are so extensive, that they seem to indicate, not only the buildings attached to the mines, but the town of Laurium itself, which was probably strongly fortified, and inhabited principally by the people belonging to the mines." Some modern writers doubt whether there was a town of the name of Laurium; but the grammarians (Suidas and Photius) who call Laurium a place (ἓνδος) in Attica appear to have meant something more than a mountain; and Dodwell is probably correct in regarding the ruins which he describes as those of the town of Laurium. Near this large round tower are heaps of scoria scattered about. Dr. Wordsworth, in passing along the shore from Stimnium to Thrócica, observes:—"The ground which we tread is strewn with rusty heaps of scoria from the silver ore which once enriched the soil. On our left is a hill, called Scoría, so named from these heaps of scoria, with which it is covered, and which were once used for working the ore in." The ores of this district have been ascertained to contain lead as well as silver (Walpole's Turkey, p. 426). This confirms the annals of PASSENGE in the Aristotelian Economics proposed by Böckh and Wordsworth, where, instead of Τόλωρος in Πανασκύλος Ἀρηανίας Ἀρεοπάγιος, Böckh suggests Αἰγεαπόλεως, and Wordsworth Argo-mor, which ought rather to be Ἐρυθρόπολις, as Mr. Lewis observes.

The name of Laurium is preserved in the corrupt form of Leucra or Leugard, which is the name of a metoxti of the monastery of Mendeli.

The mines of Laurium, according to Xenophon (de Vact. iv. 2), were worked in remote antiquity; and it was thought that the large supply of silver was one of the main causes of the early prosperity of Athens. They are alluded to by Aeschylus (Pers. 285) in the line—

δργόνον κηρὺ τῆς αὐτοῦ ἑτέρος, θεομάς χέβος.

They were the property of the state, which sold or let for a long term of years, to individuals or companies, particular districts, partly in consideration of a sum or fine paid down, partly of a reserved rent equal to one twenty-fourth of the gross produce. Shortly before the Persian war there was a large sum in the Athenian treasury, arising out of the Laurium mines, from which a distribution of ten drachmae a head was going to be made among the Athenian citizens, when Themistocles persuaded them to apply the money to the increase of their fleet. (Herod. vii. 144; Plut. Them. 4.) Böckh supposes that the distribution of ten drachmae a head, which Themistocles persuaded the Athenians to forego, was made annually, from which he proceeds to calculate the total produce of the mines. But it has been justly observed by Mr. Grote, that we are not authorized to conclude from the passage in Herodotus that all the money received from the mines was about to be distributed; nor is there any proof that there was a regular annual distribution. In addition to which the large sum lying in the treasury was probably derived from the original purchase money paid down, and not from the reserved annual rent.

Even in the time of Xenophon (Mem. iii. 6. § 12) the mines yielded much less than at an early period; and in the age of Philip, there were loud complaints of unsuccessful speculations in mining. In the first century of the Christian era the mines were exhausted, and the old scoriae were smelted a second time. (Strab. ix. p. 399.) In the following century Laurium is mentioned by Pausanias (i. 1), who adds that it had once been the seat of the Athenian silver mines. (Dodwell, Tour through Greece, vol. i. p. 537, seq.; Wordsworth, Athens and Attica, p. 908, seq.; Walpole's Turkey, p. 425, seq.; Fiedler, Reise durch Griechenland, vol. i. p. 36, seq.; Leake, Demi of Attics, p. 65; Böckh, Dissertation on the Silver Mines of Laurium, appended to the English translation of his Public Economy of Athens; Grote's Greece, vol. v. p. 71, seq.)

LAURUM, a town of Attica, more correctly written Laurium. [Laurum.]

LAURO (Λαύρος; Eth. Λαυρός: near Sceära), a city on the W. coast of Lucania, at the mouth of the river of the same name, which formed the boundary between Lucania and Bruttium. (Strab. vi. pp. 253, 254.) It was a Greek city, and a colony of Sybaris; but the date of its foundation is unknown, and we have very little information as to its history. Herodotus tells us that, after the destruction of Sybaris in B. C. 510, the inhabitants who survived the catastrophe took refuge in Lati and Scirîna (Herod. vi. 20); but he does not say whether these cities were then founded by the Sybarites: it is far more probable that they had been settled long before, during the greatness of Syracuse, when Pósinônia also was planted by that city on the coast of the Tyrrenian sea. The only other mention of Lati in history is on occasion of a great defeat sustained there by the allied forces of the Greek cities in southern Italy, who had apparently united their arms in order to check the progress of the Lucanians, who were at this period rapidly extending their power towards the south. The Greeks were defeated with great slaughter, and it is probable that Lati itself fell into the hands of the barbarians. (Strab. vi. p. 253.) From this time we hear no more of the city; and though Strabo speaks of it as still in existence in his time, it seems to have disappeared before the days of Pliny. The latter author, however (as well as Ptolemy), notices the river Lati, which Pliny concurs with Strabo in fixing as the boundary between Lucania and Bruttium. (Strab. L. C. Plin. iii. 5. s. 10; Poli. iii. 1. § 9; Steph. B. s. a.)

The river Lati still retains its ancient name as, the Lao, or Latmo; it is a considerable stream, falling into the Gulf of Policastro. Near its sources
LAUS POMPEIA.

about 10 miles from the sea, is the town of *Laia", supposed by Cluverius to represent the ancient Laeis; but the latter would appear, from Strabo’s description, to have been nearer the sea. Romanelli would place it at Scioles, a small town with a good port, about three miles N. of the mouth of the river; but is more probable, as Romanelli also is, that 15 miles from the mouth of the river, is a ruin at Lavinia, near which looks for between this and the river Latio. (Cluver. Ital. p. 126.) According to Strabo there was, near the river city, a temple or Heroum of a hero named Drascon, close to which was the actual scene of the great battle between the Greeks and Lucanians. (Strab. l.c.)

LAUS POMPEIA, sometimes also called simply *Laus* (Eub. Lauidias: *Loschi Vecchio*), a city of Gallia Transpadana, situated 16 miles to the SE. of Strabo and 18 of a gulf of from which he can hardly mean any other than the extensive bay now called the Gulf of Pisauro, which may be considered as extending from the promontory of Pyonus (Capo degli Infranchi) to near Circei. There exist coins of Laia, of ancient style, with the inscription AAINON: they were struck after the destruction of Sybaris, which was probably the most flourishing time in the history of Laia. [E.H.B.]

LAUSI.

is "Lacum Losonne," and the distances from Geneva to Colonia Equestris and Lacum Losonne are respectively 18 M. P., or 36 together. The Lacus Lausonis is supposed to be *Lousanien*, on the Lake of Geneva; or rather a place or district, as D’Anville calls it, named Vidii. The distance from Geneva to this place is 15 miles. (H. v. 10.) The place is known also from Nyos to Lausanien, about 29 or 32 miles. The distance from Geneva to Nyos is nearly exact; but the 20 miles from Equestris to the Lacus Lausonis is not enough. If Vidii, which is west of Lausanien, is assumed to be the place, the measures will agree better. D’Anville cites M. Bochart as authority for an inscription with the name Losanies, as being dug up at Vidii, in 1739; and he adds that there are remains there. (Comp. Ubert’s note, Galles, p. 491.)

LAUTULAE or AD LAUTULAS (n. Adraoa, Dioct., Lit.) is the name given by Livy to the pass between Tarracina and Fundi, where the road winds round the foot of the mountains, between them and the sea, so as to form a narrow pass, easily defensible against a hostile force. This spot figures on two occasions in Roman history. In B.C. 342 it was here that the mutiny of the Roman army under C. Marcius Rutulus first broke out; one of the discontented cohorts having seized and occupied the pass at Lautulas, and thus formed a nucleus around which the rest of the discontented cohorts quickly assembled, and they thought themselves strong enough to march upon Rome. (Liv. vii. 39.) At a later period, in B.C. 315, it was at Lautulas that a great battle was fought between the Romans, under the dictator Q. Fabius, and the Samnites. Livy represents this as a drawn battle, with no decisive result; but he says that the Tranpadanae citizens of this place, the Plataesians, were defeated on the part of the Romans, in which the master of the horse, Q. Aulus, was slain (ix. 23). Dio has evidently followed the annalists thus referred to (xix. 72), and the incidental remark of Livy himself shortly after, that it caused great agitation throughout Campania, and led to the revolt of the neighbouring Anconian cities, would seem to prove that the Tranpadanae citizens of this place were not a city, but that they thought themselves strong enough to march upon Rome. (Liv. xxv. 25; Niebuhr, vol. iii. pp. 228—231.) The locality is always designated by Livy as "ad Lautulas:" it is probable that this was the name of the pass, but whether there was a village or other place called Lautulas, we are unable to tell. The name was probably derived from the existence of warm springs upon the spot. (Niebuhr, l.c., note 399.)

It is evidently the same pass which was occupied by Minucius in the Second Punic War, in order to guard the approach to Lutium from Campania (Liv. xxv. 15), though its name is not there mentioned. The spot is now called *Pasco di Portella*, and is a gratu for a gate, forming the barrier between the Roman and Neapolitan territories. (Eustace, vol. ii. p. 309.) [E.H.B.]

LAUXONIUS LACUS, in the country of the Helvetii. The Antonine Itin. has a road from Mediolanum (Milan) through Auguratum (Strasbourg). Sixteen Roman miles from Geneva, on the road to Strasburg, the Itin. has *Equestris*, which is Colonia Equestris or Noviodunum (Nyos); and the next place is Lacus Lausonis, 20 Roman miles from Equestris. To the next station, Urba (Orbe), is 18 Roman miles. In the Table the name

[Adagia, Periploc. 10. 11; Plin. vi. 4.] Aegad, Plut. v. 10. $5$, one among the many tribes which composed the indigenous population which clustered round the great range of the Cascausus. This people, whose original date were according to Procopius (B. G. iv. 8), on the N. side of the river, Phasis, gave their name, in later times, to the country which was known to the Greeks and Romans as Colchia, but which henceforth was called "Regio Latina." They are frequently mentioned in the
LEABDAN.

from whence the inhabitants, under the conduct of
Lebadus, an Athenian, migrated into the plain, and
founded there the city named after him. On
the other hand, Strabo maintains (ix. p. 418) that
the Homeric cities Argo and Midea were both swallowed
up by the lake Corinna. Lebadea was therefore an
insignificant place; but it rose into importance in
consequence of its possessing the celebrated oracle of
Trophonius. The oracle was consulted both by
Corensis (Hered. i. 46) and by Mardonius (Hered.
iv. 184), and it continued to be consulted even in
the time of Plutarch, when all the other oracles in
Boeotia had become extinct. The present
Pausanias himself consulted the oracle, and he
speaks of the town in terms which show that it
was in his time the most flourishing place in Boeotia.
But notwithstanding the sanctity of the oracle, Lebadea
did not always escape the ravages of war.
It was taken and plundered both by Lysander and
by Archelaus, the general of Philip (Plut.
Lys. 28, Sull. 16). In the war against Pausanias
it espoused the side of the Romans, while Thibes,
Haliartus, and Corinthia declared in favour of
the Macedonian king. (Polyb. xxvii. 1.) It
continues to exist under the slightly altered name of
Astellachia, and during the Turkish supremacy it gave
its name to the whole province. It is still a
considerable town, though it suffered greatly in the
war of independence against the Turks.

The modern town is situated on two opposite hills,
rising on each bank of a small stream, called Her-
cyna by Pausanias, but the greater part of the
houses are on the western slope, on the summit of
which is a ruined castle. Pausanias says that the
Hercynian rose from two springs flowing from
one to another, one called the fountain of Oblivion
and the other the fountain of Memory, of which
the persons who were going to consult the oracle were
obliged to drink. The Hercynia is in reality a con-
tinuation of an occasional torrent from Mount Hel-
cus; but at the southern extremity of the town, on
the eastern side of the Acro-hill, are some
deep springs, which evidently are the natural
fountains of the Hercynia. They issue from either
side of the Hercynia, those on the right bank being
the most copious, flowing from under the rocks in
many large streams, and forming the main body of the
river; and those on the left bank being insignificant,
and flowing, in the time of Diodorus, through ten
springs, of which there are still two in operation.
The fountains on the right bank are warm, and are
called Chilis (Chiλιάδες), and sometimes τά γλαφρά νερά,
or the water unfit for drinking; while the fountains
on the left bank are cold and clear, and are named
Krya (ξυρία), i.e. ξυριά Βερίας, the cold source,
in opposition to the warm, Χίλιας. Neither of these
two sets of fountains is less than a cubit in depth, and
so far do not correspond to the description of Pausanias;
but there is a cavern close to each; and in the
course of ages, since the destruction of the sacred
buildings of Trophonius, the caverns may easily
have been choked up, and the springs have emerged
in different spots. The question, however, arises,
what of these the caverns contained the reputed sources
of the Hercynia? The answer to this must depend
upon the position we assign to the sacred grove of
Trophonius, in which the source of the Hercynia was
situated. Loakes places the sacred grove on the
right or eastern bank; but Ulrichs on the left, or
western bank. The latter appears more probable,
on account of the passage in Pausanias, διάσπρευς
τόν
LEBEDES (Aileus Achelius), an ancient city on the western coast of Asia Minor, 30 stadia to the east of Cape Mysenae, and 150 miles north-west of Colophon. (Strab. xiv. p. 643.) The place was originally inhabited by Carians, who, on the immigration of the Ionians into Asia, lost their possession of it by them under the guidance of Andreamon, a son of Codrus. (Paus. vii. § 5; Strabo (xiv. p. 633), however, in speaking of the foundation of the Ionian cities, states that it was colonized by Andromus and his followers, hence the name of Ariea; the tomb of Andreamon, however, was shown in the neighbourhood of Colophon, on the road crossing the city of Hales. (Paus. l. c.) For a long time Lebedes continued to be a city flourishing by its commerce, the fertility of its territory, and the excellent mineral springs in its neighbourhood, which did exist. (Hecat. Fragm. 219; Herod. i. 142; Thrac. viii. 18.) It was afterwards nearly destroyed by Lyсимachus, who transplanted its population to Ephesus (Paus. l. c. i. 9. § 8); after which time Lebedes appears to have fallen more and more into decay, so that in the days of Horace it was deserted more than Gable or Fidenae. (Epist. i. 11. 7.) It is mentioned, however, as late as the 7th century A.D. (The Christian era, (Arian. iv. v. 5; Ps.-Philost. v. H. N. x. 31; Herod. p. 660); and the Romans, in order to raise the place in some measure, established there the company of actors (σκηνήν περὶ τῶν Διανομῶν) who formerly dwelt in Teos, whence during a certain commotion they withdrew to Ephesus. At a later period transferred them to Myusenae; but the Romans, at the request of the Teians, transferred them to Lebedes, where they were well received, as the place was very thinly inhabited. At Lebedes the actors of all Ionia as far as the Hellespont had ever after an annual meeting, at which games were celebrated in honour of Dionysus. (Strab. xiv. p. 643.) The site of Lebedes is marked by some ruins, now called Zcletoc, and consisting of masses of naked stone and bricks, with cement. There also exists the base and an entire floor of a small temple; nearer the sea there are traces of ancient walls and a few fragments of Doric columns. (Chandler: "Asia Minor," p. 125.)

LEBEN (Aileus, Strab. x. p. 478) of LEBEN (Aileus, Plut. iii. 17. § 4; Stadiasmus; Plin. xii. 137. Paus. ii. 26. § 7; Lebedes, Pust. Tab.) was a maritime town of Crete, which was a harbour of Gortyna, about 70 stadia inland. (Strab. l. c.) It possessed a temple of Asclepius, of great celebrity (Philostat. Viat. Apollon. ix. 11), and is represented by the modern hamlet of Leda. (Hock, Kreut. l. p. 8. 394. 399.)

LEBINTHUS (Aileus, a small island on the coast of the Sporades, NE of Aegina, between which and Lebinthus lies the small island Cinarius. (Strab. x. p. 487; Steph. B. t. Δελού) Plin. iv. 12. § 23; Mela. ii. 7. § 11; (et. vii. 222, Ar. Am. ii. 81; Ross. Reise in Griech. Inseln, vol. ii. p. 56.)

LEBONAH, a town of Palestine, north of Sibbec, identified by Monrad with Lebedes, a village 4 barems S. of Napoleon. (Judg. xxi. 19; Winer, Biblical. Rassorter. v. 1.)

LEBUNI. [Lusitania.]

LECHEAUM. [Cortinius, p. 682.]

LECTOCE, AD, in Gallia Narbonensis, is placed
by the Jerusalem Itin. after Arausio (Orange), and xiii. M.P. from it. D’Anville says that the distance is too great, for it seems that the place is at the passage of the small river Lec.

[G. L.]

LECTUM (vb Ascerto), a promontory in the south-west of Traves, opposite the island of Lebod. It forms the south-western termination of Mount Ida. (Hom. H. xiv. 294; Herod. ix. 114; Thucyd. viii. 101; Pol. v. 2. § 4; Pline. v. 52; Liv. xxxvii. 37.) In the time of Strabo (xiii. p. 605, comp. p. 583) there was shown on Cape Lectum an altar, said to have been erected by Agamemnon to the twelve great gods; but this very number is a proof of the late origin of the altar. Under the Byzantine emperors, Lectum was the northernmost point of the province of Asia. (Herod. p. 659.) Atheneaeus (ii. p. 88) states that the purple shell-fish, found near Lectum as well as near Sigeum, was of a large size. The modern name of Lectum is Babo, or Sansa Maria. [L. S.]

LECTYCHUS (Actheos), a town in the Antonia of Sibthorn in Chalcedon, not far from Torone, with a temple to Athena. The town was attacked by Brasidas, who took it by storm, and consecrated the entire cape to the goddess. Everything was demolished except the temple and the buildings connected with it. (Thuc. iv. 115, 116.) [E. B. J.]

LEDEBATA or LADDERATA (Ladébata and Aresto) was a fortified place in Upper Moesia, on the high road from Viminacium to Dacia, on the river Morpus. It was a station for a detachment of horse archers. (Procop. de Aed. iv. 6; Tab. Peut. Notit. Imp., where it is called Lacadena.) Ruins of ancient fortifications, commonly identified with the site of Ladebata, are found in the neighbourhood of Razgrad. [L. S.]

LEDON (Aeskyri; Eth. Aeskyros), a town of Phocis, north of Tithorea, the birthplace of Philomelus, the commander of the Phocians in the Sacred War. In the time of Pausanias it was abandoned by the inhabitants, who settled upon the Cephissus, at the distance of 40 stadia from the town, but the ruins of the latter were seen by Pausanias. Leake supposed that the ruins of the rūmz are those of Ledon. (Paus. x. 2. § 2, x. 3. § 2, x. 33. § 1; Leake, Northern Greece, vol. ii. p. 89.)

LEDREN (Adrino; Aezhron), a place in Cyprus, near Leucasia, which the ecclesiastical writers mention as a bishop's see. (Sosomen, H. E. v. 10; Niceph. Callist. viii. 42; Engel, Kypros, vol. i. p. 182.) [E. B. J.]

LEDUS, or LEDUM, as Mela (ii. 5) names it, a small river of Gallia Narbonensis. Festus Avienus (Or. Morit. 590) names it Ledus. Mela speaks of the "Stagna Volcarum, Ledum sinmen, castellum Latera." The Ledus is the Lus, which passes by Sextantio, to the east of Montpelier, and flows into the Etang de Maguelone or Pérôle below Laters, now Latas or Latric. Pliny (ix. 8) gives the name of Stagnum Later to this Etang; and he shows of it as abounding in mullets, and describes the way of taking them. The mullet is still abundant there. Pliny places the Stagnum Later in the territory of Nemausus (Nîmes), which is at some distance. But the Etang and the Castellum Later may be among the many small places (Plin. iii. 4) which were made dependent on Nemausus (Nemaisonibisus instead).

[G. L.]

LEGÉTAI. [Legétai.] LEGAE (Aigysu, Strab. xi. p. 508; Agyr, Plut. Pomp. 35), a people on the shores of the Caspian, situated between Albania and the Amazones, and belonging to the Scythian stock. (Theophrast., ap. Strab. L. c.) The name survives, it has been conjectured, in the modern Legh, the inhabitants of the E. region of Caucasus. (Comp. Pottocki, Voyage dans les lieux d’Astrakhan, tom. i. p. 239.) [E. B. J.]

LEGEDIA, in Gallia, is placed by the Table on a road from Condate (Romans) to Coriolanus, and from there to Cherbourg. It is 49 Gallic leagues from Condate to Legedia, and 19 from Legedia to Coedane. None of the geographers agree about the position of Legedia. Walkesmaer places it at Villecomdon, near Lessines, in support of which there is some similarity of name. [G. L.]

LEGEBLUM, a town in Britain, mentioned in the Itinerary. At Castleford, in Yorkshire, the road from Isurium (Alborough) crosses the river Aire; and in this neighbourhood coins and other antiquities have been dug up. A camp, however, has yet to be discovered. Castleford is generally identified with Legeblum.

Legerum is the first station from York on the way to London, 21 miles from the former town, and 16 from Danum (= Doncaster). This is from the 8th Itinerary.

In the 5th Legebilum is exactly in the same position. This identifies the two. [R. G. L.]

LEGIO (Aevedo), a town of Palestine mentioned by Eusebius and S. Jerome. Its importance is intimated by the fact that it is assumed by Eusebius as a centre from which to measure the distance of other places. Thus they place it 15 M. P. west of Nazarath, three or four from Taanach (Onomast. a. v. Nazaret, Thaenach, Thanaach Camoun, Aphraim). (Beland (Palaest. a. v. p. 873) correctly identifies it with the modern village Legene or el-Lejjeen, "on the western border of the great plain of Esdraelon,"—which Eusebius and S. Jerome designate, from this town, μέγαν νεάβον Αειβών (Onomast. a. v. Παλαιστ.),—"where it already begins to rise gently towards the low range of wooded hills which connect Carmel and the mountains of Samaria." Its identity with the Megiddo of Scripture is successfully argued by Dr. Robinson (Bib. Antiq. Res. vol. iii. pp. 7-27); and the site of the town is joined with Taanach, and Legjae is the requisite distance from the village of Taloumik, which is directly south of it. Both were occupied by Caanaanish sheikhs (Joseph xii. 21), both assigned to the half-tribe of Manasseh, though lying within the borders of Issachar or Asher (xvii. 11; 1 Chron. vii. 29); both remained long unsubdued (Judges, i. 27). In the battle between Jerahmeel and Sisera "they fought in Taanach by the Waters of Megiddo,"—which waters issue from a copious fountain, the stream from which turns several mills, and is an important tributary to the Kishon (Maundrell, Journey, March 22, p. 57). This is probably the place mentioned by Shaw as the Ras-ell-Kishon, or the head of the Kishon, under the name of the southeast termination of Mount Carmel. Three or four of its sources, he says, lie within less than a furlong of each other, and discharge water enough to form a river half as big as the Ias. (Travels, p. 274, 4to. ed.) It was visited and described by Mr. Wolcott in 1842. He found it to be an hour and 40 minutes from Bein Fous (Bibliotheca Sacra, 1845, pp. 72-76.) The great caravan road between Egypt and Damascus passes through Lejijsen; and traces of an old Roman road are to be seen to the south of the village. [G. W.]

LEGIO VII GEMINA (Hist. Ant. p. 395; Aevedos (Aevedos), Pol. ii. 6. § 30: Leon.),

Digitized by Google
LEGELES.

Roman city of Asturia, in Hispania Tarraconensis, admirably situated at the confluence of two tributaries of the Eusa, at the foot of the Asturian mountains, commanding and protecting the plain of Leon. As its name implies, it grew out of the station of the new 7th legion, which was raised by the emperor Galba in Hispania. (Dion Cass. iv. 24; Tac. Hist. ii. 11, iii. 25; Suet. Galba, 10.) Tacitus calls the legion GALBANA, to distinguish it from the old LEGIO VII. CLAUDIA, but this appellation is not found on any genuine inscriptions. It appears to have received the appellation of Gemina (respecting the use of which, and GEMINELLA, see Caesar B. C. iii. 3) on account of its amalgamation by Vespasian with one of the German legions, not improbably the LEGIO I. GERMANICA. Its full name was VII. GEMINA FELIX. After serving in Pannonia, and in the civil wars, it was settled by Vespasian in Hispania Tarraconensis, to supply the place of the VI. Victorix and X. Gemina, two of the three legions ordinarily stationed in the province, but which had been withdrawn to Germany. (Tac. Hist. ii. 11, 67, 86, iii. 7, 10, 21-25, iv. 39; inscr. ap. Gruter, p. 245, no. 2.) That its regular winter quarters, under later emperors, were at Leon, we learn from the itinerary, Ptolemy, and the Notitia Imperial, as well as from a few inscriptions (Muratori, p. 2037, no. 8, a. D. 130; p. 335, nos. 2, 3, a. D. 165; p. 2046, no. 3, a. D. 187; Gruter, p. 286, a. D. 216); but there are numerous inscriptions to prove that a strong detachment of it was stationed at Tarraco, the chief city of the province. (The following are a selection, in order of time: — Orelli, no. 3496, a. D. 183; no. 4815; Gruter, p. 385, no. 7.) In the inscriptions the legion has the surname of P. F. VICTORINIUMA, P. F. AEMILIA, and P. F. SEVERINIUM ALEXANDRIANA; and its name occurs in a Greek inscription as AET. Z. ΔΙΑΔΥΤΗ (C. I. vol. iii. no. 4092), while another mentions χαλλαρχος ἐν ἤπαιναις ἀγάπης χαλαρχαῖς. (C. I. vol. i. no. 1126.) There is an inscription in which is found a "tribunus militum legio VII. GEMINAE FELICIS IN GERMANIA," from a comparison of the inscriptions found in Germany (Lehne, Schriften, vol. i. nos. 11, 62; Borghesi, sulle iscr. Rom. del Reno. p. 26), it has been inferred that the legion was employed on an expedition into Germany under Alexander Severus, and that this circumstance gave rise to the erroneous designation of GERMANIA in the text of Ptolemy. (Böcking, N. p. ii. pp. 1026, seq.; Marquardt's Becker, Rom. Alterthum. vol. iii. pt. 3, p. 354; Grotefend, in Pauly's Realencyclopaedia, s. v. LEGIO.)

The station of this legion in Asturia grew into an important city, which resisted the attacks of the Goths till a. D. 586, when it was taken by Leovigilde; and it was one of the few cities which the Goths were unable to retain with the forces they had mustered during the struggle with the Arab invaders, the same fortress, which the Romans had built to protect the plain from the incursions of the mountaineers, became the advanced post which covered the mountain, as the last refuge of Spanish independence. After yielding to the first assault of the Moors, it was soon retaken, and remained in the possession of the Heruli to the time of Ordoño I. in 850. It was again taken by Al-Mansur in 996, after a year's siege; but was recovered after Al-Mansur's defeat at Calatañazor, about a. D. 1000; recaptured by Alonso V., and enlarged by Alonso XI., under whose successor, Don Pedro, it ceased to be the capital of the kingdom of Leon, by the removal of the court to Segovia. The greater portion of the Roman walls may still be traced. (Ford, Handbook of Spain, p. 316.)

LEHI, or more fully RAMATHELEM, a place in the south of Palestine, the name of which is derived from one of Samuel's exploits. (Judg. xxv. 14, 17; comp. Joseph. Ant. v. 8; § 8; Winer, Biblisch. Real-lexicon, s. v.)

LEIMÔNE (Λειμών), the later name of the Homeric ELONE (Haldón), according to Strabo, was a town of Pasetheia in Thessaly, and was situated at the foot of Mount Olympus, not far from the Orestis or Stoura. The Greeks of Elasson report that there are some remains of this city at S邀。 (Hom. II. ii. 739; Strab. iv. p. 440; Steph. B. s. v. Haldón; Leakes, Northern Greece, vol. iii. p. 345.)

LEINUM (Λείνων), a town of Sarmatia Superior, which Ptolemy (iii. 5. § 29) places on an affluent of the Borysthenes, but whether on the Borys or Burana, is uncertain. LIANUM (Iasius, Ptol. iii. 5. § 12), on the Palus Maceias, appears to be the same place repeated by an oversight. (Schafarik, Slav. Alt. vol. i. p. 512.)

LEIPSYDRIUM. [Attica, p. 326, b.]

LEIAMONIUS SINUS, in Britain, mentioned by Ptolemy (ii. 3) as lying between the seashore of the Roman colony of Hadrumetum and the Ripiaian Sinus (Mull of Cantyre) = Loch Fyne. [R. G. L.]

LEILANTUS CAMPUS (τὸ Ἀλαντές πεδίου), a fertile plain in Euboea, between Chalcis and Eretria, which was an object of frequent contention between those cities. [Chalcis.] It was the subject of volcanic action. Strabo relates that on one occasion some heaps of hot mud issued from it; and it contained some warm springs, which were used by the dictator Sulla. The plain was also celebrated for its vineyards; and in it there were mines of copper and iron. (Strab. i. 58, x. p. 447, seq.; Hom. Hymnis in Apollo. 219; Theogn. 888; Leakes, Northern Greece, vol. ii. p. 265.) Pliny mentions a river Leilantas in Euboea, which must be the same place as this plain, if it really existed. (Plin. iv. 12. a. 21.)

LEILEGES (Λιλέη), an ancient race which was spread over Greece, the adjoining islands, and the Asiatic coast, before the Hellenes. They were so widely diffused that we must either suppose that their name was descriptive, and applied to several different tribes, or that it was the name of a distinct tribe and was afterwards extended to others. Strabo (vii. p. 392) regarded them as a mixed race, and was disposed to believe that their name had reference to this (τὸ συλλακτόνος γεγονότα). They may probably be looked upon, like the Pelasgians and the other early inhabitants of Greece, as members of the great Indo-European race, who became gradually incorporated with the Greeks, and thus ceased to exist as an independent people.

The most distinct statement of ancient writers on the origin of the Leileges is that of Herodotus, who says that the name of Leileges was the ancient name of the Carians (Herod. i. 171). A later Greek writer considered the Leileges as standing in the same relation to the Carians as the Helots to the Lacedaemonians and the Penetae to the Thessalians. (Athen. vi. p. 271.) In Homer both Leileges and Carians appear as equals, and as auxiliaries of the Trojans. (II. x. 428.) The Leileges are ruled by Altes, the father-in-law of Priam, and inhabit as
LEMANNUS LACUS (Aëusor, Aëutos Aëuros; Lemman Lacus or Lake of Geneva). Caesar says (B. G. i. 8) that he drew his rampart against the Helvetii "from the Lacus Lemannus, which flows into the Rhone, as far as the Jura;" a form of expression which some of the commentators have found fault with and altered without any reason. The name Aëutos Aëuros in Ptolemy's text (ii. 10. § 2) is merely a copyist's error. In the Antonine Itin. the name Lemanus Lacus occurs; and in the Table, Losannensis Lacus. Mela (ii. 5), who supposes the Rhodanus to rise not far from the sources of the Ebune and the Iser, says that, "after being received in the Lemannus Lacus, the river maintains its current, and flows for many miles as far as the Ahone." Strabo (p. 861) has a remark to the same purpose, and Pliny (ii. 108), and Ammianus Marcellinus (xiv. 11). This is not the fact, as we may readily suppose, though the current of the Rhone is perceptible for some distance after the river has entered the east end of the lake of Geneva. Aëusor (De Clar. Urb. Narbo) makes the lake the chief source of the Rhodanum:—Qua raptur praecipua Rhodanum genitus Lemannes; but this poetical embellishment needs no remark.

The Lake of Geneva is an immense hollow filled by the Rhone and some smaller streams, and is properly described under another title. [RHODANUS.]

LEMAVL. [GALLARCA.]

LEMINCUM, in Gallia Narbonensis, is placed in the Table and the Antonine Itin. on a road from the Alpis Graia (Little St. Bernard) to Vienna (Vienna). Leminicum is Lemens, near Chambrey, and there is also, according to some authorities, a Mont Lemsic. The next station to Leminicum on the road to Vienna is Labiconum. [LABICUM.]

LEMINOS (Aëuros: Eth. Aëuros), one of the larger islands in the Aegaean sea, situated nearly midway between Mount Athos and the Hellespont. According to Pliny (iv. 12. s. 23), it lay 52 miles SW. of 'mbros, and 86 miles SE. of Athos; but the
LEMONS.

latter is nearly double the true distance. Several ancient writers, however, state that Mount Athos cast its shadow upon the island. (Soph. op. Schol. ad Thucyd. vi. 76; Plin. l. c.) Pliny also relates that Lemnos is 112 miles in circuit, which is perhaps not far from the truth, if we reckon all the windings of its coast. Its area is nearly 150 square miles. It is of an irregular quadrilateral shape, being nearly divided into two peninsulas by two deep bays, Port Paradise on the N., and Port St. Antony on the S. The latter is a large and convenient harbor. On the east side of the island is a hole in the rocks through which a small river projectting into the sea, called by Asclepius 'Ερωμός Ἀθένα, in his description of the beacon fires between Mount Ida and Mycenae, announcing the capture of Troy. (Asch. Agam. 283; comp. Soph. Philoct. 1495.) Hills, but of no great height, cover two-thirds of the island; they are barren and rocky, and there are very few trees, except in some of the narrow valleys. The whole island bears the strongest marks of the effects of volcanic fire; the rocks, in many places, are like the burnt and vitrified scoria of furnaces. Hence we may account for its connection with Hephaestus, who, when hurled from heaven by Zeus, is said to have fallen upon Lemnos. (Herod. II. i. 595. The island is sometimes called Hephastia, (Nestor. Thyn. 458; Or. Fast. iii. 82), who was frequently called the Lemnian god. (Or. Metat. iv. 197; Verg. Aen. viii. 454.) From its volcanic appearance it derived its name of Astheleia (Ἀσθελεία, Polyb. op. Steph. B., and Erym. M. s. a. Alcydia). It was also related that from one of its mountains, called Molybda, the first fire was seen to blaze forth. (Antimach. op. Schol. ad Niconom. Thyn. 473; Lycoeph. 227; Hesych. s. v.) In a village in the island, named Choros, there is a hot-spring, called Therma, where a commodious bath has been built, with a lodging-house for strangers, who frequent it for its supposed medicinal qualities. The name of Lemnos is said to have been derived from the name of the Great Goddess, who was called Lemnos by the original inhabitants of the island. (Hecat. op. Steph. B. s. v.)

The earliest inhabitants of Lemnos, according to Homer, were the Sintizes (Σίντζες), a Thracian tribe; a name, however, which probably only signifies robbers (from σίντζες). (Hom. II. i. 594, Od. viii. 294; Strab. vii. p. 321, x. p. 457, xii. p. 544.) When the Argonauts landed at Lemnos, they were said to have found it inhabited only by women, who had murdered all their husbands, and had chosen as their queen Hypermische, the daughter of Theos, the former King of the island. [See Dict. of Biogr. art. Hypereime.] Some of the Argonauts settled here, and became by the Lemnian women the fathers of the Minyae (Μίνυαι), the later inhabitants of the island. The Minyae were driven out of the island by the Tyrrhenian Pelasgians, who had been expelled from Attica. (Herod. iv. 145, vi. 137; Apoll. Rhod. i. 605, seq., and Schol.: Apollod. i. 9. § 17, iii. 6. § 4.) It is also related that these Pelasgians, on their revenge, made a descent upon the coast of Lemnos during the festival of Artemis at Brauron, and carried off some Athenian women, whom they made their concubines; but, as the children of these women despised their half-brothers born of Pelasgian women, the Pelasgians murdered both them and their Athenian mothers. In consequence of this atrocity, and of the former murder of the Lemnian husbands by their wives, "Lemnian Deeds" (Ἀθένας Ἐρωμός) became a proverb throughout Greece for all atrocious acts. (Herod. vi. 128; Eustath. ad ll. p. 158. 11, ad Dionys. Per. 347; Xenod. iv. 91.)

Lemnos continued to be inhabited by Pelasgians, when it was conquered by Otanes, one of the generals of Darius Hystaspis (Herod. vi. 26); but Mithridates delivered it from the Persians, and made it subject to Athens, in whose power it remained for a long time. (Herod. vi. 137; Thuc. iv. 28, vili. 57.) In fact, it was always regarded as an Athenian possession, and accordingly the peace of Antalcidas, which was signed between Athens and the Thracian states, nevertheless allowed the Athenians to retain possession of Lemnos, Imbro, and Scyrus. (Xen. Hell. iv. 8. § 15, v. 1. § 31.) At a later period Lemnos passed into the hands of the Macedonians, but it was restored to the Athenians by the Romans. (Polyb. xxx. 18.)

In the earliest times, Lemnos appears to have contained only one town, which bore the same name as the island (Hom. IL xiv. 230); but at a later period we find two towns, Myrina and Hephaseitias. The island was a good harbor, and was regarded as one of the important stations of the shipping of Hymettus, and the protection of the island was assigned to the care of the Athenian fleet. (Herod. i. 140; Steph. B. s. v.; Ptol. iii. 13. § 4.) On its site stands the modern Kastri, which is still the chief town in the place. In contains about 2000 inhabitants; and its little port is defended by a pier, and commanded by a ruinous medieval fortress on the heights rising over the town. The rock on which it is situated, and the island, called Hephaseitias, or Hēphaistias (Ἡφαίστεια), Hēphaisteia (Ἑφαίστεια), Hēphāisteia (Ἑφαίστεια), was situated in the northern part of the island. (Herod., Plin., Ptol. ii. cc.; Steph. B. s. v.) There are coins of Hephaseitias (see below), but none of Myrina, and none bearing the name of the island. (Eckhel, vol. ii. p. 51.)

According to Pliny (xxxvi. 13. § 19) Lemnos had a celebrated labyrinth, supported by 150 columns, and with gates so well paved, that a child could open them. Pliny adds, that there were still traces of it in his time. Dr. Hunt, who visited the island in 1801, attempted to find out the ruins of this labyrinth, and was directed to a subterraneous staircase in an uninhabited part of the island, near a bay, called Portswall. He here found an extensive ruin of a ancient and strong building that seemed to have had a ditch round it communicating with the sea. The edifices have covered about 10 acres of ground: there are foundations of an amazing number of small buildings within the outer wall, each about seven feet square. The walls towards the sea are strong, and composed of large square blocks of stone. On an elevated spot of ground in one corner of the area, we found a subterraneous staircase, and, after lifting our tapers, we went down into it. The entrance was difficult: it consisted of 51 steps, and about every twelfth one was of marble, the others of common stone. At the bottom is a small chamber with a well in it, by which probably the garrison was supplied with water. The building was few days before excavated, and was lying in a corner, for the use of the Greek Christians, who call this well an Arles Lava, or Holy Fountain, and the ruins about it Panagia Cocompe. The peasants in the neighbourhood had no knowledge of any sculpture, or statues, or medals having ever been found there. It does not appear, however, that these ruins have any relation to the labyrinth
LEMOVICES.

mentioned by Pliny; and Dr. Hunt thinks that they are probably those of the citadel of Hephaestias.

The chief production of the island, was a red earth called tarema Lemnia or sigillata, which was employed by the ancient physicians as a remedy for wounds and the bites of serpents; and which is still much valued by the Turks and Greeks for its supposed medicinal virtues. It is dug out of a hill made into small balls, and stamped with a seal containing Arabic characters.

The ordinary modern name of the island, is Stasimi (στασίμι), though it is also called by its ancient name.

There were several small islands near Lemnos, of which the most celebrated was Chereas (Xereus), where Philetetess was said to have been abandoned by the Greeks. According to Pausanias, this island was afterwards swallowed up by the sea, and another appeared in its stead, to which the name of Hieria was given. (Erastus ad Hom. II. i. p. 330; Apian. Mithr. 77; Paus. viii. 33. § 4.)

(Rhode, Res Lemnicius, Varial. 1829; Hunt, in Walpole's Travels, p. 54, seq.)

COIN OF HEPHAESTIAS IN LEMNOS.

LEMOVICES (Δαμακάς, Strab. p.190; Δαμακάς, Ptol. ii. 7. § 10), a Gallic people who were bounded by the Arverni on the east, the Bituriges Cubi and the Pictones on the north, and the Santones on the south. Their chief town was Augustorium or Limoages. [Augustorium.] The diocese of Limoages, comprehending the diocese of Tulle, which has been separated from it, represents the limits of the Lemoices; but the diocese of Limoages extends somewhat beyond the limits of the old province of Limoages, which derives its name from the Lemoices, and into that province which was called La Limousin, and was inhabited by the same tribe. In the diocese of Limoages, prove that there was included in the territory of the Lemoices a people named Andecamuneulians; and another Gallic inscription shows that Mars was called Camillus. Camulogenus was a Gallic name. (Cas. B. G. viii. 59. 2.)

Caesar (B. G. vii. 4) enumerates the Lemoices among the peoples whom Vercingetorix stirred up against the Romans in B. C. 52; they are placed in the text between the Aurelii and Ancis. The Lemoices sent 10,000 men to assist their countrymen at the siege of Alesia (B. G. vii. 75). But in the same chapter (vii. 75) the Lemoices are again mentioned: "universis civitatis quae Oceanae situ attingent quaque eorum consistente Armaico stipulatur, quo sunt in numero Curious, litres, Redores, Ambibari, Caletes, Osmii, Lemoices, Veneti, Uselli, sex miliaria." Here the Lemoices are placed in a different position, and are one of the Armoric States. [Armaricae Civitates.] Some critics erase the name Lemoices from Caesar's text; but there is good authority for it. Davis remarks (Cas. Oudem. 5, l. p. 427), that all the MSS. (known to him) have the reading Lemoices, and that it occurs also in the Greek translation. He also observes, that as there were three Aurelii [Aurelii], so there might be two Lemoices; and

we may add that there were two Bituriges, Bituriges Cubi and Bituriges Vivisci, and Volcae Arecomici and Volcae Tectosages. If the text of Caesar then is right, there were Armoric Lemoices as well as the Lemoices of the Lemoices; and we must either keep the name as it is, or erase it. The emendation of some critics, adopted by D'Anville, rests on no foundation, and neither finds its corroboration which he assigns to the Lemoices Armoricani, a place named La Limousinii, in the arrangement of Nantes, between Macceoii, Nantes and Saint-Leger; and he considers this an additional proof in favour of a conjecture about the text of Ptolemy in the matter of the Lemoices; as to which conjecture his own remarks may be read. (Codex et. des Galliis, vol. 1. p. 369.)

[FL. L.]

LEMOVIL, a German tribe, mentioned by Tacitus ( Germ. 43) as living with the Rugii on the coast of the Ocean, that is, the Baltic Sea. Tacitus mentions three peculiarities of this and the other tribes in those districts (the modern Pomerania),—their round shields, short swords, and obedience towards their chiefs. ( Comp. Zeus, des Dombachs, p. 155.) [L. S.]

LENTIA (Lēsia), a small place in Noricum on the Danube, on the road from Lausacum. According to the Notitia Imperii, from which alone we learn anything about this place, it appears that a prefect of the Legio Italica, and a body of horse archers, were stationed there. (Comp. Tacitus, Inscript. p. 841. 10; Muchor, Noricum, l. p. 284.) [L. S.]

LENTIENSES, the southernmost branch of the Alemani, which occupied both the northern and southern borders of the Lacus Brigantini. They made repeated inroads into the province of Rhesitae, and were defeated by the emperor Constantius. (Amm. Marc. xx. 4, xxxii. 10; Zenes, des Dombaches, p. 309, foll.) [L. S.]

LENTULAE or LEONTLAE, a place in Upper Pannonia, on the principal highroad leading through that country, and 32 Roman miles to the south-east of Jovis. (It. Ant. p. 130; It. Hieros. p. 562; Goegg. Rav. iv. 19.) Ptolemy (ii. 18. § 5) mentions a town of Lenstalis in the same district, which is perhaps only a slip for Lēntulōn. Some identify the place with the modern Bertantze, and others with Letchamby. [L. S.]

LEO FLUVIUS. [LEONETES]

3. A promontory of Eubeia, S. of Eubria, on the east of Ant, (Ptol. iii. 15. § 24.)

3. A place on the E. coast of Sicily, near Syracuse, where both the Athenians and Romans landed when they were going to attack that city. (Thuc. vi. 97; Liv. xxv. 39.) [Syracusae.]

LEONICA. [EDITANI.]

LEONTIA (Λέωντια) or LEONTIA (Λέωντια) or Germania dei, a river of Phoenicia, placed by Ptolemy between Berithus and Sidon (v. 15, p. 137); consistently with which notice Strabo places Leontopolis between the same two towns, the distance between which he states at 400 stadia. He mentions no river of this name, but the Tamyrus (ταμύρας μαρσώς), the grove of Asclepius at Leontopolis, which would correspond with the lion river of Ptolemy; for it is obviously an error of Pliny to place "Leonot oppidum" between "Berithus" and "Flumen Lyceos" (v. 20). Now, as the Tamyrs of Strabo is clearly
LEONTINI.

identical with Nahr-el-Dâmar, half way between Beyrut and Saïda, Lion's town and river should be looked for south of this, and north of Sidon. The only stream in this interval is Nahr-el-Abyâ, called also in its upper part Nahr Bardik, which Dr. Robinson has shown to be the Bestreus Fluvius, 'Bostrichus.' Thus the river was formerly supposed to have sufficient authority for identifying with the Leontes. But the existence of the Líbdah—a name supposed to be similar to the Leontes—between Sidon and Tyre, is thought to countenance the conjecture that Ptolemy has misplaced the Leontes, which is in fact identical with the anomymous river which Strabo mentions near Tyre (p. 753), which can be no other than the Líbdah (Robinson, Bib. Res. vol. iii. pp. 408—410, and notes). No great reliance, however, can be placed on the similarity of names, as the form Leontos is merely the inflection of Aëurr, which was not likely to be adopted in Arabic. It is far more probable that the classical geographer in this, as in other cases, transliterated the Semitic name. [See Chittim and Lyddf.] Besides which the Líbdah does not retain this name to the coast, but is here called Nahr-el-Kârimiyeh, the Casimir of Maundrell (March 20, p. 48; Reland, Palæstina, pp. 290, 291.)

[ G. W. ]

LEONTINI (Λεόντινι : Ekh. Λεόντινι : Leontini), a city of Sicily, situated between Syracuse and Catana, but about eight miles from the sea-coast, near a considerable lake now known as the Lago di Leontini. The name of Leontini is evidently an ethnic term, signifying properly the people rather than the city itself; but it seems to have been the only one in use, and is employed both by Greek and Latin writers (declined as a plural adjective*), with the single exception of the Attic writers or Leontini. (Ptol. iii. 6 § 13.) But it is clear, from the modern form of the name, Leontini, that the form Leontini, which we find universal in writers of the best ages, continued in common use down to a late period. All ancient writers concur in representing Leontini as a Greek colony, and one of those of Chalcidian origin, being founded by the Chalcidians in the same year with Catana, and six years after the parent city of Naxos, b.c. 730. (Thuc. vi. 3; Scurry. Ch. 285; Diod. xii. 53. xiv. 14.) According to Thucydides, the site had been previously occupied by Siculi, but these were expelled, and the city became essentially a Greek colony. We know little of its early history; but, from the strength of its position and the extreme fertility of its territory (renowned in all ages for its extraordinary richness), it appears to have early attained to great prosperity, and became one of the most considerable cities in the E. of Sicily. The rapidity of its rise is attested by the fact that it was able, in its turn, to found the colony of Enobos (Skrab. vi. p. 272; Scurry. Ch. 287). It is probable, also, that the three Chalcidian cities, Leontini, Naxos, and Catana, from the earliest period adopted the same line of policy, and made common cause against their Doric neighbours, as we find them constantly doing in later times.

The government of Leontini was an oligarchy, but it was an open oligarchy. The political parties of Sicily, under the yoke of a despot of the name of Panaitius, who is said to have been the first instance of the kind in Sicily. His usurpation is referred by Eusebius to the 43rd Olympiad, or b.c. 608. (Arist.-

Pv. 10, 12; Euseb. Arm. vol. ii. p. 109.)

Leontini appears to have retained its independence till after b.c. 498, when it fell under the yoke of Hieron, tyrant of Gela (Herod. vii. 154) and of Hieron and Hieron of Syracuse; as we find that, in b.c. 476, the latter despot, having expelled the inhabitants of Catana and Naxos from their native cities, which he peopled with new colonists, established the exiles at Leontini, the possession of which they shared with its former citizens. (Diod. xi. 42.) We find no special mention of Leontini in the revolutions that followed the death of Hieron; but there is no doubt that it regained its independence after the expulsion of Thasybulus, b.c. 466, and the period which followed was probably that of the greatest prosperity of Leontini, as well as the other Chalcidian cities of Sicily. (Diod. xii. 73, 76.) But its proximity to Syracuse became the source of numerous troubles to Leontini. In b.c. 437 the Leontines found themselves engaged in hostilities with their more powerful neighbour, and, being unable to cope single-handed with the Syracusans, they applied for support not only to their Chalcidian brethren, but to the Athenians also, who sent a fleet of twenty ships to their assistance, under the command and protection of Thucytes (Thuc. iv. 86; Diod. xii. 53.) The operations of the Athenian fleet under Laches and his successors Pythodorus and Eurymedon were, however, confined to the part of Sicily adjoining the Straits of Messana: the Leontines received no direct support from them, but, after the war had continued for some years, they were restored to the general pacification of Gela, b.c. 424, which for a time secured them in the possession of their independence. (Thuc. iv. 58, 65.) This, however, did not last long: the Syracusans took advantage of intestine dissensions among the Leontines, and, by expounding the cause of the oligarchy, drove the democratic party into exile, while they adopted the oligarchy and richer classes in Syracuse for their sovereigns. The Leontine latter body even abandoned their own city, and migrated to Syracuse; but quickly returned, and for a time joined with the exiles in holding it out against the power of the Syracusans. But the Athenians, to whom they again applied, were unable to render them any effectual assistance; they were a second time expelled, b.c. 429, and Leontini became again the dependency of Syracuse, though always retaining some importance as a fortress, from the strength of its position. (Thuc. v. 4; Diod. xii. 54.)

In b.c. 417 the Leontine exiles are mentioned as joining with the Segestans in urging on the Athenian expedition to Sicily (Diod. xii. 83; Plut. Nic. 19); and their restoration was made one of the objects of the avowed object of the expedition. But the failure of that expedition left them without any hope of restoration; and Leontini continued in its subordinate and fallen condition till b.c. 406, when the Syracusans allowed the unfortunate Agrigentines, after the capture of their own city by the Carthaginians, to establish themselves at Leontini. The Carthaginians, as we shall follow, in the example the next year: the Leontine exiles of Syracuse at the same time took the opportunity to return to their native city, and declare themselves independent, and the treaty of peace concluded by Diodorus with Himilco, in b.c. 405, expressly stipulated for the

---

* Polybins uses the fuller phrase ἦν τῶν Λεόντινων τοῖς (vii. 6).
freedom and independence of Leontini. (Diod. xiii. 89, 113, 114; Xen. Hell. ii. 3, § 5.) This condition was not long observed by Dionysius, who no sooner found himself free from the fear of Carthage than he added his arms against Syracuse, (Strab. vi. p. 273; Mel. ii. 7, § 16; Plin. iii. 8, a. 14; Ptol. iii. 4, § 13.) But the great strength of its position must have always preserved it from entire decay, and rendered it a place of some consequence in the middle ages. The modern city of Leontini, which preserves the ancient site as well as name, is a poor place, though beautiful, and suffers severely from malaria. No ruins are visible on the site; but some extensive excavations in the rocky side of the hill on which it stands are believed by the inhabitants to be the work of the Laestrygones, and generally described as such by Pausanias. (Paus. ii. 5. 2.)

The situation of Leontini is well described by Polybius: it stood on a rocky hill, divided into two separate summits by an intervening valley or hollow; at the foot of this hill on the W. side flowed a small stream, which he calls the Lesusus, now known as the Paeme River, which falls into the Lake of Leontini, a little below the town. (Polyb. vii. 6.) The two summits just noticed, being bordered by precipices and steep cliffs, are supposed to have been the position of the two forts, or castles; it was evidently one of those which Thucydides mentions under the name of Phocikas, which was occupied in B. C. 422 by the Leontine exiles who returned from Syracuse. (Thuc. v. 4.) Both heights seem to have been fortified by the Syracusans, who regarded Leontini as an important fortress; and they find alluded to as "the forts" (᾿τὰ ἐστάσεις ὀεροειδεῖς), etc. (Paus. xxii. 8.) Diodorus also mentions that one quarter of Leontini was known by the name of "The New Town" (ἡ νέα πόλις, i. 72); but we have no means of determining its locality. It is singular that no ancient author alludes to the Lake (or as it is commonly called the Riveira) of Leontini, a sheet of water of considerable size, but stagnant and shallow, which lies immediately to the N. of the city. It produces abundance of fish, but is considered to be the principal cause of the malaria from which the city now suffers. (D'Oriolle, Sicula, p. 168; Smith's Sicily, pp. 157, 158.)

The extraordinary fertility of the territory of Leontini, or the LEONTINI CAMUS, is celebrated by many ancient writers. According to the tradition commonly received, it was there that wheat grew wild, and where it was first brought into cultivation (Diod. iv. 24, v. 2); and it was always regarded as the most productive district in all Sicily for the growth of corn. Cicero calls it "campus ille Leontini nobilissimas ac seracissimas," "umbra Bacchus, et pecus, et agri, et silvae," and says that the Romans were accustomed to consider it as in itself a sufficient resource against scarcity. (Cic. Verr. iii. 18, 44, 46, pro Scaur. 2, Phil. viii. 8.) The tract thus celebrated, which was known also by the name of the LAESTRYGONII CAMUS [LAESTRYGONIA], was evidently the plain extending from the foot of the hill on which Leontini was situated to the river Syracusus, now known as the river Catania. We have no explanation of the tradition which led to the fixing on this fertile tract as the abode of the fabulous Laestrygones.

Leontini was noted as the birthplace of the celebrated orator Gorgias, who in B. C. 427 was the head of the deputation sent by his native city to
LEONII. [E. H. B.]

The intervention of Athens. (Diod. xii. 53; Plat. Hipp. Mag. p. 282.)

COIN OF LEONTINIS.

LEONTINIUM (Λεοντίνιον; Eth. Λεοντίνης), a town of Achaia, was originally not one of the 12 Achaean cities, though it afterwards became so, succeeding to the place of Rhypes. It is only mentioned by Polybius, and its position is uncertain. It must, however, have been an inland town, and was probably between Pharsae and the territory of Aegium, since we find that the Eleusians under the Aetolian general Euphridas, after marching through the territory of Pharsae as far as that of Aegium, retreated to Leontium. Leake places it in the valley of the Sennus, between the territory of Triaca and that of Aegium, at a place now called Af Ancus, from a ruined church of that saint near the village of Gennadas. Callicrates, the partizan of the Romans during the later days of the Achaean League, was a native of Leontium. (Pol. ii. 41, v. 94, xxvi. 1; Leake, Morea, vol. iii. p. 419.)

LEONTOPOLIS. [Niceriumi.] LEONTOPOLIS. [Leontes.] LEONTOPOLIS (Λεοντόπολις; Ptol. iv. 5, § 51; Strab. xvii. pp. 802, 812; Ardatz, Hieronym. ad Iovianum, ii. 6; Leontos Oppidum, Plin. v. 20, s. 17), the capital of the Leontopoleis nome in the Delta of Egypt. It stood in lat. 30° 6' N., about three geographical miles S. of Thmuis. Strabo is the earliest writer who mentions either this nome, or its chief town; and it was probably of comparatively recent origin and importance. The lion was not among the sacred animals of Aegypt; but that it was occasionally domesticated and kept in the temples, may be inferred from Diodorus (ii. 84). Trained lions, employed in the chase of deer, wolves, &c., are found in the hunting-pieces delineated upon the walls of the grottoes at Benhaemus. (Wilkinson, M. and C. vol. iii. p. 16.) In the reign of Ptolemy Philometor (n. c. 180—145) a temple, modelled after that of Jerusalem, was founded by the exiled Jewish priest Onias. (Joseph. Ant. Jud. xiii. 3, § 3; Hieronym. in Daniel. ch. xi.) The Hebrew colony, which was attracted by the establishment of their national worship at Leontopolis, and which was preserved by the refugees from the oppressions of the Seleucids in Bithynia, flourished there for more than three centuries afterwards. In the reign of Vespasian the Leontopolis temple was closed, amid the general discouragement of Judaism by that emperor. (Joseph. B. Jud. vii. 10, § 4.) Antiquarians are divided as to the real site of the ruins of Leontopolis. According to D'Anville, they are covered by a mound still called Tri-Essabi, or the Lion's Hill (Comp. Champollion, Égypte, vol. ii. p. 110, seq.). Jomard, on the other hand, maintains that some tumuli near the village of El-Mengaleh in the Delta, represent the ancient Leontopolis. And this supposition agrees better with the account of the town given by Xe-
whole we may safely place them in the group of the Alps, of which the Most St. Gotard is the centre, and from which the Rhone and the Rhine, as well as the Rhum see and the Ticino, take their rise. The name of Vel Benavialla, still given to the upper valley of the Ticino, and most of the St. Gotard, is very probably derived from the name of the Leptons. Their chief town, according to Ptolemy, was Ocelia or Oscella, which is generally supposed to be Domus d’Oscola; but, as the Leptons are erroneously placed by him in the Cottian Alps, it is perhaps more probable that the town meant by him is the modern town of first described by Diodorus. It takes half an hour to ascend from the first traces of the walls to the acropolis, which is entered by an ancient gateway. "The towers are square; one of them is almost entire, and contains a small window or arrow hole. A transverse wall is carried completely across the acropolis, by which means it was anciently divided into two parts. The foundation of this wall, and part of the elevation, still remains. Three different periods of building are evident in this fortress. The walls are composed of polygonal space: some of the towers consist of irregular, and others of rectangular quadrilaterals. The ruins extend far below the acropolis, on the side of the hill, and are seen on a flat detached knoll."

"(Diod. in Thuc. vi. 34.)"

Leptis was the home of the Carthaginians, as is shown by the coins of the Carthaginians found there. It was also a place of refuge for the Carthaginians after the fall of Carthage. The Carthaginians had a colony in Leptis Magna, which was one of the richest and most important cities in the Roman world. The Carthaginians built a temple to Baal on the site of the modern Leptis Magna. The temple was dedicated to Baal Hammon, the chief god of Carthage. The temple was destroyed by the Romans, but it was later rebuilt by the Byzantines. The ruins of the temple can still be seen today.

"(Liv. xxxv. 63; Caes. B. C. ii. 38; Hirt. B. A. 8. 7. 9. 62; Mela, i. 7. 2. 3; Plin. v. 4. 2. 3.)"

Leptis Magna was a major port and trading center, and it was also a center of learning and culture. The city was home to many scholars and writers, and it was a center of scientific and philosophical thought. The city was also a center of religious activity, and it was home to many temples and shrines.

"(Liv. xxxv. 63; Caes. B. C. ii. 38; Hirt. B. A. 8. 7. 9. 62; Mela, i. 7. 2. 3; Plin. v. 4. 2. 3.)"

Leptis Magna was a major port and trading center, and it was also a center of learning and culture. The city was home to many scholars and writers, and it was a center of scientific and philosophical thought. The city was also a center of religious activity, and it was home to many temples and shrines.

"(Liv. xxxv. 63; Caes. B. C. ii. 38; Hirt. B. A. 8. 7. 9. 62; Mela, i. 7. 2. 3; Plin. v. 4. 2. 3.)"
LEPTIS MAGNA.

[See below, under Leptis Magna.] Its ruins, though interesting, are of no great extent. (Shaw, Travels, p. 109; Barth, Wanderungen, etc. p. 161.)

LEPTIS MAGNA (ἡ Λεπτὴς μηγάλη, Ἀλεπτής, Procop. B. V. ii. 21) also Leptis, simply; aft. Nedwob; Leptimaginem Civitas, Cod. Just. i. 27. 2; Eth. and Adj. Ἀλεπτινὸς, Leptianus: Libba, large Ru.,) the chief of the three cities which formed the African Tripolis, in the district between the Syrtis (Regio Syrtica, aft. Tripolitana), on the east, and the other two being Oea and Sabratha. Leptis was one of the most ancient Phoenician colonies on this coast, having been founded by the Sidonians (Sall. Jug. 19, 78); and its site was one of the most favourable that can be imagined for a city of the first class. It stood at one of those parts of the coast where the table-land of the Great Desert falls off to the sea by a succession of mountain ridges, enclosing valleys which are thus sheltered from those encroachments of sand that cover the shore where no such protection exists, while they lie open to the breezes of the Mediterranean. The country, in fact, resembles, on a small scale, the terraces of the Cyrenaic coast; and its great beauty and fertility have excited the admiration of Aristotle, and those who have visited it. (Austin. Marc. xxviii. 6; Della Cella; Beechy; Barth, &c.) Each of these valleys is watered by its streamlet, generally very insignificant and even intermittent, but sometimes worthy of being styled a river, as in the case of the Cintya, and of the smaller stream, further to the west, upon which Leptis stood. The excellence of the site was much enhanced by the situation of the city; the promontory Hermaurum (Ras-al-Ashun), W. of the city, to the roadstead in its front. The ruins of Leptis are of vast extent, of which a great portion is buried under the sand which has drifted over them from the sea. From what can be traced, however, it is clear that these remains contain the ruins of three different cities.

Of the original city, or Old Leptis, still exhibits in its ruins the characteristics of an ancient Phoenician settlement; and, in its site, its sea-walls and quays, its harbour, and its defences on the land side, it bears a striking general resemblance to Carthage. It was built on an elevated tongue of land, jutting out from the W. bank of the little river, the mouth of which formed its port, giving being at the time of the comment for that purpose. The banks of the river, as well as the seaward face of the promontory, are lined with walls of massive masonry, serving as sea-walls as well as quays, and containing some curious vaulted chambers, which are supposed to have been docks for ships which were kept (as at Carthage) for a last resource, in case the citadel should be taken by an enemy. These structures are of the same stone than the other buildings of the city; the latter being of a light sandstone, which gave the place a glittering whiteness to the voyager approaching it from the sea. (Stadiasmus. Mar. Mag. p. 453, G., p. 297, H.) On the land side the isthmus was defended by three lines of massive stone walls, the position of which is not adapted to the nature of the ground; and, in a depression of the ground between the outmost and middle line, there seems to have been a canal, connecting the harbour in the mouth of the river with the roadstead W. of the city. Opposite to this tongue of land, on the E. side of the river, is a much lower, less projecting, and more rounded promontory, which could not have been left out of the system of external works, although no part of the city was built upon it. Accordingly we find here, besides the quays along the river side, and walls in them, which served for warehouses, a remarkable building, which seems to have been a fort. Its superstructure is of brick, and certainly not of Phoenician work; but it probably stood on foundations coeval with the city. This is the only example of the use of brick in the ruins of Leptis, with the exception of the walls which surmount the sea-defences already described. Proceeding further apace, we come to a considerable expanse of land, an artificial mole was built out, to give additional shelter to the port on either side; but, through not permitting a free egress to the sand which is washed up on that coast in vast quantities with every tide, these mole have been the chief cause of the destruction, first of the port, and afterwards of the city. The former event had already happened at the date of the Stadiasmus, which describes Leptis as having no harbour (κλειστος). The harbour still existed, however, at the time of the restoration of the city by Septimius Severus, and small vessels could even ascend to some distance above the city, as is proved by a quay of Roman work on the W. bank, at a spot where the river is still deep, though the ancient channel has become a mere ditch. The harbour was the one of greatest importance. (P.S.)

2. The Old City (εφεστής) thus described became gradually, like the Byrsa of Carthage, the citadel of a much more extensive New City (Νέωσις), which grew up beyond its limits, on the W. bank of the river, where its magnificent buildings now lie hidden beneath the sand. This New City, as in the case of the old, was mainly formed by the other Phoenician cities of like growth, gave its name to the harbour, which was hence called Neapolis, not, however, as at Carthage (comp. Carthago, Vol. I. p. 559, § 1.), to the disuse of the old name, Leptis, which was never entirely lost, and which became the prevailing name in the later times of the ancient world, and is the name which the ruins still retain (Lebda). Under the early emperors both names are found almost indifferently; but with a slight indication of the preference given to Neapolis, and it seems probable that the name Leptis, with the epithet Magna to distinguish it from Leptis Parva, prevailed at last in the sake of avoiding any confusion with Neapolis in Zeugitana. (Strab. xvii. 835, 836; Pliny, iv. 2. 4.)

Aeis ete magnum; Melia, however, i. 7. § 5, has Leptis only, with the epithet altera; Pliny, v. 4. 4, missed, as usual, by the abundance of his authorities, makes Leptis and Neapolis different cities, and he distinguishes this from the other Leptis as Leptis altera, quasi cognominatur magnum; Ptolemy, iv. 3. § 13, has Νέωσις καὶ Λεπτῶς μεγάλη; Tim. Ant. p. 55, and Tab. Ptole. Leptis Magna Colonii; Steph. Byz. p. 111, 112, 113; Clem. Alex. Strom. IV. P. 435, Læptis, vulg. Aęptis, the coins all have the name Leptis simply, with the adition, on some of them, of the epithet Colonia Victoria Julia; but it is very uncertain to which of the two cities of the name these coins belong; Eckhel, vol. iv. pp. 130, 151; Ruchoe, s. v.) We learn from the coinage, that the principal intercourse of Leptis with the native tribes had led to a starting of the comnurbation, and hence to an admixture of the language of the city with the Libyan dialects (Jug. 78). In fact, Leptis, like the neighbouring Tripoly, which, with a vastly inferior site, has succeeded to its position, was the great emporium for the trade with the Garamantes and the Phazania and the eastern part of
LERINA.

Imer Libra. But the remains of the New City seem to belong almost entirely to the period of the Roman Empire, and especially to the reign of Septimius Severus, who restored and beautified this his native city. (Spart. Sen. 1; Aurel. Vict. Ep. 20.) It had already before acquired considerable importance under the Romans, whose cause it espoused in the war with Jugurtha (Sall. Jug. 77—79: as to its later condition see Tac. Hist. iv. 50); and if, as Eckhel inclines to believe, the coins with the epigraph COL. VIC. IUL. LEP. belong mostly, if not entirely, to Leptis Magna, it must have been made a colony in the earliest period of the empire. It was still a flourishing and populous fortified city in the 4th century, when it was greatly injured by an assault of a Libyan tribe, called the Aurumanni (Ammian. xxviii. 5); and it never recovered from the blow.

3. Justinian is said to have enclosed a portion of it with a new wall; but the city itself was already too far buried in the sand to be restored; and, as far as we can make out, the little that Justinian attempted seems to have amounted only to the encroachment of a suburb, or old Libyan camp; some distance to the E. of the river, on the W. bank of which the city itself had stood. (Procop. de Aed. vi. 4; comp. Barth.) Its ruin was completed during the Arab conquest (Leo, Afr. p. 435); and, though we find it in the middle ages, the seat of populous Arab camps, no attempt has been made to make use of the splendid site, which is now occupied by the insignificant village of Leghaidia, and the hamlet of El-Ishah, which consists of only four houses. (For particulars of the ruins, see Lucas, Proceedings of the Association, &c. vol. ii. p. 66, Lond. 1810; Della Cella, Viaggio, &c. p. 40; Beechey, Proceedings, &c. chap. vi. pp. 50, fol.; Russell’s Barbary; Barth, Wanderungen, &c. pp. 305—315.)

LERINA and LERON. Strabo (p. 185) says:

"After the Stoechades are Planasia and Leon (§ Pausanias xal Mpio), which are inhabited; and in Leon there is also a Lerrum of Leon, and Leon is in front of Antipolis." (Ant. vol. iii. 5) has "Lero, et Lerrum adversus Antipolim." Pu.-Jerny (p. 10. § 21) places Leon (Anapōm) before the mouth of the Var. Lerins once had a town named Vergunamum (Pliny). The Maritime Itin. places "Lero et Lerrum insulae" 11 M. P. from Antipolis.

These two islands are the Lerria, off the coast of the French department of Var. Strabo’s Planasia is supposed to be Lerina, because it is flat; Leon must then be the larger island, called Sainte Marguerite; and D’Anville conjectures that the monastery dedicated to St. Marguerite took the place of the Lerrum of Leon, which is mentioned by Strabo. The position of these two small islands is fixed more accurately by the Itin. than by the geographers. Lerina, from which the modern name Lerrias comes, is very small; it is called St. Heremar, from a bishop of Aries in the fifth century, who was also a saint. [G.L.]

LERNA or LERINE (Alpva, Apro), the name of a marshy district at the south-western extremity of the Argive plain, near the sea, and celebrated as the spot where Hercules slew the many-headed Hydra, or water-snake. [See Dict. of Biog. Vol. ii. p. 394.] In this part of the plain, there is a number of copious springs, which overflow the district and turn it into a marsh; and there can be little doubt that the victory of Hercules over the Hydra, is to be understood of a successful attempt of the ancient lords of the Argive plain to bring its marshy extremity into cultivation, by draining its sources and embanking its streams. The name of Lerna is usually given to the whole district (Paus. ii. 15. § 6, ii. 24. § 3, iii. 36. § 6, ii. 38. § 1; Plut. Cleom. 15), but other writers apply it more particularly to the river and the lake. (Strab. viii. p. 368.) The district was thoroughly drained in antiquity, and covered with level land; of late years, the government has left us an account (ii. 36, 37). A road led from Argos to Lerna, and the distance from the gate of the city to the sea-coast of Lerna was 40 stadia. Above Lerna is the Mountain Pontinum (Pontron), which according to Pausanias absorbs the rain water, and thus prevents it from running off. On its summit, on which there are now the ruins of a medieval castle, Pausanias saw the remains of a temple of Athena Satis, and the foundations of the house of Hippomenes, one of the seven Argive chiefs who marched against Thebes. (Pausanias 8 xione μνημόνια ἡμών, Εὐρ. Φοιν. 126.) The grove of Lerna, which consisted for the most part of plane trees, extended from Mount Pontinus to the sea, and was bounded on one side by the river named Pontina, and on the other by a river named Anymon. The grove of Lerna contained two temples, in one of which Demeter Prosymna and Dionysus were worshipped, and in the other Dionysus Scota. In this grove a festival, called the Lernaeae, was celebrated in honour of Demeter and Dionysus. Pausanias also mentions the fountain of Amphirhaus, and the Alycean pool (Pausanias xii. 9). From the ruins of which the Argives say that Dionysus descended into Hades in order to recover Semele. The Alycean pool was said to be unfathomable, and the emperor Nero in vain attempted to reach its bottom with a sounding line of several fathoms in length. The circumference of the pool is estimated by Pausanias as only one-third of a stadium; its margin was covered with grass and rushes. Pausanias was told that, though the lake appeared so still and quiet, yet, if any one attempted to swim over it, he was dragged down to the bottom. Here Prosymna is said to have pointed out to Dionysus the entrance in the lower world. A nocturnal ceremony was connected with the legend; expiatory rites were performed by the side of the pool, and, in consideration of the impurities which were then thrown into the pool, the proverb arose of a Lerna of ill. (Aipxya κακωτ; see Preller, Demeter, p. 212.)

The river Pontinus issues from three sources at the foot of the hill, and joins the sea north of some mills, after a course of only a few hundred yards. The Anymon is formed by seven or eight copious sources, which issue from under the rocks, and which are evidently the subterranean outlet of one of
LESOS. in which, according to mythology, the sisters of Maleser were transformed into guinea fowls (μελαγγύλες) ; Anton. Lib. 2; comp. Or. Met. viii. 533, 536, whence these birds were always kept in the sanctuary of the goddesses. (Athen. xiv. p. 655.)

In a valley, about ten minutes’ walk from the sea, a small convent still bears the name of Pantheki, and at a little distance from it there are the ruins of an ancient building of Christian character, evidently built upon some ancient foundation, which seems to have been that of the temple of Artemis Parthenos. “This small island,” says Ross, “though envied on account of its fertility, its smiling valleys, and its excellent harbours, is nevertheless scorned by its neighbours, who change its inhabitants with niggardliness” (I. c. p. 122; comp. Beekh. Corp. Inscrip. n. 2265; Ross, Inscrip. ined. ii. 188.)

LESOS (Λέος: Eth. Ληός; Adj. Ληοεύς).

L和sos was situated off the coast of Mycia, exactly opposite the opening of the gulf of Argarammus. Its northern part is separated from the mainland near Assos (Assos) by a channel about 7 miles broad; and the distance between the south-eastern extremity and the islands of Arginousa (“Argirounia”) is about the same. Strabo reckons the breadth of the former strait at 60 stadia, and Pliny at 7 miles; for the latter strait see Strab. xiii. pp. 616, 617, and Xen. Hell. i. 6. §§ 15–28. The island lies between the parallels of 36° 58’ and 39° 24’. Pliny states the circumference as 168 miles, Strabo as 1100 stadia. According to Choiseul-Gouffier, the latter estimate is rather too great. Sclavus (p. 56) assigns to Lesos the largest area in size among the islands of the Mediterranean sea.

In shape Lesos may be roughly described as a triangle, the sides of which face respectively the NW, the NE., and the SW. The northern point is the promontory of Argaritum, the western is that of Sigri (still called Cape Sigri), the south-eastern is that of Malea (now called Zelos or Cape St. Mary). But though this description of the island as triangular is generally correct, it must be noticed that it is penetrated far into the interior by two gulfs, or sea-locks as they may properly be called, on the south-western side. One of these is Port Biero or Port Oliver, “one of the best harbours of the Archipelago,” opening from the sea a couple of miles inward from Cape Malea, and extending about 8 miles inland among the mountains. It may be reasonably conjectured that its ancient name was Portus Hiereus; since Pliny mentions a Lesbian city called Hieria, which was extinct before his time. The other arm of the sea, to which we have alluded, is about half-way between the former and the Cape Sigri; it is a small and extensive basin, named Port Coloni,” and is anciently called Eupirus Pyrrhus. From the extreme narrowness of the entrance, it is less adapted for the
purposes of a harbour. Its ichthyology is repeatedly mentioned by Aristotle as remarkable. (Hist. Animal. v. 10, § 2, v. 13. § 10, viii. 20. § 15, ix. 25. § 8.)

The surface of the island is mountainsous. The principal mountains were Orydymus in the W., Olympus in the S., and Leptymenus in the N. Their elevations, as marked in the English Admiralty Charts, are respectively, 1780, 3080, and 2750 feet. The excellent climate and fine air of Lesbos are celebrated by Diodorus Siculus (v. 82), and it is still reputed to be the healthiest of the Greek islands. (Purdy's Sailing Directory, p. 154.) Tacitus (Ann. vi. 3) calls it "insula nobilis et amena." Agates were found there (Plin. xxxvii. 54), and its quarries produced variegated marble (xxxv. 5). The whole area of the island is mountainous; its most remarkable part is the island itself, given under MYTHYMA. The trade of the island was active and considerable; but here again we must refer to what is said concerning its chief city MYTILENE. At the present day the sites of Lesbos are celebrated; but its chief exports are oil and gall-nuts. The population was estimated, in 1816, at 25,000 Greeks and 3000 Turks. The invaders said to have been driven out of Lesbos were Pteleans; and Xanthus was their legendary leader. Next came Ionians and others, under MACARUS, who is said by Diodorus (v. 80) to have introduced written laws two generations before the Trojan war. Last were the Aeolian settlers, under the leadership of Lebus, who appears in Strabo under the name of the same Lebus. The inhabitants of Lesbos were Lemnians, and Xandrus was their legendary leader. This is certain, that the early history of Lesbos is identical with that of the Aiolians. Strabo regards it as their central seat (εκεῖθεν μοναδικά, xiii. pp. 616, 622). In mercantile enterprise, in resistance to the Persians, and in resistance to the Aetolians, the island seems to have been favorably contrasted with their brethren on the continent. That which Horace calls "Aeolion Carmen" and "Aeolian Scales" (Carm. ii. 13. 24, iii. 30. 13) was due to the genius of Lesbians, and in Nebuchadnezzar's expression regarding this island, that it was the "pearl of the Aeolian race." (Lectures on Ancient Ethnology and Geography, vol. ii. p. 212.)

Lesbos was not, like several other islands of the Archipelago, such as Cos, Chios and Samos, the territory of one city. We read of six Aeolian cities in Lesbos, each of which had originally separate possessions and an independent government, and which were situated in the following geographical order. Mithymna (now Mithymna) was on the north, almost immediately opposite Assos, from which it was separated by one of the previously mentioned straits. Somewhere in its neighbourhood was Amsa, which, however, was incorporated in the Methymnian territory before the time of Herodotus (i. 151). Near the western extremity of the island were Amarys and Rhoda. Their former situation may be a little more accurately ascertained by the island, situated on a small island, which in Pliny's time (ii. 91) was connected with Lesbos itself. The latter was on the coast of the promontory, and is still known under the name of Erisias, a modern village, near which ruins have been found. At the head of Port Calonia was Pyrrha, which in Strabo's time had been swallowed up by the sea, with the exception of a suburb.

(Strab. xiii. p. 618 ; see Plin. v. 31.) The name of Persus is still attached to this district according to Pocoke. On the eastern shore, facing the mainland, was Mytilene. Besides these places, we must mention the following: Hira, described by the head of Port Olieus, said by Pliny to have been destroyed before his day; Agarmen, a village in the neighbourhood of Pyrrha; Naxos, in the plain of Methymna, Aegorus, between Methymna and Mytilene; and Polum, a site mentioned by Stephanus B. Most of these places are noticed more particularly under their respective headships, but they all became important, in comparison with Methymna and Mytilene, which were situated on good harbours opposite the mainland, and convenient for the coasting-trade. The annals of Lesbos are so entirely made up of events affecting the great cities, especially the latter, that we must refer to them for what does not bear upon the general history of the island.

From the manner in which Lesbos is mentioned both in the liad and Odyssey (JL xxiv. 544 ; Od. iv. 342), it is evident that its cities were populous and flourishing at a very early period. They had also very large possessions on the opposite coast. Lesbos was not included in the conquests of Croesus. (Herod. i. 37.) The severe defeat of the Greeks by the Samians under Polycrates (iii. 39) seems only to have been a temporary disaster. It is said by Herodotus (l. 151) that at first they had nothing to fear, when Cyrus conquered the territories of Croesus on the mainland; but afterwards, with other invaders, they seem to have submitted voluntarily to Harpagus (B.C. 301). The actions of the Persians in the very confines of the great struggle between the Persians and the Greeks was so critical, that its fortunes were seriously affected in every phase of the long conflict, from this period down to the peace of Antalcidas and the campaigns of Alexander.

The Lesbians joined the revolt of Aristagoras (Herod. vi. 5, 8), and one of the most memorable incidents in this part of its history is the pillaging and burning down of its habitations, as well as those of Chios and Tenedos, by the Persians (Herod. vi. 31; Aesch. Pers. 881). After the battles of Salamis and Mycale they boldly identified themselves with the Greek cause. At first they attached themselves to the Lacedaemonian interest: but before long they came under the overworrying influences of the naval supremacy of Athens. In the early part of the Peloponnesian War, the position of Lesbos was more favourable than that of the other islands: for, like Corecyra and Chios, it was not required to furnish a money-tribute, but only a naval contingent (Thuc. ii. 9). But in the course of the war, Mytilene was induced to intrigue with the Lacedaemonians, and to take the lead in a great revolt from Athens. The events which fill so large a portion of the third book of Thucydides— the speech of Cleon, the change of mind on the part of the Athenians, and the narrow escape of the Lesbians from entire massacre by the sending of a second ship to overtake the first— are perhaps the most memorable circumstances connected with the history of this island. The Lesbians were divided among Athenian citizens (αλεξηρδεχομένοι), many of whom, however, according to Beekh, returned to Athens, the rest remaining as a garrison. Methymna had taken no part in the revolt, and was exempted from the punishment. After the Sicilian expedition, the Lesbians again governed in their allegiance to Athens; but the result was unanim.
It appears, however, that these princes were treacherously assassinated by their own subjects, and that the city was taken by the Turks. In 1457, Mahabat II. made an unsuccessful attempt to expel the Turkish forces from Bursa. But in 1469, the city was again captured by the Turks, and the Sultan Bajazet was killed in the battle of Varna. The city remained under Turkish rule until 1862, when it was taken by the Ottoman Empire.

The city of Lebros is situated on the north coast of the island of Folegandros, in the Cyclades group of islands. It was an important trading center during the Byzantine period, and was mentioned by the geographer Ptolemy as a port on the route between Constantinople and the Aegean Sea. The city was captured by the Venetians in 1204, and was later ruled by the Knights of St. John.

The city of Lebros was famous for its citrus fruits, and was a popular destination for pilgrims and tourists. It was also a center for the production of citrus products, such as lemon oil, which was exported to Europe.

The city of Lebros was destroyed by an earthquake in 1422, and was never rebuilt. The ruins of the city are a popular tourist destination, and are a testimony to the rich history of the island.

The city of Lebros was also known for its citrus fruits, which were exported to Europe from the island.
LESSA.

The pleasures on this mountain produced good cheese in Pliny's time (H. N. xi. 42), as they do now. Mont Lessa gives its name to the French department Lesse.

[ G. L. ]

LESSA (Αίγινα), a village of Epidaurus, upon the confines of the territory of Argos, and at the foot of Mount Acharnaeum. Pausanias saw there a temple of Athena. The ruins of Lessa are situated upon a hill, at the foot of which is the village of Igumaris. On the outside of the walls, near the foot of the mountain, are the remains of an ancient pyramid, near a spring which contains some ionic columns. (Paus. ii. 25. § 10; Leake, Morea, vol. ii. p. 419; Boblaye, Recerches, loc. p. 53; Curtius, Peloponnese, vol. ii. p. 418.)

LESTADAE. [Ναξοβ R.

LE'SURA, a branch of the Mosella (Mosel), mentioned by Ausonius (Mosella, v. 365). He calls it "exulis," a poor, ill-fed stream. The resemblance of name leads one to conclude that it is the Lesser or Lesser, which flows past Wittlich, and joins the Mosel on the left bank.

[ G. L. ]

LETANDROS, a small island in the Aegean sea, near Argos, mentioned only by Pliny (iv. 12. a. 28).

LETANTO (λέτον), a town of Macedonia, which Stephanus B. asserts to have been the native city of Neurthas, the admiral of Alexander the Great; but in this he is certainly mistaken, as Neurthas was a Cretan. (Comp. Arrian, Ind. 18; Diod. xix. 19.)

[ E. B. J. ]

COIN OF LETAN.

LETHAEUS (Λεθαίος), Strab. x. p. 478; Ptol. iii. 17. § 4; Eustath. ad Hom. II. ii. 646; Solin. 17; Vib. Seq. 13), the large and important river which watered the plain of Gortyna in Crete, now the Malagomia.

[ E. B. J. ]

LETHAEUS (Λεθαίος), a small river of Caria, which has its source in Mount Pyramus, and after a short course from north to south discharges itself into the Messander, a little to the south-east of Magnesia. (Strab. xii. p. 554, xiv. p. 647; Athen. xv. p. 683.) Arundell (Seeves Charack, p. 57) describes the river which he identifies with the ancient Letheus, as a torrent rushing along over rocky ground, and forming many waterfalls.

[ L. S. ]

LETHES FL. [GALLACIA.]

LETOPOLIS (Λητοπόλεις), Ptol. iv. 5. § 46; Λητόπολις, Stephan. B. e. v.; Letoc, Itin. Anton. p. 156; Eit. Λητοπόλεις). A town in Lower Egypt, near the apex of the Delta, the chief of the nome Letopolis, but with it belonging to the nome or prefecture of Memphis. (Strab. xvii. p. 807.) It was probably situated on the banks of the canal of Memphis, a few miles SW. of Cercseorum. Leto, from whom the town and the nome derived their name, was an appellation of the deity Athor, one of the eight Dii Magni of Egypt. Lat. 30° N. [W. B. D.]

LETRENI (Λέτρενι, Paus.; Λετρεία, Xen.), a town of Pisatis in Elis, situated near the sea, upon the Sacred Way leading from Elis to Olympia, at the distance of 180 stadia from Elis, and 120 from Olympia. It was said to have been founded by Letreus, a son of Pelops. (Paus. vii. 22. § 8.) Together with several of the other dependent townships of Elis, it joined Argis, when he invaded the territories of Elis; and the Eleians were obliged to surrender their supremacy over Letreini by the peace which they concluded with the Spartans in B. C. 400. (Xen. Hell. iii. 2. §§ 25, 30.) Xenophon (I. c.) speaks of Letreini, Amphidoli, and Marganae as Triphylian places, although they were on the right bank of the Alphynus, it is evident from a corruption in the text, which Mr. Grote thinks there is (Hist. of Greece, vol. i. p. 415), the word Triphylian must be used in a loose sense to signify the dependent townships of Elis. The Αυγαμενα γεωργοι are mentioned by Lycoreon (158). In the time of Pausanias nothing remained of Letreini except a few houses and a temple of Artemis Alpheias. (Paus. i. c.) Letreini may be placed at the village and monastery of St. John, between Pyrgo and the port of Katakolon, where, according to Leake, among many fragments of antiquity, a part of a large statue was found some years ago. (Leake, Morea, vol. ii. p. 188; Boblaye, p. 130, &c.; Curtius, Peloponnese, vol. i. p. 72.)

LEVACI, a people in Caesar's division of Gallia, which was inhabited by the Belgae. The Levaci, with some other small tribes, were dependent on the Nervii. (B. G. v. 39.) The position of the Levaci is unknown.

[ G. L. ]

LEVACES FANUM, in Gallia Belgica is placed by the Table on the road from Lugdunum Batavorum (Leiden) to Naissus (Narbo). Levaceses Fanum is between Fletio (Vleutum) and Carvo; 25 M. from Fletio and 12 from Carvo. (Carvo.) D'Anville, assuming that he has fixed Carvo right, supposes that there is some omission of places in the Table between Fletio and Carvo, and that we cannot rely upon it. He conjectures that Levaces Fanum may be a little beyond Fletio, on the left opposite to that of the Batavi, at a place which he calls Livon-tael (vallis Leviae), this Leva being some local divinity. Walckenaer fixes Levaces Fanum at Leevraum.

[ G. L. ]

LEUCA (và Λευκά, Strab. : Leuca), a small town of Calabria, situated close to the Iapigian promontory, on a small bay immediately to the W. of that celebrated headland. Its site is clearly marked by an ancient church still called S. Maria di Leuca, but known also as the Madonna di Finisterre, from its situation at the extreme point of Italy in this direction. The Iapigian promontory itself is now known as the Capo di Leuca. Strabo is the only author who mentions a town of this name (vi. p. 261), but Lucan also notices the "secreta littora Leucae" (v. 375) as a port frequented by shipping; and its advantageous position, at a point where so many ships must necessarily touch, would soon create a town upon the spot. It was probably never a municipal town, but a large village or borgo, such as now exists upon the spot in consequence of the double attraction of the port and sanctuary. (Rampoldi, Correg. dell'Italia, vol. ii. p. 442.)

Strabo tells us (i. c.) that the inhabitants of Leuca showed there a spring of fetid water, which they pretended to have arisen from the wounds of some of the giants which had been expelled by Hercules from the Phlegrean plains, and who had taken refuge here. These giants they called Leucaenius,
and hence gave the name of 

**LEUCAR.**

and hence gave the name of **Leuctria** to all the surrounding district. The same story is told, with some variations, by the pseudo-Aristotle (de Mirab. 97); and the name of Leuctria is found also in

Lycoophor (Alex. 978), whose expressions, however, would have led us to suppose that it was in the neighbourhood of Siris rather than of the Iapygian promontory. Tzetzes (ad loc.) calls it a city of Ionia, which is evidently only an erroneous inference from the words of his author. The Laternii of Sclavx, whom he mentions as one of the tribes that inhabited Iapygia, may probably be only another form of the same name, though we meet in no other writer with any allusion to their existence as a real people.

**[E. H. B.]**

**LEUCA.**

The name given by Pomponius Mela (I. 50.) to a district on the west of Halicarnassus, between that city and Myndus. Pliny (H. N. v. 25) mentions a town, Leucopoli, in the same neighbourhood, of which, however, nothing else is known to us. **[L. S.]**

**LEUCADIA.**

**LEUCAE or LEUCE (Aeaeum, Aedreum), a small town of Ionia, in the neighbourhood of Phocaea, was situated on the Pliny (v. 31), in promontorio quod insula fuit.** From Sclavx (p. 37) it is learnt that it was a place with harbours. According to Diodorus (xv. 18) the Persian admiral Tachos founded this town on an eminence on the sea coast, in b.c. 323; but shortly after, when Tachos had died, the Clazomenians and Cynaceans quarrelled about its possession, and the former succeeded by a stratagem in making themselves masters of it. At a later time Leucae became remarkable for the battle fought in its neighbourhood between the consuls Licinius Crassus and Aristonicus, b.c. 131. (Strab. xiv. p. 646; Justin, xxxvi. 4.) Some have supposed this place to be identical with the Leonium mentioned by Thucydides (viii. 24); but this is impossible, as this latter place must be looked for in Chius. The site of the ancient Leucae cannot be a matter of doubt, as a village of the name of Leuke, close upon the sea, at the foot of a hill, is evidently the modern representative of its ancient namesake. (Arwadell, Seres Churchs, p. 253.)

**[L. S.]**

**LEUCAE (Aeaeum), a town of Locasia situated at the eastern extremity of the plain of Locasia, now called Phnikle, which extended inland between Aecra and Asopus on the eastern side of the Locasian gulf.** (Polyb. v. 19; Liv. xxxv. 27; Strab. viii. p. 363; Leuke, Morea, vol. i. p. 226, seq.; Boblaye, Récherches, &c. p. 95; Curtius, Peloponnesos, vol. ii. p. 290.)

**LEUCARUM, a town in Britain, mentioned in the Itinerary as being 15 miles from Ica Dumunimorum, and 15 from Nidum. The difficulties involved in this list (viz. that of the 12th Itinerary) are noticed under Mlndum. The Monumenta Britannica suggests both Glastobury in Somersetshire, and L'quor in Glamorgaunlia.**

**[B. G. L.]**

**LEUCAS (Aeaeid, Aeaei, Aeaeid, Aeaei), a place in Byzantium, on the right bank of the river Irene, in the neighbourhood of Nicaea, is mentioned only by Anna Comnena (p. 470), but can be easily identified, as its name Lefke is still borne by a near little town in the middle of the beautiful valley of the Galles. (Leuke, Aia Minor, pp. 12, 13.)**

**[L. S.]**

**LEUCAS, LEUCADIA (Aeaeid, Thuc. Xeni., Strab.; Aeaeid, Thuc. Liv.: Ech. Aedreideos), an island in the sea, separated by a narrow channel from the coast of Arcadia. It was originally part of the mainland, and as such was described by Homer, who calls it the Acte or peninsula of the mainland. (Ach. fr. 48, Od. xix. 377; comp. Strab. x. pp. 451, 459.) Homer also mentions its well-fortified town Nesticus (Nýkos, l. c.) Its earliest inhabitants were Leleges and Teleboani (Strab. vii. p. 332, but it was afterwards peopled by Arcadians, who retained possession of it till the middle of the seventh century B.C., when the Corinthians, under Cypselus, founded a new town nearer towards Arcadia, and called Lebdeus, where they settled 1000 of their citizens, and to which they removed the inhabitants of the old town of Nesticus. (Strab. l. c.; Sclavx, p. 13; Thuc. i. 30; Plut. Them. 24; Scymn. Chius, 464.) Sclavx says that the town was first called Epileucadi. The Corinthian colonists dug a canal through this isthmus, with which they converted the peninsula into an island. (Strab. l. c.) This canal, which was called Diorcythus, and was, according to Pliny, 3 stadia in length (Aedreides, Polyb. v. 5; Plin. iv. l. a. 2), was after filled up by deposits of sand; and in the Peloponnesian War, it was no longer available for ships, which during that period were conveyed across the isthmus on no more than one occasion. (Thuc. iii. 81, iv. 8.) It was lying in the same straight line for Polybius relates (v. 5) that Philip, the son of Demetrius, had his galleys drawn across this isthmus in that year; and Livy, in relating the siege of Leucas by the Romans in B.C. 197, says, "Leucadia, nunc insula, et vaste fruto quod perennis manu est, ab Acarnania divisa" (xxxii. 17). The sub-settlement towards Arcadia, and the construction of a stone bridge, both of which were in existence in the time of Strabo, were no doubt the work of the Romans; the canal was probably restored soon after the Roman conquest, when the Romans separated Leucae from the Acarnanian confederacy, and the bridge was perhaps constructed by order of Augustus, to facilitate communications throughout his dominions.

Leucadia is about 20 miles in length, and from 5 to 8 miles in breadth. It resembles the Isle of Man in shape and size. It consists of a range of limestone mountains, terminating at its north-eastern extremity in a bold and rugged headland, whence the coast runs in a south-west direction to the promontory of the same name; and here the island is cut off by a natural break caused by the Italians into Cape Duceato. The name of the cape, as well as of the island, is of course derived from its white cliffs. The southern shore is more soft in aspect, and more sloping and cultivated than the rugged rocks of the northern coast; but the most populous and wooded district is that opposite Arcadia. The interior of the island wears everywhere a rugged aspect. There is but little cultivation, except where terraces have been planted on the mountain sides, and covered with vineyards. The highest ridge of the mountains rises about 3000 feet above the sea.

Between the northern coast of Leucadia and that of Arcadia there is at present a lagoon about 3 miles in length, which, at its breadth varies from 100 yards to a mile and a half. The lagoon is in most parts only about 2 feet deep. This part of the coast requires a more particular description, which will be rendered clearer by the accompanying plan. At the north-eastern extremity of Leucadia a lido, or spit, of sand, 4 miles in length, sweeps out towards Arcadia, and is cut off from the mainland by a narrow channel. On an isolated point opposite the extremity of this sand-bank, is the fort of Santa Maria, erected in the middle ages by one of the Latin princes, but repaired.
and modelled both by the Turks and Venetians. (Plan, B.) The fort was connected with the island by an aqueduct, serving also as a causeway, 1300 yards in length, and with 260 arches. (Plan, S.) It was originally built by the Turks, but was ruined by an earthquake in 1825, and has not since been repaired. It was formerly the residence of the Venetian governor and the chief men of the island, who kept here their magazines and the cars (Aegeon) on which they carried down their oil and wine from the island districts, at the nearest point of the island. The congregation of buildings thus formed, and to which the inhabitants of the fortress gradually retired as the sea became more free from corsairs, arose by degrees to be the capital and seat of government, and is called, in memory of its origin, Asmaziki (Asmaziki). (Plan, C.) Hence the fort alone is properly called Santa Maura, and the capital Asmaziki; while the island at large retains its ancient name of Leucadia. The ruins of the ancient town of Leucas are situated a mile and a half to the S.E. of Asmaziki. The site is called Kaliyoni, and consists of irregular heights forming the last falls of the central ridge of the island, at the foot of which is a narrow plain between the heights and the lagoon. (Plan, D.) The ancient inclosure is almost entirely traceable, as well round the brow of the height on the northern, western, and southern sides, as from either end of the height across the plain to the lagoon, and along its shore. This, as an oblique illustration, Livy, who remarks (xxxi. 17) that the lower parts of Leucas were on a level close to the shore. The remains on the lower ground are of a more regular, and, therefore, more modern masonry than on the heights above. The latter are probably the remains of Nericus, which continued to be the ancient acropolis, while the Corinthians gained possession of Leucas to the south of which they erected on the shore below. This is, indeed, in opposition to Strabo, who not only asserts that the name was changed by the Corinthian colony, but also that Lecan was built on a different site from that of Neritus. (x. p. 452.) But, on the other hand, the town continued to be called Nerica even as late as the Peloponnesian War (Thuc. iii. 7): and numerous inscriptions occur in the history of different quarters of the same city being known by distinct names. Opposite to the middle of the ancient city are the remains of the bridge and causeway which here crossed the lagoon. (Plan, N.) The bridge was rendered necessary by a channel, which pervades the whole length of the lagoon, and admits a passage to boats drawing 5 or 6 feet of water, while the other parts of the lagoon are not more than 2 feet in depth. The great squared blocks which formed the ancient causeway are still seen above the shallow water in several places on either side of the deep channel, but particularly towards the Acarnanian shore. The bridge seems to have been kept in repair at a late period of time, there being a solid encaustic fabric of masonry of more modern workmanship erected on the causeway on the western bank of the channel. Leaks, from whom this description is taken, argues that Strabo could never have visited Leucadia, because he states that this isthmus, the ancient canal, the Roman bridge, and the city of Leucas were all in the same place; whereas the two latter were, according to Leaks, near the modern fort Santa Maura, at the distance of 3 miles north of the city of Leucas. But K. O. Müller, who is followed by Bowen and others, believes that the isthmus and canal were a little south of the city of Leucas, that is, between Fort Alexander (Plan, 2) on the island, and Paleocogilia on the mainland (Plan, 3). The channel is narrowest at this point, not being more than 100 yards across; and it is probable that the old capital would have been built close to the isthmus connecting the peninsula with the mainland. It has been conjectured that the long spit of sand, on which the fort Santa Maura has been built, probably did not exist in antiquity, and may have been thrown up at first by an earthquake.

Between the fort Santa Maura and the modern town Asmaziki, the Anglo-Ionian government has constructed a canal, with a towing-path, for boats drawing not more than 4 or 5 feet of water. (Plan, 4.) A ship-canal, 16 feet deep, has also been commenced across the whole length of the lagoon from Fort Santa Maura to Fort Alexander. This week, if it is ever brought to a conclusion, will open a sheltered passage for large vessels along the Acarnanian coast, and will increase and facilitate the commerce of the island. (Bowen, p. 78.)

Of the history of the city of Leucas we have but few details. It sent three ships to the battle of Salamis (Herod. viii. 43); and as a colony of Corinth, it sided with the Macedonians in the Peloponnesian War, and was hence exposed to the hostility of Athens. (Thuc. iii. 7.) In the Macedonian period Leucas was the chief town of Acarnania, and the place in which the meetings of the Acarnanian confederacy were held. In the war between Philip and the Romans, it sided with the Macedonian monarch, and was taken by the Romans after a gallant defence, a. c. 197. (Liv. xxxiii. 17.) After the conquest of Perseus, Leucas was separated by the Romans from the Acarnanian confederacy.
LEUCAS.

(Liv. xlv. 31.) It continued to be a place of importance down to a late period, as appears from the fact that the bishop of Leucas was one of the Fathers of the Council of Nice in A.D. 325. The constitution of Leucas, like that of other Dorian towns, was originally aristocratical. The large estates were in the possession of the people who were not allowed to alienate them; but when this law was abolished, a certain amount of property was no longer required for the holding of public offices, by which the government became democratic. (Aristot. Pol. ii. 4. § 4.)

Besides Leucas we have mention of two other places in the island, Phara (Spael. Sicyl. p. 13.) and Helleonumum (Eupalias, Thuc. iii. 94.)

The latter name is preserved in that of a harbour in the southern part of the island. Pharae was also in the same direction, as it is described by Strabo as opposite to Thera. It is perhaps represented by some Hellenic remains, which stand at the head of the bay called Phaestiké.

The celebrated promontory Leucatas (Auruedras, Spael. Sicyl. p. 13. Strab. x. pp. 452, 456, 461), also called Leucatæ or Leucatae (Plin. iv. 1. s. 2.; Virg. Aen. iii. 274, viii. 676; Claud. Bell. Got. 185; Liv. xxi. 26), forming the south-western extremity of the island, is a broken white cliff, rising on the western side perpendicularly from the sea to the height of at least 2000 feet, and sloping precipitously into it on the other. On its summit stood the temple of Apollo, hence surmounted Leucatas (Strab. x. p. 452). and Lencadus (Ov. Trist. iii. 1. 42 v. 2. 76; Propert. iii. 11. 69). This cape was dreaded by mariners; hence the words of Virgil (Aen. iii. 274):—

"Mox et Lucatæ nambo sacrum montis,
Et formidatus nauta aperiit Apollo."

It still retains among the Greek mariners of the present day the evil fame which it bore of old in consequence of the dark water, the strong currents, and the fierce gales which they there encounter. Of the temple of Apollo nothing but the substructions now exist. At the annual festival of the god here celebrated it was the custom to throw a criminal from the cape into the sea; to break his fall, birds of all kinds were attached to him, and if he reached the sea uninjured, boats were ready to pick him up. (Strab. x. p. 459; Ov. Her. xviii. 165, sec. xvi. 76; Stat. Theb. vi. 18.) This appears to have been an expiatory rite, and is supposed by most modern scholars to have given rise to the well-known story of Sappho's leap from this rock in order to seek relief from the pangs of love. [See Dict. of Biog. Vol. iii. p. 708.] Col. Mure, however, is disposed to consider Sappho's leap as an historical fact. (History of the Literature of Greece, vol. iii. p. 285.) Many other persons are reported to have followed Sappho's example, among whom the most celebrated was Artemisia of Halicarnassus, the ally of Xerxes, in his invasion of Greece. (Polyb. Heph. ap. Phot. Cod. 190. p. 153 a, ed. Beailer.)

(Leake, North Greece, vol. iii. p. 10, seq.; Bowen, Handbook for Travellers in Greece, p. 75, seq.)

LEUCASSIA. [Massennia.] LEUCASSIA. [Arcadia, p. 193, No. 15.] LEUCATA, a port of the coast of Gallia Narbonensis: "ultra (laurum Rubrum) est Leucata, littoris nomen, et Solvaue Fons" (Mela, ii. 5). Mela seems to mean that there is a place Leucata, and that part of the coast is also called Leucata. This coast, according to D'Anville, is that part south of Narbonne, which lies between the Etae of Sigonza and Colona. He conjectures, as De Valois had done, that the name may be Greek. He quotes Roger de Hoveden, who speaks of this coast under the name Leucate: "quandam arenam protensa in mari, quasi ductur caput Leucatae." The common name of this head is now Cap de la Franqae, which is the name of a small flat island, situated in the recess of the coast near the north of the cape. (D'Anville's Notice, geometric, &c., Leucata.)

LEUCATAS PROM. [Leucatæ.] LEUCATE. 1. An island lying off Cydonia, in Crete (Plin. iv. 12), which Mr. Pashley (Trav. vol. i. p. 51) takes for the rock on which the fortress of Sirda is built. (Comp. Hock, Krete, vol. i. pp. 384, 438.)

2. An island which Pliny (iv. 12) couples with Otr'inia, as lying off the promontory of Crete. These small islands are now represented by the rocks of the Grinides. [E. B. J.]

LEUCATE ACTE. (Aurud ëxret), a port on the coast of Thrace, between Pactye and Teiristasis, which is mentioned only by Strabo of Gargara (p. 944; Ped. p. 374.)

LEUCATAE PR. (Aurud ëxret), a promontory of Mammaria, in N. Africa, W. of the promontory Hernumus. On the white cliff from which its name was obtained there stood a temple of Apollo, with an oracle. Its position is uncertain; but most probably it is the long wedge-shaped headland, which terminates the range of hills (Aspis) forming the Barbary Mass of Minor, and which is now called Ras-al-Kenete. (Strab. xvii. p. 799; Sicyl. p. 44.)

LEUCI (Aurudi), a Gallic people (Strab. p. 193; Ped. i. 9 § 13; Case. B. G. l. 40). between the Medomacri on the north and the Lingones on the south. They occupied the valley of the Upper Mosel. One of their chief towns was Tuillium (Tuol). Their territory corresponded with the diocese of Tuol, in which were comprised the dioceses of Nancy and Saint-Dié until 1774, when these two dioceses were detached from that of Tuol. (Walckenaer, Géogr. gec. vol. i. p. 531.) The Leuci are only mentioned once in Caesar, and with the Sequani and Lingones: they were celebrated for their skill in carpenter with corn. (Euseb. iv. 17.) It gives the Leuci the title of Liber. Lucane celebrates them in his poem (i. 424) as skilled in throwing the spear: —

"Optimus excusus Leucus Rheinumque lacerto."

Tacitus (Hist. i. 64) mentions "Leucorum civitas," which Tertullian calls "Leucianae." [G. L.]

LEUCIANA. [Lusatia.] LEUCI MONTES or ALBI MONTES (tâ Avu-kâ dēän, Strab. x. p. 479; Ped. iii. 17. § 9), the snow-clad summits which form the W. part of the mountain range of Crete. Strabo (i. c.) asserts that the highest points are not inferior in elevation to
LEUCOSYRI.

171

LEUCOMYPHYS (Ἀλευκόμυρης), a town in Caria, apparently in the plain of the Maeander, on the borders of a lake, whose water was hot and in constant commotion. (Xenoph. Hell. iv. 8 § 17, iii. 2 § 19.) From the passage here referred to, we learn that the town possessed a very reverential sanctuary of Artemis; hence named Artemis Leucophyræ or Leucophyræ. (Plin. i. 26 § 4; Strab. xiv. p. 647; Tac. Ann. iii. 62.) The poet Naucrates spoke of Leucophyræ as a place distinguished for its fine roses. (Aten. xv. p. 658.) Respecting Leucophyræ, the ancient name of Abedesios, see TITMOSO.

[1. S.]

LEUCOSIA (Λευκοσία), a small island off the coast of Lucania, separated only by a narrow channel from the headland which forms the southern boundary of the gulf of Paestum. This headland is called by Lycothiron dëtr' Ἐρετρίης, the promontory of Neptune, and his commentators tell us that it was commonly known as Peiraeus, a name derived from ἑρετηριον, a garrison. (Lycoth. Ael. 722; and Tzetz. ad loc.) But no such name is found in the geographers, and it seems probable that the promontory itself, as well as the little island off it, was known by the name of Leucosia. The former is still called Panata della Leucosia; the islet, which is a mere rock, is known as islet of Panata. It is generally said to have derived its ancient name from one of the Sirens, who was supposed to have been buried there (Lycothr. i. c.; Strab. i. c.; Plin. iii. 7. s. 13); but Dionyaius (who writes the name Leucasis) asserts that it was named after a female cousin of Aeneas, and the same account is adopted by Solinus. (Diony. i. 23; Solin. v. 15 § 12.) We learn from Sphrantzes (Comp. L. E. A. i. 13, v. 14, vii. 14) that the promontory was selected by wealthy Romanae as a site for their villas; and the remains of ancient buildings, which have been discovered on the little island itself, prove that the latter was also restored to its former purposes. (Rennanelli, vol. i. p. 345.)

[2. E. B.]

LEUCOSIA (Λευκοσία, Λευκωσία), a city of Cyprus, which is mentioned only by Hierocles and the ecclesiastical historian Sozomen (H. E. i. 3, 10). The name is preserved in the modern Lefkoria or Nikoria, the capital of the island. (Engel, Kypros, vol. i. p. 150; Maritti, Piaggio, vol. i. p. 89; Pococke, Trav. in the East, vol. ii. pt. 1. p. 221.) [2. E. B.]

LEUCOSYRI (Λευκοσύριος), the ancient name of the Syrians inhabiting Cappadocia, by which they were distinguished from the more southern Syrians, who were of a darker complexion. (Herod. i. 72, vii. 72; Strab. xvi. p. 737; Plin. H. N. vi. 3; Eustath. ad Dionys. 772, 970.) They also spread over the western parts of Pontus, between the rivers Iris and Halya. In the time of Xenophon (Anab. v. 6 § 8, &c.) they were united with a Paplagonian prince, who is said to have had an army of 120,000 men, mostly horsemen. This name was often used by the Greeks, even at the time when it had become customary to design-
nate all the inhabitants of the country by their native, or rather Persian name, Cappadoces; but it was applied more particularly to the inhabitants of the coast district on the Euxine, between the rivers Halys and Iris. (Hecat. Fragm. 194, 200, 350; Marc. Heral. Geogr. 72.) Ptolemy (v. 6. § 2) also applies the name exclusively to the inhabitants about the Iris, and treats of their country as a part of the province of Cappadocia. The Leucocyri were regarded as colonists, who had been planted there during the early conquests of the Assyrians, and were successively subject to Lydia, Persia, and Macedonias; but even at the time of Alexander their name is scarcely mentioned, the people having become entirely amalgamated with the nations among which they lived.

LEUCOTOYES FANUM (Διενόδωριας λεόπ), a temple and oracle in the district of the Moesich in Coeleisia. Its legendary founder was Phryxus; the temple was plundered by Pharnaces and then by Mithridates. (Strab. xi. p. 498.) The site has been placed near Soran, on the frontier of Imreia and Kartalhina, where two large "tumuli" are now found. (Dubois de Montperoux, Voyage de Turcica, vol. ii. p. 359, comp. p. 17, vol. iii. p. 171.)

[LEUCOHEUM. [LEUCOALLA.]

LEUCTRA (τὰ Λευκτρα), 1. A village of Boeotia, situated on the road from Thebes to Plataea (Strab. ix. p. 414), and in the territory of the former city. (Xen. Hell. vi. 4. § 4.) Its name only occurs in history on account of the celebrated battle fought in its neighbourhood between the Spartans and Thebans, b.c. 371, by which the supremacy of Sparta was for ever overthrown. In the plain of Leuctra, was the tomb of the two daughters of Scedalus, a Leuctrian, who had been violated by two Spartans, and had afterwards slain themselves; this tomb was crowned with wreaths by Epaminondas before the battle, since an oracle had predicted that the Spartans would be defeated at this spot. (Hill, v. 4. p. 260; Diodor. xv. 44; Plut. i. 26, 20, 21.) The city of Leuctra, is sometimes supposed to be represented by the extensive ruins at Lefka (Lefka), which are situated immediately below the modern village of Rimokastro. But these ruins are clearly those of Thebes, as appears from the inscriptions found there, as well as from their importance; for Leuctra was never anything more than a village in the territory of Thebes, and had apparently ceased to exist in the time of Strabo, who calls it simply a χώρα (x. p. 414). The real site of Leuctra, "...is very clearly marked by a tumulus and some artificial ground on the summit of the ridge which borders the southern side of the valley of Thebes.

The battle of Leuctra was fought probably in the valley on the northern side of the tumulus, about midway between Thebes, and the western extremity of the plain of Plataea. Clisthenes, in order to avoid the Boeotians, who were expecting him by the direct route from Phocis, marched by Thise and the valleys on the southern side of the ridge. Having thus made his appearance suddenly at Creusa, the port of Thebes, captured that fortress. From hence, he moved upon Leuctra, where he interchanged himself on a rising ground; after which the Thebans encamped on an opposite hill, at no great distance. The position of the latter, therefore, seems to have been on the eastern prolongation of the height of Rimokastro." (Leake.) The tumulus is probably the place of sepulture of the 1000 Leuctreanomnius war fell in the battle. For a full account of the celebrated contest, see Grote, Hist. of Greece, vol. 1. 227. 238. In ancient times, the neighbourhood of Leuctra appears to have been well wooded, as we may infer from the epitaph of "shady" Lamia, given by it when the oracle of Delphi, (Διεσπροδρας εκτορ), saw. (Paus. ix. 14. § 3) But at present there is scarcely a shrub or a tree to be seen in the surrounding country. (Leake, North Greece, vol. ii. p. 480, sqq.)

2. Or LEUCUTRA (τὰ Λευκτρα, Paus. i. 22. § 23, i. 23. § 6, Plut. Pol. 20, Plin. iv. 5. s. 8; Ptol. iii. § 9.) A town of Leuctra, situated on the eastern side of the Messenian at 20 stadia north of Pephus, and 60 stadia south of Cardamylae. Strabo speaks of Leuctra as being the minor Pamisus, but this river flows into the sea at Pephus, about three miles south of Leuctra [Pamisus]. The ruins of Leuctra are still called Lamia. Leuctra was said to have been founded by Pelops, and was claimed by the Messenians as originally one of their towns. It was awarded to the latter people by Philip in B.C. 338, but in the time of the Roman empire it was one of the Eleutherian Lacedaiion places. (Strab. vii. p. 360, 361; Paus. iii. 21. § 7, iii. 26. § 4 sec. Plut. Pol. 20, Plin. iv. 5. s. 8; Ptol. iii. § 9.)

3. Or LEUCTRA (τὰ Λευκτρα, Thuc. xiv. 11. Λευκτρα, Paus.) a fortress of the district' Arcadian, on the confines of Arcadia and Laconia, described by Thucydides (v. 54) as on the confines of Laconia towards Mt. Lycaeus, and by Xenophon (Hill. v. p. 239, sec. In ancient times, it was called Lefkos. Leuctrum was said to have been founded by Epaminondas, and was claimed by the Arcadians as originally one of their towns. It was awarded to the latter people by Philip in B.C. 338, but in the time of the Roman empire it was one of the Eleutherian Lacedaiion places. (Strab. vii. p. 360, 361; Paus. iii. 21. § 7, iii. 26. § 4, sec. Plut. Pol. 20, Plin. iv. 5. s. 8; Ptol. iii. § 9.)

[LEUCOTRÆ. [LEUKTRA.]

LEUCUS. [PYDNÁ.] LEVI. [PALLÁSTE.] LEUNI (Λευνῆ), a tribe of the Vineletrii, which Ptolemy (ii. 13. § 1) places between the Runciac and Conacumata. The form of the name has been subject to debate. Hengstmann maintaining that it ought to be written Λευνῆ, and that it is the general name of several tribes in those parts, such as the Βεσαλλάον and Αλαβολ. But nothing certain can be said about the matter; and all we know is, that the Leuni must have dwelt at the foot of the Alps of Sulawy, in the south-eastern part of Bavaria.

[LE.S.]
LEVONT.

LEVONI (Λεβώνη), a tribe mentioned by Ptolomy (ii. 11. § 35) as dwelling in the central parts of the island of Scandia. No further particulars are known about them. (Comp. Zeuss, die Deutschen, p. 118.)

LEUPHANA (Λευφάνα), a town mentioned by Ptolomy (ii. 11. § 27) in the north of Germany, on the west of the Ælbe; it probably occupied the site of the modern Lüneburg. (Wilhelm, Germania, p. 161.)

LEUTERNA or LEUTARNA. [L.E.U.R.A.]

LEUTOANUM, a place in Pannonic Superior, 11 miles from Libis, down timber froin the sea, the Gallic made it self a navy. Some idea of the extent of its pine forests may be formed from the fact recorded by this historian, that 8000 men were employed in felling and sawing it, and 1000 beasts in transporting it to its destination. He correctly describes the mountain as extending along the coast of Tripoli and Byblis, as far as Sidon, abounding in cedars, and fire, and cypress, of marvellous size and beauty (xix. 58); and it is singular that the other classical geographers were wholly mistaken as to the course of this remarkable mountain chain, both Ptolomy (v. 15) and Strabo (xvi. p. 755) representing the two almost parallel ranges of Lebanon and Anti-Lebanon as commencing near the sea and running from west to east, in the direction of Damascus, rather than from the north, and Anti-Lebanon on the south; and it is remarkable that the Septuagint translators, apparently under the same erroneous idea, frequently translate the Hebrew word Lebanon by Αντίλεβανος (e.g. Deut. i. 7; ii. 25, xii. 24; Josh. i. 4, ix. 1). Their relative position is correctly stated by Eusebius and St. Jerome (e. g. on Anti-Lebanon, who place Anti-Lebanon to the east of Lebanon and in the vicinity of Damascus. [ANTILEBANUS.]

Lebanon itself may be said to commence on the north of the river Leontes (el-Kūṣūm), between Tyre and Sidon; it follows the course of the coast of the Mediterranean towards the north, which in some places washes its base, and in others is separated from it by a plain varying in width: the mountain attains its highest elevation (nearly 12,000 feet) about half way between Beirut and Tripoli. It is now called by various names, after the tribes by whom it is peopled,— the southern part being inhabited by the Metawli; to the north of whom, as far as the road from Beirut to Damascus, are the Druzes; the Maronites occupying the northern parts, and in particular the district called kesrwan. (Robinson, Bibl. Res. vol. iii. p. 459; Burckhardt, Syria, pp. 182—209.) It still answers, in part at least, to the description of St. Jerome, being "ferthiissimus et virens," though it can be no longer said "densusissimus arborum comis proptertur" (Comment. in Osee, c. xiv.); and again,— "Nihil Libanum in terra reperimentiosius occiduum um nomen est, nec forensibus et condensius." (Comment. in Zacharin, c. xi.) It is now chiefly fruitful in vines and mulberry trees; the former celebrated from of old (Hos. xiv. 7), the latter introduced with the cultivation of the silk-worm in comparatively modern times. Its extensive pine forests have entirely disappeared, or are now represented by small stumps of cedars, with new growth, scattered over the mountain in those parts where the soft sandstone (here of a reddish hue) comes out from between the Jura limestone, which is the prevailing formation of the mountain. The cedars so renowned in ancient times, and known to be the patriarchs of all their species now existing, 8.11, 15; v. 15: Isai. ii. 13; Hos. xiv. 5—7; Zechar. xi. 1, 2.) It is, however, chiefly celebrated in sacred history for its forests of cedar and fir, from which the temple of Solomon was constructed and adorned. (1 Kings, v. 2; Chron. ii.) It is clear from the sacred history that Mount Lebanon was, in Solomon's time, subject to the kings of Tyre; but at a later period we find the king of Assyria felling its timber for his military engines (Isai. xiv. 8, xxiv. 24; Ezek. xxx. 16); and Diodorus Siculus relates that Antigonus, having collected from all quarters hewers of wood, and sawyers, and shipbuilders, brought lumber from Lebanon, down timber from the sea, the Gallic made it self a navy. Some idea of the extent of its pine forests may be formed from the fact recorded by this historian, that 8000 men were employed in felling and sawing it, and 1000 beasts in transporting it to its destination. He correctly describes the mountain as extending along the coast of Tripoli and Byblis, as far as Sidon, abounding in cedars, and fire, and cypresses, of marvellous size and beauty (xix. 58); and it is singular that the other classical geographers were wholly mistaken as to the course of this remarkable mountain chain, both Ptolomy (v. 15) and Strabo (xvi. p. 755) representing the two almost parallel ranges of Lebanon and Anti-Lebanon as commencing near the sea and running from west to east, in the direction of Damascus, rather than from the north, and Anti-Lebanon on the south; and it is remarkable that the Septuagint translators, apparently under the same erroneous idea, frequently translate the Hebrew word Lebanon by Αντιλεβανος (e.g. Deut. i. 7; ii. 25, xii. 24; Josh. i. 4, ix. 1). Their relative position is correctly stated by Eusebius and St. Jerome (e.g. St. Jerome, who place Anti-Lebanon to the east of Lebanon and in the vicinity of Damascus. [ANTILEBANUS.] Lebanon itself may be said to commence on the north of the river Leontes (el-Kūṣūm), between Tyre and Sidon; it follows the course of the coast of the Mediterranean towards the north, which in some places washes its base, and in others is separated from it by a plain varying in width: the mountain attains its highest elevation (nearly 12,000 feet) about half way between Beirut and Tripoli. It is now called by various names, after the tribes by whom it is peopled,— the southern part being inhabited by the Metawli; to the north of whom, as far as the road from Beirut to Damascus, are the Druzes; the Maronites occupying the northern parts, and in particular the district called kesrwan. (Robinson, Bibl. Res. vol. iii. p. 459; Burckhardt, Syria, pp. 182—209.) It still answers, in part at least, to the description of St. Jerome, being "ferthiissimus et virens," though it can be no longer said "densusissimus arborum comis proptertur" (Comment. in Osee, c. xiv.); and again,— "Nihil Libanum in terra reipientissius occiduum um nomen est, nec forensibus et condensius." (Comment. in Zacharin, c. xi.) It is now chiefly fruitful in vines and mulberry trees; the former celebrated from of old (Hos. xiv. 7), the latter introduced with the cultivation of the silk-worm in comparatively modern times. Its extensive pine forests have entirely disappeared, or are now represented by small stumps of cedars, with new growth, scattered over the mountain in those parts where the soft sandstone (here of a reddish hue) comes out from between the Jura limestone, which is the prevailing formation of the mountain. The cedars so renowned in ancient times, and known to be the patriarchs of all their species now existing,
LIBARNA.

are found principally towards the north of the range (Robinson, Bibl. Res. vol. iii. pp. 440, 441), particularly in the vicinity of a Marouite village named Ebden, doubtless identical with the "Eden" of Ezekiel (xxxii. 16), in the neighbourhood of which the finest specimens of the cedars were even then found. They had almost become extinct,—only eight ancient trees can now be numbered,—with a few of the smaller, the living remnants of this magnificent conven-
tion went to the pains of planting some five hundred trees, which are now carefully preserved, and will perpetuate the tradition of the "cedars of Lebanon" to succeeding generations. The fact remarked by St. Jerome, of the proper name of the mountain being synonymous with frankincense, both in Greek and Hebrew, has given rise to the idea that the mountain produced this odoriferous shrub, of which, however, there is no proof. (Reland, Polonica, p. 313.)

[821.]

LIBARNA (Λεβάρνα), a city of Liguria, which is mentioned by Pline among the "nobilis oppida" that adorned the interior of that province, as well as by Polybios in the Istorieis, in which its name appears as "Libarnum" or "Libaramum." (Plin. iii. 5. s. 7; Ptol. iii. 1. § 45; Itin. Ant. p. 294; Tab. Peut.) These place it on the road from Genua to Dertona, but the distances given are certainly corrupt, and therefore afford no clue to the position of the town. This has, however, been of late years established beyond doubt by the discovery of its remains, on the left bank of the Serchio, between Arpusta and Serravalle. The traces still visible of its ancient theatre, forum, and aqueducts, confirm Pline's statement of its flourishing condition: which is further attested by several inscriptions, from one of which it would appear to have enjoyed colonial rank. (S. Quintino, Antica Colonie di Libarna, in the Arch. Pit. 1839, vol. ii. p. 149; Aldini, Lapid. Ticin. p. 120, 129.) [822.]

LIBETHRA, LIBETHRUM (Λιβηθρα: Ed.: Λιβηθρος), a town of Macedonia in the neighbourhood of Diun. It is mentioned by Livy (xlv. 5), who, after describing the perilous march of the Roman army under Q. Marcius through a pass in the chain of Olympus,—CaLLIPRUCK (the lower pass of "Callipruck" of Plineus) six days and four days of extreme labour, they reached the plain between Libethrum and Hersaleia. Pausanias (ix. 30. § 9) reports a tradition that the town was once destroyed. "Libethra," he says, "was situated on Mount Olympus, on the side of Macedonia. At no great distance from it stood the tomb of Orpheus, respecting which an oracle had declared that when the sun beheld the bones of the poet the city should be destroyed by a boar (Στροφύλαια). The inhabitants of Libethra ridiculed the thing as impossible; but the column of Orpheus's monument having been accidentally broken, a gap was made by which light broke in upon the tomb, when the same night the torrent named Scaena, being prodigiously swollen, rushed down with violence from Mt. Olympus upon Libethra, overthrowing the walls and all the public and private buildings, and destroying every living creature in its furious course. After this calamity the remains of Orpheus were removed to Diun, 20 stadia distant from their city towards Olympus, where they erected a monument to him, consisting of a column set up upon an altar." In the time of Alexander the Great there was a statute of Orpheus made of cypress, at Libethra. (Plut. Alex. 14.)

LIBIUS.

The only two torrents which could have effected such havoc as that described by Pausanias are the rivers of Platamina and Lautikhorus. As the former was near Hersaleia, it may be concluded that the Sue, was the same river as the Epiphus, and that Libethra was situated not far from its junction with the sea, as the upper parts of the slope towards Lautikhorus are marked from the ravages of the torrent by their elevation above its banks. It might be supposed, from the resemblance, that the modern Malathea [Diurn] is a corruption of the ancient Libethra: the similarity is to be attributed, perhaps, to the two names having a common origin in some word of the ancient language of Macedon. (Leake, Northern Greece, vol. iii. P. 413, 422.)

Strabo (ix. p. 409, x. p. 471) alludes to this place when speaking of Helicon, and remarks that several places around that mountain, attest the former existence of the Pierian Thracians in the Boeotian districts. Along with the worship of the Mus—the names of mountains, caves, and springs, were regarded as sacred to Helicon: hence they were named Libethrides as well as Pierides ("Nympheis, noster amor, Libethrides,") Virg. Eccl. vii. 21. [823.]

LIBETHRIS, LIBETHRIUS. [Helicon.]

LIBIA. [Antigonem.]

LIBICII or LIBICI (Λιβίκου, Pol.; Ἀλβίκου, Ptol.), a tribe of Cisalpine Gauls, who inhabited the neighbourhood of the river Sesia, and the neighbourhood of Vercellae. They are first mentioned by Polybius (ii. 17), who places them, together with the Larvii (Aedui), towards the sources of the Padus, and W. of the Insubres. This statement is sufficiently vague: a more precise clue to their position is supplied by Pline and Plutarch, both of whom notice Vercellae as their chief city, to which the latter adds Laumellum also. (Plin. iii. 17. s. 21; Ptol. iii. 1. § 36.) Pline expressly tells us that they were descended from the Sallies, a people of Ligurian race; whence it would appear probable that the Libici as well as the Lavei were Ligurian, and not Gaulish tribes [Larvii], though settled on the N. side of the Padus. Livy also speaks, but in a phrase that is very obscure, a. 577, that there is a tower and (xv. 35), of the Sallieves (the same people with the Sallies) as crossing the Alps, and settling in Gaul near the Lavi. [824.]

LIBIOS'ONA (cognomine Formanagutana, Plin. iii. 3. s. 4; Inscr. ap. Gruter, p. 260. no. 3; Libi-

siona, Coins, op. Sestini, p. 168; Libiosion, Itin. Ant. p. 446; Aedubri, Ptol. ii. 6. § 39; Libi-

sion, Geog. Rav. iv. 44: Lecum, a city of the Oretani, in Hispania Tarraconensis, 14 M. P. NE. of the sources of the Anas, on the high-road from Laminium to Caesaragutana. It was an important place of trade, and, under the Romans, a colony, belonging to the conventus of Caesaragutana (Plin. l. c.; Uertol, vol. ii. p. 1. pp. 411, 412). [F. S.] LIBINATH (Aid, Aedubri) generally mentioned in connection with Lachion, from which it could not be far distant [Lachion]. (Jos. x. 29.—32; 2 Kings, xix. 8.) It belonged to Judah (Jos. xv. 42), and is recognised by Eusebius as a village in the district of Eleutheropolis. (Onomast. s. a. Aedubri.) Dr. Robinson could not succeed in recovering any trace of the name or site (Bib. Researches, p. 389.) [825.]

LIBIUS, a river in Ireland, mentioned by Plu-

teny (ii. 2. § 4) as on the west coast, == the river
LIBORA.

The text is a fragment from a historical document discussing the region of Libora in ancient times, mentioning its geographical location, possibly referring to the city of Liburni and the Liburnian tribes. It also alludes to the conversion of some Slavonic strangers as early as the 7th century. The text is fragmented and incomplete, making it challenging to understand the full context.
LIBYA.

habitants the general name of Aethiopes, the dark or black colored men. Between b.c. 630—620, Hecataeus of Thera, being commissioned by the oracle to lead a colony into Libya, inspired and colorfully "Libya was," although at that time the position of Agypt, and probably that of the Phoenician Carthage also, was well known to the Greeks. Hence we may conclude that, in the 7th century b.c., the name Libya, as the generic appellation of a continent within sight of Sicily, and within a few days' sail from Peloponnese, was either partly adopted by or wholly unknown to the Greeks. The Phoenicians were among the first explorers, as they were among the earliest colonisers of Libya; but they concealed their knowledge of it with true commercial jealousy, and even as late as the 8th century B.C. the Roman and Etruscan mariiners from sailing beyond the Fair Promontory. (Polyb. iii. 22.) About sixty years before the journey of Herodotus to Agypt, i.e. b.c. 528, Cambyse explored a portion of the western desert that lies beyond Elephantine; but his expedition was too brief and disastrous to afford any extension of geographical acquaintance with the interior. Herodotus is the first traveller whose accounts of Libya are in any way distinct or to be relied on, and his information was probably derived, in great measure, from the caravan guides with whom he conversed at Memphis or Naucratis in the Delta. By the term Libya, Herodotus understood sometimes the whole of ancient Africa (iv. 42), sometimes Africa exclusive of Agypt (i. 17, 18, iv. 167). He defined its proper eastern boundary to be the isthmus of Suez and the Red Sea, in opposition to Strabo, who placed it along the west bank of the Nile. In this opinion he is supported by Strabo (i. pp. 86, 174) and Ptolemy (i. i. § 6, iv. 5. § 47); and his description of the Great Desert and other features of the interior prove that his narrative generally rests upon the evidence of travellers in that region. The next step in discovery was made by the mariners of the Roman Republic, who, not only toquired gold, precious stones, ivory, and aromatics, for luxury and art, and elephants for their wars, but were also actuated by a zeal for the promotion of science. Accordingly, Ptolemy Philadelphus (Diod. i. 37; Plin. vi. 29) and Ptolemy Euergetes (b.c. 283—222) sent forth expeditions to the coast and mouth of the Red sea, and into the modern Nubia. Their investigations, however, tended more to extending acquaintance with the country between the cataracts of the Nile and the straits of Bab-el-Mandeb than to the examination of Western Libya.

About 200 years before our era, Eratosthenes described Libya, but rather as a mathematician than a geographer. He defines it to be an acute angled triangle, of which the base was the Mediterranean, and the sides the Red sea, on the east, and on the west an imaginary line drawn from the Pillars of Hercules to the Sinus Adultanata.

The wars of Rome with Carthage, and the destruction of that city in B.C. 146, tended considerably to promote a clearer acquaintance with Libya Interior. Polybius, commissioned by his friend and commander, Scipio Africanus, visited Libya, and many districts of the northern coast of Africa, and explored its western shores also, as far as the river Bambutos, perhaps Cape Non, lat. 28° N., where he found the crocodile and hippopotamus. Unfortunately, the record of his journey has perished, although it was extant in the 1st century A.D., and is cited by Pliny (vi. 1) and Stephanus of Byzantium (c. 2° 320

The events of the Jugurthine War (b.c. 111—106) led the Romans further into the interior. The historian Sallust, when prætor of Numidia, assiduously collected information respecting the indigenes races of Libya. He mentions the Gaetuli as the rude Aborigines, who fed on the flesh of wild beasts, and on the roots of the earth. They dwelt in the torrid zone and south of the arid desert "Achmousns," and their huts (mapalas) resembled invented boxes.

In b.c. 24, Aelius Gallus conducted, by the command of Augustus, an expedition into Aethiopia and Nubia, and extended the knowledge of the eastern districts. The difficulties of the road and the treachery of his guides, indeed, rendered his attempt unpromising; but in the year following, Petronius repulsed an invad of the Aethiopians, and established a line of military posts south of Elephantine (Strab. xvii. p. 615; Dion Cass. liv. 6). In b.c. 19, L. Cornelius Balbus attacked the Garamantes with success, and ascertained the names at least of many of their towns. (Flor. iv. 12; Plin. v. 73.) The information then acquired was employed by Apuleius, and in the ancient maps of the Roman empire in the later period, an exploring party was dispatched to the Asiaticus highlands, with a view of discovering the sources of the Nile. (Plin. vi. 32; Senec. Nat. Quaest. vi. 8.)

But the Romans became acquainted with portions of the Libyan desert, less through regular attempts to penetrate it on either side, than from their desire to guard the route followed by the warring banks of the Nile. Under the emperors, especially the passion for exhibiting rare animals prevailed; nor have we reason to suspect that these were found in the cultivated northern provinces, whence they must have been driven by the colonal herdsmen and farmers, even while Cyrene and Carthage were independent states. At the secular games held by the Antonines, in the time of the Arabian (a. D. 248), an incredible number of Libyan wild beasts were slaughtered in the arena, and the Roman hunters who collected them must have visited the Sâhura at least, and the southern slope of Atlas; nor, since the hippopotamus and the alligator are mentioned, is it improbable that they even reached the banks of the Senegal.

Neglected by the geographers, however, Claudius Ptolemy, who flourished in the second century A.D., displays the most accurate and various acquaintance with Libya Interior. Yet, with the works of his predecessors before him, the scientific labours of the Alexandrians, and the Roman surveys, Ptolemy possessed a very inadequate knowledge of the form and extent of this continent. His tables show that its western coast had been explored as far as 11° lat. N.; and he was aware of the approximate position of the Fortunate Islands (now the Canaries), since from them, or some point in them, he calculated all his eastern distances or lonitudes. He was also better acquainted than any of his predecessors with the eastern coast, and with the tracts which intervened between the left bank of the Nile and the Great Desert. He mentions an expedition conducted by a Roman officer named Maternus, who, setting forth from Tripoli, advanced as far southward as the neighbourhood of the lake Tchad, and, perhaps, even of Timbucto. He has also given, with probable correctness, the position of a number of places in the interior, along a river which he calls
the Niger. Ptolemy moreover assigns to Africa a greater extent & the equator: but here his knowledge becomes inexact, since he makes the land stretch into the Atlantic instead of curving eastward; and he concluded that the southern parts of Libya joined the eastern parts of Asia, and consequently was either incredulous or ignorant of the Peripitus of the Phoenicians in the reign of Pharaoh Necho.

Pliny adds little to our information respecting Libya beyond its northern and eastern provinces, although he contributes to its geography a number of strange and irreconcilable statements. He had seen an abstract at least of the journal of Polybius, and he mentions an expedition in A.D. 41 by Sestenius Paulilinus, which crossed the Atlas range, and explored a portion of the desert beyond. But both Pliny and Pomponius Mela are at once too vague and enigmatic in their accounts to have added much to our knowledge of the interior.

The persecutions which were mutually inflicted by the Christian sects upon each other in the 3rd and 4th centuries A.D., the expulsion of the Donatists, Montanists, Circumcellions, &c., from the ecclesiastical provinces of the Roman church, drove even beyond the Atlas region thousands of fugitives, and thus contributed to the formation of those in the 7th century in rendering the interior more permeable and better known. Yet neither the fugitives nor the conquerors have materially increased our acquaintance with these regions. The era of discovery, in any extensive sense of the term, commences with the voyages of the Portuguese at the close of the 15th and the commencement of the 16th century. But their observations belong to the geography of modern Africa.

We have reserved an account of the two most memorable expeditions of the ancients for the discovery of the form and dimensions of the Libyan continent, partly on account of their superior importance, if they are authentic, and partly because the results of them have been the subject of much discussion.

Herodotus (iv. 42) alleges as one reason for his belief that Libya, except at the isthmus of Swses, is surrounded by water, a story which he heard of its circumnavigation by the Phoenicians in the reign and by the command of Pharaoh Necho, king of Assyria. This supposed voyage was therefore made between B.C. 610—594. Hanno, whose narrative is indeed meagre enough, Pharaoh Necho desired to connect the Mediterranean with the Red sea by a canal from Babastis in the Delta to the Arainost bay near Swses. He abandoned this project at the bidding of the priests, and then ordered his pilots to attempt the passage from the one sea to the other by a different channel. For this purpose his fleet, manned entirely by Phoenicians, was set sail from the Red sea, coasted Acryge and Astiphaia, and passed into the Indian ocean. At the end of three years they entered the mouth of the Nile, having, as they affirmed, circumnavigated the continent. Twice they landed,—probably at the season of the monsoons,—laid up their ships, sowed the fields, and reaped the harvest, and in the spring set sail their course. They alleged,—and their assertion is remarkable, although Herodotus did not believe it,—that as they were sailing westward the sun was on their right hand.

The probability or improbability of this voyage has been canvassed by Mannert (Geograph. der Grieck. und Römer, vol. x. pt. 2, pp. 491—511), by Gosselin (Geographie des Groce Analectes, tom. i. pp. 108, &c.), by Rennell (Geogr. of Herod. vol. ii. pp. 346—363), and Heeren (Ideen, vol. i. p. 364).

We do not consider that its improbability is by any means fully established; the voyage, however, was too tedious and difficult to be repeated by the navigators of antiquity, and its results for commerce and geographical knowledge were accordingly unimportant. The most striking argument for the circumnavigation having been accomplished is the reported phenomenon of the sun appearing on the right hand, or to the south of the voyagers; nor were the Phoenician galleys less commodious. It is further noticed that the carrels which conveyed Columbus across the Atlantic, or Di Gama round the Cape. On the other hand, we must admit the improbability of some of the circumnavigations narrated. Herodotus heard the story 150 years after the supposed voyage had been made; in that time an extraordinary expedition beyond the Red sea may have been magnified into a complete Peripitus. Again, for sowing and reaping on an unknown coast, for laying up the ships, &c., the time allowed,—three years,—is too short. Moreover, no account is made for opposition from the inhabitants of the coast, or for the violent winds which prevail at the Cape itself. The notion which Herodotus entangled in which long afterwards prevailed, that Libya did not extend so far eastward as the equator, is not an argument against the fact of the circumnavigation; for the brevity of Herodotus's statement, in a matter so important to geography, shows that he had taken little pains in skirting the tradition.

A second ancient voyage is better authenticated. This was rather an expedition for the promotion of trade than of geographical discovery. Its date is uncertain; but it was undertaken in the most flourishing period of the Punic Commonwealth,—i.e. in the interval between the reign of Darius Hy- staspes and the First Punic War (b.c. 521—264). Hanno, a subject or king, as he is vaguely termed, of Carthage (Geogr. Grec. Afr. tom. i. Bernardt), with a fleet of 60 galleys, having on board 30,000 men, set sail from that city through the Straits of Gibraltar with a commission to found trading stations on the Atlantic coast, the present empire of Morocco. How far he sailed southward is the subject of much discussion. Gosselin (Geogr. des As- siens, vol. i. p. 109, seq.) so shortens Hanno's voyage as to make Cape Nos, in lat. 29° N., his extreme southern terminus, while Remmel extends it to Sierra Leone, within 8° of the equator (Geogr. of Herod. vol. ii. p. 348). The mention of a river, where he saw the crocodile and the river-horse, renders it probable that Hanno passed the Seneqal at least. Of the fact of the voyage there is no doubt. The record of it was preserved in an inscription in the temple of Kronos at Carthage. There it was copied and translated into his own language by some Greek traveller or merchant. (Bochart, Geo. Sacr. i. 39; Cam- pomanes, Antiq. Maritim. de Carthago, vol. ii.; Dudwell, Dissert. i. in Geogr. Graec. Min., ed. Hudson; Bougainville, Découvertes d'Hanno Mém. de l'Acad. des Inspect. tom. xxvi. xxviii.; Heeren, Ideen, vol. i. p. 364.)

A third and much later Peripitus is that which goes under the name of Arrian. It is probably a work of the first century A.D. It is the record or log-book of a trading-voyage on the eastern coast of Libya, and is chiefly valuable as a register of the articles of export and import in the markets of the Red sea, of the Arabian and Persian coast of the
western shores of India, and the eastern shores of Africa. The extreme south point of the voyage is the headland of Rhapta, probably the modern Qandia. In lat. 10° N. (See Vincent’s *Voyage of Narrative*, vol. 3. p. 74, &c.) With their imperfect acquaintance with Libya Interior, and their misconception of its extent, it is not surprising that the more ancient geographers should have long hesitated to which portion of the old continent Libya should be assigned. It was sometimes regarded as an independent division of the earth, and sometimes as part of the family of the various systems of Europe and of Africa. (Aristotle, *Harm. &c.*; Herod. iv. 42; Varr. *L. L.* iv. 5; Sayl. Bell. *Jugurth. 17*; Lucan, *Pharsal.* ix. 411; Malte- brun, *Geog.* i. 27.) As the topography of the interior is very uncertain, we shall examine rather the general physical phenomena of this region, than attempt to assign a local habitation to tribes who roamed over the waste, or to towns of which the names, and remains, are disfigured, even when genuine, by the Greek or Roman orthography of their Libyan titles.

1. The Great Desert. — Herodotus (ii. 32, iv. 181) divides Libya N. of the equator into three regions: — (1) the inhabited, which is described under the several heads of *Africa*, *Atlas*, *Carthage*, *Cyrene*, and *Antarctica* [see *Atlas*]; and (2) the Deserts. These divisions correspond nearly to the modern districts of *Barbara*, *Bilcaulgorid*, and *Sahdra*. The latter region (ὄρμος τής Σάδης, Herod. iv. 181) extends from the Atlantic to Egypt, and is continued under the same degrees of latitude through Arabia, Asia, the southern provinces of Persia, to *Mowla* in Northern India. Contrasted with the vale of *Bilcaulgorid*, the vast arable districts of Africa Propria, and especially with the well-watered Egypt, the *Sahdra* is one of the most dreary and inhospitable portions of the world. To its real barrenness and solitude the ancients ascribed also many fabulous terrors, which the researches of modern travellers have dispelled. It was believed to be a place of men, who, by their number and their venom, were able to impale armies in their march (Lucan, *Pharsal.* ix. 765); its tribes shriaked like bats, instead of uttering articulate sounds (Herod. iv. 183); its pestilential winds struck with instant death men and animals, who braved them (Arrian, *Exp. Alex.* iii. 3); and its eddies of sand buried the slain. These descriptions are, however, much exaggerated. The *Khamis* or fifty-days’ gale, as the Copta term it, the *Simmoum* (sweat, poison) of the Arabs, blows at the summer solstice from S. and SE. over a surface scorched by an almost vertical sun, and thus accumulates heat, which dries up all moisture, relaxes the muscular powers, and makes respiration difficult. But though it enfeebles, it does not necessarily kill. The real peril of the route, which from very remote ages has been trodden by the caravans, lies in the scanty supply of water, and in the obliteration of the track by the whirlwinds of sand. (Bruce, *Travel.* vol. vi. p. 456; Burckhardt, *Nubia,* vol. i. p. 207.) The difficulty of passing the Libyan Desert was, in fact, diminished by the inlands for centuries, which served as stepping-stones across it. Of these oases a more particular description is given elsewhere [Oasis], but they are too important a feature of this region to be quite omitted from an account of it. Herodotus (iv. 181) mentions a chain of these patches of verdure extending from E. to W. through Libya. Sometimes they are little more than halting-places for the caravans,—a spring of water and a few acres of herbs; others, like the oasis of El-Kharg, are smooth and populous tracts, over which roam, with their cattle, and a few flocks and herds, provinces and kingdoms, such as *Aigopsy* and (Regio Phazania of Potemky). One geologic feature is common to them all. They are not either occupied by the plain, but depressions of its limestone into these hollows, which are composed of limestone and clay, the subsoil water percolates, the pebbles are washed away, and springs from the strong and moist earth of the desert. But even the arid waste itself is not a uniform desert. It has considerable inequalities, and even gravel. Probably amid the changes which the oasis has undergone, at some period anterior to the present,—if not the existence of man, the *Sahdra*, which even now is not much above that of the arid wasteland, was the bed of an ocean running over the continent. Its irregular breadth and favour this supposition. It is widest in the half of N. Africa, between the present kingdome of Morocco and the negro country, and narrow between the present states of Tripoli and Khartoum, where it is broken up by watery districts. A like appearance is observable in the eastern part of the present kingdom of Egypt. Indeed, a land of terraces, ascending gradually from the three seas which bound it to central plains, such as the Abyssinian highlands, the Lunea, and the Atlas chain.

Before the importation of the camel from Arabia,—and this animal never appears in mountains,—the Pharaonic times,—the impediments to land navigation were not great. The river Nile has only been rendered insurmountable. The camel was introduced into Persia by Darius succeeded in establishing his dominion in the oases; and in the time of Herodotus, they were the stages of a traffic which passed from Libya nearly east to west. The Desert, however, was not only a road for commerce, but a theater for battles. It was a country of allied tribes, and of mineral salts, which, especially in the district between El-Sisic, the ancient Ammonium, and Nador, the great seaport, cover the soil with an incessant sand through which the foot of the camel breaks through a thin coat of ice. The salt was a valuable article with the inhabitants of Nishri; and under the name of *Sahdra*.

The components of the salt are carbonate of soda, and sulphure de soda; and the ancient and modern tribes, have been extensively employed in the operations of bleaching and making. Libya shows few, if any, traces of action; and earthquakes, except in Egypt, have been unknown. Yet, that the country undergone changes unrecorded in history, is as obvious from the sagutted wood found on the surface of the desert in the latitude of Caire, and the river *Bakr-la-Le-Ma*, where river water, is a proof of a change in the elevation of the continent. The streams, which once filled its dry hollows, have been violently by subterranean action, the silt, agate, and Jasper in its neighborhood, indicate the ages of the fire. N. Egypt, *Proc. of Geol. Society,* 1842.

It is still an unsettled question whether the ancient geographers were acquainted with the enters S. of the Great Desert; i. e. with the part of the river *Quorra*, commonly called the *Libya*. Herodotus (ii. 32) relates, on the authority of Cyrenian, that certain young men of the
LIBYA

NASAMÉSSES, who inhabited the Syrtis and the district east of it (the present gulf of Sidra), crossed the Desert in a westerly direction, and came to a great river which runs towards the rising sun, and had crocodiles in it, and black men inhabiting its banks. No extraordinary circumstance, in the narrative is probably true in substance; and, combined with the known activity of the Carthaginian trade in silver, gold-dust, ivory, elephants, &c., renders it likely that the interior was known to the ancients as well as the western coast, within 110° of the equator. But such knowledge as was acquired by travelers, rarely entered by Greek geographers, who were more intent on accumulating names of places, than on recording the physical features, through which alone names become instructive.

The mountain and river system of Libya Interior has been partly described in the article Atlas; and the principal features of its indigenous population take their heads from CARTHAGE and GARAMANT. It will suffice, then, to point out here the effect which the general conformation of the mountains has upon the climate and the rivers. The absence of snow in the Atlas ranges denies to this continent, in its northern portion at least, the privilege of partial refrigeration, although in the loftier regions of the Atlas, which is the climate and the rivers. Hence rises the superior volume of the Aethiopians rivers, the tributaries of the Nile, and the milder temperature of the plains surrounding the lake of Dambia, which, although within the tropics, enjoy a perpetual spring. Again, the northern range of Atlas runs so close to the Mediterranean that the watershed is brief and abrupt, and the streams are proper mountain streams, which, after a short course, discharge themselves into the sea. The western slope of the Libyan Masses also presents a succession of terraces, which do not propel the rivers with force enough upon the ladders to produce a continuous course; so that either they lose themselves in swamps, or are absorbed by the seas. As the Nile, do we meet with many circuitous streams, like the Somagul, the Quado, &c., rivalling the Nile. On this side, indeed, the irrigated portions of the lowlands are rich pasture-lands, and the Great Desert is bordered and encroached upon by luxuriant patches both of forest and arable land.

The more remarkable mountains not included in the Atlas are the following:—On the northern frontier of these mountains, the modern harassment or Black Mountain, which, running from east to west, separated the Oasis Pharaon (Fessum) from Africa Romana. Westward of this was the Usargula (Oberdyanae Poet. iv. 6. § 7, &c.), the present Admasuloc (Combe, which, ran far into the territory of the Garamantes, and was in two portions, the river Bagrada. This may be regarded as a continuation of the Atlas Major, S. of Numidia and Mauretania. Next, running in a N. direction to the verge of Numidia, and a branch of the Usargula, was Mora Girghi (V Gorghi Poet.), 70 miles, in which the river Gyrphas arose. Along the Atlantic coast, and parallel with the Greater Atlas, were the following mountains and headlands:—Mount Sagapola (Zagruola, Poet. iv. 6. § 8, &c.), from which the river Subus sprang, to SW. of which was Mount Mandrus (Vb Madrusa Poet.), a long chain of hills, reaching to the peninsula of the Fucanute Islands, and containing the fountains of all the rivers that discharge themselves into the Atlantic, from the Salathus to the Massa, or from Cape Nos to Cape Bojador. Mt. Caphis (Kafāis), 8 degrees to S., from which the Daradas flowed, stretched in a SE. direction far into the Desert: Mount Rissadius (Vb Peroubae Poet.), reaching almost to the same name, probably Cape Blanco, and in it rose the river Stachir. Of all these mountains, however, the most remarkable as regards the Libyan rock system, because it exhibited unquestionable tokens of volcanic action, was that denominated the Chariot of the Gods (Gōuom Oγūm), probably the present Kom, or Siurra Leona. This was the extreme point of ancient navigation in the Atlantic; for the Philonic Periplus, if it indeed was actually performed, formed the single exception to the otherwise universal ignorance of the coast beyond. As far as modern discoveries have made known the interior, Libya, from the ocean to the borders of Aegypt, is crossed by a succession of highlands, arising at certain points to a considerable elevation, bounding forth terraces and spurs towards the south. It is possible that these may form a continuous chain, but our acquaintance with its bearings is very imperfect. The ancient geographers distinguished some portions of these highlands by the names of Mount Bardesut (Baidaruros Poet.), west of the Lunea Monte; and the same line, but at a considerable interval, M. Bessi (Besi); Zibda (Zedr), north of Mescue; and, approaching the Atlantic, Mount Ion (Iov Poet.), and Dauchis (Dagitis). In a line with the Chariot of the Gods, and northward of the line of Bardesut, were the elevations Araliae (A Araloi Poet.) and Araunas (A Auranus Poet.), the latter of which ran down to the equatorial line. Towards the west, the river Thala (Thala Poet.), and, further eastward, the serrated range entitled the Garamantic Pharus or Combe (O Garamantis Pharus), may be regarded as offsets of the Aethiopians highlands. That these mountains contain considerable mineral wealth is rendered probable by their feeding the sources of rivers in the gold region, and from the currencies discovered on their flanks. That they were the cradles of innumerable streams is also certain from the rich pasture and woodland which mark the confines of the equatorial region of Libya Interior.

The voyage of Hanno was undertaken for the purpose of planting upon the coast of the Atlantic trading stations, and to secure with the regions that produced gold, aromatics, &c., the people of Carthage a channel of communication with Carthage than could be maintained across the Sahara. That this trade was materially impeded when the Romans became masters of Africa, is probable, because the conquering people had little genius for commerce, and because they derived the same articles of trade through the more circuitous routes of Egypt and Aethiopia. Yet the knowledge acquired by the Carthaginians was not altogether lost, and the geographers of the empire have left us some important information respecting the western coast of Libya as far as 11° N. lat. According to Ptolemy, the principal promontories were, beginning from the...
scends into the Atlantic from the Theduh Ochena, a little N. of the Hippodrome of the Aethiopians (Ἄθωνιας), or Cape Rasco, with which terminates the geographer Ptolemy's itinerary of the Libyan coast. He mentions, indeed, a few rivers that run into the interior which have no outlet to the sea, but form vast inland lakes. These are, probably, either tributaries of the Niger, or the upper portion of the arms of the Niger itself; but the course of the streams that flow southward to Nigrius and the Sight of Benim belongs rather to modern than to ancient geography. It is worthy of notice, however, that the large mahses or rock-houses of the Sabaks, of which Nigrius must have reached the ears of the old geographers (Agathem. ii. 10; Plin. v. i. 1. 1), since they ascribe to the Ger or Gir (Tab. Ptolemae. Girina) a course of more than 300 miles, with a further curvature to the N. of 100, where it ends in the lake Chelonides. The direct mainstream was represented as diving underground, reappearing on the surface, and finally discharging itself into a lake called Nuba.

Libya, indeed, "is a region of extensive lakes; of which there appear to be a great number on the lowlands of its east coast, in which many of the rivers from the edge of the table-land terminate." (Somerville, Physical Geog. vol. ii. p. 28.) In Libya the Nile, the Nile of the Greeks, was the only stream that contributed to the lakes of the interior; and even its affluents were ancient:—The Tritonias (Aschyl. Eumen. 289; Pindar, Pyth. iv. 36; Sclav. p. 49; Herod. iv. 178); the lake of the Hesperides (Strab. xvii. p. 836); the lake Palus, which was connected with the Niger by one of its tributaries; the Clorina, near the eastern flank of the Mount Rysaudiun; the Nigritis, into which the upper portion of the Niger flowed, probably the present Dibba of the Arabs, or the Black-Water, SW. of Timbuctoo; the Nuba, in which the river Ger terminates, and which answers to Lake Tchad, or Nou in Bornos, and whose dimensions almost entitle it to the denomination of a fresh-water sea; and lastly, the cluster of lakes named Chelonides, perhaps the modern Fittre, into which the Nile falls from the headlands of the Messe or Massaiet. (Polyb. l. c.) In Mount Caphas arises a more considerable stream than any of the above-mentioned, the modern Rio de Ouro, the ancient Daradus (Δαράδος, Δαράς), which contained crocodiles, and discharged itself into the Sinus Magnus. The appearance of the crocodile in this river in the dark population which inhabited its banks in common with those of the Niger, led many of the ancient geographers to imagine that the Nile, wherein similar phenomena were observed, took a westerly course S. of Meroe, and, crossing the continent, emptied itself a second time into the sea in the extreme west. The Aethiopians Hesperil were among the consequences of this fiction, and were believed to be a pure race with those ancient inhabitants of the Nile. Next in order southward was the Stachir (Στάχυς), which rose in Mt. Rysaudun, and, after forming the Lake Clonia, proceeded in a SE. direction to the bay of the Hesperides. The Stachir is probably represented by the present St. Antonio river, or Rio de Ocuam, and seems to answer to the old Rh. Polibus, which, after the massa's load sold at Timbuctoo for eighty ducats. The neighbourhood of the lakes is also celebrated for the number and luxuriance of its date trees. To the borders of the Desert the date tree is what the bread-fruit tree is to the South Sea islands. Its fruit is food for both men and cattle; it was capable of being preserved for a long time, and conveyed to great distances; while, from the sap or fruit of the tree (Rennell, Exped. of Cyrus, p. 120) was extracted a liquor equally intoxicating with wine.

Population.—Herodotus (iv. 168—199) distinguishes four main elements in the population of Libya;—(1) the Libyans, (2) the Aethiopians
LIBYA.

LIBYCAM MARE.

(3) the Phoenicians, and (4) the Greeks. He enumerates, moreover, a considerable number of indigenous tribes, and his catalogue of them is greatly increased by subsequent writers, e.g. Sclavus, Hanno, Polybius, and Ptolemy. Moreover, we would assign to these a generic connection, or a local habitat, the insurmountable difficulty meets us which ever attends the description of nomad races; ignorance of their language, of their relations with one another, and their customary or proper districts. The Greek geographers, in their efforts to render the names of the barbarians as homogeneous as possible, are, in many cases, guided by the prevailing colours, not merely in birds and beasts but also in reptiles and insects. In consequence of the extension of this barren region from North Africa through Arabia to Persia and India, many similar species of animals are common to both continents,—as the ass, antelopes, leopards, panthers, and hyenas. The cat tribe prevails in the beauty and variety of the most formidable of his species. The African elephant is different from the Asiatic, and has always been preferred to it for the purposes of military. The hippopotamus, which was known to the ancients as the inhabitant of the Senegal and the Upper Nile, appears to be a different species from that which is found in the inter-tropical and southern parts of the continent. The magot or Barbary ape was known to the ancients, and is mentioned by the Byzantine writers as imported for the menageries of Constantinople. The giraffe or camelopard is found as far north as the Great Desert. It appears on the monuments of Asyut, and was exhibited in the imperial triumphs at Rome. The Atlas region contains two kinds of fallow-deer, one of which is the common fallow-deer of Europe. The ox of Nubia, Abyssinia, and Borrow is remarkable for the extraordinary size of its horns, which are sometimes two feet in circumference at the root. Of the Libyan animals generally it may be remarked, that while the species which require rich vegetation and much moisture are found in the Atlas valleys and the plains below them, the Desert abounds in such kinds as are content with scanty herbage,—such as the deer, the wild ass, and the antelope. These being fleet of foot, easily remove from the scorched to the green pasture, and find a sufficient supply of water in the oases of the river beds. As regards the flora, the northern coast of Libya, and the range of the Atlas generally, may be regarded as a zone of transition, where the plants of southern Europe are mingled with those peculiar to Africa. The Greek and Phoenician colonists built their naval armaments of the pine and oak of Mount Atlas, the Aleppo pine and the sandalwood or Thuya articulata, being celebrated for their nobility, durability, and relative to the camels.

For the authorities upon which this account of Libya rests, see, besides the ancient writers already cited, the travels of Shaw, Hornemann, Burchhardt; Ritter's Erdkunde, Africa; Heeren, Ideen, vol. i.; Mannert's Geographic, Libya; and Malebran, Africa.

LIBYARCHAE. [MARMARIACA.]

LIBYCI MONTEs. [AEGYPUS, p. 37; CALES.]

LIBYCAM MARE (νως Λιβυκος νερους, νως Λιβυκος), was the name applied to that part of the Mediterranean which washed the shores of N. Africa, from the E. coast of Africa Proopia on N.
LIBYCUS NOMOS.

the W. to the S. shores of Crete, and the frontier of Egypt, on the E., where it joined the Mars Ascygium; the two Syrtes belonged to it. (Strab. ii. pp. 129, 128, x. pp. 475, 488; Agathem. i. 9, ii. 14; Dion. Per. 104; Mela, i. 4, ii. 7; Plin. v. 1; Florus, iii. 6. § 10.)

LIBUCUS NOMOS. [MARMARICA.]

LIBYPHÖNOCES (Λιθυφωνες, sometimes Λιθυφωνεα, a proper name of the population of N. Africa, who are defined by Livy, in accordance with the signification of their name, as "mixtum Punicum Afric genus" (Livy. xxi. 22). Diodorus gives a somewhat fuller account of them, as one of the four races who inhabited the Carthaginian territory in N. Africa, namely, the Punic inhabitants of Carthage, the Libyphonicans, the Libyrians, and the Numidians; and he says that the Libyphonicans possessed many of the cities on the seashore, and had the tie of intermarriage with the Carthaginians (Diod. xx. 55). Pliny restricts them to the S. part of the ancient territory of Carthage. (Plin. v. 4. s. 3: Libyphonicæ vocantur quia Byzantii incolunt); and there can be no doubt, from this, and the case, that the original seat of the race was in the country around Carthage. It is not, however, equally clear whether the Libyphonicans of the Carthaginian colonies along the coast of Africa are to be regarded as a race arising out of the intermarriage of the original Punic settlers with the natives of the surrounding country, or as the descendants of the Libyphonicans from the country around Carthage, who had been sent out as colonists. The latter is the more probable, both from indications which we find in the ancient writers, and from the well-known fact that, in all such cases, it is the half-breed which multiplies rapidly, so as to make it a matter of importance for the members of the pure and dominant races to find a check for the increasing numbers of the race below them. That such was the policy of Carthage with regard to the Libyphonicans, and moreover that they were marked by the energy and success which usually distinguishes such half-bred races, we have some interesting proofs. The defence of Agrigentum against the Romans, during the Second Punic War, was made by the Libyphonicans, and by the sons of Mutine, a Libyphonician of Hipponium, whom Livy describes as "vir impiger, at sub Hannibalis magistro omnes bellis artis edoctus" (Livy xxx. 40). The mention of his native place, Hipponium, on the Bruttian coast, a city which had been some time in the hands of the Carthaginians, is a proof of the tendency to make use of the race in their foreign settlements; while the advantage taken by Hannibal of his talents agrees with the fact that he employed Libyphonician cavalry in his armies. (Polyb. iil. 33; Liv. xxi. 22.) Niebuhr has traced the presence of Libyphonicans in the Punic settlements in Sardinia, and their further mixture with the Sardinians, as attested by Cteso in an interesting fragment of his De Scyth. Annales (Lechese on Anc. Geog. vol. ii. p. 275.) Avienus mentions the "wild Libyphonicans" on the S. coast of Spain, E. of Calpe. (Or. Mar. 419.) Perhaps the half-bred races of the Spanish colonies in America furnish the closest analogy that can be found to the Libyphonician subjects of Carthage. (Cteso on Anc. Geog. vol. ii. p. 275.)

LIGER.

as the place containing the tomb of the great Hannibal. (Plut. Flam. 20; Steph. B. s. v.; Plin. B.H. v. 43; Amm. Marc. xxi. 9; Iuptr. iv. 11; Justin. Ant. p. 139; Iust. Hist. p. 572.) In Pliny's time the town no longer existed, but the spot was noticed only because of the tumulus of Hannibal. According to Appian (Syr. 11), who evidently did not know the town of Lirias, a river of Phrygia was called Lirias. Some say that from its sour- redounding country received the name of Libyssus. The slight resemblance between the name Libyssus and the modern Ghedeh has led some geographers to regard the latter as the site of the ancient town; but Leake (Aria Minor, p. 9), from an accurate computation of distances, has shown that the modern Maldehyse is much more likely to be the site of Libyssus.

LIGIATII, or LIGICATII (Λικιατιον, or Λικιατιον), a tribe of the Vindelici, dwelling on the banks of the river Licias or Lucis, from which they derived their name. (Ptol. ii. 18. § 1) Strabo (iv. p. 206) mentions them among the most audacious of the Vindelician tribes. Pliny (iii. 24), who calls them Libyssins, says that a town being among the Alcipians was subjugated by Augustus. (Strab. iv. 60, ix. p. 426; Plin. iv. 12. a. 20; Leakes, Northern Greece, vol. ii. p. 177.)

LICIAS, LICUS (Λικιας : Lech), a small river in Vindelicia. (Ptol. ii. 12. § 2, 13; 1; Ven. Fort. Vib. S.Mart. iv. 641.) It assumed the modern form of its name as early as the time of the Lombards, (Vib. Test. A. Dic. Longob. ii. 18.) Its only tributary of any note is that of the Virdo or Vindula, which has its sources in the Alps, and, flowing in a northern direction, empties itself into the Danube, not far from Drusomagus.

LICINIANA. [LUBITANIA.]

LIDE (Λυδη), a mountain in Caris, in the neighbour- bhood of Peliasa. In the war of Cyprus against the Persians, in 492, the Persians maintained themselves against Harpalus, the Persian commander, by fortifying themselves on Mount Lide; but in the end they were also reduced. (Herod. i. 175, viii. 104.)

LIGAUNI, a people of Gallia Narbonensis, mentioned by Pliny (iii. 4): "Regio Oxubiorum Liganonorum: super quo Suestri, ecc." The next Re- gio to the east that he mentions is "Regio Deci- satium." If we can make a safe conclusion from Pliny's text, the Liganii must have been close to the Oxubii, with the Deciates to the east, and somewhere between the Argenteus river and Antipolis. Walckenaer (Céog. Go. vol. ii. p. 42) places the Liganii in the parts about Saint-Vallier, Caillic, and other places.

LIGER, LIGERIS (Λιγερης, Άρος: Loire), a river of Gallia, which has the largest basin of all the French rivers. The orthography seems to be Liger or Ligerus (Caes. iii. 9, ed. Schneider), though the Romans made both syllables short. In Caesar (viii. 55), the nominative "Liger" occurs, and the genitive "Ligerum." In B. G. vii. 11, the accusative "Ligerem," or according to some editions "Ligerin" occurs; and "Ligerem," if it is right, must have a nominative "Ligeria." The forms "Ligere," "Li-
LIGURIA.

189

the source of the Loire, and on the north-west side of the Cévennes. It flows north through the fertile Lausanne & Aversine, and after a course of about 300 miles joins the Loire at Neuvionnum or Neuvirnum (Nemurs). The Loire rises in Mont Mesene, and flows north to its junction with the Allier in a valley between the valley of the Allier and the basin of the Rhone. From Nemurs the course of the Loire is north-west to Genabum (Orleans); and from Orleans it has a general course to the ocean, which it enters below Nantes. The whole length of the river is above 500 miles. Several large rivers flow into it on the left side below Orleans; and the Mayenne on the right side below Tours. The area of this river-basin is 50,000 square miles, or as much as the area of England. The drainage from this large surface passes through one channel into the sea, and when the volume of water is increased by great rains it causes inundations, and does great damage

[L. G.]

LIGURES. [Liguria.]

LIGURES BAEBIA'NI ET CORNELIANI [HiRIPINL.

LIGURIA (Argyrope, Plut.; but in earlier Greek Argyropevos: by the Romans Ligures; but the adjective form is Ligusticus), one of the provinces or regions of Northern Italy, extending along the N. coast of the Tyrrhenian sea, from the frontiers of Gaul to those of Etruria. In the more precise and definite sense in which the name was employed from the time of Augustus, it included the country which the geographers (Strabo, Pliny, Ptolemy, &c.) Liguria was bounded by the river Varus on the W., and by the Macra on the E., while towards the N. it extended across the chain of the Maritime Alps and Apennines as far as the river Padua. The Trebi, one of the conurbations of the Padus on its right bank, appears to have formed the limit which separated Liguria from the region of the river Lambro, from Gallia Cispadana. In this sense, Liguria constituted the ninth region of Italy, according to the division of Augustus, and its boundaries were fixed by that monarch. (Pllm. ill. 6. s. 7; Strab. v p. 218; Mel. ill. 4. § 9; Ptol. iii. 1. § 3.)

But Liguria, in its original sense, as "the land of the Ligurians," comprised a much more extensive tract. All the authors are agreed in representing the tribes that occupied the western slopes of the Maritime Alps and the region which extends from thence to the sea at Massilia, and as far as the mouths of the Rhone, as of Ligurian, and not Gaulish origin. Thus Asceylus represents Hercules as contending with the Liguriones on the stony plains near the mouths of the Rhone, Herodotus speaks of Ligurians inhabiting the country above Massilia, and Hecataeus distinctly calls Massilia itself a city of Liguria, while he terms Narbo a city of Gaul. Scylax also assigns to the Ligurians the coast of the Mediterranean sea as far as the mouths of the Rhone; while from that river to Etruria in Spain, he tells us that the Ligurians and Iberians were intermingled. The Hecataeoi, who, according to Asceylus, were the earliest inhabitants of the country around Narbo, were, according to Hecataeus, a Ligurian tribe. (Asceyl. op. Strab. iv. p. 183; Hecat. Fr. 19, 20, 22, ed. Klausen; Herod. v. 9; Scyl. p. 2. §§ 3, 4; Aris. Or. Marit. 584; Strab. iv. p. 203.) Thucydides also speaks of the Ligurians having expelled the Suebi, an Iberian tribe from the banks of the river Sicamus, in

N 4
LIGURIA.

Liguria, thus pointing to a still wider extension of their power. (Thuc. vi. 2.) But while the Ligurian settlements to the W. of the Rhone are more obscure and uncertain, the tribes that extended from that river to the Maritime Alps and the confines of Italy—the Salyes, Oxybii, and Delphii—were as ancient and vigorous as the Ligurians proper. (Strab. iv. pp. 202, 208; Pol. xxxiiii. 7, 8.) On their eastern frontier, also, the Ligurians were at one time more widely spread than the limits above described. Polybius tells us that in his time they occupied the sea-coast as far as Pisa, which was the first city of Etruria; and in the interior they held the mountain districts as far as the confines of the Arretines. (Pol. ii. 16.) In the narrative of their wars with Rome in the 2nd century B.C., as given in Livy, we find them extending to the same limits; and Lyophron represents them at a much earlier period as stretching far down the coast of Etruria, before the arrival of the Tyrrhenians, who wrested from them by force of arms the site of Pisa and other cities. (Lyophr. Ann. 1356.) The population of Corsica also is ascribed by Seneca, and probably with good reason, to a Ligurian stock. [Corseca.] On the N. of the Apennines, in like manner, it is probable that the Ligurians were far more widely spread, before the settlement of the Gauls, who occupied the fertile plains and drove them back into the mountains. Thus the Lessi and Libici, which occupied the banks of the Ticinus, appear to have been of Ligurian race (Plin. iii. 17. a. 21; Liv. v. 35): the Taurini, who certainly dwelt on both banks of the Padus, were unquestionably a Ligurian tribe; and there seems much reason to assign the same origin to the Salassi also.

In regard to the national affinities or origin of the Ligurians themselves, we are almost wholly in the dark. We know only that they were not either Iberians or Gauls. Strabo tells us distinctly that they were of a different race from the Gauls or Celts who inhabited the rest of the Alps, though they resembled them in their mode of life. (Strab. ii. p. 128.) And the same thing is implied in the marked distinctions which appear between the Ligurian and the Roman writers between the Gaulish and Ligurian tribes, notwithstanding their close geographical proximity, and their frequent alliance in war. Dionysius says that the origin and descent of the Ligurians was wholly unknown, and Cat. appears to have acquiesced in a similar conclusion. (Dionys. l. 10; Cato, op. Serv. ad Ann. xi. 715.) But all ancient authors appear to have agreed in regarding them as one of the most ancient nations of Italy; and on this account Philistus represented the Siculi as a Ligurian tribe, while other authors assigned the same origin to the Aborigines of Latium. (Dionys. l. 10, 22.) Several modern writers have maintained the Celtic origin or affinity of the Ligurians. (Grotth. vol. pp. 49—51; Gresend. Alp.-Italens, vol. ii. pp. 5—7.) But the authority of Strabo seems decisive against any close connection between the two races: and it is impossible, in the absence of all remains of their language, to form even a reasonable conjecture as to their more remote affinities. A fact mentioned by Flutarch (Mar. 19), according to whom the Ligurians preserved the name and language of the Ariminians, who identified themselves in their own language Ambrothnuns, though curious, is much too isolated and uncertain to be received as reasonable proof of a common origin with the Gauls of that name.

The name of the Ligurians appears to have been obscurely known to the Greeks from a very early period, for even Herodotus noticed them, in conjunction with the Scythians and Aethiopians,—evidently as one of the most distant nations of the then known world. (Herod. vi. p. 300.) But from the time of the foundation of the flourishing Greek coloniae of Massilia and Massilia Cornus, which received not only its commerce but its colonies along the shores of Liguria, as well as those of Iberia, the name of the Ligurians must have become familiar to the Greeks, and was, as we have seen, well known to Hecataeus and Aeschylus. The Ligurians seem also from an early period to have been ready to engage as mercenary troops in the service of more civilised nations; and we find Ligurian auxiliaries already mentioned in the great army of the Carthaginian general HAMILCAR, in b.c. 480. (Herod. vii. 165; Diod. xii. 1.) The Greek despot in Sicily continued to recruit their mercenary forces from the same quarter as late as the time of Agathocles. (Diod. xii. 3.) The Greeks of Marseilles founded colonies along the coast of Liguria as far as Nicea and the Portus Herculis Moncesti, but evidently never established their power far inland, and the mountain tribes of the Ligurians were left in the enjoyment of undisturbed independence.

It was not till the year 237 B.C. that the Ligurians, for the first time, came into contact with the arms of Rome; and P. Lænius Cæninius, one of the consuls of the following year, was the first who celebrated a triumph over them. (Eutrop. iii. 2; Liv. Epit. xx. Fast. Capit.) But the successes of the Romans at this period were evidently very partial and incomplete, and though we find one of the consuls for several years in succession sent against the Ligurians, and the name of that people appears three times in the triumphal Fasti (s.c. 235—233), it is evident that nothing more was accomplished than to prevent them from keeping the field and compel them to take refuge in the mountains (Zonar. viii. 18, 19). The Ligurian tribes with whom the Romans were at this time engaged in hostilities were exclusively those on the N. of the Apennines, who appear to have been, or to have been connected with, the Gaulish tribes of the Boians and Insubrians. These petty hostilities were for a time interrupted by the more important contest of the Second Punic War. During that struggle the Ligurians openly sided with the Carthaginians; they sent support to Hannibal, and furnished an important contingent to the army with which Hasdrubal fought at the Metaurus. Again, before the close of the war, when Massilia landed in their territory, and made it the base of his operations against Cisalpine Gaul, the Ligurians espoused his cause with zeal, and prepared to support him with their whole forces (Liv. xxii. 33, xxvii. 47, xxviii. 46, xxix. 5). After the untimely fate of Massia, and the close of the war, the Romans were rewarded with the conquest of all the Ligurian tribes for their defection; but those nations were the first to take up arms, and, at the instigation of the Carthaginian Hannibal, broke out into open hostilities, (s.c. 200,) and attacked the Roman colonies of Placentia and Cremona. (Liv. xxxi. 10.)

From this time commenced the long series of wars between the Romans and Ligurians, which continued with little intermission for more than eighty years. It would be impossible to give here any detailed account of these long protracted, but desultory hostilities; indeed we possess, in reality, very little information concerning them. So long as the books of Livy are pre
LIGURIA.

to us, we find perpetually recurring notices of campaigns against the Ligurians; and while the Roman arms were overthrowing the powerful empires of Macedonia and Syria in the East, one, and sometimes both, of the consulats were engaged in petty and inglorious hostilities with the hardy mountaineers of Liguria. But the annal records of these campaigns for the most part throw little light on the true state of the case or the progress of the Roman arms. It is evident, indeed, that, notwithstanding the often repeated tales of victories, frequently celebrated at Rome by triumphs, and often said to have been followed by the submission of the whole Ligurian nation, the struggle was really an arduous one, and it was long before the Romans could make any real progress in the reduction of their territory.

One of the most formidable and powerful of the Ligurian tribes was that of the Apuanis, who inhabited the loftiest group of mountains bordering on Etruria, and appear to have occupied the valleys of the Mastra and Annaus (Moysus and Serchio), while they extended their possessions up the Apennines to the frontiers of the Arretines and the territory of Matina and Bononia. To oppose their inroads, the Romans generally made Pisae the head-quarters of one of their armies, and from thence carried their arms into the heart of the mountains: but their successes seldom effected more than to compel the communality to evacuate their villages and castles, of which the latter were mountain fastnesses in which they were generally able to defy the Roman arms. It was not till a. c. 180 that the first effective step was taken for their reduction, by the consuls Cornelius and Beebius, who, after having compelled them to a nominal submission, adopted the expedient of transporting the whole population (to the number of 40,000, including women and children) to a distance from their own country, and settled them in the heart of Samnium, where they continued to exist, under the name of "Ligures Corneliani et Beebiani," for centuries afterwards. (Liv. xliii. 41.) The establishment of Roman colonies at Pisae and Luca a few years after the above events, served to oblige the Apuanis to evacuate the country they had obtained, and established the Roman dominion permanently as far as the Mastra and the port of Luca. (Id. xlvi. 32, xliii. 13.) The Freintias, a tribe on the N. of the Apennines, near the sources of the Scultenna (Paseore), had been reduced to subjection by C. Flaminius in a. c. 187, and the obscure tribes of the Brinatani, Gurrli, Erciates, and Lepulini appear to have been finally subdued in a. c. 175. (Id. xxxix. 2, xlii. 19.) The Ingauini, one of the most powerful tribes on the coast to the W. of Genoa, had been reduced to nominal submission as early as a. c. 161, but appear to have been still very imperfectly subdued; and they, as well as their neighbours the Intemelli, continued to harass the territory of Etruria, as may be seen from the works of the Maselliani, by piratical expeditions. (Liv. xl. 25-30, 41.) In a. c. 175 the Statelli were reduced to subjection (Id. xliii. 9), and the name of this people, which here appears for the first time, shows that the Romans were gradually, though slowly, making good their advance towards the W. In the absence of the works of Livy, we are unable to trace the Ligurian wars in any detail, but we find triumphs over them still repeatedly recorded, and it is evident that they were still unsubdued. In a. c. 154 the Romans for the first time attacked the Ligurian tribes of the Oxybi and Deciates, who dwelt W. of the Varus, and were therefore not included in Italy, according to its later limits. (Liv. Epit. xlviii.; Polyb. xxxiii. 7.) It was not till more than thirty years afterwards (a. c. 123-122) that two successive triumphs celebrated the reduction of the more powerful tribes of the Voscenti and Gallianni, both of which inhabited the same neighbourhood. But while the Ligurian tribes W. of the Maritime Alps were thus brought gradually under the Roman yoke, it appears that the subjection of those in Italy was still incomplete; and in a. c. 117, Q. Marcus for the last time earned a triumph "de Liguribus." (Post. Capit.) Even after this, M. Aemilius Scaurus is said to have distinguished himself by fresh successes for them; Gaul and the construction by him (a. c. 109) of the Via Asculia, which extended along the coast from Luca to Vada Sabinata, and from thence inland across the Apennines to Dertona, may be considered as marking the period of the final subjugation of Liguria. (Strab. v. p. 217; Aur. Vict. de Vir. Illust. 72.) But a remarkable exception to this rule was Strabo, who states that, after eighty years of warfare, the Romans only succeeded in securing a space of 12 stadia in breadth for the free passage of public officers, shows that even at this time the subjection of the mountain tribes was but imperfect. (Strab. iv. p. 203.) Those which inhabited the Maritime Alps, indeed, were not finally subdued till the time of Augustus, a. c. 14. (Dion Cass. liv. 84.) This latter, however, was completely effected at the time that Strabo wrote, and Liguria had been brought under the same system of administration with the rest of Italy. (Strab. l. c.) The period at which the Ligurians obtained the Roman franchise is unknown: it is perhaps probable that the towns obtained this privilege at the same time as all the other parts of Augustus (a. c. 89); but the mountain tribes, even in the days of Pliny, only enjoyed the Latin franchise. (Plin. iii. 20. a. 24.)

In the division of Italy under Augustus, Liguria (in the more limited sense, as already defined) constituted the ninth region (Plin. iii. 5. a. 7), and its boundaries on the E. were fixed by the line of the Po. W. its limits were extended and continued unchanged throughout the period of the Roman Empire; but the Cottian Alps, which in the time of Augustus still constituted a separate district under their own native chief, though dependent upon Rome, and, from the reign of Nero to that of Constantine, still formed a separate province, were incorporated by Constantine with Liguria; and from this period the whole of the region thus constituted came to be known as the Alfæ Cottæ, while the name of Liguria was transferred (on what account we know not) to the eleventh region, or Gallia Transpadana [Italia, p. 93]. Hence we find late writers uniformly speaking of Mediolanum and Ticinum as civitates Liguriae, while the real land of the Ligurians had altogether fallen into the hands of the Taurini, and the area of the Ligurians, as fixed by the Roman author, was but the country only as the province of the Cottian Alps." (Lüb. Provinc.; P. Dac. Hist. Lang. ii. 16, 16; Journ. Get. 30, 42; Procop. B. G. i. 14; Bücking, ad Not. Dign. ii. pp. 442, 443.) It is evident that long before this change took place the Ligurians must have lost all traces of their distinct nationality, and become blended into that amorphous mass with the other Italian subjects of Rome.

Liguria is throughout the greater part of its extent a mountainous country. The Maritime Alps, which formed the western boundary, descend completely to the sea in the neighbourhood of Nice and
LIGURIA.

Monaco, while the main chain of the same mountains, turning off from the general direction of the central chain of the Alps near the sources of the Var (Varus), is prolonged in a lofty and rugged range till it reaches the sea between Noli and Savona. The lateral ranges and offshoots which descend from these mountains to the sea, occupy the whole line of coast from Monaco to Savona. Hence this line has always been one where there has been much difficulty in making and maintaining a practicable road. It was not till the reign of Augustus that the Romans carried a highway from Vada Sabata to Antipolis; and in the middle ages, when the Roman roads had fallen into decay, the whole of this line of coast became proverbial for the difficulty of its communications. (Dante, Purg. iii. 49.) From the neighbourhood of Vada Sabata, or Savona, where the Alps may be considered to end and the Apennines to begin, the latter chain of mountains runs nearly parallel with the coast of Liguria throughout its whole extent as far as the river which descends from the range of the Apennines is far inferior in elevation to that of the Maritime Alps, they nevertheless constitute a mountain mass of a rugged and difficult character, which leaves scarcely any level space between the foot of the mountains and the sea. The northern declivity of the Apennines is less abrupt, and the mountains gradually subside into ranges of steep reddish hills as they approach the plains of the Po; but for this very reason the space occupied by the mountainous and hilly tract is more extensive, and constitutes a broad belt or band varying from 15 to 30 miles in width. The narrowest portion of the range, as well as one of the lowest, is immediately at the back of Genoa, and for that reason the rapid descent of the Po and the plains of Genoa and Genitto are as ancient as well as modern times one of the principal lines of communication with the interior. Another natural pass is marked out by a depression in the ridge between the Maritime Alps and Apennines, which is crossed by the road from Savona to Cervia. This line of road communicates with the plain at the foot of the Maritime Alps, extending from the neighbourhood of Cervia and Mondovi to that of Turin, which is one of the most extensive tracts of fertile and level country comprised within the limits of the ancient Liguria. E. of this, the hills of the Astigiana and Montferrat extend from the foot of the Apennines (of the northern slopes of which they are, in fact, a mere continuation) quite to the bank of the Po; but are of moderate elevation and constitute a fertile country. Beyond these, again, another tract of plain occurs, but of less extent; for though it runs far up into the mountains near Novi, it is soon hemmed in again by the hills which descend to Tortona (Dorona), Voghera (Iria), and Casteggio (Clastidium), so as to leave but a narrow strip of plain between the hills and the banks of the Po.

The physical features of Liguria naturally exercised a marked influence on the character and habits of its inhabitants. It was with the tribes who occupied the lofty and rugged ranges of the Apennines E. of the Macra (where these mountains rise to a much greater elevation, and assume a much more Alpine character, than in any part of Liguria proper) that the Romans waged their longest and most obstinate contests; but all the tribes who inhabited the upper valleys of the central chain, and the steep and rugged declivities of the Apennines towards the sea, partook of the same hardy and warlike character. On the other hand, the Stazelli, Vaglianni, and other tribes who occupied the more fertile hills and valleys on the N. declivity of the Apennines, were evidently reduced with comparatively little difficulty. It is to the former portion of the Ligurian people that the character and description of them which we find in ancient writers may be almost exclusively applied. Strabo says that they dwelt in scattered villages, tilling the soil with difficulty, on account of its rugged and barren character, so that they had almost to quarry rather than dig it. But their chief subsistence was derived from their herds, which supplied them with flesh, cheese, and milk; and they made a kind of drink from barley. Their mountains also supported a great abundance and of the largest size. Genus was their principal emporium, and thither they brought, for export, timber, cattle, hides, and honey, in return for which they received wine and oil. (Strab. iv. p. 202, v. p. 218; Diod. v. 59.) In the days of the geographer they produced but little wine, and that of bad quality; but Pliny speaks of the Ligurian wines with commendation. (Strab. p. 209; Plin. xiv. 6. 8.) The nature of their country and the life they led insured them to hardship ("assentum malo Ligurum," Virg. G. ii. 168; "Ligures montani duri et agrenses," Cic. de Leg. Agr. ii. 35); and they were distinguished for their agility, which admirably fitted them for the kind of warfare in which they so long maintained against the Romans. Cato gave them the character of being treacherous and deceitful,—an opinion which seems to have been generally adopted by the Romans (Serv. ad Aen. xi. 700, 715), and must naturally have grown up from the nature of the wars between them; but they appear to have served faithfully, as well as bravely, in the service of the Romans as mercenaries, and, at a later period, as auxiliaries in those of Rome. (Diod. v. 36; Plut. Mar. 19; Tac. Hist. ii. 14.) The troops they furnished were almost exclusively infantry, and, for the most part, light-armed; they excelled particularly as slingers (Psued. Arist. Mirab. 90); but their regular infantry carried oblong shields, the form of which resembling that of the Germans. (Dio. L.; Strab. iv. p. 208.) During the period of their independence, they not only made plundering incursions by land into the neighbouring countries, but carried on piracy by sea to a considerable extent, and were distinguished for their hardiness and daring as navigators, as well as in all their other pursuits. (Diod. v. 39; Liv. xii. 18, 28.) The mountain tribes resembled the Gauls and Germans in the custom of wearing their hair long; on which account the wilder tribes, which were the last to maintain their independence, were known as the Ligures Capillati or Comati (Alysson Koulai, Dion Cass. liv. 24; Plin. iii. 20. 4. 24; Lucan, i. 442); and the cropping their hair was regarded as a proof of their attachment to the ancient Ligurian tribes. (Diod. v. 39; Liv. xii. 18, 28.) Among the more peculiar natural productions of Liguria are noticed a breed of dwarf horses and mules, called by the Greeks γυμοί; and a kind of mineral resembling amber, called ἀργυρώβορος, which appears to have been confounded by Theophrastus with genuine amber. (Strab. iv. p. 202; Theophr. de Leg. ¶§ 36, 28.)

The Ligurians were divided, like most nations in a similar state of society, into a number of tribes, which appear to have had little, if any, political bond of union beyond the temporary alliances which they might form for warlike objects; and it is evident, from the account of the wars carried on by
Liguria.

with them the Romans, that these leagues were extremely variable and partial. The names of many of the different tribes have been transmitted to us; but it is often difficult, or impossible, to determine with any degree of certainty the situation or limits of their respective territories. It is probable, as pointed out by Pliny, these limits themselves varied much at different times (Plin. iii. 5. 6), and many of the minor tribes, whose names are mentioned by Livy in the history of the Roman conquest of Liguria, seem to have at a later period disappeared altogether. The only tribes concerning whom we have any tolerably definite information are:—1. the Aventini, in the valley of the Macra, and about the Portus Lunae; but the greater part of the territory which had once belonged to this powerful tribe was not included in Roman Liguria. 2. The Bruttii, who may be placed with much probability in the upper valley of the Scultena, or Poramaro, on the N. slope of the Apenines towards Mutina (a district still called Pragno); so that they also were excluded from the territory by the later sense of the term. 3. The Bruttii may perhaps be placed in the valley of the Varo, the most considerable affluent of the Magra, called by Ptolemy the Boacetis. 4. The Genuates, known to us only from an inscription [Genesu], were obviously the inhabitants of Genus and its immediate neighbourhood. 5. The Vetulii, mentioned in an inscription, adjoined the Genuates on the W., and were apparently separated from them by the river Paruma, or Polopenna. 6. The more powerful and celebrated tribe of the Inoan[ici] may be placed with certainty on the coast near Albenga (Albium Ingannum), though we cannot fix their limits with any precision. 7. The Intemelli occupied the coast W. of the Ingannii; their chief town was Albium Intemelium, now Vintimigia. 8. The Veientani inhabited the country on both sides of the Varus, as their name is evidently retained by the town of Vence, some miles W. of that river; while Cemenelium, about 5 miles to the E. of it, also belonged to them. (Plin. iii. 5. 7.)

Liguria.

on the N. side of the Apenines. These are the Celelata, Cerdicata, and apparently the Livates also. (Liv. xxxii. 39, 31.) The Etnumterui are mentioned also by Livy (xxviii. 46) as a tribe who occupied the mountains above the Ingannii; but no subsequent mention of them occurs. In addition to these, Livy notices the Garuli, Hercatores, and Lapicini, as situated on the S. side of the Apenines (xii. 19), but we have no further clue to their position. Pliny also enumerates (iii. 5. 7.) among the Ligurian tribes on the Italian side of the Alps, the Veneti, Bimbelli, Magelli, Casmonates, and Veleates, of which the last doubtless occupied the country around Velesa, the ruins of which still remain about eighteen miles S. of Placentia. The others are wholly unknown, and the names themselves vary so much in the MSS. as to be of very doubtful authority.

The coast of Liguria, as already described, is bordered closely throughout its whole extent by the ranges of the Maritime Alps and Apenines, which for the most part rise very sharply from the sea shore, in other places leave a narrow strip of fertile territory between their foot and the sea, but nowhere is there anything like a plain. This steep coast also affords very few natural ports, with the exception of the magnificent bay called the Portus Lunae (now the Gulf of Spezia) near its eastern extremity, which is one of the most commodious and secure harbours in the Mediterranean. The port of Genoa also caused it to be frequented from the earliest times as a place of trade (Strab. iv. p. 202), while the Portus Herculis Monoei (Monaco), though small, was considered secure. It is singular that the much more spacious and secure harbour of Villefranche, in the same neighbourhood, is not mentioned by any ancient writer, though noticed in the Maritime Itinerary under the name of Portus Olivulam. The same Itinerary (pp. 503, 504) notices two small ports, which it places between this last and that of Monaco, under the names of Aenae and Avisio, which may probably be placed respectively at St. Ospizio and Eze. [Nicaea.] The Portus Maurici of the same Itinerary is still called Porto Mauriaco, a small town about two miles W. of Onega. The rivers of Liguria are not of much importance. From the proximity of the mountains to the S. coast, the streams which descend from them to the sea are for the most part mere mountain torrents, altogether dry in summer, though violent and destructive in winter and after heavy rains. Almost the only exceptions are the two rivers which formed the extreme limits of Liguria on the E. and W., the Macra and the Varus, both of which are large and perennial streams. Next in importance to these is the Rutura or Roya, which flowed through the country of the Intemelli. It rises at the foot of the Col di Tenda, in the Maritime Alps, at about 1400 feet above the sea, from thence to the sea at Vintimigia. The smaller streams on the S. coast were:—the Paul (Paglione), which flowed by the walls of Nicaea (Plin. iii. 5. 7.; Mel. ii. 4. § 9.); the Tavla (Ital. Mord. p. 503) still called the Taggia, between S. Remo and Porto Mauriaco; the Mersula (Plin. l. c.), which still exists; and, lastly, the sea between Onega and Albenga; the Porciferia of Pliny (l. c.), now called the Polopenna, which flows a few miles to the W. of Genoa; the Formentor (l. b.), on the E. of the same city, now the Bussagno; the Entrella (Plut. iii. 1. § 3.), which is probably...
the Lamagna, which falls into the sea at Chiavari; and the Boacites of the same author, which can be no other than the Vox, the most considerable tributary of the Magra. Much more considerable than these, both in the volume of water and length of their course, are the streams which flow from the N. along the plateaus of the Apennines towards the Padus. But of these, the only ones whose names are found in any ancient author, are the Tamaris, or Tanaro, one of the most important of the southern tributaries of the Padus; the Stura, which joins the Tanaro near Pollentia; and the Tiberis, which rises in the Apennines, not far from Genova, and falls into the Po near Susa, forming during a part at least of its course the boundary between Liguria and Gallia Cispadana.

The rivers marked in this part of Italy in the Tabula are so confused, and the names so corrupt, that it is useless to attempt to identify them.

The native Ligurians lived for the most part in mountainous and forested districts ("castella vinque"), Liv. xii. 17; Strab. x. p. 218), and had probably few towns. Even under the Roman government there seem to have been few places which deserved the name of towns along the seacoast, or among the inner ranges of the Apennines; but on the northern slopes of the same mountains, where they approached or opened out into plains, these grew up rapidly and rose to great prosperity, so that Pliny says this part of Liguria in his time, "omnia nobilissimopoppidiso nitent" (Plin. iii. 5. a. 7.). Those which he proceeds to enumerate are: Liburnia (between Arqua and Serravalle), Deritona (Tortona), Irria (Voghera), Barderate (of uncertain site), Industria (at Monferrato), on the right bank of the Po, Polentina (Polenta); Camerata Ponziana (uncertain), Forum Fulvius, called Valentium (Valonea), Augusta Vaghenorum (Bene), Alba Pompria (Alba), Asta (Asi), Aqua Statelli (Acqui).

To these must be added Augusta Taurinorum, which was certainly a Ligurian town, though, from its position on the left bank of the Padus, it is enumerated by Pliny with the cities of the Balcan region, or Gallia Transpadana. In the same district were Forum Vini, in the territory of the Vagheni, and Occhium, now Uzanes, in the valley of Fenestrelles. Seguato (Susa) was probably a Gaulish rather than a Ligurian town. In addition to these may be mentioned Clasticum (Casteggio), which is expressly called by Livy a Ligurian town, though situated on the Gaulish frontier, and Cerna, now Ceva, in the upper valley of the Tanaro. Litibium, mentioned by Livy together with Clasticum (xxii. 29), and Carystum, noticed by the same author as a town of the Stateli (xili. 7.), are otherwise wholly unknown.

Along the coast of Liguria, beginning from the Varus, the towns enumerated by Pliny or Ptolemy are:--Nicara (Nice), Cemenelium (Cimiez), a short distance inland, Portus Herculis Monoceri (Monaco), Albumium Interimellium (Vintimiglia), Albumium Ingainium (Albenga), Vada Sabatia (Vado, near Savona), Genoa, Portus Delphini (Portovenere), Vada Sabatia (as given in Ptol. VIII. 29), Segesta (probably Savona), Portus Venereus (Porto Venere), and Portus Erina (Leivi), both of them on the Gulf of Spezia, which was called as a whole the Portus Lunae [Luna]. The other names enumerated in the Itineraries are for the most part very obscure and uncertain, and many of them, from their very form, are obviously not the names of towns or even villages, but of mere stations or "mutationes." The few which can be determined with any certainty have their modern names annexed in the Itineraries here given.

1. The coast road from the Varus to the Macra is contrary to the Tabula Penninarum:--Varum fl. (Varo).

Cemenelium (Cimiez).

In Alpe Marittima (Turin). Albitinimum (Vintimiglia).

Costa Balanea.

Lucas Borsamia.

Vicos Virginula.

Alba Docilia (Albissola).

Ad Navalla.

Hasta.

Ad Figlinas.

Genoa (Genova).

Rinca.

Ad Solaris (Solaro near Chiavari). Ad Monilia (Moneglia).

In Alpe Pennino.

Boron.

Luna (Luni).

2. The same line of route is thus given (in the contrary direction) in the Itinerary of Antoninus (p. 299).--Luna.

Boceas (probably Boctes fl.; the Varo).

Bodetia.

Tegulia (perhaps identical with the Tugula of Pliny: Tegroso).

Albegana (Portus Albenga; Plin.: Porto Fino).

Genua (Genoa).

Liburnia (Liburnum). Liburnia (Liburnum).

Tortona (Tortona).

Acqua (Acqui).

Crixia.

Canalicum.

Vada Sabata (Vado).

Pulpolisem.

Albegana (Albegna).

Lucas Borsamia.

Costa Balanea.

Albitinimum (Vintimiglia).

Lomonem (Lunense).

Alpe summa (Turin).

Cemenelium (Cimiez).

Varum fl. (Varo).

(The distances given along this line of route are in all itineraries so corrupt and confused that they are omitted ab ovo. For a fuller discussion of the routes in question see Walckenaer, Géographie des Gauls, vol. iii. pp. 18—31; and Serra, Storia dell' antichi Liguri, vol. i. pp. 97—100.)

* It is evident that the Antonine Itinerary here quits the coast road, and makes a sudden turn inland to Dertona, and thence back again by Aquae Statelliab to the coast at Vada Sabata, from whence it resumes the line of coast road. A comparison with the route of Pliny (29), which in which both lines of road are placed side by side, will at once explain how this error originated; and points out a source of corruption and confusion in our existing copies of the Itinerary, which has doubtless operated in many other cases where it cannot now be so distinctly traced.
LIGUSTICUM MARE.

[Text starts here]

3. The most important of the routes in the interior of Liguria, was that leading from Genua island by Liburnum to Dertona, from whence a branch communicated, through Iris and Cornilum, with Placentia; while another branch passed by Aquae Statiliae to the coast at Vada Sabata. (The stations on both these roads have been already given in the previous route.) From Aquae Statiliae another branch led by Pollentia to Augusta Tarinoriorum. (Teb. Pest.) [E. H. B.]

LIGUSTICUM MARE (ον Λιγυστικόν μέρος), Strab. ii. p. 123), was the name given in ancient times to that part of the Mediterranean sea which adjoined the coast of Liguria, and lay to the N. of the Tyrrhenian sea. The name was applied (like all similar appellations) with considerable vagueness, sometimes as limited to what is now called the Gulf of Genoa,—in which sense it is termed the LIGUSTICUS SEVER by Florus (iii. 6. § 9),—at others in a much wider sense, so that Pliny speaks of Corsica as an island "in Ligustico mari." Some of the Greek geographers included under the name the whole extent of the coast from the Po to the These of Maruria, comprising the MARE GALLICUM of the Romans, or the modern Gulf of Lyon. The more limited use of the name seems, however, to have been the more usual, at all events in later times, and is elsewhere adopted by Pliny himself. (Plin. iii. 5. 10, 6. x. 13; Strab. l. c.; Ptol. iii. i. § 5; Agathen. i. 5; Diodor. Per. 76; Frison. Per. 80.) [E. H. B.

LILAIM (Λιλαίαμ), from the Pluto of Phocis, situated at the foot of Mount Parthenus, and at the sources of the Cephissus. (Hom. IL ii. 52, Συμάς ἐν Ἀπόλλω; Strab. ib. pp. 407, 424; Paus. xii. 8. § 1, x. 33, § 3; Stat. Theb. viii. 348.) It was distant from Delphi by the road over Parthenus 180 stadia. (Paus. l. c.) It is not mentioned by the Attic writers (viii. 81) among the towns destroyed by the Persians; whence we may conjecture that it belonged at that time to the Dorians, who made their submission to Xerxes. (Leake, North. Grec. vol. ii. p. 90.) It was destroyed at the end of the Sacred War; but was soon afterwards restored. It was taken by Demetrius, but subsequently threw off the Macedonian yoke, and became a free republic, independent of Athens, as agora, and bathes, with temples of Apollo and Artemis, containing statues of Athenian workmanship and of Pentelic marble. (Paus. xii. 11, § 4; see also x. 3, § 1, x. 8, § 10; Lycoth. 1073; Steph. B. s. v.) The ruins of Lileam, called Paleokastro, are situated about half a mile from the sources of the Cephissus. The entire circuit of the fortification exists, partly founded on the steep descent of a rocky hill, while the remainder encompasses a level space at its foot, where the ground is covered with ruins. Some of the towers on the walls are almost entire. The sources of the Cephissus, now called Kefaloueros (Κεφαλοερέως), are said by Passanides very often to issue from the earth, especially at midday, with the noise of a bell; and Leake, found, upon inquiry, that though the present natives had never made any such observation at Kefaloueros, yet the water often rises suddenly from the ground in larger quantities than usual, which cannot but be accompanied with some noises. (Doddrell, Classical Tour, vol. ii. p. 11; Leake, North. Grec. vol. ii. pp. 11, 84.) Pausanias (iii. 15. § 45) erroneously calls lilies a town of Doris.

LILYBAEUM or LILEKUM (Λιλιβαίον, Λιλεκον), a commercial place (emporium) on the coast of Bithynia, 40 stadia to the east of Dica; but no particulars are known about it. (Arrian, Peripl. p. 13; Anonym. Peripl. 3.) It is possible that the place may have derived its name from the Lileans, which Pliny (H. N. v. 45) mentions among the rivers of Bithynia. [L. 8.]

LILYBAEUM (Λιλιβαίον, Λιλεκον), Eub. Axilekun, L. lilebantusum: Μαρτυς), a city of Sicily, situated on the promontory of the same name, which forms the extreme W. point of the island, now called Capo Boio. The promontory of Lilybaeum is mentioned by many ancient writers, as well as by all the geographers, as one of the three principal headlands of Sicily, from which that island derived its name of Trinacria. It was the most westerly point of the island and that nearest to Africa, from which it was distant only 1000 stadia according to Polybius, but Strabo gives the distance as 1500 stadia. Both statements, however, exceed the truth; the real distance from Cape Boio, the nearest point of the coast of Africa, being less than 90 geog. miles, or 900 stadia. (Pol. i. 5. 19; Strab. i. p. 41; Paus. x. 31; Mel. ii. 7; Plin. iii. 8. 14; Ptol. iii. 4. § 5; Dio. v. 2, xiii. 54; Steph. B. s. v.; Dionys. Per. 470.) The headland itself is a low but rocky point, continued out to sea by a reef of hidden rocks and shoals, which rendered the navigation dangerous, though there was a safe port immediately adjoining the promontory. (Pol. i. 5.; Virg. Aen. iii. 706; En. 6.)

Didoros tells us distinctly that there was no town upon the spot until after the destruction of Motya by Dionysius of Syracuse, in B. C. 597, when the Carthaginians, instead of attempting to restore that city, settled its few remaining inhabitants on the promontory of Lilybaeum, which they fortified and converted into a stronghold. (Diod. xiiii. 54, xiri. 10.) It is, therefore, certain (though one of which we cannot explain the origin) that when that author, as early as B. C. 454, speaks of the Lilybaeans and Segestans as engaged in war on account of the territory on the banks of the river Mazara (Id. xii. 86). The promontory and port were, however, frequented at a much earlier period; we are told that the Carthaginians, who afterwards founded Lipura, landed in the first instance at Lilybaeum (Id. v. 9); and it was also the point where, in B. C. 409, Hannibal landed with the great Carthaginian armament designed for the attack of Selinum. (Id. xiii. 54.) Didoros tells us (l. c.) that on the promontory was a wall (φριβος), from whence the city took its name; this was obviously the same with a source or spring of fresh water rising in a cave, now consecrated to St. John, and still regarded with superstitious reverence. (Ps.-dil. de Reb. Sic. vii. 1; Smyth's Sicily, p. 228.)

It is clear that the new city quickly rose to prosperity, and became an important stronghold of the Carthaginian power, succeeding in this respect to the position that Motya held in the coast of Sicily. Its proximity to Africa rendered it of especial importance to the Carthaginians in securing their communications with Sicily, while the danger which threatened them if a foreign power were in possession of such a fortress, immediately opposite to the gulf of Carthage, led them to spare no pains for its security. Hence the name of Lilybaeum was given to the last bulwark of their power in Sicily. In B. C. 276 it was besieged by Pyrrhus, who had already reduced all the other cities of Sicily, and expelled the Car-
thaginians from all their other strongholds. But they continued to throw in supplies and reinforcements by sea to Lilybaeum, so that the king, after a siege of two months, was compelled to abandon the enterprise as hopeless. (Diod. xxii. 10. Exc. Hoesch. pp. 498, 499.) But it is the memorable siege of Lilybaeum by the Romans in the First Punic War which has given to that city its chief historical celebrity. When the Romans first commenced the siege in the fifteenth year of the war, B.C. 250, they were already masters of the whole of Sicily, with the exception of Lilybaeum and Drepanum. The Romans were laboriously sapping the walls to bring them into the water, and there were about 14,000 men in the army that seems destined to be transferred to Africa. (Diod. xxiii. 6.) and in the Civil Wars Caesar made it his headquarters when preparing for his African campaign against Scipio and Juba, B.C. 47. (Hist. B. Afr. 1, 2, 37; Appian, B. C. ii. 95.) It was also one of the chief naval stations of Sextus Pompeius in his war with Augustus, B.C. 36. (Appian, B. C. v. 97, 192; Doss Cass. xiii. 8.) Nor was the importance of Lilybaeum confined to these warlike occasions: it is evident that it was the habitual port of communication between Sicily and Africa, and must have derived the greatest prosperity from the constant traffic which arose from this circumstance. Hence we find it selected as the habitual place of residence of one of the two quaestors of the Roman province of Africa, Tiberius Gracchus, who himself held that office at Lilybaeum, calls it "splendidissima civitas" (Verr. v. 5.) It was one of the few cities of Sicily which still retained some importance in the time of Strabo. (Strab. vi. p. 372.) Its continued prosperity under the Roman Empire is sufficiently attested by inscriptions. From these we learn that its population was divided into twelve tribes; a rare mode of municipal organisation. (Torremuzza Inscr. Sicil. pp. 7, 15, 49; Orell. Inscr. 151, 156, 3718.) In another inscription it bears the title of a colony: the time when it became such is uncertain; but probably not till the reign of Hadrian, as Pliny does not mention it among the five colonies founded by Augustus in Sicily. (Ptol. iii. 8. a. 14; Psol. iii. 4. § 5; Ibid. Ant. pp. 86, 89, 96; Zumpt, de Colon. p. 409.) After the fall of the Roman Empire Lilybaeum still continued to be one of the most important cities of Sicily. It is mentioned as such under the successive dominion of the Goths and Vandals (Procop. B. i. 8, ii. 5) and during the period of the Arabian dominion in Sicily, that people's phrasing so much value to its port, that they gave it the name of Marsa Alla,—the port of God,—from whence has come its modern appellation of Marsala. It was not till the 16th century that this celebrated port was blocked up with a mole or mound of sunken stones by order of the Emperor Charles V., in order to prevent the landing of the Barbary corsairs. From that period Marsala has taken its place as the principal port in the W. of Sicily; but Marsala is still a considerable town, and a place of some trade, especially in wine. (Smalley Sicily, p. 232.) Very few vestiges of the ancient city remain, but numerous fragments of sculpture, vases, and other relics, as well as coins, have been discovered on the site; and some portions of its ancient aqueduct are still visible. The site of the ancient port, though now filled with mud, may be distinctly traced, but it is of small extent, and could never have had a depth of more than 13 or 14 feet. The rocks and shoals, which even in ancient times rendered it difficult of
LIMENAE.

LIMENAE (Ἀμφίες), also called LIMMOPOLIS (Ἄμφιωπολὶς), a place in the north of Cilicia, which is mentioned only by ecclesiastical writers (Hieroc., p. 670; Coss., 25; Const. iii. p. 576, where it is called Amphioe).

The ancient ruins of Galasia, on the east of the lake of Eyder, are believed to belong to Limenae. (Arundell, Discor. in Asia Minor, vol. i. p. 326; Franz, Fünf Inschriften, p. 35.) [L. S.]

LIMENIA (Ἀμφιεὶα), a town of Cyprus, which Strabo (p. 635) places B. of Soli. It appears from some ecclesiastical documents cited by Wesseling (ap. Hieroc.) to have been 4 M. from Soli. Now Limes. (Engel, Kypros, vol. i. p. 77.) [E. R. H. B.]

LIMIA, river and town. [GALLARCAIA.]

LIMICI. [GALLERCAIA.]

LIMIGANTES. The ordinary account of the Limignates is as follows. In A.D. 334—337, the Saracens, in alliance with the Vandals under Visumar, provoked the indignation of Constantinople by their inroads on the Empire. He leaves them to the sword of Gherbithe, the Gothic king. Reduced and humbled by him, they resort to the expedition of arming their slaves. These rebel against their masters, whom they either reduce or expel. Of those that leave their country, some take arms under the Gothic king, others retreat to the parts beyond the Carpathians; a third portion seeks the service of Rome, and is established, to the number of 300,000, in different parts of Pannonia, Thrace, Macedonia, and Italy (Gibbon, c. xviii. with note).

Zeus (Die Deutschen, &c. s. v. Sarmatae) holds that others were transplanted to the Rhine, believing that the messenger of him to the Franks corresponds to them. (Ad Moll. l. 5—8.) This may or may not be the case. The more important elements of the account are, that the Slavs who were thus armed and thus rebelled, are called Limignates—this being the name they take in Gibbon. Their scene of action was the part about the present town of Peterswarslein, on the north bank of the Danube, nearly opposite the Servios frontier, and in the district between the Theiss and the great bend of the Danube. Here lay the tract of the Sar-mateae, and Jassyges Metamatae, a tract which never was Roman, a tract which lay as a March or Boum-dery, with Pannonia on one side and Dacia on the other, but belonging to neither. Observe the words in Italics.

In his note, Gibbon draws special attention to "the broken and imperfect manner" in which the "Gothic and Sarmanian wars are related." Should this remark stimulate the inquiries of the historian, he may observe that the name Limignates is not found in the authority nearest the time, and of the most importance in the way of evidence, viz. Ammianus Marcellinus. Ammianus speaks only of servii et dominii:—"Sarmanae liberis ad dissertationem servorum rebellioni appellati (xvid. 6. 15)."

On the other hand, it is only in a work of such inferior authority (at least, for an event A.D. 337) as the Chronicle of Jerome (Chronicon Hieronymi) that the name Limignates is found; the same work stating that the masters were called Arcaugantis.

To say nothing about the extent to which the story has a suspicious similarity to more than one older account of the expulsion of the masters by the slaves of the same sort, the utter absence of any other writer of a semi-Latin form. Can the whole account of the slave insurrection be problematical—based upon a confusion of names which will be shown to be highly probable? Let us bear in mind the locality of these Limignates, and the language of those parts in contact with it which belonged to Rome. The locality itself was a Limia (eminently so), and the contiguous tongue was a Lingua Rustica in which such a form as Limignates would be evolved. It is believed to be the Latin name of the Sarmaetae and Jassyges of what may be called the Danubian-Pannonian March.

The account of the Servile War is susceptible of a similar explanation. Ammianus, in an early part of the authors who uses the name Sarmaetae, which will, ere long, be replaced, to a great extent, by the name Servi. (3opp.) Early and late, this name has always suggested the idea of the Latin Servus,—just as its partial equivalent Slave does of the English Slave. It is submitted that these Servi of Ammianus (Limignates of the Chronicle) are the Servianae (Servii of the Theiss) Limignates, now beginning to be called by the name by which they designated themselves rather than by the name by which they were designated by their neighbours. [R. G. L.]

LIMITES ROMANII, sometimes simply Limes or Limites, is the name generally applied to the long line of fortifications constructed by the Romans as a protection of their empire, or more directly of the Decumates agris, against the invasions of the Ger-
mans. It extended along the Danube and the Rhine, and consisted of forts, ramparts, walls, and palisades. The course of these fortifications, which were first commenced by Drusus and Tiberius, can still be traced with tolerable accuracy, as very considerable portions still exist in a good state of preservation. Its whole length was about 350 English miles, between Cologne and Ratisbon. It begins on the Danube, about 15 miles to the south-west of Ratis-
bona; whence it proceeds in a north-western direction under the name given to it in the middle ages of "the Devil's Wall" (Tenfelsermauer), or Fjölskrain. For a distance of about 60 miles it was a real stone wall, which is still in a tolerable state of preservation, and in some places still rises 4 or 5 feet above the ground; and at intervals of little more than a mile, remnants of round towers are visible. This wall terminates at Fjölskelheim in Württemberg. From
this point it proceeds in a northern direction, under the name of Teyfelsbeck (the Devil's Hedge), as far as Lorah, and is more or less interrupted. From Lorah onwards it does not present a continuous line, its course being effaced in many parts; but where it is visible it generally consists of a mound of between 6 and 7 feet high, sometimes rising to the height of 10 feet; and on its eastern side there runs along it a ditch or trench, which is called by the people the Schweinegrabern, perhaps a corruption of Suemnugraben (Ditch of the Swine). In this state the lime runs as far as the Osmond, from which point it changes its character altogether, for it consists of a succession of forts, which were originally connected by paliasses. (Spart. Hadr. i. 12.) Remains of these forts (castella) are seen in many parts. At Obernburg this line of fortifications ceases, as the river Main in its northern course afforded sufficient protection. A little to the east of Aschaffenburg, where the Main takes a western direction, the fortifications recommence, but at first the traces are not continuous, until we come to the vicinity of Nidda, where it reappears as a continuous mound raised on a foundation of stones. This last part is now known by the name of the Pfluggrabens, and its remains in some parts rise to a height of from 10 to 12 feet. It can be distinctly traced as far as Riedenreithbach, in the neighbourhood of Bons, where every trace of a northern continuation disappears behind the Siebengebirge. It is probable, however, that it was continued at least as far as Cologne, where Tiberius had commenced the construction of a limes. (Tac. Ann. i. 50.) Some have supposed that it extended even further north, as far as the river Lippe and the Caesian forest; but from Tacitus ( Germ. 32) it seems clear that it terminated near the river Sieg.

This formidable line of fortification was the work of several generations, and the parts which were first built appear to have been those constructed by Drusus in Mount Taunus. (Tac. Ann. i. 56; Dion Cass. liv. 33.) But Tiberius and the other emperors of the first century constructed the greater part of it, and more especially Trajan and Hadrian. (Varr. l. c. 7; Tac. Ann. li. 51; Suet. Aug. viii. 2; Spart. Hadr. i. 12.) Until the reign of Alexander Severus these limits appear to have effectually protected the Decumates agris; but after that time the Alemanni frequently broke through the fortifications. (J. Capitol. Maximin. 13; Flav. Vopisc. Prob. 13.) His successors, Posthumus, Lollianus, and Probus, exerted themselves to repair the breaches; yet after the death of Probus, it became impossible to prevent the northern barbarians from breaking through the fortifications; and about the end of the third century the Romans for ever lost their possessions in Germany south of the limes. (Comp. Wilhelm, Germanien, p. 290, &c.; Buchner, Reise auf der Taunuslimes, Regensburg, 1820.) [L.S.]

LIMNAE. (Alph. Obs. ii. 36.) LIMNAE (LIMNEI) stands on the frontiers of Messenia and Laconia, containing a temple of Artemis Limnatis, used jointly by the Messenians and Lacaelemaonians. An outrage offered by the Messenians to some Lacaelemaonian virgins at the festival of this goddess is said to have been the cause of the First Messenian War. (Strab. vi. p. 297, viii. p. 560, & C.; Dion Cass. l. c. 26, 31; Procop. Hist. i. 6; Paus. 8. 16.) In the 2nd century this temple, and of the Ager Denthellionis, the district in which it was situated, was a frequent subject of the dispute between the Lacaelemaonians and Messenians down to the time of the Roman emperors. (Tac. Ann. iv. 43.) The ruins of the temple of Artemis Limnatis have been discovered by Ross, near the church of Panagia Volvisitas, in the village of Volinis; but the topography of this district requires a more particular description, and will be found under MESSENIA.

LIMNARI. [Sparta.] LIMNARI is in the mess. of Edh. Austerne: Keras-
wara, a town in Acharnania at the SE. corner of the Ambraciot gulf, on the very frontier of Acharnania towards Argos. There has been a dispute about its site, but the ruins at Keraswara are probably the remains of Limnari; some modern writers would place it more to the W., either at Levidiki, or at Ergos. The former supposition, however, appears to be the more correct, since we learn from Thucydides that Limnari lay on the road from Ambracia and Argos Amphilochicum to Stratus, which could not have been the case if Limnari lay to the W. of Keraswara. Philip III., king of Macedon, disembarked at Limnari, when about to invade Aetolia. There is a march near Keraswara, two miles in length, upon which Limnari appears to have derived its name. (Thuc. ii. 80, iii. 105; Pol. v. 5; Leake, Northern Greece, vol. iv. p. 243, seq.)

2. A town of Histiaotis in Thessaly, taken by the Romans in a. c. 191, was probably on the site of Koritzhi. (Livy. xxxvi. 13; Leake, Northern Greece, vol. iv. p. 518.)

LIMUS, an island off the coast of Ireland, mentioned by Ptolemy (ii. 9), as lying to the east of Ireland, and being uninhabited. Pliny also mentions it (iv. 30). It is probably Lambay Island. However, the Monumenta Britanniaca not only suggests for Limos (Ptolemy's Limus) the modern names of Lambay, Lymen, and Ramsey, but they also distinguish it from Limus (Pliny's Limus) which they make Dudley. [R. G. L.]

LIMONE. [LIMONE.] LIMONUM or LEMONUM (Alph. Obs. iv. 7; § 6: Poiteira), the capital of the Pictones or Pictavi, one of the Celtic nations south of the Loire. The name is first mentioned in the eighth book of the Gallic war (vi. 26, 27). At a later time, after the death of Probos, it became impossible to prevent the northern barbarians from breaking through the fortifications; and about the end of the third century the Romans for ever lost their possessions in Germany south of the limes. (Comp. Wilhelm, Germanien, p. 290, &c.; Buchner, Reise auf der Taunuslimes, Regensburg, 1820.) [L.S.]

LIMONIUM (LEMONIUM). LIMONIUM (LEMONIUM) or LEMONIUM (Alph. Obs. iv. 7; § 6: Poiteira), the capital of the Pictones or Pictavi, one of the Celtic nations south of the Loire. The name is first mentioned in the eighth book of the Gallic war (vi. 26, 27). At a later time, after the death of Probos, it became impossible to prevent the northern barbarians from breaking through the fortifications; and about the end of the third century the Romans for ever lost their possessions in Germany south of the limes. (Comp. Wilhelm, Germanien, p. 290, &c.; Buchner, Reise auf der Taunuslimes, Regensburg, 1820.) [L.S.]

This is a place called Vieux-Poiteiras, more than 15 Roman miles north of Poiteira; but though it seems to have been an old town, it is quite a different place from the Poiteirs which is the site of the Limonum.

The conquest of the Pictavi cost the Romans little trouble, for they were not of such a nature as to be of much service, as little is said of them. In a. c. 51, C. Caninius, a legatus of Caesar, came to the relief of Duratius, a Gaul and a Roman ally, who was blockaded in Limonum by Dumnacus, the chief of the Andes. The siege was raised, and Dumnacus was subsequently defeated.

The remains of the great amphitheatre of Limonum are as described by Procop. The position of his Historia in the Poitou (quoted in the Guide du Voyageur, par Richard et Hoquet). M. Dufour found the walls of the amphitheatre three feet and a half below the present level of the soil. The walls are seven French feet thick. It is estimated that this amphitheatre
LIMYRA.

would contain 20,000 spectators, from which estimate we must conclude that the dimensions and outline of the building can be accurately determined. M. Du-

douf says: "On the level of the present soil, there are yet visible traces of our covered citer-
tices, which led, by means of the vomitoria, into the different galleries: the part which is least damaged at present is in the stables of the Hotel d'Evreux. A principal arch, which led into the arena, is still nearly entire, though the interior facings have been almost completely removed." [G. L.]

LINDUS. [Albesc.] 1. A town in Britain; the modern Lincoln. Ptolemy (ii. 3. § 20) assigns Lindum and Rætæ, or Ratae, to the district of the Coritani. In the list of the anonymous Geographer of Ravenna it is called Littinum. Cæsar in the Itinerary of Antoninus, simply as Lindum. Among the priests who attended the Synod of Arles, a. p. 314, was "Aedilicus de civitate colonia Lindinen-

sium," which we must read Lindensium, for at the same council London was represented by Restitutus;

and that Lincoln was a colony may be accepted from the authority of Eusebius. Another also, in which the word occurs in Beda (Hist. Eccles. ii. 16, "Civitas Lindoceansis.") Lindum occurs in Antoninus in the ite from Londinium to the great Wall; in that from Eburacum to Lindinium; and in another from Londinium, in which it is the terminus.

The Roman remains extant at Lincoln are among the most important and interesting in this country. It is perhaps the only town in England which preserves one of the original Roman gateways in use at the present day. This is the Newport Gate, which is wholly of Roman masonry, as is also the narrow side entrance for foot passengers. Originally there were two of the latter, but one is walled up in a modern building. Another gateway, which was discovered, a few years since, near the castle.

There is also a long extent of the Roman sewers remaining at Lincoln, and a considerable number of inscriptions, chiefly sepulchral. The Mint Wall, as it is called, is a side wall of a Roman edifice, apparently of a public description. From the course of the remains of the external wall, the Romans seem to have found it necessary to extend the cir-
cumvallation of Lindum.

2. A town of the Demetii, in the northern part of Britain, placed by Ptolemy (ii. 3. § 9) a little to the north of the Clyde. Horsey suggests Kirkintilloch, on the Wall of Antoninus Fins, as the site of this Lindum.

LINDUS (Albesc; Ed. Albesci; Londus), one of the most important and most ancient towns in the island of Rhodes, was situated on the eastern coast, a little to the north of a promontory bearing the same name. The district was in ancient times very productive in wine and figs, though otherwise it was, and is still, very barren. (Philos. spea. ii. 24.) In the Homeric Catalogus (I. II. xii. 182) Lindus, together with the two other Rhodian cities, Ialysus and Camirus, are said to have taken part in the war against Troy. Their inhabitants were Dori-

ans, and formed the three Dorian tribes of the island, Lindus itself being of one the Dorian hexapolis in the south-west of Asia Minor. Previous to the year a. c. 408, when Rhodes was built, Lindus, like the other cities, formed a little state by itself, but when Rhodes was founded, a great part of the population and the common government was transferred to the new city. (Diod. xii. 75.) Lindus, however, though it lost its political importance, still remained an inte-

resting place in a religious point of view, for it contained two ancient and much revered temples, one of Athena, hence called the Lindian, and the other of Heraclis. The former was believed to have been built by Danans (Diod. v. 58; Callim. Hymn. p. 477, ed. Ernesti), or, according to others by his daughters on their flight from Egypt. (Herod. ii. 163; Strab. xiv. p. 656; comp. Plin. H. N. xxxiii. 39; Act. Apost. xvii. 17.) The temple of Heraclis was remarkable, according to Lactantius

O
LINGONES.

(i. 81), on account of the vituperative and injurious language with which the worship was conducted. This temple contained a painting of Hercules by Parrhasius; and Lindus appears to have possessed several other paintings by the same artist. (Athen. xii. p. 543, xvi. p. 687.) Lindus also was the native place of Cleobulus, one of the Seven Sages of Greece; and Athenaeus (vii. p. 360) has preserved a pretty parallel addressed to Cleobulus, and which the Lindian boys used to sing as they went round collecting money for the return of the swallows in spring.

The site of Lindus, as described by Strabo, "on the side of a hill, looking towards the south and Alexandria," cannot be mistaken; and the modern neat little town of Lindos is exactly the spot occupied by the ancient Derbion, mentioned by Pliny (ii. 19, § 9) may probably be a copyist's error. In Polybius (ii. 17, ed. Bekker), the name is corrupted to Att琦wov, which appears to be the MSS. reading, and was doubtless intended to be Al琦wov. In the old text of Strabo (p. 186) it is said that the Aretinae, a tribe of the county, inhabited the country from the Aeduli and Lincassai (Al琦wovov); but it is agreed that we ought to read Lindos, for Strabo names the people Lindos in two other passages (pp. 193, 208).

The Lindos occupied the country about the sources of the Marous and Sineus, and extended eastwards to the sources of the Trosinus. (Xen. Hell. i. 10.) This does not state expressly whether they belonged to Celtica or to Belgica, but we may infer from what he says that he considered them as included in Celtica [Gallia Transalpina, Vol. i. p. 968.] Strabo (p. 193) says: "Above or beyond the Helvetii and Sequani, the Aeduli and Lindos dwell to the west; and beyond the Mediomatrici dwell the Lunci and part of the Lindos." But the Lunci, whose capital was Tullum (Touλ), are between the Mediomatrici and the Lindos, and there is some error in this passage of Strabo. The chief town of the Lindos was Andonatumum, afterwards named Lindos, and in the old French, Langez or Longome, and now Lamges, near the sources of the Marous. Biblio (Di- jog, vi. 10, 108) mentions the territory of the Lindos, which corresponded to the diocese of Longres, before the diocese of Dijon was taken from it.

Pliny (ii. 8) and Pliny (iv. 17) place the Lindos in Belgica, which was true of the time when they wrote.

The Lindos were one of the Celtic nations, which, according to Roman tradition, sent a detachment to settle in North Italy. (See the next article.] Lucan (i. 397) represents the Lindos as warlike, or fond of fighting, for which there is no evidence in Caesar at least:—

LIPARA.

"Castraqae quasi Vessii curvam super arsum rupe
Pauinas pictis oboebant Lindos armis."

After Caesar had defeated the Helvetii in the great battle near Bibracte, the survivors fled into the country of the Lindos; "to whom Caesar sent letters and a message to inform them that they must not supply the Helvetii with corn, but help them as much as they could, and that if they did, he would treat them like the Helvetii." (B. G. i. 26.) It is plain from Caesar's narrative that this insolent order was obeyed. When Caesar was at Vesontio (Besançon) on his march against Ariovistus, the Sequani, Lunci, and Lindos supplied him with corn (B. G. i. 40). During the winter which followed the campaign of n. c. 53, Caesar placed two legions in the country of the Lindos, not to keep them in obedience, for they never rose in arms against him, but because it was a good position. (B. G. vi. 44.)

It is stated in Tacitus (Hist. i. 78) that Otho gave the "civitas Romanorum" to all the Lindos; but this passage is not free from difficulty. Galba had lost the friendship of the Helvetii, and the influence which other Gallic states, by harsh measures or by depriving them of part of their lands; and the Lindos and others supported the party of Vitellius in Gallia by offering soldiers, horses, arms and money (Tacit. I. 53, 59). It seems that Otho made the Lindos a present of the "civitas" in order to effect a diversion in Gaul in his own interests. The authenticity of Tacitus's text is right, why he omitted the Treviri and others. Pliny calls the Lindos "Foordari." This nation, which during the whole Gallic war was tranquil, even in the year of Vercingetorix's great struggle (B. G. vii. 63), became very restless under the Empire, as we see from Tacitus (Hist. iv. 67). [Gallia Transalpina, Vol. i. p. 969.] [G. L.] G. L. L. LINGONES (Ali琦wovov, Pdr.) a tribe of the tribe of the Gales, without doubt a colony or offset of the more powerful Transalpine tribe of the same name, who, according to Livy, migrated into Italy together with the Boii, and settled with them in the plains between the Apenines and the Padus. We learn from Polybius, that they dwelt between the Boii and the Taurisci. (Xen. Hell. i. 10.) Caesar gives the name of Boionus and as far eastward as the river Utia (Moon- tone), which was the northern limit of the Sequanes. (Livy. v. 35; Pol. ii. 17.) They seem to have been in later times so closely associated with the Boii as to be commonly considered as one nation; hence we do not meet with any separate mention of their name in history, nor are they noticed by the geographers. [K. H. B.]

LINTOMAGUS. [LUTTOMAGUS.]

LINUS (Ali琦wovov), a place on the coast of Myasia, on the Propontis, between Priapus and Parium; it is noticed only by Strabo (xiiii. p. 588), as the spot where the best smals (exylaia) were found. [L. S.]

LIPARIA (Achyria: Eit. Achyrias), Liparia, Liparia was the largest and most important of the group of the Aeolian islands, between the coast of Sicily and Italy. It had a town of the same name, and was the only one of the whole group which was inhabited, or at least that had any considerable population. Hence the other islands were always dependent on it, and were sometimes called in another time, the "islands of the sea," or the "islands of the sea." (Strab. vi. p. 275.) Strabo correctly tells us that it was the largest of the seven, and the nearest to the coast of Sicily except Thermessas or Hierax (Veil-
LIPARA.

Both he and Pliny inform us that it was originally called Meligunis (Megaroussia); a name that must probably be referred to the period before the Greek colony; although ancient writers affirm that it derived the name of Lipara from Liparus, a son of Asopus, who reigned there before Asopus, so that they must have referred the name of Meligunis to a purely fabulous age. (Plin. iii. 9. s. 14.; Diod. v. 7.) The name of Asopus himself is inseparably connected with the island; but there can be no doubt that his abode was placed by the earliest mythological traditions in Lipara itself, though in later times this was frequently transferred to Strongyle. [Ar Oakland Insulæ, p. 52.]

In the historical period the first mention that we find of Lipara is the settlement there of a Greek colony. This is assigned by Diodorus to the 50th Olympiad (B. C. 580—577); and there seems no reason to doubt this date, though Eusebius (on what authority we know not) carries it back nearly 50 years, and places it as early as B. C. 627. (Diod. v. 9.; Euseb. Arm. p. 107; Clinton, F. H. vol. i. pp. 206, 232.) The colonists were from Corinth, and the subsequent history is the same as on the former island: the Romans, too, landed on it in B. C. 281, and made it a Cnidian, so that the city was always reckoned a Cnidian colony. (Diod. i. 13.; Paus. x. 11. § 3.; Thuc. iii. 88.; Strab. vi. p. 275; Sycman. Ch. 263.) According to some accounts Pentathius did not himself live to reach Lipara, but the colony was founded by his sons. (Diod. i. 13.) Of its history we know very little, except that for a century and a half, but are told generally that it attained to considerable power and prosperity, and that the necessity of defending themselves against the Tyrrhenian pirates led the Liparans to establish a naval force, with which they ultimately obtained some brilliant victories over the Tyrrhenians, and who seem to have been engaged in piracy by costly掠ings at Delphi. (Strab. i. 13.; Diod. v. 9.; Paus. x. 11. § 3, 16.; § 7.) It appears, however, that the Liparans themselves were sometimes addicted to piracy, and on one occasion their corsairs intercepted a valuable vessel that the Romans were sending to Delphi; but their chief magistrate, Timasthenes, immediately caused it to be restored and forwarded to its destination. (Diod. xiv. 95; Liv. v. 28; Val. Max. i. 1. § 4.)

The territory of Lipara, though of small extent, was fertile, and produced abundance of fruit; but its more important resources were its mines of alum, arising from the volcanic nature of the soil, and the abundance of thermal sources proceeding from the same cause. The inhabitants of Lipara not only cultivated their own island, but the adjoining ones of Hiera, Strongyle, and Dindyne as well; a proof that the population of Lipara itself must have been considerable. (Thuc. iii. 88; Diod. v. 10; Paus. x. 11. § 4; Strab. vi. p. 275.)

At the time of the first Athenian expedition to Sicily the Liparans were in alliance with the Syracusans, probably on account of their Dorian descent; for which reason they were attacked by the Athenian and Rhegian fleet, but with no serious result. (Thuc. iii. 88; Diod. xii. 54.) In B. C. 326 they again appear as in friendly relations with Syracuse, and were in consequence attacked by the Carthaginian general Himilco, who made himself master of the city and exacted a contribution of 30 talents from the inhabitants. (Diod. xiv. 56.) It does not appear that the Carthaginians at this time retained possession of Lipara; and we subsequently find it in the enjoyment of independence in B. C. 264, when the island was suddenly attacked by Agathocles, in the midst of profound peace, and without even a pretext for the aggression. The invader carried off a booty of 50 talents, which was, however, lost on his voyage to Sicily in a storm, which was naturally attributed to the wrath of Asopus. (Id. xx. 101.) It could not have been an inconsiderable sum, for long after this it was the place of a Phoenician, from whom the name of Carthage, to which city it was subject at the outbreak of the First Punic War (B. C. 264), and from its excellent ports, and advantageous situation for commanding the N. coast of Sicily, became a favourite naval station with that people. (Id. xxvii. 18, p. 500.) In the fifth year of the war (B. C. 260), the Roman consul, Cn. Cornelius, having been deceived with the hopes of making himself master of the island, was captured there, with his whole squadron (Ptol. vi. 21); and in B. C. 257, a battle was fought between the Carthaginian and Roman fleets in its immediate neighbourhood (Id. 25); but a few years later it was at length taken by the Romans, under C. Aurelius, and remained in their hands from that time, B. C. 251. (Id. xxviii. 20; Zonar. viii. 14; Oros. iv. 8; Frontin. Strat. iv. 1. § 31.)

At the commencement of the Second Punic War a considerable Carthaginian squadron was wrecked on the shores of Lipara and the adjoining island of Vulcano (Liv. xx. 48); but from this time we find no historical mention of Lipara, except that Octavian and Sextus Pompeius in Sicily, in B. C. 86, when Lipara and the adjoining islands once more appear as a naval station of importance. It was occupied and fortified by Pompeius, but taken by Agrippa, who afterwards established his fleets at the island of Vulcano, and from thence threatened the forces of Pompeius at Mylae and Messanae (Appian, B. C. v. 97, 105, 112; Dion Cass. xlix. 77, 78). There seems no doubt that Lipara continued to enjoy considerable prosperity under the Roman government. Diodorus praises its fertility, as well as the excellence of its ports; and says that the Liparans derived a large revenue from the monopoly of the trade in alum. (Diod. v. 10.) Cicero, indeed, speaks of it in disparaging terms, as 'a station on the coast of a country, insula tenuisse postea' (Verr. iii. 37); but this seems to be an oratorical exaggeration, and the immediate reference of the passage is to corn, for the growth of which Lipara could never have been well adapted. But though suffering severely from drought in summer (Thuc. iii. 88), owing to the volcanic nature of the soil, the island long retained a considerable fertility, and at the present day produces abundance of fruit, wine, and oil. (Smyth's Sicily, p. 265; D'Orrville, Sicula, p. 18.)

Under the Roman Empire Lipara was sometimes used as a place of exile for political offenders (Dion Cass. liv. 6); and before the fall of the Western Empire it was a favourite resort of monks. At an earlier period of the Empire it was frequented for its hot baths (Plin. xxxvi. 6. s. 32; Diod. v. 10), which are still in use at the present day, being supplied from thermal springs; some remains of ancient buildings, still visible, appear to have been connected with these establishments. A few fragments of walls may also be traced on the hill crowned by the modern castle; and many coin fragments of sculpture, &c., have been discovered on the island. (Smyth's Sicily, p. 262.)
LIPARIS. (Alavari), a small river in the east of Cilicia, which emptied itself into the sea at Soth, and was believed to derive its name from the olive nature of its waters. (Plin. v. 22; Antig. Cary Selected.
150; Vitruv. viii. 3.)

LIPAY'XUS (Alava'), a town of Cilicia, or Coss, in Macedonia, mentioned only by Hecataeus (Steph. B. S. e.) and Herodotus (vii. 120).

LIPPOS, AD. [VIKTOA.] LIPSYDRIUM [ATTICA, p. 386, b.] LIGNI'TIA (Ligntes), a considerable river of Venetia, which rises in the Julian Alps to the N. of Opieterium (Odero), and flows into the Adriatic near Curna, about midway between the Piave (Pivse) and the Tagliamento (Tilaventum). (Plin. iii. 16. s. 28.) It had a part of the same name at its mouth and it is one of the Tiber. Above it was placed it between Albinum and Concordia. The name is not found in the Itineraries, but Paulus Diaconus mentions the "pons Lignaetis flumina" on the road from Forum Julii towards Patavium. (P. Dic. Hist. Lang. v. 39; Anon. Ravenn. iv. 36.)

LITRIA. [EDITORA.]

LIMIRIS (Aysaipi), a town in the north of Germany, between Marium and Lephana, about 10 miles to the north of Hamburgh. Its exact site, however, is unknown. (Ptol. ii. 11. § 27.)

LIRIS (Alexis: Garigliano), one of the principal rivers of central Italy, flowing into the Tyrrhenian Sea a little above Lataequa. It had its sources in the central Apennines, only a few miles from the Luscus Eunus, of which it has been sometimes, but erroneously, regarded as a subterranean outlet. It flows at first in a SE. direction through a long troughlike valley, parallel to the general direction of the Apennines, until it reaches the city of Sora, where it turns abruptly to the SW., and plunges down a precipice until after its junction with the Trevis or Sacco, close to the site of Friggia; from thence it again makes a great bend to the SE., but ultimately resumes its SW. direction before its enters the sea near Minturnae. Both Strabo and Pliny tell us that it was originally called Clania, a name which appears to have been common to many Italian rivers [Clania]: the former writer erroneously assigns its sources to the country of the Vestini; an opinion which is adopted also by Lucan. (Strab. v. p. 233; Lucan. ii. 425.) The Liris is noticed by several of the Roman poets, as a very gentle and tranquil stream (Hor. Carp. i. 31; Sil. Ital. iv. 348) — 'most ornate, by which it well deserves in the lower part of its course, where it is described by a modern traveller as "a wide and noble river, winding under the shadow of poplars through a lovely vale, and then gliding gently towards the sea."' (Bruce's Classical Tour, vol. ii. p. 520.) But nearer its source it is a clear and clear, unmixed water, and at the village of Lavinus, about four miles below Sora, and just after its junction with the Fibrense, it forms a cascade of above 90 feet in height, one of the most remarkable waterfalls in Italy. (Craven's Abreu, vol. i. p. 93.)

The Liris, which is still called Léros in the upper part of its course, though better known by the name of the city which it assumes when it begins to be more considerable, has a course altogether of above 60 geographical miles; its most considerable tributary is the Trevis or Sacco, which joins it about three miles below Cephalo. A few miles higher up it receives the waters of the Fibrense, so celebrated from Cicero's description (de Leg. i. 3); whilst below, but a small stream, is remarkable for the clearness and beauty of its water. [FIBRENSE.] The Melfa (Mejga), which joins it a few miles below the Sacco, but from the opposite bank, is equally inconsiderable.

At the mouth of the Liris near Minturnae, was an extensive sacred grove consecrated to Marica, a nymph or local divinity, who was represented by a tradition, adopted by her, as mother of Virgil, as mother of Latinus, while others identified her with Circe. (Virg. Aen. vii. 47; Lactant. Inst. Div. i. 21.) Her grove and temple (Lucus Maricas: Maplesr Edanes, Plut. Mar. 39) were not only objects of great veneration to the people of the neighbouring town of Minturnae, but appear to have enjoyed considerable influence, even over the Romans themselves. (Ov. Pers. v. 233; Liv. xxvii. 37; Serv. ad Aen. vii. 47.)

Immediately adjoining its mouth was an extensive marsh, formed probably by the stagnation of the river itself, and celebrated in history in connection with the adventures of Marina. (E. H. B.)

LISAE (Alawa), a town of Cilicia, or Cossae, in Macedonia, mentioned only by Herodotus (vii. 123).

LISBIBA, a town of Histiaeotis, in Thessaly, on the borders of Athamanis. (Liv. xxxii. 14.)

LISISA. [JACcastrii, Lissa. (Alava, Procop. B. G. i. 7; Ius. Antim.) an island off the coast of Illyricum, placed by Pliny (iii. 30) over against the coast of Illyria, noted for its barren, and an island which obtained a momentary importance during the wars of the Venetians, represents Lissa. (Wilkinson, Dalmatia and Montenegro, vol. i. p. 78.)

LISSUS. [LEONTINII, Lissus. (Alava, Procop. iii. 17. § 8) a town on the S. coast of Creta, which the anonymous Cosasetian Littoral, Vita Cretae, S. S. sicci.) The Peutinger Table gives 16 M.P. as the distance between Cantanum and Liso. This Cretan city was an episcopal see in the time of Hierocles. (Comp. Corin. Creta Sacra, vol. i. p. 253.)

The order in which he mentions it with the other bishoprics
LITANOBРИГА.

197

in the W. part of the island agrees very well with the supposition that its site was on the spot now called Haghia Kyriko. This place occupies a small hill near Agia Kyriaki, on the coast. Near the church of the Panaghia are what appear to be vestiges of an ancient temple, consisting of granite columns, and white marble fragments, architraves, and pediments. Further on, appears to have been another temple, and a theatre. The tombs are on the SW. side of the plain. They are worked into the hill in a line with arches and pillars, and perhaps fifty of them. (Pashley, Trav. vol. ii. p. 85; Mou. Class. Ant. vol. ii. p. 298.)

Of all the towns which existed on this part of the coast, Lissus alone seems to have struck coins, a fact which agrees very well with the evidence supplied by its situation, of its having been a place of some trading importance. The harbour is mentioned by Sclavus (p. 18), and the types of the coins are either maritime, or indicative of the worship of Dicynna, as might have been expected on this part of the island. The obverse of one coin bears the image of the capes and stars of the Dioscuri, and its reverse a quiver and arrow. On the second coin the capes and stars are replaced by a dolphin and inscription in Attic, and it is supposed that of Artemis or Dicynna. (Comp. Eckhel, vol. ii. p. 315.)

LISSUS (Lissi), Strab. vii. p. 316; Polt. ii. 16. § 5; Steph. B.; Hierocles; Peut. Toub.), a town of Illyricum, at the mouth of the river Drilo. Dionysius the elder, in his schemes for establisshing settlements around the valies of Illyria, included Lissi. (Diod. xv. 13.) It was afterwards in the hands of the Illyrians, who, after they had been defended by the Romans, retained this port, beyond which their vessels were not allowed to sail. (Polyb. ii. 12.) n. c. 211, Philip of Macedon, having surprised the citadel Acrolios, compelled the town to surrender. (Polyb. viii. 15.) Gelon, the Illyrian king, collected his forces here for the war against Rome. (Liv. xliv. 30.) A body of Roman citizens was stationed there by Caesar (B. C. iii. 26—29) to defend the town; and Pliny (iii. 26), who says that it was too M. P. from Epidaurus, describes it as "oppidum civium Romanorum." Constantine Forphyrogenetes (De Arm. Imp. c. 1, lib. 1, cap. 14) states that the name of Lissi, as it is a city from the name of Leonis. (L. A. & R.'s Nothern Greece, vol. iii. p. 477; Schaffarik, Slov. Alt. vol. ii. p. 275.)

LISTA (Lissi), a very ancient city of Central Italy, which, according to Varro (ap. Dion. Hal. l. 14), was the metropolis of the Arbigenes, when that people dwelt in the mountain valleys around Easte. It was surprised by the Sabines by a night attack from Amierrn; and the inhabitants took refuge in Beate, from whence they made several fruitless attempts to recover possession of their city; but failing in this, they declared it, with the surrounding territory, sacred to the gods, and impractically cures on all who should occupy it. This claim was, however, without mention of it; though it would seem that its ruins still remained in the time of Varro, or at least that its site was clearly known. This has been in modern times a subject of much dispute. According to the present text of Dionysius, it was situated 34 stades from Tiora, the ruins of which are probably those at Castore near Sta. Anastasia in the upper valley of the Scalina, 36 miles from Rieti. Bunsen accordingly places it at Sta. Anastasia itself, where there are some remains of an ancient city. But Holstenius long ago pointed out a site about 3 miles from Beate itself, on the road from thence to Civita di Latina, where there still exist, according to a local tradition, tombs, Martelli, and Sir W. Gell, the remains of an ancient city, with walls of polygonal construction, and a site of considerable strength. The situation of these ruins would certainly be a more probable position for the capital of the Arbigenes than one so far removed as that from their other settlements, and would accord better with the natural line of advance of the Sabines from Amierrn, which must have been by the pass of Ascrodoco and the valley of the Velino. In this case we must understand the distance of 24 stadia (3 miles), as stated by Dionysius (or rather by Varro, whom he cites), as having reference to Beate itself, not to Tiora. (Bunsen's Mon. Arch. v. p. 192; Ann. Agr. vi. p. 137; Gell's Topography of Rome, p. 472; Holsten. Not. de Cheser. p. 114.)

LISTERON (Leser), a place in Epirus Nova, mentioned by Hierocles with a fortress Aitzras (Aitzias, Procop. de Ascl. iv. 4). It is probably represented by the site of Aitzias, which is situated on the river Aios (Véios), which is mentioned by Cantacuzenus (Kanzásios, ii. 92; comp. Anna Comnena, xiii. p. 390) in the fourteenth century, together with other places which are still to be recognised as having been the chief strongholds in this part of Greece. (Aios.) (Leake, Northerns Greece, 1842.)

LITABRUM (L'Aquila), a forest in the territory of the Boians in Gallia Cispadana, memorable for the defeat of the Roman consul L. Postumius, in B.c. 316. On this disastrous occasion the consul himself perished, with his whole army, consisting of two Roman legions, augmented by auxiliaries to the amount of 25,000 men. (Liv. xxii. 46; D. & R.'s Hist. Stor. l. 6. § 4.) At a later period it witnessed, on the other hand, a defeat of the Boians by the Roman consul L. Valerius Flaccus, n. c. 195. (Liv. xxi. 44.) The forest in question appears to have been situated somewhere between Bononia and Placentia, but its name is never mentioned after the reduction of Bononia, and its site cannot be determined. It is probable, indeed, that a great part of the tract between the Apennines and the marshy ground on the banks of the Pado was at this time covered with forest.

LITANOBРИГA, in Gallia, is placed by the Antonine Itin. between Caesaraugustam (Bononiae) and Augustamagum, which D'Anville supposed to be Sens. According to his reading, the Itin. makes it xviii. Gallie leagues from Caesaraugustam to Litanobriga, and iii. from Litanobriga to Augustamagum. Walckenaer (Géogr. de, vol. iii. p. 55) makes the first distance xvi. and the second iii.; and he places Caesaraugustam at Verberie, near the river Asione. The Table menomone put between Caesaraugustam and Augustagumus, but it makes the third distance xxii. We may assume that Litanobriga was situated at a ford or bridge over a river, and this river is the Oise. D'Anville first thought that Litanobriga might be Ponte Sainte-Maxence, for a Roman road from Bononiae, called Bruscias, passes by Clermont, and joins a road from Ponte Sainte-Maxence. But the numbers in the Itin. fit the distances between Beate and Sens; and accordingly
D'Anville gave up Pont-Sainte-Maxence, and fixed Litanobriga at Cresli on the Oise, and along this line the distances of the Table agree pretty well with the real distances. Walckenaer fixes Litanobriga at Pont-Sainte-Maxence. The solution of this difficulty depends on the position of Augustomagus; or if we are content with the evidence for fixing Litanobriga at Pont-Sainte-Maxence, we cannot place Augustomagus in a period earlier than the time of Liuv. Strabo and Pliny both place the seat of Augustomagus in the time of Augustus. Pliny also notes that the name of Augustomagus was used by the people of the region for the place which they knew to be the site of the town, and which was situated on the coast of Campania, between the mouths of the Vulturnus and Cumae. It was situated at the mouth of a river of the same name (Strab. v. p. 243; Liv. xxxii. 29), which assumed a stagnant character, and was a marshy pool or lagoon, called the LITURNA PALA (Sil. Ital. vii. 275; Stat. Silv. iv. 3. 66), and bordered on either side by more extensive marshes. It is not quite clear whether there was a town there at all before the establishment of the Roman colony: Livy's expression (L.c.) that coloniae sine urbe Letterne" would seem to imply the contrary; and though the name of Litternus is mentioned in the Second Punic War, it is in a manner that does not clearly prove there was then a town there. (Liv. xxiii. 35.) But the notice in Festus (v. Prop. Horae), who mentions Litternus, with Capua, Cumae, and other Campanian towns, among the Praefecturas, most probably refers to a period earlier than the Roman settlement, and is of no use in determining the character of the neighbourhood rendered it unhealthy, while the adjoining tract on the coast was sandy and barren; hence, it never seems to have been of any importance, and is chiefly noted from the circumstance that it was the place where Scipio Africannus chose for his retirement, when he withdrew from public life, and where he ended his days in a kind of voluntary exile. (Livy. xxxviii. 59; Seneca, Ep. 86; Val. Max. v. 3. § 1; Oros. iv. 20.) At a later period, however, Augustus settled a fresh colony at Litternus (Lib. Colom. p. 283), and the construction by Domitian of the road leading along the coast from Sinnesia to Cumae was always used to render it more frequented. But it evidently never rose to a considerable place; under the Roman Empire its name is mentioned only by the geographers, and in the Itineries in connection with the Via Domitiana already noticed. (Strab. v. p. 243; Mal. ii. 4. § 9; Plin. iii. 5. 9; Pol. iii. i. 6; Hist. Ant. p. 122; Tob. Pent.) We learn, however, that it still existed as late as the reign of Valentinian II. (Symmarch. Ep. vi. 5); and it was probably destroyed by the Vandals in the fifth century. The villa of Scipio, where he spent the latter years of his life, was still extant in the days of Seneca, who has left us a detailed description of it, and strongly contrasts the simplicity of its arrangements with the luxury and splendour of those of his own time. (Ep. 86.) Pliny also tells us, that some of the olive trees and myrtles planted by the hands of Scipio himself were still visible there. (Plin. xvi. 44. s. 85.) It is certain that his tomb also stood in the town of Litternus in the days of the ancient writer Livy, though it would appear that there was great doubt whether he was really buried there. The well-known epitaph which, according to Valerius Maximus, he caused to be engraved on his tomb,— "Ingrata patria, ne cessas quidem mea habes," could certainly not have been extant in the time of Seneca, who may have been present there, as far as we know, only when he visited the town of Cumae, though he inclines to the belief that Africanus was really buried there, and not in the tomb of the Scipios at Rome. (Seneca, L.c.; Val. Max. v. 3. § 1; Strab. l.c.; Liv. xxxviii. 56.)

The site of Litternus is now marked by a watch-tower called Tor di Patria, and a miserable village called Litterne, which was unquestionably the Litterna Palus, and hence the river Litternus can be no other than the small and sluggish stream which forms the outlet of this lake to the sea. At the present day the Lago di Patria communicates with the river Clanusa or Lago, and is formed by one of the arms of that stream. It is not improbable that this was the case in ancient times also, for we have no account of the mouth of the Clanusa, while the Litternus is mentioned only in connection with the town at its mouth. [CLANUS.] The modern name of Patria must certainly have been derived from some tradition of the epitaph of Scipio already noticed, though we cannot explain the mode in which it arose; but the name may be interpreted as far as the genius of the eighth century. There are scarcely any ruins on the site of Litternus, but the remains of the ancient bridge by which the Via Domitiana here crossed the river are still extant, and the road itself may be traced from thereto the whole way to Cumae. [E. H. B.]

LITHEUS (Aladna), the name of the northern branch of the river Tich, which passes together with Mount Opolemus in the north-west of Amaisia, enclosed the extensive and fertile plain of Phanaroea. (Strab. xii. p. 566.) Hamilton (Researches, vol. i. p. 349) believes that these two ancient hills answer to the modern Kemper Dag and Oktap Dag. (L.c.)

To treat the question as to the name of Gallia Narbonensis, is placed by the Table and the Jerusalem Itin. between Carcassae (Carcassonne) and Narbo (Narbonne). It is the next station to Carcassae, and xii. from it: the station that follows Liviana is Ususara, or Ususara, or Homerba. The site is uncertain. [G. L.]

LIX, LIXUS. [MAURETANIA.]

LIZIZIS. [ALGIRIA.]

LOBETA\'Nî (Lobethara), one of the lesser peoples of the NE. part of Hispania Tarraconensis. Their position was SE. of the Celiterni, and of the Baetetai, in the SW. of Arragon. The only city mentioned as belonging to them was Lobetum (Lobetar), which D'Anville identifies with Requena, but Uberti with Albeniz. (Pol. ii. 6. § 60; Coins of Uberti, p. 109; Uberti, vol. ii. pl. i, pp. 322, 464.)

LOBETUM. [LOBETANI.]

LOCORITUM (Locherpes), a town on the river Main in Germany, and probably the same as the
modern Labr. (Ftil. ii. 11. § 29.) Its name seems to be of Celtic origin. (Comp. Steiner, Das Meisen-gebiet, p. 125.)

LOCRAS. [Cocrux, p. 691, s.] LOCRIS EPICNEMID'II, OPUN'TIL (Locris.) LOCRIS OZOLAE. [Locris.]

Locris (Aesepus), sometimes called, for distinction's sake, Locris EPICSPHRIBS (Aesepus Erataphes), Locris (Eh. Aesepus, Locrisena: Ruins near Greece.), a city on the SS. coast of the Bruttian peninsula, not far from its southern extremity, and one of the most celebrated of the Greek colonies in this part of Italy. It was a colony, as its name obviously implies, of the Locrians in Greece, but there is much discrepancy as to the time of its foundation from which it derives its origin. Strabo affirms that it was founded by the Locris Ozolae, under a leader named Eunaxus, and censures Ephorus for ascribing to it the Locri Opunti; but this last opinion seems to have been the one generally prevalent. Scymnus Chius mentions both opinions, but seems to incline to the latter; and it is almost certain by Pausanias, as well as by the poets and later Latin authors, whence we may probably infer that it was the tradition adopted by the Locris themselves. (Strab. vi. p. 259; Scymn. Ch. 313–317; Paus. iii. 19. § 12; Virg. Aen. iii. 399.) Unfortunately Polybius, who had informed himself particularly as to the history and institutions of the Locris, does not give any statement upon this point. But we learn from him that the origin of the colony was ascribed by the tradition current among the Locris themselves, and sanctioned by the authority of Aristotle, to a body of fugitive slaves, who had carried off their mistresses, with whom they had previously carried on an illicit intercourse. (Pol. xii. 9, 10–12.) The same story is in that of Histiaeus (365–367). Pausanias would seem to refer to a wholly different tale where he says that the Lacedaemonians sent a colony to the Epizephyrean Locri, at the same time with one to Crotone. (Paus. iii. 8. § 1.) These were, however, in both cases, probably only additional bands of colonists, as Lacedaemon was not a particularly active founder of cities. The date of the foundation of Locris is equally uncertain. Strabo (Locr.) places it a little after that of Crotone and Syracuse, which he regarded as nearly contemporary, but he is probably mistaken in this last opinion. (Crotone.) Eusebius, on the contrary, brings it down to so late a date as n. c. 675 (or, according to Hieronymus, 683) but there seems good reason to believe that this is much too late, and we may venture to adopt Strabo's statement that it was founded soon after Crotone, if the latter be placed about 710 n. c. (Euseb. Arm. p. 105; Clinton F. H. vol. i. p. 186, vol. ii. p. 410.) The traditions adopted by Aristotle and Polybius represented the first settlers as gaining possession of the soil of Locris immediately on their arrival there (called Siculi), by a fraud not unlike those related in many similar legends. (Pol. xii. 6.) The fact stated by Strabo that they first established themselves on Cape Zephyrium (Cape di Brumaono), and subsequently removed from thence to the site which they ultimately occupied, about 15 miles further N., is supported by the evidence of their distinctive application, and may be depended on as accurate. (Strab. Locr.)

As in the case of most of the other Greek colonies in Italy, we have very scanty and imperfect in-
from the period of their very foundation. (Strab. vii. p. 259.) On the other hand, they were almost constantly on terms of hostility with their neighbours of Carthage and the Bruttians, in Sicily, and the latter city, were threatened with complete destruction by that despot, from which they were saved by the intervention of Hieron of Syracuse. (Pind. Pyth. ii. 35; and Schol. ad loc.) In like manner we find them, at the period of the Athenian expeditions to Sicily, in close alliance with Syracuse, and on terms of amity even with Carthage, which they at first engaged in actual hostilities with the Athenians under Lachas; and though they subsequently concluded a treaty of peace with them, they still refused to admit the great Athenian armament, in B.C. 415, even to anchor on their coasts. (Thuc. iii. 99, 115, iv. 1, 24, v. 5, vi. 44, vii. 1; Diod. xii. 54, xiii. 5.) At this period the Peloponnesian War they were among the few Italian cities that sent auxiliary ships to the Lacedaemonians. (Thuc. vii. 91.)

During the reign of the elder Dionysius at Syracuse, the bonds of amity between the two cities were strengthened by the personal alliance of that monarch, who married Doris, the daughter of Xanthes, one of the sons of the cities of Megara and Corinth. (Diod. xiv. 44.) He subsequently adhered steadfastly to this alliance, which secured him a footing in Italy, from which he derived great advantage in his wars against the Rheginians and other states of Magna Graecia. In return for this, as well as to secure the continuance of their support, he conferred great benefits upon the Locrians, to whom he gave the whole territory of Canolonia, after the destruction of that city in B.C. 389; to which he added that of Hipponium in the following year, and a part of that of Seylileum. (Diod. xiv. 100, 105, 107; Strab. p. 261.) Hipponium was, however, again wrested from them by the Carthaginians in B.C. 379. (Id. xv. 24.) The same intimate relations with Syracuse continued under the younger Dionysius, when they became the source of great misfortunes to the city; for that despot, after his expulsion from Syracuse (B.C. 356), withdrew to Locri, where he reigned on the citadel, and established himself in the possession of despotic power. His rule here is described as extremely arbitrary and oppressive, and stained at once by the murder of the Locrians and undeserved cruelties. At length, after a period of six years, the Locrians took advantage of the absence of Dionysius, and drove out his garrison; while they exercised a cruel vengeance upon his unfortunate wife and daughters, who had fallen into their hands. (Justin, xxii. 2, 3; Strab. vi. p. 299; Arist. Pol. v. 7; Clearch. ap. Athen. xxiii. 541.)

The Locrians are said to have suffered severely from the oppressions of this tyrant; but it is probable that they sustained still greater injury from the increasing power of the Bruttians, who were now become most formidable neighbours to all the Greek cities in this part of Italy. The Locrians never appear to have fallen under the yoke of the barbarians, but it is certain that their city declined greatly from its former prosperity. It is not again mentioned till the wars of Pyrrhus. At that period it appears that Locri, as well as Rhegium and other Greek cities, had placed itself under the protection of Rome, and even admitted a Roman garrison into its walls. On the approach of Pyrrhus the Locrians, like the others, declared themselves in favour of that monarch (Justin, xviii. 1; but they had soon ceased to regret the change: for the garrison left there by the king, during his absence in Sicily, conducted itself so ill, that the Locrians rose against them and expelled them from their city. On this occasion, according to the story related by Pyrrhus on his return from Sicily; and, not content with exactions from the inhabitants, he carried off a great part of the sacred treasures from the temple of Proserpine, the most celebrated sanctuary at Locri. A violent storm is said to have punished his impiety, and compelled him to restore the treasures. (Appian, Samn. ii. 12; Liv. xxii. 19; Val. Max. i. 1, Ext. § 1.)

After the departure of Pyrrhus, the Locrians seem to have submitted again to Rome, and continued so till the Second Punic War, when they were among the states that threw off the Roman alliance and declared in favour of the Carthaginians, after the destruction of Cannae, B.C. 216. (Liv. xxii. 61, xxiii. 30.) They soon after received a Carthaginian force within their walls, though at the same time their liberties were guaranteed by a treaty of alliance on equal terms. (Liv. xxiv. 1.) When the fortune of the war began to turn against Carthage, Locri was besieged by the Roman consul Crispinus, but the Locrians, being invited by the Carthaginians, compelled him to raise the siege. B.C. 208. (Id. xxvii. 25, 28.) It was not till B.C. 205, that Scipio, when on the point of sailing for Africa, was enabled, by the treachery of some of the citizens, to surprise one of the forts which commanded the town; an advantage that soon led to the surrender of the rest of the city and the city itself. (Id. xxix. 6—9.) Scipio confined the charge of the city and the command of the garrison to his legate, Q. Pile- minius; but that officer conducted himself with such cruelty and rapacity towards the unfortunate Locrians, that they rose in tumult against him, and a violent sedition took place, which was only appeased by the intervention of Scipio himself. That general, however, took the part of Pileminius, who was continued in his command; and the Locrians were exposed anew to his exactions and cruelties, till they at length took courage to appeal to the Roman senate. Notwithstanding vehement opposition on the part of the friends of Scipio, the senate pronounced in favour of the Locrians, condemned Pileminius, and restored Locri and its inhabitants to the enjoyment of their own laws. (Liv. xxix. 8, 16—29; Diod. xxvii. 4; Appian, Liv. 55.) Pilemi- nius had, on this occasion, followed the example of Pyrrhus in plundering the temple of Proserpine; but the senate caused restitution to be made, and the impunity to be expiated at the public cost. (Diod. xxvii. 52.)

From this time we hear little of Locri. Notwithstanding the privileged condition conceded to it by the senate, it seems to have sunk into a very subordinate position. Polybius, however, speaks of it as in his day still a considerable town, which was bound by treaty to furnish a certain amount of naval auxiliaries to the Romans. (Pol. xii. 5.) The city was still colonized by the Romans, and enjoyed the special patronage of Cicero. (Cic. de Leg. ii. 6), but we do not know the origin of their connection with the great orator. From Strabo's account it is obvious that Locri still subsisted as a town in his day, and it is noticed in like manner by Fliny the elder and others. (Plin. hist. xxii. 115; Liv. xxii. 37; Plut. iii. 1, § 10.) Its name is not found in the itineraries, though they describe this coast in con-
LOCRIS was an ancient people in Greece, and were said to have been descended from the Leleges. This was the opinion of Aristotle; and other writers supposed the name of the Locrians to be derived from Locrus, an ancient king of the Leleges. (Aristot.; Her. ap. Strab. vii. p. 322; Scymnus Ch. 590; Dicaearch. 71; Plin. iv. 7. a. 12.) The Locrians, however, must at a very early period have become intermingled with the Hellenes. In the Homeric poems they always appear as Hellenes; and, according to some traditions, even Deucalion, the founder of the Hellenic race, is said to have lived in the Locrian town of Opus or Cyrus. (Find. Ol. ix. 63, seq.; Strab. ix. p. 425.) In historical times the Locrians were divided into two distinct tribes, differing from one another in customs, habits, and civilization. Of these the eastern Locrians, called the Opuntii and Epicenemisii, dwelt upon the eastern coast of Greece, opposite the island of Euboea; while the western Locrians dwelt upon the Corinthian gulf, and were separated from the former by Mount Parnassus and the whole of Doris and Phocis. (Strab. i. p. 425.) The eastern Locrians are alone mentioned by Homer; they were the more ancient and the more civilized: the western Locrians, who are said to have been a colony of the former, are not mentioned in history till the time of the Peloponnesian War, and are even then represented as a semi-barbarous people. (Thuc. i. 5.) We may conjecture that the Locrians at one time extended from sea to sea, and were torn by derision by the immigration of the Phocians and Ionians. (Niederh., Notice sur l'histoire des Anciens, p. 123.)

1. Locri Epicenemidii et Opuntii (Euxynomii, "Opuntii", inhabited a narrow strip upon the eastern coast of Greece, from the pass of Thermopylae to the mouth of the river Cephissus.
Their northern frontier town was Alpeni, which bordered upon the Malians, and their southern frontier town was Larymna, which at a later time belonged to Boeotia. The Locrians, however, did not inhabit this coast continuously, but were separated by a narrow strip of Phocis which extended to the Eucoean sea, and contained the Phocian seaport town of Daphnus. The Locrians north of Daphnus were called Epicenemidii, from Mount Cnenias; and those south of this town were named Opuntii, from Opus, their principal city. On the west the Locrians were separated from Phocis and Boeotia by a range of mountains; from Corinthia by Mount Oeta and running parallel to the coast. The northern part of this range, called Mount Cnenias (Strab. ix. pp. 416, 425), now Tilaconda, rises to a considerable height, and separated the Epicenemidii Locri from the Phocians of the upper valley of the Cephissus; the southern portion, which bore no specific name, is now as lofty as Mount Cnenias, and separated the Opuntian Locrians from the north-eastern parts of Boeotia. Lateral branches extended from these mountains to the coast, of which one terminated in the promontory Cnenides [Cnenimides], opposite the islands called Lichades; but there were several fruitful valleys, and the fertility of the whole of the Locrian coast is praised both by ancient and modern observers.

Forchhammer, Gute, Hist. of Greece, vol. ii. pp. 11—12; Grote, Hist. of Greece, vol. ii. p. 381.) In consequence of the proximity of the mountains to the coast there was no room for any considerable rivers. The largest, which, however, is only a mountain torrent, is the Boagrus (Boagrous), called also Manex (Manex) by Strabo, rising in Mount Cnenias, and flowing into the sea between Scaphela and Thronium. (Horn. R. ii. 538; Strab. ix. p. 426; Ptol. iii. 15. § 11; Plin. iv. 17. s. 12; Leake, Northern Greece, vol. ii. p. 67.) The only other river mentioned by name is the Platanus (Platánus, Paus. ix. 24. § 5), a small stream, which flows into the Opuntian gulf near the Boeotian frontier; it is the river which flows from the modern village of Prosaktos. (Leake, vol. ii. p. 174.) The Opuntian gulf (q' Opúntias kútos, Strab. ix. pp. 416, 425, 426), at the head of which stood the town of Opus, is a considerable bay, shallow at its inner extremity. In this bay, close to the coast, is the small island of Atalanta. (Atalanta, No. 1.)

There are three important passes across the Locrian mountains into Phocis. One leads from the territory of the Epicenemidii, between the summits of Mount Callidromus and Mount Cnenias, to Thronium, in the upper valley of the Cephissus; a second across Mount Cnenias to the Phocian town of Elateia; and a third from Opus to Hyampolis, also a Phocian town, whence the road ran to Aabe and Orocho-menos.

The eastern Locrians, as we have already said, are mentioned by Homer, who describes them as following Ajax, the son of Oileus, to the Trojan War in forty ships, and as inhabiting the towns of Cynus, Opus, Callirrus, Bosa, Scaphel, Augeia, Tarpe, and Thronium. (T. l. 527—533.) Neither Homer, Herodotus, Thucydides, nor Polybius, make any distinction between the Opuntii and Epicenemidii; and, during the flourishing period of Greek history, Opus was regarded as the chief town of the eastern Locrians. Even Strabo, from whom the distinction is chiefly derived, in one place describes Opus as the metropolis of the Epicenemidii (ix. p. 416); and the same is confirmed by Pliny (iv. 7. s. 12) and Stephanus (s. v. Orídes; from Leake vol. ii. p. 181). In the Persian War the Opuntian Locrians fought with Leonidas at Thermopylae, and also sent seven ships to the Greek fleet. (Hered. vii. 203, viii. 1.) The Locrians fought on the side of Sparta in the Peloponnesian War. (Thuc. ii. 33.)

The following is a list of the Locrian towns:—

1. Of the Epicenemidii:—along the coast from N. to S., Alpenus; Nicaea; Scaphela or Scaphel; Thronium; Cnenimides; more inland, Tarpe, afterwards Phthiaros; Augeia. 2. Of the Opuntii:—along the coast from N. to S., Alpeus; Cynus; Opus; Larymna, which at a later time belonged to Boeotia; more inland, Callirrus; Napyt; Corsoila.

LOCRIS.

COIN OF THE LOCRI OPUNTII.

II. LOCHI OZOLAE ('OZolai), inhabited a district upon the Corinthian gulf, bounded on the north by Doris and Astolia, on the east by Phocis, and on the west by Astolia. This district is mountainous, and for the most part unproductive. The declivities of Mount Parnassus from Phocis, and of Mount Corax from Astolia, occupy the greater part of it. The only river, of which the name is mentioned, is the Hypaespis, now the Moreo, which runs in a south-western direction, and falls into the Corinthian gulf near Naupactus. The frontier of the Locri Ozolae on the west was close to the promontory Antirrhium, opposite the promontory Rhinn on the coast of Achaia. Antirrhium, which was in the territory of the Locri, is spoken of elsewhere. (Vol. i. p. 13.) The eastern frontier of Locria, on the coast, was close to the Phocian town of Crissa; and the Crissaean gulf washed on its western side the Locrian, and on its eastern the Phocian coast. The origin of the name of Ozolae is uncertain. Various etymologies were proposed by the ancients. (Paus. x. 35. § 1, seq.) Some derived it from the verb ὅσον, "to smell," either from the stench arising from a spring at the foot of Mount Tapha, near which the centaur Nessus is said to have been buried, and which still retains this property (cf. Strab. ix. p. 427), or from the abundance of asphodel which scented the air. (Cf. Archytas, op. Post. Quaest. Graec. 15.) Others derived it from the undressed skins which were worn by the ancient inhabitants, and the Locrians themselves from the branches (4ον) of a vine which was produced in their country in a marvellous manner. The Locri Ozolae are said to have been a colony from the Opuntian Locrians. They first appear in history in the time of the Peloponnesian War, as has been mentioned above, when they are mentioned by Thucydis as a semi-barbarous nation, along with the Astolians and Acarnani, whom they resembled in their armour and mode of fighting. (Thuc. ii. 5, iii. 94.) In a. c. 426 the Locrians promised to assist Demothenes, the Athenian commander, in his invasion of Astolia; but, after the defeat of Demothenes, most of the Locrian tribes submitted
without opposition to the Spartan Eurylochus, who marched through their territory from Delphi to Naupactus. (Thuc. iii. 95, seq.) They belonged at a later period to the Aetolian League. (Polyb. xviii. 30.)

The chief and only important town of the Oecusans was Amphissa, situated on the borders of Phocis. The other towns, in the region of W. to E., were:—Molycheia; Naupactus; Oenone; Anticthna or Anticycla; Eupehium; Eretheia; Tolophon; Hesumus; Orantheia or Oranthia; Iphium; Chalarum; more inland, Abortion; Pottadania; Cychelum; Trichium; Olpe; Messapia; Tyle; Trimenta; Myotina.

On the geography of the Locris tribes, see Leake, Northern Greece, vol. ii. pp. 66, seq., 170, seq., 587, seq.

LOGI or LUGI (Adrux or Agyry), a people in North Britain, mentioned by Ptolemy (iii. 3. 12) as a population to the south of the Mertes, and west of the Cornubii. This gives the part about the Dornoch, Cromarty, and Moray Firths. [R. G. L.]

It is not clear whether they were situated as between the Vinderius and the Rhobogitan promontory. Probably [see Vindernius] the Lagus, falling into Belfast Lough, name for name, and place for place. [R. G. L.]

LONCIUM (Liones), a place in the south of Noricum, on the right bank of the river Dravus, as the sources state, in the Vindis. (Strab. vii. 3. 3. p. 257.) The whole district about Liones abounds in Roman antiquities. (Gruter, Inscription, p. 257. 9; Médar, Noricum, p. 254.)

[L. S.]

LONDINIUM (London), Plin. i. 3. 27; Aufidius, Steph. v. w.; Londinium, Tac. Ann. xiv. 33; Oppidum Londinense, Sann. Paneg. Const. 17; Londinium, Amm. Marc. xx. I.), the capital of Roman Britain. Ptolemy (L.) places Londinium in the district of the Cantii; but the correctness of this position has very naturally been questioned. Modern discoveries have, however, decided, that the southern limits of the city, in the time of Hadrian and Antoninus Pius, extended a considerable distance into the territory of the Cantii; and Ptolemy, therefore, was not able to determine the place of the city in this division of Britain. In earlier times the city was confined to the northern bank of the Thames.

The earliest mention of it is by Tacitus, in his well-known account of the insurrection of the Britons in the reign of Nero. As Britain was only fully subjugated by Claudius, Londinium must have rapidly advanced to the importance it assumes in the narrative of this historian. Although it is not mentioned by Julius Caesar or by other earlier writers, the peculiar natural advantages of the locality point it out as one of the chief places of resort of the merchants and traders who visited Britain from the Gaulish ports and from other parts of the continent. At the comparatively early period in the Roman conquest when it was established, as a place of established mercantile reputation. The three chief cities of Britain at this period were Verulamium, Camulodunum, and Londinium. At Camulodunum a colony of veterans had been established; Verulamium had received the rights and privileges of a municipium Londinium, without such distinctions, had an above mention. It was the first town that pre-eminent which ever marked her as the metropolis of Britain:—"Londinium . . . cognomento quidem coloniae non ignoscit, sed copia negotiorum et commenstuorium maxime celeberr." (Tac. Ann. xiv. 33.)

At this period we must infer that Londinium was without external walls; and this absence of mural defences appears to have been common also to Verulamium and to Camulodunum. The Britons passed by the fortified places and attacked at once the rich and populous cities inadequately defended. Camulodunum was the first to fall; Londinium and Verulamium speedily followed in a similar catastrophe.

The Itinerary of Antoninus, which is probably not later than the time of Severus, affords direct evidence of the chief position which Londinium held among the towns and cities of Britain. It occurs in no less than seven of the itineraries, and in six of these it stands either as the place of departure or as the terminus of the routes; no other town is introduced so conspicuously.

The next historical mention of Londinium occurs in the panegyric of Fenius addressed to Constantius Cæsar (c. 17), in which it is termed "oppidum Londinense." After the defeat of Allectus, the victorious Romans marched directly on Londinium, which was besieged by Picta and other foreign mercenaries, who made up the greater part of the usurper's forces.

Ammianus Marcellinus, who wrote at a later period, states that, in his time, Londinium was called Augusta, an honourable appellation not unfrequently conferred on cities of distinction. In this writer we find the word the first time at the present day:—"Egressus, tendendae ad Londinium, vetus oppidum, quod Augustam posteritas appellavit." (xxvii. 8, comp. xxviii. 3). In the Notitia Dignitatum we find mention of a "Præpositus Thesaurorum Augustensi in Britannia;" and in the Chronography of Ravenna the complete form, Londinium Augusta, is given.

Monumental remains show that Londinium contained buildings commensurate in grandeur and extent with its historical claims. The foundations of the wall which bordered the river, when laid open a few years since, was almost wholly composed of materials used in buildings which were anterior to the period when the wall was built; but it was impossible to determine the date of the wall, or of which part of this wall was constructed. Portions of columns, friezes, cornices, and also foundation stones. From their magnitude, character, and number, they gave an important and interesting insight into the obscure history of Roman London, in showing the architectural changes that had taken place in it. Similar discoveries have been made in various parts of the modern city which more fully developed the "debris" of an ancient city of importance; other architectural fragments have been found; walls of vast strength and thickness have been noticed; and within the last twenty years, at least thirty tessellated pavements have been laid open, of which some were of a very fine kind. (Archaeologia, vol. xxviiiv. xxviii. et seq.) Londinium, enclosed at first, was subsequently in early times walled; but it occupied only part of the site it eventually covered. (Archaeologia, vol. xxix.) The line of the wall of Roman London is well known, and can still, in parts, be traced. Where it has been excavated to the foundation, it appears based upon a bed of clay and flints; the ground within it was paved with stones laid in hard mortar, is faced with small squared stones and bonding tiles; its thickness is about 12 feet; its original height was probably between 20 and 80 feet; it was flanked with towers, and had a
least seven gates. By the sides of the chief roads stood the cemeteries, from which enormous quantities of sepulchral remains have been, and still are, procured. Among the inscriptions, are records of soldiers of the second, the sixth, and the twentieth legions. But, as Fabricius, A. D. 1. says, there is no evidence, however, to show that the legions themselves were ever quartered at Londinium. The only troops which may be considered to have been stationed in this city were a cohort of the native Britons (Col. Ant. vol. I.); but it is not known at what particular period they were here. It is, however, a rather remote conjecture, and it is somewhat contrary to the policy of the Romans to station the auxiliaries in their native countries.

Traces of temples and portions of statues have also been found in London. The most remarkable of the latter is, perhaps, the bronze head of Hadrian found in the Thames, and the large bronze hand found in Thames Street. In reference to the statues in bronze which adorned Londinium and other cities of Roman Britain, the reader may be directed to a curious passage in Geoffrey of Monmouth. That writer relates (xii. 18), that, after the death of Cadwalla, the Britons embalmed his body and placed it in a bronze statue, which was set upon a bronze horse of wonderful beauty, and placed over the western suburbs of London, as a trophy of victory and as a terror to the Saxons. All that we are called upon to consider in this statement is, whether it is at all likely that the writer would have invented the details about the works in bronze; and whether it is not very probable that the story was made up to account for some Roman works of art, which, for centuries, had left Britain, remained a mystery and a puzzle to their successors. Equestrian statues in bronze were erected in Britain by the Romans, as is proved by a fragment found at Lincoln; but in the subsequent and middle ages such works of art were not fabricated.

We have above referred to the "Præsesiun The- smatorum Augustorum," but the names of the statues in existence of the Britains of Londonium. Those which may be certainly thus attributed are of Carausius, Allectus, Constantinus, and the Constantine family. (Aherman's Coins of the Romans relating to Bri- tain.) With respect to the precise position of the public buildings, and, indeed, of the general distribution of the Roman city, but little is known; it is, however, very certain, that, with some few exceptions, the courses of the modern streets is no guide to that of the ancient. This has also been remarked to be the case at Trèves and other ancient cities. [C.R.S.]

LONDORBIS (Lambda, Ptol. ii. 5. § 10; Ad- rimeps, Marc. Heracl. p. 43: Berlingue), a small island, and the only one, belonging to the province of Lausitania, lay off the promontory Lumbarum (C. Carv. P. S.)

LONGANUS (Lambda), a river in the N. of Sicily, not far from Myles (Milazzo), celebrated for the victory of Hieron, king of Syracuse, over the Mamertines in b. c. 270 (Pol. i. 9; Dion. xxii. 19; Exc. H. p. 499, where the name is written Aul- raeus; but the modern river is undoubtedly meant). Polyaenus describes it as "in the plain of Myles (ts τῆς Μυλαίας ἔριδος), but it is impossible to say, with certainty, which of the small rivers that flow into the sea near that town is the one meant. The Fiume di Santa Lucia, about three miles southwest of Milazzo, has perhaps the best claim; though Olearius fixes on the Fiume di Castro Reale, a little more distant from that city. [Cluv. Sicil. p. 303.] [E. H. B.]

LONGATICUM, a town in the S. of Panonia Superior, on the road from Aquileia to Emona. Now Logatec, according to Muchar. (Fl. Anton. i. 3; Marci. Vet. Fast. iv. 223.)

LONGOBARDI. [Langobardi]

LONGONES. [Sardiniæ.]

LONGOVICUS, a town in Britain, mentioned in the Notitia, and nowhere else. It was, probably, in the neighbourhood of the Cumberland and Westmoreland lakes; but beyond this it is not safe to go further. The name is somewhat contrary to the policy of the Romans to station the auxiliaries in their native countries.

Lo'ngula (orygala; Ed. Longulana; Buon Ripo- so), an ancient city of Latium, which seems to have been included in the territory of the Vol-scians. It first appears as a Volscian city, which was taken by assault by the Roman consul, Postu- mus Cominius, in a.c. 493. (Liv. ii. 33; Dionys. vi. 91.) But it was recovered by the Volsciens under the command of Coriolanus, in a.c. 488 (Liv. ii. 39; Dionys. vii. 39); in both cases it is described as falling an easy prey to the invading army, and was probably not a place of any great importance; indeed Livy's expressions would lead us to infer that it was a dependency of Anitium. After this it is only once mentioned, and that in the passage in which the Roman army under L. Aemilius encamped in the war against the Volsciens, in a.c. 482 (Dionys. viii. 85); and again, at a much later period in the Samnite Wars, in a.c. 309. (Liv. ix. 39.) Its name is after this found only in Pliny's list of the cities of Latium which were in his time utterly decayed and deserted. (Plin. Nat. Hist. iii. 67.) Polyaenus states that Consimius, of the cities that shared in the sacrifices on the Alban Mount, it would seem to have been originally a Latin city, though it had fallen into the hands of the Volsciens before its name appears in history.

All the above passages would lead us to place Longula in the neighbourhood of Anitium, while the two towns, Polvesa and Corioli, are all the data which we have for determining its position, which must therefore be in some degree matter of conjecture, especially as that of Polvesa and Corioli is equally uncertain. But Nibby has pointed out a locality which has at all events a plausible claim to be that of Longula, in the oasis, or farm-house, now called Buon Riposo, on the right of the road from Rome to Anitium, about 27 miles from Rome, and 10 in a straight line from Porto d'Ama. The farm, or tenuta, di Buon Riposo lies between that of Carrocesto on the one side, and Ardea on the other; while the site occupied by the oasis itself, and which was that of a castle in the middle ages, is described as one of those which is so clearly marked out by natural advantages of position that it could scarcely fail to have been chosen as the site of an ancient city. No ruins re- main; but perhaps these could hardly be expected in the case of a town that ceased to exist so early a period. (Nibby, vol. i. p. 326; Abeken, Mittel- italien, p. 72.) [E. H. B.]

* The position assigned to Buon Riposo on Gell's map does not accord with this description of the site given by Nibby; but this part of the map is very imperfect, and evidently not derived from personal observation. Gell's own account of the situation of Buon Riposo (p. 185), though less precise, agrees with that of Nibby.
LONUM PROMONTORIUM.

LONUM PROMONTORIUM. [Sicilia.] LONUM, in North Britain, mentioned by Ptolemy (ii. 3) as a river to the north of the Epi-

LORD, a town of Cirencester, Strab. iv. 8. 22; Aemilius, Strab. iv. 3. 34; [Lopedumus], a small island off the E. coast of Africa Propria, opposite to the town of Thapsus, at the distance of 80 stadia, according to an ancient Periplus (Iriarte, Bibl. Matri. Cod. Græc. p. 488). Pliny places it about 50 M. P. N. of Cercina, and makes its length about 6 M. P. (Plin. iii. a. 14, r. 7. a. 7.) It really lies about 80 Eng. miles E. of Thapsus, and about 90 N.E. of Cercina. [P. S.]

LOPHIS. [Borotta, p. 413, a.]

LOPOSAGIUM, in Gallia, is placed between Vesontio (Besançon) and Epamandodurum (Mandeure). It is xii. leagues from Vesontio. D'An-
vil supposes that it may be a place called Besan-
es-Neuves, being a necropolis named in the inscrip-
tions found in the church of Dussey, a place near it named Locul or Lociul. [G. L.]

LOPSICA, a town of Liburnia, which Ptolemy (i. 25. 3; comp. Plin. iii. 8. 26) places near the mouth of the river Tedunus (Zyrmagum): perhaps the same place as the Oresta of the Geographer of Ravenna. [E. B. J.]

LOQUIUM, or Quarum, a village near Etruria and station on the Via Aurelia, 12 miles from Rome. (Itin. Ant. p. 290; Tab. Peut.) It is chiefly known from the circumstance that the family of Antoninus Pius had a villa there, in which that emperor was brought up, and where he after-
wards constructed a palace or villa on a more mag-
nificent scale, which was his place of residence at the time of his death. (Jul. Capit. Ant. P. 12; Vic. de Cosa. 15, Epit. 15; Estrop. viii. 8.) It was afterwards a favourite place of resort with his successor M. Aurelius, as we learn from his letters to Fronto (Fronto, Ep. ii. 18, iii. 20, vi. 3, &c.); but had already fallen into decay in the time of Capitelius, who speaks only of its ruins. No other name of Laurium occurs in the ancient itineraries, by which we are enabled to fix its position with certainty. The 12th mile from Rome coincides with a bridge over a small stream between a farm called Bottaccia and the Castel di Guido: here the remains of ancient buildings and sepulchres have been found; and on the high ground above are the ruins of an edifice of a more extensive and sumptuous character, which, from the style of construction, may probably have belonged to the villa of the Antonines. (Nibby, vol. ii. p. 271.)

The name is variously written Lorium, Loria, and Laurium, but the first form, which is that adopted in the epistles of Fronto and M. Aurelius, is the best warrant for the supposed antiquity of the site inhabited during the early ages of Christianity, and we even meet with a bishop of Lorium in the 5th century. [E. H. B.]

LYOURMA (or Abyra), a small fortified place with a port, close to Cape Cynossema, on the western-
most point of the Rhodian Chersonesus, in Caria. Its harbor was also a Roman miles distant from Rhodos. (Liv. xxxvii. 17, xiv. 10; Steph. B. s. v.; Plin. v. 29; Ptol. v. 2. 11; Thucyd. viii. 43; Smet. Qwace Nat. iii. 19; Appian. B. C. iv. 72.) Strabo (xiv. p. 652) applies the name Loruma to the whole of the rocky district, without mentioning the town. The Larumna of Melia (i.

LOTOPHAGI. 205

LOTOPHAGI (Aerophagioi, i. e. lotus-eaters), a people on the N. coast of Africa, between the Syrtes, who first appear in mythical, but afterwards in his-

torical geography. Homer (Od. ix. 84, et sequ.)

represents Ulysses as coming, in his wanderings, to the coast of the Lotophagi, who compassed the destruction of his companions by giving them the

lotus to eat. For whoever of them ate the sweet

fruit of the lotus, lost all wish to return to his native country, but desired to remain there with the Lotophagi, feeding on the lotus, and forgetful of return. (The poetical idea is exquisitely wrought out by Tenison in his Lotus-Eaters, works, vol. i. pp. 175—184.) The Greeks of the historical

time divided the territory of these Lotus-eaters with the coast between the Syrtes, which was once

a Turanian indigenous tribe, who used to a great extent (Herodotus says, as their sole article of food) the fruit of a plant, which they therefore supposed to be the lotus of Homer. To this day, the aboriginal inhabitants who live in caves along the same coast eat the fruit of the plant, which is doubtless the lotus of the ancients, and drink a wine made from its juice, as the ancient Lotophagi also did (Herod. iv. 177). This plant, the Zizyphus Lotus or Rhamnus Lotus (jujube tree) of the botanists (called by the Arabs Sedefa), is a prickly branching shrub, bearing fruit of the size of a wild plum, of a
saffron colour and sweetish taste (Herodotus likens its taste to that of the date). It must not be con-
flated with the celebrated Egyptian lotus, or water-
lily of the Nile, which was also used for food.

1 [There were, in fact, several plants of the name,
which are carefully distinguished by Liddell and 
and Scott, Gr. Lex. a. e.)

The ancient geographers differ as to the extent of
coast which they assign to the Lotophagi. Their
chief seat was around the Lesser Syrtis, and east-
ward indefinitely towards the Great Syrtis; but Mela
carries them into Cyrenaica. They are also placed
in the second line of the island (Graecia, Egeo, Syr-

[Asiat. iii. 2. § 25; Scylax. p. 47; Mela, i. 7. § 5] 
[Plin. v. 4. a. 4; Stil. iii. 310; Hygin. Fab. 125.;
[Saw; Della Cella; Barth; Heeren, Ideea, vol. ii.

[pi.: 1. p. 54; Ritter, Erdkunde, vol i. p. 969.] [P.S.]

LOTUM, in Gallia, is placed by the Antonine 
[M. on a road from Juliiobona (Liddelbona) to 
Rotomagus (Romes). It is in the league from Julii-
obona to Lotum, and xili. from Lotum to Rotomagus.
The actual distances seem to fix Lotum at or near 
Cusdebec, which is on the north bank of the Seine 
between Liddelbona and Romes. 

[G. L.]

LOXA, in Britain, mentioned by Ptolemy (ii. 8) 
as a river on the western coast of Scotland, north of the 
[Forficulus, i. 196; Asautopis, v. 8.] 

[Identified in the Monuments Britannicae with the 
Loth in Sutherland; the Lossie, and Cromarty 
Firth.

[B. G. L.]

LUANCI [GALLERIA.]

LUBAENIL [GALLEREA.]

LUCA. [Ascola, Strab.; Ptol.; Ebd. Lucania; 
[Lorenz.] in a valley 1 in a place at the 
foot of the Apennines, near the left bank of the 
Asis (Sorcho) about 12 miles from the sea, and 10 
NE. of Pisa. Though Luca was included within 
the limits of Etruria, as these were established in 
the time of Augustus (Plin. iii. 5. a. 8; Ptol. iii. 1. 
§ 47), it is very doubtful whether it was ever an 
Etruscan town. No mention of it is found as such,
and yet it has been regarded as Etruscan, and in its 
neighbourhood. But it is probable that the Etrus-
cans at one time extended their power over the level 
country at the foot of the Apennines, from the 
Arno to the Macra, leaving the Ligurians in pos-
session only of the mountains,—and at this period,
therefore, Luca was probably subject to them. At 
a later period, however, it had certainly fallen into 
the hands of the Ligurians, and being retracted 
from them by the Romans, seems to have been commonly 
considered (until the reign of Augustus) a Ligurian 
town. For this reason we find it comprised within 
the province assigned to Casurus, which included 
Lucuria as well as Cispinale Gaul. (Suet. Cas. 24.) 
The exact position of Luca in history is in a. 316, 
when Livy tells us that the Etruscans retired there after his unsuccessful contest with 
Hannibal. (Liv. xxi. 59.) It was, therefore, at this 
period certainly in the hands of the Romans, though 
it would seem to have subsequently fallen again into 
those of the Ligurians; but it is strange that during 
the long protracted wars of the Romans with that 
people, we meet with no mention of Luca, though it 
must have been of importance as a frontier town, 
especially in their wars with the Apuani. The 
next notice of it is that of the establishment there 
of a Roman colony in a. c. 177. (Vell. Pat. i. 15; 
Liv. xii. 13.) There is, indeed, some difficulty with 
regard to this; the MSS. and editions of Livy vary 

between Luca and Luna; but there is no such dis-
crepancy in those of Velleius, and there seems to 
least no reason to doubt the settlement of a Latin 
colony at Luca; while that mentioned in Livy being 
a "colonia civium," may, perhaps, with more pro-
bability, be referred to Luna. (Madvig, de Colom. 
p. 387; Zumpt, de Colom. p. 349.) That at Luca 
became, in common with the other Latin colonies, a 
municipal town by virtue of the Lex Julia (a. c. 49), 
and hence is termed Cicero "municipium Lu-
rcens." (Cic. ad Fam. xiii. 13.) It appears to have 
been at this time a considerable town, as we find it 
reported by Suet. Tito. (Cic. de Vis. ad Titi 
[fitting his administration of Gaul as the frontier town of his province, 
to which he repaired in order to consult with his 
friends, or with the leaders of political parties at 
Rome. (Suet. Cas. 24; Plin. Cas. 21, Crass. 14. 
Pomp. 51; Cic. ad Fam. i. 9. § 9.) On one of 
these occasions (in a. c. 69) there are said to have 
been more than 200 senators assembled at Luca, 
including Pompey and Crassus, as well as Caesar 
himself. (Plut. L c.; Appian, B. C. ii. 17.) Luca 
would seem to have received a fresh colony before 
the time of Pliny, probably under Augustus. (Plin. 
iii. 5. a. 8; Zumpt, de Colom. p. 348.) We hear 
little of it under the Roman Empire; but it seems 
to have continued to be a provincial town of some 
considerable influence, whose possessions extended 
to Fructus. Clodia, proceeding from Rome by Arestitum, Flo-
rentia, and Pistoria, was met by other roads from 
Parma and Pisa. (Plin. L c.; Ptol. iii. i. § 47; 
[Plin. Ant. pp. 283, 284, 289; Tab. Peut.] During the 
Gothic wars of Narses, Luca figures as an 
important city and a strong fortress (Agath. B. G. 
[17.11]). The place was now given to the Lombard 
monarchy which it attained to the degree of 
prosperity and importance that we find it enjoying 
during the middle ages. Luca is still a flor-
ishing city, with 25,000 inhabitants; the only 

[relics of antiquity visible there are those of an 
amphitheatre, considerably part of which may still 
be traced, not connected into a market-place called 
the Forum del Mercato, and some small remains of 
a theatre near the church of Sta. Maria di Coro 
Landini. 

[E. H. B.]

LUCA'NUS, a river of Bruttium. [Bruttii, 
p. 450, b.]

LUCA NIA (Aneuigor, Strab). The name of the 
people is written Anuigow by Strabo and Polybius, 
but Ptolemy has Anuigow, and this is found also 
on a coin), a province or district of Southern Italy, ex-
tending across from the Tyrrhenian sea to the 
gulf of Tarrentum, and bounded by the Bruttiasts on the 
S., by Samnium and Apulia on the N., and by Cam-
pania, or the district of the Picentini, on the NW. 
Its more precise limits, which are fixed with un-
usual unanimity by the geographers, were, the river 
Tinno from the Lena to the Hykris; the Brundusia 
from the gulf of Tarrentum, just beyond Metaponto, 
on the NE.; while the mouths of the Liris and the 
Crathis marked its frontiers towards the Bruttiasts 
on the two sides of the peninsula. (Strab. vi 
pp. 229, 228, 223; Plin. iii. 5. a. 10, 11. a. 15; 
Ptol. iii. 1. §§ 8, 9.) Its northern frontier, from 
the Tina to the Clorus, through the Crathis, must 
have been an arbitrary line; but nearly fol-
lowing the main ridge of the Apennines in this part 
of its course. It thus comprised the modern pro-
vince of the Basilicata, together with the greater 
part of the Principato Citeriore and the extreme 
northern portion of Calabria.
LUCANIA.

Lucania is evidently "the land of the Lucanians:" but though no territorial designation in Italy became more clearly marked or generally adopted than this appellation, it was not till a comparatively late period that it came into use. The name of the Lucanians was wholly unknown to the Greeks in the time of Thucydides, and the tract subsequently known as Lucania was up to that time generally comprised under the vague appellation of Oenotria, while its coasts were included in the name of Magna Graecia. Sclavus is the earliest author in whom the name of Lucania and the Lucanians is found; and he describes them as extending from the frontiers of the Samnites and Iapygians to the southern extremity of the Bruttian peninsula. (Sclav. pp. 3, 4, 5. §§ 12, 13.) We are fortunately able to trace with certainty the historical causes of this change of designation.

The earliest inhabitants of the part of Italy afterwards known as Lucania, were the Oenotrians and Chones, tribes whom there is good reason to refer to a Pelasgic stock (see Ant. Lib. i. p. 84. The few particulars transmitted to us concerning them are given under Oenotria.) These races appear to have been unwarlike, or at least incapable of offering any material opposition to the arms of the Greeks;

so that when the latter established a line of colonies along the shores of the Tyrrhenian sea and the gulf of Taras, they seem to have reduced the barbarians of the interior to a state of at least nominal submission with but little difficulty. Thus Sybaris extended her power from sea to sea, and founded the colonies of Poseidonia, Later, and Scidrus on the western coast of Oenotria; while further to the S. Crotona and Locri followed her example. It is probable, however, that other means were employed by the Greeks as well as arms. The Pelasgic races of Oenotria were probably assimilated without much difficulty with their Hellenic rulers; and there seems reason to believe that the native races were to a considerable extent admitted to the privileges of citizens, and formed no unimportant element in the population of the cities of Magna Graecia. (Niebuhr, vol. i. p. 60.) The history of the relations of the Greeks with the Trojan colonies, which gradually formed as it were a belt, encircling the whole southern peninsula of Italy, are more appropriately reserved for the article Magna Graecia. It may here suffice to mention that the period immediately preceding the fall of Sybaris (B. C. 510) may be taken as that during which the Greek cities were at the height of their power, and when their dominion was most widely extended. But though many of those cities suffered severely from domestic dissensions, we find no trace of any material change in their relations with the neighboring barbarians, till the appearance of the Lucanians at once produced an entire change in the aspect of affairs.

The Lucanians were, according to the general testimony of ancient writers, a Sabellian race,—an offshoot or branch of the Samnite nation, which, separating from the main body of that people, in the same manner as the Campanians, the Hirpini, and the Sventani had severally done, pressed on still further to the south, and established themselves in the country subsequently known as Lucania. (Strab. vi. p. 254; Phil. ii. 5. § 10.) The origin of their name is unknown; for the derivation of it from a leader of the name of Lucius (Plin. xxx. 1. c.; Eym. Magn. s. 2. Aen.) is too obviously a mere etymological fiction of late days to deserve attention. Nor have we any distinct information as to the period of their first appearance and establishment. Strabo describes them, without doubt, correctly, as first expelling (or more properly subduing) the Oenotrians and Chones, and then turning their arms against the Greek cities on the coast; it is not till they come into contact with these last that we have any account of their proceedings; and we have, therefore, no information as to the commencement of their career. Even their wars with the Greeks are known to us only in a very imperfect and fragmentary manner, so that we can scarcely trace the steps of their progress. But it is probable that it was not till after the conquest of Campania (about B. C. 490) that the Samnites began to extend their conquests to the southward. Niebuhr has justly observed that the tranquil foundation of the Athenian colony at Thurii, in B. C. 442, and the period of prosperity which allowed it at first to rise rapidly to power, sufficiently prove that the Lucanians had not as yet become formidable neighbours to the Gauls, at least on that side of the peninsula (Niebuhr, vol. i. p. 96.) But they seemed to have first turned their arms against the Greek cities on the W. coast, and established a permanent footing in that quarter, before they came into collision with the more powerful cities on the Tarentine gulf. (Strab. i. p. 254.) Poseidonia was apparently the first of the Greek cities which yielded to their arms, though the date of its conquest is uncertain. [PAESTUM.] It was probably soon after this that the Thuriens, under the command of Clesandrides, were engaged in war with the Lucanians, in which they appeared to have obtained some considerable successes. (Polyaeus, ix. 6.) But the progress of the latter was still unchecked; and the increasing danger from their power led to the formation, in B. C. 393, of a defensive league among all the principal cities of Magna Graecia, with a view of resisting the Lucanians on the N., and the power of Dionysius on the S. (Diod. xiv. 91.) They might reasonably suppose that their combined arms would easily effect this; but only three years later, B. C. 390, the forces of the confederates, among whom the Thuriens were the last to join, met at the Isthmus of Corinth near Locri, in which it is said that 10,000 of the Greeks perished. (Diod. xiv. 101; 102; Strab. vi. p. 253.) After this success, the Lucanians seem to have spread themselves with but little opposition through the southern peninsula of Italy. The wars of the elder Dionysius in that region must have indirectly favoured their progress by weakening the Greek cities; and though he did not openly support the Lucanians, it is evident that he looked upon their successes with no unfavourable eyes. (Diod. xiv. 102.) Their continued advance towards the south, however, would soon render them in their turn a source of umbrage to the Syracusan despots, who had established a permanent footing in the Italian peninsula; hence we find the younger Dionysius engaged in hostilities with the Lucanians, but apparently with little success; and after a vain attempt to exclude them from the southernmost peninsula of Bruttium, by fortifying the isthmus between the Hipponian and Scylacian gulf, he was obliged to conclude a treaty of peace with them in B. C. 356. (Diod. xvi. 5; Strab. vi. p. 254.) This was about the period during which the Lucanians had attained their greatest power, and extended their dominion to the limits which we find assigned to them by Sclavus (pp. 3, 4). They
had not, however, subdued the Greek cities on the coasts, some of which fell at a later period under the yoke of the Bruttians; while others maintained their independence through the aid of Carthage in a dejected and enfeebled condition, till the period of the Roman dominion. [Magna Graeca.] Shortly afterwards, the Lucanians lost the Bruttian peninsula, their most recent acquisition, by the revolt of the Bruttians, who, from a mere troop of outlaws and bandits, gradually consolidated into a formidable nation. [Barr. 117.] From that time forth, the limits which confined the Lucanians within the region assigned to them from this time forward to their territory; they seem to have acquired, after a brief struggle, in the independence of the Bruttians, and soon made common causes with them against the Greeks. Their arms were now principally directed against the Tarentines, on their shore. The latter people, who had apparently taken little part in the earlier contests of the Greeks with the Lucanians, were now compelled to provide for their own defence; and successively called in the assistance of Archidamus, king of Sparta, and Alexander, king of Epirus. The former monarch was slain in a battle against the Lucanians in n. c. 330, and his army cut to pieces (Diod. xvi. 63, 88; Strab. vi. p. 280); but Alexander proved a more formidable antagonist: he defeated the Lucanians (though supported by the Samnites) in a great battle near Paestum, as well as in several minor encounters, took several of their cities, and carried his arms into the heart of Bruttium, where he ultimately fell in battle near Pandoea (Liv. viii. 24; Justin. xii. 2, xxii. 1, Strab. vi. p. 256.) It would appear as if the power of the Lucanians was considerably broken at this period; and in n. c. 303, when we next hear of them as engaged in war with the Tarentines, the very arrival of Cleonymus from Sparta is said to have terrified them into the conclusion of a treaty. (Diod. xiv. 106.)

Meantime the Lucanians had become involved in relations with a more formidable power. Already, in n. c. 326, immediately after the death of Alexander king of Epirus, the Lucanians are mentioned as voluntarily concluding a treaty of peace and alliance with Rome, which was then just entering on the Samnite War. We have no explanation of the causes which led to this change of policy; but before, we find them in alliance with the Samnites, and very shortly after they returned once more to their old allies. (Liv. ix. 27.) But though they were thus brought into a state of direct hostility with Rome, it was not till n. c. 317, that the Roman armies were sent to Lucania to punish their defection. In that year the consuls for the first time entered Lucania, and took the town of Neapolis by assault. (Liv. x. 20.) The Lucanians were evidently included in the peace which put an end to the Second Samnite War (n. c. 304), and from this time continued steadfast in the Roman alliance; so that it was the attack made on them by the Samnites which led to the Third Samnite War, n. c. 298. (Liv. x. 11.) Throughout that struggle the Lucanians seem to have been faithful to Rome; and were probably admitted to an alliance on favourable conditions at its close. But in n. c. 286, they having turned their arms against Taurii, the Romans took up the cause of the besieged city, and declared war against the Lucanians, over whom M. Curius is said to have celebrated an ovation. (Liv. Vict. de Lucania. (Vit. Vict. 33s); and four years afterwards (n. c. 282) the allied forces of the Lucanians and Samnites, which had again been besieged by Taurii, were defeated at Caudine Forks (Val. Max. i. 8. § 6.) On the arrival of Pyrrhus in Italy (n. c. 281) the Lucanians were among the first to declare in favour of that monarch, though it was not till after his victory at Heraclea that they actually sent their contingent to his support. (Pint. Pyrr. 13, 17; Zonar. viii. 3.) The Lucanian auxiliaries are especially mentioned as being of great power in the battle of Asculum ( Dionys. xx. Fr. Dido); but when Pyrrhus withdrew from Italy, he left his allies in the mercy of the Roman arms, and the Lucanians in particular, were exposed to the full brunt of their resentment. After they had seen their armies defeated, and their territory ravaged in several successful campaigns, by C. Fabricius, Cornelius Rufus, and M. Curius, they were at length reduced to submission by Sp. Carvillius and L. Papirius Cursor in n. c. 272. (Zonar. viii. 6; Eutrop. ii. 14; Liv. Epit. xiii. xiv.; Fast. Capit.)

From this time the Lucanians continued in undisturbed submission to Rome till the Second Punic War. In the celebrated register of the Roman forces in the first Punic War, Lucania is placed third (Dionys. xxv. 29); but the Lucanians, who are not separately noticed) are reckoned as capable of bringing into the field 30,000 foot and 3000 horse, so that they must have been still a numerous and powerful people. (Pol. ii. 24.) But they suffered severely in the Second Punic War. Having declared in favour of Hannibal after the battle of the Metaurus (n. c. 206), that territory became during many successive campaigns the theatre of war, and was ravaged, in turn, by both contending armies. Thus, in n. c. 214, it was the scene of the contest between Sempronius Gracchus and Hanno; in the following year Gracchus employed the whole campaign within its limits, and it was in Lucania that that general met with his untimely death in n. c. 212. (Liv. xxi. 26; Liv. xxiv. 1, 16.) At length, in n. c. 207, the Lucanians, in conjunction with the Hirpini, abandoned the alliance of Hannibal, and betrayed the garrisons which he had left in their towns into the hands of the Romans; in consideration of which service they were admitted to favourable terms. (Id. xxvii. 15.) The Roman army went into winter quarters with the resources of this country, for in the next year their territory was the scene of the campaign of Marcellus and Crispinus against Hannibal, in which both consuls perished; and it was not till after the battle of the Metaurus, in n. c. 207, that Hannibal withdrew his forces into Bruttium, and abandoned the attempt to maintain his footing in Lucania. (Liv. xxvii. 51; xxviii. 11.)

Strabo tells us that the Lucanians were punished by the Romans for their defection to Hannibal, by being reduced to the same degraded condition as the Bruttians. (Strab. v. p. 251.) But this can only be true of those among them who had refused to join in the general submission of the people in n. c. 209, and clung to Hannibal to the last; the others were received as a considerable and favourable nation, and continued to form a considerable nation; though, if we may trust to the statement of Strabo, they never recovered from the ravages of this war.

But it was the Social War (n. c. 90—88) that gave the final blow to the prosperity of Lucania. The Lucanians on that occasion were among the first to take up arms; and continued to bear an important part throughout the contest, they still, in conjunction with
the Samnites, preserved a hostile attitude when all the other nations of Italy had already submitted and received the Roman franchise. (Appian, B. C. I. 39, 51, 53.) In the civil war between Marius and Sulla, which immediately followed, the Lucanians, as well as the Samnites, actively espoused the cause of the Marian party, and a Lucanian legion fought in the great battle at the Colline Gate. They in consequence were exposed to the full vengeance of the conqueror; and Lucania, as well as Samnium, was laid waste by Sulla in a manner that it never recovered. The remaining inhabitants were admitted to the Roman citizenship. From this time the Lucanians ceased to be a people, and soon lost all traces of distinct nationality. (Appian, B. C. I. 90—93, 96; Strab. vii. pp. 253, 254.)

Of Lucania under the Roman government we hear but little; but it is certain that it had fallen into a state of complete decay. The Greek cities on its coast, once so powerful and flourishing, had sunk into utter insignificance, and the smaller towns of the interior were poor and obscure places. (Strab. l.c.) Nor is there any appearance that it ever recovered from this state of depression under the Roman Empire. The Liber Coloniarum mentions only eight towns in the whole province, and all of these were in the subordinate condition of "praefectus," or presidents, over the neighboring tract of country, and from which now desolates its coasts, must have begun to act as soon as the population had disappeared; and the mountain region of the interior was apparently then, as at the present day, one of the wildest regions of Italy. Large tracts were given up to pasture, while extensive forests afforded subsistence to vast herds of swine, the chief of which furnished the meat and supplies of the Imperial City. The mountain forests were also famous resorts of wild bears, and contained abundance of bears, which were sent from thence to the amphitheatres at Rome. (Hor. Sat. ii. 3, 234, 8, 6; Martial, de Spect. 8; Varr. L. L. v. § 106.) Lucania was comprised together with Bruttium in the third region of Augustus, and the whole country was placed under a governor designated for the whole province, and the supplies of the Imperial City. The mountain forests were also famous resorts of wild bears, which were sent from thence to the amphitheatres at Rome. (Hor. Sat. ii. 3, 234, 8, 6; Martial, de Spect. 8; Varr. L. L. v. § 106.) Lucania was comprised together with Bruttium in the third region of Augustus, and the whole country was placed under a governor designated for the whole province, and the supplies of the Imperial City. The mountain forests were also famous resorts of wild bears, which were sent from thence to the amphitheatres at Rome.

The physical characters of Lucania are almost wholly determined by the chain of the Apennines, which enters at its northern frontiers, and from thence traverses the province, its whole length to be continued to be regarded as a single range of mountains forming a lofty group or knot immediately on the frontiers of Samnium, and from thence the main chain is continued nearly due S. to the confines of Bruttium; a little before reaching which, it rises again into the very lofty group of Monte Polizzo, the highest summit of which attains an elevation of above 7000 feet. Throughout its course this chain approaches considerably nearer to the western than the eastern coast; but it is not till after passing the frontier of Bruttium that it becomes a complete littoral chain, as it continues for a considerable distance. In the more northern part of Lucania the space between the central chain and
LUCANIA.

be regarded as only the salient points of one large projecting mass which separates the gulf of Paestum from that of Policastro. The latter seems to have been known in ancient times as the gulf of Lata. Opposite to the headland called Posidum was the small islet named by the Greeks Leucosia, from which the promontory now derive the name of Punta di Leuco; and a little further S, off the coast of Velia, were the two islands (also mere rocks) called by the Greeks the Oenostrides. (Strab. vi. p. 252; Plin. iii. 7. s. 13.)

The towns of Lucania may be conveniently enumerated in two classes:—the first comprising those along the coasts, which were almost without exception of Greek origin; the other containing the towns of the interior, which were for the most part either native Lucanian settlements, or Roman colonies of a later date. On the W. coast, proceeding along the shore of the Tyrrhenian sea, from N. to S., were:—Posidumia, afterwards called Paestum, a very little way from the mouth of the Silarus; Elba or Velia, at the mouth of the Heles (Ateno); Phebus, called by the Romans Buxentum, now Policastro; Scorbutum, supposed to have occupied the site of Sapri; Blanda, now Maratea; and Laus, which was at the mouth of the river of that name, on its right bank. On the E. coast, bordering on the gulf of Tarentum, and beginning from the Frattis, stood Tauri, replacing the ancient city of Syrasus, but not occupying precisely the same site. Helea, which had in like manner succeeded to the more ancient settlement of Siris, a few miles further N.; and, lastly, Metapontum, on the southern bank of the river Bradanus.

The principal towns in the interior were:—Potentia, still called Potamia, and the capital of the province known as the Basilicata; Atina, still called Atina, in the upper valley of the Tanager; Volceium or Volcentum, now Buccino; Numistro, of uncertain site, but apparently in the same neighbourhood; Ebura (Eboli), which is expressly called Pliny a Lucanian town, though situated to the N. of the Silarus; Bantia, Baniez, a few miles from Venusia, on the very frontiers of Apulia, that was sometimes referred to therein, was probably in proof of which an ancient statue of Minerva, in the temple of that goddess, was alleged to be the true Palladium brought by Diomed himself from Troy. (Strab. vi. pp. 264, 264; Plin. iii. 11. s. 16.) Yet all the accounts of the city from the time that its name appears in history would seem to point to its being an Oscan town, and connected rather with the Oscan branch of the Apulians than with the Danians. Nothing is known of the history of Luceria till the Second Samnite War, when the Lucerians, who had apparently joined with the other Apulians, in their alliance with Rome in B.C. 326, but had refused to partake in their subsequent defection to the Samnites, were besieged by the latter people; and the Roman legions were on their way to relieve and succour them, when they sustained the great disaster at the Caudine Forks. (Liv. ix. 2; Darenborch, ad loc.; Aur. Vic. de Cir. Illustr. 30.) It is clear that in consequence of that blow to the Roman power, Luceria fell into the hands of the Samnites, as we are told shortly after that the hostages given up by the Romans by the treaty at Cad- dium were deposited for safety in that city. (Id. ix. 12.) For this reason its recovery was a great object with the Romans; and in B.C. 320, Papirius Cursor laid siege to Luceria with a large army, and

LUCERIA.

Ad Tanagrum - - - xxv.
Ad Calorem - - - xxiv.
Marcellana - - - xxv.
Casariana - - - xxi.
Nerulum - - - xxiii.
Sub Murano - - - xiv.

The Tabula gives a place which it calls Vicus Mendiculns (?) as the intermediate station between Marcellana and Nerulum. All these stations are very doubtful, the exact line of the ancient road through this mountain country having never been traced with accuracy. Another road, given in the Tabula, led from Potentia by Anzio (Anzat) and Grumentum to Nerulum, where it joined the Via Popillia. The other roads in the interior, given in the Itinerary and the Tabula, are very corrupt; we may, however, ascertain that there was a line of road proceeding from Venusia through Potentia to Heraclea and Tauri, and another from Potentia to join the Via Popillia at Marcellana, being probably the direct line of communication between Potentia and Rome. Lastly, there was always a line of road along the coast, following its level shores from Tarentum by Metapontum and Heraclea to Tauri.

[E. H. B.]

COIN OF LUCANIA.

LUCERIA (Lauceria, Pol., Strab.: Ecb. Luncer- pius, Steph. B.; Lucerinius: Lucera), an ancient and important city of Apulia situated in the interior of that country, about 12 miles W. of Arpi, and 9 N. of Acasta (Troya). It is called by ancient writers a city of the Danians, and the tradition current among the Greeks ascribed its foundation, in common with that of Arpi and Tauri, to Himera, who, according to Strabo, in the temple of that goddess, was alleged to be the true Palladium brought by Diomed himself from Troy. (Strab. vi. pp. 264, 264; Plin. iii. 11. s. 16.) Yet all the accounts of the city from the time that its name appears in history would seem to point to its being an Oscan town, and connected rather with the Oscan branch of the Apulians than with the Danians. Nothing is known of the history of Luceria till the Second Samnite War, when the Lucerians, who had apparently joined with the other Apulians, in their alliance with Rome in B.C. 326, but had refused to partake in their subsequent defection to the Samnites, were besieged by the latter people; and the Roman legions were on their way to relieve and succour them, when they sustained the great disaster at the Caudine Forks. (Liv. ix. 2; Darenborch, ad loc.; Aur. Vic. de Cir. Illustr. 30.) It is clear that in consequence of that blow to the Roman power, Luceria fell into the hands of the Samnites, as we are told shortly after that the hostages given up by the Romans by the treaty at Cad- dium were deposited for safety in that city. (Id. ix. 12.) For this reason its recovery was a great object with the Romans; and in B.C. 320, Papirius Cursor laid siege to Luceria with a large army, and
after an obstinate resistance, made himself master of the city, which was defended by a garrison of above 7000 Samnites. (Id. ix. 15–15.) Besides recovering the hostages, he obtained an immense booty, so that Luceria was evidently at this period a flourishing city, and Diodorus (xii. 72) calls it the most important place in Apulia. A few years after (a. c. 314), the city was again betrayed into the hands of the Samnites; but was quickly recovered by the Romans, who put the greater part of the inhabitants to the sword, and sent thither a body of 2500 colonists to supply their place. (Id. ix. 26; Vell. Pat. i. 14; Diod. xii. 72.) The possession of so important a stronghold in this part of the country became of material service to the Romans in the subsequent operations of the war (Diod. l. c.); and in a. c. 294, the Samnites having laid siege to it, the Roman consul Attilius advanced to its relief, and defeated the Samnites in a great battle. According to another account, Luceria afforded shelter to the shattered remnants of the consul's army after he had sustained a severe defeat. (Liv. x. 35, 37.)

Not less important was the part which Luceria bore in the Second Punic War. The establishment of this useful colony in a military position of the utmost importance, was of signal advantage to the Romans during all their operations in Apulia; and it was repeatedly chosen as the place where their armies took up their winter-quarters, or their generals established their head-quarters during successive campaigns in Apulia. (Liv. xxi. 9, xxii. 37, xxiv. 3, 14, 20; Pol. iii. 60, 100.) But though it was thus exposed to a more than ordinary share of the sufferings of the war, Luceria was nevertheless one of the eighteen Latin colonies which in a. c. 209 expressed their readiness to continue their contributions, both of men and money, and which in consequence received the thanks of the senate for their fidelity. (Liv. xxvii. 10.)

From this time we meet with no notice of Luceria till near the close of the Roman Republic; but it appears from the manner in which Cicero speaks of it (pro Cluent. 69) that it was in his time still one of the most considerable towns in this part of Italy; and in the Civil War between Caesar and Pompey, it is evident that much importance was attached to its possession by the latter, who for some time made it his head-quarters before he retired to Brundisium. (Caes. B. C. i. 24; Cic. ad Att. vii. 12, viii. 1; Appian, B. C. ii. 38.) Strabo speaks of Luceria as having fallen into decay, like Caeniusum and Arpi (vi. p. 284): but this can only be understood in comparison with its former presumed greatness; for it seems certain that it was still a considerable town, and one of the few in this part of Italy that retained their prosperity under the Roman Empire. Pliny terms it a Colonia, and it had therefore probably received a fresh colony under Augustus (Plin. iii. 11. a. 16; Lib. Colom. p. 210; Zumpt, de Colon. p. 349). Its colonial rank is also attested by inscriptions (Mommsen, Inscr. R. N. pp. 50, 51); and from the Tabula it would appear to have been in the 4th century one of the most considerable cities of Apulia (Tab. Peut., where the indication of a great building with the name "Prastorium Laverianum" evidently points to the residence of some provincial magistrate). Even after the fall of the Roman Empire Luceria long retained its prosperity, and is enumerated in the 7th century by P. Dianus among the "urbes satia opulentas" which still remained in Apulia. (P. Dia. ii. 31.) But in A.D. 663 it was taken by the emperor Constans II. from the Lombards, and utterly destroyed (Id. v. 7). Nor does it appear now to have recovered this blow till it was restored by the emperor Frederic II. in 1227. The modern city of Lucera still retains its episcopal see and about 12,000 inhabitants. It occupies the ancient site, on a hill of considerable elevation (one of the last underrun of the Apennines) overlooking the extensive and fertile plains of Apulia. Livy speaks of it as situated in the plain ("urbs sita in plana"), (Id. xxvi. 26); but if this was the case with the Apulian city, the Roman colony must have been removed to the heights above, as existing remains leave no doubt that the ancient city occupied the same site with the modern one. The remains of buildings are not of much importance, but numerous inscriptions, fragments of sculpture, &c. have been found there. The inscriptions are collected by Mommsen (Inscr. Regn. Neap. pp. 50–54). The neighbourhood of Luceria was celebrated in ancient, as it is still in modern, times for the abundance and excellence of its wool (Hor. Carm. iii. 15, 14), an advantage which was indeed common to all the neighbouring district of Apulia. (Strab. vi. p. 294; Plin. viii. 48; K. Craven, Southern Tour, p. 45.)

Ptolemy writes the name Luceria; and that this is not merely an error of the MSS. in our existing copies is shown by the circumstance that the epiphet Apula is added to it (Naukrìa Άπουλων, Plot. iii. 1. § 73), as if to distinguish it from other towns of the name. Appian also writes the name Naukrìa (B. C. ii. 38); and the same confusion between Naukrìa and Lucera occurs perpetually in the middle ages. But the correctness of the orthography of Luceria is well established by inscriptions and coins. The latter, which have the name LOVCHRI in Roman characters, are certainly not earlier than the establishment of the Roman colony. [E. H. B.]

**COIN OF LUCERIA.**

**LUCETIUM.** [BLUCTUM.]

**LUCENSES, CALLAICI.** [GALLARECIA.]

**LUCENTUM** (Plin. iii. 3. a. 4.; Lucentia, Mela, lii. 6. § 6; ALOXITI & ASIOERUV, Plot. ii. 6. § 14: Alciuma), a city on the sea-coast of the Costantinii, in Hispania Tarraconensis, with the Latin franchise. (Marco, Hisp. ii. 6; Ubert, ii. 1. p. 405; [F. S.].)

**LUCI'NAE OPPIDUM.** [LITHYLA.]

**LUCOPBIA (Λουκομελία),** in North Britain, mentioned by Ptolemy (ii. 8) as one of the towns of the Novantes (Galloway), Rhetiginium being the other. Probably, this lay on Luce Bay, in Wigtownshire. The Monumenta Britannica suggests Broughton, and Whithorn. [E. G. B.]

**LUCRETILIS MONS** (Monte Cenário), a mountain in the land of the Sabines, whose name is known to us only from the mention of it by Horace, who calls it "the pleasant Lucertilia," whose shades could allure Faunus himself from Mount Lycaeus. (Hor. Carm. i. 17.) It is evident from the expressions of the poet that it was in the immediate neigh-
bourn of his Sabine farm; and this is admitted by all the old commentators, who with one accord call it "Mons in Sabinis," but without giving any further clue to its position. The identification of this must therefore depend upon that of Horace's villa: but this being clearly abolished near Licinum [Duurnu"], we cannot refuse to recognize Lucritii in Monte Gemini, a lofty mountain mass which rises nearly due W. of Licinum, standing out prominently towards the plain of the Campagna, so that it is one of the most conspicuous of the Apennines as seen from Rome. On the side towards the plain it rises very steeply and abruptly, but on the reverse or Sabine side it has a much more gentle slope, and fully deserves Horace's epithet of "amoena,"—being furrowed by deep valleys, the sides of which are clothed with woods, while nearer the summit are extensive pastures, much resorted to by cattle in summer. (Gell. Top. of Rome, pp. 270 —273; Nibby, Dict. Rom., vol. ii. pp. 105—107.) The highest point is 498 English feet above the sea. Whether the name of Mons Lucritii was applied to the highest part of the mountain, now called Monte Gemini, which is so conspicuous from Rome, or was a more local appellation for the peaks nearer the valley of the Dignitia, cannot now be determined; but there is little doubt that the two names belong at least to the same mass or group of mountains. [E. H. B.]

LUCRINUS LACUS (ό Aπολλών κοιλος, Strab.; Lago Lucrino), a salt-water lake or lagoon, adjoining the gulf of Baiae on the coast of Campania. It was situated just at the right or inmost point of the deep bay between Puteoli and Baiae, and was separated from the outer sea only by a narrow strip or bank of sand, in all probability of natural origin, but the construction of which was ascribed by a tradition or legend, frequently alluded to by the Roman poets, to Hercules, and the road along it is said to have been commonly called in consequence, the Via Herculea or Herculea. According to Strabo it was 8 stadia in length, and wide enough to admit of a road for wagons. (Diod. iv. 22; Strab. v. p. 245; Lycoeph. Ant. v. p. 13, 14; Plaut. Haec. Natal. 52; 116 —120.) On the other side, the Lucrine lake was separated only by a narrow space from the lake Avernus, which was, however, of a wholly different character, being a deep basin of fresh water, formed in the crater of an extinct volcano; while the Lucrus Lucrinus, in common with all similar lagoons, was very shallow, and was for that reason well adapted for producing oysters and other shell-fish, for the excellence of which it was celebrated. (Hor. Epod. ii. 49, Sat. ii. 4. 32; Juven. iv. 141; Petron. Sat. p. 424; Martial, vi. 11. 5, xiii. 90; Varr. op. Non. p. 216.) These oyster-beds were so valuable as to be farmed out at a high price, and Caesar was induced by the conditions of his own son-in-law to purchase them for their protection. (Serv. ad Georg. i. 161.)

The Lucrine lake is otherwise known chiefly in connection with the great works of Agrippa for the construction of the so-called Julius Portus, added to in two well-known passages of Virgil and Horace. (Verg. Geor. ii. 161—163; Hor. Ars Poet. 6. 103, 105.) These are the nature of these works; but the object of Agrippa was obviously to obtain a perfectly secure and land-locked basin, for anchoring his fleet and for excising his newly-raised crews and rowers. For this purpose he seems to have opened an entrance to the lake Avernus by a cut or canal from the Lucrine lake, and must, at the same time, have opened a channel from the latter into the bay, sufficiently deep for the passage of large vessels. But, together with this work, he strengthened the natural barrier of the Lucrine lake against the sea for a port, but could not be used so much on account of the Lucrine lake, which was shallow and broad, lying between it and the sea (v. p. 244). And again, a little further on (p. 245), he speaks of the later as useless as a harbour, and accessible only to small vessels, but producing abundance of oysters. At a later period Cassiodorus (Var. vi. 8) describes it in a manner which implies that a communication was still open, with the lake Avernus as well as with the sea. The two lakes are now separated by a considerable breadth of low sandy ground, but it is probable that this was formed in great part by the memorable volcanic eruption of 1358, when the hill now called Monte Nuovo, 413 feet in height and above 8000 feet in circumference, was thrown up in the course of two days, and a large part of the Lucrine lake filled up at the same time. Hence the present aspect of the lake, which is reduced to a mere marish pool full of reeds, affords little assistance in comprehending the ancient localities. (Dubeny, On Volcanoes. pp. 206—210.) It is said that some portions of the piers of the port of Agrippa, as well as part of the entrance to the lake, are still visible under the level of the water. [E. H. B.]

LUCUS ANGITTIAE (Eth. Lucensis; Lucco), a place on the W. shore of the lake Fucinus, in the territory of the Marsi, originally, as its name imports, nothing more than a sanctuary of the goddess Angitia, but which seems to have gradually grown up into a town. This was sometimes called, as we learn from an inscription, Amoritia; but the name of Lucas or Lucas Angitia must have been the more prevalent, as we find the inhabitants styled by Pliny simply Lucenses, and the modern name of Lucco or Lago points to the same conclusion. It is evident, both from Pliny and from the inscription referred to, that it was a municipal town, having its own colony of stolid old Romans for their protection. (Plin. iii. p. 17; Orell. Inscri. 115.) About half a mile N. of the modern village of Lucca, and close to the shores of the lake, are the remains of ancient walls constructed in the polygonal style, but which, from their position, could never have been designed as fortifications; and these probably formed part of the sacred enclosure in connexion with the ancient temple of the grove and temple. The site is now marked, as is so often the case in Italy, by an ancient church. (Nibby, Vmaggio Antiqu. vol. i. p. 210; Class. Mus. vol. ii. p. 175, note.) Virgil alludes in a well-known passage to the "numen Angitiae" (Aen. vii. 759), where the name of the
LUCUS ASTURUM.

poles is written in some MSS. "Angitia," in others "Angiætia;" but the authority of numerous inscriptions is decisive in favour of the first form. (Orell. Inscr. 115. 116, 1845.) [E. E. B.]

LUCUS A'STURUM. [ASTURES.]

LUCUS AUGUSTI, a town in Gallia Narbonensis, and east of the Rhone, which Tacitus (Hist. i. 66) calls "municipium Vocontiorum;" and Pliny (iii. 4) names Vasio (Vasium) and Lucus Augusti the two chief towns of the Vocontii. Lucus is placed in the time of Cicero (in Acad. ii. 17) with the other towns of Gallia Narbonensis: (Lugunum): it is the first stage after Mons Seclusus, and lies between Mons Seclusus and Dea Vocontiorum (Die). The name is preserved in Luc.

"This town has been destroyed by the fall of a rock, which, having stopped the course of the Drôme, has caused the river to spread out and form lakes which have covered part of its territory: there remains, however, in the neighbourhood and at the outlet of these lakes a place which preserves the name of Luc." (D'Anville, Notice, j.d.) It was the site of the Guida du Voyageur (Richard and Hocquart), that "on the mountain called the Pied de Luc, in the commune of Luc-en-Diois, there are considerable remains of old buildings. The column of the public fountain and a small line of walls mark the site of old capital, and the basin is a sarophagus of a single stone." There is an inscription on it in Roman characters.

[O. L.]

LUCUS AUGUSTI (Augustae Aupyriorum, Plut. ii. 6, § 24: Lugum), a city in the centre of Gallia, in hispania Tarraconensis, was originally the chief town of the inconsiderable tribe of the Augusti, but after the Romans it was the seat of a conventus juridicus, and became one of the two capitals of Gallia, and gave its name to the Galliaca Luceneas. [GALLIAE.] The Conventus Luceneas, according to Pliny, began at the river Navilubio, and contained 16 peoples, besides the Celtici and Lebuni, and though these tribes were insignificant, and their names barbarous, there were among them 166,000 freemen (Plin. iii. 3. 4, iv. 30. 34). The city stood on one of the upper branches of the Minius (Milio), on the road from Bracara to Asturica (Hist. Ant. pp. 434, 430), and had some famous baths, of which there are now no remains. (Flores, Esp. S. vol. xi; Ubert, vol. ii. R. i. p. 498.) [P. S.]

LUCUS FERONIAE. [FERONIAE.]

LUCUS HE'CATES (Aedes Exeimai Exepos, Plut. iii. 5. § 7), the westernmost point of the peninsula of Hyblaen, now the alluvial tongue of land Kiperus.

[E. B. J.]

LUCUS MARICAEAE. [LIBER.]

LUDIAS, L'YDIAE, L'YDIES, Herod. vii. 127; Aelius, Eur. Brut. 567, Soc. ii. 21; Plut. iii. 13. § 15; AesPl. Stab. vii. p. 330), a river of Botissia in Macedonia, or discharge of the marshes of Pella. In the time of Herodotus (L. c.) it joined the Haiacon, but a change has taken place in its course, as it is now an affluent of the Azina (Varhidi). The river which now emerges from the towns of the lake of Lebunium and the town of the Augusti, is called the Mavromeris. The river of Moglen, now called Karagyri, by the Turks, Megaleimii, by the Bulgarians, and by the Greeks Moleniko, falls into the lake of Pella, and which in its course before entering the lake follows the same direction as the Mavromeris, was probably called by the ancients the Lydias. (Leake, Northern Greece, vol. iii. pp. 270, 437.)

[E. B. J.]

LUENTI'NUM (Aquodurum), in Britain, mentioned by Ptolemy (ii. 3) as a town of the Dimetiae, Maridunum (Castra-maritenna) being the other. The Monasterium Britonum together with Llugdunum to Lycurgus. [R. G. L.]

LUGDUNUM (Aquitovia, Ete. Aqütovia, Gallia Narbonensis: Lyon), a Roman settlement in Gallia, at the junction of the Arar (Saône) and Rhodanus. It was in the territory of the Segusi, who were the neighbours of the Aedui (Cass. B. G. i. 10, vii. 46); in Pliny, however, he says, in the time of Nero, it belonged to the Liberi. (Plin. H. N. iv. 18.) Ptolemy incorrectly places Lugdunum among the cities of the Aedui; he calls it Lugdunum Metropolis.

The writings of the name does not seem to have been quite fixed. Dion Cassius (xiv. 50, ed. Reim.) observes that the place was originally named Lugdunum (Aurosiisessorum), and then Lugdunum. In Stephanus (s. v.) the name is Lugdunum, and he refers to Ptolemy; but in Ptolemy (ii. 8. § 17) it is Lugdunum. It is also written "Lugdunum" in Annianus Marcellinus. In the Tissia on Rivers printed among Plutarch's works (Aeap, c. 4), the hill of Lugus is named Lugdunum; and it is added, on the authority of Ciliophus, that Lugus means a "crown," and "the house of the crown." If the explanation of dies is right, we cannot accept the explanation of the other part of the word.

The colonia of Lugdunum is said to have been settled s. o. 43, by L. Munatius Plancus, and the settlers were the people of Vienna (Vimose) who were driven from their homes by the Allodrages. [Dion Cass. xvi. 56. 50; Mommsen, Paris. Gebi. i. 64.] Lugdunum was in the Senate position, according to Dio, was the place between the Sâone and the Rhône. Strabo says that it was "under" a hill, the position of which he determines by referring to it the junction of the two rivers; but this does not show exactly where the town was, and probably Strabo did not know. In the passage in Strabo, the word "under" (Aedus) has been corrected to "upon" (Aedus), which may be a true correction. The old town of Lugdunum was on the right side of the Rhone, on the slope of a hill named Fourvière, which is supposed to be a corruption of Forum Vetus. The largest part of modern Lugus is between the Sâone and the Rhône, but this is a modern addition, not earlier than the time of Louis XII and Francis I.

In Strabo's time Lugdunum was the most populous of the Gallo towns after Narbonemus: it was a place of trade, and the Roman governors had a mint there for coining gold and silver. Its great commercial prosperity was due to its excellent position, and to the roads which the Romans constructed in several directions from Lugdunum as a centre. [Gallia Transp. Volume, p. 965.] In the time of the younger Pliny there were booksellers at Lugdunum, and Pliny's works might be got there (Plin. Ep. ix. 11.). The city was destroyed by fire in Seneca's time (Ep. 91), but shortly after it was restored through the liberality of the emperor Nero, to whom the inhabitants of Lugdunum continued their faithful loyalty. (Tacit. Ann. xvi. 13, Hist. i. 51.) Lugdunum was plundered and again burnt by the soldiers of Septimius Severus (A. D. 197), after the defeat of the Albinus near the city (Herodian, iii. 33). It was an important position under the later Empire, but the name only occurs occasionally in the scanty historical notices of that time. When Julian was governor of Gallia, Lugdunum was near being surprised by a
LUGDUNUM.

body of Alamanus (Ammian, Marcell. xvi. 11). The place is entitled Cupa Claudia Augusta on some inscriptions, a name probably given to it in the time of the emperor Claudius.

In the angle between the Arar and the Rhodanus was the Ara Augusti, dedicated to Augustus by all the Gallic states. On this large altar there was an inscription which contained the names of the sixty states; and there were as many figures, intended to represent each state. If the figures were not relief on the altar, they may have been statues placed round the altar, or near it. The passage of Strabo (p. 193) appears to be corrupt; but, as it is explained by Grockord (Transf. vol. i. p. 331), there was also a large statue of Augustus, which may have been in the middle of the sixty. There was an annual solemn celebration at this altar, which was observed even when Dion Cassius was writing. (Dion, liv. 32.) The time when this altar was fixed is by the Epitome of Livy (Ep. 137) in the year in which there was a disturbance in Gallia on account of the census. This year was B. C. 12. Suetonius (Claud. 2) fixes the dedication of the Altar of Augustus at the census of Julius (A. D. 46); but Tacitus and Fabius Africanus (a. C. 10), on the first of August, which was the birthday of the emperor Claudius, who was a native of Lugdunum. The first priest of this altar was C. Julius Verundarius, an Aeduan. The celebration at the altar of Lugdunum is alluded to by Juvenal in the line (l. 44, and Heinrich's note), —

"Aut Lugdunensem rhetor dicturus ad aram."

Lugdunum was the seat of a Christian church at an early period. In the time of Marcus Aurelius (about A. D. 172, or perhaps A. D. 177, according to some computations) there was a furious persecution of the Christians at Lugdunum. The sufferings of the martyrs are told by Eusebius with some manifest absurdities and exaggerations; but, the fact of a cruel persecution cannot be disputed. The letter of the churches of Lugdunum and Vienna to the churches of Asia and Phrygia is preserved by Eusebius (Hist. Eccl. v. 1); and it states that Aurelius, who was then at Rome, was consulted by the Gallic governor about the treatment of the Christians. The letter says that those who confessed to being Christians should be put to death, and that those who denied it should be set free. We have however only one version of the story, though no excuse can be made for the Roman philosophical emperor, if men were put to death only because they were Christians. Irenaeus, one of the Christian fathers, was bishop of Lugdunum. He is said to have succeeded Pothinus, who perished A. D. 177, in the religious persecutions at Lugdunum.

The part of Gallia which Caesar called Celtica became under Augustus Gallia Lugdunensis; of which Lugdunum was the capital; but Lugdunensis was contracted within narrower limits than Celtica by the extension of the province of Aquitania (Aquiti- ana Trans. vol. I. p. 47). The Romans covered the soil of Lyon with houses, temples, theatres, palaces and aqueducts. Nature made it to be the site of a large city. There are few remains of Roman Lugdunum. Time, the invasion of the barbarian, and the employment of old materials for other purposes, have left only scanty fragments of the works of the most magnificent of all city-builders. There are some remains on the Place des Martyrs which are supposed to have been a theatre. On the west side of the Sabae there are traces of a camp capable of holding several legions. It was bounded and defended on the west by the hills of the Fores, and on the north by the heights of Saint-Diéler and of the Mont d'Or. The Sabae defended it on the east side. The camp had no water, but the Romans found a supply in the chain of mountains which bounds it on the west. Water was brought along the valleys and the bases of the hills in a regular slope the way, and under ground through a distance measured along its line of more than 24 miles. In its course the aqueduct collected water from seventeen streams or large sources. The height of the channel or passage for the water, measured inside, was near five feet; the vault or roof was semicircular. There were openings at intervals by which workmen could go in to clean and repair the channel. It was constructed with great care, and the two sides were covered with a double layer of cement. All this construction was buried in a cutting six feet and a half wide and near ten feet deep; and a great part of this cutting was made in the solid rock. Another aqueduct was constructed from Mont Poulet to the site of the hill of Fourières, a distance of more than 50 miles along the course of the aqueduct. There were in all fourteen aqueducts bridges along this line: one of them at the village of Champenois still has ninety arches well preserved. There was a third aqueduct from Mont d'Or.

Two bronze tablets were dug up at Lyon in 1529, on which is inscribed the Oratio of the emperor Claudius on the subject of giving the Roman civitas to the Galli. (Tacit. Ann. xi. 24; and Oberlin's edition of Tacitus, vol. ii. p. 306; Gallia Trans. vol. I. p. 968.) There are many modern works on Lyon and its antiquities. The principal are mentioned by Forbiger (Handbuch, gc. vol. iii. p. 210.)

[COIN OF LUGDUNUM.]

LUGDUNUM or CONVEXAE. [CONVEXAE.]

LUGDUNUM BATAVORUM. [Lugdunum Batavorum, Ptol. ii. 9. § 4: Leiden]. The two elements Lun and d are in the name of this remote city and in two other Gallic names, which is one evidence of the Celtic race having once occupied the flat country about the outlets of the Rhine. The Roman Itins have marked a road running from Leiden through Colonge to Venamus (Immenstadt) on the Upper Danube Circle of Bavaria. The routes are not the same all through, but the commencement of the road and the termination are the same. This route in fact followed the basin of the Rhine from the Lake of Constance to the low and sandy shores of the North Sea.

The words "Caput Germaniarum" placed before the name Lugdunum in the Antonine Itin. probably do not mean that it was the capital of the Germaniae, for this was certainly not so, but that it was the point where the two provinces called Germaniae commenced on this northern limit. It has been supposed that Leiden in the province of Holland is not the Roman Lugdunum, because no Roman remains have been found there, though the absence of
LUGUS LACUS. LUNA.

them would certainly not be conclusive against Leiden. But remains have been dug up in the neighbourhood of Leiden, and an inscription of the time of Septimius Severus. (Ubert, Gallien, p. 534.)

[3. L.]

LUGUS LACUS (άλυγος λάκ), a lake in the land of the Iapyges in Illyricum, now Lakes Zürich (Strabo, iv. p. 314).

LUGIDUNON (άλυκδογον), a town in the east of Germany, the site of which must be looked for in Silesia, either at Breslau or Liège. (Ptol. ii. 11 § 28.) [L. S.]

LUGUL. [Lyons.]

LUGULIONUM (άλυγονόμον), a town in the south of Pannonia Inferior, was the capital of a district. (Ptol. ii. 16 § 5.) In the Peutinger Table it is called Lugio, and it is, perhaps, to be looked for on the site of the modern Bátta, at the mouth of the Save into the Danube. [L. S.]

LUGUVALLUM, or LUGUVALLIUM (Anton. Itin.), LUGUBALUM (Ravennas), now Carliole. This town is not mentioned by Ptolemy; neither does it stand upon the line of the road of the latter work, yet that, although it stands upon the line of the Wall, the proximity of the great castra, as well as its own strength and population, rendered a fixed garrison unnecessary. Beda (in Vita S. Cuthberti, c. 8) describes Saint Cuthbert on his visit to Lugubalia, as being shown the walls and a fountain built by the Romans: "unit ad Lugubali- lian castrum, quo illacente Anglorum Lnel vocator, ut alloqueretur regimen. Postera autem die deducitnabant usum civitatis usi viderent moenia civitatis, fontemque in ea muro omnium Romanorum operae exstructum." Leland (Itin. vol. vii. p. 54), after speaking of the Roman architectural and other remains often brought to light in Carlisle, adds, "the hole site of the town is sore changed. For wher as the streets were and great edifices now be vacant and garden plottes." But few remains, if any, of the Roman town are, at the present day, to be noticed; but whenever excavations are made to any considerable depth, the foundations of the buildings of Luguvallum are almost always met with. Very recently a deep drain having been sunk on the north side of the city, the bottom has been ascertained; previously, the direction it took from Stanwix, where there was a fortified camp, was uncertain, as above ground in the immediate vicinity of Carlisle, it has been entirely pulled down. [C.R.S.]

LUMBERTA'NI [Vasconum.]

LUNA (άλυν, Strabo. Λύν, Ptol.: Χαλυβί αυτες, Stephan. B.; fra. Lunaeus; Luna), a city of Etruria, situated on the left bank of the Macra, a short distance from its mouth, and consequently on the very borders of Liguria. There is indeed considerable discrepancy among ancient authors as to whether it was an Etruscan or a Ligurian city; and it is probable that this arose not only from the uncertainty of its position on the immediate frontier of the two countries, but from its having been successively occupied and held by both nations. Pliny calls it "the first city of Etruria;" and Strabo begins to reckon the Etruscan coast from thence: Ptolemy also mentions it first in order among the cities of Etruria; while Mela, on the contrary, assigns it to the Ligurians. ("Luna Ligurum," Mel. ii. 4 § 5; Strab. v. p. 222; Ptol. iii. 5. a. 8; Ptol. iii. 4 § 4.) From the time indeed when the Macra became the established limit between Liguria and Etruria, there could be no doubt as to Luna being geographically included within the latter country; but it is certain that when the Romans first came into collision with the Ligurians, that people was in possession of Luna and the surrounding territory, and indeed held the whole country from the Macra to the mouth of the Arno. (Ptol. ii. 16; Liv. xxxiv. 56; xxxix. 39, &c.) Livy, however, tells us that the territory of Luna, in which the Roman colony was founded and which had been taken by them from the Ligurians, had previously belonged to the Etruscans (Livy. xii. 13), and this seems to be the true explanation of the case. Both Luna and Luca, with the whole of the fertile and level country adjoining them at the foot of the Apennines, seem to have really belonged to the Etruscans during the height of their power, but had fallen into the hands of the Ligur- rians, before that people came into contact with Rome. We have, however, scarcely any account of Luna as an Etruscan city, no Etruscan remains have been found there, and there is certainly no foundation for the views of some modern writers who have supposed it to be one of the chief cities of Etruria, and have even identified the Etruscan Le Roye with the Le Roye. (Dennis's Etruria, vol. ii. p. 79.)

The first historical mention of Luna itself (as distinguished from its more celebrated port) is that of its capture by the Romans under Domitius Cal- vinus (Frontin. Strat. iii. 2 § 1); but the date of this event, which is not noticed by Livy, cannot be fixed with any approach to certainty. Hence, the earliest fact in which we have any certain knowledge, is the victory of Nell, in 234 B.C., at the battle of the Po in a battle now known as the battle of Philippi. (Itin. nos. 96 and 97.) It appears that the two districts adjacent one another, so that the Pisans, in B. 169, complained of the encroachments of the Roman colonists on their territory. (Id. xiv. 13.) But, notwithstanding this colony, Luna seems not to have risen into any importance: Lucan indeed represents it as in a state of complete decay as early as the time of the Civil War (deserta moenia Lunae, Lucan, i. 586); and though it received a fresh colony under the Second Triumvirate, it was still in Strabo's time but a small and insignificant city. (Lib. Colon. p. 223; Strab. v. p. 222.) No historical notice of it is found under the Roman Empire, but its continued existence down to the fifth century is attested by Pliny, Ptolemy, the Itineraries, and Rufinus, as well as by inscriptions found on the spot. (Ptol. iii. 5. a. 8; Ptol. iii. 1 § 4; Itin. Ant. p. 293; Itin. Marit. p. 501; Ruf. Itin. ii. 63—68.) We learn also that it was celebrated for its wines, which was reckoned the best in Etruria (Plin. xiv. s. 8 § 67), as well as for its cheeses, which were of vast size, some of them weighing as much as 2000 pounds. (Plin. xi. 42. s. 97; Martial. xiii. 30.) But the chief celebrity of Luna in imperial times was derived from its quaries of white marble, the same now known as Carrara marble, and which was considered equal, if not superior in quality, to the finest Greek marbles. It is first mentioned as employed at Rome for building purposes in the time of Cæsar, and from the age of Augustus onwards was very extensively employed, as may still be seen in the Pantheon, the Pyramid of Cæsars.
LUNA.

But it was speedily adopted for statutory purposes also, for which it was esteemed a finer material even than the Parian. (Plin. xxxvi. 5 s. 4, 6 s. 7; Strab. v. p. 222; Sil. Ital. viii. 480; Ruell. L.c. Stat. Sicil. iv. 22. 9 s. 23.) The buildings of Luna itself, and even its walls, are said to have been constructed wholly of it, whence Rutillus calls them "candentia moenia." and Cytricus, an antiquarian of the 15th century, who visited the ruins of Luna, attests the same fact.

The period of the final decay of Luna is uncertain. It was visited and plundered by the Normans in 857, but was probably not destroyed; and Dante, writing after 1300, speaks of Luna as a city that had sunk gradually into complete decay (Par. xvi. 73); which was doubtless accelerated by the malaria, from which the neighbouhood now suffers severely. When it was visited by Cytricus of Ascoli, the ruins were still extensive and in good preservation; but little now remains. Vestiges of an amphitheatre, of a semi-circular building which may have been a theatre, of a circus, and piscinae, as well as fragments of columns, pedestals, &c., are still however visible. All these remains are certainly of Roman date, and no vestiges of Etruscan antiquity have been found on the spot. The ruins, which are obviously those of a town, are said to have been visited by Strab. He situates them about 4 m. S. of Sorreana, and little more than a mile from the sea. (Dennis's Etruria, vol. ii. pp. 78—84; Targioni-Tozzetti, Viagg. in Toscania, vol. x. pp. 403—466; Promus, Memoria della Città di Luna, 4to. Turin, 1838.)

Far more celebrated in ancient times than Luna itself is its port, or rather the magnificent gulf that was known by the name of the Portus (Ptol. iii. 3. 14; Strab., &c.; nāvium, Magra, Strab.), now called the Gulf of Spezia. This is well described by Strabo as one of the largest and finest harbours in the world, containing within itself many minor ports, and surrounded by high mountains, with deep water close in to shore. (Strab. v. p. 222; Sil. Ital. viii. 452.) He says that this was a very large and populous city that had so long possessed the dominion of the sea,—a remark that must refer to the Etruscans or Tyrrhenians in general, as we have no allusion to any naval supremacy of Luna in particular. The great advantages of this port, which is so spacious as to be capable of containing all the navies of Europe, seem to have early attracted the attention of the Romans; and long before the subjecttion of the mountain tribes of Liguria was completed, they were accustomed to make the Lunae Portus the station or rendezvous of their fleets which were destined either for Spain or Sardinia. (Liv. xxxiv. 8, xxxv. 21, 32.) It must have been on one of these occasions (probably in company with M. Cato) that it was visited by Ennius, who was much struck with it, and celebrated it in the opening of his Annals (Ennius, ap. Pers. Stat. vi. 9.) At a later period it seems to have been restored to also for its mild and delightful climate. (Pers. l.c.) No doubt can exist that the port of Luna is identical with the modern Gulf of Spezia; but it is certainly curious that it should have derived its name from the town or the lake, which was situated on the left bank of the Magra, at least five miles from the gulf, and separated from it, not only by the river Magra, but by a considerable range of rocky hills, which divide the Gulf of Spezia from the valley of the Magra, so that the gulf is not even within sight of Luna itself. It is this range of hills which at their extremity form a promontory, called by Ptolemy, Lunae Promontorium (Στεπάνι, Ἀπορς, Ptol. iii. l. § 4), now the Punta Bianca.

It is true that Strabo places Luna on the right bank of the Macra; but this is a mere mistake, as he is certain of the Roman town of Luna; it is possible that the Etruscan town of that name may not have occupied the same site with the Roman colony, but may have been situated on the right bank of the Macra, but even then it would have been at some distance from the port. Holstein and some other writers have endeavoured to prove that another town of Luna was situated at the mouth of the Macra; and it is probable that the town may have had a small port or landing-place at that point; but the celebrated Port of Luna, described by Strabo and extolled by Ennius, can certainly be no other than the Gulf of Spezia.

The Gulf of Spezia is about 7 miles in depth by 3 in breadth; it contains within itself (as justly observed by Strabo) several minor ports, two of which are noticed by Ptolemy under the names of Portus Venetus (Ἀνδρεβιός ὄρμη), still called Porto Venus, and situated not far from the western extremity of the gulf; and Portus Erius (Ἐλευθερία), now Leri, on the E. shore of the gulf. The former name is found also in the Maritime Itinerary. (Ptol. iii. 3. 15; Strab. iv. 6. 23.) The latter name is also used by Livy in the following sense: "He rode as far as Erius, a city on the south coast of Etruria." (Liv. viii. 20. 10.)

LUNAE MONTES (Στεπάνι Ἀπορς), Ptol. iv. 8. SS. 3, 6), from which mountains, and from the lakes formed by their melting snows, Ptolemy derives the sources of the Nile. Their position is unknown, and, if they have any real existence, they must be placed S. of the Equator. [W. B. D.]

LUNAE PORTUS. [Πόλις Ανδρέβιος.]

LUNAE PORTUS PROMONTORIUM, (Στεπάνι Ἀπορς Ἀπορς, Ptol. ii. 5. § 4), a headland on the W. coast of Lusatia, placed by Ptolemy 10 minutes N. of the mouth of the Tagus, and therefore corresponds to the C. da Roca, near Cima, where Resedius found ruins of what he took for a temple of the Sun and Moon, with inscriptions (Αντίκ. Lusi. p. 52). Others, however, identify it with the more southern C. Corvo; and, in fact, the accounts of the headlands on this coast are given in a confused manner by the ancient writers. [P. S.]

LUNARIUM PROMONTO/RIUM (Ἀνδρέβιος Ἀπορς, Ptol. ii. 6. § 19: C. Tardera, NE. of Barceloneta), a headland on the coast of the Bastili, in Hispania Tarraconensis, formed by one of the SE. spurs of the Pyrenees, resembles the origin of the SE. spurs of the Pyrenees, and is elongated. (Strab. v. p. 282.)

LUNGONES. [Αρτεμίς, Λιμενάρια.]

LUNNA, in Gallia, was on a road from Lugdunum (Lyons) to Augustodunum (Autun). The first station after Lugdunum is Assa Paulina, 15 M. P. from Lugdunum, and then Lonna 15 M. P. from Assa Paulina, according to the Antonine Itin. [Assa Paulina.] In the Table it is 14 M. P. from Lugdunum, and in the Roman text the name is written in the Table, and Assa Paulina is omitted. Lonna and Ludaun are probably the same place; and the site is uncertain. [G. L.]

LUPIA. [Lupia.]

LUPIAE (Ἀνδρεβιός, Strab.; Ανδρεβιός, Paul.; Ανδρεβιός, Ptol.: Ἐθνικ. λιμενείων: Λεκκό), an ancient city of the Etruscans, as the name is written in the Table, and Assa Paulina is omitted. Lonna and Ludaun are probably the same place; and the site is uncertain. [G. L.]
LUPODUNUM.

Pтолемей would lead us to suppose that it was a maritime town. (Plin. iii. 11. s. 16; Tol. iii. 1. § 14.) Appian also speaks of Octavian as landing there on his return to Italy, immediately after Caesar's death, when he halted some days at Lupsa without venturing to advance to Brundisium, until he received fresh information from Rome. (Appian, B. C. iii. 10.) There seems, however, no doubt that the ancient Lupiae occupied the same site as the modern Lecce, though it may have had a port or landing-place of its own. The above passage of Appian is the only mention of it that occurs in history; but it is preserved to us by Julius Capitolinus (M. Ant. 1.) ascribing its foundation to a king of the Salentines, named Malemnius, the son of Dasamnus. There is little doubt that it was a native Salentine city; nor is there any foundation for supposing that it had received a Greek colony.

Pausanias, in a passage which has given rise to much confusion, in treating of the treasury of the Sybarites at Olympia, tells us that Sybaris was the same city which was called in his time Lupiae, and was situated between Brundisium and Hydruntum. (Paus. vi. 19. § 9.) The only reasonable explanation of this strange mistake is, that he confused Lupiae in Calabria (the name of which was sometimes written Lupia) with the Roman colony of Lupiae, which is not far from the site of Thurii, and, therefore, in a manner succeeded to Sybaris. But several modern writers (Romanelli, Cramer, &c.) have adopted the mistake of Pausanias, and affirmed that Lupiae was previously called Sybaris, though it is evidently of the well-known city of Sybaris that that author is speaking.

We hear but little of Lupiae as a Roman town, though it appears to have been a municipal town of some importance, and is mentioned by all the geographers. The "ager Lyppensis" (sic) is also noticed in the Liber Coloniarum; but it does not appear that it received a colony, and the inscriptions in which it bears the title of one are, in all probability, spurious. Nor is there any ancient authority for the name of Lyctum or Lycia, of which it is assigned to the city by several local writers: this form of the modern name of Lecce is obviously a corruption, being first found in documents of the middle ages. (Lib. Colon. p. 262; Hel. ii. 4. § 7; Itin. Ant. p. 118.)

The modern city of Lecce is a large and populous place, and the chief town of the province called the Terra di Otranto. No ancient remains are now visible; but Galateo, writing in the 15th. century, tells us that there were then extensive subterranean remains of the ancient city — vast arches, covered galleries and foundations of ancient buildings — upon which the modern city was in great measure built. Numerous vases and other relics of Lyctum or Lycia, as it is assigned to the city by several local writers, are found on an inscription in the Messapian dialect. (Galateo, de Sit. Itapp. pp. 81—86; Romanelli, vol. ii. pp. 83—93; Mommsen, Unter Ital. Dialekte, p. 25.)

E. H. B.

LUPODUNUM, a place on the river Nicer (Necker) in Southern Germany. (Auseon. Mosel 423; Synmachus, p. 16, ed. Niebuhr.) It is probably the same place as the modern Landshut on the Necker, though some identify it with the fort which the emperor Valentinian built on the banks of the Neckar. (Amn. Marc. xxviii. 2.)

LUPPHURDUNUM (Λουψφυρόδουρον), a town in the north of Germany. (Plut. ii. 11. § 58.) Its site is generally identified with Wittswberg or Meisen, but it seems more probable that it was situated near Leipsig, on the river Lupsa, from which it may have derived its name.

LUPPIA or LUPPIA (让您a: Λοππία: Loppia), a navigable river in the north-west of Germany, which was well known to the Romans, from its sources to the point where it empties itself into the Rhine. Its sources are in the interior of Germany, not far from those of the Amisia. (Vema.) (Vell. Pat. ii. 105; Tac. Ann. i. 50, ii. 7; Hist. v. 23; Pomp. Mela, iii. 3. § 3; Strab. viii. p. 291; Dion. Cass. lvi. 33.) Strabo (l. c.) says: "A river which appears to have come out of a mountain in the course of the Lupa, for he describes it as flowing through the country of the Bructeri Minores, and as discharging its waters, like the Amaesa, into the ocean: he, moreover, places it about 600 stadia from the Rhine. Tacitus (Ann. ii. 7) mentions a Roman fort built on its banks.

LUPPIA (Λουππία), a place of considerable importance in the north of Germany, between the rivers Albs and Visurgis, above Mons Melibocna. (Plut. ii. 11. § 28, viii. 6. § 3.) It is generally identified with the modern town of Luppa.

LUSI. (Λουσίων, Paus. Steph. B. a. e.; Λουσίων, Λουσίων, δι Λουσίων, Schol. ad Callim. Dion. 333; comp. Meineke, ad Steph. B. a. e.; 7th edition, Schol. ad Apollod. iv. 2. § 211), a town in the north of Arcadia, originally independent of, but afterwards subject to, Cleitor. (Cleitor.) Luai was situated in the upper valley of the Aroanias, and probably on the site of Soudend, which stands in the N.E. corner of the valley at the foot of Mt. Kehimbe (the ancient Arcadian mountains), and in the road from Sparta to Kalavryta. The upper valley of the Aroanias, now called the plain of Soudend, consists of two plains, of which the more easterly is the one through which the Aroanias flows, the waters of which forced their way through a gorge in the mountains into the plain of Cleitor, now Kalamata, to the south. The more westerly plain of Soudend is entirely shut in by ranges of hills; and the water of three streams which flow into this plain are carried off by a katavthera, after forming an inundation, apparently the Euos Clitoriatis mentioned by Pliny (xxxii. 2. s. 13). The air is damp and cold; and in this locality the best hemlock was grown (Theophr. ix. 15. § 8).

Luai was still independent in the 50th Olympiad; since one of its citizens is recorded to have gained the victory in the 11th Pythiad. (Paus. viii. 18. § 8.) Its territory was ravaged by the Astolians in the Social War (Polyb. iv. 18); but in the time of Pausanias there were no longer even any ruins of the town. (Paus. l. c.) Its name, however, was preserved in consequence of its temple of Artemis Luai (or Hemenai), and in the description of the Messapian dialect. (Galateo, de Sit. Itapp. pp. 81-86; Romanelli, vol. ii. pp. 83-93; Mommsen, Unter Ital. Dialekte, p. 29.)

L. S.
presented on an ancient vase. (Millinger, *Peintures de Vases*, pl. 53; Miller, *Denkmäler der alt. Kunst*, t. 11.) The ruins, which Dodwell discovered above Lusi towards the end of the plain, and on the road to Cynashta, are probably those of the temple of Artemis. Leake discovered some ancient foundations at the middle fountain of the three in the more westerly of the two plains of Suidenán, which he supposes to be the remains of the temple. One of the officers of the French Commission observed a large cave on the western side of the Aromanian mountains, in which the inhabitants of Suidenán took refuge during war, and which is probably the one intended in the legend of the daughters of Proestra. (Dodwell, *Classical Tour*, vol. ii. p. 447; Leake, *Mores*, vol. ii. p. 109, vol. iii. pp. 168, 181; Bölbay, *Récherches*, f. c. p. 155; Curtius, *Pelopennes*., vol. i. p. 375, seq.)

**Lusitania** (cf. *Asuriniana*, cf. *Asurianach*, *Strab., Asuriniana*, Diss. Sic., Ptol., Steph. B.: cf. Asurinarn, Lusitani), originally denoted the country of the Lusitani, but is commonly used in a wider sense, as the name of one of the three provinces, into which Hispania was divided by Augustus. (Hispania, p. 1081, Nos. 3, 4.)

1. Extent and Boundaries.—Like the modern Portugal, it lay on the W. side of the peninsula, extending from its SW. point (San Pedro do, C. S. Vincent), eastwards to the mouth of the Amas (Guadiana), and northwards along the W. coast; but here, as well as in the interior, the boundaries of the two countries were very different; Lusitania occupying only two-thirds of the W. coast, and Portugal more than three-fourths. The former had its N. boundary at the Duradeira (Durada), in the latter at the Minho (Mé); and the Portuguese province, called Entre Douro e Minho, as lying between these rivers, as well as that of Tras os Montes E. of it, were anciently the part of Gallaecia which belonged to the Callaci. Bracari. But on the E. side, inland, Lusitania had a much wider extent than Portugal. Both rest on the same base, as their S. sides, namely the coast between C. S. Vincent and the mouth of the Guadiana, and at first the boundary runs N. nearly along the same line, namely the course of the Guadiana, the slight difference being in favour of Portugal, which has a slip on the E. side of the river. But, from a point on the river, a little below Badajoz, and a little above its intersection with the Meridian of W. long., the boundaries diverge; that of Portugal taking a general direction N. with a slight bearing to the E., till it strikes the Douro at its great bend from SW. to NW. (where the Aquea joins it), and running up the river to its great bend in the opposite direction, below the Esla; while that of Lusitania continued up the Amas eastward, towards the middle of the Peninsula, to a point considerably above Miranda (but not very certainly defined), whence it followed a N. direction to the Durias, which it met at a point below the river Piatorca (also not very well defined). Thus, Lusitania contained, on this side, the N. part of Spanish Extremadura, and the S. part of Leon; and the part of the province thus lying E. of Modern Portugal, corresponds very nearly to the territory of the Varrtorres. These are the boundary of the Roman province, as constituted under Augustus; but there are considerable variations in the extent assigned to the country by various writers, especially according as the word is used, in the wider sense, for the province, or in the narrower meaning, for the country of the Lusitani. In this first and narrowest sense, it included only the district between the Tagus and the Durias, from the Atlantic on the W., to about the present frontier of Portugal on the E., not the supposed or actual connection of these people with their Northern neighbours, the Callasci, Artabri, and Astures, led to their being, at least in part, included under the same name, and accordingly Strabo defines Lusitania as the country N. of the Tagus, bounded on the W. & N. by the Ocean. (Strab. iii. p. 185.) But, as Pliny says, there was a great confusion of the Lusitani, meaning those N. of the Durias, who had obtained the name of Callasci; and elsewhere he expressly states that the whole region N. of the Durias, which was formerly called Lusitania, was now called Callasci. (iii. p. 166.) On the E., says Strabo (I. c.), it bordered on the Carpetani, Vettizoes, Vacciini, and Callasci, and other tribes of less note; and he adds that these also were sometimes called Lusitani, thus pointing to the extension of the name towards the east. Then, again, on the S. of the Tagus, where the country seems originally to have belonged to the Turdetani, with an intermixture of Celtic tribes [Celtici], the long and obstinate wars carried on by the Romans drove many of the Lusitani and their allies into the other part of the country, which naturally became included under the name of Lusitania. (Strab. iii. p. 139.) Finally, under Augustus, the boundaries were fixed as above stated.

2. Dimensions.—Agrippa, as quoted by Pliny, assigned to the province, together with Asturia and Gallaecia, a width of 536 M. P.; and a length of 546 M. of land. (Plin. iv. 21. a. 35.) Strabo makes its length 3000 stadia, and its width considerably less (iii. p. 158. as amended by Xylander: it should be remembered that the width is reckoned, as Strabo expressly says, along the E. side, i. e. from N. to S., in conformity with his general views respecting the form of the peninsula, which are explained under Hispania).

3. Physical Geography.—Strabo's description of Lusitania (I. c.) as lofty and rugged on the E. side, and level towards the sea, with the exception of minor rises of mountains, is tolerably correct. A more exact account of its relation to the whole formation of the surface of the peninsula is given under Hispania (§ v. No. 5. pp. 1085, 1086), together with a description of the coast and the chief promontories. Its surface is roughly divided into the Mona Herminium (Sierra de Estrella), which ends in the peninsula of Lisbon, into the two great basins of the Tagus and the Durias; but it is also intersected by numerous0 reefs from the great central chains of the peninsula. Besides the great river Tagus, which bisects it, there are several others, of more or less importance, which flow in the same general direction, and fall into the sea on the W. coast; but of these none require special notice, except the Calypis (Calilipis, Sadus), which flows N. from the M. Cuneus in the extreme S., and falls into the sea, SE. of the Tagus, and the Munda (Mondope) and Vouga (Vonga), between the Tagus and the Durias.*

* The discrepancies among the ancient writers respecting the names of the rivers between the Tagus and the Minius have been noticed under Gallaecia: the following conjecture, by Groskurd, of their various statements, may be useful: —
The country, being irrigated by these rivers, and
penetrated by their navigable streams, as well as
enriched by the gold and silver found in their beds
and in mines, was rich and fertile, Strabo tells us; but
its prosperity was greatly checked by the predatory
habits of its people, who neglected the culture of the
soil, to give themselves up to war and robbery. This
evil tendency, however, he ascribes chiefly to the
mountains, by whose attacks the inhabitants of the
lowlands were involved in the same disorder.

Strabo. iii. p. 154.)

4. Population.—The province, as finally con-
stituted, contained the countries of five chief peoples,
and of innumerable petty tribes, most of whom,
however, may be included among these five. Thus,
for example, the 30 (some read 50) tribes (460),
mentioned by Strabo, between the Tagus and the
Arabací, are doubtless but subdivisions of the Cal-
lacíi and Lusitani. The five chief peoples of Lus-
tania (the Roman province) were:—(1) The Lus-
tani, on the W. coast between the Duriius and the
Tagus, and extending also (as explained above) S. of
the river. (2) E. of them the Vettonii, between the
Duriius and the Tagus, were the TURDIU VETERRA, a
branch of the ancient population of Batetia, who (according
to the common opinion of the ancients) had crossed the
Anas; but whose presence should perhaps rather be
referred to an ancient occupation of the country up to
the Tagus. (4.) S. of them again, in the dis-
tricts between the lower courses of the Anas and the
S. and W. coasts, were the TURDIU VETERE, a branch
of the Roman province of Lusitania, and whose
Romans it is likely that the Romans did not carry
as far S. as the M. MARTEMUS (Sierra Morena); the
places on the road, which are commonly assigned to
Batetia, are: CONTUBOLLA, 12 M. P. (Alange?)
MINIBRIGA, 36 M. P. (Capilla); ISALONE, or
SHAPO, 13 M. P. (Almeden); CARGUJUIM, 20 M. P.
(Caragujuf?); AD TURRAS, 26 M. P. (Cal-
VETTONI), where the road goes S. The only
important town is MONTIBRIGA, 2 M. P. (Mont-
BRIGA, 30 M. P. (Monteorgiolo), near the left
bank of the Tagus (Amarío, Cortés; Villa
Vela, Lapide); TUBOCCIO, 32 M. P. (Abrav-
tes or Puncholes); SCALABUR, 32 M. P., a colony
and conventus, with the curia Plebisburn.

5. The LUSITANI (AUSTAVOLO, STRAB.; AUS TAVOLO, DICI, R. TO.,) are designated by Strabo as "the
greatest of the nations of Iberia, and the one most
frequently and longest engaged in war with the
Romans," a distinction which, certainly, not even the
Celtiberians could dispute with them. The history
of the wars referred to has been given in outline
under HISPANIA, and that of their last great contest
may be read in the histories of Rome and under
VIRRIATHUS (Dict. of B.C.). The incidents of
that war seem to prove that thought the Lusitani
formed a compact state, under one national govern-
ment, its force was impaired by a certain defect of
real union among the numerous minor peoples of
whom Strabo speaks. (Niebuhr, Lectures on Ase.
Ethnog. and Geog. vol. ii. p. 297.) The full
account of their manners and customs, given by
Strabo (ill. pp. 154—156), may be more conveniently
studied in the original than repeated here in its many
details.

6. LUSITANIA as a Roman Province. (LUSI-
TANIA PROVINCIA, Inscr. ap. Gruter, p. 31, No.
388.) The position of Lusitania, after its conquest
by the Romans, first as a part of Hispania Ulterior,
and already under Julius Cæsar tending to a sepa-
rate constitution; its formation into a distinct pro-
vince, under Augustus; its civil and military govern-
ments; its three convents of EMERITA AUGUSTA,
PAZ JULIA, and SCALABUR, with the number and
rank of the towns included in them; and its position
under the later empire, are all given under HISPANIA
(pp. 1081, 1082).

7. Cities and Towns.—(Some of the VETTONI
are given under the article.)—The city of LIsbOON
(Porto Lisboa) was, under the same name (OLISBORO),
the capital of the ancient province of Lusitania;
and Augustus, under the name of LUSITANA (Merido)
in the SE. of the province. The true Roman city of
the Romans was transferred, under the Romans, to
SCALABUR (Santarem), a colony, and seat of a conventus juridi-
cicus, higher up the river, on its right bank. But
the true Roman city of EMERITA AUGUSTA (Mercato)
in the SE. of the province, a colony founded by
Augustus. The chief roads leading through the province
from Emerita, with the places on them, were as follows:
1. From Emerita, E. and then N.E. to CAZABAR-
AUGUSTA "per Lusitaniam," as the itinerary ex-
pressly says, although it lies entirely S. of the Anas
(Lus. Ant. pp. 444, 445); thus suggests a doubt as
whether the boundary of Lusitania was not carried
as far S. as the M. MARTEMUS (Sierra Morena); the
places on the road, which are commonly assigned to
Batetia, are: CONTUBOLLA, 12 M. P. (Alange?)
MINIBRIGA, 36 M. P. (Capilla); ISALONE, or
SHAPO, 13 M. P. (Almeden); CARGUJUIM, 20 M. P.
(Caragujuf?); AD TURRAS, 26 M. P. (Cal-
VETTONI), where the road goes S. The only
important town is MONTIBRIGA, 2 M. P. (Mont-
BRIGA, 30 M. P. (Monteorgiolo), near the left
bank of the Anas, a colony founded by Augustus.
The chief roads leading through the province from Emerita, with the places on them, were as follows:
1. From Emerita, E. and then N.E. to CAZABAR-
AUGUSTA "per Lusitaniam," as the itinerary ex-
pressly says, although it lies entirely S. of the Anas
(Lus. Ant. pp. 444, 445); thus suggests a doubt as
whether the boundary of Lusitania was not carried
as far S. as the M. MARTEMUS (Sierra Morena); the
places on the road, which are commonly assigned to
Batetia, are: CONTUBOLLA, 12 M. P. (Alange?)
MINIBRIGA, 36 M. P. (Capilla); ISALONE, or
SHAPO, 13 M. P. (Almeden); CARGUJUIM, 20 M. P.
(Caragujuf?); AD TURRAS, 26 M. P. (Cal-
VETTONI), where the road goes S. The only
important town is MONTIBRIGA, 2 M. P. (Mont-
BRIGA, 30 M. P. (Monteorgiolo), near the left
bank of the Anas, a colony founded by Augustus.

BRIGA, 30 M. P. (Monteorgiolo), near the left
bank of the Anas, a colony founded by Augustus.
The chief roads leading through the province from Emerita, with the places on them, were as follows:
1. From Emerita, E. and then N.E. to CAZABAR-
AUGUSTA "per Lusitaniam," as the itinerary ex-
pressly says, although it lies entirely S. of the Anas
(Lus. Ant. pp. 444, 445); thus suggests a doubt as
whether the boundary of Lusitania was not carried
as far S. as the M. MARTEMUS (Sierra Morena); the
places on the road, which are commonly assigned to
Batetia, are: CONTUBOLLA, 12 M. P. (Alange?)
MINIBRIGA, 36 M. P. (Capilla); ISALONE, or
SHAPO, 13 M. P. (Almeden); CARGUJUIM, 20 M. P.
(Caragujuf?); AD TURRAS, 26 M. P. (Cal-
VETTONI), where the road goes S. The only
important town is MONTIBRIGA, 2 M. P. (Mont-
BRIGA, 30 M. P. (Monteorgiolo), near the left
bank of the Anas, a colony founded by Augustus.
LUSITANIA.

LUM (Plin. l. c. Sautarem, Flores, Esp. S. vol. xiii p. 69, xiv. p. 171); JEREBRIGA, 32 M. P. (Arab.), Plin. l. c.; 'Apódepor, Ptol. ii. 5 § 7; Alconquer, Flores, Esp. S. vol. xiv p. 174); OLIBRO, 30 M. P. 4. From Emerita, W. to Olibro, curving round to the N.: PLAGIARIA, 30 M. P. (vid. sup.); BODRA, 8 M. P. (S. Maria de Besaya Cortés, Campo Mayor, Lapię; the river Bodos pres- sumably begins near this point in the A. M. (vid. sup.)); MATURIO, 8 M. P., ABELLERIA, 24 M. P. (it seems that these names are inverted, and that the latter is Alter de Chao, and the former Puente do Sara); ARBITUM PRAETORIUM, 28 M. P. (Salvatierra, or Benavente, both close together on the left bank of the Tagus); OLIBRO, 38 M. P. 8. From Emerita, to Olimpo, W. with a curve to the S. (Ihis. Ant. pp. 416–418); EVANDRIA, 8 M. P. (Elavdyla, Ptol. ii. 5 § 8); DIP0, 17 M. P.; AD ADRUM FLUMEN, 12 M. P.; EBORA, 9 M. P. (Evora). Here is a difficulty: the last is a well-known place, but the distance is evidently much too small; and the various attempts made to identify the immediate positions rest on no sufficient data. The identification of AD ADRUM FLUMEN AD ADRUM has no sign in the MSS. to bear it out. It seems, on the whole, most likely that the route intended is that of the great road through Talaroera la Real, Badejos, and Elvas. From Evora, it proceeds thus:—SALACIA, 44 M. P., named Ubeks Imperatora, a municipality, with the Old Latin Francia in the Plin. iv. p. 23, viii. p. 75; Meles, iii. i. MARC. ANTONIO, p. 42; Inschr. ap. Grotter, pp. 13, 16; Flores, Esp. S. vol. xiii. p. 115, xiv. p. 241; MALGORGA, 26 M. P. (Marvatoa F.); CARCIJANA, 26 M. P. (Aguata, or Paseiro, or Seziosa F.); CATOBRIA, 8 M. P. (Cotobria, Geog. Rav. iv. 43; Karbôt, Ptol. ii. 5 § 3; Karbôt, MARc. ANTONIO, p. 43; BU on the head-land at the mouth of the Garbeira); SADO, near Soutulum; Resdig. Ins. Rav. iv. p. 210; Montella, p. 87; EQUADORNA, 12 M. P. (Ocampa) OLIBRO, 12 M. P. The country S. of this road was traversed by others, connecting Evora with Pax Julia, and both with the Anas and the S. coast; namely:—6. (Ihis. Ant. pp. 426, 427.) From Evora (vid. supra.) at the mouth of the Arade, to Baxia, W. along the coast to Balma, 24 M. P. (Tavira); OSSONORA, 16 M. P. (Estay, N. of Faro, by C. de S. Maria); thence the road struck inland across the mountains of the Cuneus (Alpura), and down the valley of the Callipus (Sale), to Aramii, or Arambis, 60 M. P. (Os- râne), SALACIA, 36 M. P. (vid. supra.) and EBORA, 44 M. P. (vid. supra.). The course pursued from EBORA by SERPA, 14 M. P., Fines, 20 M. P., and ARUCUI, 25 M. P., to Pax Julia, 30 M. P. (Boca), is so intricate as to prove an error in the itinerary, which commentators have sought in vain to amend. 7. The direct road from Esquins to Pax Julia is given thus (Ihis. Ant. p. 431):—MYSTI- TALUS, 32 M. P. (Notitia, P. 90); PONTEFICUS, 36 M. P. (vid. supra.), 8. A direct road from Salacia to Ossonora is also mentioned, but the distance, 16 M. P., is absurdly wrong (Ihis. Ant. p. 418). 9. From Olibre a great road ran parallel to the coast, up to the mouth of the Durius and Bracara Augusta, thus (Ihis. Ant. pp. 420–422): JEREBRIGA, 30 M. P. (vid. supra.) Scalabis, 32 M. P. (vid. supra.); SELLUM, 32 M. P. (Romul F.); GOWEN- BRICA, 34 M. P. (Cóimbre, or further S.); EMER- MIUM, 10 M. P. (Aqueida, Mistre, or Curvalhos?) (site very uncertain); TALABRIGA, 40 M. P. (Aveío); LAGORBRIGA, 18 M. P. (near Feira); CALEM, 18 M. P. (Oporto); BRACARA, 35 M. P. (Braga); the last two, though originally Lusitania, belong, according to the common division, to the Callalachi Bracarii. Other places, not important enough to require further notice, will be found in the lists of Provence (ii. 5) and Uherli (vol. ii. p. 351). S. [P. S.]

LUSIUS. [Gorotta.]

LUSONES (Asinowror), the smallest of the four tribes into which the Celtiberians were divided. Their position was about the sources of the Tagus, SW. of the territory of Numantia. (Strab. iii. p. 163; Appian, Hisp. ec. 42, 49.) [P. S.]

LUSSONIUM (Asinowrorov), also called Los- numium, a town in Lower Pannonia, on the western bank of the Danube, a little to the north of the modern Pôza. It was the station of a body of Dalmatian cavalry. (Ptol. ii. 16 § 4; Not. Imp.; Ihis. Ant. p. 354; Tab. Pest., where it is called Losuna.) [L. S.]

LUSITIA PARISIORUM (Asinowrorov, Ptol. ii. 8 § 13; Asinowrorov, Strabo, p. 194), the territory of the Parisi, a Gallic people on the Seine. Lutetia is mentioned by Caesar (B. G. vi. 3), who held a meeting of the Gallic states there in the spring of 53 B.C. He calls it Lutetia Parisiorem; and in his narrative of the operations of Labienus in B. G. vi. 53, he says (B. G. vii. 87) that Lutetia is on an island opposite the city of Strez, a description from Caesar. Vilius Sequester (p. 17 ed. Oberlin) also describes Lutetia, as he writes it, as being on an island.

The Parisii were the neighbours of the Senones. There had been some kind of political union between the Parisii and the Senones before Caesar's Gallic campaigns (B. G. vi. 3), but at the time when Caesar mentions them, they seem to have been separate states. When Vercingetorix (p. c. 52) rose against the Romans, the Senones, Parisii, and others joined him immediately; and the Parisii sent 8000 men to oppose Caesar at Alesia (B. G. vii. 4. 75). Though a part of the little territory of the Parisii was north of the Seine, we must conclude from Caesar's narrative that they were a Celtic people. The diocese of Paris represents the territory of the Parisii.

Lutetia, like many other Gallic towns, finally took the name of the people, and was called Civitas Parisiorum, whence the modern name of Paris. Zoémus (iii. 9) calls it Parisium. It appears from the Notit. Dign. that the Romans had a fleet at Paris; and from the words in the Notitia, "praefec- tucus classis Andreitaniarum Parisiaria," the nameAndreisiacimplies that the name "Andreisii" was a place Andreitium, which he further supposes to be Andrisi, immediately below the junction of the Seine and Oise. An inscription dug up in 1711 among other ancient monuments in the church of Notre Dame, contained the words "Natae de Parisiari," and De Yalinde observed that the name of the people of Paris had always a fleet before their eyes, they may from this circumstance have taken the ship which appears in the arms of the city.

The position of Lutetia at Paris is determined by the description of the place, the name, and the measurements of the roads from Agrippinum (Sene), Rotomagus (Rosses), and Genabum (Orleans), which meet at Lutetia. When Caesar held the meeting of the states of Gallia at Lutetia, the town was con-
fixed to the island which afterwards was called Le Cidé (civitas), a name given to the old Roman port of several French towns. But the island on which stands the church of Notre Dame was then and for a long time after of less extent than it is now; for the site of the Place Dauphine was once two small islands which were not joined together and united to the Cidé before the sixteenth century; and the spot called Le Terre was another addition produced by the ruins of the buildings which were erected in this part of the city. Paris was never a large place under the Roman dominion. Ammianus (xx. 11) calls it a Castellum, and Julian (Moesogos, p. 340) and Zoëimus names it a small city (vrbxuyn). Zoëimus, who was no great geographer, places it in Germany. Lutetia may probably have occupied some ground on the north or on the south side of the river, or even on both sides, for the island was joined to the mainland by bridges in Caesar's time (B. G. vii. 58), made of wood, as we may assume. Julian spent a winter in Paris, A. D. 338, and was proclaimed Augustus there. (Ammian. Marcell. vii. 3, S. x. 4.) The Franks under Cluvia took Paris about the close of the fifth century, A. D.; and about A. D. 508 Cluvia made Paris his residence.

When Caesar (a. c. 59) was setting out to attack Gergovia, he sent Lшибeniens with four legions against the Sequani and Parisii. (B. G. vii. 84.) Lшибeniens advanced upon Lutetia from Aquitania, where he Lшибeniens advanced upon Lutetia from Aquitania, where he the first store. His march was along the left bank of the Seine. The commander of the Gallic forces occupied a marshy tract, the water of which ran into the Seine, and here he waited, with the intention of preventing the Romans from crossing the river (B. G. vii. 57) to Lutetia. Lшибeniens attempted to make a road across the marsh, but, finding it impossible, he left his camp silently in the night, and, returning by the route by which he had advanced, he reached Melunum (Melun), a town of the Sequani on an island in the Seine. He there seized about thirty vessels, and easily got possession of Melun. After repairing the bridge from the island to the right bank of the river, he carried over his men to the right side, and marched again upon Lutetia. He took the vessels with him, and used them, as we must suppose, for crossing the Matrona (Marne), though the Marne is not mentioned in the narrative. Before Labienus could reach Paris, the Galli set Lutetia on fire, and broke down the bridges which united the island to the main. They also quitted the march, and placed themselves on the banks of the Seine opposite to Lutetia and to the camp of Labienus, which was on the right side of the river. In the meantime Caesar's defeat before Gergovia was known, and Labienus was threatened from the north by the Bellovacii in his rear. In front of him, on the opposite side of the river, were the Parisii and their allies. His safety depended on getting to the left bank of the Seine, and he accomplished it by a clever movement. Soon after nightfall he left half a legion in his camp; he ordered another half legion, with their baggage, to march up the river, making a loud noise; and he sent up the river, in the same direction as the half legion as many boats as he could collect, which made a great noise and, while their crews were preparing the ships that he brought from Melunum four miles down the river, and, soon after despatching the half legion up the river, he marched with his three legions down the stream in great silence, and found his ships. The scouts of the enemy, who were placed all along the stream, were surprised and slaughtered; for there was a great storm raging, and they were off the guard. The three legions were carried across the river in the vessels. The enemy were confounded by the unusual noise purposely made in the Roman camp, by the boats moving up the river, and by the news of the enemy crossing lower down. Accordingly, the Galli left part of their forces to watch the opposite camp, and sent another part up the river towards Metissorum, as it is in Caesar's text, which is either a mistake for Melunum, or it is some place higher up the Seine than Paris. Either supposition will explain Caesar. The Galli led the rest of their forces to oppose the three legion which had crossed the Seine with Labienus, and, after a hard fight, they were defeated and dispersed. Labienus led his troops back to Aquitania, where his stores and baggage were. This is the substance of Caesar's narrative, which is correctly explained by D'Anville (Notice, loc. cit. Melunum), and Ubert (Galliae, p. 476) has done well in following him. Some of the old critics completely misunderstood Labienus' movements; and even, of late years, the passage has been wrongly explained.

The Romans built both on the island La Cidé and on both sides of the Seine, but the Roman memorials of Paris are very few. Some sculptured stones were dug up under the choir of Notre Dame. The inscriptions were of the time of Tiberius Caesar, and show that the Roman and Gallic deities were worshipped jointly. The remains of a subterranean aqueduct have been discovered both on the north and south sides of the river. The materials of the Roman city were doubtless employed for more recent constructions, and thus Roman Lutetia has disappeared.

[GL.]
concluded that he means the Forum Neronis mentioned by Ptolemy as being in the country of the Mennini. [CARPENTORACTE.] But the name Luteva, the modern name Lodève, and the Itin. seem to determine the position of Lutera; and, if Pliny is right, we must suppose that Luteva was also named Forum Neronis.

LUTIA (Lutia), a considerable town of the Arurae, in Hispania Citerior, 300 stadia from Numantia, mentioned only by Appian (Hist. 93, 94).

LUTOMMAGUS, a place in North Gallia, according to the Table on a road from Samarobriva (Arimina) to Castellum Meranorum. The site is uncertain. D'Anville has followed Oliver in writing the name Lubumagus; but it is Liminomagus in the Table.

LUXIA (Odiel), a small river on the coast of Hispania Baetica, between the Baetis (Guadalquivir) and the Anas (Guadiana; Plin. l. iii. a. 3). [P. S.]

LUXOVUM. This name appears on some inscriptions dug up at Lusaeuli, in the French department of the Vosges. Lusaeuli is on the Bréconch, and it has warm baths. The name on the inscriptions is said to be Luxovium or Luxovium. These inscriptions were published by Caylus, but they may not be genuine. In the life of St. Columban, written in the seventh century, Luxovium is mentioned:—"Castrum quo olim munitissimum, priore temporibus Luxovium nuncupatum, ubi etiam Thermo

LYCABETTUS MONS. [ATHENAE, p. 303, b.]

LYCAEAE. [LYCOA.]

LYCAEUS or LYCEUS (тω Λύκαιος βρός, δ' Ακώνιοι: Diosfortis), a lofty mountain of Arcadia, in the district of Parrhasia, from which there is a view of the greater part of Peloponnesus. Its height has been determined by the French Commission to be 4,659 feet. It was one of the chief seats of the worship of Zeus in Arcadia, and on the summit called Olympus, or laos karpheph, were the sacred grove and altar of Zeus Lycaeus, together with a hippodrome and a stadium, where games called Lycaeae were held, and the Icneion, near this altar, was a place called Creusa. These games are said to have resembled the Roman Lupercalia, and were sometimes celebrated by Arcadians when in foreign countries. (Plut. Cæsa. 61; Xen. Anab. i. 2, § 10.) Near the hippodrome was a temple of Pan, who is hence also called Lycaeus. There are still remains of the hippodrome extending from S. to N.; and near its northern extremity there are considerable remains of a cistern, about 50 feet in length from E. to W. A little further W. is a ruin called Hellenikon, apparently part of a temple; and near the church of St. Elias is the summit called Diosfortis, where the altar of Zeus formerly stood. In the eastern part of the mountain stood the sanctuary of the grove of Apollo Parrhasius or Pythius, and left in the place called Creusa. (Paus. vii. 88; Pind. Ol. i. 145, xii. 154; Thesprot. i. 123; Virg. Georg. i. 16, iii. 314; Aen. viii. 344.)

The river Neda rose in Mt. Ceranum (Keraneum), which was a portion of Mt. Lycaea. (Paus. vii. 41. § 3; comp. Strabo. p. 345.) Ceranum is shown by Ross to be Stephanei, and not Tetraëdri, as is usually stated. Nomia (Nomia spruce) is near Lykeus and near the place called Creusa. (Paus. vii. 38. § 11.) It was probably a portion of the modern Tetras. (Leake, Morea, vol. ii. p. 313, seq.; Peloponnesiacca, p. 244; Ross, Reisen in Pe-

LYCAONIA. [Aeumonia: Eth. Avdaneia, Ave-
donis, vol. i. pp. 88, 91; Curtius, Peloponnesiacca, vol. i. pp. 294, 338.)

LYCAONIA (тω Λυκαιο ανα: Eth. Avdaneia, Auto-

I'n., a province of Asia Minor, bordering in the east on Cappadocia, in the south on Cilicia, in the west on Pisidia and Phrygia, and in the north on Galatia.

These frontiers, however, were not always the same, but the fluctuation became most perplexing at the time when Asia was under the influence of the Romans, who gave portions of Lycaonia sometimes to this and sometimes to that Asiatic prince, while they incorporated the greater part with the province of Cappadocia, whence Ptolemy (v. 6. § 16) treats of it as a part of Cappadocia. The name Lycaonia, however, continued to be applied to the country down to a late period, as we see from Hierocles (p. 672) and other Christian writers.

Lycaonia is, on the whole, a plain country, but the southern and northern parts are surrounded by high mountains; and the north, especially, was a cold and bleak country, but very well adapted as pasture-land for sheep, of which king Amyntas is said to have more than 300,000. Their wool was rather coarse, but still yielded considerable profit to the proprietors. The country was also rich in wild asses. Its chief mineral product was salt, the soil down to a considerable depth being impregnated with salt. In consequence of this the country had little drinking-water, which had to be obtained from very deep wells, and in some parts was sold. The amount of the country, furnished by Strabo (xii. p. 558), is fully confirmed by modern travellers. The streams which come down from the surrounding mountains do not form rivers of any importance, but unite into several lakes, among which the salt lake Tatta, in the north-east, is the most important.

The Lycaonians of Lycaonia, although Eustathius (ad Dionys. Per. 857) connects their name with the Arcadian Lycaon, according to which they would be Pelasgians, are never mentioned in history until the time of the expedition of Cyrus the Younger against his brother Artaxerxes, when Cyrus, passing through their country in five days, gave it up to plunder because they were hostile. (Xen. Anab. i. 2, § 10.)

Who the Lycaonians were, and to what branch of the human family they belonged, is uncertain; but from the Acts of the Apostles (xiv. 11) it appears that they spoke a peculiar language. It is also well attested that, like the Pisdians, they were a hardy and warlike race, which owned no subject to the Persian monarchs, and lived by plunder and foray. (Dionys. Per. 857; Psell. 806; Avien. 1020.) Their principal towns, which are few in number, and all of which appear to have been very small, were: Icionium, Laodichea Combusta, Delphi, Antiochia, and Laranda; the least important ones were Thyriakos, Yabat, Sohata, Illitara, and Coronaphus.

As to their early history, we know nothing about the Lycaonians; but they seem to have gradually advanced westward, for in the time of Crenesus the Phrygians occupied the country as far as the river Haly, and Xenophon calls Ictonium the easternmost town of Phrygia, so that the Lycaonians must have continued their extension towards the west even after that time. Contemporaneously Ictonium was nearly in the centre of Lycaonia. It has already been remarked that they maintained their independence against Persia, but afterwards they shared the fate.
LYCIA.

223

of all the other nations of Asia Minor, being successively under the rule of Alexander the Great, the Seleucids, Antiochus, Ennemes of Pergamus, and finally under the Romans. (Liv. xxi. 54, xxviii. 39, 56.) Under this change of rulers, the character of the people remained the same: daring and intractable, they still continued their wild and lawless habits, though in the course of time many Greek settlers must have taken up their abode in the Lyccean towns. Under their chief Amyntas, however, whom Strabo even calls king, and who was his own contemporary, the country acquired a greater political consistency. [Dict. of Biogr. under Amyntas, Vol. i. p. 156.] After the death of Amyntas, his whole kingdom, which he had greatly extended, fell into the hands of the Romans, who constituted the greater part of Lycenia as a part of their province of Cappadocia.

We may add, that Strabo regards Isauria as a part of Lycia. [Hauera.] [L.S.]

LYCASTUS (Albumas: Eich. Alexander), a town of Crete, mentioned in the Homeric catalogue (Ili. ii. 647; comp. Pomp. Mela, ii. 7. § 13; Plin. iv. 12). Strabo (x. p. 479) says that it had entirely disappeared, and that nothing now remains of it, except a few tombs, according to the Ciconians. According to Polybius (xxiii. 15) the Lycastian district was afterwards wrested from the Ciconians by the Gortyrians, who gave it to the neighbouring town of Rhacana. In Mr. Pasheley's map the site is fixed at Kamaresia. (Hock, Kreta, vol. i. pp. 15, 414.) [E. B. J.]

LYCIA and LYCASTUM (Albumas), a very ancient town in Pontus, on a river bearing the same name. It was situated 20 stadia south-east of Amisa. (Scyl. Perip. p. 33; Marcian, p. 74; Perip. Post. Eur. p. 10; Steph. B. s. v. Xafesia: Plin. vi. 3; Mela, i. 19, who calls it Lycasta.) Pherecydes (ap. Schol. ad Apoll. Rhod. ii. 573, comp. ad ii. 1001) speaks of a town of Lycasia, inhabited by Amazons, and situated between Themiscyra and Chalbyia. The river Lycestus was but a small stream, which after a short course emptied itself into the Euxine close by the town of Lycastum. (Scyl. Marcian, Plin. ll. cc.) [L. S.]

LYCHIUM. [Athenea, p. 503, b.]

LYCHNIDUS (Athynidas: Eich. Athynidas, Athynidas, Steph. B.; Pod. iii. 10. § 92), the chief town of Lycia, was at a very recent period, lying about 3 miles on the frontier it was always a place of considerable importance, and the name frequently occurs in the wars of the Romans with Philippus V. and Pescus, kings of Macedon. (Liv. xxxvi. 32, xxxvii. 34, xiiii. 9, 10, 21; Athynidas, Polyb. xiv. 80.) Afterwards it continued to be, as on the Cynadian way described by Polybius (Athynidas, xxxiv. 19), one of the principal points on the Egyptian road. (Strab. vii. p. 333; Ith. Anton., Pest. Tab.; Ith. Hierosol.; in the Jerusalem Itinerary the original reads Ceda.)

Under the Byzantine empire it appears to have been a large and populous town, but was nearly destroyed by an earthquake during the reign of Justinian. (Procop. Hist. Arc. 18; Malch. Excerpt. p. 250, ed. Bonn; Niceph. Callist. xvi. 3,) Lycinthus, which from the data of the Itineraries must be placed near the S. extremity of the Lake Lycinthis, on its E. shores (Leaks, North Greece, vol. iii. p. 281), was afterwards replaced by the more northerly ACCHIDNA (σκήνα Αχεδιά, Ωχεδιά, Αχεδι, of the Byzantine writers; Anna Comm. xiii. p. 371; Cedren. vol. ii. p. 468, ed. Bonn Canutiuen. ii. 21), the capital of the Bulgarian empire. Some geographers have supposed that Achrida is the same as Justinianis; this identification, which is a mistake, has arisen from the circumstance that the metropolitans of Achrida called themselves after the emperor Justinian. Justiniana Prima is the modern town of Kostendil. (Scharafik, Slav. Alt. vol. ii. p. 237.) The Slavonic name survives in the modern Akrpdika, on the NE. shores of the lake. [E. B. J.]

LYCHNITIS. 1. (Αχρηνίτις λυκ, Polyb. v. 108), a lake of Illyricum, first mentioned by Schemnus of Chios (429). Philip pushed his conquests over the Illyrian tribes as far as this lake (Diod. xvi. 8). The lake of Akrpdika or Okrida, which abounds in fish (comp. Strab. vii. p. 327), represents Lychnitis. (Leaks, Northern Greece, vol. i. p. 328, vol. iii. pp. 280, 288.) 2. (Αχρηνίτις; comp. Steph. B. s. v. Athynidas), a lake of the Greater Armenia, which Porphyry (v. 13. § 8) places in long. 78° and lat. 45° 15'. It has been identified with the lake Göblasek, or Seyrenca to the NW. of Erivan, the true position of which is lat. 40° 35'. The river Zeynac, which flows out of the lake and communicates with the Araxes, is not mentioned by Porphyry. Dubois de Messe (Mém. de l'Acad. des Ins. et Arts, pt. i. pl. v. vol. iii. pp. 299—311; St. Martin, Mon. sur l'Arménie, vol. i. p. 61; Journ. Geog. Soc. vol. iii. pp. 40—43; Ritter, Erdkunde, vol. ix. p. 786.) [E. B. J.]

LYCIA (Λυκία; Eich. Abatus), a country on the south coast of Asia Minor, forming part of the region now called Lycia, on the E. boundary of Asia Minor, next to Caria, on the N. by Phrygia and Pisidia, and on the N.-east by Pamphylia, while the whole of the south is washed by the part of the Mediterranean called the Lycian sea. The mountainous interior is formed by the river Glaucus and Mount Daedala (Strab. xiv. p. 564), the northern by the range of Mount Taurus, and the eastern one by Mount Cilix. The whole extent of the country, from east to west, amounts, according to Strabo, to 1720 stadia; this measurement, however, must have been made along the line of coast, for a straight line from east to west does not amount to more than one-half that distance. Its extent from the sea to the northern boundary is different in the different parts, but is everywhere smaller than that from east to west. Unlike most of Asia Minor, Lycia, even in the days of antiquity, was almost a terra incognita,—having never been visited by European travellers, until Sir Charles Fellows, in 1838, and a second time in 1840, travelled the country; since which time it has been explored and described by several other men of learning and science, whose works will be noticed below.

1. Name of the Country. — The name Lycia and Lycians is perfectly familiar to Homer, and the poet appears to have been better acquainted with Lycia than with some other parts of Asia Minor, for he knew the river Xanthus and Cape Chimaera. (Il. vi. 171, &c. x. 430, xii. 312, &c. Od. v. 262, and elsewhere.) But, according to Herodotus (I. 179), the ancient name of the country had been Milysia (Μιλυσία), and that of the inhabitants Solymi (Σόλωμοι), and Tremilas or Tremilas (Τρεμιλα or Τρωμιλά). These latter are said to have been conquered and expelled from the coast districts by Sarpedon, the brother of Minos, who, with a band of Cretans, invaded the country and conquered it, but without changing either its name or that of the people. But in his reign, Lycus, the
LYCIA.

son of Pandion, being driven by his brother Aegeus from Attica, found a place of refuge in Milyas, the kingdom of Sarpedon, who now changed the name of his dominion into Lycia, to honour his friend Lycus. (Comp. Strab. xiv. p. 667; and Steph. B. s. v. Trepdos, who states, on the authority of the historian Alexander, that Bellerophonites changed the name of Tremilbas into that of Lycias, some fifty years later; for at that time the Milyans still existed, but was confined to the northern and more mountainous parts of the country, into which the original inhabitants of the country had been driven by the conquerors, and where they were known under the name of the Milyans. [Milyas.] Strabo, in his desire to look upon Homer as an infallible authority in historical and geographical matters, is inclined to disbelieve the tradition related by Herodotus, as irreconcilable with the poet, who, he conceives, meant by the Solymi no other people than that which in later times bore the name of Milyas. Whatever we may think of the cause of the change of name from Milyas to Lycia, it is probable that it took place in the course of the conquests of the country by foreigners, and that this conquest belongs to an earlier date than the composition of the Homeric poems. But although the inhabitants of the country had changed their own name, they continued as late as the time of Herodotus to be called Tremilbas by their neighbours.

2. Physical Character of the Country.—All Lycia is a mountainous country,—the range of Mount Taurus in the north sending forth numerous branches to the south, which generally slope down as they approach the sea, and terminate in promontories. The principal of these branches are, mounts Dardala, Cragus, Marryottes (rising in some parts to a height of 10,000 feet), and Climax. But, notwithstanding its mountains, Lycia was by no means an unfertile country, for it produced wine, corn, and all the other fruits of Asia Minor; its cedars, firs, and plane trees, were particularly celebrated. (Pline. H. N. xii. 5.) Among the products peculiar to it, we may mention a particularly soft kind of sponge found near Anti-peleus, and a species of chalk, which possessed medicinal virtues. Lycia also contained springs of naphthal, which attest its volcanic character; of which other proofs also are mentioned, for, not far from the rock called Deliktash, there is a perpetual fire issuing from the ground, which is supposed to have given rise to the story of the Chimaera, but is in reality nothing but a stream of inflammable gas issuing from the crevices of the rocks, as is the case in several parts of the Apennines. Most of the rivers of Lycia flow in a southern direction, and the most important of them are the Xanthus, in the west, and the Limyrus or Argianus, in the east. It also has two considerable lakes; one, now called Amias Goli, is formed by the confluence of several rivers, another, in the more northern part, situated in a hollow among high mountains, is called Yesser Goli.

3. The Inhabitants of Lycia.—The most ancient inhabitants of Lycia, as we have seen above, were the Solymi, who are generally believed to have been a Phoenician or Semitic race. We are not informed why these Solymi were called Tremilbas; but the probability is that the Solymi and the Tremilbas were two different tribes occupying different parts of the country at the same time, and that while the Solymi were driven into the northern mountains by the invaders, the Tremilbas were subdued, and received from their conquerors the name of Lycians. This seems clearly to follow from the account of Herodotus and the fragments quoted by Stephanus Byzantinus. The Tremilbas were no doubt as foreign to the Hellenic stock of nations as the Solymi. The conquerors of the Tremilbas, that is the Lycians proper, are said to have come from Crete, which, before its occupation by the Dorians, was inhabited by barbarous or non-Hellenic tribes, whence it follows that the conquering Lycians must likewise have been barbarians. Their struggles with the Solymi appear to have lasted long, and to have been very severe, for Bellerophon and other mythical heroes are described as having fought against the warlike Solymi. (Hom. II. vi. 184, 204, Od. v. 143.) From the recently discovered Lycean inscriptions, composed in an alphabet partly Greek and partly foreign, it has been inferred that, after the conquest of Lycia by the Persians, the great body of the nation changed its character, at least in some parts, which are supposed to have been occupied by the Persians; but this opinion is not yet supported by the inscriptions, the great majority of which Mr. Sharp and others believe to contain a language akin to the Zend. But this hypothesis is devoid of all foundation, for we never find that the Persians colonised the countries conquered by them, and the Lycean language is as yet utterly unknown. All we can say is, that the Lycean alphabet seems to be a variety of the Graecophoenician or Graeco-Semitic character, and that there is no evidence to show that in the historical ages the Lycians changed their character as a nation. They were and remained barbarians in the Greek sense, though they adopted and practised to a great extent the arts and modes of civilised life, such as they existed among their Greek neighbours.

4. Inscriptions. It is known that in the Lycean Inscriptions, (hymns to the gods, obelisks, &c.) there is some Semitic character, and in the historical times we find Lycia as a confederation of free cities, with a constitution more wisely framed perhaps than any other in all antiquity. An authentic account of this constitution has been preserved by Strabo. It was the political power also maintained by this union; it united a country strong, and enabled it to maintain its freedom against the encroachments of Croesus, while all the surrounding nations were compelled to own his sway. When and by whom this federal constitution was devised, we are not informed, but it reflects great credit upon the political wisdom of the Lycians. They were a peaceable and well-conducted people, and took no part in the piracy of their maritime neighbours, but remained faithful to their ancient institutions, and on this account were allowed the enjoyment of their free constitution by the Romans. It was under the dominion of Rome that Strabo saw its working. The confederacy then consisted of 23 towns, from which the deputies met in a place fixed upon each time by common consent. The six largest towns, Xanthus, Patara, Phocara, Olympic, Tytra, and Tlos, had each three votes at the common diet; the towns of more moderate size had two, and the remaining small places one vote each. The executive of the confederacy was in the hand of a magistrate called Lyciarch (Lukciarch), whose election was the first business of the congress, and after whom the other offices of the confederacy were chosen. The judges, also, as well as the magistrates, were elected from each city according to the number of
its votes; taxation and other public duties were regulated on the same principle. In former times, the deputies constituting the congress had also decided upon peace, war, and alliances; but this of course ceased when Lycia acknowledged the supremacy of Rome. This happy constitution lasted until the time of the emperor Claudius, when Lycia became a Roman province, as is mentioned below. The religion, language, and customs of the Lycians are said by Herodotus to have been partly Carian and partly Cretan; but in one point they differed from all other men, for they derived their names from their mothers and not from their fathers, and when any one was asked to give an account of his parentage, he enumerated his mother, grandmother, great-grandmother, etc. (Herod. i. 178.) Herodotus (vii. 99), in describing their armour, mentions in particular, hats with plumes, greaves, short swords, and sickles. Respecting the religion of the Lycians nothing is known, except that they worshipped Apollo, especially at Patara; but whether this was the Greek Apollo, or a Lycian god identified with him, cannot be said with certainty; and if the Lycians continued to worship him, if we attach any value to the story of Patara. [Dict. of Biogr. s. v.] This would show that the Greeks of Asia Minor exercised considerable influence upon the Lycians at a very early period. 5. Literature and the Arts. — Although we have no mention of any works in the Lycian language, it cannot be doubted that the Lycians either had, or at least might have had, a literature, as they had a peculiar alphabet of their own, and made frequent use of it in inscriptions. The mere fact, however, that many of these inscriptions are engraved in two languages, the Lycian and Greek, shows that the latter language had become so familiar to the people that it was thought desirable, nay necessary, to employ it along with the vernacular in public decrees and laws about and after the time of the Persian wars; and it must have been this circumstance that stopped or prevented the development of a national literature in Lycia. The influence of Greek literature is also attested by the theatres which existed in almost every town in which the Lycians performed, and have been understood and enjoyed by the people. In the arts of sculpture and architecture, the Lycians attained a degree of perfection but little inferior to that of the Greeks. Their temples and tombs abound in the finest sculptures, representing mythological subjects, or events of their own military history. Their architecture, especially that of their tombs and sarcophagi, has quite a peculiar character, so much so that travellers are thereby enabled to distinguish whether any given place is really Lycian or not. These sarcophagi are surmounted by a structure with pointed arches, and richly decorated with sculptures. One of these has been brought to this country by Sir C. F. Petrie, who has deposited it in the British Museum. The entrances of the numerous tombs cut in the faces of lofty rocks are formed in the same way, presenting at the top a pointed arch, which has led Sir C. Fellows to compare them to Gothic or Elizabethan architecture. If we examine the remains of their towns, as figured in the works of Sir C. F. Petrie, we cannot avoid coming to the conclusion that, in all the arts of civilised life, the Lycians, though barbarians, were little inferior to the Greeks.

6. History. — Lycia and the Lycians act rather a prominent part in the Homeric account of the Trojan War, where they are described as the allies of the Trojans. Sarpedon and Glauceus, are the two Lycian heroes in the war; but the poet was familiar also with the earlier legends of Lycia,—as that about Ballerophon, which he introduces into the parley between Glauceus and Diomedes. Pandarus, another hero on the side of the Trojans, came from a district about the river Lycus, which was called Lycia, and which was supposed by the ancient commentators to have been peopled by colonists from Lycia, the subject of this article (I. ii. 824, &c., iv. 91, v. 105; comp. Strab. xii. p. 572, xiii. p. 585); but both history and tradition are silent as to the time when, and the circumstances under which, Lycians settled in Troas. During the period from the Trojan times down to the Lycian conquests under Croesus, the Lycians are not mentioned in history; but that conqueror, who was successful in all other parts of Asia Minor, failed in his attempts upon the Lycians and Cilicians. (Herod. i. 28.) When Cyrus overthrew the Lydian monarchy, and invaded his general Harpagus invaded the plain of the Xanthus, the Lycians offered no resistance; but when, in the end, they found their situation hopeless, the men of Xanthus assembled in the citadel their women, children, slaves, and treasures, and then set fire to it. They themselves then renewed the fight against the enemy, but all perished, except a few Xanthians who happened to be absent during the battle. [Xanth.] (Herod. iii. 90); the fact that the Lycians formed a part of the Persian monarchy, but, like all Persian provinces, retained its own constitution, being obliged only to pay tribute and furnish its contingents to the Persian army. The Lycians joined in the revolt of the Asiatic Greeks, but afterwards were reduced, and Darius made the country a part of his first satrapy (Herod. iii. 90); the fact that the Lycians furnished fifty ships to the fleet of Xerxes (Herod. viii. 99) shows, that they still continued to be a prosperous and powerful people. Their armour on that occasion is described by Herodotus, and was the same as that noticed above. During the Peloponnesian War the Lycians are not mentioned; but as Rhodes was tributary to Athens, and in connexion with Asia Minor levied as far as Apollonia, it is not improbable that Lycia may have been compelled to pay similar contributions. Alexander traversed a part of the country on his march from Caria into Pisidia and Phrygia, and reduced it under his sway. The Lycians on that occasion offered little or no resistance to the young conqueror; the cities of Xanthus, Patara, and about thirty other smaller towns, surrendered to him without a blow. (Arrian, Anab. i. 24.) In the division of the Macedonian empire, Lycia successively came under the dominion of the Ptolemies and the Seleucids; and then, after a brief interval, during which the Lycians enjoyed their full freedom, they fell under the dominion of Rome; and after the death of Antiochus the Great Lycia was ceded by the Roman senate to the Rhodians; but the Lycians, indignant at being considered the subjects of the islanders, and being secretly supported by Eumenes, resisted the Rhodian authorities by force of arms. In this contest they were overpowered; but the Romans, dispose with the Rhodians for their country in the Maritime Lycia interfered, and restored the Lycians to independence. (Polyb. xxii. 7, xxiii. 3, xxvi. 7, xxx. 5; Liv. xiv. 25; Appian, Mithr. 61, &c., Syr. 44.) It was apparently during the period which now followed,
LYCIA.

LYCOSURA.

that Lycia enjoyed its highest degree of prosperity, for under the protection of Rome the people had sufficient leisure to attend to their own internal affairs. By a strict and wise neutrality, they escaped the dangers of the Mithridatic Wars as well as those of the wars against the pirates. (Appian, Mithrid. 24, 61; Strab. xvi. p. 665.) The prosperity of Lycia, however, received a severe blow during the wars of Brutus and Cassius, who attacked the country, because it was suspected to favour the party of Octavianus and Antony. When Brutus advanced against Xanthus, the inhabitants raised the suburbs to the ground, and offered the most determinate resistance. After a long and desperate siege, the soldiers of Brutus gained admission by treachery, whereupon the Xanthians made away with themselves by setting fire to their city. The fall of Xanthus was followed by the surrender of Patara and the whole Lycian nation. Brutus levied enormous contributions, and in some instances ordered the inhabitants to give up all their gold and silver. (Appian, B. C. iv. 60, 65, 75, 81.) Antony afterwards granted the Lycians exemption from taxes, in consideration of their sufferings, and exhorted them to rebuild the city of Xanthus. (Ibid. v. 7; comp. Dion Cassi. xlvii. 34.) But after this time the prosperity of Lycia was gone, and internal dissensions in the end also deprived the inhabitants of their ancient and free constitution; for the emperor Claudius made the country a Roman province, and compelled the people to pay large indemnities on account of their sufferings, and exhorted them to rebuild the city of Xanthus. (Ibid. v. 7; comp. Dion Cassi. xlvii. 34.)

LYCO or LYCON, a small town of Haraonia Bactria, mentioned only by Livy (xxvii. 47). [P. S.]

LYCOA (Λυκοά; Αθεκ Αυτοκράρος), a town of Arcadia in the district Mænælaia, at the foot of Mt. Mænælaus, with a temple of Artemis Lycoa. It was in ruins in the time of Pausanias, and is represented by the Palæokastro between Arachova and Kastorofik. (Paus. viii. 5 § 4, 56 § 7; Stephan. B. s. v.; Diction. de Bats.) Delphi, Νεόλαος, p. 171; Ross, Reisen im Peloponnes, p. 120; Curtius, Peloponnes, vol. i. p. 385.) There was another Lyco not far from the Alpeus, near its junction with the Lusius or Gortynius, at the foot of Mt. Lycaonia. (Poli. xvi. 17.) It has been conjectured that the proper name of the latter of these towns was Lycaea, since Pausanias (viii. 27. § 4) speaks of the Lycaean (Λυκαια) as a people in the district of Cyurnia, and Stephanus mentions a town Lycaea (Αλυκαία). (Leake, Morea, vol. ii. p. 304.)

LYCONE (Λυκον), a mountain of Argolis, on the road from Argos to Tegea. (Paus. ii. 24. § 6.)

[See Vol. i. p. 201, b.]

1. In the Thebaid, the capital of the nome Lygopolitis, SE. of Hermopolis, in lat. 27° 10' 14" N.; the modern `Espet'. It was seated on the western bank of the Nile. The sheikh of a village named `Kamal', who resided in Upper Egypt, probably during the sheepdrift season in the Lower Country, has been discovered here. (Rosellini, Mon. Cl. i. 81.) Lygopolis has no remarkable ruins, but in the excavated chambers of the adjacent rocks are found mummies of wolves, confirming the origin of its name, as well as a tradition preserved by Lycurgus (Lyco, Ihs. Anot., p. 157; Ath. Naik. 184.)

2. The Deltaic Lygopolis (Λυγαστήρ, Strab. xvii. p. 802; Stephan. B. s. v.), was an inconsiderable town in the Sebennytic nome, in the neighbourhood of Mendes, and, from its appellation, apparently founded by a colony of Osirian priests from Upper Egypt. The Deltaic Lygopolis was the birthplace of the Neo-Ptolemaic philosopher Plutinus, a. n. 205. (Suidas, p. 3015.) [W. B. D.]

LYCOREIA. [Delph., p. 768.]

LYCOSURA (Λυκοσουρα; Euth. Λυκοσουρα), a town of Arcadia, in the district Parrhisia, at the foot of Mt. Lycusos, and near the river Plataniston (Gastritis), on the road from Megalopolis to Phila-altis. (Paus. vii. 5 § 3; 12; Gigas, Περιηγ. p. 91.) It was in ruins in the time of Pausanias, and is said to have been founded by Lycaon, the son of Pelasgus. It was in ruins in the time of Pausanias, since its inhabitants had been transplanted to Megalopolis upon the foundation of the latter. The remains of this town were first discovered by Dodwell, near the village of Staks, and had been more accurately described by Ross. The ruins are called Palacechastros or Sekheros. (Paus. vii. 2 § 1, viii. 4 § 5, viii. 38 § 1; Dodwell, Travels in Greece, vol. ii. p. 395; Leake, Morea, vol. ii. p. 319; Ross, Reisen im Pelo-
LYCURYA.

LYCUS (Ἄκως), is the name of a great many rivers, especially in Asia, and seems to have originated in the impression made upon the mind of the beholder by a torrent rushing down the side of a hill, which suggested the idea of a wave rushing at his prey. The following rivers of this name occur in Asia Minor:—

1. The Lykus of Bithynia: it flows in the east of Bithynia in a western direction, and empties itself into the Euxine a little to the south of Heracleia Pontica, which was twenty stadia distant from it. The breadth of the river is said to be twenty stadia, its depth is equal to its breadth, and the plain near its mouth bore the name of Campus Lycanus. (Sclerax, p. 34; Orph. Argon. 720; Arrian, Perip. p. 14; Anonymous. Perip. p. 3; Xenoph. Anab. vi. 2. § 3; Or. Epist. ex Pont. x. 47; Memnon, op. Phot. 51; Plin. vi. 1, who erroneously states that Heracleia was situated on (apposatum) the river.

2. The Lykus of Cilicia is mentioned only by Pliny (v. 22) as flowing between the Pyramus and Fimnara.

3. The Lykus of Lydia was a tributary of the Hermus, flowing in a south-western direction by the town of Thyatira: whether it emptied itself directly into the Hermus, or into its junction with the Hyllus, is uncertain. (Plin. vii. 31; comp. Wheeler, vol. i. p. 253; P. Lucas, Triorcimois Voyage, vol. i. p. 139, who, however, confounds the Lycus with the Hermus.)

4. The Lykus of Phrygia, now called Tchoruk-Se, is a tributary of the Maeander, which it joins a few miles south of Tripolia. It had its sources in the eastern part of Mount Mæander, which joins the Libyian sea. (Strab. p. 476; comp. Steph. B. s.v.; Scyl. p. 18; Plin. iv. 12; Hesych. s. v. Kapnosów; Hierocoll.) The site still bears the name of Lyko, where ancient remains are now found. (Pashley, Trav. vol. i. p. 269.) In the 16th century, the Venetian Mésis (M. Class. Ant. vol. ii. p. 274) describes the walls of the ancient city, with circular bastions, and other fortifications, as existing upon a lofty mountain, near in the centre of the island. Numerous vestiges of ancient structures, tombs, and broken marbles, are seen, as well as an immense arch of an aqueduct, by which the water was carried across a deep valley by means of a large masonry arch. The tower of Arreas and the ancient harbour of Cration are assigned to Lykos. The type on its coins is an eagle flying, with the epigraph ΛΤΤΠΩΝ. (Eckhel, lib. ii. p. 316; Héck, Kreto, vol. i. pp. 13, 408, vol. ii. pp. 431, 446, vol. iii. pp. 430, 465, 508.)

[QUI 2]

LYCURYA (Ἀυκουπία), a village in Arcadia, which still retains its ancient name, marked the boundaries of the Pheneaeae and Cletorii. (Paus. viii. 19. § 4; Leake, Morea, vol. iii. p. 143; Böhlsay, Kicharches, 4c. p. 156; Curtius, Pelo- pomassae, vol. i. p. 195.)
LYCUS.
Wolf-river is plainly identical with the Dog-river of the present day (Nahr-el-Keb), about 2 hours north of Byyard; which derives its name, says Maundrell, from an idol in the form of a dog or wolf, which was worshipped, and is said to have pronounced oracles, at this place. It is remarkable for an ancient via-
duct cut in the face of a rocky promontory command-
edly on the south of the stream, the work of Antoninus Pius, as a Latin inscription, copied by
Maundrell, and still legible, records (Journey, March
17, pp. 35—37). Cuneiform inscriptions and figures resembling those found at Behistun [BAGHTANUS
MOUNT] would seem to indicate that the Roman em-
peror did but repair the work of some Persian king.
There are casts of the inscriptions and figures in the
British Museum. [G. W.]
LYCUS (Ainos), a river of Sarmatia, which flows
through the country of the Thasagetaes, and dis-
charges itself into the Palus Masoria. (Herod. iv.
184.) Herodotus was so much in error about the posi-
tion of the region, that it is difficult to make
out his geography here. The Lyucus has been iden-
tified with the Lagos of Pliny (vi. 7), or the
upper course of the Volga. (Comp. Schafarik, Svor.
Alt. i. p. 499.) Rennell (Geog. of Herod. vol.
i. p. 119) supposes it may be the Medenotis.
It must be distinguished from the Lyucus of Ptolemy
(Stahl. ii. § 15), which is the modern Kudovas. (Shaf.
trach, l.c.)
LYCUS (Alos, Protol. v. 14. § 2), a river of
Cyprus, W. of Amathus. At a little distance inland
from Capo delle Gatte (Corinhas) are some salt
marshes, which receive an arm of a river correspon-
ding with the Lyucus of Ptolemy. (Engel, Cyprus,
vol. i. 37.) [E. B. J.]
LYDIA. [DIOPECOLII.
LYDIA (Aelia; Ekk. Aedes, Lydusa), a country in
the western part of Asia Minor. Its boundaries
varied at different times. Originally it was a small
kingdom in the east of the Ionian colonies; but
during the period of the Persian dominion it ex-
tended to the south as far as the river Maeander, and
perhaps even to Mount Messogia, whence some
writers speak of the Carian towns of Aromata,
Tralles, Nyas, and Magnesia on the Maeander, as
Lydian towns, and Strabo (xii. p. 577) mentions the
Maeander as the frontier between Lydia and Caria.
To the east it extended as far as the river Lyucus, so as to embrace a portion of Phrygia. In
this state the kingdom of Lydia embraced the
whole of Asia Minor between the Aegean and the
river Halys, with the exception of Cilicia and
Lycia. The limits of Lydia during the Roman
period are more definitely fixed; for it bordered in
the north on Mycia, from which it was separated
near the coast by the river Hermus, and in the
inland by the range of Mount Tmnassa; to the east
it bordered on Phrygia, and the whole of Asia Minor
between the Aegean and the river Halys, from which it was separated by Mount Mes-
ogia. To the west it was washed by the Aegean
(Plin. v. 30; Strab. i. p. 58, ii. p. 130, xii.
pp. 572, 577, &c.), whence it is evident that it
embraced the modern province of Sakkliam and
the northern part of Sipylia. This extent of country,
bordering on the coasts of Ionia and Caria, also
Lycia, or the coast-country between the mouth of the Hermus and that of the
Maeander, which was, properly speaking, no part of
Lydia. [IONIA.]
1. Physical Features of Lydia.—In the southern
and western parts Lydia was a mountainous country,
being bounded on the south by the Messogiai, and
traversed by the range of Tmolus, which runs paralel to it, and includes the valley of the Ca-
strus. In the western parts we have, as continu-
tions of Tmolus, Mount Dracus and Olympus,
in the north of which rises Mount Sepphus. The
extensive plains and valleys between these heights
are traversed by the rivers Maeander and Ca-
strus and Hermus, and their numerous tribu-
taries. The whole country was one of the most
fertile in the world, even the sides of the mountains
admitting of cultivation; its climate was mild and
healthy, though the country has at all times been
visited by severe earthquakes. (Xenoph. Cyrop.
vi. 2. § 27; Strab. i. p. 58.) Its most important
productions were an excellent kind of wine, saffron,
and gold. The accounts of the ancients about the
quantity of gold found in Lydia, from which Croes-
sus was believed to have derived his wealth, are no
doubt exaggerated, for in later times the sand of
the river Pactolus contained no gold at all, and the
proceeds of the gold mine of Mount Tmolus were
so small as scarcely to pay for the labour of working
them. (Strab. xiii. p. 591.) The plains about the
Hermus and Caystres were the most fertile parts of
the country, if we except the coast districts of
Ionia. The most celebrated of these plains and
valleys bore distinct names, as the Cilhianian,
the Caystrian, the Hyrcanian; and the Catace-
farin, &c. Some of the north east coast of Ionia also
contained lakes of considerable extent, the most
important of which are the Gygasia Lacus, on
the north of the Hermus, and some smaller ones in
the neighbourhood of Ephesus, which were partic-
ularly rich in fish. The capital of the country at
all times was Sardes.
2. Habitations of the Country.—In the Homerio poems the names Lydia and Lycians do
not occur; but the people dwelling about Mount Tmolus and Lake Gygaesa, that is the country afterwards called
Lydia, bear the name Meones or Maeones (Majo.
i. 565, v. 45, x. 431), and are allied with the Tro-
jans. The earliest author who mentions the name
Lydians is Herodotus (i. 7) states that the people
originally called Meones afterwards adopted the name of Lydians, from Lydus the son of
Ayes; and he accordingly regards Lydians and
Meones as the same people. But some of the
poets who preceded him from Strabo (xii. p. 572, xiv.
p. 679), considered them as two distinct races. —
a view which is unquestionably the correct one, and
has been adopted in modern times by Niebuhr and
other inquirers. A change of name like that of
Meonesians into Lydians alone suggests the idea of
the former people being either subdued or expelled by the latter. When once the name Lydians had
been established, it was difficult to assert the
right of the nation that had been conquered by them as
well as to the conquerors, and hence it happens that later
writers use the name Lydians even when speaking of a
time when there were no Lydians in the coun-
try, but only Meonesians. We shall first endeavour
to show who the Meonesians were, and then proceed
lydians in the country the time when they conquered the Meonesians. The
Meonesians unquestionably belonged to the Indo-
European stock of nations, or that branch of them
which is generally called Tyrrenhian or Pelagian,
for these latter "inhabited Lesbos before the Greeks took possession of those islands (Strab. v. 231
LYDIA.

xiii. p. 391), and, according to Mancrates the Ephesian, the whole coast of Ionia, beginning from Mycale, and of Aeolis." (Niebuhr, Hist. of Rome, vol. i. p. 32.) They no doubt extended beyond the coast into the interior of the country. The existence of a Pelasgian population is probably also implied in the statement, that the most ancient royal dynasty of Lydia was Heseraleidae, and that Lydia was a part of the Tyrrenian kingdom. The Lydians on the other hand, are extremely stated to have had nothing in common with the Pelasgians (Dionys. i. 30), and all we know of them points to more eastern countries as their original home. It is true that Herodotus connects the Heseraleid dynasty with that of Assyria, but if any value can be attached to this statement at all, it refers only to the rulers; but it may be, as in the case of the Persians, that this was merely the result of an error in tradition. The Pelasgian inhabitants of Lydia, whether of the Lydians, or of the Myxrians, or of the Carian towns, or even of the Laconians, were all Pelasgians, and that country was originally inhabited by the Lydians, though it is reasonable to assume that they occupied some district near the Maeonians; and it is possible that the Phrygians, who are said to have migrated into Asia from Thrace, may have pressed upon the Lydians, and thus forced them to make further inroads into Asia. The time when these conquests took place, and when the Maeonians were overpowered or expelled, is conjectured by Niebuhr (Lect. on Anc. Hist. vol. i. p. 87) to have been the time when the Heseraleid dynasty was supplanted by that of the Mermnades, who were real Lydians. This would place the conquest of Maeonia by the Lydians about the year 660 B.C., and the Lydians, from this time, still maintained themselves in the country of the Upper Hermus, which continued to be called Maeonia; whence Ictinos (v. 2 § 21) speaks of Maeonia as a part of Lydia. Ptolemy (v. 30) also speaks of the Maeonians as the inhabitants of a district between Philea and Thales, and Hieraclea (Pausanias, ii. 28). It is probable, therefore, that there was a small town called Maeonia, which Mr. Hamilton (Researches, vol. ii. p. 139, &c.) is inclined to identify with the ruins of Magnes, about five miles west of Sandal. To what branch of the human family the Lydians belonged is a question which cannot be answered, any more than that about the original seat; all that we know of their language, which has been transmitted to us are quite foreign to the Greek, and their kinship, the Carians, are described as a people speaking a barbarous language.

3. Institutions and Customs. Although the Lydians must be regarded as barbarians, and although they were different from the Greeks both in their language, and in their religion, yet they were capable, like some other Asiatic nations, of adopting or developing institutions resembling those of the Greeks, though in a lesser degree than the Carians and Lycians, for the Lydians always lived under a monarchy, and never rose to free political institutions. The Lydians and the Carians were both gifted nations; they cultivated the arts, were in many respects a little inferior to the Greeks. Previous to their conquest by the Persians, they were an industrious, brave, and warlike people, and their cavalry was regarded as the best at that time. (Herod. i. 79; Minnemer, l.c.) Cyaxares and Artapanus, the Median princes, for all their warlike spirit, forbade them the use of arms, and caused them to practice dancing and singing, instead of cultivating the arts of war. (Herod. i. 154; Justin, i. 8.) Their subsequent partiality to music was probably the reason why the Greeks ascribed to them the invention of gymnastic games. (Herod. i. 94.) The mode of life thus forced upon them by their conquerors gradually led them to that degree of effeminacy for which they were afterwards so notorious. Their commercial industry, however, continued under the Persian rule, and was a source of great prosperity. (Herod. l. 14, 25, 51, &c.) In their manners the Lydians differed but little from the Greeks, though their civilization was inferior, as is manifest from the fact that their women were allowed to gain their dowries by public prostitution, without thereby injuring their reputation. (Herod. i. 93.) The moral character of the Lydian women was necessarily suffered from such a custom, and it cannot be matter of surprise that ancient Greek authors speak of them with contempt. (Strab. xi. p. 533, xiii. p. 531.) The Lydians were not a warlike race. The Lydians we know very little: their chief divinity appears to have been Cybele, but they also worshipped Artemis and Bacchus (Athen. xiv. p. 836; Dionys. Perig. 542), and the phallic worship seems to have been universal, whence we still find enormous phalli on nearly all the Lydian tombs. (Hamilton's Researches, vol. ii. p. 139.) The Lydian money appears to have been the first to establish inns for travellers, and to coin money. (Herod. i. 94.) The Lydian coins display Greek art in its highest perfection; they have no inscriptions, but are only adorned with the figure of a lion, which was the talisman of Sardis. We do not know that the Lydians had any alphabet or literature of their own; the want of these things can satisfactorily have been accounted for, as the people must at an early period have become familiar with the language and literature of their Greek neighbours.

4. History. The Greeks possessed several works on the history of Lydia, and one of them was the production of Xanthius, a native of Sardis, the capital of Lydia; but he has left only a few inconsiderable fragments of a few insignifican7n fragments. If we had the work of Xanthius, we should do well to make our best on various points on which we can now only form conjectures. As it is, we owe nearly all our knowledge of Lydian history to Herodotus. According to him (1. 7) Lydia was successively governed by three dynasties, that of the Heseraleids, that of the Mermnads, and that of the Mermnads, which the son of Atys, but the number of its kings is not mentioned. The second dynasty was that of the Heseraleidae, beginning with Acrus, and ending with Candaces, whom the Greeks called Myrtilus. The commencement of the Heseraleid dynasty may be dated about n. c. 1200; but they were connected in the legend in Herodotus with the founder of Nineveh, which, according to Niebuhr, means either that they were actually descended from an Assyrian family, or that the Heseraleid dynasty submitted to the supremacy of the king of Nineveh, and thus connected itself with the race of Ninus and Belus. The Heseraleids maintained themselves on the throne of Lydia, in unbroken succession, for a period of 505 years, the third dynasty, or that of the Mermnads, probably the first really Lydian rulers, commenced their reign, according to some, in n. c. 713 or 716, and according to Eusebius, twenty-two years later. Cyges,
LYDIA.

LYCEOSTIS.

the first king of the Hermad dynasty, who is said to have murdered Candaulas, is an entirely mythical
personage, at least the story which Herodotus relates
about him is nothing but a popular tradition. He
reigned until B.C. 678, and conquered several of
the adjacent provinces. Little is known of him,
and the absence of the Halicarnassus, and annexed to
his dominions the cities of Colophon and Magnesia,
which had until then been quite independent of both
the Maceans and the Lydians. Gyges was suc-
ceded by Arydis, who reigned from B.C. 678 to 639,
and, continuing the conquests of his predecessor,
made himself master of Ionia. His reign, however,
was disturbed by the invasion of his kingdom by
the Cimmerians and Tures. He was succeeded by
Sadyattes, of whom nothing is recorded except that
he occupied the throne for a period of twelve years,
from B.C. 639 to 627. His successor Alyattes, from
B.C. 627 to 560, expelled the Cimmerians from Asia
Minor and captured the last remnant of the Indian
cities. In the east he extended his dominion as far as
the river Halys, where he came in contact with the
Cossacks. His successor Croesus, from B.C. 560 to
546, extended his conquests so far as to embrace
the whole peninsula of Asia Minor, in which the
Lydians and Cilicians alone successfully resisted
him. He governed his vast dominions with moderate
justice and moderation, and his yoke was scarcely felt
by the conquered nations. But as both Lydia and the
Persian monarchy were conquering states, and
separated from each other only by the river Halys,
a conflict was unavoidable, and the kingdom of
Lydia was conquered by Cyrus. The detail of these
occurrences is so well known that it does not require
mention here. It became at length a satrapy annexed
to the Persian empire. We have already noticed the
measures adopted by Cyrus to deprive the Lydians
of their warlike character, but as their country was
always considered the most valuable portion of Asia
Minor, Darius, in the division of his empire, made
Lydia and some small tribes, apparently of Macedonian
origin, together with the Mythys, the second satrapy,
and demanded from it an annual tribute for the
royal treasury of 500 talents. (Herod. iii. 90.)
Sardes now became the residence of a Persian
satrapy, who seems to have ranked higher than the
other governors of provinces. Afterwards Lydia
shared the fate of all the other Asiatic countries,
and became a part of the Persian monarchy. At the
death of Strabo, the beginning of the neighborhood of
the Lydians had entirely disappeared, the Greek
having taken its place. After the death of Alex-
ander, Lydia was subject for a time to Antigonus;
then to Achaean, who set himself up as king at
Sardes, but was afterwards conquered and put to
death by the Macedonians. (Comp. Th. Mommsen,
Lydia, Dissertation Ethnographica, Berlin, 1844,
8vo; Crum, Asia Minor, vol. i. p. 413; &c.;
Forniger, Handbuch der Altere Geogr. vol. ii.
p. 167; &c.; Clinton, Fasti Hell. Append. p. 361,
&c., 3rd edit.; Niebuhr, Lectures on Ancient His-
tory, vol. i. p. 83, &c.)

LYGIA. [LYDIA.]

LYGIS, LUGI, or LUGIH (Ardynes, Ardusin,
Adyus), is the general name for a number of small
tribes in the north-east of Germany, all of which
belonged to the Suevi. (Strab. vii. p. 290; Prot. ii.
11. § 18; Dion Cass. xlvii. 5; Tac. Germ. 43, Amm.
xxii. 29, 30.) The ancients speak of them as a Ger-
man nation, but there can be no doubt that, properly
speaking, they were Slavonians, who had been
subdued by the Suevi, and had gradually become
united and amalgamated with them. Their name
contains the root leg, which in the old German signi-
fies a wood or marsh, and still has the same mean-
ing in the Slavonic; it seems, therefore, to be de-
scriptive of the manner dwelling in the swamps
in the Vistula and the Oder. The Legi are first men-
tioned in history as belonging to the empire of
Marobodunus, when they were united with the Mar-
comanni and Hermunduri. When the Quadi rose
against king Vannius, in A. D. 50, the Legi and
Hermunduri were still united, and opposed the in-
vasion of the Germanic tribes of the Limes l.d. In
the reign of Domitian, about A. D. 84, they made
war on the Quadi, their neighbours, who in vain
sought the protection of the Romans. (Dion Cass.
L. c.) After this time the Legi disappear from
history, and it is possible that they may have be-
come lost among the Goths. The different Lyowan
tribes were also distinguished by Tacitus (Ann.
xxiv., xxv., xxvi., xxxii., xxxiii., xxxiv., xxxv., xxxvi.,
and xxxvii.), and by Suetonius, who seems to have
been united among one another by a common
worship, the principal seat of which was among
the Naharvili. The name of their two common gods
were Ael, who were worshipped without images;
and Tactus observes that their mode of worship was
free from all foreign admixture. Polybius mentions,
as tribes of the nation dwelling in the swamps be-
neath the mountains, who are either not noticed by
Tactus at all, or are classed with other tribes. (Comp.
Wilhelm, Germ.
omices, p. 236, &c.; Zeuss, die Deutschen, p. 124;
Latham, on Tactis. Germania, p. 186.)

LYGOS. [CONSTANTINOPLE, p. 257.]

LYCEOSTIS (Arysenwos, Strab. vii. p. 326;
Prot. ii. 13. § 28, comp. the courts of the Limes l.d.
(Arysenwos, Thuc. ii. 99, iv. 83, 124; Strab. vii.
p. 333, 326), once a small independent kingdom,
and afterwards a province of the Macedonian
monarchy. This district was situated to the S. of the
Pelagonian, and between that people, and the Borsaei.
It was watered by the Erigon, and lay in the centre
of the mountainous coast of Epirus, near Phocis, Mon-
stantinople, and Jerusalem. The pass which sepa-
rated Lycestis from Borsaei, where Philip made his
unsuccessful stand against the Romans, is described
by Polybius (viii. 6) as alle die "Kapitol des Kopoldos,
and Thucydides (iv. 83) calls a defile in the same
mountains the "epodhos de Aragone, in re-
sisting the attack of Perdiccas against Lycestis,
which ended in a separate negotiation between his
ally Brasidas and Arhiasbous king of the Lycestae.
(Thuc. iv. 83.) It was by the same pass in the
following year that Brasidas effected his skilful and
daring retreat from the united forces of the Lyn-
cestae and Illyrians. (Thuc. iv. 124.)

LYCEOSTIS. [D-analysis.

LYGIS. [LYDIA.]

LYGIS, LUGI, or LUGIH (Ardynes, Ardusin,
LYRBE.

extracted from Polybius, as well as from the itineraries, it would appear that Lyncestis comprehended that part of Upper Macedonia now called Filiorâs, and all the S. part of the basin of the Erigos, with its branches, the Bevera and Osphagus. As it is stated that the first encampment of the Romans was at a torrent on the river Bevera, and as Lyncesus is described as being on the road to Strabo (vol. ii. p. 186), though this description is evidently incorrect, it might be supposed that Hieracleia, the chief town of this district, was sometimes called Lyncesus, and that the camp of Sulpicius, was at Hieracleia itself. But though the words "ad Lyncestum sponte prope geminam Beveram" (Liv. i. 75) seem to point to this identification, yet it is more likely that Lyncesus is here used as synonymous with Lyncestis, as in two other passages of Livy (xxvi. 25, xxxii. 9), and in Thucydides (iv. 83, 124) and Pintarch (Plutarch. 5. xxvii.).

At or near Bunius are the mineral acidulous waters of Lyncestis, which were supposed by the ancients to possess intoxicating qualities. (Civ. Met. xxv. 32. Comp. Mom. ii. 3; Tac. ann. p. 103, xxxii. 2. comp. Ant. Serg. iv. 180, comp. Sotir. de Flum. p. 123; Vitruv. viii. 3; Sen. quaest. nat. ii. 20.) They were found by Dr. Brown (Travel in Hungary, Macedonia, Thessaly, &c. Lond. 1875, p. 43) on the road from Filiorâs to Egri Ægidi. He calls the place Eccepmi, a verbiâ, which, though found Westphal, may possibly be a corruption of the name of the Dunites or pasi (Leake, Northern Greece, vol. iii. pp. 305-318.)

LYRBE (Λυρβή: Euth. Apoll. per.,) a town of Phasis, mentioned by the poet Dionysius. There are coins of this place belonging to the reign of Alexander Severus, and it occurs among the epigraphical towns of the Erythrae, and it is here used as synonymous with Lyncestis, as in two other passages of Livy (xxvi. 25, xxxii. 9). The town is made up of the latter. In the Chalicuda, which he places the latter, in Asia Minor, in the epigraphical towns of the Erythrae, and it is here used as synonymous with Lyncestis, as in two other passages of Livy (xxvi. 25, xxxii. 9). The town is made up of the latter, in Asia Minor, in the epigraphical towns of the Erythrae, and it is here used as synonymous with Lyncestis, as in two other passages of Livy (xxvi. 25, xxxii. 9).

LYRBEA or LYRBECEUS (Λυρβέα, Paus. 4. 32. 30; Alcæus, Soph. Soph. ib. p. 371; in Strab. viii. p. 371). The city is situated on the island of Thasus, where Kramer's Str. vol. ii. p. 186), a town on the island of Thasus, 60 stadia from Argos, and 60 stadia from Orestes, and situated on the road Climax, which ran from Argos in a north-west direction along the bank of the Inachus. [Alkæus, p. 201.] The town is said to have been originally called Lyncesus, and to have obtained this name from Lyncesus, who fled here when all his other brothers, the sons of Agrippa, were murdered by the daughters of Danaus on their wedding night. He gave intelligence of his safe arrival in this place to his faithful wife Hypermestra, by holding up a torch, and she in like manner informed him of her safety by raising a torch from Larissa, the citadel of Argos. The name of the town was afterwards transferred to the son of Abas. It was in ruins in the time of Pausanias. Its remains may still be seen on a small elevation on the left of the Inachus, at a little distance beyond Skiapa, on the road to Argos. (Paus. ii. 25. §§ 4, 5; Apollod. ii. 1. § 5; Strab. 2. 2. 6; Ross, Reises im Peloponnes, p. 138; Bohatay, Riçekahre, p. 45; Lolling, Vorderung, 3. iii. p. 414; Curtius, Peloponnes, vol. ii. p. 415.)

LYRNAS. [LYRMENES, 2.]

LYMENES (Λυμενῆς: Euth. Apoll. per.,) a town of Amyclæ, Pers. 324). 1. A town often mentioned by Homer (H. ii. 60, xix. 60, xx. 93, 191), and described by Stephanus B. (s. v.) as one of the eleven towns in Troes; and Strabo (xiv. 6. 612) mentions that it was situated in the territory of Thebe, but that afterwards it belonged to Adramytium. Pliny (v. 32) places it on the river Evessus, near its sources. It was, like Thebe, a deserted place as early as the time of Strabo. (Comp. Strab. 2. 2. 6.) No parts of the town are known, but it is about 4 miles from Karaddes, Sir C. Fellowes (Journ. of an Exc. in Asia Minor, p. 39) found several columns and old walls of good masonry; which he is inclined to regard as remains of the ancient Lyrmenes.

2. A place on the coast of Pamphylia, which was reported to have been founded there by the Trojan Cilicians, who transferred the name of the Trojan Lyrmenes to this new settlement. (Strab. xiv. 675.) The town is also mentioned by Pliny (v. 26), who places it on the Carabacthes, and by Dionysius Perigetes (675). The Stadiasmus Maria Magni (§ 204) calls Lyrmes, and, according to the French translator of Strabo (vol. iii. pt. 2. p. 369), its site is identical with the modern Eurymedon, a town on the place, nor is its site ascertained, but we still possess coins of Lyrmes. (Eckelh, Docu. Natum. iii. p. 167.)

Lyrmene (Λυμενή: Ευρυμενή) is a small town in Phrygia, between Sennada and Pymennes. (Strab. xii. p. 676; Plin. v. 29; Ptol. v. 2. § 33; Hierol. p. 673.) No parts of the town are known, nor is its site ascertained, but we still possess coins of Lyrmes. (Eckelh, Docu. Natum. iii. p. 167.)

LYRMESCHIA (Λυμησχία or Λυρμήσχια) 1. A small town in Mytilene, mentioned only by Pliny (v. 23), in whose time it no longer existed. 2. An important town on the north-western extremity of the Thraco-Cimmerian, not far from the Sinus Melas. It was built by Lyrmamesch in B. C. 309, when he was preparing for the last struggle with his rivals; for the new city, being situated on the isthmus, commanded the road from Sestos to the north and the mainland of Thrace. In order to obtain inhabitants for his new city, Lyrmamesch destroyed the neighbouring towns of Cardia, the birthplace of the historian Hieronymus. (Strab. ii. p. 134, vii. p. 331; Paus. i. 9. § 10; Diod. xx. 29; Polyb. vi. 34; Plin. H. N. iv. 18.) Lyrmamesch no doubt made Lyrmeschia the capital of his kingdom, and it must have rapidly risen to great splendour and prosperity. After his death the city fell under the dominion of Syria, and during the wars between Seleucus Callinicus and Ptolemy Euergetes it passed from the hands of the Syræans into those of the Egyptians. Whether these latter set the town free, or whether it emancipated itself, is uncertain, at any rate it entered into the relation of sympathy with the Astolidæ. But as the Astolidæ were not able to defend the town from the Scyths, it was destroyed by the Thracians during the war of the Romans against Philip of Macedon. Antiochus the Great restored the place, collected the scattered and enslaved inhabitants, and attracted colonists from all parts by liberal promises. (Liv. xxxiii. 38, 40, Diod. Exc. de Civ. et Ptol. p. 574.) This restoration, however, has been doubted. The town continued under the dominion of Rome it decayed more and more. The last time the place is mentioned under its ancient name, is in a passage of Ammianus Marcellinus (xxxii. 8). The emperor Justinian restored it and surrounded it with strong fortifications.
LYSMACHIA.

Procop. de Aed. iv. 10, and after that time it is spoken of only under the name of Hexamullum (Ἐξαμύλλος; Symeon, Logoth. p. 408). The place now occupying the site of Lysimachia, Ecasis, derives its name from the Justinianic fortress, though the ruins of the ancient place are more numerous in the neighboring villages of Basilar. [L. S.]

COIN OF LYSIMACHIA IN THRACE.

LYSIMACHIA (Λυσιμάχια; Ecasis, Λυσιμαχία; Papadhathe), a town of Aeolia, situated upon the southern shore of the lake formerly called Hyria or Hydra, and subsequently Lysimachia, after this town. [Respecting the lake, see Aetolla, p. 64, a.] The town was probably founded by Arinóct, and named after her first husband Lythus, since we know that she enlarged the neighboring town of Conope, and called it Arinóct after herself. [Colophon.]

The position of the town is determined by the statement of Strabo that it lay between Pleuron and Conope, and by that of Livy, who places it on the line of march from Naupactus and Calydon to Stratcus. Its site, therefore, corresponds to Papadhathe, where Leake discovered some Hellenic remains. It was deserted in Strabo's time. (Strab. p. 460; Pol. v. 7; Liv. xxxvi. 11; Steph. B. s. v.; Leake, Northern Greece, vol. i. pp. 122, 153.)

LYSIMELEIA. [Syracuse.]

LYSINOCH (Λυσινόχ) or LYSINIA (Λυσίνεα, Pol. v. 5, § 5), a small town in the north of Pisidia, on the south of the Ascania Lacus, and west of Sagalassus. (Polyb. Exch. de Leg. 52; Liv. xxxviii. 15; Hieroc. p. 630, who calls it Lysenara, Λυσενάρα.)

LYSIA, a small river mentioned only by Livy (xxxvii. 15), which had its sources near the town of Lysa, in the west of Pisidia. [L. S.]

LYSTRON (Λύστρον), or Lystria, a town of Lycia, in the province of Lycisium, which is mentioned by Piny (iv. 42; Ely, Lystrum) and Ptolemy (v. 4, § 19), and repeatedly in the New Testament History. (Acts, xiv. 8, 21; Timoth. iii. 11; comp. Hieroc. p. 675.) A bishop of Lystra was present at the Council of Chalcedon. Leake (Asia Minor, p. 102) is inclined to place the town at Khadour Seyth, about 30 miles south of Iconium; but Hamilton (Researches, vol. ii. p. 513), with more appearance of probability, identifies its site with the ruins of Kaosdagh, which are generally believed to be the remains of Derbe. [L. S.]

LYTARIA, a promontory in Northern Europe, mentioned by Piny (vi. 12, 14). His text makes the promontory of Lytaris, at one and the same time, a portion of the Celtic country and the extremity of the Rhinean range — the Rhinean mountains being the Urallian — "extra eae" (i.e. the Scythiania), alaque Aquilonis initia Hyperboraeae, in partibus in Europa distae. Prunius incip se noscur promontorium Celtico Lytarie, finibus Carmubicis, ubi iassata cum siderum vi Rhiaeorum montium deficient jugum. In the eyes of the physical geographer, the extremity of the Urallian chain is either the island of Nova Zembla or the most northern portion of the district on the west of the sea of Obi,—the Obi being the Caramoucas. In the usual maps, however, the Dvinus is the Caramobicus, and Namin Nosa, on the east of the White Sea, the Lytaris From. [R. G. L.]

LYTTUS. [Lycurgus.]

MAACAH, BETH-MAACAH v. ABEL-BETH-MAACAH (Maasayd, Bethsuayd, 'Abel oluev Maasayd), a city of Palestine, placed by Eusebius and St. Jerome on the road between Eleutheropolis and Jerusalem, 8 miles from the former, the site of which was then marked by a village named Mechimm. It is clear, however, that the Abel Beth-Macah of the sacred writers could not have been situated so far south. It is first mentioned in 2 Samuel, xx. 14, etc., as the city in which the rebel Sheba was besieged by Joab. From this passage, however, it may be gathered (1) that Abel was not identical with Beth-Macah, for the copula is inserted between the names ("unto Abel and unto Beth-Macah"); (2) that it was situated at the extremity of the land of Israel; for Joab "went through all the tribes of Israel" to come there. Abel then, which, as "the wise woman" called it, "a city and a mother in Israel" (ver. 19), was so called from its contiguity to Beth-Macah, (so Rendal, Palaeestina, p. 519); and this must have been situated near the northern frontier, for it is mentioned with Ijon and Dan, and Cinnereth and Naphtali (1 Kings, xx. 20), as one of the cities taken by Benhadad, king of Syria, from Basaha, king of Israel; and two centuries later it was one of the cities of Israel first occupied by Tiglath-Pilesar, king of Assyria. (2 Kings, xv. 29.) Eusebius mentions three places named Abel:—(1) a village three miles from Philadephia; (2) a city 15 miles east of Gaddara; (3) another between Paneas and Damascus. (Onomast. s. v.) Rendal justly remarks (L. c.) that if any one of these is to be taken as Abel of Beth-Macah it must be the last-named; but that he is more disposed to look for it in Galilee, to the west or south of Paneas, rather than to the east or north, on the Damascus road. This view is perhaps confirmed by a copy of a letter of 2 Chron. xxvi. 4, with 1 Kings, xxv. 20; the Abel Beth-Macah of the latter being called Abel Maim, or "Abel of the Waters" in the latter, probably so named either from the sea of Cinnereth or from the sea of Galilee. Dr. Robinson suggests its identity with the modern village of Abil, or 'Abil-el-Kamakh, or Abil or 'Abil-el-Hosca, both situated in the Merj 'Ayun, which last name is certainly identical with the ancient Ijon, with which Abel Beth-Macah is associated in 1 Kings, xx. 20. (Robinson, B. & R. vol. iii. pp. 346, n. 2, 347, n. 1, and Appendix, pp. 136, 137, n. 1.)

Maacah is used as an adjunct to Syria or Aram in 1 Chron. xix. 6, 7, but its situation is not defined. (Rendal, Palaeestina, p. 118.)

The existence of the Maacathites (Masgaffi) on the east of Jordan, apparently between Bashan and Mount Hermon, contiguous to the Geshurites (Deut. iii. 14; Josh. xii. 5, xii. 11, 18) intimates that another city or district of the name Maacah was situated in that quarter. [G. W.]

MAAGR-AMMUM. (Madrura, Pol. vii. 4, § 10, viii. 28, § 5), a considerable town in the island of Taprobane or Ceylon. Ptolemy calls it a

MACARIA (Μακαιρία), that is, "the afflicted (island)," a name given by the poets to several islands, such as CYPRIUS, LEBOS, and RHODES; but also occurs as a proper name of an island in the south of the Arabian gulf, a little to the north of the gulf of Aden.

MACATUTAE (Μακατουταί), a people in the extreme W. of Cyprianica, on the border of the province of Africa, above the Velpi Mounts. (Ptol. iv. 4. § 10.)

MACCHUREBI. (Μακχυρεβί.)

MACCOCALLINGAE. (Μακκοκάλλιγα.)

MACCURAE. (Μακκυραί.)

MACEDONIA (Μακεδονία), the name applied to the country occupied by the tribes dwelling north-westward of Thessalonica, and the land, or chain by which Pindus is continued, and westward of the river Axios. The extent of country, indeed, to which the name is generally given, embraces later enlargements, but, in its narrowest sense, it was a very small country, with a peculiar population.

I. Name, race, and original seats.

The Macedonians (Μακεδόνες or Μακκεδόνες), as they are called by all the ancient poets, and in the fragments of epic poetry, owed their name, as it was said, to an eponymous ancestor; according to some, this was Macedus, son of Lycaon, from whom the Arcadians were descended (Apollod. iii. 8. § 1), or Maced, the brother of Magnes, or a son of Aeson, according to Hesiod and Hellenicus (op. Const. Porph. de Them. ii. 2; comp. Aelian. H. A. x. 48; Eustath. ad Dion. P. 247; Steph. B.).

These, as well as the otherwise unsupported statement of Herodotus (I. 56), of the original identity of the Doric and Macedonian (Macedonian) peoples, are merely various attempts to form a genealogical connection between this semi-barbarous people and the rest of the Hellenic race. In the later works, which appear, sometimes, under the name of MACETAE (Sil. Ital. xiii. 878, xiv. 5, xvii. 414, 632; Stat. Sil. iv. 6. 106; Anon. de Clar. Urb. ii. 9; Gel. x. 3). And their country is called MACETIA (Μακετία, Herod. x. 17; Eustath. ad Dion. P. l. c.).

In the fashion of wearing the mantle and arranging their hair, the Macedonians bore a great resemblance to the Illyrians (Strab. viii. p. 327), but the fact that their language was different (Polyb. xxviii. 8) contradicts the supposition of their Illyrian descent. It was also different from Greek, but in the Macedonian dialect there occur many grammatical forms which are commonly called Aeolic, together with some Archaic and Thessalian words; and what perhaps is still more decisive, several words which, though not found in the Greek, have been preserved in the Latin language. (Comp. Müller, Doriana, vol. i. p. 3, trans.)

These tribes, which differed as much in ancient
times as they do now, accordingly as they dwell in mountain or plain, or in soil or climate more or less kindly, though distinguished from each other, by having substantive names of their own, acknowledged only in certain territories. Finally, the various sections, such as the Elymiotae, Orcestae, Lyncestae, and others, were swallowed up by those who were pre-eminently known as the Macedonians, who had their original centre at Aegae or Edesa. (Comp. Grote, Hist. of Greece, c. xcv.)

Macedonia in its proper sense, it will be seen, did not exist as a region by the sea, and must be distinguished into two parts.—Upper Macedonia, inhabited by people about the W. range of mountains extending from the N. as far as Findus, and Lower Macedonia about the rivers which flow into the Axios, in the earlier times, not, however, extending as far as the Axios, but only to Pella. From this district, the Macedonians extended themselves, and partly repressed the original inhabitants. The whole of the sea-coast was occupied by other tribes who are mentioned by Thucydides (ii. 99) in his episode on the expedition of the Thracians against Macedonia. There is some little difficulty in harmonising his statements with those of Herodotus (viii. 138), as to the original series of occupations on the Thracian coast, granted to the Macedonian messenians. So far as it can be made out, it would seem that in the seventh century B.C., the narrow strip between the Peneius and Haliacmon, was the original abode of the Pierian Thracians; N. of the Pierians, from the mouth of the Haliacmon to that of the Axios, dwelt the BOUTIass, who, when they were expelled by the Thracians, went to Thrace. They were followed the Paeonians, who occupied both banks of the Strymon, from its source down to the lake near its mouth, but were pushed away from the coast towards the interior. Mygdonia, the lower country E. of the Axios, about the Thracian gulf, was, previously to the extension of the Macedonians, inhabited by Thracian Edonaeans. While Upper Macedonia never attained to any importance, Lower Macedonia has been famous in the history of the world. This was owing to the energy of the royal dynasty of Edeza, who called themselves Heraclaeids, and traced their descent to the Temenidae of Argos. Respecting this family, there were two legends; according to one, the kings were descended from Caranus, and according to the other from Perdiccas; the latter tale which is given by Herodotus (viii. 137—139), bears much more the marks of a genuine local tradition, than the other which cannot be traced higher than Theopompos. (Dexippos op. Synedel, p. 262.) After the legend of the foundation of the Macedonian kingdom, there is nothing but a long blank, until the reign of King Amyntas (about 620—560 B.C.), and his son Alexander (about 480 B.C.). Herodotus (I. c.; comp. Thuc. ii. 100) gives a list of five successive kings between the founder Perdiccas and Alexander—Perdiccas, Argaeus, Philippus, Airupas, Alcetas, Amyntas, and Alexander, the contemporary, and to a certain extent ally, of Xerxes. During the reign of Alcetas last prince, who would not allow the power of the Thessalians to be extinguished, and afterwhwards with the emancipated Athenians, Macedonia becomes implicated in the affairs of Greece. (Herod. i. 59, v. 94, vi. 136.)

Many barbarous customs, such as that of tattooing, which prevailed among the Thracians and Illyrians, must have fallen into disuse at a very early period. Even the usage of the ancient Macedonians, that every person who had not killed an enemy, should wear some disgraceful badge, had been discontinued in the time of Aristotle. (Pol. vii. 2. § 6.) Yet as a very late date no one was permitted to lie down asleep in a wild boar without the neta. (Hegesander, op. Athan. i. p. 18.) On the other hand, a military disposition, personal valour, and a certain freedom of spirit, were the national characteristics of this people. Long before Philip organised his phalanx, the cavalry of Macedonia was greatly celebrated, especially that of the highlandmen who were trained by the tables and plains of Alexander. In smaller numbers they attacked the close array of the Thracians of Sitaces, relying on their skill in horsemanship, and on their defensive armour. (Thuc. ii. 100.) Teleutias the Spartan also admired the cavalry of Eilemos (Xen. Heli. v. 2, § 41, v. 3. § 1); and in the days of the conquests of Asia, the custom remained that the king could not condemn any person without having first taken the voice of the people or of the army. (Polyb. v. 27; Q. Curt. vi. 8. § 25, vi. 9. § 34.)

II. Macedonia in the historic period till the death of Alexander.

This kingdom had acquired considerable power even before the outbreak of the Persian War, and Grecian refinement and civilisation must have gained considerable ground, when Alexander the Philhellene offered himself as a combatant at the Olympic games (Herod. v. 22; Justin. vii. 12), and honoured the poet of Findar (Solin. ix. 16). After that war, Alexander and his son Perdiccas appear to have extended their power in Thrace, and in consequence of the fall of the Persian power in Thrace, as far as the Strymon. Perdiccas from being the ally of Athens became her active enemy, and it was from his intrigues that all the difficulties of Athens on the Thracian coast arose. The faithless Perdiccas, was succeeded by his son Archelaus, who first established himself in his dominions and was received as a Macedonian army (Thuc. ii. 100), and even intended to procure a navy (Solin. ix. 17), and had tragedies of Euripides acted at his court under the direction of that poet (Ael. V. R. ii. 21, xiii. 4), while his palace was adorned with paintings by Zeuxis (Ael. V. R. xiv. 17). In c. 399, Archelaus perished by a murder plot (Diod. iv. 97; Ael. Pol. v. 8, 10—13; Plut. Archel. ii. p. 181, D.). A list of kings follows of whom we know little but the names. Orsetos, son of Archelaus, a child, was placed upon the throne, under the guardianship of Aëropus. The latter, however, after about four years, made away with his ward, and reigned in his stead for two years: he then died of sickness, and was succeeded by his son Pausanias, who, after a reign of only one year, was assassinated and succeeded by Amyntas. (Diod. iv. 84—89.) The power of Macedonia so declined with these frequent derthomem and assassinations of its kings, that Amyntas had to cede to Olynthus all the country about the Thracian gulf. (Diod. xiv. 99, xv. 18.) Amyntas, who was also despised by Philip, was assassinated by his four children, one of the last in the line of Thessaly, died nearly about the same time as that prince (Diod. xv. 60), and was succeeded by his youthful son Alexander. After a short reign of two years, n. c. 368, Alexander perished by assassination, the fate that so frequently befell the Macedonian kings. Eurydice, the widow of Amyntas, was left with her two younger children, Perdiccas, now a young man, and Philip, yet a youth; Ptolemaeus of
Macedonia.

Alexander, one of the murderers of Alexander, was regent, and administered the affairs of the widowed queen, and those of her children, against Pausanias, a man of the royal lineage and a pretender to the throne. (Diod. vii. 2; Arrian. Anab. loc. cit. p. 249, 250; Justin. viii. 6.) Hebodrates declared in favour of Eurydice, who would have been forced to yield the kingdom to her brother. Arrian, in the Temple of Atonoma, against him as to expel him from Macedonia and secure the sceptre to the family of Amyntas. (Corn. Nep. Iphocr. 3.) When Philip succeeded his brother Perdiccas, slain in battle with the Illyrians, a. c. 360—359, no one could foresee the future conqueror of Chersonesus, and the destroyer of Greek liberties. In the very first year of his reign, though only 24 years old, he laid the foundations of the future greatness of a state which was then almost annihilated. His history, together with that of the other Macedonian kings, is given in the Dictionary of Biography. At his death Macedonia had already became a compact empire; its boundaries had been extended into Thrace as far as Parnitha; and the Grecian and Scythian tribes of Macedonia ascendency was established from the coasts of the Propontis to those of the Ionic sea, and the Ambracian, Messenian, and Saronic gulfs. The empire of Alexander became a world-dominion. Macedonian settlements were planted almost everywhere, and Grecian manners diffused over the immense region extending from the borders of Thrace to the Nile, in the Libyan Oasis, and from Alexandria on the western Delta of the Nile to the northern Alexandria on the Jaxartes.

III. Later History till the Fall of the Empire.

At the death of Alexander a new Macedonian kingdom arose with the dynasty of Antigonus Gonatas, and the murder of the king Philipus III. (Arrhidaeus) and Eurydice by the queen Olympias, Cassander the son of Antipater, after having murdered the king Alexander Aengus, and his mother, ascended the throne of Macedonia; at his death his three sons, Philip, Antipater, and Alexander, successively occupied the throne, but their reigns were of short duration. Philip was carried off by sickness, Alexander was put to death by Demetrius Poliorcetes, and Antipater, who had fled for refuge to Lyiasmachus, was murdered by that prince. When the line of Cassander became extinct, the crown of Macedon was the prize for which the neighbouring sovereigns struggled, Lyiasmachus and Pyrrhus, kings of Thrace and Epirus, with Demetrius, who still retained Athens and Thessaly, in turn, dispossessed each other of this disputed throne. Demetrius, however, after long overcome the other competitors; and at his death transmitted the kingdom to his son Antigonus, and the dynasty of the Antigonidae, after many vicissitudes, finally established their power. The three great irritations in the empire were the losses of the N. parts, and were established in Thrace and Upper Macedonia, full within this period. Antigonus Gonatas recovered the throne of deposed Macedonians; and now secured from the irritations of the Gauls, and from foreign rivals, directed his policy against Greece, when the formation of the Aetolians, and yet more important Achaean league, gave rise to entirely new relations. Antigonus, in the latter part of his reign, reconquered to various means, and more especially to an alliance with the Aetolians, for the purpose of counterpoising the Achaean. He died in his eighty-fourth year, and was succeeded by his son Demetrius II., who waged war upon the Aetolians, now, however, supported by the Achaean; and tried to suppress the growth of the latter, by favouring the tyrants of particular cities. The remainder of the reign of this prince is little more than a gap in history. Demetrius' son, Philip, was passed over, and his brother's son, Antigonus II. surnamed Doson, was raised to the throne. He spent most of his time by the events in Greece, when a very remarkable revolution in Sparta, raised up a formidable enemy against the Achaean; and so completely altered the relative position of affairs, that the Macedonians from having been opponents became allies of the Achaean. Philipus V., a young, warlike, and popular prince, was called free, in collision with Rome, — the war with the imperial city (a. c. 200—197), suddenly hurled the Macedonian power from its lofty pitch, and by laying the foundation of Roman dominion in the East, worked a change in almost all the political relations there. T. Quinctius Flaminius, by offering the magic spell of freedom, stripped Philip of his allies, and the Greek nobility rebelled. Antigonus Doson, after, the freedom of Greece was solemnly proclaimed at the Isthmian games; but loud as the Greeks were in their triumph, this measure served only to transfer the supremacy of their country from Macedonia to Rome. On the 32nd of June, a. c. 168, the fate of Macedon was decided on the field of Pydna by her last king Phermenes.

According to the system then pursued at Rome, the conquered kingdom of Macedon, was not immediately converted into a province, but by the famous edicts of Amphipolis issued by the authority of the Roman senate, the year after the conquest, was divided into four districts. By this decree (Liv. xiv. 30), the Macedonian territory was divided into four districts, each city to govern itself by magistrates annually chosen, and the Romans were to receive half the amount of tribute formerly paid to the kings, the distribution and collection of which was probably the principal business of the councils of the four regions. None but the people of the extreme frontiers towards the barbarians were allowed to defend themselves by foot and artillery; that was the method of a purely Macedonian army. In order to break up more effectually the national union, no person was allowed to contract marriage, or to purchase land or buildings but within his own region. They were permitted to smelt copper and iron, on paying half the tax which the kings had received; but the Romans reserved to themselves the right of working the mines of gold and silver, and of falling naval timber, as well as the importation of salt, which, as the third region only was to have the right of selling it to the Dardani, was probably made for the profits of the conquerors on the Thermaic gulf. No wonder, that after such a division, which tore the race in pieces, the Macedonians should compare their sufferance to the laceration and dismemberment of an animal. (Liv. xiv. 30.)

This division into four districts did not last longer than eighteen years, but many tetrarchies of the first division of the tetrarchy coined at its capital, Amphipolis, are still extant. a. c. 149 Andrieus, calling himself Philip, and Simeius, called Philip, divided all Macedon (Liv. Epig. xiliis), but was defeated and taken in the following year, by Q. Caecilius Metellus; after which the Macedonians were made tributary (Porphyr. op. Ench. Chron. p. 178), and the county was probably governed by a "praetor,"
MACEDONIA.

like Achaea, after the destruction of Corinth, which occurred two years afterwards, B.C. 146. From that time to the reign of Augustus the Romans had the troublesome duty of defending Macedonia, against the people of Illyricum and Thrace; during that period, they established colonies at Philippi, Pella, Boeotia, and Dion. At the division of the provinces, Macedonia fell to the senate (Dion Cassius, liii. 12; Strab. xvii. p. 840). Tiberius, united the provinces of Achaea and Macedonia to the imperial government of Moesia, in order to deliver them from the weight of the proconsular administration (Tac. Ann. 176—80, v. 10), and this continued till the time of Claudius (Suet. Claud. 25; Dion Cassius, xii. 24). Afterwards it was again under a "proconsul," with the title "proconsul" (Orelli, Insocr. n. 1170 (Vespasian); n. 3851 (Caracalla), while mention often occurs of "legate" (Orelli, n. 3658) and "quaestores" (Orelli, n. 822, 3144).

Thessalonica, the most populous city in Macedonia, was the seat of government, and virtually the capital of Illyricum, as well as of Macedonia. Under Constantine, Macedonia, was one of the two governments of the preface of Illyricum, and consisted of six provinces, Achaea, Macedonia, Crete, Thessaly, Old Epirus, and New Epirus (Marquardt, in Becker, Röm. Alterthüm., vol. iii. pt. i. pp. 115—119). The ravages inflicted by the northern nation, on the most populous provinces, was so great that the inhabitants of Thrace and Macedonia were greatly diminished, the uncultivated plains were traversed by armed bands of Scythians, who gradually settled in great numbers in Macedonia, while many mountainous districts, and most of the fortified places still remained in the possession of the Greeks, who were driven into the Chatino peninsula, where the marshes and rivers which intersect them, offered means of resistance; but the existence of the ancient race may be said to terminate with the reign of Heraclius. (Comp. Schafarik, Slav. Alt. vol. ii. pp. 153—164.) The emperors of Constantinople attempted to remedy the depopulation of their empire by transporting Asiatic colonization from the colony of Pessinont to the banks of the Axios (Vardar) as early as the reign of Theophilius, A.D. 829—842, and it long continued to furnish recruits for a cohort of the imperial guard, which bore the name of Vardaritios. In A.D. 1085 a colony of Uses was settled in Macedonia, whose chiefs rose to the rank of senators, and filled high official situations at Constantinople (Sylvis. ad calc. Codresi, p. 868; Zonar. vol. ii. p. 273; Ann. Comm. p. 195). Anna Comnena (pp. 109, 315) mentions colonies of Turks established near Achrida before the reign of her father (A.D. 1081). These and other nations were often included under the general name of Turks, and indeed most of them were descended from Turkish tribes. (Finlay, Mediæval Greece, p. 31.)

IV. Physical and Comparative Geography.

The large space of country, which lies to the N. of the Cambonian chain, is in great part mountainous, occupied by lateral ridges or elevations, which connect themselves with the main line of Scardus. It also comprises three wide alluvial basins, or plains which are of great extent, and well adapted to cultivation; the northernmost of these, contains the sources and early course of the Axios, now the plain of Tetovo or Kalkandelo: the second is that of Bitola, coinciding to a great extent, with that of ancient Pelagonia, wherein the Erigon flows towards the Axios; and the larger and more undulating basin of Grevena and Anassaltis, containing the Upper Halicarnon with its confluent streams. These plains, though of high level above the sea, are yet very fertile, each generally bounded by mountains, and divided by transversals and tributaries; the lower ones, each leaving only one cleft for drainage by a single river, the Axios, the Erigon, and the Halicarnon respectively. The flat rich land to the E. of Pindus and Scardus is described as forming a marked contrast with the light calcareous soil of the Albanian plains and valleys on the W. side (comp. Grote, Hist. Ques. 124).

Upper Macedonia was divided into ELEMIA, EORDAEA, ORESTEA and LYNCESTIS; of these subdivisions, Elemia comprehended the modern districts of Grevena, Verija, and Tserdsembl; Eordaea those of Bujević, Sarishević, and Ostron; Orestis those of Drimisini, Anassaltis, and Kastoria; and Lyncestis Filarti, and all the S. part of the basin of the Erigon. These seem to have been all the districts which properly belonged to Upper Macedonia, the country to the N. as far as Illyricum to the W. and Thrace to the E. constituting Paeonia, a part of which (probably on the Upper Axios) was a separate kingdom as late as the reign of Cassander (Diod. xx. 19), but which in its widest sense was the great basin of interior country which covered the N. and NE. both Upper and Lower Macedonia; the latter containing the maritime and central provinces, which were the earliest acquisition of the kings, namely, Pireia, Bottiaia, Emathia and Mygdonia.

Pireia, or the district of Katervia, forms the slope of the range of mountains of which Olympus is the highest peak, and is separated from Magnesia on the S. by the Pessinos (Salonevia). The real Emathia is in the interior of Macedonia, and did not in its proper sense extend towards the sea, from which it is separated by Pireia and part of the ancient Bottiaia. Mygdonia comprehended the plains around Saloniki, together with the valleys of Kílassi and Boézia, extending westward to the Axios, and bounded on the N. by the Erigon. The name CHALCIDICE is applied to the whole of the great peninsula lying to the S. of the ridge of Mt. Korthiades.

An account of these subdivisions will be found under their different heads, with a list of the towns belonging to each.

Macedonia was traversed by the great military road — the Via Egnatia; this route has been already described [Vol. II. p. 36] as far as Heraclea Lyncestis, the first town on the confines of Illyricum; pursuing it from that point, the following are the stations up to Amphipolis, where it entered Thrace, properly so called:—

Egnatia.

Cella. — 'Ostrovo.
Edessa. — Vodkendi.
Pella. — Alatsiai.
Mutatio Gephyra. — Bridge of the Vardariki.
Thessalonica. — Saloneia.
Melissia. — Melissaria.
Apollonia. — Plataia.
Amphipolis. — Plataia.

From the Via Egnatia several roads branched off to the N. and S., the latter leading to the S. provinces of Macedonia and to Thessaly; the former into Paesia, Dardanias, Moeisia, and as far as the Danube.
MACEDONIA.

The Peisiger Table furnishes the following route from Pella to Larissa in Thessaly:—

Pella.  - - -  Berca.  - - -  Verria.
Achaea.  -  -  Arcadia.  -  -  Buda.
Arcadia.  -  -  Buda.  -  -  Ake.
Aegean.  -  -  Katerina.
Boeotia (Boeotia).  -  -  Malathiria.
Thessaly.  -  -  Phocis.  -  -  Lykosomai.
Olympus.  -  -  Thebes.  -  -  Sphi.

Two roads led to Sphi in Paeonia, the one from the other from Thessalonica. According to the Table, the stations of the former are:

Heraclea.  -  -  Colata (Andrastus).  -  -  Sphi.

The latter—

Thessalonica.  -  -  Galliaki.
Aegae.  -  -  Doiriana.
Beroeia.  -  -  Demirkapi.
Sithonia (Sithonia).  -  -  Antiparos.
Sphi.  -  -  Sphi.

From Sphi again two roads struck off to the NW. of Ne to Sphi (Sphiis), at the "deobouchi" from the Olympus mountains into the plains of Paeonia (at the Upper Axios, and to Serdica:—

Sphi.

Traphatra.

Arcadia.  -  -  Iasth.
Palladia.  -  -  Ghiustendil.
Asia.  -  -  -

Serdica.  -  -  Sofia.

Though the Macedonians were regarded by the Greeks as a semi-barbarous people, the execution of their coin would not lead to that inference, as they were fine and striking pieces, boldly executed in high, sharp relief. The coin of Alexander I. of Macedon, c. 560, is the first known monarchical coin in the world that can be identified with a written name, and to which, consequently, a positive date can be assigned. It has for "type" a Macedonian warrior leading a horse; he bears two lances, and wears the Macedonian hat. The coins of the princes who followed him exhibit the steps towards perfection very gradually.

With Philip II. a new era in the Macedonian coinage commences. At this period the coins had become perfect on both sides, that is, had a "reverse" equal in execution to the "obverse." During his reign the gold mines at Mt. Pangaeus were worked. He issued a large gold coinage, the pieces of which were by his name, and were put forth in such abundance as to circulate throughout all Greece. The series of coins, from Philip II. to the extinction of the monarchy, exhibit the finest period of Greek monetary art. (Comp. H. N. Humphry's Ancient Coins and Medals, London, 1856, pp. 58—63.) During the tetrarchy there are numerous existing coins, evidently struck at Amphipolis, bearing the head of the local deity Artemis Tanapolaros, with an "obverse" representing the common Macedonian "type," the club of Hercules within a garland of oak, and the legend "Macedonos πρωτος." (Comp. Eckhel, vol. ii. p. 61, foll.)

[ E. B. J. ]

COIN OF MACEDONIA.

MACCELLA or MAGELLA (Macedella: Macellario), a town in the NW. of Sicily, which is noticed by Polybius (i. 24) as being taken by the Roman consul, C. Duilius and Cn. Cornelius, as they returned after raising the siege of Segesta, in B.C. 260. It is interesting to find the same name noticed here, and the name of this otherwise obscure town mentioned, in the celebrated inscription on the rostral column which records the exploits of C. Duilius. (Orell. Inscr. 649.) It would seem from Diodorus, that at an earlier period of the same war, the Romans had besieged Macella without success, which may account for the importance thus attached to it. (Diod. xxxii. 4. p. 502.) The passage of Polybius in reality affords no proof of the position of Macella, though it has been generally received as an evidence that it was situated in the neighbourhood of Segesta and Panormus. But as we find a town still called Macellario, in a strong position on a hill about 15 miles E. of Segesta, it is probable that this may occupy the site of Macella. The only other mention of it in history occurs in the Second Punic War (B.C. 211), among the towns which revolted to the Carthaginians after the departure of Marcellus from Sicily. (Liv. xxxvi. 21.) As its name is here associated with those of Hybla and Murgantia, towns situated in quite another part of the island, Cluverius supposes that this must be a distinct town from the Macella of Polybius; but there is clearly no sufficient reason for this assumption. The name is written in the old editions of Livy, Magella; and we find the Magellini enumerated by Pliny among the stipendiary towns of the interior of Sicily (Plin. iii. 8. 14), while Plutarch, like Polybius, writes the name Magna. (Plut. iii. 4. § 14.) The orthography is therefore dubious, as the authority of so ancient an inscription as that of Duilius is of no avail in this case. The coins which have been ascribed to Macella are of very dubious authenticity.

[ E. H. B. ]

MACEPHRACTA (Amman, xxiv. 2), a small town of Babylonia mentioned by Ammianus Marcellinus. It was situated apparently on the Euphrates, to the W. of Sittace, not far from the place where the Royal Canal, or Nahir-malka, joined the Euphrates.

[V.]

MACESTUS or MECESTUS (Μάκεστος or Μάθεστος), a tributary of the river Rhynoecus: it took
MACETA. (Macæra, Nearch. Perip. p. 23: C. Mæsedom), a promontory of Arabia, at the entrance of the Persian gulf, opposite the promontory Harmozon in Carmania. (Strab. xvi. p. 726, xvi. p. 765.) It seems to be the same river as the one called by Polybius Megistus (v. 77), though the Scholiast on Apollonius Rhodius (i. 1162) remarks, that in his time the Rhynus itself bore that name. The name is now, however, known by the name Sana or Sanaqaih, while the upper part is called Samaul-Su. (Hamilton's Researches, vol. ii. pp. 105, 111.)

MACETIA, MACETTA. (Macædonia.)

MACETHA. (Megethaeus, Joseph.), a strong fortress of Persæa, first mentioned by Josephus in connection with Alexander the son of Hyrcanus I., by whom it was originally built. (Ant. xiii. 16. § 3: Bell. Jud. vii. 6. § 2.) It was delivered by his widow to her son Aristobulus, who first fortified it against Gabinius (Ant. iv. 5. § 2.) It was held by Cassius and lost by Surius, and by whom it was afterwards surrendered, and by whom it was abandoned. (§ 3: Strab. xvi. p. 762.) On his escape from Zoilos Aristobulus again attempted to fortify it; but it was taken after two days' siege (vi. 1.) It is however celebrated in the history of Herod the Tetrarch, and St. John the Baptist. It was situated in the mountains of Arabia (φῶς τοῖς 'Αποστόλοις ἐρεῑν) (§ 2), and on the confines of Chalcidice, and that of the Sea of Aretes, the latter being the southern extremity of Arabia, as Pella was the northern. (B. J. iii. 3. § 8, iv. 7. § 5.) When Herod's first wife, the daughter of Aretes, first suspected her husband's guilty passion for his sister Philadelphia, she dissembled her indignation, and requested to be sent to Machaerus, whither she immediately proceeded to Petra, her father's capital. The fact of Machaerus being then subject to the jurisdiction of Aretes presents an insuperable difficulty to the reception of Josephus's statement that it was the place of St. John the Baptist's martyrdom: for suffering, as he did in one view, as a martyr for the conjugal rights of the daughter of Aretes, it is impossible to believe that Herod could have had power to order his execution in that fortress. (xviii. 6 §§ 1, 2.) It held out against the Romans after the fall of Jerusalem, and the account of its siege and reduction by the lieutenant Lucullus Bassus furnishes us with the moment of its downfall to the lovely fortress, which Pliny (v. 15) reckons second to Jerusalem for the strength of its works. Josephus's account is as follows. It was situated on a very high hill, and surrounded with a wall, trenched about on all sides with valleys of enormous depth, so as to defy embankments. Its western side was the highest, and on that side to the valley opposite were six miles, as far as the Dead Sea. On the north and south the valleys were not so steep, but still such as to render the fortress inaccessible, and the eastern valley had a depth of 100 cubits. It had been selected by Herod, on account of its proximity to the Arabs and the natural advantages of its position, and he had enclosed a large space within its walls, which was strengthened with towers. This formed the city: but the summit of the hill was the acropolis, surrounded with a wall of its own: flanked with corner towers of 160 cubits in height. In the walls of the acropolis there were many strong towers, beautiful chambers, and furnished with numerous reservoirs for preserving the rain water. A shrub of rue, of portentous size, grew in the palace yard, equal in height and bulk to any fig-tree. A large store of missiles and military engines was kept there so as to enable its garrison to endure a protracted siege. Bassus proposed to assail it on the east side, sea, in turned raising banks in the valley, and the garrison, having left the city and its inhabitants to their fate, betook themselves to the acropolis, from which they made a succession of spirited sallies against the besiegers. In one of these a youth named Eleazar, of influential connections, fell into the hands of the Romans, and the garrison capitulated on condition that Eleazar should be spared, and he and they allowed to evacuate the place in safety. A few of the inhabitants of the lower city, thus abandoned, succeeded in effecting their escape: but 1700 males were massacred, and the women and children sold into captivity. (B. J. vii. 6.) Its site has not been recovered in modern times; but it is to be supposed that it is the site of the Dead Sea. (vii. 16: Belaud, s. v. p. 880.) The account given by Josephus of the copious hot springs of bitter and sweet water, of the sulphur and alum mines in the valley of Barra, which he places on the north of the city of Machaerus, seems rather to point to one of the ruined sites, noticed by Irby and Mangles, to the northern part of the Dead Sea, and the peaks of Callichro, where the Arabo-Phenician nomes are still found; but not the peculiarly noxious tree, of the same name as the valley, which was deadly to the gatherer, but was a specific against daemoniacal possession. (Callirrhoe.) (Irby and Mangles, Travels, pp. 464, 465.)

MACHAESTIGI (Macæsætigii; some MSS. read Macænestigii). A tribe of the tribe of Zabulon, settled in the eastern parts of the Dead Sea (vii. 16: Belaud, s. v. p. 880.) The account given by Josephus of the copious hot springs of bitter and sweet water, of the sulphur and alum mines in the valley of Barra, which he places on the north of the city of Machaerus, seems rather to point to one of the ruined sites, noticed by Irby and Mangles, to the northern part of the Dead Sea, and the peaks of Callichro, where the Arabo-Phenician nomes are still found; but not the peculiarly noxious tree, of the same name as the valley, which was deadly to the gatherer, but was a specific against daemoniacal possession. (Callirrhoe.) (Irby and Mangles, Travels, pp. 464, 465.)

MACHÆLONES (Macælõnës, Arrian, Perip. p. 11; Ascon. p. 15), a subdivision of the Colchian tribes situated to the S. of the Phasis. Anchialus, prince of this people, as well as of the Heniochi, submitted to Trajan. (Dion Cass. liv. 19: Bitter, Erzeugnisse vol. ii. p. 116.)

MACHLYNES (Málynes, Herod. iv. 179; Pol. iv. 3. § 26. Málynov, v. 14), a Libyan people, in the S. of Africa Propra (Bryzaena), on the river Triton, and separated by the lake Tritonis from the Lophaghi, like whom they fed upon the lotus. (Comp. Plin. viii. 2.)

MACYRES. (Mácyres.)

MACYTH,SIL (Mácythes), a people of Africa Propra, whom Ptolemy places S. of the Ligyphoenicians, as far as the Lesser Syrtis and the Macylides. (Pol. iv. 3. §§ 22, 26.)

MACYTHS. (Mácythes), a district of Arabia, mentioned only by Strabo (xvi. p. 766) as nearest to the borders of Lycia, and next to Persia. The desert of Arabia, on another of the branches of the Chaldaens, formed by the overflowing of the Euphrates, and on the third by the Persian Gulf. Its climate
MACRORABA. 339

MACRUS. was heavy and fuggy, showery and hot, but producing excellent fruits. The cultivation of the vine was peculiar. They were planted in the marathes, the soil necessary for their sustenance being placed in wicker baskets. They would sometimes drift from their moorings, and were thrust back to their places with poles.

MACRUS or MACRIDIUS (Mackareis, τὸ Μάκρος, Ekk. Mackarios), a town of Triphylia, in Elis, said to have been also called PLANARITUS.

It was originally inhabited by the Parovaeae and Canoconae, who were driven out by the Minyae. (Strab. viii. p. 345.) It was afterwards subdued by the Eleusae, and became one of their dependent towns, whose history is given under LEPEREUS. In the time of Strabo, it was no longer inhabited (viii. p. 349). Macrund was situated upon a lofty hill in the north of Triphylia, and appears to have been the chief town in the north of the district, as Lepreum was in the south. That Macrund was in the north of Triphylia appears from several circumstances. Strabo, as is the case with the Magia, is altogether uncertain upon Pisaia. (Strab. viii. p. 343.) Agis, in his invasion of the territory of Elis, in b. c. 400, when he entered Triphylia through the Aulon of Messenia, was first joined by the Lepreutases, next by the Macrundites, and then by the Epitalites on the Alpheus. (Xen. Hell. iii. 2. § 25.) Stephanus places Macrund to the westward of the Lepreum (Strab. viii. p. 343.) but that is obviously an error, as Arcadia bordered upon the Lepreum in that direction. Macrund would appear to have been in the neighborhood of Samicum upon the coast, as it had the superintendence of the celebrated temple of the Samian Poseidon at this place. (Strab. viii. p. 343.) From these circumstances there can be little doubt that Macrund was situated upon the heights of Kastriana.

It is worthy of notice that Pausanias and Polybios mention only Samicum, and Xenophon only Macrund. This fact, taken in connection with the Magiaists having the superintendence of the temple of the Samian Poseidon, has led to the conjecture that upon the decay of Samos upon the coast, the Minyae built Macrund, the ancient name of the place was afterwards revived in the form of Samicum. The Macrundites had a temple of Hercules situated upon the coast near the Acidon. (Strab. viii. p. 343.)

MACRABA (Μακραβα), an inland town of Arabia Felix, according to Ptolemy (vi. 7.), who places it in lat. 67½, long. 28° 45′, near the Atlantic Gulf of the Red Sea, now the Gulf of Arabia. [G. W.]

MACORABA (Μακοράβα), a flourishing inland city of Arabia Felix, placed by Ptolemy in lat. 30° 5′, long. 22° 27′, universally admitted to be the ancient seat of the Nabataeans, and the old representative of the modern Mecca or Mecca, which Mr. Forster holds to be an idiomatic abbreviation of Machoraba, identical with the Arabic " Mecharab," " the warlike city," or " the city of the Harb." (Geog. of Arabia, vol. i. pp. 265, 266.)

A very high antiquity is claimed for this city in the native traditions, but the absence of all authentic notices of it in the old geographers must be allowed to dispove its claim to notoriety on account of its ascendency at any very remote period. The territory of Mecca was, according to universal Arabian history or tradition, the central seat of the kingdom of Joramb and the Jorambites, descendants of the Jokanite patriarch Sherah, the Jerah of the book of Genesis (x. 26), who in the earliest times were the sovereigns of Mecca, the guardians of the Kaabah, and the superintendents of the idolatrous sacrifices in the valley of Mina, from whence they derived their classical synonyum Meccae. It is quite uncertain when they were superseded by the Luhaimite Arabs of the family of Kedar, whose descendants, according to immemorial Arabian tradition, settled in the Hedjam; and one tribe of whom was named Koreish (kollegiat umdeke), "quod circa Meccam, congregati degenerant." (Cassius ap. Gallus, in loc.; cited by Forsber, Geog. of Arabia, vol. i. p. 244, n.) This tribe, however, from which Mohammed sprung, had been for centuries the guardians of the Kaabah, and lords of Mecca, prior to his appearance: for if the very plausible etymology and import of the classical name, as above given, be correct, and Besni-Harab was, as Mr. Forster has elaborately proved, a synonym for the sons of Kedar, in their turn, it will follow that he has succeeded in fixing their name to the capital of the tribe that first appeared in Ptolemy's list, nor can any traces of a more ancient name be discovered, nor any notices of the ancient city, further than the bare mention of its name by the Alexandrian geographer.

"Mecca, sometimes also called Bekka, which words are synonymous, and signify a place of great concourse, is doubtless that which is mentioned in the Appian's narration of the Alexandrians in the world. It is by some thought to be the Massa of Scripture (Gen. x. 30), a name not known to the Arabsians, and supposed to be taken from one of Luhaimai's sons" (Gen. xxv. 15). (Sale's Koran, Preliminary Discoveries, sect. i. p. 4.) Its situation is thus described by Burckhardt:—"The town is situated in a valley, broad and sandy, the main direction of which is from north to south; but it inclines towards the north-west near the southern extremity of the town. In breadth this valley varies from one hundred to seven hundred paces, the chief part of the city being placed where the valley is most broad. The town itself covers a space of about 1500 paces in length; but the whole extent of the ancient city is shown by the denomination of Mecca" (i.e. including the suburbs) "amounts to 3500 paces. The mountains enclosing this valley (which, before the town was built, the Arabs had named Wady Mecca or Bekka) are from 200 to 500 feet in height, completely barren and destitute of trees. . . Most of the town is situated in the valley itself; but there are also parts built on the sides of the mountains, principally on the eastern chain, where the primitive habitations of the Koreish and the ancient town appear to have been placed." It is described as a handsome town; with streets broader, and stone houses more lofty, than in other Eastern cities: but since the decline of the pilgrimage "numerous buildings in the outskirts have fallen completely into ruins; and this ruin does not exhibit in every street house rapidly decaying." Its population has declined in proportion. The results of Burckhardt's inquiries gave "between 25,000 and 30,000 stationary inhabitants for the population of the city and suburbs, besides from 3000 to 4000 Abyssinians and black slaves: its habitations are capable of containing three times this number." This estimate, however, shows a considerable increase within the last three centuries; for "in the time of Sultan Selym i. (in A. E. 923, i. e. A. D. 1517) a
MACRA.

ceans was taken, and the number found to be 12,000 men, women, and children." In earlier times the population was much more considerable; for "when Abon Dhaeker sacked Mekka in A.H. 314 (A.D. 926) 30,000 of the inhabitants were killed by his ferocious soldiers." Ali Bey’s estimate in A.D. 1807 is more than Burchhardt’s in A.D. 1814.

Yet the former says "that the population of Mekka diminishes sensibly. This city, which is known to have contained more than 100,000 souls, does not at present shelter more than from 16,000 to 18,000;" and conjectures that "it will be reduced, in the course of a century, to the tenth part of the size it now is." The celebrated Kaaba demands a cursory notice. It is situated in the midst of a great court, which forms a parallelogram of about 536 feet by 356, surrounded by a double piazza. This sanctuary, called, like that of Jerusalem, El-Haram, is situated near the middle of the city, which is built in a narrow valley, having a considerable slope from north to south. In order to form a level area for the most sacred part of the temple, the ground has evidently been hollowed out, subsequently to the erection of the Kaaba, which is the only ancient edifice in the temple. The building itself (called by the natives Beit-Ulha, the House of God), probably the most ancient sacred building now existing, is a quadrilateral tower, the sides and angles of which are remarkable. Its dimensions are 38 feet by 29, and its height 34 feet 4 inches; built of square-hewn but unpolished blocks of quartz, schorl, and mica, brought from the surrounding mountains. The black stone, the most sacred object of veneration, is built into the angle formed by the NE. and SE. sides, 42 inches above the pavement. It is believed by the Moallems to have been presented to Abraham by the angel Gabriel, and is called "the heavenly stone." Ali Bey says that "it is a fragment of volcanic basalt, sprinkled throughout its circumference with small, pointed, coloured crystals, and varied with red fleldspar upon a dark black ground like coal." The famous well of Zemzem, in the great mosque, is 66 feet deep to the surface of the water, and the water, says the Geographer, "is the sweetest in the world after Mekka and Burchhardt, "however holy, is heavy to the taste, and impedes digestion." Ali Bey, on the contrary, says that it is wholesome, though warmer than the air even in that hot climate. The town is further supplied with rain-water preserved in cisterns: but the best water in Mekka is brought by a conduit from the vicinity of Arafat, six or seven hours distant." (Ali Bey, Travels, vol. ii. pp. 74—114; Burchhardt, Travels in Arabia, pp. 94, &c.) [G.W.]

MACRA (Μακρα), a considerable river of Northern Italy, rising in the Apennines and flowing into the Tyrrenhian Sea near Luna. It was under the Roman dominion the established limit between Etruria and Campania (Pliny, ii. 3. § 4; Strab. v. p. 229; Vib. Seq. p. 14); but at an earlier period the Ligurian tribe of the Apuani occupied the country on both sides of it, and it was not till after a long struggle with that people that the Romans were able to carry their arms as far as the banks of the Macra. (Liv. xxxix. 32, x1. 41.) The Macra, on one side, is a considerable river on the Ligurian coast, but it still retains the character of a mountain torrent, at times very violent and impetuous, at others so shallow as to be wholly unfit for navigation (Lucan, ii. 426). The ruins of Luna are situated on the left bank of the

MACROBI.

Magra, about a mile from the sea, while the celebrated Port of Luna (the Gulf of Spezia) is some miles distant to the W., and separated from it by an intervening range of hills [Luna]. About 10 miles from its mouth the Magra receives from its W. bank the waters of the Varia, also a formidable torrent, which, in all probability tijd the Boarcra of Ptolemy (iii. 1. § 3). [E. H. B.]

MACRA COME, a place mentioned by Livy (xxxix. 13) along with Spercheus. Its position is uncertain, but it was perhaps a town of the Aesimines. MACRIS, an island off the coast of Attica, also called Helena. [HELEN.] MACROBII (Herod. iii. 17—25; Plin. vi. 30, a. 55, vii. 1. 28; Solin. 30. § 9; Mela, iii. 9. § 1), or the long-lived, might have been briefly enumerated among the numerous and obscure tribes which dwelt above Philae and the second cataract of the Nile, were it not for the conspicuous position assigned to them by Herodotus. He describes the Macrobi as a strong and opulent nation, remarkable for its statues being unique, and, in some respects, as highly civilized. According to this historian, a rumour of the abundance of gold in the Macrobion territory stimulated the avarice of the Persian king, Cambyse, who led a great army against them: but in his haste he omitted to provide his host with food and water, and the city was taken by the Persians by a simple stratagem. Its inhabitants, who were 30 miles distant, went out to meet the Persians on their approach, and immediately afterwards the Persians perished through drought and hunger, Cambyse alone and a small residue of his army returning to Egypt. In the description of Herodotus, the most important point is the geographical position assigned to them. It is in the farthest south (τοι πιον υπονυμωμένον, c. 17, τα κεφαλά της γης, c. 25) the limit of the world, according to the knowledge of Herodotus. The Macrobion land was accordingly beyond the Arabian Gulf, on the shores of the Indian ocean, and in that undefined and illimitable region called Barbaria by the ancient cosmographers.

Travellers and writers on geography have advanced several remote conjectures as to the position in Africa. Bruce (Travels, vol. iv. p. 43) supposes the Macra to have been a tribe of Shangalla or lowland blacks. Rennell (Geogr. System of Herod. ii. p. 297, 2nd edit.) identifies them with the Abyssinians; Heeren (African Nations, vol. ii. pp. 321—338) believes them to have been a branch of the Semites, who occupied the maritime district around Cape Guardafui: while Niebuhr (Descrip. on the Geogr. of Herod. p. 20) objects to all these surmises, as taking for granted too much knowledge in Herodotus himself. In the story, as it stands, there is one insurmountable objection to the position in the far south assigned to them by the historian, and too readily accepted by his modern commentators. No navigable river of the size which is in any of the rivers in the area, could have marched from Egypt into Abyssinia without previously sending forward magazine and securing wells. There were neither roads, nor tanks of water, nor corn land nor herbage to be found in a considerable portion of the route (Wālmair, c. 25). Even at the present day no direct communication exists between Egypt and the land of the Nubians of Somma. No single traveller, no caravan, could adventure to proceed by land from the cataracts to Cape Guardafui. An army far inferior in numbers to the alleged host of Cambyse would in a few days exhaust the grass and the millot of Nu-
he wherein the only productive soil for some hundreds of miles south of Philæ consists of narrow slips of ground adjacent to and irrigated by the Nile. From the southern frontier of Egypt to the nearest frontier of Abyssinia the principal road for an army lies along the river bank, and the distance to be traversed is at least 900 miles.

We must therefore abandon the belief that the Macrobians dwelt in the farthest south. But there are other suspicious features in the narrative. Similar length of days is ascribed by Herodotus to the Tarabostaei, which have 12 months of 28 days; nor should it be overlooked that the Hyperboreans in the extreme north are also denominated Macrobii. We may also bear in mind the mythical aspect of Homer’s Aethiopians (Iliad, i. 423) in which passage the epithet “faultless” (ἄφθαρτος) implies not moral but physical superiority (comp. Herod. iii. 20; πέραντος αὐτῷ Ἀθηναὶ ἀνακαλοῦσιν ἰταντα). “Men,” as Dr. Kenrick justly remarks, “groaning under the burden of the social state, have in every age been prone to indulge in such pictures of ease and abundance as Herodotus, in the passages cited, and Pindar (Pyth. v. 57) draw of countries beyond the limits of geographical knowledge and of times beyond the origin of history.”

So, do we yield up the Macrobii to myth or fable altogether, we must seek for them in some district nearer Egypt. Whatever tribe or region Cymbræs intended to subdue, gold was abundant, and brass or rather copper, scarce among them. Now the modern inhabitants of Kordofan (15°-20° 10° N. lat., 26°-35° E. long.) are commonly called Nokah and Nob is an old Aegyptian word for gold. Again the Macrobii of Herodotus were well proportioned and healthy; and Kordofan has, from time immemorial, supplied the valley of the Nile with able-bodied and comely slaves of both sexes (Hume, op. Wapole, Turkey, p. 392). Moreover, the caravans bear with them, as marketable wares, wrought and unwrought copper to this district. In 1811 Mahomed Ali established a mint on the outskirts of Kordofan in attempting. With less than 7000 men, half of whom indeed perished through famine and the climate, he subdued all the countries contiguous to the Nile as far as Semnans and Kordofan inclusive; and the objects which stimulated his expedition were gold and slaves. We shall therefore perhaps not greatly err in assigning to the Macrobii of Herodotus the original habitation much nearer than Abyssinia to the southern frontier of Egypt, nor in suggesting that their name, in the language of the Greeks, is a corruption of the Semitic word Mahrobi, i.e. the dwellers in the west.

A position west of the Nile would account also for the knowledge possessed by the Ichthyophagi of Elephants (Bojas or Biahares Araba) of the languages of the Macrobii. It is easy to suppose that the country east of the Nile from Egypt to Abyssinia; and their trade and journeys extend from the Red Sea to Kordofan. If then we regard the Macrobii (the Mahrobi) and the Ichthyophagi (the Biahares) as respectively seated on the east and west banks of the Nile, the latter people will have been the most available guides by whom Cymbræs could employ for exploring the land of the Macrobii.

It should be remembered, however, that Herodotus derived his knowledge of the Persian expedition either from the Persian conquerors of Aegypt, or from the Aegyptian priests themselves: neither of whom would be willing to disclose to an inquisitive foreigner the actual situation of a land in which gold was so abundant. By placing it in the far south, and exaggerating the hardships endured by the army of Cymbræs, they might justly hope to deter strangers from venturing into the remote and difficult region from which themselves were deriving a profitable monopoly.

Upon the wonders of the Macrobian land it would be hardly worth while to dwell, were they not in singular accordance with some known features in the physical or commercial character of that region. In the southern portion of Kordofan there is a country of considerable height, and iron ore in some districts is plentiful. The fountain of health may thus have been one of several mineral springs. The ascension of extreme longevity to a people who dwelt in a hot and by no means healthy climate may be explained by the supposition that, whereas many of the pastoral tribes in those regions put to death their old people, when no longer capable of moving from place to place, the Macrobians abstained from such a cruel practice. The prosperity of the king seems to imply that the chieftains of the Macrobii belonged to a different race from their subjects (compare Scylax, op. Aristot. viii. p. 1393). “The Table of the Sun” is the market-place in which trade, or rather barter, with the south was carried on, according to a tradition mentioned by Cosmas, the Indian mariner, who describes the annual fairs of southern Aethiopia in terms not unlike those employed by Herodotus in his account of the Macrobians (pp. 138, 139). [W. B. D.]

MACROCEPHALI (Μακροκεφάλοι), that is, “people with long heads.” (Strab. i. p. 43.)

The Siginiti, a barbarous tribe about Mount Caucana, are artificially contrived to lengthen their heads. This was done to increase their beauty, according to the usual custom of the Greek, and is an example of how the old customs are transmitted to foreign nations. (De Agr. 35.) It appears that owing to this custom they were called Macrocephali; at least Pliny vi. 4), Pompon Mela (i. 19), and Scylax (p. 33), speak of a nation of this name in the north-east of Pontus. The anonymous author of the Perip. Pont. Esat. (p. 14) regards them as the same people as the Macrobii, but Pliny (i. c.) clearly distinguishes the two.

[L. S.]

MACRO’NES (Μακρωνεσί), a powerful tribe in the east of Pontus, about the Moschichi mountains. They are described as wearing garments made of hair, and as using in war wooden helmets, small shields of wicker-work, and short lances with long points. (Herod. i. 104; viii. 72; Xenoph. Anab. iv. 8. § 3, v. 5. § 18, viii. 8. § 25; comp. Hecat. Fragm. 191; Scylax, p. 33. Dionys. Perig. 766; Apollon. Rhod. ii. 22; Plin. vi. 4; Joseph. c. Apion. i. § 22, who asserts that they observed the custom of circumcision.) Strabo (Xii. p. 548) remarks, in passing, that the people formerly called Macrones bore in his day the name of Sarmi, (Strab. i. 1045; 1054; comp. the Sarmi and Macrones as two distinct peoples. They appear to have always been a rude and wild tribe, until civilisation and Christianity were introduced among them in the reign of Justinian. (Procop. Bell. Pers. i. 15, Bell. Got. iv. 2, de Aed. iii. 6.)

MACRON THEICHOS (Μακροθείχος, also called “the wall of Anastasia,” was a fortification constructed in A.D. 507, by the emperor Anastasius I. of Constantinople, as a means of defence against the Bulgarians; it consisted of a strong wall running across the isthmus of Constantinople, from the coast of the Propontis to that of the Euxina.

VOL. II.
MACROPOGONES.

Some parts of this wall, which at a later period proved useful against the Turks, are still existing. (Procop. de Aed. iv. 9; comp. Dict. of Biolgr. Vol. I. p. 135.)

MACROPOGONES (Μακροπόγοι), or the "Longbeards," one of the tribes of the W. Caucuses (Strab. xi. p. 493), whose position must be fixed somewhere near Taurisusae. (Chesney, Enzyprat. vol. I. p. 276.)

MACHTRIUM ('Μαχτρίω), a town of Sicily, in the neighbourhood of Gela, mentioned by Herodotus (vii. 130), who tells us that it was occupied by a body of Delians, who were driven out from their country, and were restored to it by Telineus, the ancestor of Gela. The name is also found in Stephanus of Byzantium (s. e.), who cites it from Philistus, but no mention of it occurs in later times. The only clue to its position is that afforded by Herodotus, who calls it "a city above Gela," by which he must mean further inland. Cluverius conjectures that it may have occupied the site of Butera, a town on a hill about 6 miles inland from Terracina, the site of Gela. (Cluver. Sicil. p. 363.)

MACUM, a town in the north of Aethipia. (Plin. vi. 29, s. 35.)

MACURELL. [Makurellas.]

MACASTRANA. (Makastras, Strab. x. p. 451; Makastron, Plut. Quaest. Græc. 15; Makassor, Steph. B. c. v. Euh. Macastref, a town of Aetolia on the coast, at the foot of the eastern slope of Mount Taphiassus. According to Strabo it was built after the return of the Heracleids into Peloponnesus. It is called a town of the Ozolian Locrians by the poet Archytas of Amphiara, who describes it in an hexameter line; "the grape-clad, perfume-breathing, lovely Makastra." It is also mentioned in an epigram of Alcaeus, the Messenian, who was a contemporary of Philip V., king of Macedonia. Pliny mentions a mountain Macedonium, which must have been part of Mount Taphiassus, near Macastra, unless it is indeed a mistake for the town. (Strab. x. pp. 451, 450; Plut. I. c.; Anb. Græc. ix. 518; Plin. iv. 3; Leake, Northern Greece, vol. iv. p. 188.)

MACYONIA. [Macyelia; Aetolia, p. 63, b.]

MADAI. [Media.]

MADĀRA (Augustin. Ep. 49, Conf. ii. 3) or MADURUS (Mādāpura, Post. iv. 3. § 30), a town in the north of Numidia, near Tagaste, which must not be confounded with Madaura, the birthplace of Appuleius. [Madaurad.]

MADERA (Μαδέρα, LXX.; Meðēon, Joseph.), a city originally of Moab, and afterwards obtained by conquest by Sihon, king of the Amorites. (Numb. xxi. 30; comp. Joseph. Ant. xii. 1. §§ 2, 4.) The name does not occur in the LXX. in two of the passages in which it is found in the Hebrew, xvi. 25, but is being substituted in Numbers (x. c.) and vii. Madarás in Isaiah (xv. 2). It fell to the lot of the Benenites in the division of the trans-Jordanic conquests, and was in their southern border. (Josh. xiii. 9, 16.) It was one of several Moabite cities occupied by the Jews under Hyrcanus and Alexander Jannaeus (Joseph. Ant. xiii. 9. § 1, 15. § 4), but was afterwards restored by Hyrcanus II. to Aretas (xiv. i. 4, § 4). Mēdēon is placed by Ptolemy (v. 17, § 6) in Arabia Petraea, and joined with Heshbon, consistently with which Eusebius and S. Jerome (Onomast. a. e.) notice it as still existing, under its old name, in the vicinity of Heshbon; where its ruins may still be identified.

MREA.

"In order to see Medaba, I left the great road at Heshbon,—and proceeded in a more eastern direction. . . . At the end of eight hours we reached Medaba built upon a round hill. This is the ancient Medaba, but there is no river near it. It is at least half an hour in circumference: I observed many remains of the walls of private houses, constructed with blocks of alux; but no single edifice is standing. There is a large Birke ("the immense tank" mentioned by Irby and Mangles, p. 471, as "the only object of interest"). On the west side of the town are the foundations of a temple, built with large stones, and apparently of great antiquity. . . . A part of its eastern wall remains. At the entrance of one of the courts stand two columns of the Doric order: . . . in the centre of one of the courts a large well." (Burckhardt, Travels in Syria, pp. 365, 366. It is mentioned as τὸ Μηδαμῖα in the Council of Chalcedon, and was an episcopal see of the Third Palæstine, or of Arabia. (Roland, Palæstine, a. e. pp. 893, 516—519; Le Quem, Orient Chirurg. col. 769—772.)

MADENA, a district in Armenia Minor, between the Cyrus and Araxes. (Sext. Enf. in Lucull. 15. 16; Eutrop. viii. 4.)

MADETHRUBADUS M. (Ὁ Μαδεθρουβάδος ή Μαδεθρούβαδος), is the name applied by Ptolemy (v. 17, § 6) to that part of theelongation of the Atlas chain S. of Mauretania Cæsariensis which contained the sources of the Chinalph and its tributaries. [Comp. Atlast.] [P. S.]

MADIA (Μαδία, Post. v. 10. § 6), a place in the interior of Cilicia, probably the Matian of Pliny (vi. 4.)

MADIS. [Madytrus.]

MADIANNA (Μαδιαννα, LXX.; Μαδιανε, Euseb.), a city of the tribe of Judah mentioned only in Jobus (xx. 31). It was situated in the south of the tribe, apparently near Ziklag. Eusebius, who confounds it with the Madmenah of Isaiah (x. 31), mentions the ruins of a town near Gaza, named Menoph (Μενοῆς), which he identifies with Madmannassa (Onomast. a. e. v. 150.) [G. W.]

MADENEH (Μαδηνε, LXX.), a town on the Nile, or village on the confines of the tribes of Judah and Benjamin, mentioned only in Isaiah (x. 31). It was obviously on or near the line of march of an invading army approaching Jerusalem from the north, by way of Michmash, and apparently between Anathoth and Jerusalem. It is confounded with Madmanna by Eusebius. (Onomast. a. e. v. 150.) [G. W.]

MADOCE (Μαδοκέ, LXX.), a city on the south coast of Arabia, in the country of the Homeritaes, apparently in the extreme west of their district, and consequently not far to the west of Aden. (Post. vi. 7. § 9.) It is not otherwise known. [G. W.]

MADUAITEI, a people of Thrace, mentioned by Livy (xxxvii. 40) along with the Astii, Caeni, and Corii, but otherwise unknown.

MADURUS. [Madaura.]

MADYTUS (Μαδυτύς; Euh. Maduris), an important port town in the Thracian Chersonesus, on the Hellespont, nearly opposite to Abydos. (Liv. xxxvi. 16, xxxviii. 38; Mela, ii. 2; Anna Const. xiv. p. 429; Stephest. B. s. e.; Strab. vii. p. 331.) Ptolemy (iii. 12. § 4) mentions in the same district a town of the name of Madis, which some identify with Madytus, but which seems to have been situated more inland. It is generally believed that Maito marks the site of the ancient Madytas. [L. S.]

MAEA (Μαῖα, Stadiam. Mar. Magn. §§ 74, 75;
MAEANDER. called Gaia or Gaia by Ptol. iv. 3. § 46), an island off the coast of Africa Propria, 7 stadia S. of the island Pontia.

MAEANDER (Malaδορoς: Meander or Bogako Meander), a celebrated river in Asia Minor, has its sources not far from Celsaeae in Phrygia (Xenoph. Anab. i. 2. § 7), where it gathered forth in a park of Cyrus. According to Homer (Strab. xii. p. 378; Maxim. Tyr. v. 38) its sources were the same as those of the river Maryas; but this is irreconcilable with Xenophon, according to whom the sources of the two rivers were only near each other, the Maryas rising in a royal palace. Others, again, as Pliny (v. 31), Solinus (40. § 7), and Martianus Capella (6. p. 221), state that the Maeander flowed out of a lake on Mount Anoacre. Col. Leake (Asia Minor, p. 158, &c.) reconciles all these apparently different statements by the remark that both the Maeander and the Maryas have their origin in the lake on Mount Anoacre, above Celsaeae, but that they issue at different parts of the mountain below the lake. The Maeander was so celebrated in antiquity for its numerous windings, that it became, and still is, proverbial. (Hom. Il. ii. 869; Hesiod, Theog. 339; Herod. viii. 26, 30 Strab. xii. p. 577; Paus. viii. 41. § 3; Ov. Met. viii. 162, &c.; Liv. xxxvi. 13; Senec. Herc. Fure. 663, &c., Phoen. 605.) Its whole course has a south-western direction on the south of the range of Mount Messogia. In the south of Tripolis it receives the waters of the Lycomus; and there it becomes a river of some importance. Near Caria it passes from Phrygia into Caria, where it flows in its tortuous course through the Maeandrian plain (comp. Strab. xiv. p. 648, xv. p. 691), and finally discharges itself into the Icarian sea, between Priene and Myus, opposite to Miletus, from which its mouth is only 10 stadia distant. (Plin. L. c.; Paus. iii. 5. § 2.)

The tributaries of the Maeander are the Ogytas, Maryas, Claudius, Lethares, and Gaebosion, in the north; and the Obrnas, Lycur, Harpasus, and a second Maryas, in the south. The Maeander is everywhere a very deep river (Nic. Chonat. p. 125; Liv. L. c.), but not very broad, so that in many parts its depth equals its breadth. As moreover it carried in its waters a great quantity of mud, it was navigable only by small vessels (Strab. xii. p. 379, xv. 636.) It frequently overflowed its banks, and in consequence of the quantity of its deposits at its mouth, the coast has been pushed about 20 or 30 stadia further into the sea, so that several small islands off the coast have been united with the mainland. (Paus. viii. 24. § 5; Thucyd. v. 17.)

There was a story about a subterranean communication between the Maeander and the Alpheus in Elis. (Paus. ii. 5. § 2; comp. Hamilton, Researches, vol. i. p. 525, foll. ii. p. 161, foll.)

MAEANDER (Δ Μαλαδορός, Ptol. vii. 2. §§ 8, 10, 11), a chain of mountains in Eastern Asia, comprehended, according to Ptolemy's subdivision, in the part called by him India extra Gangeum. They may be best considered as an outlying spur from the Beryanthis M. (now Jarrow), extending in a southerly direction between the Ganges and the Doanas towards the sea coast. Their present name seems to be Main-Muara.

MAEANDROPOULIS (Μαυρουπόλις), a town of uncertain site, though, as its name seems to indicate, it must have been situated somewhere on the Maeander, and more especially in the territory of Magnesia, as we learn from Stephanus B. (ε. ὕπ. comp. Plin. v. 29), from whom we may also infer that the place was sometimes called Maesander. [L.S.]

MAEATAE (Μαεαταί), a general name given by Dion Cassius (lxxv. 5, lxxvi. 12) to the British tribes nearest to the Roman valium, the Caledonii dwelling beyond them. (Comp. Jornandes, de Reb. Get. c. 2.)

MAELDI (Μαλδί, Μαλδαί, Thes. ii. 98; Polyb. x. 41), a powerful people in the west of Thrace, dwelling near the sources of the Axios and Margus, and upon the southern slopes of Mt. Socinion. (Leake, Northern Greece, vol. iii. p. 472.) Strabo says that the Maedi bordered eastward on the Thraciae of Dardania (vii. p. 316), and that the Axios flowed through their territory (vii. p. 351). The latter was called Maedis (Maesari, Ptol. iii. 11. § 9; Liv. xxvi. 25, xii. 22), They frequently made incursions into Macedonia; but in m.c. 211, Philip V. invaded their territory, and took their chief town Tamphorina, which is probably represented by Vromi or Virona, in the upper valley of the Margus or Molosus. (Liv. xxvi. 25.) We also learn from Livy (xii. 22) that the same King traversed their territory in order to read the treaty of Peace to the Maedi. Strabo says that on his return into Macedonia he received the submission of Petra, a fortress of the Maedi. Among the other places in Maedis, we read of Phragandae (Liv. xxvi. 25) and Desudaba, probably the modern Kandernono, on one of the confines of the upper Axios. (Liv. xii. 26.) The Maedi are said to have been of the same stock as the Bitihynians in Asia, and were hence called Maedaebyzni (Steph. B. ii. 25; Paus. viii. 295). (Comp. Strab. vii. p. 316; Plin. iv. 11. s. 18.)

MAENACA (Μαίνακα), a Greek city on the 8. coast of Hispシアna Bactica, the most westerly colony of the Phocaeanos. (Strab. iii. p. 156; Scymn. 145, et seq.) In Strabo's time it had been destroyed; but the ruins were still visible. He relates the errors of those who confounded it with Malaca, which was not a Greek, but a Phoenician city, and lay further to the W.; but this error is repeated by Avienus (Or. Marit. 426, et seq.). The place seems to be the Mena of Stephanus.

MAENALUS. 1. (Malaias, Strab. viii. p. 388; Schol. ad Apoll. Rhod. l. 769; Malaias, Theoc. l. 122; ζ Καιρος Μαλαίανος, Porph. Strab. vii. 25; Malaias, Virg. Ecl. viii. 22; Mol. ii. 3; Plin. iv. 6. a. 10; Maemala, pl., Virg. Ecl. x. 55; Or. Met. l. 216), a lofty mountain of Arcadia, forming the western boundary of the territories of Mantinea and Teges. It was especially sacred to the god Pan, who is hence called Maenalus Denu (Or. Fast. iv. 650.) The inhabitants of the mountain fancied that they had frequently heard the god playing on his pipe. The two highest summits of the mountains are called at present Aita and Apamna-Khraps; the latter is 5115 feet high. The mountain is at present covered with pines and firs; the chief pass through it is near the modern town of Tripolitza. —The Roman poets frequently use the adjectives Maenalia and Maenalae as equivalent to Arcadian. Hence Maenalus,ceus, shepherds' songs, such as were usual in Arcadia (Virg. Ecl. viii. 21); Maenalae oria, i.e. Arcadia (Or. Fast. iii. 84); Maenalae nempha, i. e. Carmenta (Or. Fast. i. 634); Maenalae Urea, and Maenalae Arctos, the constellation of the Bear, into which Callisto, daughter of Lycaon, king of Arcadia, was said to have been metamorphosed. (Or. Trist. iii. 11. 8. Fast. i. 192.)

2. (Malaias: ΕΚΘ. Μαλαιάς, Μαναλιάς, Μαγ-
MAENARIAE INSULAE, a town of Arcadia, and the capital of the district Maenaria (Maenaria, Thuc. v. 64; Paus. iii. 11. § 7, vi. 7. § 9, viii. 9. § 4), which formed part of the territory of Megalopolis upon the foundation of the latter city. A list of the towns in Maenaria is given in Vol. I. p. 192. The town Maenaria was in ruins in the time of Pananius, who mentions a temple of Athena, a stadium, and a hippodrome, as belonging to the place. (Paus. viii. 3. § 4, 36. § 8; Steph. B. s. v.) Its site is uncertain. Rose supposes that the remains of polygonal walls on the isolated hill, on the right bank of the river Heliason and opposite the village Dardis, represent Maenaria; and he assigns to this place more probable than the opinion of Leake, who identifies this site with Dipasa, and thinks that Maenaria stood on Mt. Apaou-Bipasa. (Rose, Reisen im Peloponnes, vol. i. p. 117; Leake, Mora, vol. ii. p. 52, Peloponnesiaca, p. 243.)

[Dipasa.]

MAENARIAE INSULAE, a cluster of little islands in the sea of Paphos, off the coast of the Greater Balaerica. (Plin. iii. 5. s. 11.) [P. S.]

MAENOBASA (Mela, ii. 6. § 7; Plin. iii. i. s. 3; Mela, Plin. ii. 4. § 7; Menova, Itin. Ant. p. 405; Vales Malavoga, a town of the Bautili Poeni, on the S. coast of Baetica, 12 M. P. E. of Malaec, on a river of the same name (Vales). Strabo (iii. 143) also mentions Masobasa (Malavoga), with Astra, Nabriessa, Oneba, and Oseobasa, as towns remarkable for their situation on tidal estuaries; whence Ubert argues that, since not only all the other places thus mentioned were outside of the Straits, but also Strabo's description necessarily applies to an estuary exposed to the tides of the Atlantic, we must seek for his Masobasa elsewhere than on the tideless Mediterranean. Accordingly, he places it on the river Masobasa or Menuba (Gaadamar), the lowest of the great tributaries of the Baetis, on its right side, mentioned both by Pline (iii. i. s. 3), and in an inscription found at San Lucar la Mayor (Caro, ap. Flores, Exp. S. vol. i. p. 47), up which river the tide extends to a considerable distance. (Ubert, vol. ii. p. 1, pp. 288, 349, 350.)

This argument, though doubtful, has certainly some force, and it is adopted by Spruner in his Atlas.

MAENOBASA (Malavoga), rivers. [MAENOBA.]

MAENOBORICA (Maenoborica), a town of the Maestani, in the S. of Spain, mentioned by Hecataeus (ap. Steph. B. s. v.), seems to be identical with MAENOBASA on the S. coast of Baetica. [P. S.]

MAENOCAIA (Maenocia), an ancient name of Lydia. (Lydia.) There was, also, in later times a town of this name in Lydia, mentioned by Pline (v. 29. s. 30), Hierocles (p. 670), and in the Epipolac Notitia; and of which several coins are extant. Its ruins have been found at a place called Magna, 5 English miles W. of Sandal. (Hamilton, Researches, vol. ii. p. 139.)

MAEOTAE (Maeotae, Soyl. p. 31; Strab. xii. pp. 492, 494; Plin. iv. 26; Maedot, Pomp. Mela. i. § 6, 494; § 17; Plin. vii. 19), collective name which is given to the people about the Palus Maeotis as early as the logographer Hellenicus (p. 78), if we read with his editor Stza (for Maioiata), Maioiata. According to Strabo (l. c.) they lived partly on fish, and partly tilled the land, but were no less warlike than their nomad neighbours. He enumerates the following subdivisions of the Maeotae: Sindi, Dandari, Toratza, Agri, Arrhechi, Tarpetes, Obidaceni, Sittaaceni, Doci, and many others. These wild hordes were sometimes tributary to the factory at the Tanais, and at other times to the Bosporan, revolting from one to the other. The kingdom of the Cimmerian Bosporus in later times, especially under Pharnaces, Assander, and Polthodoros, extended as far as the Tanais. [E. B. J.]

MAEOTIS PALUS, the large body of water to the NE. of the Euxine now called the Sea of Azov, or the Azak-deenis of the Turks. This sea was usually called "Pallas Maeotis (Pallas Maeotis Azov, Asch. Prom. 427), but sometimes "Maeotica" or "Maeotis Palus." (Plin. ii. 67; Lucan, ii. 641.) "Maeotis" or "Maeota Lacus" (Plin. iv. 24, vi. 6), "Maeotim" or "Maeoticum aequum" (Arrian. v. 32; Val. Flac. iv. 720), "Cimmeriae Paludes" (Clamd. in Evrop. i. 249), "Cimmericum" or "Bosporicum Mare" (Gell. xvii. 8), "Scythicae Undae, Paludes" (Ovid. Her. vi. 107, Tristan. i. 44). The genitive in Latin followed the Greek form "Maeotis," but was sometimes "Maeotis" (Ennius, ap. Cic. Tuscul. v. 17). The accusatives have the two forms Maeotum, Maeotis (Plin. x. 10), and Maeotis. (Pomp. Mela. i. 3. § 1, i. 1. § 1). Pliny (vi. 7) has preserved the Libyan name Temginda, which he translates as "Mater Maris."

The Maeotic gulf, with a surface of rather more than 13,000 square miles, was supposed by the ancients to be of far larger dimensions than it really is. Thus Herodotus (iv. 86) believed it to be not much less in extent than the Euxine, while Sclavus (p. 30, ed. Hudson) calculated it at half the size of that sea. Strabo (ii. 125, comp. vii. pp. 307—312, xi. p. 493; Arrian, Perip. p. 20, ed. Hudson; Agatham. i. 3, ii. 14) estimated the circumference at somewhat more than 9000 stadia, but Polybius (iv. 39) reduces it to 8000 stadia. According to Pliny (iv. 27) was reckoned at 14000 P. F., or according to some, 1125 M. P. Strabo (vii. 310) reckons it in length 9200 stadia between the Cimmerian Bosporus and the mouth of the Tanais, and therefore came nearest amongst the ancients in the length; but he seems to have supposed it to carry its width on towards the Tanais (comp. Rennell, Comor. Geol. vol. ii. p. 321). The length according to Pliny (l. c.) is 385 M. P., which agrees with the estimate of Troleny (v. 9. §§ 1—7). Polybius (l. c.) confidently anticipated an entire and speedy choking of the waters of the Maeotis; and ever since his time the theory that the Sea of Azov has contracted its boundaries has met with considerable support, though on this point there is a material discordance among the various authorities; the latest statement, and approximation to the amount of its cubic contents will be found in Admiral Smyth's work (The Mediterraneans, p. 148). The ancients appear to have been correct in their assertion about the absence of salt in its waters, as, although in SW. winds, when the water is highest, it becomes brackish, yet at other times it is drinkable, though of a disagreeable savour (Chones, Journ. Geol. Soc. vol. i. p. 106).

MAEPEHA (Maepha, Myrmodon), an inland city of Arabia Felix, placed by Troleny in long. 38° 15',
MAGADALA. 245

MAGABA (Kawrath Dagh), a considerable mountain in the central part of Galilee, on the river Halya, and E. of the city of Ancyra, which was only 10 Roman miles distant from it. In A.D. 189, when Manlius was carrying on war against the Galatians, the Tectosagi and Trocmi took refuge on Mt. Magaba, and there defended themselves against the Romans, but were defeated. (Liv. xxxviii. 19, 26; Flor. i. 11.) According to Rufus Festus (11), this mountain was afterwards called Modussus.

MAGABULA, a place mentioned in the Pentateuch. Table in Pontus Pontomius, on the road from Comana to Nicopolis, at a distance of 21 miles from the former city. There can be no doubt but that it is the same place as Megalula (Μηγαλούλα) mentioned by Ptolemy (v. 6. § 10); but its exact site cannot be ascertained.

MAGARSA, MAGARUS, or MEGARUS (Μηγάρας, Μηγαρώς, Μηγαρος), a town in the eastern part of Cilicia, situated on a height close to the mouth of the river Pyramus. (Strab. xiv. p. 676.) Alexander, previous to the battle of Isus, marched from Soli to Magarvs, and there offered sacrifices to Athena Megarvs, and to Amphiochos, the son of Amphiarachus, the centaur. (Curtius, Bk. iv. p. 660.) (Arrian, Anab. ii. 5.) It seems to have formed the port of Mallus (Steph. Byz. s. a. Μηγαρος; Lycoph. 439; Plin. H. N. v. 23). The hill on which the town stood now bears the name of Kavoidsh, and vestiges of ancient buildings are still seen upon it. (Leake, Asia Minor, p. 215, foll.)

MAGADALA (Μηγαδάλα; Εκκ. Μηγαδάλων), a town of Galilee, chiefly noted as the birthplace of that Mary to whom the distinguished name of Magdalene is ever applied in the Gospel. The place itself is mentioned only by S. Matthew (xx. 39), where we find the words τα Ἡράκλει, which are represented in the parallel passage in S. Mark (viii. 10) as τα μέρη Δαλματουσία. As neither does this name occur elsewhere, nor are there any traces in the position of the town; although, a modern writer says, "it seems to follow from the New Testament itself that it lay on the west side of the lake." The argument is, that, on leaving the coast of Magdala, our Lord embarked again, and "departed to the other side,"—"an expression which in the N. T. is applied almost exclusively to the country east of the lake and of the Jordan." (Robinson, Res. vol. iii. p. 323.) There can, however, be no difficulty in identifying it with the site of the modern village of Mejdel in the SE. corner of the plain of Gennesaret; where there certainly existed an ancient town of the name, noticed in the Jerusalem Talmud, compiled in Tiberias, from which it is not more than 4 or 5 miles distant, on the north: probably identical with Migdal-el, in the tribe of Naphtali. (Jos. xix. 38.) It is a small and insignificant village, "looking much like a ruin, though exhibiting no marks of antiquity." (Robinson, l. c.) Pococke's argument against this identification is unintelligible. This does not seem to be Magdala mentioned in Scripture, because that is spoken of with Dalmatis, which was to the east of the sea." (Observations i. 3)
MAGDOLUM.

on Palestine, Trasula, vol. ii. p. 71.) How this last assertion is to be proved does not appear. The authority of Josephus has been quoted for a Magdala near Cana, and consequently on the east of the sea (Pils, § 24); but the reading is corrupt. (Robinson, l. c. p. 379, note.)

MAGGOL. See, in Herod. ii. 159, but Μᾶγγολος in LXX; the Maggoi of the Old Testament (Exod. xiv. 3; Num. xxxii. 7; 2 Kings, xxiii. 29; Jerom. xliv. 1, xlvi. 14; Euseb. xxi. 10, xxx. 6; It. Anton. p. 171,) a town of Lower Assyrg which stood about 13 miles S. of Palandum, on the coast-road between Assyrg and Phoenicia. Here, according to Herodotus, (I. c.) Pheron-Nebo, defeated the Syrians, about 608 a. C. Eusebius (Prosop. Evang. ix. 18), apparently referring to the same event, calls the defeated army “Syrians of Judah.” That the Syrians should have advanced so near the frontiers of Egypt as the Deltaic Magdolum, with an arid desert on their flanks and rear (comp. Herod. iii. 5) seems extraordinary; nearer is the suspicious aspect of the Battle of Magdolum diminished by the conquest of Cydria, a considerable city of Palestine, being represented as its result. The Syrians might indeed have pushed rapidly along the coast-road to Assyrg, if they had previously secured the aid of the desert tribes of Araba, as Cambyses did before his invasion of Assyrg (comp. Herod. iii. 7). Calmet’s Dict. of the Bible, s. v.; Winer, Bibl., Realencycl., vol. ii. p. 93, note 2; Champollion, L’Egypte, vol. ii. p. 79.

[ W. B. D.]

MAGELLI, a Ligurian tribe, mentioned only by Pliney (iii. 8. 7). They have been supposed to have occupied the Vul di Magello, in the Apennines, N. of Florence; but though it is certain that the Ligurians at one time extended as far to the E. as this, it is very improbable that Pliney should have included such a tribe in his description of Roman Liguria. The name of the Magello is found in Procopius (B. G. iii. 5) where he speaks of a place (μαγελλός) called Mucella (Μουκέλα), situated a day’s journey to the N. of Florence. [E. H. B.]

MAGETOBRIA or ADAMGETOBRIA, in Georgia, an ancient in, by the ancients, Magetobia, or Magetobria, a tribe that defeated the Persians in a battle in 100 B.C. (Cass. B. G. i. 31.) The site of Magetobria is unknown. The resemblance of name induced D’Anville (Notice, &c.) to fix it at Moigie de Broie, near the confluence of the Oumon and the Sadee, a little above Pontcharl. There is a story of a broken urn, with the inscription MAGETOBRIA, having been found in the Sadee in 1808. But this story is of doubtful credit, and the urn cannot be found now. Walckenaer supposes Ambas on the Brenchin, which is west of Fumonney and east of Lusenwi, to correspond best to the indications in Caesar’s text. But Caesar does not give us the least indication of the position of Magetobria.

[G. L.]

MAGL. [MEDIA.]

MAGIOVINUM or MAGIOVINIUM, in Britain, a town placed in three of the itineri of Antoninus at the distance of 24 miles to the N. of Verulamium. Its site is generally supposed to be at Fenny Stratford. [G. R. S.]

MAGNA (R. Ant. p. 484; Geogr. Ravenn.) 1. A town or station in Bithynia, the site of which is occupied by Kenzechester, in Herefordshire, in both of which places the word is in the plural form, Magna, most probably for Magnis Castria. Indeed, the extraordinary extent of the place, as ascertained by its remains, renders this suggestion more than probable. The walls, now almost entirely destroyed, enclosed an area of from 30 to 30 acres. Leland, speaking of Kenzechester, says:—”Ther hath ben fownd 'mostra memoria interis Britaniici; et ex eius casibus, aqua dulcia, terrae parvim, fragmentum castrarum auxere, calcare arx argento, byside other straung things." The terraced pavements, mentioned by Leland, have, of late years, been partially laid open. The only lapidary inscription which appears on record, as discovered at Kenzechester, is a fragment with the name of the emperor Numerianus; but coins and miscellaneous antiquities are still, from time to time, plumbed up.

2. A station in Britain, on the line of the Roman Wall, mentioned in the Notitia; it also occurs in Geog. Ravenn.; and probably on the Rhod Cup, as Maissa. Its site is that of Carvoran, a little to the S. of the Wall, on a high and commanding position near the village of Greenhead. There seems a little doubt of Carvoran being the site of this Magna; although, unlike many of the Notitia stations on the Wall, its position has not been identified by inscriptions. The Notitia places at Magna the second cohort of the Dalmatians. At least two inscriptions found here mention the Hamiti, but none name the Dalmatians. The Hamiti do not appear to be recorded in any other inscriptions, and they are not mentioned by that name in the Notitia. Hodgson (Roman Wall and South Trasula, p. 205) considers that these auxiliary troops were from Apamena in Syria, at the confluence of the Orontes and Marys, 62 miles from Aleppo, which is still a large place, and called Hamah, and, in ancient times, Hama. This conjecture seems feasible, as the Notitia mentions the Cohors Prima Apamensis as quartered in Egypt; and also as some altars dedicated to the Syrian goddess have been discovered at Carvoran. [C. R. S.]

MAGNA GRAECIA (ἡ εὐρύτερη Ἑλλάς), was the name given in ancient times by the Greeks themselves to the assemblage of Greek colonies which encircled the shores of Southern Italy. The name is given by Hesiod in his Work, by Homer, by Polybius: but the latter, in speaking of the cities of Magna Graecia in the time of Pythagoras, uses the expression, “the country that was then called Magna Graecia” (Pol. i. 59); and it appears certain that the name must have arisen at an early period, while the Greek colonies in Italy were at the height of their power and prosperity, and before the states of Greece proper had attained to their fullest greatness. But the omission of the name in Herodotus and Thucydides, even in passages where it would have been convenient as a geographical designation, seems to show that it was not in their time generally recognised as a distinctive appellation, and was probably first adopted as such by the historians and geographers of later times, though the origin must have to be derived from a much earlier age. It is perhaps still more significant, that the name is not found in Sclavus, though that author attaches particular importance to the enumeration of the Greek cities in Italy as distinguished from those of the barbarians.

Nur is the use of the term, even at a later period, very fixed or definite. It seems to imply that the Greek cities of Sicily were included under the appellation; but this is certainly opposed to the more general usage, which confined the term to the colo-
MAGNA GRAECIA.

nies in Italy. Even of these, it is not clear whether Cumae and its colonies in Campania were regarded as belonging to it; it is certain at least that the name is more generally used with reference only to the Greek cities in the south of Italy, including those on the shores of the Tarentine gulf and the Bruttian peninsula, together with Veii, Poseidonia, and Neapolis, on the W. coast of Lucania. Sometimes, indeed, the name is confined within still narrower limits, as among others to cities on the Tarentine gulf, from Locri to Tarentum (Pline, iii. 10. s. 15; Ptol. iii. 1. § 10); but it is probable that this distinction was introduced only by the later geographers, and did not correspond to the original meaning of the term. Indeed, the name itself sufficiently implies (what is expressly stated by many ancient writers) that it was derived from the number and importance of the Greek colonies in Southern Italy, and must, therefore, naturally have been extended to them all. (Strabo, v. p. 253; Suidas, Ch. 303; Ptol. iii. 118; Athen. xii. p. 532; Justin, xx. 2; Cic., Tusc. iv. 1, v. 4, de Or. iii. 54.) It must be added that the name was never understood (except perhaps by later geographers) as a territorial one, and the term was applied merely to the Greek cities on the coasts, so as to correspond with the expression "Grecorum omnium," employed by Livy (xii. 61). The same author in one passage (xxxvi. 7) uses the phrase "Graecia Major," which is found also in Festus (p. 134, ed. Müll.), and employed by Justin and Ovid (Justin, l. c.; Ovid, Fast. iv. 64); but the connexion of form and expression was certainly Graecia Magna (Cic. Epist. ii. 65.).

There could obviously be no ethnic appellation which corresponded to such a term; but it is important to observe that the name of Ταύρικας is universally used by the best writers to designate the Greeks in Italy, or as equivalent to the phrase οἱ Ταύρικοι Καλαμιαμοοι, and is never confined with that of Ταύρικος, or the Italians in general. (Thuc. vi. 44; Herod. iv. 15, &c.) Polybius, however, as well as later writers, sometimes loses sight of this distinction. (Ptol. vi. 52.)

The geographical description of the country known as Magna Graecia is given under the article ITALIA, and in more detail in those of BRUTTIUM, LUCANIA, and CALABRIA; but as the history of these Greek colonies is of a great extent separate from that of the mother country, while it is equally distinct from that of the Italian nations which came early in contact with Rome, it will be convenient here to give a brief summary of the history of Magna Graecia, bringing together under one head the leading facts which are given in the articles of the several cities.

The general testimony of antiquity points to Cumae as the most ancient of all the Greek settlements in Italy; and though we may reasonably refuse to admit the precise date assigned for its foundation (a. c. 1050), there seems no sufficient reason to doubt the fact that it really preceded all other Greek colonies in Italy or Sicily [CUMAE]. But, from its relative position, it appears to have been in great measure isolated from the later Greek settlements, and, together with its own colonies and dependencies, Dicaearchia and Neapolis, formed a little group of Greek cities, that had but little connection with those further south, which here form the immediate subject of consideration.

With the single exception of Cumae, it seems certain that none of the Greek colonies in Italy were more ancient than those in Sicily; while there seems good reason to suppose that the greater part of them were founded within the half century which followed the first commencement of Greek colonisation in that quarter. (B. C. 735—685.) The causes which just at that period gave such sudden an impetus to emigration in this direction, are unknown to us; but, though the precise dates of the foundation of these colonies are often uncertain, they have no record of their establishment equal either in completeness or authority to that preserved by Thucydides concerning the Greek cities in Sicily, we may still trace with tolerable certainty the course and progress of the Greek colonisation of Italy.

The Achaean led the way; and it is remarkable that a people who never played more than a subordinate part in the affairs of Greece itself should have been the founders of two of the most powerful cities of Magna Graecia. Of these, SYRACUS was the earliest of the Achaean colonies, and the most ancient of the Greek settlements in Italy of which the date is known with any approach to certainty. Its foundation is ascribed to the year 720 B.C. (Suidas, Ch. 360; Critias, vi. p. 174); and the city of CROTONE, according to the best accounts, may be placed about ten years later, B.C. 710. [CROTONE.] Within a very few years of the same period, took place the settlement of TARENTUM, a Spartan colony founded after the close of the First Messenian War, about 708 B.C. A spirit of rivalry between this city and the Achaean colonies seems to have early sprung up, and was with a view to the encroachments of the Tarentines that the Achaean, at the invitation of the Sybarites, founded the colony of METAPONTUM, on the immediate frontier of the Tarentine territory. The date of this is very uncertain (though it may probably be placed between 700 and 680 B.C.); but it is clear that Metapontum rose rapidly to prosperity, and became the third in importance among the Achaean colonies. While the latter were thus extending themselves along the shores of the Tarentine gulf, we find subduing in the midst of them the Ionian colony of SIRIS, the history of which is extremely obscure, but which for a brief period rivalled even the neighbouring Sybaris in opulence and luxury. [SIRIS].

Further towards the S. the Ionian colony of SYRA was founded near the Cape Zephyrion the city which was thence known by the name of Locri Epizephyrii. This settlement is described by Strabo as nearly contemporary with that of Crotone (B. C. 710), though some authorities would bring it down to a period thirty or forty years later. [LOCRI.] The next important colony was that of RHEGION, on the Sicilian strait, which was, according to the general statement, a Chalcidian colony, founded subsequently to Zancle in Sicily, but which, from the traditions connected with its foundation, would seem to have been more ancient even than Sybaris. [RHEGION.] The Greek cities on the Tyrrhenian sea along the shores of Bruttium and Lucania were, with the single exception of VILLA, which was not founded till about 540 B.C., all of them founded from the earlier settlements already noticed and not sent out directly from the mother country. Thus POZITONIA, LADUS and SCIABRUS, on the Tyrrhenian sea, were all colonies of Sybaris, which in the days of its greatness undoubtedly extended its dominion from sea to sea. In like manner, Crotone had founded TERRA on the W. coast of the Bruttian peninsula, as well
as CAULONIA on the E. coast, but considerably more to the S. Locri, also, had established two colonies on the W. coast, HIPPONIUM and MEDMA; neither of which, however, attained to any great importance. Several other places which at a later period assumed more or less of a Greek character, were probably only Oenotrian towns, which had become gradually Hellenized, but without ever receiving Greek colonies. Such were PAVIA, TESSALONICA, TRIPOLIS, &c., and probably SCTILLETTUM also, though this is frequently called an Athenian colony. We have very little information as to the early history of these Greek cities in Italy. All accounts agree in representing them as rising rapidly to a high state of prosperity, and attaining to an amount of wealth and power which far exceeded that enjoyed at so early a period by any of the cities of the mother country. The Achaeans, colonies, Sybaris, Crotone, and Metapontum, seem to have been the first to attain to this flourishing condition; and Sybaris especially became proverbial for its wealth and the luxurious habits of its citizens. [SYBARIS.] There can be no doubt that the extraordinary fertility of the lands on which these colonies were founded, was the primary cause of their prosperity; but they appear, also, to have carried on an extensive foreign commerce; and as they increased in power they sought to extend their territorial possessions, so that we are told that Sybaris, in the days of its greatness, ruled over twenty-five dependent cities, and four nations or tribes of the neighboring Oenotrians. [SYBARIS.] It is remarkable how little we hear of any wars with the barbarians of the interior, or of any check to the progress of the Greek cities arising from this cause; and it seems probable, not only that the Pelasgic origin of these tribes [ΟΧΥΝΟΜΕΙΑ] caused them to assimilate with comparative facility with the Hellenic settlers, but that many of them were admitted to the full rights of citizens, and amalgamated into one body with the foreign colonists. This we know to have been the case with Locri in particular (Pol. xii. 8); and there can be little doubt that the same thing took place more or less extensively in all the other cities. (Diod. xii. 9.) It is, indeed, impossible, on any other supposition, to explain the rapidity with which these rose to so great a power and reputation at that time, unexampled in the Hellenic world. It seems certain that the period of about two centuries, which elapsed from the first settlement of the Greek colonies till after the fall of Sybaris (A.C. 710 — 510), was that during which these cities rose to the height of their power; and probably the half century preceding the latter event (A.C. 560—510) may be taken as the culminating point in the prosperity of the Achaeans cities (Grote, vol. iii. p. 522.) Unfortunately, it is precisely for this period that we are the most absolutely deficient in historical information. The loss of the early books of Diodorus is especially to be regretted, as they would undoubtedly have preserved to us many interesting notices concerning the early fortunes of the Greek cities, and at the same time have afforded us a clue to the chronological arrangement of the few scattered facts that have been preserved to us. The want of this renders it impossible to connect the extant notices into anything like a historical narrative. Among the earliest of these may probably be placed the leagues of the three great Achaean cities, - as, Sybaris, and Metapontum, for the expulsion of the Etruscans from their colony of Siris, - an union which appears to have led to the capture, and perhaps the destruction, of that city. (Justin. x. 1) But the date of this event is almost wholly uncertain [SOGAS,] and scarcely less so is that of much more celebrated battle of the Sagae, viz. Justin connects with the fall of Siris; while the authors would bring it down to a much later period. [SOGAS.] According to all accounts, the town was burned to the ground. It is said that 19,000 Crotians were defeated by 10,000, or at most 15,000, of the Sagaeans and Bregians, inflicted for a time a severe blow upon the prosperity of Crotone: but Sostes is certainly in error in representing that city as yet recovering from its effects. [CROTON.] Justin says the contrary, describes the period of depression consequent on this disaster as continuing only till the time of Pythagoras (xx. 4); and it is certain in the days of that philosopher, Crotone, as well as the neighbouring Achaean cities, appears in a state of great prosperity. It was about the year B.C. 530 that the sea of Pythagoras at Crotone gave rise to a naval change in the cities of Magna Graecia. The cities of the southern coast, not confined to that city, but extended to Syra and Metapontum also, as well as to Rhegium at Taras, and it was far from being isolated, the sea and the hands of the Pythagoreans. [CROTON.] The power was ultimately overthrown by a violent revolution, which led to the expulsion of Pythagoras himself and his followers from Crotone; and it seems to have been followed by similar disturbances in the other cities. We are very imperfectly informed as to the circumstances of these revolts, but it seems certain that they gave rise to a period of disorder and confusion throughout the cities of Magna Graecia from which the latter did not fully recover for a considerable period. (Pol. ii. 38, Secs. xx. 4; Iambli. V. F. P. 258—264, Porphyry. F. P. 54—58.) It was apparently before the expulsion of the Pythagoreans, and while their influence was paramount at Crotone, that the first cause of the Achaean war of 346-345, which led to the total destruction of the latter, A.C. 510. On this occasion we are told that the Crotoneans bought into the field 100,000 men, and the Sybarites at least 300,000; and though these numbers cannot be received as historically accurate, they sufficiently prove the opinion entertained of the spacious and power of the rival cities. The decisive victory of the Crotoneans on the banks of the river Iseus was followed by the capture and total destruction of Sybaris, - an event which seems to have produced a profound sensation in the Hellenic world (Herod. vi. 21), and must have caused a great change in the political relations of Magna Graecia. Unfortunately, we have no means of tracing these; we know only that a part of the remaining Sybarites took refuge in the colonial cities of Larisa and Scira, while another portion settled themselves on the banks of the Tres, where they maintained themselves for a considerable period. (Herod. l.c.; Strab. vi. pp. 363, 264.) The civil dissensions arising from the expulsion of the Pythagoreans may perhaps have been the cause of the remarkable circumstance (which we have already noticed as a less to account for), that none of the cities of Magna Graecia sent assistance to the Greeks at the
time of the Persian invasion. It is still more remarkable, that even when the Athenians and Lacedaemonians sent an embassy to Sicily to invite the assistance of Gela, we do not hear of any similar application to the Greek cities in Southern Italy.

While the same time (n. c. 478) we find mention of a disastrous defeat, which must, for a time, have given a severe check to the rising power of the Tarentines. That people appear to have taken little part in the disputes or contests of their Achaean neighbours; but after their ineffectual attempt to oppose the founding of Metapontum [METAPONTUM], would seem to have been principally engaged in extending their commerce, and in wars with the neighbouring barbarians. Here they found, among the Iapygians or Messapians, a more formidable opposition than was encountered by the other Greek cities. After repeated contests, in many of which they had come off victorious and reduced many of the Iapygian towns, the Tarentines were defeated in a great battle by the Iapygians, with a heavy loss that Herodotus tells us it was the greatest slaughter of Greek citizens that had happened within his knowledge. Three thousand Rhetian auxiliaries, who had been sent to the support of the Tarentines, perished on the same occasion. (Herod. vii. 170; Dio. 12. 52.)

The period between the Persian and Peloponnesian Wars. The establishment of the two latest of the Greek colonies in Southern Italy—THRACE and HERALCIA. Both of these were, however, but a kind of renewal of previously existing settlements. Thrace was founded in B.C. 443, by a body of colonists, of whom the Athenians seem to have taken the lead, but which was composed, in great part, of settlers from other states of Greece [THRACE], with whom were united the remaining citizens of Sybaris, and the new colony was established within two miles of the site of that city. The new settlement rose rapidly to prosperity, but was soon engaged in war with the Tarentines for the possession of the vacant district of Siris; until these hostilities were at length terminated by a compromise, according to which the two cities joined hands in establishing a new colony, three miles from the site of the ancient Siris, to which they gave the name of Hercules, B.C. 432. (Strab. vi. p. 264; Dio. 72. 53, 36.) But though thus founded by common consent, the Tarentines seem to have had much the largest share in its establishment, and Hercules was always considered as a colony of Tarentum. During the Peloponnesian War the cities of Magna Graecia seem to have studiously kept aloof from the contest. Even when the Athenian expedition to Sicily (n. c. 415) involved the whole of the Greek cities in that island in the war, those on the coasts of Italy still endeavoured to preserve their neutrality, and refused to admit the Athenian forces within their walls, though they did not offer any obstruction to their progress. (Thuc. vi. 44; Dio. xii. 3.) At a later period, however, the Thurians (among whom there was scarcely a pax or parcy) and the Metapontines were induced to enter into a formal alliance with Athens, and supplied a small force to their assistance. (Thuc. vii. 33, 35; Dio. xii. 11.)

At this period the cities of Magna Graecia seem to have been still in a prosperous and flourishing condition; but it was not long after that they began to feel the combined operation of two causes which mainly contributed to their decline. The first danger which threatened them was from the south, where Dionysius, tyrant of Syracuse, after having established his power over the greater part of Sicily, began to seek to extend it in Italy also. Hitherto the cities of Italy had kept aloof in great measure from the revolutions and wars of the neighbouring island: Rhetium and Locri alone seem to have maintained closer relations with the Sicilian Greeks. The former, from its Chalcidic origin, was naturally friendly to the colonies of the same race in Sicily; and when Dionysius turned his arms against the Chalcidic cities, Neapolis, Catana, and Locantia, he at once brought upon himself the enmity of the Rhetians. Hence, when he soon after applied to conclude a matrimonial alliance with them, the proposal was indignantly rejected. The Locrians, on the other hand, readily accepted his offer, and thus secured the powerful assistance of the despots in his subsequent wars. (Dio. xiv. 44, 107.) From this time his efforts were mainly directed to the humiliation of Rhetium and the aggrandisement of the Locrians. His designs in this quarter soon excited so much alarm, that, in B.C. 393, the Italian Greeks were induced to conclude a general league for their mutual protection against the arms of Dionysius on the one side, as well as those of the Lucanians on the other. (Id. 91.) But the result was far from successful. The combined forces of the confederates were defeated by Dionysius in B.C. 387, at the river Hellesporus or Helorus, near Canolium, B.C. 389; and this blow was followed by the capture of Caulonia itself, as well as Hipponium, both of which places were reduced to a state of dependence on Locri. Not long after, the powerful city of Rhetium was compelled to surrender, after a siege of nearly eleven months, B.C. 387. (Dio. xiv. 105—110, 111.)

While the more southerly cities of Magna Graecia were suffering thus severely from the attacks of Dionysius, those on the northern frontier were menaced by a still more formidable danger. The Lucanians, a Sabellian race or branch of the Samnite stock, who had pressed forward into the territory of the Oenotrians, and had been reduced to subjection by the tribes of that people who inhabited the mountain districts of the interior, next turned their arms against the Greek cities on the coast. Paestum, the most northerly of these settlements, was the first which fell under their yoke (Strab. vi. p. 254); and though we cannot fix with accuracy the date of its conquest, it is probable that this took place some time before we find them engaged in wars with the cities on the Tarentine gulf. If, indeed, we can trust to the uncertain chronology of some of these events, they would seem to have been already engaged in hostilities with the
Magn Graecia. 250

Rising colony of Thurii at an early period of its existence (Polyaem. ii. 10); but it was not till after 400 B.C. that their power assumed a formidable aspect towards the Greeks in general. The territory of Thurii was the first object of their hostilities, but the Greek cities were not insensible to their power; and hence the general leagues of the Italian Greeks in B.C. 393, as already mentioned, was directed as much against the Lucanians as against Dionysius. Unfortunately, their arms met with equal ill success in both quarters; and in B.C. 390 the confederate forces were defeated by the Lucanians with great slaughter near Lato. (Diod. xiv. 101, 105; Strab. vi. p. 253.) That city had already fallen into the hands of the invaders, who now pressed on towards the south, and seem to have spread themselves with great rapidity throughout the whole of the Bruttian peninsula. Here they became so formidable that the younger Dionysius was compelled to abandon the policy of his father (who had courted the alliance of the Lucanians, and even rendered them active assistance), and turn his arms against them, though with little effect. A period of great confusion and disorder appears to have ensued, and the rise of the Bruttian people, which took place at this period (B.C. 358), though it in some measure broke the power of the Lucanians, was so far from giving any relief to the Greek cities that they soon found the Bruttian people themselves as formidable neighbours. The flourishing cities of Terina and Hipponium were conquered by the barbarians (Diod. xiv. 15; Strab. vi. 255); Rhegium and Locri, though they maintained their nationality, suffered almost as severely from the oppressions and exactions of the younger Dionysius; while Crotone, long the most powerful city in this part of Italy, seems never to have recovered from the blow inflicted on it by the elder despotic of that name (Crotoma), and was with difficulty able to defend itself from the repeated attacks of the Bruttians. (Diod. xix. 3, 10.)

Meanwhile, the Lucanians had turned their arms against the more northerly cities on the Tarentine gulf, and the Epirotae, to a large extent, bore the brunt of the attack; but at length Tar- rentum itself, which had hitherto stood aloof, and had apparently not even joined in the league of B.C. 393, was compelled to take up arms in its own defence. The Tarentines could have suffered comparatively but little from the causes which had so severely impaired the prosperity of the other cities of Magna Graecia; and Tarentum was undoubtedly at this time the most opulent and powerful of the Greek cities in Italy. But its citizens were already enervated by indolence and luxury; and when they found themselves threatened by the forces of the Lucanians, combined with their old enemies the Messapians, who mistrusted their own resources, and their nearest Greek city was too far afield for assistance. Archidamus, king of Sparta, accepted the invitation, and proceeded to Italy with a considerable force, where he appears to have carried on the war for some years, but was finally defeated and slain in a battle near Manduria, B.C. 338. (Diod. xvi. 63, 88.) Only a few years afterwards, B.C. 334, however, B.C. 328, he took over Epirus, and proceeded to Italy for the same purpose. The history of his expedition is, unfortunately, very imperfectly known to us; though it is clear that his military operations were attended with much success, and must have exercised considerable influence upon the fortunes of the Greek cities. Though invited, in the first instance, by the Tarentines, he subsequently quarrelled with that people, and even turned his arms against them, and took Harecla, their colony and dependency. At the same time he defeated the combined forces of the Lucanians and Neapolitans, in several successive battles, retook Tarina, Consentia, and several other towns, and penetrated into the heart of Bruttium, where he was slain by a Lucanian exile, who was serving in his own army, B.C. 336. (Liv. viii. 17, 24; Justin. xil. 2.)

After his death, the wars between the Tarentines and Lucanians appear to have continued with little interruption; though we have no further account of them till the year 303 B.C., when the former people again sued to Sparta for assistance, and Cleon- nymus, the uncle of the Spartan king, repaired to Tarentum with a large mercenary force. So formidable did this armament appear that both the Mes- sapians and Lucanians were speedily induced to sue for peace; while Metapontum, anxious, for some reason or other, had opposed the views of Cleonymus, was reduced by force of arms. (Diod. xx. 104.) The Spartan prince, however, soon alienated all his allies by his luxury and rapacity, and quitted Italy the object of universal contempt.

We have very little information as to the wars of Agathocles in Bruttium; though we learn that he made an unsuccessful attempt to seize Hipponium and Crotone, and occupied the latter city with a garrison. It is evident, therefore, that his designs were directed as much against the Greek cities as their barbarian neighbours; and the alliance which he concluded at the same time with the Iapygians and Pachaeans could only have been with a view to the humiliation of Tarentum. (Diod. xxii. 9, 8.) His ambitious des- igns in this quarter were interrupted by his death, B.C. 259.

Only a few years later than this took place the celebrated expedition of Pyrrhus to Italy (B.C. 281 —274), which marks a conspicuous era in the his- tory of Magn Graecia. Shortly before that event, the Thuriacs, finding themselves hard pressed and in imminent danger, concluded an alliance with the Romans, who raised the siege and defeated the assailants, B.C. 283. (Appian, Samn. 7; Val. Max. i. 8. § 6.) This was the first occasion that brought the Roman power down to the shores of the Tarentine gulf; and here they almost immediately after came into collision with the Tarentines themselves. (Tarentum.) That people, conscious of their inability to resist the power of these new enemies, now invoked the assistance of Pyrrhus, king of Epirus, at the same time that they con- cluded a league with the Lucanians and Samnites, so long the inveterate enemies of Rome. Hence, when Pyrrhus landed in Italy, he found himself supported at the same time by all the remaining Greek cities in that country, as well as by the barbaric nations with whom they had been so long at war. It was un- necessary to enter into a detailed account of his campaigns; notwithstanding his first successes, his alliance proved of no real advantage to the Greeks, while his visit to Sicily in B.C. 278, and his final departure in B.C. 274, left them at the mercy of the victorious Romans. The Tarentine city itself was taken by the consuls in B.C. 273. Crotone and Locri had previously fallen into the hands of the Romans; while Rhegium, which was held by a revolted body of Campanian troops, originally placed there as a gar- rison, was finally reduced to subjection in B.C. 271
MAGNA GRAECIA.

There can be no doubt that the cities of Magna Graecia had suffered severely during these wars; the foreign troops placed within their walls, whether Roman or Greek, appear to have given way to similar excesses; and the garrisons of Pyrrhus at Locri and Tarentum were guilty of exactions and cruelties which almost rivalled those of the Campanians at Rhegium. In addition to the loss of their independence, therefore, it is certain that the war of Pyrrhus inflicted a mortal blow on the prosperity of the few Greek cities in Southern Italy which had survived their long-continued struggles with the Lucanians and Bruttians. The decayed and enfeebled condition of the once powerful Crotona (Liv. xvi. 30) was undoubtedly common to many of her neighbours and former rivals. There were, however, some exceptions; Heraclea especially, which had earned the favour of Rome by a timely submission, obtained a treaty of alliance on unusually favourable terms (Cic. pro Balb. 23), and seems to have continued in a flourishing condition.

But the final blow to the prosperity of Magna Graecia was inflicted by the Second Punic War. It is probable that the few cities that were visited with unwelcome tidings by the Roman victors, and were naturally desirous to recover their lost independence. Hence they eagerly seized the opportunity afforded by the victories of Hannibal, and after the battle of Cannae we are told that almost all the Greek cities on the S. coast of Italy (Gracceorum esse firmas orb. Liv. xvi. 61) declared in favour of the Carthaginian cause. Some of these acts were, however, overruled by Roman garrisons, which restrained them from open defection. Tarentum itself (still apparently the most powerful city in this part of Italy) was among the number; and though the city itself was betrayed into the hands of the Carthaginian commander, the citadel was still retained by a Roman garrison, which maintained its footing until the city was recovered by Fabius, a. c. 209. (Liv. xxi. 6—11, xxvii. 15, 16.) Tarentum was on this occasion treated much like a captured city, and plundered without mercy, while the citizens were either put to the sword or sold as slaves. Metapontum was only saved from a similar fate by the removal of its inhabitants and their property, when Hannibal discovered the march of the Romans, and in order to protect them, and at a later period of the war Terina was utterly destroyed by the Carthaginian general. (Liv. xxvii. 51; Strab. vi. 256.) Locri and Crotona were taken and retaken: Rhegium alone, which maintained its fidelity to Rome inviolate, though several times attempted by a Carthaginian force, seems to have in great measure escaped the ravages of the war.

It is certain that the cities of Magna Graecia never recovered from this long series of calamities. We have very little information as to their condition under the government of the Roman Republic, or the particular regulations to which they were subjected. But it is probable that, until after the complete subjugation of Greece and Macedonia, they were looked upon with a jealous eye as the most powerful allies of their kinmen beyond the seas (Liv. xxxxi. 7); and even the colonists, whether of Eoman or Latin citizenship, which were settled on the coasts of Southern Italy, were probably designed rather to keep down the previous inhabitants than to recruit the exhausted population. One of these colonies, that to Posidonia, now known as Paestum, had been established at a period as early as a. c. 778 (Liv. Epit. xiv.; Vell. Pat. i. 14); and Brundisium, which subsequently rose to be so important a city, was also settled before the Second Punic War, a. c. 244. (Vell. Pat. i. c.; Liv. Epit. xix.) But, with these exceptions, all the Roman colonies went to the coasts of Lucania, Bruttium, and Calabria, date from the period subsequent to that war. Of these, Buzetum in Lucania and Tempes in Bruttium were settled as early as a. c. 194; and in the same year a body of Roman colonists was established in the n. e. of Corinth (Liv. xxxi. 47). Shortly afterwards two other colonies were settled, one at Thurii in Lucania, in a. c. 193, and the other at Hippoion or Vibo, in Bruttium, a. c. 192. (Liv. xxxv. 53, xxxv. 9, 40.) The last of these, which, under the name of Vibo Valentia became a flourishing and important town, was the only one of these colonies which appears to have risen to any considerable prosperity. At a much later period (a. c. 128), the two colonies sent to Scylacum and Tarentum, under the name of Colonie Minervia and Neptunia (Vell. Pat. i. 15), were probably designed as an attempt to recruit the sinking population of those places.

But all attempts to check the rapid decline of this part of Italy were obviously vain and unprovable, or indeed almost certain, that malaria begins to make itself severely felt as soon as the population diminished. This is noticed by Strabo in the case of Posidonia (v. p. 251); and the same thing must have occurred along the shores of the Tarentine gulf. Indeed, Strabo himself tells us, that, of the cities of Magna Graecia which had been so famous in ancient times, there were not a few, the traces of their Greek civilisation in his day were Rhegium, Tarentum, and Neapolis (vi. p. 225); while the great Achaean cities on the Tarentine gulf had almost entirely disappeared. (Ib. p. 262.)

The expressions of Cicero are not less forcible, that Magna Graecia, which had been so flourishing in the days of Pythagoras, and abounded in great and opulent cities, was, in his time, nothing but utter ruin (esse quidem delecta est, Clc. de Amic. 4, Tusc. iv. 1). Several of the towns which still existed in the days of Cicero, as Metapontum, Heraclea, and Locri, gradually fell into utter insignificance, and totally disappeared, while Tarentum, Crotona, and a few others maintained a sickly and feeble existence through the middle ages. (Liv. xvi. 61.)

It has been already observed, that the name of Magna Graecia was never a territorial designation; nor did the cities which composed it ever constitute a political unity. In the earliest times, indeed, the difference of their origin and race must have effectually prevented the formation of any such union among them as a whole. But even the Achaean cities appear to have formed no political league or union among themselves, until after the troubles growing out of the expulsion of the Pythagoreans, on which occasion they are said to have applied to the Achaeanans in Greece for their arbitration, and to have founded by their advice a temple of Zeus Honorius, where they were to hold councils to deliberate upon their common affairs and interests. (Polf. E. 96.)

A more comprehensive league was formed in a. c. 393, for mutual protection against the attacks of Dionysius on one side, and the Lucanians on the other (Diod. xiv. 91); and the cities which composed it must have had some kind of general council or place of meeting. It is probable that it was on this occasion that the general meetings of the Italian Greeks, illustrated by Strabo (v. p. 250), were first instituted; though it is highly improbable
that the Tarentine colony of Hercules was selected in the first instance for the place of assembly, as the Tarentines seem at first to have kept aloof from the contest, and it is very doubtful whether they were included in the league at all. But it was natural that, when the Tarentines assumed the leading position among the allied cities, the councils should be transferred to their colony of Hercules, just as Alexander of Epirus afterwards sought to transfer them from the river Acanthus in the Thurian territory, as a mark of enmity towards the Tarentines. (Strab. l.c.)

MAGNATA. [MAGNATAE]
MAGNIA, MAGNETES. [THEMATIA,].
MAGNIA (Μάγνηα) Εὐχ. Μάγνηα. 1.
A city in Ionia, generally with the addition πόλις
or ἡ πόλις Μαγνητών (ad Maeandrum), to distinguish it from the Lydian Magnesia, was a considerable city, situated on the slope of mount Taurus, on the banks of the small river Lethaena, a tributary of the Maeander. Its distance from Mileta was 120 stadia or 15 miles. (Strab. xiv, pp. 636, 647; Pliny ii. 93; Ptol. v. 2, § 16; vii. 17, § 16; Suidas, p. 37; Liv. xxxvii. 57, foll.; Tac. Ann. ii, 47.) At a later time, however, the city was taken and destroyed by the Cimmerians; perhaps about b.c. 726. In the year following the destruction, its citadel was occupied, and the place rebuilt by the Milesians, or, according to Athenaeus (xii. p. 595), by the Ephesians. Themistocles during his exile took up his residence at Magnesia, the town having been assigned to him by Artaxerxes to supply him with bread. (Nepos, Themist. 10; Diod. xi. 57.)

The Persian satrap of Lydia also occasionally resided in the place. (Herod. i. 161, ii. 192.) The territory of Magnesia was extremely fertile, and produced excellent wine, figs, and cucumbers (Athen. i. p. 29, ii. p. 59, iii. p. 78.) The town contained a temple of Dindymene, the mother of the gods; and the wife of Themistocles, or, according to others, his daughter, was priestess of that divinity; but, says Strabo (p. 647), the temple no longer exists, the town having been transferred to another place. The new town which the geographer saw, was most remarkable for its temple of Artemis Leucophryne, which in size and in the number of its treasures was indeed surpassed by the temple of Ephesus, but in beauty and the harmony of its parts was superior to all the temples in Asia Minor. The change in the site of the town alluded to by Strabo, is not noticed by any other author. The temple, as we learn from Vitruvius (vii. Praefat.), was built by the architect Hermogenes, in the Ionic style. In the time of the Romans, Magnesia was added to the kingdom of Pergamus, after Antiochus had been driven eastward beyond Mount Taurus. (Liv. xxxvii. 45, xxxviii. 13.) After this time the town seems to have decayed, and is rarely mentioned, though it is still noticed by Pliny (v. 31) and Tacitus (Ann. iv. 55). Dio (p. 659) ranks it among the bishopric of Asia, and later documents seem to imply that at one time it bore the name of Maeandropolis. (Concil. Constantin. iii. p. 666.) The existence of the town in the time of the emperors Aurelius and Gallienus is attested by coins.

Formerly the site of Magnesia was identified with the modern Gewel-bazar; but it is now generally admitted, that Inek-bazar, where ruins of the temple of Artemis Leucophryne still exist, is the site of the ancient Magnesia. (Leake, Asia Minor, pp. 342, foll.; Arundell, Seven Churches, pp. 55, foll.; Cramer, Asia Minor, vol. i. pp. 459, foll.)

COIN OF MAGNESIA AD MAEANDRUM.

2. A town of Lydia, usually with the addition πόλις Μαγνητών (ad Sipyrum), to distinguish it from Magnesia on the Maeander in Ionia, situated on the north-western slope of Mount Sipylos, on the southern bank of the river Hermus. We are not informed when or by whom the town was founded, but it may have been a settlement of the Magnesians in the east of Thessaly. Magnesia is most celebrated in history for the victory gained under its walls by the two Scipios in c. 190, over Antiochus the Great, whereby the king was for ever driven from Western Asia. (Strab. xii. p. 622; Plin. ii. 93; Ptol. v. 2, § 16; vii. 17, § 16; Suidas, p. 37; Liv. xxxvii. 57, foll.; Tac. Ann. ii, 47.) The town, after the victory of the Scipios, surrendered to the Romans. (Appian, Syr. 35.) During the war against Mithridates the Magnesians defended themselves bravely against the king. (Paus. ii. 20, § 3.) In the reign of Tiberius, the town was nearly destroyed by an earthquake, in which several other Asiatic cities perished; and the emperor on that occasion granted liberal sums from the treasury to repair the loss sustained by the inhabitants (Strab. xii. p. 579; xiii. p. 632; Tac. l.c.) From coins and other sources, we learn that Magnesia continued to flourish down to the fifth century (Hieroc. p. 660); and it is often mentioned by the Byzantine writers. During the Turkish rule, it once was the residence of the Sultan; but at present it is much reduced, though it preserves its ancient name in the corrupt form of Mossinias. The ruins of ancient buildings are not very considerable. (Chandler, Travels in Asia, ii. p. 352; Kepple, Travels, ii. p. 295.) The accompanying coin is remarkable by having on its obverse the head of Cicero, though the reason why it appears here, is unknown. The legend, which is incorrectly figured, should be ΜΑΡΙΟΣ ΤΥΛΙΟΣ ΚΗΡΗΓΙ. [L.S.]

COIN OF MAGNESIA AD SYPILUM.

MAGNOPOLIS (Μαγνόπολις), a town in Pontus, at the confluence of the rivers Lycus and Iris, was founded by Mithridates Eupator, who called it Eupatoria; but it was completed by Pompey the Great, who changed its name into Magnopolis (Strab. xii. p. 556). The town seems to have fallen into
MAGNUM PROMONTORIUM. MAGNUS PORTUS. MAGNUS SINUS. MAGO. MAGON. MAGONTIACUM. MAGORAHAS.

Decay at an early period, as it is not mentioned by any late writer. Appian (Mithr. 78, 115) speaks of it under both names, Eupatoria and Magopolis, and Strabo in one passage (xii. p. 580) speaks of it under the name of Maegopolis. Ruins of the place are said to exist some miles to the west of Somssia, at a place called Boghas Himun Kalkh. (Hamilton, Researches, i. p. 540. [L. S.]

MAGNUM PROMONTORIUM (Ἡ μέγας ἄκρα-
τάρας, Ptol. vii. 2. § 7; Marcian, Periplus p. 26), a promontory which forms the southern termination of the Chersonesus Aurea, in India extra Gangem, on the western border of the Sinus Mysiae. A modern name is C. Romanius. Some have supposed that the Prom. Magn. represents another cape, either considerably to the NW., now called C. Pata-

omi. Ptolemy's account of these far Eastern places is so doubtful, that it is impossible to feel sure of the evidence for or against the position of any place in the Aurea Chersonesus. [V.]

MAGNUM PROMONTORIUM, a promontory on the west coast of Lustitania (Mela, iii. 1. § 6), probably the same which Strabo (iii. p. 151) and Ptolemy ii. 5 § 1) call ᾨταῖρος ἄκρας, near the mouth of the Tagus. The passage in Strabo is corrupt; but according to the correction of Coray, approved of by Grockurd, the promontory was 310 stadia from the mouth of the Tagus, in which it corresponds with C. Espeickel. Pliny also calls it Magnus or Olist-

poenaeus, from the town in its vicinity; but he strangely confounds it with the Prom. Artabrum, on the NW. of the peninsula (v. 21. a. 35). [V.]

MAGNUM PROM. MAURETANIAE. MAU-

RETANIA. MAGNUS PORTUS. 1. (Πλήρως μεγάρως, Ptol. ii. 4. § 4; comp. Marcian, p. 41), a port-town of Hispanic Baetica, between the towns Abdera and the Prom. Charidem. 2. (Μέγας λιμή, Ptol. ii. 6. § 4), a bay on the coast of the Gallaei Lucenses, which is evidently the same as the Artaborum Sinus. [Vol. i. p. 226, b.]

3. (Μέγας λιμή, Ptol. ii. 3. §§ 4, 35), a har-

bour in Britain, opposite the island of Vectis, corres-

donent Probatica. 4. (Πλήρως μεγάρως, Ptol. iv. 2. § 2; Mela, i. 5; Plin. v. 2; It. Anton. p. 13), a port-town of Maria-
tania Caesareiana, on the road between Gluza and Quiria, described by Pliny as "civium Romanorum opus ipsum." It is identified by Forberger with Oros, of which the harbour is still called Maria-al-Kibr, i.e., the great Harbour. 5. (Μέγας λιμή, Ptol. iv. 6. § 6), a port on the west coast of Libya Interior, between the mouth of the river Dardanus and the promontory Byzantium. [V.]

MAGNUS SINUS (Δ μέγας κόλπος, Ptol. vii. 2. §§ 3, 5; Agathem. i. p. 53), the great gulf which runs up to the middle of the present king-

dom of Asa, and is known by the name of the Gulf of Siam. The ancient geographers correctly placed China on the east of this gulf, though they had no very accurate notions relative to its latitude or longitude. On the west side was the Aurea Chersonesus. [V.]

MAGO. [Balaeres, p. 374, s.]

MAGON (Μαγωρ, Arrian, Ind. c. 4), a river mentioned by Arrian as flowing into the Gangas on its left bank. It has been conjectured that it is the same as the present Rangana. [V.]

MAGONTIACUM. [Maguntiacum.]

MAGORAHAS, a river of Syria, under mount Li-

banus, mentioned by Pliny (v. 20) apparently be-

tween Sidon and Bybuset, and probably identical with the Tamyras of Strabo (xvi. p. 756), now Nahor-ed-Dammar; though Dr. Robinson suggests the Nahor-Beirat. (Bib. Res. vol. iii. pp. 433, 438.) [TAMYRAS.]

MAGORUM SINUS (Μαγορύς κόλπος), a bay on the Arabian coast of the Persian Gulf, in the country of the Theeni, who joined the Gerraei on the north. (Ptol. vi. 7. § 54.) It is still marked by the modern town of Magas, and the ancient name is accounted for by Mr. Foster by the fact that "the ancient Theeni are the Magian tribe of Beni-Temin, one of the last of the old inhabitants of the gulf and city of Magas—a deep bay, with its chief town of the same name, immediately above the bay of Katif." (Geogr. of Arabia, vol. ii. p. 215.) He maintains that the Magi of S. Matthew (ii. 1) were of this tribe, and from this country (vol. i. pp. 304—307.) [THEM.] [G. W.]

MAGRADA, a small river on the N. coast of Hispasia Tarraconensis, now Ureameca. (Mela, iii. 1. § 10.)

MAGYDUS (Μαγυδος; Eibh. Magydes; called Ma-

gyrds by Scylax, p. 39), a town of Pam-

phylia, on the coast between Attaleia and Perge, and subsequently of episcopal rank, is probably the Mygdale (Μυγδαλη), of the Stadiasmus. There are numerous variant spellings. Magyds, bearing the epigraph Martaemon, Leukas Hemaellus. It is with Laara. (Ptol. v. 5. § 2; Hieroc. p. 679; Stadia-

simus, §§ 301, 302; Leake, Asia Minor, p. 194; Craner, Asia Minor, vol. ii. p. 278.)

MAHANAIM (Μαναία, LXX.), a place, and after wards a town, on the east side of the Jordan, so named from the incident related in Genesis (xxiii. 2), where the word is translated, both by the LXX. and Josephus, Parumelloi, and also by the latter Ἱωά̈ννα. (Ant. i. 20. § 1). The following notices of its position occur in the Old Testament:—It was north of the brook Jabok (Gen. L. c, comp. v. 22), in the borders of Bashan (Josh. xiii. 30), after wards in the tribe of Gad (xxi. 38), but on the con fines of the half-tribe of Manasseh (xii. 29) as signed to the Leviathan. (Josh. v. 40.) Observe, v. ix. 80.) . It was occupied by the state of Jabboth, the king, during the time that David reigned in Hebron (2 Sam. ii.), and there he was assassinated (iv.). When David fled from Absalom, he was maintained at Mahanaim by Bar zillai, the aged sheikah of that district (2 Sam. xvii. 27, xiii. 32); and it was apparently in the vicinity of this city that the decisive battle was fought in the wood of Ephraim between the royal troops and the rebels (xviii.). A ruined site is mentioned in the Jebel Ajlam, under the name of Mahan, which probably marks the position of Mahanaim. (Robi-

nson, Bib. Res. vol. iii. Appendix, p. 166.) [G. W.]

MAIS, a station in Britain, so called upon an engraved bronze cup found at Rudhe, in Wiltshire. From this name occurring with those of four other stations, all on the line of the Great Wall, it is supposed to be identical with Magnus, or Magnes. [C. R. S.]

MAIS (Μαίς), a river of India intra Gangem, flowing into the Sinus Barygasenus, now the Mahi. (Nearch. p. 24; Arrian, Periplus Maris Erythraei.)

MAKEDDAH (Μακεδα, LXX., Euseb.; Macsyd, Joseph.), a city of the plains of the south part of the tribe of Judah (Josh. xv. 41), governed by a sheikah. It was the first city taken by Joshua after the battle is Gibeon; and there it was that the five confederate kings were found hid in a cave, which
was made their sepulchre after their executions (Jos. x. 16–25.) It is placed by Eunostius (Onomast. s. v.) 8 miles east of Eleutheropolis. [BETHMAGARIA] [3. W. v.]

MALA (Mäalä, Mädr), a town in Colchis, which Scylax (p. 32), in contradiction to other writers, makes the birthplace of Medea. [E. B. J.]

MALACA (Määläc, Strab.; Iul. ii. 4. § 7; Mäläker, Steph. B. s. v.: Młyka, Malakaros, Malaga), an important town upon the coast of Hispania Baetica, east of Calpe, which was equidistant from Gades and Malaca. (Strab. ii. p. 156.) According to the Antonine Itinerary (p. 405), the distance from Gades to Malaca was 145 miles; according to Strabo (iii. p. 140) the distance from Gades to Calpe was 750 stadia. Malaca stood upon a river of the same name, now Guadalmedina.

(Arion. Or. Mor. 426; Malaca cum fluvio, Plin. iii. i. 8.) Strabo says (I. c.) that Malaca was built in the Phoenician fashion, whence we may conclude that it was a Phoenician colony. Accordingly some modern writers have supposed that the name was derived from the Phoenician word maalcko, "royal;" but Humboldt says that Malaca is a Basque word, signifying the "side of a mountain." Under the Romans it was a foderata civitas (Plin. I. c.), and had extensive establishments for salting fish. (Strab. i. 4.) Arrian says (I. c.) that Malaca was formerly called Maaec; but Strabo had already noticed this error, and observed not only that Malaca was further from Calpe, but that the ruins of the latter city were clearly Baelica. Malaca is also mentioned in Strab. iii. pp. 158, 161, 163; Hirt. B. Alc. 48; Geogr. B. iv. 44. There are still a few remains of its ancient architecture. Its exact position cannot be determined, but it was probably along the Straits of Malaca. [V.]

MALAMANTUS (Mähleuor, Arrian, Ind. c. 4), a small tributary of the Cophen, or river of Kibar, perhaps now the Pandocora. [V.]

MALANA (Mälna, Arrian, Ind. c. 25), a cape which enters the Indian Ocean, and forms the western boundary of the Ostiae (one of the sea-coast tribes of Gedrosia) and the Ithiyophagi. There is no doubt that it is the same as the present C. Malan in Brahuh, the measurements of Nearchus and of modern navigators corresponding remarkably. (Vincent, Voy. of Nearchus, vol. i. p. 216.) [V.]

MALANGA (Mälænges, Plut. vii. 1. § 98), the chief town of the Arvari, a tribe who inhabited the eastern side of Hindustan, beyond where the Tynosis (now Kistna) flows into the sea. It has been supposed that it is the same place as the present Madras, but it may have been a little higher up near Nellore. [V.]

MALAO (Mälæ, Ptol. iv. 7. § 10. com. Mädr), probably answers to the modern Berbera, the chief town of the Somdick, who inhabits the western coast of Africa from the straits of Bab-el-Mandeb to cape Guardafui. This district has in all times been the seat of an active commerce between Africa and Arabia, and Malao was one of the principal marts for gums, myrrh, frankincense, cattle, slaves, gold, d unravel and ivory. (See Heren, Africae Nationes, vol. i. p. 380, Eng. trans.) [W. B. P.]

MALATA, according to the inscription, or MALATA according to the Pouting. Table, a place in Panonias Inferior, on the Danube. As the inscription was found at Petrosurdei, Malata was perhaps situated at or near the latter place. (Geogr. B. iv. 19; Marsilius, Distri. ii. p. 118, tav. 47.) [L. B.]

MALSCHUBEL [MAULSTAMM] [MALSCHUBEL]

MALCOAE. [MÄNDORO]

MALE (Mälä, a town in the district of Aegae in Caria, the inhabitants of which were transferred to Megalopolis upon the foundation of the latter city. (Paus. viii. 27. § 4.) Its territory was called the Malae (Mälä). Xenophon describes Leontora as a fortress situated above the Malaean; and as Leuctra was probably at or near Leontoros, Malae must have been in the same neighbourhood. [LEUCTHRA.] Leakes, however, connecting Malae with the river MALUS (Malæir, Paus. vii. 35. § 1), a tributary of the Alpheus, places the town on this river, and on the road from Megalopolis to Carausius (Leakes, Peloponnesici, p. 248); but this is not probable. The place MIDEA (Mälæa) mentioned by Xenophon (Hell. vii. 1. § 28) is probably a corrupt form of Malae. (Curius, Peloponnesici, vii. 358.)

MALEA (Mälä, Steph. B. s. v. et alii; Malæir, Herod. i. 62; Strab. viii. p. 358), still called Malac, a promontory of Laconia, and the most southerly point in Greece with the exception of Teneassar. For details see Vol. ii. p. 114.

MALLEA (Mälæa, Thucyd. iii. 4, 6; Xen. Hell. i. 6. §§ 26, 27; Malæa, Strab. xiii. p. 617; Malæa, Ptol. ii. 2; see M. of a. Ptol. ii. 2), the southernmost point of the island of Lemnos, reckoned by Strabo to be 70 stadia distant from Mytilene, 560 stadia from Cape Sigirnus, and 340 from Methymna. Immediately opposite, on the mainland, were the point of Cape and the islands of Aigion (see those articles). The modern name of Malia is Zizouws Boussas, or Cape St. Mary, and it is a high and magnificent promontory at sea. Xenophon says (I. c.) that the fleet of Callixaridas occupied this station before the sea-fight off Arginusae. There is some obliquity in Xenophon's topography in reference to this place; and the Malae of Thucydides (I. c.) can hardly have been C. St. Mary, unless there is some error in his relation. He says distinctly (c. 4.), that Malia lay to the north of Mytilene, and (c. 6.) that the Athenians had their market there, while besieging the city. The first statement is inconsistent with the position of Cape St. Mary, and the second with its distance from Mytilene. Possibly the Malae of Thucydides had some connection with the sanctuary of Apollo Malaea. (See the notes of Arnold and Poppo, and Thrallis's Greece, vol. iii. p. 173.) [J. S. H.]

MALIA (Mälæa, Mæala, or Malistos, Ptol. iv. 4. §§ 8), a large group of mountains in the southern part of the ancient Taprobane or Ceylon. There can be little doubt that it comprehends the mountain tract now known by the name of Newera Elinas, one of the chief mountains of which is called, from the Arabs, Adam's Peak, by the natives Siripada. Ptolemy states, that it is the water-shed of three rivers, which he calls the Sonnas, the Azan, and the Barosas, and describes with remarkable truth the present condition of the island, when he adds that in the low ground below it, towards the sea, are the pastures of the elephants. Pliny speaks of a mount-
MALECECA.

in the interior of India, which he calls Mona Maleus (vi. 19. 32). It has been supposed that he may refer to the western Ghidu; but as Maleus is evidently derived from the Ghidu, a mountain, this identification cannot, we think, be maintained.

MALECECA. [Lustianna, p. 220, a.]

MALENE (Μάλενα), a place near Atarmona, where Hiskias was defeated by the Persians, is not mentioned by any ancient author except Herodotus (vii. 6). [L. 4.]

MALETHUBALON (Μαλεθυβάλων), Ptol. iv. 2. § 15; Nobbe, ad loc. reads Malethubadoi, a mountain of Manetanis Cesarriensis, which is identified with Jebel Naser in the Sakhera. (Shaw's Travels, p. 56. [E. B. J.]

MALEVENTUM. [Beneventum.]

MALIUM P. (Μαλίον ἅτομον, Ptol. vii. 1. § 4), a prominence which forms the southern termination of Syrastrone (now Cutch). It separated the gulfs of Canthi (the Rama of Cutch) and Barygaza (Cambay).

MALIA (Μαλία; Eth. Malian), a town in Hissopiana Tarraconensis, near Numantia, but of which nothing more is known. (Appian, Hisp. 78. 2.)

MALICUS SINUS (ὁ Μαλικοῦς κόλπος; Μηλικίους, Thuc. iii. 96; Strab. ii. p. 403; ὁ Μηλικίους κόλπον, Herod. iv. 35; Polib. iv. 41; Gulf of Zitoun), a long gulf of the sea, lying between the southern coast of Thessaly and the northern coast of the Locri Epipolamis, and which derived its name from the country of the Malians, situated at its head.

At the eastern end of the gulf is the northwestern prominence of Euboza, and the islands Lichades, and into its utmost extremity the river Spercheius flows. The gulf is called Lamiaicus Sinus (ὁ Λαμιαίκους κόλπον) by Pausanias (i. 4. § 3, vii. 15. § 2, x. § 2), from the important town of Lamia; and in the same way the gulf is now called Zitoun, which is the modern name of Lamia.

Livy, who usually terms it Maliscus Sinus, gives it in one place the name of Aenianum Sinus (xxviii. 5), which is borrowed from Polybius (x. 42). (Comp. Leake, Northern Greece, vol. ii. p. 4.)

MALIARPHA (Μαλιαρφα, Ptol. vii. 14), a place of considerable commerce in the territory of the Parallai, on the northern coast of the Bay of Bengas, between the mouths of the Godomni and the Kitaos. It is represented now by either Malepar or by the ruins of Mavoliparam. [V.]

MALICHI INSULAE (Μαλιχίου νησιώτικον, Ptol. vii. § 44), two islands in the Sinus Arabicus, off the south coast of Arabia Felix. One of them is the modern Sokour.

MALIS (ὁ Μάλης γιά; Μαλής, Herod. vii. 198: Eth. Maleisidi, Μαληνίδες), a small district of Greece, at the head of the Malis Gulf, surrounded on all sides by mountains, and open only in the direction of the sea. The river Spercheius flowed through it. The limits of Malis are fixed by the description of Herodotus. It extended a little north of the valley of the Spercheius to the most western part of the straits of Thermopylae.

Anticyra was the northernmost town of the Malians (Herod. vii. 198); the boundary passed between Lamba and Anticyra. Anthela was their southernmost town (vii. 176, 200). Inland, the Anopoea, the path over Mount Oeta, by which the Persians entered the territory of the Thracian Malians from that of the Oetaeans (vii. 217). A more particular description of the locality is given under Thermopylae. According to Stephanus B. (a. v. Maleus), the Malian derivative of their name came from a town in Thessaly, not mentioned by any other ancient author, said to have been founded by Malus, the son of Amphecyton. The Malians were reckoned among the Thessalians; but although tributary to the latter, they were genuine Hellenes, and from the earliest times members of the Amphictyonic council. They were probably already a colony when in connection with the acknowledged Doric state of Hercules, the great Doric hero, is represented as the friend of Cyrus of Trachis, and Mount Oeta was the scene of the hero's death. Diodorus (vii. 59) even speaks of Trachis as the mother-town of Lacedaemon. When the Thracianis were hard pressed by their Oetean neighbours, about the commencement of the Peloponnesian War, they applied for assistance to the Spartans, who founded in consequence the colony of Herculesia near Trachis. (Thuc. iii. 92.)

Scylax (p. 24), who is followed by Diodorus (vii. 11), distinguishes between the Maleis and Malai Lista, the former extending along the northern coast of the Malian gulf from Lamia to Echinus; but, as no other writer mentions the town of Maleis, belonging to the Lamians, we ought probably to read Maleis, as K. O. Müller observes. Thucydides mentions three divisions (μέρη) of the Malians, called Parali (Παραλίοι), Priests (Πρίστη), and Trachinii (Τραχηνίοι). Who the Priests were is a matter only of conjecture; Grote supposes that they may have been possessed of a sacred spot on which the Amphictyonic meetings were held; while Leake imagines that they were the inhabitants of the Sacred City (Παρόν σαραγόν), to which, according to Callimachus (Hymn. in Del. 287), the Hyperborean offerings were sent from Dodona on their way to Delos, and that this Sacred City was the city Oeta mentioned by Stephanus B. The names of the Parali and Trachinii were sufficiently understood by their position. The Malians admitted every man to a share in the government, who either had served or was serving as a Hoplite (Aristot. Pol. iv. 10. § 10). In war they were chiefly famous as slingers and darters. (Thuc. iv. 100.)

Trachis was the principal town of the Malians. There were also Articu and Artus, or the western coast; and others, of which the names only are preserved, such as Colauses (Theopom. ap. Athen. vi. 254, f). Argoubia (Lyocyph. 903; Steph. B. s. v.), and Ithub (Scol. in Lycoch. I. c. Steph. B. s. v.). (Müller, Doriens, vol. i. p. 50; Grote, Greece, vol. ii. p. 578; Leake, Northern Greece, vol. ii. p. 263.)

MALAA, MALLOEA, or MALOEA, a town of southern Pherasaeia in Thessaly, perhaps represented in name by Molochistes, which Leake conjectures to be a corruption of Maloa, with the addition of Augusta. But as there are no remains of antiquity at Molochistes, Leake supposes Maloa to have occupied a height on the opposite side of the river, whence it sends guesthouses to ancient cinematographs. (Lit. xxi. 31, xxvi. 10, 13, xxvi. 29; Leake, Northern Greece, vol. iv. p. 311.)

MALLLI (Μαλλί, Arrian, Anat. vi. 7, 8, 14), the inhabitants of the south part of the district now known by the name of the Parnith. There was probably in ancient times a city from which they derived their name, though the name of the town is not given by ancient authors. (Arrian, l c.; Strab. ...
MALLUS.

The people occupied the spaces between the Acesines (Asells) and Hydratis (Hydratis), which both enter the Isthmus at no great distance. There can be little doubt that the name represents at once the country and the town of the Mallus, being itself derived from the Sanscrit Mila-sthiti. Pliny speaks of Malli quorum Mons Mallus (vi. 17. a. 21). If his locality corresponds with that of the other geographers, the name might be taken from the mountain which was conspicuous there. It is not, however, possible from Pliny's brief notice, to determine anything of the position of his Malli. It was in this country, and not improbably in the actual town of the Malli (as Arrian appears to think) that Alexander was nearly slain in combat with the Indian tribes of the Punjáb. [V.]

MALLUS (Mallás; Μαλλάς), an ancient city of Cilicia, which, according to tradition, was founded in the Trojan times by the soothsayers Mepens and Amphirhoeus. (Strab. xiv. p. 675, etc.; Arrian, Anab. ii. 5.) It was situated near the mouth of the river Pyramus, on an eminence opposite to Megaraus, as we must infer from Curtius (iii. 7), who states that Alexander entered the town after throwing a bridge across the Pyramus. Mallus therefore stood on the eastern bank of the river. According to Scylax (p. 40) it was necessary to sail up the river a short distance in order to reach Mallus; and Mela (i. 13) also states that the town is situated close upon the river; whence Ptolemy (v. 8. § 4) must be mistaken in placing it more than two miles away from the river. Mallus was a town of considerable importance, though it does not appear to have possessed any particular attractions. Its port-town was Magarea (Magaena), though in later times it seems to have had a port of its own, called Portus Palorum (Geogr. Nub. p. 195; Sammt. Secret. Fid. ii. 4, 26, whence we learn that in the middle ages it continued to be called Maleo; comp. Callim. Frugam. i. 5; Appian, Mithr. 26; Dionys. Per. 875; Ptol. viii. 17. § 44; Plin. H. N. v. 22; Stadinsam. Mar. M. §§ 151, 152; Leake, As. Min. pp. 216, etc. [L. S.]

MAMMALAE.

MAMMARIA (Mmrmwia), a district in Byzacena, at the foot of a chain of lofty mountains, where in A.D. 556 the enuche Solomon, with 10,000 Romans, inflicted a signal defeat upon 50,000 Moors. (Procop. B. V. ii. 11; Corpusius, Johannisi, vi. 283; Theophan. p. 170; Asat. p. 51; Le Beut, Bas Empires, vol. vii. pp. 307—311; comp. Gibbon, c. xii.) Justinius afterwards fortified Mamma (Procop. de Aed. vi. 6), which is represented by the plains lying under the slopes of Jebel Trusa near Kirdad, in the Regency of Tunis. (Barth, Wunderwurmen, pp. 247, 285.)

MAMPSARUS MONS, (Bogradia.)

MAMPSARUS MONS, a mountain in the east coast, possessing a town called MAMPSARIA (Mampsoria), near the mouth of the Medorrenus, the present Délbia. (Ptol. ii. 2. §§ 8, 9.) The name is the same as one of the Celtic tribes of Gaul. [Mesapuli.] MAMARMANIS PORTUS (Mamarmânus múçrus), a harbour on the west coast of Germany, and probably formerly on the mouth of the river Usk. It is perhaps identical with the modern Marna in West Friesland, which may even owe its name to the ancient port. (Ptol. ii. 11. § 1; Marcian, Heracle. p. 51, where it is called Marmurics.) [L. S.]

MANASSEH. (Palæstina.)

MANASSEH (Moschänon), a town in Mesopotamia, of which the site is uncertain. (Ptol. v. 18. § 9.)

MANCUNIUM, a town of the Brigantes in Britain (It. Ant. p. 482), now Manchester. But few, if any, of the remains of the ancient town are to be traced at the present day. From inscriptions we learn that at some period of the Roman domination a cohort of the Frisians was stationed at Mancunium; and that the sixth legion, or one of its divisions had its camp here, probably on the occasion of some journey into the north. [C. R. S.]

MANDACADA (Mandaca), a place in Mysia, which is not mentioned till the time of Hierocles (p. 683), though it must have existed before, as Pliny (v. 32) mentions Cilices Mandacadi in the northern part of Mysia on the Hellespont. [L. S.]

MANDAGARA (Mandagera, Ptol. viii. 1. § 7), a small port on the western coast of Hindostan, in the district now called Comonns. It was situated a little to the S. of Bombay, nearly in the same latitude as Poona. The author of the Periplus calls it Mandagara (p. 30). [V.]

MANDAGABAL (Mandagarab, Ptol. vi. 3. § 2), a small port on the southern coast of the Caspian sea, between the rivers Strato and Charidara. Forbiger has conjectured that it may be represented by the present Mandokhisar. [V.]

MANDALAE (Marbodius, Ptol. vii. 1. § 72), an Indian tribe who occupied both banks of the Ganges in the neighbourhood of Palimbortha (Patna), which was perhaps (as has been conjectured by some geographers), their chief city. They seem

COIN OF MALLUS IN CILICIA

MALOETAS. (Methydrium.)

MALVA. (Murcha.)

MALLUS. (Malla; Megalopolis.)

MAMMALAE (Mamallai kóyai), a village of the Cessantes, south of Badri Regia, on the Arabian coast of the Red Sea. (Ptol. vii. 1. § 9; *Garmades; Badri Regia.*) It has been supposed to be represented by the modern town of Kófóda, and to have been the capital of the piratical tribe of Conraite, mentioned by Arrian (Periplus, p. 15). [G. W.]

MAMMERTIANI. (Messana.)

MAMERTTIUM (Mamertiou: Eth. Mamertivos), a city in the interior of the Bruttian peninsula. It is noticed only by Strabo, who places it in the mountains above Locri, in the neighbourhood of the great forest of Sila, and by Stephanus of Byzantium, who calls it merely a city of Italy. (Strab. vi. 261; Steph. B. s. v.) There is no reason to reject these testimonies, though we have no other account of the existence of such a place; and its position cannot be determined with any greater precision. But the Mamertini who figure in history as the occupants of Messana are wholly distinct from the city of this obscure and nameless city.[E. H. B.]

MAMMA (Mmwwi), a district in Byzacena, at the foot of a chain of lofty mountains, where in A.D. 556 the enuche Solomon, with 10,000 Romans, inflicted a signal defeat upon 50,000 Moors. (Procop. B. V. ii. 11; Corpusius, Johannisi, vi. 283; Theophan. p. 170; Asat. p. 51; Le Beut, Bas Empires, vol. vii. pp. 307—311; comp. Gibbon, c. xii.) Justinian afterwards fortified Mamma (Procop. de Aed. vi. 6), which is represented by the plains lying under the slopes of Jebel Trusa near Kirdad, in the Regency of Tunis. (Barth, Wunderwurmen, pp. 247, 285.)

MAMPSARUS MONS. (Bogradia.)

MAMPSARUS MONS, a mountain in the east coast, possessing a town called MAMPSARIA (Mampsoria), near the mouth of the Medorrenus, the present Délbia. (Ptol. ii. 2. §§ 8, 9.) The name is the same as one of the Celtic tribes of Gaul. [Mesapuli.]

MANARMANIS PORTUS (Mamarmähnus múçrus), a harbour on the west coast of Germany, and probably formerly on the mouth of the river Usk. It is perhaps identical with the modern Marna in West Friesland, which may even owe its name to the ancient port. (Ptol. ii. 11. § 1; Marcian, Heracle. p. 51, where it is called Marmurics.) [L. S.]

MANASSEH. (Palæstina.)

MANCHANE (Moschänon), a town in Mesopotamia, of which the site is uncertain. (Ptol. v. 18. § 9.)

MANCUNIUM, a town of the Brigantes in Britain (It. Ant. p. 482), now Manchester. But few, if any, of the remains of the ancient town are to be traced at the present day. From inscriptions we learn that at some period of the Roman domination a cohort of the Frisians was stationed at Mancunium; and that the sixth legion, or one of its divisions had its camp here, probably on the occasion of some journey into the north. [C. R. S.]

MANDACADA (Mandaca), a place in Mysia, which is not mentioned till the time of Hierocles (p. 683), though it must have existed before, as Pliny (v. 32) mentions Cilices Mandacadi in the northern part of Mysia on the Hellespont. [L. S.]

MANDAGARA (Mandagera, Ptol. viii. 1. § 7), a small port on the western coast of Hindostan, in the district now called Comonns. It was situated a little to the S. of Bombay, nearly in the same latitude as Poona. The author of the Periplus calls it Mandagara (p. 30). [V.]

MANDAGABAL (Mandagarab, Ptol. vi. 3. § 2), a small port on the southern coast of the Caspian sea, between the rivers Strato and Charidara. Forbiger has conjectured that it may be represented by the present Mandokhisar. [V.]

MANDALAE (Marbodius, Ptol. vii. 1. § 72), an Indian tribe who occupied both banks of the Ganges in the neighbourhood of Palimbortha (Patna), which was perhaps (as has been conjectured by some geographers), their chief city. They seem
MANDANE

however, to have lived rather lower down the river near Monghir, in the district now called Behar. (See Lessen's map.)

MANDANE (Μανδανή), a town on the coast of Cilicia, between Celenderis, and Cape Paphlagon, from which it was only five stadia distant (Strabo. §§ 174, 175). It is probably the same place as the Myanda or Myanda in Pliny (v. 27); and if so, it must also be identical with the town of Myra (Μύρα) mentioned by Strabo (p. 40) between Nagdus and Celenderis.

MANDARAE (Μανδαραῖ), the district about Cabyles in Macedonia. (Steph. B. s. v.) [E. B. J.]

Mandraka. [Deecke.]

MANDORI. [Manduroi.]

MANDROCOLUM. [Carmesio, Vol. I. p. 551, s.]

MANDRUANI (Flin. vi. 16. a. 18), a people mentioned by Pliny as occupying a part of Western Bactriana, under the spurs of the Paropamisa. They are now, like several other tribes whose names are given by that geographer to the same locality, no longer to be identified.

MANDRUPOLIS (Μανδρύπολις or Μανδρύπωλος), a town in Mysia (Hierocl. p. 664), now called Mandra or Mandrepors, at the foot of Mount Tenaros. Stephans of Byzantium (s. v.) erroneously places the town in Phrygia. There seems to be little doubt but that Mandrupolis is the same town as Mandrepors or Mandrepion, mentioned by Livy (xxxviii. 15).

MANDRUS MONS ((frōr Μανδρο, Φρανδρος Μονς), one of the chief mountains of Libya, from whence flowed all the streams from Salathus to Massa; the middle of the mountain has a position of 14° E. long. and 19° N. lat., assigned to it by Ptolemy (iv. 6. § 8). Afterwards (§ 14) he describes the river Niger as uniting, or joining together (συγκείνων), Mount Mandrus with Mount Thala. [Niger.] (Comp. London Geogr. Journ. vol. ii. p. 19; Denkm. Dissertation on the Niger, p. 81.) Ptolemy (§ 17) places the following tribes in the neighbourhood of this mountain: the Rabii (Ράβιοι), the Mandon (Μανδόν), and the Mandori (Μανδορί).

Mandubii (Μανδοβεῖοι), a Gallic people whom Strabo (iv. p. 191) erroneously calls the neighbours of the Arverni. When Caesar (n. c. 52) was marching through the territory of the Lingones, with the intention of retracing through the Sequani into the Provencia, he was attacked by the confederate Galli under Vercingetorix (B. G. vii. 68). The Gallic were defeated, and Vercingetorix, with his men, took refuge in Alesia, a town of the Mandubii. The site of the battle is not indicated by Caesar, but the position of Alesia is at Alise, or Alise Sancta Reina, as it is also called, in the department of the Côte d'Or.

The railroad from Paris to Dijon crosses the hills of the Côte d'Or, of which Alesia and the heights around it are a part. The Mandubii were a small people who fed their flocks and cattle on the grassy hills of the Côte d'Or, and cultivated the fertile land at the foot of Alesia. Before the blockade was formed, they had driven a great quantity of their animals (pecus) within the walls. (B. G. vii. 71.)

The Mandubii who had received their countrymen into the city, were turned out of it by them, with their wives and children, during Caesar's blockade, in order that the scanty supply of provisions for the troops might last longer. The Romans refused to receive the Mandubii and give them food. The certain conclusion from Caesar's narrative is, that these unfortunate people died of hunger between their own walls and the Roman circumvallation (B. G. vii. 78; Dion Cass. xli. 41). Caesar's description of Alesia is true; and the operations of his army were conducted (B. G. vii. 69—90) as easily understood.

This plan of Alesia and the surrounding country is taken from Cassini's last map of France. The city of the Mandubii, or Alesia, was "on the summit of a hill, in a very elevated position," as Caesar correctly describes it. This hill stands alone, and, except on the west side, where there is a plain, it is surrounded by hills of the same height, which are separated from Alesia by valleys. In the flat valley
on the north side of Alésia, and in the narrower valley at the east end, is the railroad from Paris to Dijon. The nearest railway station to Alésia is Les Lounnes.

The summit of Alésia is not quite flat; but the irregularities are inconsiderable. The sides of the hill beneath the plateau are steep and rocky; and the upper part of the ascent to the summit is not easy. Below the plateau, and below this steep ascent, there is a narrow level piece of ground, which appears to have been widened a little by the labour of man. This is the level part of the hill, which is another descent, which in some parts is steep. The fine plain (plantatio) at the western foot of Alésia, which Caesar describes, is seen well from the western end of the level summit. This is the part which Caesar (c. 84) calls the "Arc Alésia." The surface of the plateau rises a little towards the western extremity, and then falls away abruptly, terminating in a rocky promontory, something like the head of a boat. A cross, with a small tree on each side of it, stands at the edge of the brow, and exactly marks the place from which Vercingetorix looked down on the plain of Alésia (c. 84). Beneath the Arc Alésia is the small town of Alise, on the western and south-western slope of the hill. It occupies a different place from that which it occupied in the time of Julius Caesar, which was on the summit level. The hill is a mass of rock. The plateau has a thin soil, and the few parts which are not cultivated are covered with a short grass like that on the Brighton downs. It appears that the town of the Mandubii occupied all the large plateau, the length of which is shown by the scale, though we must assume that it was not all built on. The Arc, as almost everywhere in the interior, was a place commanding a view of the plain. The city wall seems to have been carried all round the margin of the plateau. Caesar says (B. G. vii. 69): "under the wall, that part of the hill which looked towards the east, all this space the forces of the Gallic had filled, and they had formed in their front a ditch and a wall of stones (maceria) six feet high." This is the place marked A. in the plan, the only part of the hill of Alésia which is connected with the neighbouring heights. It is a small neck of land which separates the valleys of the Losse and the Loserzia. This is the part where the plateau of Alésia is most accessible, which Vercingetorix first occupied when he retired to Alésia, and where he constructed the wall of loose stones (maceria). There are plenty of stones on the spot to construct another such wall, if it were wanted. At the eastern end of the plateau, just under the summit there is a source of water, which is now covered over with a small building. The water is now carried in pipes round the hill, to supply the hospital of Alise, which is (F.) on the west side of the hill on the slope which is got at Alise by digging wells in the small level below the plateau; and as the Galli held this part of the mountain during the blockade, they may have got water from wells, as they do not doubt did from the spring on the plateau.

Caesar's lines were formed all round the hill of Alésia, and they crossed the neck (A.) which connects this hill with another hill (B.) on the south-east hill. The "cataphracts" of Caesar (c. 69, 80) were on B. C. D. E., on all the heights around Alésia. These hills have a steep side turned to Alésia, and flat tops. They are so near to Alésia that Caesar could not be safe against an attack from the outside, unless he occupied them. The valleys between Alésia and B. C. D. are narrow. On the north and north-west side the valley is wider. There is a good source of water on the hill B.

The hill of Alésia is well defined on the north and the south by the valleys of the two streams which Caesar mentions (B. G. vii. 69), and on the west side by the plain in which these rivers meet. Caesar estimates the width of this plain from north to south at three Roman miles; and it is that width at least even in the part which is only a little distance from the foot of the hill. It extends much further in a N. by E. direction on the road to Massilia. The plain is a perfect level, covered in summer with fine wheat. As we go from the foot of the hill of Alésia to Les Lounnes, the Arc Alésia is a conspicuous object.

Caesar made two lines of circumvallation round Alésia. The circuit of the inner lines was eleven Roman miles; and we may infer from his words that this circumvallation was entirely in the plain and the valleys, except that it must have passed over the small elevation or neck of land between A. and B. In making the outer lines, which were fourteen Roman miles in circuit, he followed the level as far as the ground allowed (c. 74); from which we conclude that some parts of the outer line were on the high grounds opposite to the hill of Alésia. Alésia must have been so. The upper part of the hill west of Croixguy, part of which hill appears in the north-west angle of the plan, was crossed by the lines; and the camp of Reginus and Rebius (c. 83) was on the slope of this hill which faces Alésia. One of the ditches (fossae) of the interior lines was filled with water from the river (c. 72). The lines of eleven and fourteen were commanding a great and flat view of the enemy, and thus made an effective line of resistance, as well as a line of communication. No less circuit would enclose the hill and give the Romans the necessary space. The boldness of the undertaking may be easily conceived by the size of numbers; but the sight of the work that was to be done before Vercingetorix and his troops, to the number of 80,000 men, could be shut in, can alone make a man comprehend and admire the daring genius of the Roman commanders.

There was a cavalry fight in the great plain before Caesar had completed his works. The Galli were driven back from the plain to their camp under the east end of the hill, and took refuge within Alésia. After this defeat Vercingetorix sent his cavalry away, and made preparation for holding out till the Gallic confederates should come to his aid (B. G. 70, 71). When the forces of the confederates (vii. 75) came to raise the blockade of Alésia, they posted themselves on the hills where the name Mussey appears; and in the battle which is described in vii. 79, the Gallic cavalry filled the plain on the west side of the hill of Alésia, while the infantry remained on the heights about Mussey. The Gallic cavalry were brought back to the camp before night; but on the following night they renewed the attack on that part of the lines which crossed the plain. This attack also failed. The next night the Gallic confederates sent 60,000 men under Verpasianus to the north, to the back of the hill (E.), on the slope of which Regius and Rebius had their camp. Their orders were to fall on the Romans at midnight. The Galli got to the back of the hill at daybreak, and waited till near noon, when they began their attack on the camp. At the same time the cavalry of the confederates came against the lines in the plain; and Vercingetorix descended from the heights of Alésia to attack the lines from
the inside. The Galli failed to force the lines both on the inside and the outside. But the attack on the camp of Regius and Bibulus was desperate, and Labienus was sent to support them. Neither ramparts nor ditches could save the men. Neither of the enemy, Labienus summoned to his aid the soldiers from the nearest posts, and sent to tell Caesar what he thought ought to be done. His design was to sail out upon the enemy, as Caesar had ordered him to do, if he could not drive them off from the lines.

The place where the decisive struggle took place is easily seen from the Arx Aleiae; and it is accurately described by Caesar (B. G. 83, 85). This is the hill (E.) which slopes down to the plain of the Lous. The upper part of the slope opposite the Arx Aleiae is gentle, or "mitter decivia" (c. 85); but the descent from the gentle slope to the plain of the Lous, in which the railway runs, is in some parts very steep. Caesar could draw his lines in such a way as to bring them along the gentle slope, and comprise the steep and lower slope within them. But there would still be a small slope downwards from the upper part of the hill to the Roman lines; and this is that gentle slope downwards which he describes in c. 85, as giving a great advantage to the Gallic assailants under Vergasallammus ("Regium loci ad decivitatem fastigium magnum labet momentum").

The mountain behind which Vergasallammus hid after the night's march is the part of the mountain west of Creasogym. The camp of Regius and Bibulus being on the south face turned to Aleia, then the next line towards Vergias was kept by his men till they came over the hill top to attack the lines. Veruncutarius, from the Arx Aleiae (c. 84), could see the attack on Regius' camp, and all that was going on in the plain. He could see everything. Caesar's position during the attack of Vergasallammus was one (Idomeneus locus) which gave him a view of the fight. He saw the plain, the "superiores muritites," or the lines on the mountain north of West of Aleia, the Arx Aleiae, and the ground beneath. He stood therefore on the hill south of Aleia, and at the western end of it.

Caesar, hearing from Labienus how desperate was the attack on the upper lines, sent part of his cavalry round the exterior lines to attack Vergasallammus in the rear. The only way round the east end of Aleia. They could not go round the west end, for they would have crossed the plain outside the lines, and the plain was occupied by the Galli. Nor could they have got up the hill on that side without some trouble; and they would not have come on the rear of the enemy. It is certain that they went by the east end, and upon the heights round Aleia. This would take a much longer time than Caesar's rapid narrative would lead us to suppose, if we did not know the ground.

When Caesar sent the cavalry round Aleia, he went to the aid of Labienus with four cohorts and some cavalry. The men from the higher ground could see him as he came along the lower ground (c. 84), and the rear. The only way round the west of Aleia, between his lines along the plain, with the Arx Aleiae on his right, from which the men in the town were looking down on the furious battle. The scarlet cloak of the proconsul told his men and the enemies who was coming. He was received with a shout from both sides, and the shout was answered from the circumanvallation and all the lines. The Roman soldier throws his pila aside; and the sword begins its work. All at once Caesar's cavalry appears in the rear of Vergasallamnus: "other cohortis approach the enemy turn their backs; the cavalry meets the fugitives, then there is the scene of the victory is won. The Galli who were on the outside of the fortifications desert their camp, and the next day Veruncutarius surrenders Aleia. The flight of Aleia was the last great effort of the united Gallic against Caesar. They never recovered from this defeat; and from this time the subjugation of Galia, though not yet quite completed, was near and certain.

Aleia was a town during the Roman occupation of Gallia; but the plateau has long since been deserted, and there is not a trace of building upon it. Many medals and other antiquities have been found by grubbing on the plateau. A vigerurn of Ales possesses many of these rare things, which he has found; a fine medal of Menenmus in bronze of Trojan and Feustana, and the well-known medal of Nemanaus (Nimaeus), called the "pied de biche." He has also a steelyard, keys, and a variety of other things.

The plan of Cassini is tolerably correct; correct enough to make the text of Caesar intelligible. [G.L.]
MANTINEIA

Lagadnium through Trajectum (Utrechz) to Carvo (Carvo). It is 15 M. F. from Trajectum to Mantinia, and 16 M. F. from Mantinia to Carvo. Mantinaria may be Maures. But other places have been suggested. 

[5. L.]

MANARELI (Mádrzeuz, Potol. v. 10. § 6), a people on the coast of Coelia, whose name has been traced in the modern Mangerika. 

[B. E. J.]

MANTALA, a place in Gallia Narbonensis, on the coast in the Roman list, and 16 M. F. from Mancinaria to Carvo (Tèsera in Tarentum). It is the next station after Leminecum (Léméncum), and 16 M. F. from it. The Antonine Itin. and the Table agree as to the position of Mantala. The site of the station Mantala may be, as D'Aville suggests, at a place on the Ibre, named Carsois, which is commanded by an old building named Montallade. 

[G. L.]

MANTIANA LAGUS. [Arumusa.]

MANTINEIA (Mántinneia) (E. Mántinneis, Mantinensis: Paleopolis), one of the most ancient and powerful towns in Arcadia, situated on the borders of Argolia, S. of Ochomenus, and N. of Tegesa. Its territory was called MANTINICAE (Mántinnikéi). The city is mentioned in the Homeric catalogue as Márteu, and is shown both by Strabo and Plutarchus to be called Mántina, from Mántina, a son of Lycaon. (Hom. Il. ii. 607; Poli. ii. 56; Paus. viii. 8. § 4.) Mantinea originally consisted of four or five distinct villages, the inhabitants of which were collected into one city. (Xam. Held. v. 2. § 6, seqq.; Strab. viii. p. 537; Diod. xv. 5.) If Strabo is correct in stating that this incorporation was brought about by the Athenians, who were invited by the itineraries to give them a city, the latter adopted this proceeding as a means of providing some check upon their powerful neighbours of Tegesa. The political constitution of Mantinea is mentioned by Polybius as one of the best in antiquity; and the city had acquired so great a reputation at an early period that, by the Cyprianus, in the reign of Emperor Trajan, the town of Mantinea was strongly fortified when weakened by internal seditions, were recommended to apply to the Mantineians, who sent to them Demaxon to settle their constitution. (Pol. vi. 43; Herod. iv. 161.) Some time before the Persian wars, Mantinea, like the other Arcadian towns, had acknowledged the Spartan supremacy; and accordingly the Mantineans fought against the Persians as the allies of Sparta. For a hundred years these Mantineans fought at Thermopylas, but their contingent arrived on the field of Platae immediately after the battle. (Herod. vii. 202, iz. 77.) In the Peloponnesian War, Mantinea was at first a member of the Peloponnesian confederacy; but several causes tended to estrange her from the Spartan alliance. Mantinea and Tegesa were, at this time, the two most important Arcadian states, and were frequently engaged in hostilities. In n. c. 423, they fought a bloody and indecisive battle, which is mentioned by Thucydides (iv. 134). Tegesa, being oligarchically governed, was firmly attached to Sparta; whereas Mantinea, from her possessing a democratical constitution, was led, according to Morcelli, Africa Christiana, vol. i. p. 211.) Shaw (Travels, pp. 63—64) found remains of Roman architecture, and a "ciprus" with an inscription which he refers to some of the descendants of Cn. Pompeius (Barth, Wanderung, pp. 58, 202). 

[5. E. B. J.]

MANILA'NUS SALUTUS. [Idum.] 

MANNARIITUM, in north Gallia, is placed by the Antonine Itin. on a road which leads from the broad street or way between the two, and a ditch on the outside. At present they are nowhere more than 3 feet in height. The modern town of Manturia (a flourishing place, with about 6000 inhabitants) does not occupy the site of the ancient city; the latter having been destroyed by the Saracens, the few remaining inhabitants settled at a place called Casel Nuovo, which appellation it retained till towards the close of the eighteenth century, when, having grown into a considerable town, by its present name Manturieno. (Swinhurne, Travele, vol. i. p. 293; Romanelli, vol. i. p. 53; Giustiniensi, Dis. Geogr. vol. v. p. 338.)

Pliny mentions the existence at Manturia of a well or spring of water, which was always full to the brim, and could not be either increased or diminished in quantity. This natural curiety is still owned by the inhabitants of Manturia, and has been described by several recent travellers; it is said that it preserves a constant equality in the level of its waters, notwithstanding any addition that may be made to them or any quantity that may be withdrawn,—a statement exactly coinciding with that of Pliny. (Plin. ii. 103. s. 106; Swinhurne, Travels in Greece, Travels in Greece, Travels, pp. 165—167.) The expression used by that author, who calls the basin or reservoir of the water "lacus," has given rise to the erroneous notion that there existed a lake in the neighbourhood of Manturia, for which there is no foundation in fact. [E. B. J.]

MANIMI, a tribe of the Lycuri, in the north-east of Germany (Tac. Germ. 48). They occupied the territory south of that part of the Rhine which was the same as the Omanni (Omany, of Polomy, ii. 11. § 18; Zeuss, Die Deutsche, p. 124). [L. S.]

MANTUAE (Mántieu), an inland tribe of Arabia Felix, situated west of the Thamnae, and south of the Salanei, north of the "inner Frankincense country." (Strabo, iv. § 2, Athens, p. 200.) The position shown by the Antonine Itin. is that of his Kamnitea, and of Zamae Mount, together with the near resemblance of name, implies their being the same with the Mæconae of Burchard, the most eastern of the Harb tribes, situated on the borders of Karym in the line of country between Medisa and Darayeh. (Forster, Geog. of Arabia, vol. ii. p. 249.) [G. W.]

MANIUS SINUS (Damasco Scyl. p. 8), that part of the coast off the coast of Donna of the island of Donna, on which the river Naro discharged itself, and in which the Liberian group of islands is situated. In modern times it bears no distinctive name. [E. B. J.]

MANIA'NA (Mahnà) (Σηραλδα, Potol. iv. 2. § 25), an inland town of Mantetania, upon the position of which there is a great disagreement between the Antonine and the author of the Itinerary. The first places it 10' to the W. of Oppidum Novum, and the latter 18 M. F. to the E. of that place. The modern Miliana, on the slopes of the Lesser Atlas, preserving the ancient name, may be presumed to represent the old town, both of Polomy and the Itinerary, in which a Christian community was established. (Arnold, M. F. G. H. morta scire, A. 14. 17. M. F. 340—350), when weakened by internal seditions, were recommended to apply to the Mantineians, who sent to them Demaxon to settle their constitution. (Pol. vi. 43; Herod. iv. 161.) Some time before the Persian wars, Mantinea, like the other Arcadian towns, had acknowledged the Spartan supremacy; and accordingly the Mantineans fought against the Persians as the allies of Sparta. For a hundred years these Mantineans fought at Thermopylas, but their contingent arrived on the field of Platae immediately after the battle. (Herod. vii. 202, iz. 77.) In the Peloponnesian War, Mantinea was at first a member of the Peloponnesian confederacy; but several causes tended to estrange her from the Spartan alliance. Mantinea and Tegesa were, at this time, the two most important Arcadian states, and were frequently engaged in hostilities. In n. c. 423, they fought a bloody and indecisive battle, which is mentioned by Thucydides (iv. 134). Tegesa, being oligarchically governed, was firmly attached to Sparta; whereas Mantinea, from her possessing a democratical constitution, was led, according to Morcelli, Africa Christiana, vol. i. p. 211.) Shaw (Travels, pp. 63—64) found remains of Roman architecture, and a "ciprus" with an inscription which he refers to some of the descendants of Cn. Pompeius (Barth, Wanderung, pp. 58, 202). 

[5. E. B. J.]

MANLIA'NUS SALUTUS. [Idum.] 

MANNARIITUM, in north Gallia, is placed by the Antonine Itin. on a road which leads from...
Mantineia formed an alliance with Argos, Elis, and Athens, in a. c. 421, and thus became involved in war with Sparta. (Thuc. v. 29, 33, 47.) This war was brought to a close by the decisive battle fought near Mantineia, in June, 418, in which the Argives, Mantineians, and Athenians were defeated by the Lacedaemonians under Agis. This battle was fought in the S. of Mantineia between the city and the frontiers of Tegea, and is the first of the five great battles bearing the name of Mantineia. The Mantineians now concluded a peace with Sparta, renouncing their dominion over the districts in Arcadia, which they had conquered. (Thuc. v. 65, seq., 81.)

Mantineia continued an unwilling ally of Sparta for the next 33 years; but in the second year after the peace of Antalcidas, which had restored to the Spartans a great part of their former power, they resolved to crush for ever this obnoxious city. Accordingly, they required the Mantineians to raze their walls; and upon the refusal of the latter, they marched against the city with an army under the command of their king Agesipolis (a. c. 385), alleging that the truce for 30 years had expired, which had been concluded between the two states after the battle of 418. The Mantineians were defeated in battle, and took refuge in their city, prepared to withstand a siege; but Agesipolis having raised an embankment across the river Ophiis, which flowed from the south to the north, he dammed it, and thus caused an inundation around the walls of the city. These walls, being built of unassuming bricks, soon began to give way; and the Mantineians, fearing that the city would be taken by assault, were obliged to yield to the terms of the Spartans, who required that the inhabitants should quit the city, and be dispersed among the villages, from the easement of which the city had been originally formed. (Xen. Hell. v. 2. §§ 6, 7; Dio. v. 5; Ephorus, ap. Harpocr. a. e. Martyrion Douspar; Pol. iv. 27; Paus. viii. 8. § 7, seq.) Of the forces of Mantineia shortly before this time we have an account from the orator Lysias, who says that the military population or citizens of Mant. nea amounted to 13,000, and the garrison of the city to 13,000 for the free population of the Mantineian territory. (Lysias, ap. Dione. p. 531; Clinton, F. H. vol. ii. p. 416.)

The Mantineians did not long remain in this dispersed condition. When the Spartan supremacy was overthrown by the battle of Leuctra in 371, they again assembled together, and rebuilt their city. They took care to exclude the river from the new city, and to make the stone substructions of the walls higher than they had been previously. (Xen. Hell. vi. 5. § 3; Paus. viii. 8. § 10; Leake, Mores, vol. iii. p. 73.) The Mantineians took an active part in the formation of the Arcadian confederacy, and in the foundation of Megapoli, which followed immediately upon their own city; and one of their own citizens, Lycomedes, was the chief promoter of the scheme. But a few years afterwards the Mantineians, for reasons which are not distinctly mentioned, quarrelled with the supreme Arcadian government, and formed an alliance with their invertebrate enemies the Spartans. In order to put down this new coalition, Sparta sent her army under the command of Leonidas to the Peloponnese; and Mantineia was again the scene of another great battle (the second of the five alluded to above), in which the Spartans were defeated, but which was rendered still more memo-

rable by the death of Epaminondas. (Xen. Hell. vii. 5; Diod. xrv. 84.) The site of this battle is described below. The third and fourth battles of Mantineia are only incidentally mentioned by the ancient writers; the third was fought in 395, when Demetrius Poliorcetes defeated Archidamus and the Spartans (Plut. Demetri. 58); the fourth in 345, when Aratus expelled the Spartans under Agis, the latter falling in the battle. (Paus. viii. 10. § 5, seq.)

Mantineia continued to be one of the most powerful towns of Arcadia down to the time of the Achaeans League. It at first joined this league; but it subsequently deserted it, and, together with Orchomenus and Tegea, became a member of the Aetolian confederacy. These three towns at this time renounced their alliance with the Aetolians, and entered into a close union with Sparta, about a. c. 228. This step was the immediate cause of the war between the Achaeans and the Spartans, usually called the Celoemnic War. In 226, Aratus surprised Mantineia, and compelled the city to receive an Achaeus garrison. The Mantineians, afterwards expelled the Achaeans, and again joined the Spartans; but the city was taken a second time, in 222, by Antigonus Doson, whom the Achaeans had invited to their assistance. It was now treated with great severity. It was abandoned to plunder, its citizens were sold as slaves, and its name changed to Antibonos (\textit{Antigonos}) in honour of the Macedonian monarch (Pol. ii. 57, seq.; Plut. Arsat. 45; Paus. viii. 8. § 11). In 207, the plain of Mantineia was the scene of a fifth great battle, between the Achaeans, forces, commanded by Philopoemen, and the Lacedaemonians, under the tyrant Machanidas, in which the latter was defeated and slain. An account of this battle is given by Polybius, from whom we learn that the Achaeans occupied the entire breadth of the plain S. of the city, and that their light-armed troops occupied the hill to the E. of the city, which is known as Alesium by Pausanias. The Lacedaemonians were drawn up opposite to the Achaeans; and the two armies thus occupied the same position as in the first battle of Mant. nea, fought in 371. (Paus. ix. 11.) The Mantineians were the only Achaean people who fought on the side of Augustus at the battle of Actium. (Paus. viii. 8. § 12.) The city continued to bear the name of Antigonea till the time of Habrian, who restored to it its ancient appellation, and conferred upon it other marks of his favour, in honour of his favourite, Antinous, because the Bithynians, to whom Antinous belonged, claimed descent from the Mantineians. (Paus. viii. 8. § 12, viii. 9. § 7.)

The territory of Mantineia was bounded on the W. by Mt. Maenalus, and on the E. by Mt. Artemisium, which separated it from Argolis. Its northern frontier was a low narrow ridge, separating it from Orchomenus; between the two was divided it from Tegea, was formed by a narrow part of the valley, hemmed in by a projecting ridge from Mt. Maenalus on the side west, and by a similar ridge from Mt. Artemisium on the other. (See below.) The territory of Mantineia forms part of the plain now called the plain of Tripoliades, from the modern town of this name, and includes the plain of Mantineia and Tegea, which is the principal place in the district. This plain is about 35 English miles in length, with a breadth varying from 1 to 8, and includes, besides the territory of Mantineia, that of
MANTINEIA.

Orchomenus and Caphyse on the N., and that of Teges and Pallantium on the S. The distance between Mantinea and Teges is about 10 English miles in a direct line. The height of the plain where Mantinea stood is 2087 feet above the level of the sea. Owing to its situation, Mantinea was a place of great military importance, and in territory was the scene of many important battles, as has been already related. It stood upon the river Ophis, nearly in the centre of the plain of Tripoliotes as to length, and in one of the narrowest parts as to breadth. It was enclosed between two ranges of hills, on the E. and the W., running parallel to Mt. Artemisium and Maenalus respectively. The eastern hill was called Alexeon (Ἀλεξέων, Paus. viii. 10. § 1), and between it and Artemisium lay the plain called by Pausanias (viii. 7. § 1) τὸ ἄργυρον ἔργατον, or the "Uncultivated Plain." (viii. 8. § 1) The range of hills on the W. had no distinct name; between them and Mt. Maenalus there was also a plain called Alcimeidon (Ἀλκιμείων, Paus. viii. 12. § 2).

Mantinea was not only situated entirely in the plain, but nearly in its lowest part, as appears by the course of the waters. In the regularity of its fortifications it differs from almost all other Greek cities of which there are remains, since very few other Greek cities stood so completely in a plain. It is now called Psevdrakia. The circuit of the walls is entered with the exception of a small space on the N. and W. sides. In no place are there more than three courses of masonry existing above ground, and the height is so uniform that we may conclude that the remainder of the walls was constructed of unbaked bricks. The city had 9 or 10 gates, the approach to which was carefully defended. Along the walls there were towers at regular distances. Peaks reckoned 118 towers, and says that the city was about 3 miles in circumference; but Boeot makes the city considerably larger, giving 129 or 130 as the number of the towers, and from 28 to 30 stadia, or about 3½ English miles, as the circuit of the city. The walls of the city are surrounded by a ditch, through which the river Ophis flows. The city was a place of commerce, in which the most important rises on Mt. Alexeeum, as the E. side of the city; the different rivulets unite on the NW. side of the town, and flow westward into a katavothra. Before the capture of Mantinea by Agesipolis, the Ophis was made to flow through the city, and it is probable that all the water-courses of the surrounding plain were then collected into one channel above the city. Of the buildings in the interior of the city, described by Pausanias, few remains are left. Nearly in the centre of the city are the ruins of the theatre, of which the diameter was about 240 feet; and west of the theatre, Boes observed the foundations of the temple of Aphrodite Symmachis, which the Mantineans erected to commemorate the place they had taken in the battle of Actium. (Paus. viii. 9. § 6.)

The territory of Mantinea is frequently described by the ancient writers, from its having been so often the seat of war; but it is difficult, and almost impossible, to identify any of the localities of which we find mention, from the disappearance of the sanctuaries and monuments by which spots are indicated, and also from the nature of the plain, the topography of which must have been frequently altered by the change of the water-courses. On the latter subject a few words are necessary. The plain of Tripoliotes, of which Mantinea formed part, is one of those valleys in Arcadia, which is so completely shut in by mountains, that the streams which flow into it have no outlet except through the chasms in the mountains, called katavothras. (Ἀσκαλών.) The part of the plain, which formed the territory of Mantinea, is so irregular, that there is not, in some parts, a sufficient slope to carry off the waters; and the land would be overflowed, unless trenches were made to assist the course of the waters towards some one or other of the katavothras which nature has provided for their discharge. (Pol. xi. 11.) Not only must the direction of these trenches have been sometimes changed, but even the course of the streams was sometimes altered, of which we have an interesting example in the history of the campaign of 418. It appears that the regulation of the mountain torrent on the frontiers of Mantinea and Tegeatas was a frequent subject of dispute and even of war between the two states; and the one frequently inundated the territory of the other, as a means of annoyance. This was done in 418 by Agis, who let the waters over the plain of Mantinea (Thuc. v. 65). This river can only be the one called Ophis by the Geographers of the French Commission. It rises a little N. of Teges, and after flowing through Tegeatas falls now into a katavothra north of the hill Scopus. In general the whole plain of Mantinea bears a very different aspect from what it presented in antiquity; instead of the wood of oaks and cork-trees, described by Pausanias, there is now not a single tree to be found; and no poet would now think of giving the epithet of "lovely" (κομψός) to the naked plain, covered to a great extent with stagnant water, and shut in by gray treeless rocks. (Ross, Reisen ins Peloponnes, p. 128.)

About a mile N. of the ruins of Mantinea is an isolated hill called Gortysyll; north of which again, also at the distance of about a half-mile, is another hill. The latter was probably the site of the ancient Mantinea, and was therefore called Ptolis (Πτολίς) in the time of Pausanias (viii. 12. § 7). This appears to have been one of the five villages from the inhabitants of which the city on the plain was peopled.

Two roads from Mantinea to the coast.

Two of these roads led north of the city to Orchomenus; the more easterly of the two passed by Ptolis, just mentioned, the fountain of Alacomeinoss, and a deserted village named Makra (Μακρα), 30 stadia from Ptolis; the road on the west passed over Mt. Anchis, on the northern slope of which was the temple of Artemis Elymnia, which formed the boundary between Mantinea and Orchomenia. (Paus. viii. 12. §§ 5—9, comp. v. 5. § 11.)

A road led from Mantinea on the W. to Masthydrion. It passed through the plain Alcimeidon, which was 30 stadia from the city, above which was Mount Ostracina; then by the fountain Cissa, and, at the distance of 40 stadia from the fountain, by the small place Pateroscia (Πατερόσκαια), which was on the confines of the Mantinean and Megapolitan territories. (Paus. viii. 12. §§ 2—4.)

Two roads led from Mantinea southward,—the one SE. to Teges, and the other SW. to Pallantium. On the left of the road to Teges, called Kernis (Κερνις) by Polybus (xi. 11. § 5), just outside the gates of Mantinea, was the hippodrome, and a little further on the stadium, above which rose Mount Alesium; at the spot where the mountain ceased was the temple of Poseidon Hippus, which was 7 stadia from the city, as we learn from Poly-
PLAIN OF MANTINEIA.

F F. Road to Argos, called Pirus.
G G. Road to Argos, called Climax.
MANTINEIA.

called PREMON (Πραμον) and CILMAX (Κηλμαξ) the "Ladder," respectively. (Paus. viii. 6. § 4. 4.
The latter was so called from the steps cut in the rock in a part of the road; and the Primon probably derived its name from passing by a holm-oak (μέλισσα), or a small wood of holm-oak, but the roads do not appear to have borne the names till the several Mantines. There were two passages through the mountains, which connect the Argive plain from Mantinea, of which the southern and the shorter one is along the course of the river Charadus, the northern and the longer one along the valley of the Inachus. Both roads quit Argos at the same gate, the hill called Deiras, but then immediately part in different directions. The Primon, after crossing the Charadus, passed by Oenoichos, and then ascended Mount Artemisium (Makleia), on the summit of which, by the road-side, stood the temple of Artemis, and near it were the springs of the Inachus. Both roads crossed the Pegana, passing through the town of Mantinea, and about six miles from Tegas. It was here that the Lacedaemonian army was posted, over which Epaminondas gained his memorable victory. He had marched from Tegas in a north-westly direction, probably passing near the site of the modern Tripolis, and then keeping along the side of Mt. Mamalsus. He attacked the enemy on their right flank near the projecting ridge of Mt. Miamalus, already described. It was called Scopae (Σκόπες, now Myrtikus), because Epaminondas, after receiving his mortal wound, was carried to this height to view the battle. Here he expired, and his tomb, which Pausanias saw, was erected on the spot. (Paus. viii. 11. §§ 6, 7; for an account of the battle see Croce, vol. xi. p. 464, seq.)

The road from Mantinea to Pallantium ran almost parallel to the road to Tegas till it reached the frontiers of Tegasis. At the distance of one stadium the temple of Zena Charmon. (Paus. viii. 10, 11, 12. § 1.)

Two roads led from Mantinea eastwards to Argos:

* This ditch must have terminated in a katalvitha, probably in one of the katalvitha on the W. side of the plain at the foot of the Maelian mountains. On the other side of these mountains is the village and river named Helisson; and as the Elisphasis are not mentioned in any other passage, it has been proposed to read Ελίσφασις instead of Ελίσψασις. (Krom, p. 127.) Leake has conjectured, with some probability, that Elispthis may be the corrupt ethnic of Elymnia (Ελυμνία), a place only mentioned by Xenophon (Hell. vi. 5. § 19), who places it on the confines of Orchomenus and Mantinea. Although Leake places Elymnia at Lerida, on the NW. frontier of Mantinea, he conjectures that the whole plain of Alcimion may have belonged to it. (Leake, Peloponnesiac, p. 380.)

† Leake imagines that Phoexon was situated on a side road, leading from the tombs of the daughters of Pelias. But Rosc maintains that Phoexon was on the high-road to Tegas, and that Pausanias has only mentioned it, in anticipation, in vii. 11. § 1, the altar forming the boundary between Mantinea and Tegasis, the more proper place for it being at the close of § 4.

MANTINEIA.

COIN OF MANTINEA.
MANTUA.

said to signify in the Albanian language "abounding in springs." The road next passed by the fountain of the Meliasitas (Meliasital), where were temples of Dionysus and of Aphrodite Melasina: this fountain was 7 stadia from the city, opposite Paulus or Old Manna (Pall. 4, 44., 15). The preceding account is rendered clearer by the map on p. 106.

(For the geography of Mantines, see Leake, Mor. vol. i. p. 100, seq.; vol. iii. p. 44, seq.; Pelecopoms. p. 569, seq.; Ross, Reise in Peloponnes, vol. i. p. 121, seq.; Curtius, Peloponnes, p. 121, seq.)

MANTUA (Muntheis: Exit. Mantunno: Mantova), a city of Cisalpine Gaul, situated on the river Mincius, on an island formed by its waters, about 13 miles above its confluence with the Padus. There seems no doubt that it was a very ancient city, and existed long before the establishment of the Gauls in this part of Italy. Virgil, who was naturally well acquainted with the traditions of his native place, tells us that its population was a mixed race, but the bulk of the people were of Etruscan origin; and Pliny even says that it was the only city beyond the Padus which was still inhabited by an Etruscan people. (Verg. Aen. x. 201—203; Plin. iii. 19, a. 23.) Virgil does not tell us what was the name of the city, but his partial knowledge of it, and it is not easy to understand the exact meaning of his expression that it consisted of three "gentes," and that each gens comprised four "populi"; but it seems certainly probable that this relates to the internal division of its own territory and population, and has no reference (as Müller has supposed) to the twelve cities founded by the Etruscans in the valley of the Padus. (Müller, Etrusker, vol. i. p. 137; Niebuhr, vol. i. p. 296, note 735.) The Etruscan origin of Mantua is confirmed by its name, which was in all probability derived from that of the Etruscan divinity Mantus, though another tradition, adopted by Virgil himself, seems to have deduced it from a prophetic nymph of the name of Mantus (see next page). The name Mantua, as we shall see, is of the same derivation as that of the town Mantinei, at the head of the N. of Italy; and is still a populous place, and one of the strongest fortresses in Italy. It is still so completely surrounded by the stagnant waters of the Mincio, that it is accessible only by causeways, the shortest of which is 1000 feet in length.

Mantua was distant from Verona 25 miles; so that Procopius calls it a junior from that distance was frequently traversed by muleteers with light vehicles in a single day.

MANTZICERT. (Mozzeper, Const. Porph. de Adm. Imp. c. 44.), a fortress of great importance upon the Armenian frontier. In a. d. 1050, it offered so determined a resistance to Togrul Beg, the founder of the Seljuk dynasty, that the latter had to give up all hope of breaking through the barrier of fortresses that defended the limits of the empire, and retired into Persia. (Cod. vol. i. p. 780; Le Bean, Bas Empire, vol. iv. p. 367; Finlay, Byzantine Empire, p. 523.) It is identified with Melagard or Manazker, situated to the N.W. of lake Vix, and the
266 MAOGAMALCHA.

remarkable volcanic cone of Sfida Tizik. (St.

[ E. B. J.]

MAOGAMALCHA (Ammian. xxiv. 4), a place in Mesopotamia, attacked and taken by Julian. It was distant about 90 stadia from Ctesiphon. (Zosim. iii. 18) and appears to have been strongly fortified and well defended. Zosimus evidently alludes to the same place (L.c.), though he does not mention it by name.

[V.]

MAON (Mades), a city of Judah, in the mountains, south of Hebron. It is joined with Carmel, and Ziph, and Juttah (Jos. xv. 53), known only as the residence of Nabab and Abigal (1 Sam. xxv. 2).

"The wilderness of Maon, in the plain on the south of Jebusites," is identical with or contiguous to the wilderness of Ziph, where David and his men hid themselves in the strongholds from the malice of Saul (xxiii. 14—25). It is placed by Eusebius in the east of Daroma (Onomast. s. e.) Its site is marked by ruins, still called Māsus, situated between Carmel and Zeph, half an hour south of the former. (Euseb. Prol. p. 126. W.)

Mapharitis (Μαφαρίτης), a district of Arabia Felix, lying about the city of Sava (Σαβίο), which is placed by Arrian three days' journey from Maza, on the Red Sea. (MUSA.) He mentions the king's name, Oloabaus (Αλοάβαος). (Periplus Maria Eryth. p. 13.) The Sava of Arrian is probably identical with the Sapharion or Saphar of Ptolemy (Tzetzes, a. Σφαφίρ μικρά. 71; vi. § 41), the capital no doubt of a tribe named by him Sapharitae (Σαφαρίται), the Mapharitae of Arrian. They are distinct from the Maphoritae of Ptolemy.

[G. W.]

Maphoritae (Μαφορίται), a people of Arabia Felix, placed by Ptolemy above, i. e. north of, the Ratihan, and west of the outer Frankincense country (§ 70 Ζαραφασία), contiguous to the Chastamanitas (vi. § 25). The similarity of name indicates a connection between this tribe and the Massaepa metropolis of the same geographer; the same as the "Aphepsa metropolis" of Arrian, which he places 9 days' journey east of his Maphoritis regio, and therefore 12 days from the Red Sea. It was the capital of Charibed, the lawful king of the Homerites and the Sabaeans, the friend of the Roman emperors, to whom he is said to have sent frequent embassies. (ΜΑΦΟΡΙΤΑ.) The district is probably that now known as Wady Mejafa, in the midst of which is situated the remarkable ruins now called Nakab-el-Hajar, which are supposed to mark the site of the metropolis. This fruitful valley contains above the ruins in question and is well cultivated throughout. It is thus described by Lient. Welledt, who traversed its southern part in 1838 — "Nakab-el-Hajar (ancient Maphaia, g. v.) is situated north-west, and is distant 48 miles from the village of 'Atin, which is marked on the chart in latitude 14° 2' north, and longitude 46° 30' east, nearly. It stands in the centre of a most extensive valley, called by the natives Wady Mejafa, which, whether we regard its fertility, population, or extent, is the most interesting geographical feature we have yet discovered on the southern coast of Arabia. Taking its length from where it opens out on the sea-coast to the town of 'Abba, it is 4 days' journey, or 75 miles. Beyond this point I could not exactly ascertain the extent of its prolongation; various native authorities give it from 6 to 7 additional days. Throughout the whole of this space it is thickly studded with villages, hamlets, and culti-

vated grounds. In a journey of 15 miles, we cross more than thirty of the former, besides a great race of single houses." (Welledt, Travels in Arabia vol. i. p. 436.)

MARATHIUM, in Britain, occurring in Geogr. haw, among the diverse races, without any characteristic or local peculiarities, and inseparable from the daily Maspine (Deo Mapone), discovered at Pines in Cumberland; and another (Apollon Mapa's) Ribecherstern, in Lancashire, merely stronger is the probability of the existence of a place so called in Britain, without disclosing its situation. Mapon also appears in Geogr. Ravenn. among the towns of the north of Britain. (C. E. A.]

MARATHUS (Μαραθος, Μαραθός, Pat. 21. 21), a river of Sarmatia, which richard has sighted with the Maspine, an affluent of the Dni, on the left bank of that river. Some have seen the Maspine to represent the Acharheters (Μες), but Strabo (xi. p. 506) expressly says that latter discharges itself into the Maspine. (Cf. Stor. Str. Pat. 21. i. 2. p. 60. 600.) [E. B. J.]

MARACANDA (Maraquandas, Maraquandas), an Arabian, iii. 30, iv. 5; Ptol. vi. 11. § 5), the capital of Sogdiana, now Samarqand. It is said by arrian to have been one of the eight cities which were built in those parts by Alexander the Great. Peace is placed there in Bactria. Arrian (iii. 30) states it contained the palaces of the ruler of the Sogdians but does not appear to have been more than a town. Alexander had anything to do with the building of Curtius states that the city was 70 stadia in circumference, and surrounded by a wall, and that he was destined the province for his favourites, Curtius was the unfortunate quarril took place in which he was slain (viii. 1. § 30). Professor Wilson (Asia Minor, p. 165) considers that the name has been derived from the Sarmatian Samaroka-Akhan, "the whole province." In many of the old editions the word was written Paracanda, but there can be said to be that Maracanda is the correct form. Sarmatian has been in all ages a great emporium for the commerce of Central Asia.

[M.]

MARAINITAE (Μαραινίται, Strab. xvi. p. 571), an ancient people on the W. coast of Arabia Felix near the corner of the Asiatic Sinus, destroyed by the Garindace.

MARAPHII (Μαραφιη, Herod. i. 125) occupied the three tribes into which the highest class of the ancient Persians was divided, according to Herodotus. The other two were the Parthagae and the Marpi.

MARATHEA (Μαραθεία), a village of Arcadia, the district Gyronia, between Bupalaphus and Gyropolis perhaps represented by the ruin called the City of Leothoro. (Paus. viii. 28. § 1; Lobe, Kavs. vol. ii. p. 66, Peloponnese. p. 232.)

MABATE, a small island near Corcyra, mentioned only by Pliny (iv. 12. a. 19).

MARATHIUM (Μαραθιον, Theb. Mab- chus), an Italian town on the coast of Libya, near of Ephesus, and not far from the frontiers of Carthage, Stephanus (s. e.) calls it a town of Caria. (Seylac. p. 37; Flin. R. N. v. 31.) The town at this time belonged to the Samians; but it made a change, and, giving it up to the Ephesians, received the name of Arisw in return. (Strab. xiv. p. 659.) Col. Leo (Asia Minor, p. 261) believes that a few more remains found at a place called Salmisera mark the site of Marathium, though others regard them remains of Pygela.

[L. S.]
MARATHON.

MARATHON (Μαραθών: Εθν. Μαραθώνος), a small plain in the NE. of Attica, containing four places, named MARATHON, PROBALANTHUS (Προβαλάνθος: Εθν. Προβαλάνθου), TRIODYTHON (Τριώδυθος), or Τριώδυθος, Τριώδυθος: Εθν. Τριώδυθου), and OX(sm) (Οξυς: Εθν. Οξυος), which originally formed the Tetrapolis, one of the 13 districts into which Attica was divided before the time of Theseus. Here Xuthus, who married the daughter of Erechtheus, is said to have reigned; and here the Heraeaeaeada took refuge when driven out of Peloponnesus, and defeated Eurystheus. (Strab. viii. p. 588; Steph. B. s. a. Τρέωνν.) The site was probably the first temple in Greece to whom paid divine honours to Hercules, who possessed a sanctuary in the plain, of which we shall speak presently. (Paus. i. 15. § 3, ii. 35. § 4.) Marathon is also celebrated in the legends of Theseus, who conquered the ferocious bearded bull, which used to devastate the plain. (Plin. Thes. 14; Strab. Ib. p. 399; Paus. i. 37. § 10.) Marathon is mentioned in the Homeric poems, and is in a way that implies that it was then a place of importance. (Od. viii. 80.) Its name is derived from an eponymous hero Marathon, who is described by Pausanias as a son of Epopeus, king of Sicyon, who fled into Attica in consequence of the cruelty of his father (Paus. ii. 1. § 1, ii. 6. § 5, i. 15. § 3, iii. 32. § 4). Pitsarch calls it an Arcadian and says that the Dodonians, when migrating to the tribe Aes选址, and Probalsinthos to the tribe Pandionis; but Marathon was so superior to the other three, that its name was applied to the whole district down to the latest times. Hence Lucian speaks of "the parts of Marathon about Oenois" (Μαραθώνος τῆς τοῦ Οἰνοῖ τοῦ Κυκέων Μαραθῶν. 18). Few places have obtained such celebrity in the history of the world as the site of the battle of Marathon. It lies upon a height fortified by the ravine of a torrent, which descends into the plain after flowing between Mt. Argali and Aforiamis, which are parts of Mt. Briesseus or Pentelica. (Plan. 1, 2.) A little below Vronda are seen four artificial tumuli of earth, one considerably larger than the others; and in a wood at the base of the hill of Kotrona, which leads from the vale of Vronda into that of Marathon, there are some remains of an ancient gate. Near the gate are the foundations of a wide wall, 5 feet in thickness, which are traced for nearly 3 miles in circumference, enclosing all the upper part of the valley of Vronda. These ruins are now known by the name of Μέσης τῆς Πατρίδος (The mesena sheepfold). Near the ruined gate Leakes observed the remains of three statues, probably those which were erected by Herodes Atticus to three favourite servants. (Philos. Steph. ii. 1. § 10.) Marathon was the demus of Herodes, who also died there. The wall mentioned above was probably built by Herodes, to enclose his property for its own safety, after finding that Marathon no longer existed as a town or village a century before the time of Herodes. ("Rhamnus pagus, locus Marathon," Plin. iv. 7. s. 11.) The early disappearance of the ancient town of Marathon would easily cause its name to be
transferred to another site; and it was natural that the celebrated name should be given to the principal place in the district. Three-quarters of a mile to the south-east of the tumulus of Pænellus there is a rising ground, upon which are the traces of a Hellenic wall, apparently the peribolus of a temple. This was probably the temple of Hercules (Plan, 10), in whose sacred enclosure the Athenians were encamped before the battle of Marathon. (Heron. vi. 108.)

3. There are several fragments of antiquity situated at the head of the valley of Marathon near a small spring, which is no doubt the site of the ancient Oenoüs, one of the four demi of the district. The retired situation of Oenoüs accounts for its omission by Strabo in his enumeration of the demi situated near the coast (ix. p. 399).

3. There are also evident remains of an ancient demus situated upon an inselated height in the plain of Sádi, near the entrance of the pass leading out of the Marathonian plain to Sádi. These ruins are probably those of Triócoritthys, the situation of which agrees with the order of the maritime demi in Strabo, where Triócoritthys immediately precedes Rhamnous. We learn from Aristophanes and Suidas that Triócoritthys was tormented by grunts from a neighbouring marsh (ἡχῶσα δέντρα ἀπὸ του προῖτος, Aristoph. Lys. 1190; Suidas: θ. ν. ἤχώσα;) at the present day the inhabitants of Lower Sádi in the summer are driven by this plague and the bad air into the upper village of the same name. The town was probably called Triócoritthys from the triple peak on which its citadel was built.

The site of Probalintus is uncertain, but it should probably be placed at the south-west extremity of the Marathonian plain. This might be inferred from Strabo's enumeration, who mentions first Probalintus, then Marathon, and lastly Triócoritthys. Between the southern marsh and Mt. Argallí, there are foundations of buildings at a place called Valeró, which is, perhaps, a corruption of Probalintus. Close to the sea, upon a rising ground, there have been various re-

The principal monument in the Marathonian plain was the tumulus erected to the 192 Athenians who were slain in the battle, and whose names were inscribed upon ten pillars, one for each tribe, placed upon the tomb. There was also a second tumulus for the Plataeans and slaves, and a separate monument to the Miltiades. All these monuments were seen by Pausanias 600 years after the battle (i. 32. § 3). The tumulus of the Athenians still exists. It stands in the centre of the plain, about half a mile from the sea-shore, and is known by the name of Sord or Σῶρδ, the tomb. (Plan, 13.) It is about 30 feet high, and 200 yards in circumference, composed of a light mould mixed with sand, amidst which have been found many brazen heads of arrows, about an inch in length, of a trilateral form, and pierced at the top with a round hole for the reception of the shaft. There are also found, in still greater numbers, fragments of black flint, rudely shaped by art, which have been usually considered fragments of the arrow-heads used by the Persian archers; but this opinion cannot be received, as flints of the same kind abound in other parts of Greece, where no Persian is reputed to have set foot; and, on the other hand, none have been found either at Thermopylae or Plataea. At a very small distance from this tumulus Leake noticed a small heap of earth and stones, which is, perhaps, the tomb of Plataeans and Athenian slaves. At 500 yards north of the great tumulus is a ruin called Pýrgo (Πυργοῦ), consisting of the foundation of a square monument, constructed of large blocks of white marble; it is apparently the monument erected in honour of Miltiades. (Plan, 14.)

From Philochorus that there was a temple of the Pythian Apollo at Marathon (ap. Schol. ad Sop. Oed. Col. 1047); and Demosthenes relates that the sacred vessel was kept on this coast, and that once it was carried off by Philip. (Phil. i. p. 49.)

Pausanias (i. 32. § 3, seq.) mentions in the plain several natural objects, some of which have been noticed already. The lake at the northern extremity of the plain he describes "as for the most part marshy, into which the flying barbarians fell through their ignorance of the ways; and here it is said that the principal slaughter of them occurred. Beyond the lake (ἐκ τῆς λιμνοῦ) are seen the stables of stone for the horses of Artaphernes, to which the Persian king rode from his camp before the battle. A river flows out of the lake which, within the lake, affords water fit for cattle to drink; but, towards the place where it enters the sea, becomes salt and full of sea-fishes. At a little distance from the plain is a mountain of Pan, and a cavern worthy of inspection: the entrance is narrow; but within are apartments and baths, and that which is called the goat-stand (ἀξιώνας) of Pan, together with rocks very much resembling goats." Leake observes that the marshy lake, and the river, which, becoming salt towards the mouth, produces sea-fishes, are precisely as Pausanias describes them. The marsh is deepest towards the foot of Mt. Koriski, where several springs issue from the foot of the rocks on the right side of the road leading from the great plain to Lower Sádi. These springs arise in the fountain Macaria (Plan, 8), which Pausanias mentions just before his description of the marsh. It derived its name from Macaria, a daughter of Hercules, who devoted herself to death in behalf of the Heracleidae before the victory which they gained over the Argives in the plain. (Comp. Strab. viii. p. 377.) A small stream, which has its origin in these springs, is traced through the marsh into a small salt lake (Plan, 9), supplied by subterranean sources, and situated on the south-eastern extremity of the marsh, under a rocky ridge, the continuation of C. Sîoli. Both the ridge and salt lake are known by the name of Dhrakónoria (ἡ Δράκονοιρα, i.e. the monster-waters, so called from its size, since δρακός is a common expression among the modern Greeks for any marvellous object). On the eastern side of the great marsh Leake noticed a small cavern in the side of Mt. Dhrakónoria, which is perhaps the place called by Pausanias "the stables of Artaphernes." Leake supposes that the Persian commanders were encamped in the adjoining plain of Triócoritthys. The mountain and cavern of Pan have not yet been discovered. They would appear, from the description of Pausanias, to have been a little further removed from the plain than the marsh and salt lake. Hence they may be placed in Mt. Koriski.
The exact ground occupied by the Greek and Persian armies at the battle of Marathon can only be a matter of conjecture. Col. Leake, whose account is both probable and consistent, though Mr. Finlay differs from him, supposes that the Athenian camp was in the valley of Vrosa near its opening into the plain; that on the day of battle the Athenian line extended from a little in front of the Haraclium, at the foot of Mt. Argoiako, to the bend of the river of Marambina, below the village of Seferis; and that the Persians, who were 8 stadia in front of them, had their right resting on Mt. Korosia, and their left extending to the southern marsh, which prevented them from having a front much greater than that of the Athenians. (See Plan, A.A, B.B.) When the Persians defeated the Athenian centre, they pursued the latter up one or both of the two valleys on either side of Mt.

Korosia, since Herodotus says that the pursuit continued quite into the interior (εν της μεθυσμας). Nearly at the same time the Persian left and right were defeated; but instead of pursuing them, the Athenians returned towards the field to the aid of their own centre. The Persian right fled towards the narrow pass leading into the plain of Tricothus; and here numbers were forced into the marsh, as Panantas relates.

---

MARATHON. Eith Marathonos al. Marathon) is a city on the coast of Syria, north of Arados, placed by Ptolemy in the district of Casstoi, which extended as far north as Antioch. It is joined with Enydra, and was a ruin in Strabo’s time. It was on the confines of Phoenicia, and the district was then under the dominion of the Aradians (Strab. xvi. p. 753; comp. Plin. v. 20), who had been foiled in a former attempt to reduce it to their power. The story, as given in a fragment of Diodorus (lib. xxxiii. vol. x. p. 76-78, ed. Bipont; vol. ii. p. 539, ed. Wess.), is as follows. The people of Arados having
seized what they considered a favourable opportunity for the destruction of the people of Marathus, sent privately to Ammonius, prime minister of Alexander Balas, the king of Syria, and bribed him with the offer of 300 talents to deliver up Marathus to them. The unfortunate inhabitants of the devoted city attempted in vain to appease their enemies. The Aradians violated the common laws of suppliants, broke the very ancient images of the local deities,—which the Marathonians had brought to add solemnity to their embassy,—stoned the ambassadors, and cast them into the sea. The act was reported to Antioch, and the laity murdered some, and forged letters in their names, which they sealed with their seals, promising succour to Marathus, with a view of introducing their troops into the city under this pretence. But discovering that the citizens of Marathus were informed of their design, they desisted from the attempt. The facts of its final subjugation to Aradus are not preserved. Pliny (v. 20) places Marathus opposite to the island of Aradus, which he says was 300 stadia (1000 Roman feet) from the coast. Diodorus (i. c.) states the distance between Aradus and Marathon to be 8 stadia; which need not be inconsistent with the statement of Pliny, as the latter may be supposed to measure to the point on the mainland opposite to Aradus, and the former to the distance of the nearest point of that island and the town of Marathon. The fact, however, is, that even the statement of Diodorus is too short for the nearest point on the coast; for this island is, according to Maunderl (March 7, p. 19), "about a league distant from the shore. And Pococke, who crossed the strait, says "it is reckoned to be about two miles from the continent. (Observations on Syria, p. 201.) The 20 stadia of Strabo is therefore much more correct than either of the other authorities. He says that the island lay off an exposed coast (βαχθῶν καὶ λαμβαδον), between its port (Carrus lege Carnos) and Marathon: and what was the respective situation of these towns he intimates in another passage, where, recalling from the north, he enumerates Balaniceps, Carnos, Euryd, Marathon. Pococke takes Tortosa to be "without doubt Carnus (Carnos) the port of Aradus on the continent;" and as this is two miles north of Aradus, he properly looks for Marathon to the south,—identifying Euryd with Ein-al-Hiye (the Serpent's Fountain), "directly opposite to Arados (p. 394)." Notwithstanding this, it appears that some ruins which he observed on a raised ground, at the northern extremity of a plain, about 7 miles south of Tortosa, "might possibly be Marathon" (p. 204). These conjectures may be admitted with some slight modifications. Thus, e.g., instead of identifying Tortosa with Carnos, this naval arsenal of the Arval games must be placed about 3½ miles north of Tortosa, where a later traveller has discovered extensive ruins, called by the Arab peasants Carrayos,—the site, doubtless, of the Carnos or Caruss of the ancients. The people from Arvad still quarry stones from these ruins; and below it, on the north, is a small harbour, which appears to have been fortified like that of Tortosa. (Thompson, in Bibliotheca Sacra, November, 1833, p. 241.) A few rods from the shore, an immense fountain, called 'Ein Ibrahim (Abraham's fountain), boils up from the bottom. Tortosa, then, will be, as many mediaeval writers maintained, Antaradus, which "Arabic geographers write Antarit and Antaradus; whence the common Arabic name Turaka, in Italian Tortosa." (i. e. p. 247, n. 1). 'Ein-al-Hiye, written by Pococke Ein-al-Heje, is certainly the Euryd of Strabo; the geographer, or his informant, having in this, as in so many other instances, retained the first half of the native name, and translated the latter half,—Era being the usual Greek and Latin equivalent for the Semitic 'Amar = fountain, and the hiye a sufficiently close representative of the Semitic Hiye = serpent. South of this fountain are extensive quays, five or six miles to the south of Tortosa. This neighbourhood is described by various Arab geographers, among whom Abul Ammeur 'the face of Ammeur.' This name the Greeks probably changed into Marathus, and the old vaults, foundations, sarcophagi, &c., near 'Ein-al-Hiye (Serpent's Fountain), may mark the precise locality of ancient Marathus. (Thompson, i. c. p. 250.) Pococke describes here a rock-hewn temple, and moonlit house and chambers; besides a kind of semicircle, which he thinks "might serve for some sports to divert the people of Aradus and Antaradus, or of the ancient Marathus, if that was near. It was probably a circus." (p. 203.)

It was the more necessary to identify these sites, as D'Anville placed the ancient Marathus at the modern Maroslik, which is, doubtless, the representation of *Marathus* in the Itinerary, on the confines of Syria and Phoeneice, 13 M.P. south of Balaniceps (now Banneca), and 10 M.P. north of Antaradus: and this error is perpetuated in Arrowsmith's map. [G. W.]

MARATHUS (Μαραθος). 1. A small town in Phocis, near Anticyra, mentioned only by Strabo (i. 434). The spots represented by the remains at Sidiro-kykhis. (Lako, Northern Greece, vol. ii. p. 549.)

2. A town of Acazaria, of unknown site, mentioned only by Stephanus B. (s. e.)

MARATHUSA (Μαραθουσα), a small island of the Aegean sea, off the coast of Ionia, near Clazomenae. (Thuc. viii. 31; Plin. v. 31. a. 38.)

MARCI, a place mentioned in the Nat. Imp. as on the Saxon shore, and as a station of some Dalmatian cavalry under the command of the general of Belgium Secundus. D'Anville supposes, that it may be Armos, between Colonia and Germania; but the site is uncertain. [G. L.]

MARCAIE. (Gallaeaca, p. 934, b.)

MARCIANA SILVA, a mountain forest in the south-west of Germany, probably the whole or a portion of what is now called the Black Forest (Amm. Mar. xxii. 8; Tab. Pest.) The origin of the name is not known, Cluver regarding Marciana as a corruption of Marchiana, and it was not used in the Black Forest as a name for a moor. [L. S.]

MARCIANOPOLIS (Μαρκιανοπολις, Procop. de Aed. iv. 7), a city of Moesia, 18 M. F. from Odesus (Varia) (Hist. Anton. Pent. Tab.; Hieroc.), which derived its name from Marciana, sister of Theon, who married Marcian, the emperor (Procop. de R. G. 16.). Claudina II. signalized the Gothic war in several battles near this town. (Trebell. Pll. Claud. 9; Zoitn. i. 42.) Gibbon (c. xxi. i. comp. Le Beau, Bas Empire, vol. iv. p. 106; Greenwood, History of the Germans, London, 1836, p. 329 Act de Ver. des Dates, vol. i. p. 358) has told the story of the accidental quarrel between the Visigoth
MARCIANA.

Ptiligur and the Roman governor of Marcianopolis, Lapicicum, — which became the signal of a long and destructive war. (Ann. Mar. xxi. 5. § 4, Zosim. iv. 10. 11.) Marcianopolis afterwards became Peristhassia or Presstlava (Περιστήσσα), the capital of the Bulgarian kingdom, which was taken A. D. 971 by Sviatopolk the Russian, and again reduced by John Zimisces, when 8500 Russians were put to the sword, and the sons of the Bulgarian king rescued from an ignominious prison, and invested with a royal title and marriage. (I. Ser. Ser. xii. 462.)

Alt. vol. ii. pp. 187, foll. 216; Finlay, Byzantine Empire, pp. 408—413.) The site of the ancient town must be sought for in the neighbourhood of Pres- tigli. For coins of Marcianopolis, both autonomous and imperial, see Eckhel, vol. ii. p. 15. [E. B. J.]

MARCIANA'NA, a station on the Via Popilia, in Locania, where, according to the Tabula, that road (which led directly S. from Campania into Bruttium) was joined by a branch from Potentia. The name is corrupted both in the Tabula and in the Antonine Itinerary; but there can be no doubt that the place meant is the same called by Cassiodorus "Marciliam," which was a kind of suburb of the town of Consilia, where a great fair was annually held. (I. Ser. Ins. p. 196.) Presumably the name is still called Marciliana, in the valley of the Tsimpro, between La Sala and Podula. (Romanelli, vol. i. p. 405.) [E. H. B.]

MARCI'NA (Μαρκίνα), a town of Campania, in the district of the Picentini, situated on the N. shore of the Gulf of Pozzuoli, between the Sirenasse Inlet and the mouth of the Silvius. (Strab. v. p. 231.) It is mentioned by Pliny the Elder and Strabo, who tells us that it was a colony founded by the Tyrrhenians, but subsequently occupied, and in his day still inhabited, by the Samnites. As he adds that the distance from thee through Nuceria to Pompeii was not more than 120 stadia (15 Roman miles), he appears to have regarded this as the point from whence the passage of the isthmus (as he calls it) between the two seas began; and it may therefore be placed with some plausibility at Victor. (Cluver, Ital. p. 1190; Romanelli, vol. iii. p. 614.) Some ancient remains have been discovered there, though these may seem to indicate the site of Roman villas rather than of a town. [E. H. B.]

MARCIO'US MONS (ὁ Μαρκίος ὄρος) was, according to Plutarch, the name of the place which was said to be the scene of a great defeat of the Volscians and Latins by Camillus in the year after the taking of Rome by the Gauls a. d. 369. (Plut. Camill. 33, 34.) Diodorus, who calls it simply Marcus or Marcium (ὁ καλλιόμην Μάρβου, xiv. 107), tells us it was 200 stadia from Rome; and Livy, who writes the name as ad Medium, says it was near Lasuvium. (Livy. vi. 11.) The exact site cannot be determined. Among the older topographers speak of a hill called Colle Marro, but no such place is found on modern maps; and Gell suggests the Colli di due Torri as the most probable locality. (Gell, Top. of Rome, p. 311.)

MARCO'DAVA (Μαρκοδάβα, Ptol. iii. 8. § 7), a town of Dacia, the remains of which have been found near Podura. (Scrin. Bacch. p. 105.) [E. B. J.]

MARCO'DURUM, in North Gallia. Some of the cohorts of the Ubii were cut to pieces by the troops of Civilis at Marcedurum, which as Tacitus observes (Hist. iv. 28) is a long way from the bank of the Rhine. The termination durum indicates a place on a river; and Marcedurum seems to be Durum on the Rôse. The Frank kings are said to have had a palace there, named Dura Virila or Dura. [G. L.]

MARCOMAGUS, a place in North Gallia on a road from Augusta Treverorum (Trier) to Argentum Curia (Cologne). It appears both in the Antonine Itinerary and in the Table. Marcomagus is Mar- cemage. It is 26 or 31 M. F. from Cologne, for the numbers are not certain. [G. L.]

MARCOMANNI (Μαρκομάνου, Μαρκομάνου, Μαρκομάνου, or Μαρκομάνου), a name frequently occurring in the ancient history of Germany, sometimes as a appellative, and sometimes as a proper name of a distinct nation. Its meaning is border-men or march-men, and as such it might be applied to any tribe or tribes inhabiting and defending a border country. Hence we must be prepared to find Marcomanni both on the western and southern frontiers of Germany; and they might also have existed in the east, or on any other frontier. Marcomanni are first mentioned in history among the tribes with which Ariovistus had invaded Gaul, and which were defeated and driven back across the Rhine by J. Caesar, n. c. 58. (Cass. Bell. Gall. i. 51.) These Marcomanni, therefore, appear to have been the marchmen on the Rhenish frontier, perhaps about the lower part of the Mosse. They are again mentioned during the campaigns of Augustus against the Germans, from n. c. 10 to 19, by Florus (iv. 12), who seems to place them somewhat farther in the interior. Only a few years later, we hear of a powerful Marcomannian kingdom in Bohemium or Bohemia, governed by Marobodus; and we might be inclined to regard these Marcomanni as quite a different people from those of the Rhine and Mosse, that is, as the marchmen on the southern frontier,— were it not that we are expressly told by Tacitus (Germ. 42), Paterculus (ii. 108), and Strabo (vii. p. 390), that their king Marobodus had emigrated with them from the west, and that, after expelling the Celtic Boii from Bohemia, he established himself and his Marcomanni in that country. (Comp. Ptol. ii. 11. § 25.) If we remember that the kingdom of the Marcomanni in Bohemia was fully organised as early as A. D. 6, when Tiberius was preparing for an expedition against it, it must be owned that Marobodus, whose work it was, must have been a man of unusual ability and energy. Henceforth the name of the Marcomanni appears in history as a national name, though ethnologically it was not peculiar to any particular tribe, but was given to all the different tribes which the Marcomannian conqueror had united under his rule. The neighbouring nations whom it was impossible to subdue were secured by treaties, and thus was formed what may be termed the great Marcomannic confederacy, the object of which was to defend Germany against the Romans in Pannonia. But the Marcomanni soon came into collision with another German confederation, that of the Cherusci, who regarded the powerful empire of Marobodus as not less dangerous to the liberty of the German tribes than the aggressive policy of the Romans. In the ensuing contest, A. D. 17, the Marcomanni were humbled by the Cherusci and their allies, and Mar- coenodurus implored the assistance of the emperor Tiberius. The aid was refused, but Drusus was sent to mediate peace between the hostile powers. (Tac. Ann. ii. 45, 46.) During this mediation, however, the Romans seem to have stirred up other enemies against the Marcomanni; for two years later, A. D. 19, Catnulide, a young chief of the Gothones,
probably derived from some of the far extended nomad tribes of the Mardi or Amardi. (Herod. i. 125; Strab. xi. p. 534.)

MARDI (Μάρδινος). Ptol. vi. 12 § 4), a tribe who occupied the lower part of the Sogdian mountains in Sogdiana. There can be no doubt that this is the Mardi of the ancient historians, and establishes the identity of the numerous races, whose traces we find spread over a wide extent of country from the Caspian to the Persis Gulf, and from the Oxus to the Caspian. We find the names of these tribes preserved in different authors, and attributed to very different places. Hence the presumption that they were to a great extent a nomad tribe, who migrated from the N. and E. to the S. Thus we find them under the form of Mardi in Hircania (Diod. xvii. 76; Arrian, Anab. iii. 24, iv. 18; Dionys. Perieg. v. 732; Curt. vi. 5), in Margiana according to Pliny (vi. 16. a. 13), in Persia (Herod. i. 125; Strab. xii. p. 534; Ptol. vi. 4. § 3; Curt. v. 6), in Armenia (Ptol. v. 12.; Tact. Anab. xiv. 23), on the eastern side of the Pontus Euxinus (Plin. vi. 5), under the form Amardi in Scythia in intra Imaum (Mela, iii. 5, iv. 6; Plin. vi. 17. a. 19), and lastly in Bactriana. (Plin. vi. 16. a. 18.)

MAREIA or MAREA (Μαρεά). Herod. ii. 18, 30; Ptol. v. 12.; Tact. Anab. xiv. 23); on the eastern side of the Pontus Euxinus (Plin. vi. 5), under the form Amardi in Scythia in intra Imaum (Mela, iii. 5, iv. 6; Plin. vi. 17. a. 19), and lastly in Bactriana. (Plin. vi. 16. a. 18.)
MARBOTIS.

er of keeping well to a great age; and Horace (Od. i. 37) mentions it as a favourite beverage of Cleopatra.

Mareia, from its neighbourhood to Alexandria, was as generally known to Roman travellers, that among the Latin poets, the words Mareia and Mareotic became synonymous with Asian and Egyptian.

Thus Martial (Ep. xiv. 209) calls the papyrus, "the grass of Mareia"; and Martial, in the same line, and Cæcinus (Cæsareus, v. 915) designates Egyptian luxury as Mareotic; and Ovid (Meta. iv. x 73) employs "ara Mareoticara" for Lower Egypt.

[W. B. D.]

MAREOTIS OR MARETIA (Μάρεοτις or Μαρετία Αἰγύπτου, Strab. xvii. pp. 789—789; Μαρέωτ, Steph. B. s. v.; Mareotis Libya, Plin. v. 10. s. 11; Justin. xi. 1), the modern Birkalet-el-Mareoot, was a considerable lake in the north of the Delta, extending south-westward of the Canopic arm of the Nile, and running parallel to the Mediterranean, from which it was separated by a long and narrow ridge of sand, as far as the tower of Pseri on the Plinithentic bay.

The extreme western point of the lake was about 26 miles distant from Alexandria; and on that side it was separated from the sea by a sandy ridge, which, from its northern extremity its waters at one time washed the walls of Alexandria on their southern side, and before the foundation of that city Mareotic was termed the Lake above Pharos. In breadth it was rather more than 150 stadia, or about 22 English miles, and in length nearly 300 stadia, or about 42 English miles. It is connected with the Canopic arm of the Nile, and another with the old harbour of Alexandria, the Portus Euneotus. [ALEXANDRIA.]

The shores of the Mareotis were planted with olives and vineyards; the papyrus which lined its banks and those of the eight islets which studded its waters was cultivated for its fine quality; and around its margin stood the country-houses and gardens of the opulent Alexandrian merchants. Its creeks and quays were filled with Nile boats, and its export and import trade in the age of Strabo surpassed that of the most flourishing havens of Italy.

Under the later Caesars, and after Alexandria was occupied by the Arabs, the canals which fed the lake were neglected, and its depth and compass were reduced. In the 16th century, its waters had retired about 3 miles from the city walls; yet it still presented an ample sheet of water, and its banks were adorned with thriving date-plantations. Its lake, however, continued to recede and to grow shallower; and, according to the French traveller Savary, who visited this district in 1777, its bed was then, for the most part, a sandy waste. In 1801 the English army in Egypt, in order to annoy the French garrison in Alexandria, bored the narrow isthmus which separates the Birkalet-el-Mareoot from the Lakes of Madicah or Aboukir, and re-admitted the sea-water. About 450 square miles were thus converted into a salt-marsh. But subsequently Mehemet Ali repaired the isthmus, and again diverted the sea from the lake. It is now little more than 14 feet deep, at its northern end, near Alexandria, it is about 14 feet deep, at its opposite extremity not more than 3 or 4. Westward it forms a long and shallow lagoon, separated from the sea by a bar of sand, and running towards Libya nearly as far as the Tower of the Arabs. The lands surrounding the Mareotis now form part of the new Egyptian Nome (Μαρεωτική Νόμια, Plut. v. 5. §§ 3, 34); but this was probably not one of the established Names of Pharonic Egypt.

[W. B. D.]

MARES (Μαρείς), a tribe on the coast of Pontus, in the neighbourhood of the Mosynoceri. (Hecat. Fragm. 192; Herod. iii. 94.) Their armour, when serving in the army of Xerxes, is described by Herodotus (vii. 79) as having consisted of helmets of wicker-work, leather shields, and javelins. Later writers do not mention this tribe.

[I. S.]

MARESSH (Μαρέθση, LXX., Enesob.; Μαρέθση, Joseph.), a city in the territory of Thapsos, with Kiril and Achiab in Joshua (xv. 44). In Micah (i. 15), where it is again joined with Achiab, the LXX. have substituted Ασκέθ (Lachish, however, is found in the list of Joshua, independent of Mareesh (xv. 39), so it could not be a synonym for Mareesh. It was one of the cities fortified by Nebuchadnezzar for the Philistines and Egyptians (2 Chron. xii. 8); and there it was that Asa, the shamed Zerah the Ethiopian, "in the valley of Zephathah at Marees" (xv. 9), and gained a signal victory over him. In the time of Judas Maccabees it was occupied by the Idumeans (3 Macc. xii. 35), but Judas took and destroyed it. (Joseph. Ant. xii. 8. § 6.) Only a few years later it is again reckoned to Idumea (9. § 10); and Herod the Great expelled its inhabitants, in common with the other Idumeans, to practice circumcision, and to conform to the law, as a condition of remaining in that country (xiii. 9. § 11, § 16. § 4). It was one of the cities restored to Aretas king of Arabia by Herod the Great (9. § 13. § 9), and probably never recovered its former importance, as this is the latest historical notice. It is placed by Eusebius and St. Jerome 2 miles from Eleutheropolis; it was then a ruin. Dr. Robinson conjectures that Eleutheropolis (at first Bethagorah) had sprung up after his destruction of Mareesh, and had been built with its materials,

[M. W.]

MAREURA OR MALTHUAA (Μαριοῦρα μαλθούς ἢ καὶ Μαλθοῦρα καλομνή, Ptol. vii. 2. § 24), a place of some importance in the upper part of the Aenare Chersonesus in India extra Gangam. It is not possible now to identify it with any existing place.

MARGANA or MARGALAK (Μαργάνα, Dict.; Μαργανές, Xen.; Μαργάνας, Strab.; Μαργάνας, Steph. B. s. v.), a town in the Ptolemaic, in the district Amphidias, was supposed by some to be the Homero Aesecus. (Strab. viii. p. 349.) The Eleians were obliged to renounce their supremacy over it by the treaty which they made with Spartas in B.c. 400 (Xen. Hell. iii. 3. § 10). In the time of Ptolemy it is called one of the Triphylian towns: to this statement, see LETRIN. It is mentioned as one of the two towns taken by the Arcadians in their war with the Eleians in B.c. 366. (Xen. Hell. vii. 4. § 14; Diod. iv. 77.) Its site is uncertain, but it was probably east of Letrin. Leake places it too far north, at the turning of the river to the Eumessian Peneias, which is in all probability the site of the Eleian Pylaos. (Leake, Peloponnesia, p. 219; Bolyai, Recerches, g. c. p. 130; Curtius, Peloponnes, vol. i. p. 73.)
MARGIANA.

MARGIANA (ภ. Margyan, Strab. xi, p. 516, Ptol. vi, 10; Plin. vi, 16, a. 18), a district of considerable extent in the western part of Central Asia, which was bounded on the W. by Hyrcania, on the N. by Scythia and the Oxus as far as Bactriana, on the E. by Bactriana, and on the S. by Ariana. At present it is called Khurasan, and comprehends also some part of the territory occupied by the Turcoman tribes. Like most of the districts at a great distance from Greece or Rome, it was but partially known to the ancients; hence its limits are variably stated by ancient authors. Thus Strabo makes it the province next to Parthia, to the N. of the Sarpi mountains; Pliny makes it the province of the Danda (about A.D. 950) it still flowed into the Jihon (De Sac. Mém. sur deux Proven. de la Perse, p. 22). The Margus passed by and watered Antiocchia Margiana, the capital of the province.

MARIABA.

MARGUS (Μαργύας, Strab. xi, p. 516; Ptol. vi. 10, §§ 1, 4), the chief river of the province of Margiana, in which all probability derives its name from it,—now the Murgh-bâ or Merâ Rubâ. It is said by Ptolemy to have taken its rise in the Sarpi mountains (now Barchi mountains), a western spur of the great range of the Paropamisus, and, after a northern course and a junction with another small stream, to have flowed into the Oxus. The travels of Sir Alexander Burnes have demonstrated that the Murgh-bâ no longer reaches the Oxus, but is lost in the sands about 50 miles N.W. of Merv (Burnes, vol. ii. p. 35); but it is probable that as long as 1869, and possibly before, it still flowed into the Jihon (De Sac. Mém. sur deux Proven. de la Perse, p. 22). The Margus passed by and watered Antiocchia Margiana, the capital of the province.

MARIABA (Μαριάβα). There seem to have been several cities of this name in Arabia, as there are still several towns or sites of the same name, scarcely modified. How many distinct cities are mentioned by the classical geographers, antiquarians are not agreed, and the various readings have involved the question in great perplexity. It will be well to eliminate first those of which the notices are most distinct.

1. The celebrated capital of the Sabaei in Yemen, is known both in the native and classical writers. It is called the metropolis of the Sabaei by Strabo (xvi. 4, § 2), which tribe was contiguous to that of the Minaei, who bordered on the Red Sea on one side, and to the Catabanesi, who reached to the straits of Bab-el-Mandeb. [SABAEI; MINAEI; CATABANESI.] It was situated on a well-wooded mountain-side, and was the principal residence. It seemed difficult to imagine that this was distinct from the Mariaba of Pliny, who, however, assigns it to the Atrakmitae, a branch of the Sabaei, and places it on a bay 94 M. P. in circuit, filled with spice-bearing islands; while it is certain that the Mariaba of the Sabaeans was an inland city. It is beyond all doubt the Maarrab of the Arabian historians, built according to their custom, on a level and sandy plain near the coast, and only in succession from the patriarch Koktan or Jokadan, son of Eber. Abulfeda says that this city was also called Saba; and that, in the opinion of some, Maarrab was the name of the royal residence, while the city itself was called Saba. Its founder also constructed the stupendous embankment so renowned in history, forming a dam for confining the water of seventy rivers and torrents, which he conducted into it from a distance. (Abulfeda, Historia Ante-Islamicos, lib. iv. ap. init.) The object of this was not only to supply the city with water, but also to irrigate the lands, and to keep the subjegated country in awe, being masters of the water. The water rose to the height of almost 20 fathoms, and was kept in on every side by a work so solid, that many of the inhabitants had their houses built upon it. It stood like a mountain above the city, and no danger was apprehended of its ever failing. The inundation of El-Arem (the mound) is an aera in Arabic history, and is mentioned in the Koran as a signal instance of divine judgment on the inhabitants, who, instead of rising against their pride and wickedness, a mighty flood broke down the mound by night, while the inhabitants were asleep, and carried away the whole city, with the neighbouring towns and people. (Sale, Koran, cap. 84, vol. i. p. 289, notes, and Preliminary Discourse, sect. 1. vol. i. p. 13;
MARIABA. 275

Questions Proposées, par M. Michaelis, pp. 183—
188.) This catastrophe seems to have happened about
the time of Alexander the Great, though
some chronologies place it subsequently to the
Christian era. Sale places the city three days' journey
from Sanaa (note, in loc. cit.). The notion of the
identity of Marob with Sheba, mentioned by Abul-
feda, is still maintained by some natives; and Nie-
bhur quotes for this opinion native of the town
itself (Description de l'Arabie, p. 252), and justly
reminds that the existence of the remains of the
famous reservoir of the Sabaeans in the vicinity of
Marob serves to identify it with the capital of the
Sabaeans. To account for the capital not bearing
the name of the tribe, as was usual, he suggests
that the Sabaeans may have derived their name from
another source, and then have built this stupendous
reservoir near Marisba, and there have fixed the
residence of their kings. But a fact elsewhere
mentioned by him, will perhaps lead to a more
satisfactory solution. It seems that the great re-
servoir is not situated before Marob, nor close to it,
but at the distance of an hour, and on the side of it.
This would explain the preservation on the burning
of the embankment. May not the inundation
have occasioned the utter destruction of the neigh-
boring city of Sheba, as the traditions relate, while
the royal residence at Marob escaped, and formed
the nucleus of the modern town? We have seen
from Abulfeda that some native authorities maintain
that Marob was the royal residence, while the cap-
ital itself was called Saba. The name Mariba
(al. Mariva) signifying, according to the etymology
of Pliny, "domines omnium," would well suit the
residence of the dominant family (vi. 28. § 32).

Marob is now the principal town of the district
of Darof, 16 German leagues E.N.E. of Sanaa,
containing only 300 houses, with a wall and three gates;
and the ruins of the town of Ghanim are there shown.
The reservoir is still much celebrated. It is described
by a native as a valley between two chains of mountains, near a day's journey in length
(=5 German leagues). Six or seven small streams,
flowing from the west and south, are united in this
valley, which contracts so much at its east end, by
the convergence of the mountains, that it is not more
than 1240 yards in width. It is bounded on the west
by a thick wall, to retain the superfluous water
during and after the rains, and to distribute it over
the fields and gardens on the east and north by
three sluice-gates, one on the other. The wall
was 40 or 50 feet high, built of enormous blocks of
hewn stone, and the ruins of its two sides still
remain. It precisely resembles in its construction
the Bends, as they are called, in the woods of Bel-
groma, near Budhris, on the Bophora, which
supply Constantinople with water, only that the
work at Marob is on a much larger scale. (Nie-
bhur, l. c. pp. 240, 241.)

2. MARIABA BARAMALACUM. A city of this
name in the interior of Arabia is mentioned with
this distinguishing appellation by Pliny (vi. 30)
as a considerable town of the Chermis, which
was one division of the MIRABE: he calls it
"oppidum xvi. mill. pass. . . . . . . . . et ipsum non
sperservedum." It is supposed by some to be iden-
tical with the Barmalac metrosp (Bermalea al. Ma-
rib/masqarâli) of Ptolemy (vi. 15, p. 155),
which he places in long. 79°, lat. 18° 20'. Forster
has found its representation in the modern Torah, whose
situation corresponds sufficiently well with
the Barmalac metrosp of Ptolemy (Geog. of Ara-
bia, vol. i. p. 135, ii. p. 256); but his account of
the designation Baramalacum (Bermale a Bar-
malacum, equivalent to "Merab of the sons of Ams-
kek") is inadmissible according to all rules of
etymology (vol. ii. pp. 43, 47). Taraba, pronounced
by the Bedouins Toraba, is 30 hours (about 80
miles) distant from Tejg in the Hedjaz, still a consid-
erable town, "as large as Tejg," remarkable for its
plantations, which furnish all the surrounding
country with dates; and famous for its resistance
against the Turkish forces of Mohammed Ali, until
January, 1815, when its inhabitants were compelled to
submit. Taraba is environs with palm-
groves and gardens, watered by numerous rivulets.

(Burchardt, Travels in Arabia, Appendix, No. iv.
p. 461.) A more probable derivation of Baramal-
acum from Bahr-m-al-malkm = the Royal Lake,
would identify it with the preceding, No. 1. (Vin-
cent, Periplus, p. 307.)

3. MARIANA, another inland city of Arabia, is
mentioned also by Pline (I. c.) as the capital of the
Caliugia, 6 M.P. in circumference, which was, ac-
cording to him, afterward destroyed by Aslans Gallus.
He has perhaps con-
found it with the Marsyabah which Strabo fixes as the
limit of his expedition, and the siege of which
he was forced to abandon; but it was remarked be-
fore that this name was according to Pliny equiva-

tent to metropolis,—though the etymology of the
name is hopelessly obscure; so that it is
possible that, besides the Marsyabah mentioned
by Strabo, a Mariabah may have fallen in with the line
of that general's march, either identical with one of
those above named, or distinct from both; possibly
still marked by a modern site of one of several towns
still preserving a modification of the name, as El-
Maraba, marked in Kiesper's map in the very heart
of the country of the W-player; and still marked by Arrowsmith, in the NE. of the Negeb
 country. (MARIYABAH.)

G. W. MARIÄMA (Mapœa), an inland city of Arabia,
mentioned only by Ptolemy (vi. 15), who places it in
long. 78° 10' and lat. 17° 10', and therefore not far
south-east from his Baraba or Maraba metropolis
[MARIABA, 2.] (Manett, Geographia, p. vii.
p. 66) suggests as its site a place marked by a thick
wall, to retain the superfluous water during and after the rains, and to distribute it over
the fields and gardens on the east and north by
three sluice-gates, one on the other. The wall
was 40 or 50 feet high, built of enormous blocks of
hewn stone, and the ruins of its two sides still
remain. It precisely resembles in its construction
the Bends, as they are called, in the woods of Bel-
groma, near Budhris, on the Bophora, which
supply Constantinople with water, only that the
work at Marob is on a much larger scale. (Nie-
bhur, l. c. pp. 240, 241.)

2. MARIABA BARAMALACUM. A city of this
name in the interior of Arabia is mentioned with
this distinguishing appellation by Pliny (vi. 30)
as a considerable town of the Chermis, which
was one division of the MIRABE: he calls it
"oppidum xvi. mill. pass. . . . . . . . . et ipsum non
sperservedum." It is supposed by some to be iden-
tical with the Barmalac metrosp (Bermalea al. Ma-
rib/masqarâli) of Ptolemy (vi. 15, p. 155),
which he places in long. 79°, lat. 18° 20'. Forster
has found its representation in the modern Torah, whose
situation corresponds sufficiently well with
on the site previously occupied by the Greek city of Nicæa mentioned by Diodorus (Diod. v. 13; Oliver. Sicil. p. 508). Its name is mentioned in the Antoninus Itinerary (p. 85), which erroneously reckon- es it 40 miles from Aleria; the ruins of Mariana, which are still extant under their ancient name at the river Gölo, being only about 30 miles N. of those of Aleria. They are 15 miles S. of the modern city of Basta. The ancient remains are inconsiderable, but a ruined cathedral still marks the site, and gives title to the bishop who now resides at Basta. (Rampoldi, Diss. Geogr. vol. ii. p. 589.)

MARINA FOSSA. [Fossa MARIANA.]

MARIANDYNI (Μαριανδύνι, Μαριανδύνι, or Μαριανδύνι), an ancient and celebrated tribe in the north-east of Bithynia, between the rivers Sangarius and Bilaus, on the east of the tribe called Thyrai or Bithyni. (Seylac, p. 34; Plin. vi. 1.) According to Seylac, they did not extend as far west as the Sangarius, for according to him the river Hanus formed the boundary between the Bithyni and Mariandyni. Strabo (vii. p. 995) expresses a belief that the Mariandyni were a branch of the Bithynians, a belief to which he was probably led by the resemblance between their names, and which cannot be well reconciled with the statement of Herodotus (iii. 90), who clearly distinguishes the Mariandyni from the Thracians or Thyrai in Asia. In the Persian army, also, they appear quite sepa- rated from the Bithyni, and their armour resembles that of the Paphлагonians, which was quite dif- ferent from that of the Bithyni. (Herod. vii. 73, 75; comp. Strab. vii. p. 345, xii. p. 542.) The chief city in their territory was Hercules Ponticus, the inhab- itants of which reduced the Mariandyni, for a time, to a state of servitude resembling that of the Cretan Mosea, or the Thessalian Pesetae. To what race they belonged is uncertain, though in their Thracian origin be given up, it must probably be admitted that they were akin to the Paphлагonians. In their division of the Persian empire they formed part of the third Persian satrapy. Their country was called (Μαριανδύνι, Μαριανδύνι, or Μαριανδύνι) and Pliny speaks of a Sinus Mariandynus on their coast. (Comp. Hecat. Fragm. 201; Aeschyl. Pers. 932; Xen. Anab. vi. 4. § 4, Cyrop. i. 1. § 4; Plut. v. 1. § 1; Scyrm. Fragm. 199; Ducis. Paris. 788; Mela. i. 19; Athen. xiv. p. 630; Apollon. Argon. ii. 724; Constant. Porphy. Thesm. i. 7; [L. S.])

MARIA NUS MONS (Μουσ Μαρίανος, Mous Marion). (Pol. ii. 4. § 15; Mous Mariorum, It. Anton. p. 423; Sierva Moreno), a mountain in Hispania Bética, properly only a western offshore of the Oropesca, and probably the mountain which Strabo describes, (iii. p. 142), without mentioning its name, as running parallel to the river Bética, and full of mountains, xxvii. 3, xxxiv. 2), seems to have been called "sea Mariamn, quod et Cordubense dicitur." The eastern part of this mountain was called Saltus Castelonensis. [CASTULO.]

MARICAE LUCUS. [LUCEN.

MARIDE (Ammian. xxvii. 6), a castle or forti- fied town in Mesopotamia, mentioned by Ammianus Marcellinus in his account of Constantine. There can be no doubt that it is the same as the present Maridun, which is seated on a considerable eminence looking southward over the plains of Mesopotamia. [V.]

MARIDUNUM (Maridunum, Plut. ii. 3. § 25), in Britain, a town in the country of the Demetae, now Carmarthens. In the time of Gildas Cambrensis the Roman walls were in part standing ("est igitur haec urbs antiqua coculis muris partem adhibuit extantibus egregie clausa." Itin. Camb. lib. i. c. 10. [C. R. S.])

MARINIA'NA, also called MARINIANA (It. Bieros. p. 562), a town in Pannonia, on the frontier between Upper and Lower Pannonia, on the road from Juvia to Mursa. (It. Anton. p. 130.) It is possible that the place may have been the same as the one called by Ptolomy (ii. 14. § 6) Marianiana. (Comp. Geogr. Rav. iv. 19, and Tab. Ptol.)

MARIONIS (Μαρίων). Two towns of this name are mentioned by Ptolomy (ii. 11. § 27) in the north-west of Germany. As the name seems to indicate a maritime town, it has been inferred that one of them was the modern Hamburgh, or Marne at the mouth of the Elbe, and the other Laebec or Wismar. But nothing certain can be said about the matter. [L. S.]

MARIS. [Maris.]

MARISUS (Μαρίσις, Strab. vii. 304; Μάρις, Herod. iv. 49; Marisa, Jornand. de Reb. Gt. 5; Geogr. Rav.), a river of Dacia, which both Herodotus (1. c.) and Strabo (1. c.) describe as falling into the Danube; it is the same as the Marosch, which falls into the Theiss. (Heeren, Asiat. Nations, vol. ii. p. 10., trans.; Schafarik, Slav. All. vol. i. p. 309.)

MARITI MONTES (Μάριτις Μοντές, Μαρίτις Μοντές), a mountain chain in the interior of Arabia, the middle of which is placed by Ptolomy, who alone mentions them, in long. 60° 30', lat. 21° 30', and round which he groups the various tribes of this part of the peninsula, viz., the Melangitae (Μελαγγιταί), and Dachareni (al. Dacharemnes, δαχαραν- νοι), on the north; the Zeritae (Ζεριταί), Binlaei (Βινλαεοί), and Omalites (Ομαλάεοι), on the south; to the east of the last were the Cattabeni, extending to the Montes Agressorum. [ΜΕΛΑΝΕΣ] MONTES. (Ptol. vi. 7. § 20.) They appear to correspond in situation with the Jebel 'Athak, on the south of Wady-al-Ayda, in Ritter's map. (For map of Arabia, it. Anton. p. 256.) [G. W.]

MARITIMUS. (Μαρίτιμος) a town of Gallia Narbonensis on the coast. Mela (i. 5) says, that "between Massilia and the Rhodanus Maritimus was close to the Avati- corum stagna;" and he adds that a "foes" discharges a part of the lake's water by a navigable mouth. Pliny in a passage before quoted [Fostra Mai- n, Vol. I. p. 912], also calls Maritima a town of the Avatice, above which are the Cami Lapedes. Ptolomy (ii. 18. § 8) places Maritimos of the Avatice east of the eastern branch of the Rhone, and he calls it Colonia. The name is Avatici in the Greek texts of Ptolomy that are now printed, but it is Analtii in the Latin text of Pirkseym, and perhaps in other Latin texts. It does not seem certain which is the true reading. Walckenaer (Glog. ge. vol. i. p. 188) assumes that Analtii is the true reading in Ptolomy.

D'Anville concludes that Maritimus was between Marailles and the canal of Maris, and that Mar- tiques is the site, but there is no reason for fixing on Martiques, except that it is between the Rhone and Marais, and that there is little resemblance between the two names. It is said that no traces of remains have been found at Martiques, which, however, is not decisive against it, if it is true; and it is not true. Martiques is near the outlet of the Etang de Berre. Walckenaer observes, that
there has been found at Côte or Saint-Blaise, on the borders of the same lake, an inscription which mentions "Curator Maritimae, Sextumvir Aug斯塔lis Avatirorum," and he would fix the Maritima Avatirorum of Pliny at this place. But he thinks that the Maritima Colonia of Ptolemy is a different place from the Maritima Avatirorum of Pliny; and he says that the measures of Ptolemy for Maritima Colonia fix the Anaitis, whose capital this town was, between the mouths of the Rhone. Pliny also speaks of the Anaitis (iii. 4), and Wallkenaer says that he places the town of Ptolemy there; but he says that Ptolemy places them. But this is not so. Pliny places them east of the eastern branch of the Rhone, if his text can be understood. Nor is it true that Ptolemy places the Anaitis or Avatich, whatever may be the true name in his text, between the mouths of the Rhone; for Ptolemy places them east of the eastern branch of the Rhone, where Pliny places the Avatich. Wallkenaer can find no place for Ptolemy's Maritima Colonia, except by hazarding a guess that it may have been Heraclea [HERACLEA] at the mouth of the Rhone; but Ptolemy places the Maritima Colonia half a degree east of the eastern mouth of the Rhone. Wallkenaer's examination of this question is very badly done. The site of the mouth of the Rhone is according to this passage now at a considerable distance when Cyrenaica became a dependency of Egypt—into two parts, the E. of which was called LIBYCUS NOMOS (AISTHIS NOMOS, § 4) and the W. MAR MARICUS NOMOS (ΜΑΡΜΑΡΙΣ ΝΟΜΟΣ; § 9); the line of separation was made by the CATARACHEMUS MAGNUS (ΚΑΤΑΡΑΘΗΜΟΣ ΜΑΓΝΟΣ, Polyb. xxxi. 26; Strab. pp. 791, 925, 926, 927; Plin. vi. 34; Ann. 19). [G. L.]

MARMARIS. [ARABES.] MARMARIS STATIONES (ΤΡΑΤΟΙ ΒΡΟΜΑΤ, Potl. iv. 4, § 3), a place on the coast-line of the Great Syria, a little to the N. of AUTOMALA (ΒΡΟΑ). The position of Tabaiba, where there are ruins, and inscriptions in the running hand of the Greeks of the Roman Empire, corresponds exactly with these naval stations. (Beechey, Expedition to the N. Coast of Africa, pp. 230—237) [EBJ].

MARMARIA. [ARABES.] MARMARIA (ΜΑΡΜΑΡΙΑ, the sandy and hilly district, which forms the westernmost coast of the Mediterranean, from the valley of the Nile to the Cyrenaica, and is now called the Desert of Bardak, and divided by no certain line of demarcation between the Pasha of Aegypt and the ruler of Tripoli. The MARIMARAI (ΜΑΡΜΑΡΙΔΑ), a Libyan tribe, gave their name, which Niebuhr (Loc. cit. in Arc. Ethnog. and Geog. vol. ii. p. 336) derives from the word "Mar" = salt, with a reduplication common to these languages, to the region they occupied. They appear as the principal indigenous tribe to the W. of Aegypt, between the age of Philip of Macedon, and the empire of the Christian era (Sculac, c. 107, ed. Krause; Strab. ii. p. 131, xvii. pp. 798, 825, 838; Plin. v. 5; Joseph. B. J. ii. 16. § 4; Vopisc. VII. Prob. c. 9), but are not mentioned by Herodotus; it is probable that they were pushed into the interior of the country, by the Greek colonists of Cyrene, and afterwards returned. During the reign of Magas of Cyrene, the Marmaraides revolted, and compelled that prince to give up his intention of attacking Ptolemy Philadelphus, and the Egyptian frontier. (Paus. i. 7. §§ 1, 2.) The ancients differed considerably in the limits they assigned to the Marmaraides; Sculac (l.c.) places them between Apis, and the Gardens of the Hesperides; Pliny (l.c.) between Parastumonion, and the Greater Syrtes; while Strabo (xvii. p. 583) extends their frontier to the S. as far as the Oasis of Ammonium (Siris).

Ptolemy (iv. 5. §§ 1—10) bounds the district Marmarica, on the E. by the Plinthiatic Gulf, and on the W. by a line which is drawn through the town of Darna (Derwa); he divides this region—when Cyrenaica became a dependency of Egypt—into two parts, the E. of which was called LIBYCUS NOMOS (AISTHIS NOMOS, § 4) and the W. MARMARICUS NOMOS (ΜΑΡΜΑΡΙΣ ΝΟΜΟΣ; § 9); the line of separation was made by the CATARACHEMUS MAGNUS (ΚΑΤΑΡΑΘΗΜΟΣ ΜΑΓΝΟΣ, Polyb. xxxi. 26; Strab. pp. 791, 925, 926, 927; Plin. vi. 34; Ann. 19). [G. L. 2; Steph. B.] This elevation, which rises to the height of 900 feet, according to some authors separated Aegypt from Cyrenaica, and extends from the coast in a SSE direction towards the Oasis of Ammonium. Edrisi (vol. i. p. 125, ed. Jaubert) calls it 'Alidhak el Solom, or staircase descent, whence the port Solom and Solomun of most of the earlier "Portulan"; the modern name is 'Aishah el Kibir. Further to the E., near Parastumonion, was the smaller inclination CATARACHEMUS MINOR (Strab. p. 838; Solin. 30), now called 'Alidhak el Siyr, the height of which is 500 feet. Shooting out into the sea, in the headland Ras el Kornas, it takes a direction from (Jas. el Makana) and is the sea-board of this arid space, following the coast from E. to W., were the promontories of Deris (el Hejeh); HERMAKUM (Ras el Kamaa); the harbour of GYGIS or ZYGIS (Mahadah); PARGASTON (Ras el Harweit); APIS (Boum Ajoubeh); the little rocks called SOOFUL TYYRED (el聊天); PLATHI (Ras Hulem); PARMENUS (Marsach Soloum); ALANDUS PROM. (Ras el Malab;), with the adjoining harbour MENELAI PI. (ΜΕΝΕΛΑΙΟΣ; Antipatris (Tobrack)); PETRAS PARYUS (Magharat el Hean); with its harbour BATTARACHUS; ADATEIA PI. (Ain el Gharai) with the islands ARDONIA and PLATETA (Bomba), and Chersounburs (Ras et Tha). Along the whole of this coast a road ran, the stations on which were given-names, and the rocks (Segen. viii.). One river, the PALLABUS (Παλλαβος, Potl. iv. 5. § 2; el Zemmrieh), watering the district of AZHIS, discharges itself into the sea at the Gulf of Bomba. The interior, which was occupied by the tribes of the ADYRACHIDAE and GILGAMMÆ, is described under OASIS, TAPPOURIS, APIS, and PARASTUMONION were the chief towns, of
MARRUCINI.

which the ruins still remain. Throughout the whole of Marmaria no vestiges of Egyptian architecture before the Greek period have been found. The saxon, "scilla maritima," and madder, "rubia," which cover the plains, remind the traveller of what Herodotus (iv. 189, 190) says about the practice of the Libyans feeding their goats-akin with red, and of the portable houses constructed of stalks of asphodel, intertwined with rushes. Now, as then, the "jerboas" (Micro, Herod. iv. 192) is common. The few coins of Marmaric towns, such as those of Apis and Batrachus, are of the same workmanship as the Ascalonian mints. (Echchel, vol. iv. p. 116.)

Ptolemy (iv. S. § 22) enumerates the following tribes in Marmaria:—In the Lybian nome, along the coast, the Zoritaris (Zöröti), Chattani (Caw-rawol), and Zygenses (Zör-eti); further to the S., in the interior, the Büzenises (Bouzit) and Oodami. In the district of Ammonium (§ 23), the Anaomaei (Ana⁵wëd), Iobacchi (Iobëx-ë), and Raedtari (Raudëtari). In the Marma- rite nome, to the N., on the coast, the Liby-Archaris (Libëxëd), the Amberitas (Amberët), and Basachitari (Basëxëtari); to the S. of these, the Augilaris (Augiët), Nasamones (Nasamowë), and Bacatares (Bacëtari); then the Amschib- kari (Amisëkti), who belong more properly to Cyrenaica (Tarifti); and farther to the S. the Senttiris (Sentëtirët), Oribali (Orëbalë), and Aezari (Aëzëpët). (Pacho, Voyage dans la Marœa Tique. pp. 1-81; Barth, Wonders of the East, pp. 495-546.) [E.J.B.]

MARRMIUM. [Caeretum.]

MARMOLITIS. [Paphlagonia.]

MARKODUDUM (Markoâdoum), a town of the Markomanni in Bohemia (Ptol. ii. 11. § 29), and undoubtedly identical with the royal residence of Marobodus, with a fortress attached to it, mentioned by Tacitus. (Ann. ii. 63.) The same place, or rather the fortress, is called by Strabo (vii. p. 390) Buissiemon, and is identified with the modern Vossouëna, in Bohemian Moravia. [L.S.]

MARNEIA (Marneëa; Eth. Maeperatë), a rich and powerful city of the Cicones, in Thrace, situated on the Aegean sea, not far from the lake Ismaris. (Herod. viii. 109.) It was said to have been founded by Maron, a son of Dionysus (Eurip. Oed. v. 100, 141), or, according to some, a companion of Osiris (Diod. Sic. i. 20); but Scyrnus (672) relates that it was built by a colony from Chios in the fourth year of the fifty-ninth Olympiad (s. c. 540). Pliny (iv. 11. 18) tells us that the ancient name was Ortagures. The people of Maronea venerated Dionysus in an especial manner, as we learn from their coins, probably on account of the superior character of their wine, which was celebrated as early as the days of Homer (Od. ix. 196, xcii. 301). This wine was universally esteemed all over the ancient world; it was said to possess the odour of Nectar (Nonnus, i. 12, xvii. 6, xix. 11), and to be capable of mixture with twenty times its quantity of water (Hom. Od. ix. 209); and, according to Pliny, on an experiment being made by Mucianus, who doubted the truth of Homer's statement, it was found to bear even a larger proportion of water. (Plin. xiv. 4. s. 6; comp. "Vicia Maronoe fodacita lumina Bacocho," Tibull. iv. 1. 57.)

Maronea was taken by Philip V. of Macedon in B.C. 200; and when he was ordered by the Romans to evacuate the towns of Thrace, he vented his rage by slaughtering a great number of the inhabitants of MARRUCINI.

the city. (Liv. xxxi. 16, xxix. 24; Polyb. xxii. 6, 15, xxixi. 11, 15.) The Romans subsequently granted Maronea to Attalus; but they almost immediately afterwards revoked their gift, and declared it a free city. (Polyb. xxx. 3.) By Constantine Porphyrogenitus (Them. ii. 2), Maroneia is reckoned among the towns of Macedon. The modern name is Maroûna, and it has been the seat of an archbishopric. (Comp. Ptol. iii. 11. § 2; Scalix, p. 27; Strab. vii. 331; Amm. Marc. xxii. 8, xxvii. 4; Hieroc. p. 643; Tzetz. ad Lygophr. p. 818; Theophil. ad Autol. xi. p. 86.) [A.L.]

COIN OF MARONEA.

MARONSA (Mârōona, Zeisi. iii. 28), a small village in Mesopotamia, at which the army of Julian arrived, just before the combat in which he fell. It is probably the same which Ammianus calls Mârona (xxvi. 1), but its exact locality cannot now be determined. (V.).

MARPESSA (Mârâpacea), a mountain in the island of Paros, from which the celebrated Parian marble was obtained. (Steph. B. s. v. Mârâpacea.) [Paros.] Hence Virgil (vi. 471) speaks of "Marpeia cautes." [MARPESSUS.]

MARRUBIUM. [Marrumum.]

MARRUCINI (Mârûcuinou, Pol., Strab. iv. Mârâbudoum, Ptol.), a nation of Central Italy, inhabiting a narrow strip of territory on the S. bank of the river Aternum, extending from the Adriatic to the ridge of the Apennines. (Strab. v. p. 241.) They were bounded on the N. by the Vestini, from whom they were separated by the Aternum, and on the S. by the Frentani, while to the W. and S.W. they apparently extended inland as far as the lofty mountain barriers of the Majella and the Marvone, which separated them from the Peligni, and effectually cut them off from all intercourse with their neighbours on that side, except by the valley of the Aternum. The southern limit of their territory is not stated by any ancient author, but was probably formed by the river Foro, which falls into the Adriatic about 7 miles from the mouth of the Aternum (Pescara). Pliny, indeed, extends the district of the Frentani as far as the Aternum (Plin. iii. 12. 17), thus cutting off the Marrucini altogether from the sea; but there seems little doubt that this is erroneous. [FRENTARI.] The Marrucini were, undoubtedly, like the other tribes in their immediate neighbourhoods, of Sabine origin, and appear to have been closely connected with the Marsi; indeed, the two names are little more than different forms of the same, a fact which appears to have been already recognised by Cato (ap. Fructus. i. p. 871). But whether the Marrucini were an offshoot of the Marsi, or both tribes were separately derived from the common Sabine stock, we have no information. The Marrucini appear in history as an independent people, but in almost constant alliance with the Marsi, Peligni, and Vestini. There is, indeed, little doubt that the four nations formed a kind of league for mutual defence.
MARRUCINI

(Liv. viii. 29; Niebuhr, vol. i. p. 101); and hence we find the Marrucini generally following the lead and sharing the fortunes of the Marsi and Pergini. But in B. c. 311 they appear to have taken part with the Samnites, though the other confederates remained neuter; as in that year, according to Diodorus, they were engaged in open hostilities with Rome. (Diod. viii. 53.) And hence, probably, arose the apprehension expressed by Statius, lest the mountains of the Marrucini should be visited by a catastrophe similar to that which had recently occurred in Campania. (Stat. Silv. iv. 4. 86.) The only city of importance belonging to the Marrucini was Teate, now Chieta, which is called by several writers their metropolis, or capital city. At a later period its municipal district appears to have comprised the whole territory of the Marrucini. INTERROMPETUM, known only from the Itineraries, and situated on the Via Valeria, 12 miles from Corfinium, at the Osteria di S. Valentino, was never more than a village or vicus in the territory of Teate. Pollitiun, mentioned by Diodorus (xix. 105) as a city of the Marrucini, which was destroyed by the Romans in B. c. 311, is wholly unknown. ARENUM, at the mouth of the river of the same name, served as the port of the Marrucini, but belonged to the Vestini. (Strab. v. p. 241.) [E. H. B.]

MARRUVIUM or MARRUBIUM (Mapoléo, Strab.: Edh. Marruvia: S. Benedetto), the chief city of the Marsi, situated on the eastern shore of the lake Pausia, and 7 miles from the town of Alba Fucensia. Ancient writers agree in representing it as the capital of the Marsi: indeed, this is sufficiently attested by its name alone; Marruvium or Marrubii being evidently another form of the name of the Marsi, and being thus used by Virgil as an ethnie appellation (Marruvius de genti, Aem. vii. 750). In some accounts also, Silvius Italicus represents Marruvium as deriving its name from a certain Marrus, who is evidently only an eponymous hero of the Marsi. (Sil. Ital. viii. 505.) We have no account of Marruvium, however, previous to the Roman conquest of the Marsiac territory; but under the Roman Empire it was a flourishing municipal town; it is noticed as such both by Strabo and Pliny, and in the latter's work we find it called "splendidissima civitas Marronum Marruvium." (Strab. v. p. 241; Plin. iii. 12. 17; Mommsen, Jascr. R. N. 5491, 5499; Orell. Jascr. 3148.) It seems, indeed, to have been not unfrequently called "Civitas Marronum," and in the middle ages "Civitas Marricana:" hence, even in the Liber Coloniarum, we find it called "Marrus municipium." (Lib. Colon. pp. 229, 226.) It is noticed in the Tabula, which places it 13 M. P. from Alba; but it was not situated on the Via Valeria, and must have communicated with that high-road by a branch from Cerfenna. (Tab. Peut.) Marruvium continued through the middle ages to be the see of the bishop of the Marsi; and it was not till 1560 that the sea was removed to the neighbourhood of Pescina. The site is now known by the name of S. Benedetto, from a convent erected on the spot. Considerable ruins of the ancient city still remain, including portions of its walls; the remains of an amphitheatre, &c., and numerous inscriptions, as well as statues, have been discovered on the site. These ruins are situated close to the mouth of the lake, about two miles below Pescina. (Holten. of Clover. p. 151; Romanelli, vol. iii. p. 180—186; Kramer, Fusciner Sei. p. 55; Hoare's Class. Tour, T 4.
MARS.

vol. i. pp. 357—361. The inscriptions are collected by Mommsen, I. R. N. pp. 290—294.)

The little river Giano, which flows into the lake close to the site of the ancient city, is probably the stream called by the ancients Pisonius, concerning which they related many marvels. (Fuscusus Lucus.)

Dionysius mentions (i. 14) a town called Maruvium (Marauvium) among the ancient settlements of the Aborigines in the neighbourhood of Beate, which is certainly distinct from the above, but is otherwise wholly unknown. [ABORIGINES.] [E. H. B.]

MARS. [Dionysius, p. 362.]

Marsi (Marsia: a. Adj. Marsicanus, Marsicano), an ancient nation of Central Italy, who inhabited an inland and mountainous district around the basin of the lake Fucinus, where they bordered on the Peligni towards the E., on the Sabines and Vestini to the N. and on the Aequians, Hannicans, and Volscians, to the W. and S. There can be no doubt that they were, in common with the other inhabitants of the upland valleys of the central Apennines, a race of Sabine origin; though we have no direct testimony to this effect. Indeed the only express statement which we find concerning their descent is that which represents them as sprung from a son of Circe, obviously a mere mythological fable arising from their peculiar customs. (Plin. vii. 2, Sili. i. 25, v. 57. Another tradition, equally fabulous, but obscurely known to us, seems to have ascribed to them a Lydian origin, and derived their name from Marmyas. (Gellius, ap. Plin. iii. 12. s. 17; Sil. Ital. viii. 503.)

But the close connection of the four nations of the Marsi, Marrucini, Peligni and Vestini, can leave no reasonable doubt of their common origin; and the Sabine descent of at least the Peligni is clearly attested. (Pellini.) It may be added that the Marsi are repeatedly mentioned by the Roman poets in a manner which, without distinctly affirming it, certainly seems to imply their connection with the Sabine race (Hor. Epod. 17. 29; Juv. iii. 168; Virg. Georg. ii. 187.) That the Marsi and the Marrucini were closely related is sufficiently evident from the resemblance of their names, which are in fact only two forms of the same; the old form Marrubii or Marruvii, retained by Virgil (Aen. vii. 750) as the name of the people, as well as preserved in that of their capital city, Marruvium, being the connecting link between the two. (Niebuhr, vol. i. p. 100.) This connection seems to have been already perceived by Cato (ap. Priscian. ix. p. 971), though he mixed it up with a strange etymological fable. But we have no historical account, or even tradition, of the origin or separation of these closely connected tribes, which appear in history together with the Peligni and Vestini, as nearly related, but still distinct, nations.

The Marsi are first noticed in Roman history in B.C. 340, at which time they, as the Peligni, were on friendly terms with the Romans, and granted a free passage to the consuls who were proceeding with their armies through Seminum into Campania. (Liv. viii. 6.) At the commencement of the Second Samnite War they appear to have remained neutral; and even when their kinsmen and allies the Vestini were assailed by the Roman army, they were not only unaltered, but had expected, take up arms in their defence. (Id. vii. 29.) It was not till B.C. 308 that we first find them engaged in hostilities with Rome, and we have no explanation of the circumstances which then induced them to take part with the Sammites. (Id. ix. 41.) It is indeed singular that while Livy notices this campaign as memorable from its being the first occasion on which the Romans were opposed to the Marsi, Diodorus gives a wholly different account, and represents the two nations as in alliance against the Samnites. (Diod. xx. 44.) There is, however, every probability that the account given by Livy is the more correct one, as we find shortly after (B.C. 304) a special treaty concluded with the Marsi, Marrucini, and Peligni, immediately after the defeat of the Aequians. (Liv. ix. 45; Diod. xx. 101.) But a few years later (B.C. 301) the Marsi again took up arms (this time apparently single-handed) to oppose the invasion of the Roman colony at Carsesoli, on the immediate frontiers of their territory. They were, however, easily defeated; three of their towns, Plestina, Millionia, and Fresilus, were taken; and they were compelled to purchase peace by the cession of a part of their territory. (Liv. x. 3.) With this exception, they obtained favourable terms, and the former treaty was renewed.

From this time the Marsi, as well as their confederate tribes, the Marrucini, Peligni, and Vestini, became the faithful and constant allies of Rome, and occupied a prominent position among the "socii" whose contingents bore a important share in the Roman victories. The names of the four nations are sometimes all mentioned, sometimes one or other of them omitted; while the Samnites, who appear, though of Samnite origin, to have maintained closer political relations with their northern neighbours, are, in consequence, often associated with them. Thus Polybius, in enumerating the forces of the several Italian nations in B.C. 225, classes the Marsi, Marrucini, Vestini and Frentani, under one head. (Polyb. xxii. 4.) He gives the name of the Marsi comprehensively to all, and especially to the Frentani, who appear, though of Samnite origin, to have maintained closer political relations with their northern neighbours, are, in consequence, often associated with them. Thus Polybius, in enumerating the forces of the several Italian nations in B.C. 225, classed the Marsi, Marrucini, Vestini and Frentani, under one head. (Polyb. xxii. 4.) He gives the name of the Marsi comprehensively to all, and especially to the Frentani, who appear, though of Samnite origin, to have maintained closer political relations with their northern neighbours, are, in consequence, often associated with them. Thus Polybius, in enumerating the forces of the several Italian nations in B.C. 225, classed the Marsi, Marrucini, Vestini and Frentani, under one head. (Polyb. xxii. 4.) Pompey they appear to have been at first favourably disposed to the latter; and the twenty cohorts with which Domitius occupied Corfinium were principally raised among the Marsi and Pergini, or their immediate neighbours. (Cass. B. C. i. 15, 20.) In like manner, the Marsi are mentioned as declaring themselves, as a people, in favour of Verpassian during the civil war between him and Vitellius. (Tac. Hist. iii. 59.) In the year 67, at the instigation of the Pergini, as well as the Sabines, were comprised in the Sercian tribe (Cic. in Verr. i. 42; Schol. Bob. ad loc.); and at a later period all three were included in the Fourth Region of Augustus, which, according to Pliny, was composed of the bravest nations of all Italy. (Plin. iii. 12. a. 17.) In the later division of the Empire, the territory of the Marsi (Maurorum regio) was included in the province named Valeria. (P. Dion. ii. 50; Litt. Col. p. 229.) It appears that in the land of the Marsi, and the noble Roman family of Colonna bears the title of Counts of the Marsi. (K. Craven's Abruzzi, vol. i. p. 144.)

The Marsi appear to have been always celebrated in ancient times, even beyond their hardy and warlike neighbours, for their valour and bravery. Virgil adduces them as the first and most prominent example of the "genus acre virum" which Italy was able to produce: and Horace alludes to the "Marsic cohorts" as an almost proverbial expression for the bravest troops in the Roman army. (Virg. Georg. ii. 167; Hor. Carm. ii. 20. 18, iii. 5. 9.) Appian also tells us that a proverbial saying was current at the time of the outbreak of the Social War, that no triumph had ever been gained over the Marsi or without the Marsi (Appian, B. C. i. 46). The historical accuracy of this saying will not bear examination, but it sufficiently proves the high character they had earned as Roman auxiliaries. In common with the Sabines and other mountain tribes, they retained down to a late period a separate identity of their own race; and are cited by the Roman poets as examples of primitive simplicity. (Juuv. iii. 169, xiv. 180.) But the most remarkable characteristic of the Marsians was their peculiar skill in magical charms and incantations—especially in charming venomous reptiles, so as to render them innocuous. This power, which they were said to have derived from their ancient priestess Circe, or from the local divinity Angitia, who was described as her sister, was not confined to a few individuals, though the priests appear to have principally exercised it, but, according to Silius Italicus, was possessed by the whole body of the nation. (Verg. Aen. vii. 750—758; Sil. Ital. viii. 495—501; Virg. Aen. vii. 9. 24; Stat. Silv. iii. 4. 1; Appian, B. C. i. § 27; Gell. xvi. 11; Lamprid. Helig. 23.) It is worthy of notice that the inhabitants of these regions still pretend to possess the same occult powers as their ancestors: and are often seen as wanderers in the streets of Naples carrying boxes full of serpents of various sizes and colours, against the bites of which they pretend to charm both the living and the spectators. (Craven's Abruzzi, vol. i. p. 145.)

The physical characters of the land of the Marsi have been already described under the article of the lake Fucinus; the basin of which, surrounded on

by their neighbours andkinsfolk the Perginis, Marrucini, and Vestini, as well as the Samnites, Frutani, and Lucanians. (Appian, B. C. i. 39; Liv. Epit. lxxii.; Orat. v. 18.) During the military operations that followed, imperfect as is our information concerning them, we may clearly discern that the allies formed two principal groups; the one composed of the Marsi, with their immediate neighbours, the Sabines and probably the Frutani; the other of the Samnites, with the Lucanians, Apuli, and some of the Campanians. The Marsi appear to have stood, by common consent, at the head of the former section; and hence we frequently find their name alone mentioned, where it is clear that their confederates also fought by their side. At the first outbreak of the war (a. c. 91), they laid siege to Alba Fucensia, a Roman colony and a strong fortress (Liv. Epit. lxxii.), which appears to have at first defied all their efforts. But the Roman consul P. Rutilius, who was sent against them, proved unequal to the task. One division of his army, under Perpenna, was cut to pieces at the outset of the campaign; another, at least, he himself was slain and slain by the allied forces under Vettrius Capo. (Appian, B. C. i. 43; Liv. Epit. lxxii.; Orat. v. 18.) C. Marinius, who was acting as legate to Rutilius, is said to have retrieved this disaster; and afterwards, in conjunction with Sulla, achieved a decisive victory over the Marsi, in which it is said that the allies lost 6000 men, mere war and the Maruncini, Herins Asinianus, was slain. But notwithstanding this advantage, it appears that Marinius himself was unable to keep the field, and was almost blockaded in his camp by Pompeius Silo; and when at length he ventured on a third battle, it had no decisive result. Meanwhile, his colleague in the command, Q. Crispus, at the last defeated and cut to pieces with his whole army by the Marsi; while an advantage gained by Ser. Sulpicius over the Pergini appears to have led to no important result. (Liv. Epit. lxxii. lxxiv.; Appian B. C. i. 46; Plut. Marr. 33; Orat. v. 18.) The next campaign (a. c. 89) proved at first scarcely more favourable to the Roman arms; for though the consul L. Porcius Catulus, gaining possession of their lands, and their allies, he was himself slain in a battle near the lake Fucinus. (Appian, B. C. i. 50; Orat. v. 18.) But it is probable that the policy adopted by the Romans in admitting to the franchise all those of the allies who were willing to submit had a great tendency to disarm the confederates, as well as to introduce dissensions among them; and this cause, combined with the successful operations of the consul Cn. Pompeius Strabo and his lieutenant Sulpicius, effected the submission of the Marrucini, Vestini, and Pergini before the close of the year. The Marsi for a time still held out, though single-handed; but repeated defeats at length compelled them also to sue for peace to the consuls (Cass. B. C. i. v. 18.) Notwithstanding their obstinate resistance, they were admitted to favourable terms, and received, in common with the rest of the Italians, the full rights of Roman citizens. From this time the Marsi as a nation disappear from history, and became merged in the common condition of the Italians. They however, still retained much of their national character, and their existence as a separate tribe is acknowledged by many Roman writers, both of the Republic and Empire. In the civil war between Caesar and

MARSIL
MARSIBAEAE.

All sides by lofty, or strongly marked mountain ridges, may be considered as constituting the natural limits of their territory. But towards the N.E. we find that Alba Fucens, though certainly belonging to this natural district, and hence sometimes described as belonging to the Marsi (Ptol. iii. 1. § 57; Sil. Ital. 340) was more properly an Aquatic city [Alba Fucens]; while, on the other hand, the upper valley of the Liris (though separated from the lake by an intervening mountain ridge) was included in the Marsi territory, as Antinum (Civita d'Astino) was unquestionably a Marsian city. [Antinium.] On the N. the Marsi were separated from the Sabines and Vestini by the lofty group of the Monte Velino and its neighbours; while on the S. another mountain group, of almost equal elevation, separated them from the northern valleys of Samnium and the sources of the Sagro (Sangro). On the E., a ridge of very inferior height, but forming a strongly marked barrier, divided them from the Peucini, who occupied the valley of the Gioso, a tributary of the Aterusma. From its highest elevation above the sea (2176 feet at the level of the lake), even more than from the mountains which surrounded it, the land of the Marsi had a cold and ungenial climate, and was ill adapted for the growth of corn, but produced abundance of fruit, as well as wine, though the latter was considered harsh and of inferior quality. [Sil. Ital. viii. 507; Athen. i. p. 26; Martial, iii. 121, xiv. 116.]

The principal town of the Marsi was MARUVITUM, the ruins of which are still visible at S. Benedetto, on the E. shore of the lake Fucinus. This was indeed (if Alba Fucens be excluded) probably the only place within their territory which deserved the name of a city. The others, as we are told by Silvius Italiensis, though numerous, were for the most part obscure places, rather fortified villages (castella) than towns. [Sil. Ital. viii. 510.] To this class belonged, in all probability, the three places mentioned by Livy (x. 8) as having been taken in a. c. 301 by the dictator M. Valerius Maximus,—Millonia, Piestina, and Frasilia; all three names are otherwise wholly unknown, and there is no clue to their site. In the list of the provinces by Marco Antonio, the following towns:—Anxantina (Anxantini), the name of which is found also (written Anxatini) in an inscription, and must have been situated near Asdrossano or Scorgola, in the immediate neighbourhood of Alba (Hisor's Classical Tour, vol. i. p. 367; Mommsen, Isae. A. N. 5828; Antinium (Antiniae), now Civita d'Astino; Lucus (Lucense), more properly Lucus Angelitae, still called Lago, on the W. bank of the lake; and a "populus" or community, which he terms Fucensae, who evidently derived their name from the lake; but what part of its shores they inhabited is uncertain. Besides these he notices a tradition, mentioned also by Sollinus, that a town named Archippe, founded by the mythical Marsyas, had been swallowed upon in the waters of the lake. (Pline. iii. 12, s. 17; Solin. 2. § 6.) From the number of inscriptions found at Trasacco, a village near the S. end of the lake, it would appear to have been certainly an ancient site; but its name is unknown. [Mommsen, I. c. p. 295.]

The only town of the Marsi mentioned by Ploenery (iii. 1. § 67) besides Alba Fucens, is a place which he calls Aex (Aex), a name in all probability corrupt, for which we should perhaps read Avae, the Anta or Antaxia of Pliny. Cerpennia, a place known only from the itineraries, was situated on the Via Valeria, at the foot of the pass leading over the Mons Imeus into the valley of the Peligni. This remarkable pass, now called the Foroledo Caruso, must in all ages have formed the principal line of communication between the Marsi and their eastern neighbours, the Peligni and Marrucini. Another natural line of communication was formed from the north of the Fucini near Celano to the valley of the Aternum near Aquila. It must be this line which was followed by a route obscurely given in the Tabula as leading from Areia through a place called Frusteniae (? to Alba and Marruvium (Tab. Peut.) [E. H. B.]

MARSIGNI, a German tribe, mentioned only by Tacitus (Germ. 43), probably occupying the north of Bohemia, about the Upper Elbe. In language and manners they belonged to the Suevi. (Comp. Zeus, Die Deutschen, p. 124.) [L. S.]

MARSOYNA (Mapororia), or MARSOYNIUM (Tab. Peut.), a place in Upper Pannonia, south of the river Sava, on the road between Siedia and Servitiun; is identified by some with Popiductus, at the mouth of the Una into the Sava. (Ptol. ii. 16. § 7; Geogr. Rav. iv. 19.) [L. S.]

MARSYABAE (Maporavala), a town of the Rhumantia, an Arabian tribe, mentioned by Strabo as the utmost limit of the Roman expedition under Aelius Gallus, the siege of which he was obliged to abandon, after six days for want of water, and to commemorate his retreat. The only direct clue afforded by Strabo to the position of the town is that it was two days distant from the Frankincense country; but the interest attaching to this expedition—which promises so much for the elucidation of the classical geography of Arabia, but has hitherto served only still further to perplex it.—demands an investigation of its site in connection with the other places named in the only two remaining versions of the narrative. It will be convenient to consider,—(I) the texts of the classical authors. (II) The commentaries and glosses of modern writers on the subject. (III) To offer such remarks as may serve either to reconcile and harmonize conflicting views, or to indicate a more satisfactory result than has hitherto been arrived at; and it may be proposed to study these conclusions only will be stated; the arguments on which they are supported must be sought in the writings referred to. I. To commence with Strabo, a personal friend of the Roman general who commanded the expedition, and whose account, scanty and unsatisfactory as it is, has all the authority of a personal narrative, in which, however, it will be advisable to omit all incidents but such as directly bear on the geography. [Dictionary of Biography, Gallus, Aelius.] After a voyage of 15 days from Cleopatra (Arenion, No. 1), the expedition arrived at Lenece Come (Acwch nnoyn), a considerable sea-port in the country of the Nabathaeans, under whose trusteurous escort Gallus had placed his armament. An epidemic among the troops obliged him to pass the summer and winter at this place. Setting out again in the spring, they traversed for many days a barren tract, through which they had to carry their water on camels. This brought them to the territory of Aretas, a kinsman of Obodas, the chief sheik of the Nabathaean at the time. They took thirty days to pass through this country, during which they had to pass many of the obstructions placed in their way by their guide Syllaus. It produced spelt and a few palms. They next came to the nomad country named Ararena (Assawp), under a sheik named Sabus. This it
took them fifty days to traverse, through the fault of their guide; when they came to the city of the Agarens (Afteran), lying in a peaceful and fruitful country. This they took; and after a march of six days, came to the river. Here, after a pitched battle, in which the Romans killed 10,000 Arabs, with the loss of only two men, they took the city called Aseca (Asera), then Athurilla (Athurila), and proceeded to Marsyas of the Rhamanitaes, then governed by the Emir of the same name. Thence they commenced their retreat by a much shorter route. Nine days brought them to Anagrana (Anagraga), where the battle had been fought; eleven more to the Seven Wells (Seven fountains), so called from the fact; then to a village named Chassala (Chassula), and another named Malcho (Malcho), the latter situated on a river, and through a desert with few watering-places to Nera or Negra Come (Nera or Negra Come), on the sea-shore, subject to Obozas. This retreat was accomplished in sixty days; the advance had occupied six months. From Nera they sailed to Myos Hormos (Myos Hormos) in eleven days. Thus far Strabo (vi. p. 782).

Pliny is much more brief. He merely states that Gallesus of the Agarens, who was one of his most accessible writers, Negra, Ammestrum, Necla, Magana, Tammescum, Labicia, the above-named Mariaba (i.e. the Mariaba of the Cailingi, 3), and Caripeta, the remotest point which he reached. (Hist. Nat. vi. 23.) The only geographical point mentioned by Dion Cassius, who dwells chiefly on the sufferings of the army, is that the important city of Aseca (Asera) was the limit of this disastrous expedition. (Dion Cass. lliii. 29.)

II. The variations of commentators on this narrative may be estimated by these facts: Dean Vincent maintains that, "as Pliny says, that places which occur in the expedition of Gallus are not found in authors previous to his time, the same may be said of subsequent writers; for there is not one of them, ancient or modern, who will do more than afford matter for conjecture." (Periplus, p. 300, 301.) Mr. Forster asserts, "Of the eight cities named by Pliny, the names of two most clearly prove them to be the same with two of those mentioned by Strabo; and that seven out of the eight stand, with moral certainty, and the eighth with good probability, in the same position as among the Anagras of Strabo, still actually in being." (Geography of Arabia, vol. ii. p. 310.) D'Anville and M. Freneel (inf. cit.) conduct the expedition to Hadramaut, in the southern extremity of the peninsula; Gosselin does not extend it beyond the Hadjfan. (Recherches sur la Geographie des Anciens, tom. ii. p. 114.) But these various theories require more distinct notice. 1. D'Anville, following Bochart (Chalma, i. 44), identifies Lence Come with the modern Haur or El-Houra, on the Red Sea, a little north of the latitude of Medina, justifying the identification by the coincidence of meaning between the native and the Greek names. Anagrana he fixes at Nageran or Negra (Nearan), a town supposed consistently with which theory he makes the Marsyas of Strabo identical with the Mariaba of the same geographer; though Strabo makes the latter the capital of the Sabaei, and assigns the former to the Rhamanitaes. Finally, D'Anville places Chassala at Khallan (El-Challum), in the NW. extremity of Yemen, and, therefore, as he presumes, on the Roman line of retreat between Anagrana and the sea. (D'Anville Geographie ancienne abrégée, tom. ii. pp. 218, 217, 293, 294.) 2. Gosselin, as before noticed, maintains that the expedition did not pass beyond Arabia Deserts and the Hedjfa; that the Negra of Pliny = the Negra of Potimea = the modern Nobra or Mauden en-Nobra (in the NW. of Nejfa); that Pliny's Magana = Migarias-saeser (which he marks in his map NW. of Negra, and due East of Mousalah, his Leuc; pp. 254, 255), perhaps identical with Dahr el-Maghbar in Bitter's map; that Teim in Bitter, between Mauden en-Nobra and Dahr el-Maghbar; that Laboica = Lobo of Potimea, which he does not place; that Athurilla = Lathiropa (Lathiropa) in Potimea = Mousalah; that Mariaba in Pliny = Marasyas in Strabo; Macoraba in Potimea = Mecca; and lastly, that Caripeta, the extreme point according to Pliny, = Araréne in Strabo = modern Caritasain, in the heart of El-Nejfa. (Gosselin, l. c. pp. 113—116.) 3. Dean Vincent's opinion on the difficulty of recovering any clue to the line of march has already been stated; but he ventures the following conjectures, partly in agreement with certain statements and peculiarities of place and persons. He adopts the Lence Come of Gosselin, i.e. Mousalah; the Angranas or Negra of D'Anville, i.e. Nijfar of Yemen; and thinks that the country of the nomades, called Araréne, has a resemblance to the territory of Mediène and Mecca; and that the space of fifty days employed in passing it, is some confirmation of the statement of the Rhamanitaes, that the Mousalah could not be Mariaba of the Tank; but takes it as the general name for a capital,—in this case of the Minéas,—which he suggests may correspond with the Caripeta of Pliny, the Carna or Carana of Strabo, the capital of the Minéas, and the Carni-peta, or Carini-peta of modern geographers. The fact that Strabo speaks of Carna as the capital of the Minae, and places Marsyas in the territory of the Rhamanitaes, is disposed of by the double hypothesis, that if Ilaaer is the king of this tribe, whether Calingii, Rhamanitaes, or Baramalscum, all three were comprehended under the title of Minéas. Of Nera, the termination of the expedition, he remarks, that it being in the country of Obozas, it must be within the limits of Petraea; but, as no modern representation of the places, it should be placed as far below (south of) Lence Come as the province will admit. (Vincent, Periplus of the Erythraean Sea, vol. ii. pp. 300—311.) 4. M. Freneel, long a resident in the country, thinks that the Marsyas of Strabo must be identical with the Mariaba in Pliny's list of captured cities, the same writer's Baramalscum, and Potimey's Mariamah; and that the Rhamanitaes of Strabo are the Rhamel of Pliny, the Minite of Potimey, one of the divisions of the Minaei, to which rather than to the other division, the Chorsam, Mariaba Baramalscum should have been assigned. In agreement with Vincent, he finds the Marsyas of Strabo in the capital of the Minaei, i.e. the Carana of Strabo and the CaranB Susan of Bithynia, which he however finds in the modern Al-Chaama in the Wady Damar or Desert (Kureis and Greis in Keiper's and Zimmerman's maps), six or seven days' journey north of Moubaallah, and in the heart of Hadramaut. (Freneel, in Journal Arabe, Juillet, 1840, 3me série, tom. x. pp. 83—96, 177, &c.) He fancied that he recovered the Caripeta of Pliny in the site of Khour-al-Nyusalah, also in the vicinity of Moubaallah (ib. p. 196). 5. Dassarykov prefers the identification.
of Leuce Come with El-Haura, proposed by D'Anville, to the Moilákh of Gesselin and Vincent. In common with D'Anville and Vincent, he finds the town of Angrana (which he writes "la ville des Négranes") in the modern Nedjirá, and doubly fixes Marsyabae at Mørab in Yemen. The Manita of Ptolemy he identifies with the rhamanaitae of Strabo,—suggesting an ingenious correction to Jaminet,—the people of Yemenes (L'Empire Arab., Arab., pp. 58, 59).

6. Jomard, one of the highest authorities on Arabian geography, has offered a few valuable remarks on the expedition of Gallus, with a view to determine the line of march. He thinks the name Marsyabae an evident corruption for Maribá, which he assumes to be "that of the Tank," the capital of the Masaé, now Mórab. Nezáíne exactly corresponds with Nedjirá or Ngéfr, nine days' journey NW. of Mórab. He fixes Leuce Come at Moilákh, and Ngéra or Nerá opposite to Coseyg, in the 26th degree of latitude. His argument for determining the value of a day's march is ingenious. The whole distance from Mórab to the place indicated would be 350 leagues of 25 to a degree. From Mórab to Mófax, the distance was 170 leagues; therefore, which was nine days from Maribá, is 14ths of the whole march, and Wadi Nedjirá is 59 leagues NW. of Mórab. The distance of the Seven Wells, eleven days from Ngéra, =14ths of the march=117 leagues from Maribá: and the same analogy might have been applied to Chaasal and the river Malothas, had Strabo indicated the distance of these two stations together, in order to reach the sea, on land. This retreat must have traversed the province of Asey, a district between Yemen and the Hedjás (whose geography has been recently restored to us by M. Jomard), and one of the elevated plains which separate the mountain chain of Yemen from that of the Hedjás. "The road," he says, "is excellent, and a weak body of troops could defend it against a whole army." Having thus disposed of the line followed in the retreat, he briefly considers the advance:—"The country governed by Aretas, and the next mentioned, Aretene, correspond with Thamoud and Nedjirá, and the southern part of the latter province approaching Nedjirá has always been a well-peopled and cultivated district. Asca, on the river, and Athrullas, the last mentioned by Strabo, are in the same line, and it is determined, as the distances are not stated; and the line between Nedjirá and Mórab is still but little known." (Jomard, op. Morgen. Histoire de l'Egypte, €c., pp. 388—389.)

7. M. Forster has investigated the march with his usual diligence, and with the partial success and failure that must almost necessarily attach to the investigation of so difficult a subject. To take first the main points, viz., Leuce Come, the point of departure; Marsyabae, the extreme limit; and Nerá, the point at which they embarked on their return. He accepts D'Anville's identification of Hadora as Leuce Come, thinking the coincidence of name decisive; Marsyabae he finds in Saadí, the chief city of the province of Sabía, a district of the kingdom of Mehrál or Wehral, the latter is divided into the districts of A. of Saadí, the frontier and key of Yemen; and Nerá, in Yembo, the sea-port of Medina. The line of march on their advance he makes very circuitous, as Strabo intimates; conducting them first through the heart of Nedjirá to the province of El-Ahas on the Persian Gulf, and then again through the same province in a SW. direction to Yembo. On their retreat, he brings them direct to Nedjirá, then turns west to the sea, which they coast as far north as Yembo. To be more particular, he thinks that "a difference in distance in the advance and retreat, commensurate, in some reasonable degree, with the recorded difference of time, i.e. as 3 to 1, must be found; that the caravan road from Hadora by Madána and Kusiyam, into the heart of Nedjirá, was the line followed by Gallus (the very route, in fact, traversed by Captain Sadlier in 1819: Transactions of the Soc. of Bombay, vol. x. pp. 449—453), and thence by one of the great Nedjirá roads into Yemen, the description of which in Burckhardt agrees in many minute particulars with the brief notices of Strabo. He further finds nearly all the towns named by Pliny as taken by the Romans, on this line of march: Maribá of the Calegni in Mórab, in the NE. extremity of Nedjirá, within the province of Hagar or Babitha,—in the former of which names he finds the Ararenia or Agarena of Strabo. Caripeta he identifies, as Gesselin had done, with Caritata in Nedjirá; but he does not attempt to explain how Pliny could call this the extreme limit of the expedition,—"quo longissime processit." The Tammanus of Pliny == the Agálim of Ptolemy == the well-known "Tagy" of Strabo. The same presents itself in Korn el-Moghalah, a place situated about half-way between Tagý and Nedjirá, which last is with him, as with all preceding writers except Gesselin, the Angrana of Strabo, the Ngéra of Pliny. "Labeica is the anagram, with the slightest possible inversion, of Al-Beitah," and this is called by the northern Bedouins "the key of Yemen,"—the key of Jedda. He finds that the army on their retreat must have traversed the province of Asey, a district between Yemen and the Hedjás, which is a very fertile district, extremely rich in date-trees. The river at which the battle with the Arabs was fought is the modern Sabións, which, taking its rise in the Hedjás mountains near Korn el-Moghalah, after a southern course of somewhat more than 100 miles, is lost in the sands of the Talesía, to the northward of the mountains of Asey. The Arabs of Strabo, the Nasca of Pliny, are "obviously identical with Sabións, the present name of a town seated on the Sabións river, near its termination in the sands." Athrullas, next mentioned by Strabo, is again Labeica, i.e. Beitah; and this hypothesis "implies a counter-march," of which there is no hint in the authors. Lastly, he finds that the modern Ansar is the ancient representative in Ibn Mán (the Manambí of Ptolemy), a town about half-way between Beitah and Sabións, all the cities enumerated by Pliny occur on the route in question." As to the retreat of the army. From Marsyabae to Nedjirá, a distance of from 140 to 160 miles, was accomplished in nine days; hence to the Seven Wells, eleven days from Nedjirá, brings us to El-Haiba (in Arabic "the Seven"), a place about 150 miles due west of Nedjirá, and then to Chaasal, the modern Choulam (according to Forster as well as D'Anville), the chief town of the province of the same name), and hence to Malothas, situated on a river, the same as that crossed on the advance, i.e. the Sabións. The Hedjás is a name by which the northern Bedouins understand the same district, with the Tabala of Birkhardt, a town on the Sabións, at this point, on the caravan road to Hedjás, a short day's march from El-Haiba. From Malothas to Nerá Come, i.e. through the Tahamah, there are two routes described by Birkhardt; one along the coast, in which only one well is found between Dyddas and Leyd, —a distance of four days; another more eastern, some 200 miles, yielding plenty of water, five days' journey between the same two
towns. Now as Strabo describes the latter part of the retreat through a desert tract containing only a few wells, it is obvious that the coast-road was that followed by the Romans as far as Yembo, already identified with Nera Conae; "the road-distance between Sabassia and Yembo (about 800 English miles) allowing no rest to either the reason­able traveller (the little more than thirteen miles a-day)."

(Forster, Geogr. of Arabia, vol. ii. pp. 277—332.)

III. Amid these various and conflicting theories there is not perhaps one single point that can be regarded as positively established, beyond all question; but there are a few which may be safely regarded as untenable. 1. And first, with regard to Lence Conae, plausible as its identification with El-Hawwa is rendered by the coincidence of name, there seem to be two inseparable objections to it; first, that the author of the Peripius places the harbour and castle of Lence two or three days' sail from Myos Hormus (for Mr. Forster's gloss is quite inadmissible), while El-Hawwa is considerably more than double that distance, under the most favourable circumstances, and, certainly, that Lence could not have been extended so far south as El-Hawwa. Mr. Forster attempts to obviate this objection by supposing that both Lence Conae and Nera were sea-porta of the Nabataeans beyond their own proper limits, and in the bestial territory of the Himyarite (iii. p. 384, note 1). But this hypothesis is clearly inconsistent with the author of the Peripius, who implies, and with Strabo, who asserts, that Lence Conae lay in the territory of the Nabataeans (κατὰ τὴν Ναβατα­αν χωρίαν τῆς Ἡμιαρίτου πόλεως, μέγα), a statement which is further confirmed by the fact that Nera Conae, which all agree to have been south of Lence, is also placed by Strabo in the territory of Obo­des, the king of the Nabataeans (κατὰ τὴν ὸβοδαν). Lence cannot therefore be placed further south than Molas, as Gosselin, Vincent, and Jomard all agree; and Nera must be sought a little to the south of this, for Jomard has justly remarked that Strabo, in contrast­ ing the time occupied in the advance and in the retreat, evidently draws his comparison from a calendar of two years (xxvii. p. 2). With regard to the site of Marysabae, it may be re­marked that its identification with Mabisa, the metropolis of the Sabaeans, the modern Mard, main­tained by D'Arville, Frezal, and Jomard, is inad­missible for the following reasons: first, that dis­tinct mention having been made of the latter by Strabo, it is not to be supposed that he would immediately mention it with a modification of its name, and assign it to another tribe, the Hasmiteans; and it is an uncer­ tain method of removing the difficulty suggested by M. Jomard without the authority of MSS.—"il faux lire partout Marysabae; je n'ai Mary­sabae est corrompu évidemment." Secondly, whether the Mabisa Baramalasum of Pliny be identified with Strabo's Marysabae or not, and whatever becomes of the plausible etymology of this epithet, suggested by Dean Vincent (quasi Bahr em-Marala=the royal reservoir), the fact remains the same, that the Marysabae of the Sabaeans was abundantly supplied with water from numerous rivulets collected in its renowned Tank; and that therefore, as Gosselin remarks, drought was the last calamity to which the Romans would have been exposed in such a locality. 3. With regard to Anagran and Negra, on the identity of which with the modern Nejrya, there is a singular agreement among all commentators; there seems to be an insuperable objection to that also, if Strabo, who it must be remembered had his information direct from Gallus himself, is a trustworthy guide; for the Anagranas of the re­treat (which is obviously also the Negra of Pliny), nine days distant from Marysabae, was the place where the battle had been fought on their advance. But he had said before that this battle was fought at the river; and there is no mention of a river nearer to Nejrya than the Sabac, which, as accord­ ing to Mr. Forster, 170 miles, or twelve days' journey, distant. It is certainly strange that, of the writers who have commented on this expedition, all, with one exception, have overlooked the only indication furnished by the classical geographers of the direction of the line of march,—clearly pointing to the west, and not to the south. The Mabisa taken by the Romans was, according to Pliny, that of the Calingii, whom he places in the vicinity of the Pers­ian Gulf; for he names two other towns of the same tribe, Fallon and Uranimil or Muranmil, which are placed nearer to the river which he thought to be deboche into the Persian Gulf (vii. 28), opposite to the Bahrein islands. (Forster, vol. ii. p. 312.) This important fact is remarkably confirmed by the expedition having landed near the mouth of the Elamite gulf of the Red Sea, and commencing their march through the territory of Obo­des and his kinman Atetas, two powerful tribus of the Nabataeans, who inhabited the northern extremity of the Arabian peninsula from the Euphrates to the pen­insula of Mount Sinai [NABATHAEN], and there can be little doubt that the Mabisa of Pliny is cor­rectly identified with the Morab, still existing at the eastern base of the Nejrya mountains. [MARIABA, No. 3.] Whether this be the Marysabae of Strabo, or whether future investigations in the eastern part of the peninsula, hitherto so imperfectly known, may not restore to us both this and other towns mentioned in the lists of Strabo and Pliny, it is impossible to determine. At any rate, the very circuitous route through Nejrya to Temen, marked out by Mr. Forster, and again his line of the retreat, seem to in­volves difficulties and contradictions insurmountable, by the place is, that this is not the place to discuss; but to the supposed analogy of the modern names, it may be safely assumed that an equal amount of ingenuity might discover like analogies in any other parts of Arabia, even with the very scanty materials that we at present have at command. In conclusion, it may be remarked that the observation of Strabo that the expedition had reached within two days' journey of the country of the Frankincense, is of no value what­ever in determining the line of march, as there were two districts so designated, and there is abundant reason to doubt whether either in fact existed; and that the reports brought home by Gallus and pre­served by Pliny, so far as they prove anything, clearly indicate profound ignorance of the nature and produce of Arabia, and some authors suppose him to have traversed, for we are in a position to assert that so much of his statement concerning the Sabaei as relates to their wealth—"silverum ferti­tudin orbiters, surati metalls"—is pure fiction. The question of the confusion of the various Mabises, and their cognate names, is discussed by Ritter with his usual ability. (Erdbahmen von Abasien, vol. i. pp. 276—284.)

MARYSABAE. 1. A tributary of the Maedar, having its sources in the district called
MARTYRAS.

Idrias, that is in the neighbourhood of Stratonicea, and flowing in a north-western direction past Ablanda, discharged its waters into the Maeander nearly opposite to Teles. On its banks were the Aesouo and Euphe, near which the Carians held their national meetings. (Herod. v. 118.) The modern name of this river is Teles, as is clearly proved by Leake (Asia Minor, p. 234, &c.); while earlier geographers generally confused this Marysas with the Harpusus.

2. A small river of Phrygia, and, like the Carian Marysas, a tributary of the Maeander. Herodotus (v. 263) calls it a river that discharged its waters into the Maeander, according to Xenophon (Anab. i. 2. § 8) its sources were in the market-place of Celaenasa, below the acropolis, where it fell down with a great noise from the rock (Curt. iii. 1.) This perfectly agrees with the term applied to it by Herodotus; but the description is apparently opposed to a statement of Piny (v. 41), according to whom the river took its origin in the valley of Abile, ten miles from Apamea. (Comp. Strab. xii. p. 578; Max. Tyrr. viii. 8.) Strabo, again, states that a lake above Celaenasa was the source of both the Maeander and the Marysas.

"Comparing these accounts," says Col. Leake (Asia Minor, p. 160), "with Livy (xxvii. 38), who probably copied from Polybius, it may be inferred that the river was formed of a spring on the north side of a mountain which rose above Celaenasa as the reputed source of the Marysas and Maeander; but that in fact the two rivers issued from different parts of the mountain below the lake." By this explanation the difficulty of reconciling the different statements seems to be removed, for Autocrene was probably the name of the lake, which imparted its own name to the plain mentioned by Piny. The Marysas joined the Maeander a little way below Celaenasa. (Comp. Maran- der; and Hamilton's Researches, p. 499.) [L.S.]

MARSYSAS (Marosias), a river of Coeselis, mentioned only by Piny (v. 23) as dividing Apamea from the tetarchery of the Nazerini. It was probably the river mentioned—without its name—by Abufedra as a tributary of the Oreves, which, rising above Apamea, formed the boundaries of the tribe of the Amazons and the territory of Antioch, and so joins the Oreves. The modern name Yarranak is given by Pococke, who places it in his map on the east of the Oreves. (Abufedra, Tabula Syriae, ed. Koehler, pp. 151, 152; Pococke, Description of the East, vol. ii. p. 79.) It doubtless gave its name to Marasyas, a district of Syria, mentioned by Strabo, who joins it with Iattara, and defines its situation by the following notes:—It adjoined the Media Caesarae, on its east, and had its commencement at Laodicea ad Libanum. Chalcis was, as it were, an acropolis of the district. This Chalcis is joined with Heliopolis, as under the power of Potalmy, son of Mennaeus, who ruled over Marasyas and Or- tazes. (Strab. xvi. pp. 755, 754.) The same geographer speaks of Chalcis the capital Maped or the Yarranak (p. 153), and extends it to the sources of the Oreves, above which was the Aylaw Barjakud (p. 155), now the Bekaa. From these various notices it is evident that the Marasyas comprehended the valley of the Oreves from its rise to Apamea, where it was bounded on the north probably by the river of the same name. But it extended westward to the Media Caesarae, which bordered on the Mediterranean. (Mannert, Geographie von Syrien, pp. 326, 363.) [ITURAZ; ORTANCES. [G.W.]

MARTA, a river of Etruria, still called the Marta, which has its source in the Lake of Bolsena (Lucus Valentinensis), of which it carries off the superfluous waters to the sea. It flowed under the N. side of the hill on which stood Tarquinii; but its name is known only from the itineraries, from which we learn that it was crossed by the Via Aurelia, 10 miles from Centurianae (Cicero, Tusc. Hist. v. 391; Tab. Peut.) [E. H. B.]

MARTIAE. [GALLERIA, p. 934, b.]

MARTIALIS, a place in Gallia, near to, and north-west of Augustonemetum (Clermont en Auvergny), which Sidonius Apollinaris, once bishop of Clermont, names Pagus Violvenscensis, with the remark that it was not far from Tournus, a place which has been the winter quarters of the Julian legions. The tradition may refer to Caesar's legions. The place is now Voreux (D'Anville, Notice, &c.) [G. L.]

MARTINAE (Martin, Potl. vi. 2. §§ 2. 5), a lake placed by Ptolemy (I. c.) in Aquitaine, and probably the same as that called Saura by Strabo (§ 144. Epit. 509). St. Martin (Mont. sur l'Auvergne, vol. i. p. 97) has ingeniously conjectured that the name Sauria that is applied to it in our MSS. of Strabo, is an error of some copyist for Caputa, a word which answers to the Armenian Gaboia and Persian Kabi, signifying "blue," and which, in allusion to the colour of the water, is the title usually assigned to it by the Oriental geographers. Martin has also demonstrated in Azerbaidjan, remarkable for the quantity of salt which it retains in solution. This peculiarity has been noticed by Strabo (I. c.), where, for the unintelligible reading kataro, Godard, tract (ac loc.) has substituted the kataro, which has been noticed in older editions. (Journ. Geog. Soc. vol. iii. p. 356, vol. x. pp. 7; Ritter, Erdkunde, vol. ii. p. 722; Chesney, Explorat. vol. i. pp. 77, 97.) [E. B. J.]

MARTINI (Martin, or Martin), a people of Arabia Petraea, near Babylonla (Potl. v. 19. § 2), the exact position of which it is now impossible to fix. (Forster, Geog. of Arabia, vol. ii. pp. 238, 238.) [G. W.]

MARTIS, AD, a manio marked by the Iulius, on the road from Taurini (Tarqino) to Briginato (Bivona), near Brinagio. It was near the south-western extremity of the old Roman road through Brinagio. The Antonine Itinerary makes it xviii. M. P. between Ad Martis and Brinagio, omitting Gessaio [GESSAIO]. The Table gives the same distance between Ad Martis and Brinagio, thus divided: from Ad Martis to Gessaio (Gessaio), viii., to Alpa Gotta, v., to Brinagio vi.; and the Jerusalem Itinerary, making the distances between Ad Martis and Brinagio the same. Ad Martis is fixed at Holia or Oula, on the road from Su'a to Brinagio. Ammianus Marcellinus mentions this place " nomine Martis" (xx. 10), and he calls it a statio. [G. L.]

MARTYRIPOLIS (Martrypolis), a town of Sophanese in Armenia, near the river Nympheas, which, according to the national traditions, was founded towards the end of the 5th century by the bishop Murphi, who collected to this place the relics of all the martyrs that could be found in Armenia, Persia, and Syria. (St. Martin, Mont. sur l'Auvergne, vol. i. p. 96.) Armenia, which as an independent kingdom, had long formed a slight counterpart to the Roman and Persian empires, was in the reign of Theodosius II. partitioned by its powerful neighbours. Martyripolis was the capital of Roman Armenia, and was made by Justinian a strong fortress. (Procop. de Aed. iii. 2. B. P. i. 17; Le Beau, Bas Empire, vol. ix. p. 135; Gibbon, c. x.) It is represented by the modern

MARUGA.  [Sodiana.]

MARVINGI  [Marpugi, ymu], a German tribe on the east of Mons Abnobe, between the Suevi and the Danube. (Ptol. ii. 11. § 22.) The town of Bergium (some modern Erzberg) was probably the capital of this tribe. Marvingii. (Ptol. ii. 11. § 29.) [L.S.]

MARUNDAE  [Marevndes, Ptol. vii. 2. § 14], a people who lived in India extra Gangem, along the left bank of the Ganges, and adjoining the Gangaridae [Gangaridae]. They are probably the same as those whom Pliny calls Mofindae (vi. 19. a. 23), and may perhaps be considered the same as the native Indian Varnedents. [V.]

MARUS, a tributary of the Danube, into which it flows from the north. Between it and the Casus a band of exiled Marcomannians received settlements from the Romans under Tiberius. (Tac. Ann. ii. 63; Plin. H. N. iv. 25.) It is generally believed that this river is the same as the March in Moravia; but it is more probably identical with the Morasco, which the ancients generally call Mariscus. [M.]

MARUSIUM, a town which the Jerusalem Itinerary fixes at 13 M. P. from Clodiana, and 14 M. P. from the river Arpas, on the road to Apollonia. Colonel Leake's map identifies it with Lasopa. [E. B. J.]

MARUVUM.  [Marruvium.]

MASADA (Mardiba), a very strong fortress of Palestine, mentioned by Strabo and Pliny, but much more fully described by Josephus. Strabo mentions it in connection with the phenomena of the Dead Sea, saying that there are indications of volcanic action in the rugged burnt rocks about Masada (Mesarda). Pliny describes it as situated on a rock not far from the lake Asphaltitis. (Strab. xvi. p. 764; Plin. v. 17.) The description of Josephus, in whose histories it plays a conspicuous part, is as follows:—A lofty rock of considerable extent, surrounded on all sides by precipitous valleys of frightful depth, afforded sufficient access only in two places; one on the east, towards the lake Asphaltitis, by a zigzag path, scarcely practicable and extremely dangerous; the other occasions it from its altitude; another easy, towards the west, on which side the isolated rock was more nearly approached by the hills. The summit of the rock was not pointed, but a plane of 7 stadia in circumference, surrounded by a wall of white stone, 13 cubits high and 8 cubits thick, fortified with 37 towers of 50 cubits in height. The wall was joined within by large buildings connected with the towers, designed for barracks and magazines for the enormous stores and munitions of war which were laid up in this fortress. The remainder of the area, not occupied by buildings, was arable, the soil being richer and more genial than that of the plain below; and a further provision was thus made for the garrison in case of a failure of supplies and provisions without. The rain-water was preserved in large cisterns excavated in the solid rock. A palace on a grand scale occupied the north-west ascent, on a lower level than the fortress, but connected with it by covered passages cut in the rock. This was adorned within with porticoes and baths, supported by monolithic columns; the walls and floor were covered with tessellated work. The distance of 1000 cubits from the fortress a massive tower guarded the western approach at its narrowest and most difficult point, and thus completed the artificial defences of this most remarkable site, which nature had rendered almost impregnable. Jonathan, the high-priest, had been the first to occupy this rock as a fortress, but it was much strengthened and enlarged by Herod the Great, who designed it as a refuge for himself, both against his own domestic enemies and against the more dreaded designs of Cleopatra, who was constantly importing Antony to put her in possession of the kingdom of Judaea by removing Herod out of the way. It was in this fortress that the unfortunate Mariamne and other members of Herod's family were left for security, under his brother Joseph and a small garrison, when he was driven from Jerusalem by Antigonus and his Parthian allies. The fortress was besieged by the Parthians, and Joseph was on the point of surrendering for want of water, when a timely shower filled the cisterns and enabled the garrison to hold out until it was relieved by Herod on his return from his successful mission to Rome. It next figures in the history of the Jewish revolt, having been captured by the rebels, and, burned by Masala, a king of Judas the Galilæan, a ringleader of the sicarii, who took it by treachery, and put the Roman garrison to the sword; and afterwards by Elesazar and his partisans, a rival faction of the same murderous fanatics, by whom it was held for some time after Jerusalem itself had fallen; and here it was that the last scene of that tragic war was enacted under circumstances singularly characteristic of the spirit of indomitable obstinacy and endurance that had actuated the Jewish zealots throughout the whole series of their trials and sufferings. It was the only stronghold that still held out when Flavius Silva succeeded Bassus as prefect in Judæa (A. D. 73). The first act of the general was to surround the fortress with a wall, to prevent the escape of the garrison. Having distributed sentries along this line of circumvallation, he pitched his own camp on the west, where the rock was most nearly approached by the mountains, and was therefore more open to assault; for the difficulty of procuring provisions and water for his soldiers did not allow him to attempt a protracted blockade, which the enormous stores of provisions and water from the surrounding mountains would have enabled the garrison better to endure. Behind the tower which guarded the ascent was a prominent rock of considerable size and height, though 300 cubits lower than the wall of the fortress, called the White Cliff. On this a bank of 200 cubits' height was raised, which formed a base for a platform (pígma) of solid masonry, 50 cubits in width and height, on which was placed a tower similar in construction to those invented and employed in sieges by Vespasian and Titus, covered with plates of iron, which reached an additional 60 cubits, so as to dominate the wall of the castle, which was quickly cleared of its defenders by the showers of missiles discharged from the scorpions and ballistæ. The outer wall soon yielded to the storm which an inner wall was discovered to have been constructed by the garrison—a framework of timber filled with soil, which became more solid and compact by the concussion of the rain. This, however, was speedily fired. The assault was fixed for the morrow, when the garrison prevented the swords of the Romans by one of the most cold-blooded and atrocious massacres on record. At the instigation of Elesazar, they first slew every man his wife and children; then having
MASADA.

collected the property into one heap, and destroyed it all by fire; they cast lots for ten men, who should act as executioners of the others, while they lay in the embrace of their slaughtered families. One was then selected by lot to slay the other nine survivors; and he last, having set fire to the palace, with a desperate effort drove his sword completely through his own body, and so perished. The total number, including women and children, was 960. An old woman, with a female relative of Eleezer and five children, who had contrived to conceal themselves in the reservoirs while the massacre was being perpetrated, survived, and narrated these facts to the astonishèd Romans when they entered the fortress on the following morning and had ocular demonstration of the frightful tragedy.

The scene of this catastrophe has been lately recovered, and the delineations of the artist and the description of the traveller have proved in this, as in so many other instances, the injustice of the charge of exaggeration and extravagance so often preferred against the modern Jewish historian. Mr. Eli Smith was the first in modern times to suggest the identity of the modern Sobbex with the Masada of Josephus. He had only viewed it at a distance, from the cliffs above Engezdi, in company with Dr. Robinson (Biblical Researches, vol. iii. p. 242, n. 1); but Pliny visited it, and fully describes it in 1849, by Messrs. Woolcot and Tipping, from whose descriptions the following notices are extracted. The first view of it from the west strikingly illustrates the accuracy of Strabo's description of its site. "Rocky precipices of a rich reddish-brown colour surrounded us; and before us, across a scoured and desolate tract, were the cliffs of Sobbex, with its ruins, almost in an ascent and between, and the Dead Sea lying motionless in its bed beneath. The aspect of the whole was that of lonely and stern grandeur." So on quitting the spot they found the ground "sprinkled with volcanic stones." The base of the cliff is separated from the water by a shoal or sand-bank, and the rock projects a vast extent, and is completely isolated by a valley, even on the west side, where alone "the rock can now be climbed: the pass on the east described by Josephus seems to have been swept away. The language of that historian respecting the loftiness of the site, is not very extravagant. It requires firm nerves to stand over its steepest sides and look directly down. The depth at these points cannot be less than 1000 feet.

The whole area we estimated at three-quarters of a mile in length from N. to S., and a third of a mile in breadth. On approaching the rock from the west, the 'white promontory,' as Josephus appropriately calls it, is seen on this side near the northern end. This is the point where the siege was pressed and the wall built up against the entire top of the hill by King Herod, all the lower part remains. Its colour is of the same dark red as the rock, though it is said to have been composed of white stone; but on breaking the stone, it appeared that it was naturally whitish, and had been burnt brown by the sun." The ground-plan of the store-houses and their extent can still be seen in the foundations of the buildings on the summit, and the cisterns excavated in the natural rock are of enormous dimensions; one is mentioned as nearly 50 feet deep, 100 long, and 45 broad; its wall still covered with a white cement. The foundations of a round tower, 40 or 50 feet below the northern summit, may have been connected with the palace, and the windows cut in the rock near by, which Mr. Woolcot conjectures to have belonged to some large cistern, now covered up, may possibly have lighted the rock-hewn gallery by which the palace communicated with the fort. It is interesting to see how every part of the wall of circumvallation could be traced.—carried along the low ground, and, wherever it met a precipice, commencing again on the high summit above, thus making the entire circuit of the place. Connected with it, at intervals, were the walls of the Roman camps, opposite the NW. and SE. corners, the former being the spot where Josephus placed that of the Roman generals. A third may be traced on the level near the shore. The outline of the works, as seen from the heights above, is as complete as if they had been but recently abandoned. The Roman wall is 6 feet broad, built, like the fortress walls and buildings above, with rough stones laid loosely together, and the interstices filled with stones. The distance of this from a diminutive heap of stones by which the position is exactly opposite to the peninsula that runs into the Dead Sea from its eastern shore, towards its southern extremity. (Bibliotheca Sacra, 1843, pp. 62—67; Traill's Josephus, vol. ii. pp. 109—115: the plates are given in vol. i. p. 126, vol. ii. pp. 87, 236.) It must be added that the identity of Sobbex with Masada is most complete, and the vindication of the accuracy of the Jewish historian, marvellous as his narrative appears without confirmation, so entire as to leave no doubt that he was himself familiarly acquainted with the fortress.

[G. W.]

MASATITICA (Mara'tir), a river the "en-bouchure" of which is placed by Arrian (Peripl. p. 336) in a small place of the Nisia. Pausanias (Comp. Geog. vol. ii. p. 325) has identified it with the Kammular. [E. B. J.]

MASANI (Mara'af), a people of Arabia Deserta, mentioned only by Ptolemy (v. 19, § 2), situated above the Bhabeni. (Forster, Geog. of Arabia, vol. i. pp. 284, 285.) [G. W.]

MASANE (Mara'n, Xenophon. Anc. Hist. iv. 4, § 4), a small river of Messopotamia, mentioned by Xenophon in the march of Cyrus the Younger through that country. It flowed round a town which he calls Corosthe, and was probably a tributary of the Euphrates. Foriger imagines that it is the same as the Sassorax of Ptolemy (v. 18, § 3), which had its rise in the neighbourhood of Nisibis. [V.]

MASOLIUM, a place on the east of the main road leading from Veldidena to Pons Aeni (Ital. Ant. p. 239), identified with Muniad on the Tegernose, or with Matena, near Rottenberg. [L. S.]

MASGILANA or MASGILIANAE, a town in Dacia, which the Ptolemy Table fixes at 11 M.P. from Dragan. The Geographer of Ravenna calls it Mountia; its position must be sought for near Karanese. [E. B. J.]

MASDORANI (Musa'qar or Mus'qar), a wild tribe who occupied the mountain range of Masdorana, between Parthis and Ariana, extending SW. towards the desert part of Carmania or Kirman. (Vol. vi. 17, § 3) [V.]

MASDORANI.
MASDORANUS

MASDORANUS (Μασδόρανος), a chain of mountains which divided Parthia from Carmania Deserts, extending in a S. direction. They must be considered as spurs of the Sarthi mountains (Σαρθία), which lie to the N. of Parthia (Ptol. vi. 5 § 13).

MASSE (Μάσσα, Μασσάρος). An ancient city in the district Hermioni, in the Argolic peninsula, mentioned by Homer along with Aegina. In the time of Pausanias it was used as a harbour by Hermione. (Hom. Il. ii. 562; Strab. viii. p. 376; Paus. ii. 36 § 2; Steph. B. s. v.) It was probably situated on the western coast of Kitharès, at the head of the deep bay of Kitharès, which is protected by a small island in front. The possession of this harbour on the Argolic gulf must have been of great advantage to the inhabitants of Hermione, since they were thus saved the navigation round the peninsula of Kretëthi. The French Commission, however, place Messe more to the south, at port Xanthi, which we suppose to have been the site of Halic. [Halice.] (Leake, Morea, vol. ii. p. 465, Peloponnesian, p. 287; Boblaye, Rerichenes, p. 61; Curtius, Peloponnesos, vol. ii. p. 462.)

MASIES. [Μασιτανία]...

MAS'IAI (Μασιαίοι). Strabo xi. pp. 506, 527; Ptol. v. 13 § 2), a chain of mountains which form the northern boundary of Messopotamia, and extend in a direction nearly east and west. They may be considered as the ancient Hellenistic mountain known by the name of Amanos, between Cilicia and Assyria, and the Niphates, on the eastern or Armenian side. The modern name is Karja Baglar. Strabo states, that M. Maximus in Asia, because he extends Armenia somewhat more to the W. and S. than other geographers. A southern spur of the Messian chain is the mountain district round Singara (now Sineur.)

MAS'II (Μασήιοι, Herod. i. 125), one of the three tribes mentioned by Herodotus, as forming the first and most honourable class among the ancient Persians.

MASSA (Μάσσα, Ptol. iv. 6 § 6; Mestat, Polyb. ap. Flor. vi. l), a river of Libya, which joined the sea far to the S. of the Downs, and to the S. of Scolis (Capo Blanco) in E. long. 10° 30', N. lat. 16° 30'. [E. B. J.]

MASSA, surnamed MASSA VETERENUS, a town of Etruria, situated about 12 miles from the sea, on a hill overlooking the wide plain of the Marsalanum; hence it is now called Messa Marittima. In the middle ages it was a considerable city and the seat of a bishop; but it is not mentioned by any ancient author earlier than Ammianus Marcellinus (xiv. 11, § 27), who tells us that it was the birthplace of the emperor Constantius Gallus. From the epithet Veterenus, it would seem probable that there was an Etruscan city of the name of Vetrum in its neighbourhood; and, according to Mr. Denys, there are signs of an Etruscan population on a hill called the Poggio di Vettime, a little to the S. of the modern town. (Denys, Etruria, vol. ii. p. 218.) [E. H. B.]

MASSABATICA. [Mesarbatae.]

MASSAE (Μασσαίοι). Ptol. vii. 14 §§ 9, 11) in the extreme N. of Scythia, near the mountains of the Alani, or the N. part of the Dural chain. [E. B. J.]

MASSAEYLL. [Muxidia.]

MASSAGA (Μάσσαγαι, Arrian, Anab. iv. 25, 39), a strongly fortified town in the N.E. part of India, between the Cophes and the Indus. It is stated by Arrian (I. c.) to have made a desperate defence, and to have withstood Alexander for four days of continued assault. It had been the residence of the Indian king Assacenus, who was recently dead when Alexander arrived there. (Curt. viii. 10). This name is written differently in different authors. Thus, Strabo writes it Māṣāgā (xv. p. 698); Steph. Byzs. and Diodorus, Mασσάγα (xxvii. Proem.); and Curtius, Masaga (I. c.). It is doubtless the same as the Samecitt, Μασγα, near the Gurusana (or Gauwar). Curtius himself mentions that a rapid river or torrent defended it on its eastern side. (Lassen’s Map of India.) [V.]

MASSAGETAE (Μασσαγηταί), a numerous and powerful tribe who dwelt in Asia on the plains to the E. of the Caspian and to the S. of the Isen-edges, on the E. bank of the Araxes. Cyrus, according to story, lost his life in a bloody fight against them and their queen Tomyris. (Herod. i. 205—214; Justin. i. 8.) They were so analogous to the Scythians that they were reckoned as members of the same race by many of the contemporaries of Herodotus, who has given a detailed account of their habits and manner of life. From the exactness of the geographical data furnished by that historian, the situation of this people can be made out with considerable precision. The Araxes is the Jaxartes, and the immense plain to the E. of the Caspian, that “stepte land” which now includes Sirkar and Mongolia, touching on the frontier of Ergasur, and extending to the chain of the Altai. The gold and bronze in which their country abounded were found in the Altai range. Strabo (xi. pp. 512—514) confirms the statements of the father of History as to the inhuman practices and repulsive habits of these earliest specimens of the Mongolian race. It may be observed that while Niebuhr (Klein Schrift. p. 265), Böckh (Corpus Inscriptionum Graecarum, p. 81) and Schaffarik (Slav. Ant. vol. i. p. 279) agree in assigning them to the Mongol stock, Von Humboldt (Asie Centrale, vol. i. p. 400) considers them to have belonged to the Indo-European family.

Alexander came into collision with these wandering hordes, during the campaign of Sogdiana, in c. 326. (Arrian, Anab. iv. 16, 17.) The Massagetae occur in Pomponius Mela (i. 2 § 3), Pliny (vi. 19), and Ptolemy (vi. 10. § 2, 13. § 3) afterwards they appear as Alani. (Alani.) [E. B. J.]

MASSALIA (Μασσαλία), a town of Crete, which Ptolemy (iii. 17, § 2) places to the W. of Psychium (Psychium), now the Mogado-pelion. (Hick. Crete, vol. i. p. 393.) [E. B. J.]

MASSALIA (Μασσαλία).

MASSALIOTICUM OSTIUM. (For Massaliotica.)

MASSANI (Μασσανάι), a people in India, who are said by Diodorus to have lived on the coast of the Indus, in the district called Patiala. [V.]

MASSAVA, in Gallia, is placed by the Table between Brivodorum (Britore) and Ebrous, which is Nevrinum (Nevres) on the Loire. The distance is marked the same from Massava to Brivodorum and to Nevrinum, being xvi. in each case. Massava is Massa or Massa, a place where the small river near Massa flows into the Loire; but the numbers in the Table do not agree with the real distance, as D’Anville says, and he would correct them in his usual way. [G. L.]

u
MASSIANI (MаssаvоII, Strab. xiv. p. 690), a people who dwelt in the NE. part of India, beyond the Punjab, between the Cophes and the Indus. They are mentioned by Strabo in connection with the Astaceni and Aspasi, and must therefore have dwelt along the mountain range to the N. of the Kōdil river.

MASSICUS MONS (Monte Massico), a mountain, a further range of hills, in Campania, which formed the limit between Campania properly so called and the portion of Latium, south of the Liris, to which the name of Latium Novum or Adjectum was sometimes given. (Plin. iii. 5. a. 9.) The Massicen Hills form a range of inconceivable elevation, which extends from the foot of the mountain group near Sessa (the Мe. di Sta. Croce), in a SW. direction, to within 2 miles of the sea, where it ends in the hill of Mondragone, just above the ancient Sinuessa.

The Massican range is not, like the more lofty group of the Мe. di Sta. Croce or Rocca Monfina, of volcanic origin, but is composed of the ordinary limestone of the Apennines (Du Pinсеt On Volcanoes, p. 175). Yet, for the immediate vicinity of the volcanic formations of Campania, the soil which covers it is in great part composed of such products, and hence probably the excellence of its wine, which was one of the most celebrated in Italy, and vied with the still more noted Falernian. (Virg. Геог. ii. 143, Аes. v. 724; Hor. Carm. i. 19, ii. 21, 3; Сil. It. v. 20; Martial, i. 27, 8. xii. 111; Plin. xiv. 6. s. 8; Columell. iii. 5.) Yet the whole of this celebrated range of hills does not exceed 9 miles in length by about 2 in breadth. [E. H. B.]

MASSICTES, MASSYCITES, or MASSYCITUS (Мaсякитoй), a mountain range traversing western Lycia from north to south, lying in the north, near Nyssa, from Mount Taurus, and running almost parallel to the S. coast. Though in the south it turns a little to the east. (Πtθoλ. v. 3. § 1; Plin. v. 28; Quint. Smyrn. iii. 232.) [L. S.]

COIN OF MASSYCITES.

MASSIENA, a town, mentioned only by Avienus (Or. Μaгат. 450, seq.), situated on the south coast of Hispania Tarraconensis, from which the Sinus Massienus derived its name. It is the bay Ε. of Cartagena, between C. Palos and C. Gata.

MASSILIA (Масяlιa; Eθh. Μaσσαlίa, Мaσσαlίη, Мaσσαlετις, Мaσσαlετος, in the feminine, Мaσσαlίως; Massiliensis; the modern name, Мaрсellа, is from the corrupted Latin Marsilia, which in the Provençal became Мarsi1еlл.), Massalia, with which name it is generally called; it is a town commandery of the Gallia Narbonensis, on the coast, east of the Rhone. Its position is represented by the French city of Мarselle, in the department of Βouχeς-de-θRhone. Plutarch (ιι. 10. § 6) calls Massilia a city of the Commoni, whose territory he extends along the coast from Massilia to Forum Julii (Frigus). He places here on 26° 31' N. lat. and the length of the longest day 15 hours, 15 minutes; which does not differ many minutes from the length of the longest day as deduced from the true latitude of Мaрсellе, which is about 43° 18' N. lat.

The territory of Мaрсellе, though poor, produced some good wine and oil, and the sea abounded in fish. The natives of the country were probably a mixed race of Celts and Ligures; or the Ligurian population may have extended west as far as the Rhone. Stephannus (s. a. Μaσσαλία), whose authority is nothing, except we may understand him as correctly citing Heraclides, describes Massallia as a city of Ligurians, Celts, and Strabo (p. 550) observes, "that as far west as Massalia, and a little further, the Saluvarians inhabited the Alps that lie above the coast and some parts of the coast itself, mingled with the Hellenes." This is doubtless the meaning of Strabo's text, as Greskund remarks (Тravel. Strab. vol. i. p. 350). Strabo adds, and the old Greeks give to the Salus the name of Lycyges, and to the country which the Massaliots possess the name of Lygastia; but the later Greeks name them Cetto-ligycites, and assign to them the plain country as far as the Rhodanus and the Druentia. Massalia, then, appears to have been built on a coast which was occupied by a Ligurian people.

The Via Apia, on the Roman town of Phocaea in Asia, one of the most enterprising maritime states of antiquity, showed their countrymen the way to the Adriatic, to Tyrrenhia, Iberia, and to Tartessus. (Herod. i. 166.) Herodotus says nothing of their visiting Celts or the country of the Celts. The story of the origin of Massalia is preserved by Aristotle (о. Аθη. ii. 376) in his history of the policy of the Massaliots. Eusebius of Phocæa, a friend of Nannus, who was the chief of this part of the coast, Nannus, being about to marry his daughter, invited to the feast Euxenus, who happened to have arrived in the country. Now the marriage was after the following fashion. The young woman was to enter after the feast, and to give a cup of wine and water to the same woman she preferred, and the man to whom she gave it was to be her husband. The maid coming in gave the cup, either by chance or for some reason, to Euxenus. Her name was Petta. The father, who considered the giving of the cup to be according to the will of the deity, consented that Euxenus should have Petta to wife; and Euxenus was given the Greek name Aristoxena. It is added, that there was a family in Massalia, up to Aristotle's time, named Protidæa, for Protæas was a son of Euxenus and Aristoxena.

Justin (111. 3. &c.), the epitomiser of Τrоgοн Pompeius, who was either of Gallic or Ligurian origin, for his ancestors were Βοcсοnts, tells the story in a somewhat different way. He fixes the time of the Phocæans coming to Gallic in the reign of Tarquinus, who is Tarquinius Priscus. The Phocæans first entered the Tiber, and, making a treaty with the Roman king, continued their voyage to the furthest bays of Gallia and the mouths of the Rhone. They were pleased with the country, and returning to Phocæa, induced a greater number of Phocæans to go. As the Phocæans was a town commandery of the Gallia Narbonensis, on the coast, east of the Rhone. They were pleased with the country, and returning to Phocæa, induced a greater number of Phocæans to go. As the Phocæans was a town commandery of the Gallia Narbonensis, on the coast, east of the Rhone. They were pleased with the country, and returning to Phocæa, induced a greater number of Phocæans to go. As the Phocæans was a town commandery of the Gallia Narbonensis, on the coast, east of the Rhone. They were pleased with the country, and returning to Phocæa, induced a greater number of Phocæans to go. As the Phocæans was a town commandery of the Gallia Narbonensis, on the coast, east of the Rhone. They were pleased with the country, and returning to Phocæa, induced a greater number of Phocæans to go. As the Phocæans was a town commandery of the Gallia Narbonensis, on the coast, east of the Rhone. They were pleased with the country, and returning to Phocæa, induced a greater number of Phocæans to go. As the Phocæans was a town commandery of the Gallia Narbonensis, on the coast, east of the Rhone. They were pleased with the country, and returning to Phocæa, induced a greater number of Phocæans to go. As the Phocæans was a town commandery of the Gallia Narbonensis, on the coast, east of the Rhone. They were pleased with the country, and returning to Phocæa, induced a greater number of Phocæans to go. As the Phocæans was a town commandery of the Gallia Narbonensis, on the coast, east of the Rhone. They were pleased with the country, and returning to Phocæa, induced a greater number of Phocæans to go. As the Phocæans was a town commandery of the Gallia Narbonensis, on the coast, east of the Rhone. They were pleased with the country, and returning to Phocæa, induced a greater number of Phocæans to go. As the Phocæans was a town commandery of the Gallia Narbonensis, on the coast, east of the Rhone. They were pleased with the country, and returning to Phocæa, induced a greater number of Phocæans to go. Judged by his son Co- Gallia, which Justin Massalia, to send some of the nation of Massaliots made himself with his daughter as there was a gate at night, deep and filled with a pit. She was a week for her lover. Before the hapless one he told him of this his life. The man of the city. The Li- hiding-places and was surprised to cut to pieces with the Massaliots kept good watch, a reinvention over

The history of Massalia anything is natural. The Massaliots were a people who lived in the plain country of Vir- same gentle and heroic woman, Pocahontas, by marrying another Englishman, made peace between the settlers and the savages, and secured for England a firm footing in Chesapeake Bay.

Livy's story (v. 34) of the Phocaeans landing on the site of Massalia at the time of Belothesus and his Celts being on the way to invade Italy, is of no value.

When Cyrus invaded Ionia (b.c. 546), part of the Phocaeans left Phocaea and sailed to Alalia in Corsica, where the Phocaeans had made a settlement twenty years before. Herodotus, who tells the history of these adventurers at some length, says nothing of their settlement at Massalia. (i. 163—167.) Strabo (vi. p. 252), on the authority of Antiochus, names Crementius as the commander of the Phocaeans who fled from their country on the Persian invasion, and went to Corsica and Massalia, whence being driven away, they founded Velia in Italy. It is generally said that the exiles from Phocaea formed the second colony to Massalia; but though it seems likely enough, the evidence is rather imperfect. When Thucydides says (i. 13) that the Phocaeans while they were founding Massalia defeated the Carthaginians in a naval battle, we get nothing from this fact as to the second settlement of Massalia. We only learn that the Carthaginians, who were probably looking out for trading posts on the Gallic shore, or were already there, came into conflict with the Phocaeans; and if we interpret Thucyd-ides' words as we ought to do, he means at the time of the settlement of Massalia, whenever that was. Pausanias, who is not a careless writer (x. 8. § 6), states that the Massaliots were a Phocaean colony, and a part of those who fled from Carthage the Medes; and that having gained a victory over the Carthaginians, they got possession of the country which they now have. The Phocaeans dedicated a bronze statue to Apollo at Delphi to commemorate the victory. There seems, then, to have been an opinion current, that some of the exiles at the time of the Persian invasion settled at Massalia; and also a confusion between the two settlements. Justin, following Trogus, speaks of the Massaliots having great wars with the Galli and Ligures, and of their often defeating the Carthaginian armies in a war that arose out of some fishing vessels being taken, and granting them peace. They also were, he says, in alliance with Rome almost from the time of founding their city; but it seems that he had forgotten what he said a little before, that it was not almost from that time, but even before. They also contributed gold and silver to pay the ransom when the Galli took Rome, for which they received freedom from taxation (immunitas), and other privileges which is very absurd, and certainly untrue. The historical account of Rome and Massalia belongs to a later time.

Massalia was built on rocky ground. The harbour lay beneath a rock in the form of a theatre, which looked to the south. Both the harbour and the city were well walled, and the city was of considerable extent. On the citadel stood the Ephesus, and the temple of Delphian Apollo, which was a common sanctuary of all the Ionians, but the Ephesus was a temple of Artemis of Ephesus. The Massaliots had ship-houses (νεφερωμα) and an armory (ολιθηνε); and in the time of their prosperity they had many vessels, arms, and stores of ammunition both for navigation and for the siege of cities; by which means they kept off the barbarians and gained the friendship of the Romans. (Strab. pp. v. 2
Caesar, who knew the site well, described Massalia as washed by the sea almost along three parts of its extent; the fourth part was that by which the river was connected with the mainland; and here also the part that was occupied by the citadel was protected by the nature of the ground and a very deep valley (B. C. ii. 1). He speaks of an island opposite to Massalia. There are three small islands nearly opposite the entrance of the present port. It was connected with the mainland, as Eumenius describes it, "by a space of fifteen hundred paces." D'Anville observes that these fifteen hundred paces, or a Roman mile and a half, considerably exceed the actual distance from the bottom of the port to the place called the Grande Pointe; and he supposes that we must take these to be single paces, and so reduce the space to half the dimensions. Walckenaer (Glog. Ge. vol. i. p. 25) supposes Eumenius to mean that the tongue of land on which Massalia stood was 1500 paces long. At present the port of Marseille is turned to the west; but the old port existed for a long time after the Roman period. This old port was named Lacydon (Mela, ii. 5), a name which also appears on a medal of Massalia. The houses of Massalia were mean. Of the public buildings not a trace remains now, though it seems that there were not very long ago some remains of aqueducts and of baths. Medals, urns, and other antiquities have often been dug up.

The friendship of Rome and Massalia dates from the Second Punic War, when the Massaliots gave the Romans aid (Liv. xxii. 20, 25, 26), and assisted them all through the long struggle. (Polyb. iii. 93.) In B.C. 208 the Massaliots sent the Romans intelligence of Aenraplilius having come into Gallia. (Liv. xxvii. 36.) Massalia was never safe against the Ligurians, who even attacked them by sea (Liv. xli. 18). At last (n. s. 154) they were obliged to ask the Romans for aid against the Oxybi and Daesus, who were defeated by Q. Oppius. The story of the establishment of the Romans in Southern Gaul is told in another place (Gallic Transalpina, Vol. I. p. 933.)

By the victory of the Romans over the Ligurians the Massaliots got some of the Ligurian lands; and after the defeat of the Teutones by C. Marius (B.C. 102) near Aquae Sextiae (Aix), the Roman commander gave the Massaliots the canal which he had constructed at the eastern outlet of the Rhone, and they lieved tolls on the ships that used it [Fossa Mariana]. The Massaliots were faithful to the Romans in all their campaigns in Gallia, and furnished them with supplies. (Cic. pro Font. c. 1.)

On Pompeius gave to the community of Massalia lands that had belonged to the Volcae Aroricini and the Helvi; and C. Julius Caesar increased their revenue by fresh grants. (B.C. i. 35.)

When Caesar (B.C. 49) was marching from Italy into Spain against the legati of Pompeius, Massalia shut her gates against him. The excuse was that they would not side with either party; but they showed that they were really favourable to Pompeius by admitting L. Domitius within their walls and giving him the command of the city (B.C. i. 34-36). At the suggestion of Pompeius the Massaliots also made great preparations for defence. Caesar left three legions under his legatus C. Trebonius to besiege Massalia, and he gave D. Brutus the command of twelve ships which he had constructed at Arele (Aries) with great expedition. While Caesar was in Spain, the Massaliots having manned seventeen vessels, eleven of which were transports, and put on board of them many of the neighbouring mountaineers, named Albici, fought a battle with Brutus in which they lost nine ships. (B.C. i. 56-59.) But they still held out, and the narrative of the siege and their sufferings is one of the most interesting parts of Caesar's History of the Civil War (B.C. ii. 1-22; Dion Cassius, xii. 7). The town finally fell to Caesar, the people gave up their arms and military engines, their ships, and all the money that was in the public treasury. The city of Massalia appeared in Caesar's triumph at Rome, "that city," says Cicero, "without which Rome never triumphed over the Tranalsine nations" (Philipp. viii. 6, de Offic. ii. 8). Still it retained its freedom, abrogaque, or in Roman language it was a Libera Civitas, a term which Strabo correctly explains to signify that the Massaliots "were not under the governors who were sent into the Provincia, neither the city itself, nor the dependencies of the city." Pliny names Massalia "a foderata civitas" (ill. 4), a term which the history of its early connection with Rome explains. The constitution of Massalia was aristocratic and its institutions were good (Strab. iv. p. 179). It had a council of 600, who held their places for life, and were named Timuchi (τιμοτυχοι). The council had a committee of fifteen, in whose hands the ordinary administration was: three out of the fifteen presided over the committee, and had the chief power; they were the executive. Strabo's text here becomes corrupt, and it is doubtful whether he means to say that no man could be a Timuchus, unless he had children and unless he could trace his descent for three generations from a citizen, or that no man could be one of the fifteen unless he fulfilled these conditions. (See Groskurd, Transal. Strabo, vol. i. p. 310.) Their laws were Ionic, says Strabo, whatever this means; and were set up in public. Possibly we may infer that they were not overloaded with legislation. Aristotle (Pol. v. 6) seems to say that Massalia was once an oligarchy, and we may conclude from this and other authorities that it became a Timocracy, that is, that the political power came into the hands of those who had a certain amount of wealth. Cicero (de Rep. i. 27, 28) in
his time speaks of the power being in the bands of the "select et principes," or as he calls them in another place the "optimates;" and though the administration was equitable, "there was," he says, "in this condition of the populans a certain resemblance to servitude." Though the people had little or no power, so far as we can learn, yet the name Denus was in use; and probably, as in most Greek towns, the official title was Boule and Demus, at least at Rome it was Senatus Populusque Romanus. The division of the people was into Phyle. The council of the 600 probably subsisted to a late period, for Lucan, or whoever is the author of the Tonturia (c. 24) mentions it in his story of the friendship of Theocles and Menesocrates.

Some writers have attempted, out of the fragments of antiquity, to reconstruct the whole polity of Massalia; an idle and foolish attempt. A few things are recorded, which are worth notice; and though the authority for some of them is not a critical writer, we can hardly suppose that he invented. (Valer. Maxim. ii. 6.) Poison was kept under the care of the administration, and if a man wished to die, he must apply to the Six Hundred, and if he made out a good case, he was allowed to take a dose; and "herein," says Valerius, "a manly investigation was tempered by kindness, which neither allowed any one to depart from life without a cause, and wisely gave him a speedy way to death." The credibility of this usage has been doubted on various grounds: but there is nothing in it contrary to the notions of antiquity. Two coffins always stood at the gates, one for the slaves, one for the freeman; the bodies were taken to the place of interment or burning, whichever it was, on the day of the funeral, which was followed by a domestic sacrifice and a repet of the relations. The thing was done cheap: the undertaker would not grow rich at Massalia. No stranger was allowed to enter the city with arms: they were taken from him, and restored when he went away. These and other precautions had their origin in the insecurity of property and persons, and the domination of Ligurians and Galli. The Massaliots also had slaves, as all Greeks had; and though massacre was permitted, it may be inferred from Valerius, if he has not after his fashion confounded a Greek and Roman usage, that the slave's condition was hard. A supply of slaves might be got from the Galli, who sold their own children. Whether the Ligurian was so base, may be doubted. We read of Ligurians working for daily hire for Massaliot masters. This hardy race, men and women, used to come down from the mountains to earn a scanty pittance by tilling the ground; and two ancient writers have preserved the same story, on the evidence of Poseidonius, of the endurance of a Ligurian woman. who was working for a Massaliot farmer, and being seized with the pains of childbirth, retired into a wood to be delivered, and came back to her work, for she would not lose her hire. (Strab. iii. p. 165; Diodor. iv. 20.) It is just to add that the employer paid the poor woman her wages, and sent her off with the child.

The temperance, decency, and simplicity of Massaliot manners during their hey-days, as being on the Roman scale, are commended by the ancient writers. The women drank no wine. Those spectacles, which the Romans called Mimi, coarse, corrupting exhibitions, were prohibited. Against religious impostors the Massaliots shut his door, for in those days there were men who made a trade of superstition. The highest sum of money that a man could get with a woman was a hundred gold pieces: he must take a wife for what she was worth, and not for her money. She had five gold pieces for her dress, and five for her gold ornaments. This was the limit fixed by the sumptuary laws. Perhaps the Massaliot women were handsome enough to want nothing more.

Massalia cultivated literature, though it did not produce, as far as we know, either poets or historians. An edition (Συλλογικαί) of the Homerico poetae, called the Massaliot edition, was used by the Alexandrine critic in settling the text of Homer. It is not known by whom this edition was made; but as it bore the name of Massalia, it may be supposed that it came from this city. The name of Pythias is inseparably connected with the maritime fame of Massalia, but opinions will always differ, as they did in antiquity, as to the extent of his voyages and his veracity. (Strab. ii. p. 104.)

That this man, a contemporary of Alexander, navigated the Atlantic Ocean, saw Britain, and explored a large part of the western coast of Europe, can hardly be doubted. There was nothing strange in this, for the Phoenicians had been in Britain centuries before. Pliny (ii. 97) records a statement of Pythias and the high tides on the British coast. Strabo (iv. 71) says that Hipparchus, by the authority of Pythias, placed Massalia and Byzantium in the same latitude. But it appears from another passage of Strabo (ii. 115), that Hipparchus said that the ratio between the gnomon and its shadow at Byzantium was the same that Pythias said it was at Massalia; whence it appears that the conclusion of Hipparchus' own was, that whatever point was in the latitude of Massalia, or in the latitude of Byzantium. As for the voyages of another Massaliot, Euthymenes, there is too little authority to enable us to say anything certain.

As the Massaliots planted their colonies along the south coast of Gallia and even in Spain, we may conclude that all the places which they chose were selected with a view to the colonies of Ligurians and Galli. The Massaliots also had slaves, as all Greeks had; and though massacre was permitted, it may be inferred from Valerius, if he has not after his fashion confounded a Greek and Roman usage, that the slave's condition was hard. A supply of slaves might be got from the Galli, who sold their own children. Whether the Ligurian was so base, may be doubted. We read of Ligurians working for daily hire for Massaliot masters. This hardy race, men and women, used to come down from the mountains to earn a scanty pittance by tilling the ground; and two ancient writers have preserved the same story, on the evidence of Poseidonius, of the endurance of a Ligurian woman. who was working for a Massaliot farmer, and being seized with the pains of childbirth, retired into a wood to be delivered, and came back to her work, for she would not lose her hire. (Strab. iii. p. 165; Diodor. iv. 20.) It is just to add that the employer paid the poor woman her wages, and sent her off with the child.

The temperance, decency, and simplicity of Massaliot manners during their hey-days, as being on the Roman scale, are commended by the ancient writers. The women drank no wine. Those spectacles, which the Romans called Mimi, coarse, corrupting exhibitions, were prohibited. Against religious impostors the Massaliot
MASSILIA.

The medals of Massilia are numerous, and some of them are in good taste. It is probable that they also coined for the Galli, for the Galli had coined money of their own long before the Christian era with Greek characters. The common types of the Massaliot medals are the lion and the bull. No gold coins of Massalia have yet been found; but there are coins of other metal covered over with gold or silver, which are generally supposed to be base coin; and base or false coin implies true coin of the same kind and denomination. It has been also supposed that Mt. Bablon was practiced by the Romans themselves to cheat their customers; a supposition which gives them no credit for honesty and little for sense.

The settlements of Massalia were all made very early: indeed some of them may have been settlements of the mother city Phocaea. One of the earliest of these colonies was Tauroctis or Tanitrometum (a doubtful position), which Caesar (B. C. ii. 4) calls "Castellum Massiliasium." The other settlements east of Massalia were Olbia (Oeoboe or Oeubo), Athenopolis [Athenopolis], Antipolis (Antiope), Nicaea (Nizza), and the islands along this coast, the Stoechades, and Lero and Lirina. West of Massalia was Agathia (Agde), on the Araritis (Heracle), doubtful whether it was a colony called Massalia or Massalia. Isola (Isola), within the limits of Hispania, was either a Rhodian or Massaliot colony; even if it was Rhodian, it was afterwards under Massalia. Emporium (Emporium), in Hispania, was also Massaliot; or even Phocaean (Liv. xxv. 19) originally. [Emporium]. Strabo speaks of three small Massaliot settlements further south on the coast of Hispania, between the river Sacro (Juvac) and Carthago Nova (iii. p. 159).

The chief of these, he says, was Hemerocoeapium. [Dianium].

The first Phocaean settlement on the south coast of Spain was Maenaco (iii. p. 156), where remains of a Greek town existed in Strabo's time. There may have been other Massaliot settlements on the Gallic coast, such as Heraclea. [Herculea]. Stephens, indeed, mentions some other Massaliot cities, but nothing can be made of his fragmentary matter.

There is no good reason for thinking that the Massaliots founded any inland towns. Arelate (Arles) would seem the most likely, but it was not a Greek city; and as to Avenio (Avignon) and Caesellio (Cazello), the evidence is too small to enable us to reckon them among Massaliot settlements. There is also the great improbability that the Massaliots either wanted to make inland settlements, or were able to do it; if, contrary to the practice of their nation, they had wished it. That Massaliot merchants visited the interior of Gallia long before the Roman conquest of Gallia, may be assumed as a fact.

Probably the downfall of Carthage at the end of the Third Punic War, and the alliance of Massalia with Rome, increased the commercial prosperity of this city, but the Massaliots never became a great power like Carthage, or they would not have called in the Romans to help them against two small Ligurian tribes. The foundation of the Roman colony of Narbo (Narbonne), on the Atax (Asse), in a position which commanded the road into Spain and to the mouth of the Garonne, must have been detrimental to the commercial interests of Massalia.

Strabo (iv. p. 186) mentions Narbo in his time as the chief trading place in the Provincie. Both before Caesar's time and after Massalia was a resort for the Romans, and sometimes served as a residence. (Tac. Ann. iv. 43). When the Roman supremacy was established in Gallia Massalia had no longer to protect itself against the natives. The people having wealth and leisure, applied themselves to rhetoric and sophistry; the place became a school for the Gallic senate, which was where the Greek language, which was common use that contracts were drawn up in.

In Strabo's time, that is in the time of Augustus, Massalia, one of the Romans who had been learning to write was sent to Massalia instead of Athens, to teach his countrymen the Latin language, with the thrifty habits of a provincial town. (Tac. Ann. iv. 44.) The Galli, by acquaintance with Massalia, became fond of this language, which has remained a national taste to the present day. They had teachers of rhetoric and private schools, and private libraries, and the town was a school for youth, as it did physicians; for anyone of inspective health was a part of the education of a Greek town. Circumstances brought this happy state of affairs about Massalia, the Greek, and the Gallic (Ibid. xvi, on the authority of the Propontis). The studies of the youth at Massalia in the Roman period were both Greek and Latin. Medicine and law had not been cultivated at Massalia. One of the doctors of this town, combined physics and surgery, and had no superfluities. He had an enormous sum of money for repelling the sick into ponds. Men of rank were seen shivering for display under the influence of this water doctor. On which Pliny (Hist. Nat. v. 40) says that all these men hastened after the cure by bringing in some novelty, and trafficked away the lives of their patients.

The history of Massalia after Caesar's time is very little known. It is said that there are several coins with the name of Massalia. Some tombs and inscriptions are in the Museum of Marseille.

A great deal has been written about the city of Massalia; but it is not worth much. The following references will lead to other authorities: Rocchet, Historie des Colonies Greceques; A. T. Tamer, Historia Reipublicae et of Massalia a Primordis ad Neronomia; which is useful for the references, but for nothing else; Thierry, Historie des Gaulois.

COIN OF MASSILLA.

MASSITHOLUS (Massatholos), a river in the Hesperian bay, the source of which Ptolemy (iv. 6. § 8), calls the mountain called Theon Ochera, and in the bouchure (§ 9) in the Hesperian bay, Hesperium Ceare and the Hypodromus of A.
MATT. MONTES.

and Perge in Pamphylia (Stadium, §§ 200, 201), and 70 stadia from Mygdelai, which is probably a corruption of Mahdyias. [MAGNUS.] [L. S.]

MATHIA PR. [MATHALIA.]

MATHALIA (Mataria, Ptol. iii. 17, § 4), a town in Crete near the headland of Matala (Mataria, Stadium, Strab. x. p. 479), as it appears in our copies of Strabo, but incorrectly. (Comp. Grokoud, ad loc.) The modern name in Mr. Pasleley's map is Matalh. (Hick, Krete, vol. i. pp. 399, 435; Mau, Class. Antiq. vol. ii. p. 287.) [E. B. J.]

MATEOLA, a town of Apulia, mentioned only by Pliny (iii. 11, s. 16) among the inland cities of that province. It is evidently the same now called Marata, about 13 miles from Gioia (Genusium), and 27 from the Gulf of Taranto. It is only about 8 miles from the river Brada; and must therefore have been closely adjoining the frontier of Lucania. [E. H. B.]

MATAVO, or MATAVONIUM, as D'Anville has it, in Gallia Narbonensis, is placed by the Antonine Itin. on a road from Forum Voconii (Forum Voconii) to Massilia (Marseilles), 12 M. P. from Forum Voconii, and 14 from Ad Turres (Tournes), between which places it lies. It is also in the Table, but the distances are not the same. Matavo is supposed to be Vima. [G. L.]

MATERENSE OPPIDUM, one of the thirty free towns ("oppida libera," Plin. v. 4) of Zeugitana. It still retains the ancient name, and is the modern Mater in the government of Tanis,—a small village situated on a rising ground in the middle of a fruitful plain, with a rivulet a little below, which empties itself into the Siara Palus. (Shaw, Trav. p. 165: Barth, Wanderungen, p. 206.) [E. B. J.]

MATER (Mataria; some MSS. read Mataro), a people of Asiatic Sarmatia, to the E. of the river Rha. [E. B. J.]

MATURENUM, a town of Etruria, known only from the Tabula Peutingeriana, which places it on the Via Clodia, between Tuscania (Toscanello) and Saturnia, 12 miles from the former, and 18 from the latter city. It probably occupied the same site as the modern village of Farnese. (Cluver. Ital. p. 517; Dennis, Etruria, vol. i. p. 463.) [E. H. B.]

MATIANA (Mataria, Strab. ii. p. 73, 1. 509; Steph. B.: Matrunh, Herod. v. 52: Edh. Mathanov, Mathanov), a district of ancient Media, in the south-western part of its great subdivision called Media Atropatene, extending along the mountains which separate Armenia and Assyria. Its boundaries are very uncertain, and it is not possible to determine how far it extended. It is probably the same as the Mathanov of Tyloma (vi. 2, § 5). [MARTIANE.] Strabo mentions as a peculiarity of the trees in this district, that they distil honey (L. c.). The Matiani are included by Herodotus in the eighteenth satrapy of Dareius (iii. 94), and served in the army of Xerxes, being armed and equipped in the same manner as the Paphlgontians (vii. 72). Herodotus evidently considered them to occupy part of the more widely extended territory of Armenia. [V.]

MATIEI MONTES (râ Matarh hriy, Herod. l. 189, 209, v. 52), the ridge of mountains which forms the back-bone or centre of Matiana, doubtless part of the mountain range of Kordistan, in the neighbourhood of Vima. Herodotus makes them the watershed from which flowed the Gyndes and the
MATILO, in Gallia Belgica, is placed by the Table on a route which ran from Lugdunum (Leiden) along the Rhine. The first place from Lugdunum is Pistorium Agrippinae (Roosendaal), and the next in Matilis is supposed to be Rhemnesburg. [G. L.]

MATILICA (Ed. Martialis, 41.1: Matiscio), a municipal town of Umbria, situated in the Apennines, near the sources of the Acis, and close to the confines of Picenum. It is mentioned both by Pliny and the Liber Coloniarum, of which the latter includes it among the "Civitates Piceni." Towards the close of the Roman Empire it appears as an episcopal see, included in the province then termed "Picenum Suburbicarium." (Plin. iii. 14. a. 19; Lib. Colon. p. 257; Bingham's Ecc. Hist. book i. ch. 5. § 4.) Matiscio is still a considerable town, and remains the ancient site as well as name. [E. H. B.]

MATINUS MONS. [GAMBARTS.]

MATISCO, a place in Gallia Celtica, in the territory of the Aedui in Caesar's time, and on the Soissons. (B. G. vii. 99.) After the capture of Alesia, a. c. 52, Caesar placed P. Sulpicius at Massica with a legion during the winter, to look after the supply of corn for the army. (B. G. viii. 4.) The position of Matiscio is fixed by the name, its site on the river, and the Itina. The name, it is said, was written Mascio by a transposition of the letters; and from this form came the name Massocis, and by a common change, Mascus. The form Mascisco occurs in the Table. (D'Anville, Notice, &c.) [G. L.]

MATITAE. "NIGER.

MATIUM, a maritime city of Crete, next to the E. of Apollonia in Pliny's list (iv. 12), and opposite to the island of Dia. — Contra Matium Dia " (I. c.). The modern Megalo-Kastro occupies the ancient site. (Fashby, Trans. vol. i. pp. 172, 261; Böck. Akten, vol. i. pp. 12, 403.) [E. B. J.]

MATRICEM, AD, a considerable town in Iliricum, which the Peutinger Table places between Bisutis Vetus and Bistum Nova, 20 M. P. from the former, and 25 M. P. from the latter. It must be identical with Mostar, the chief town of Herzegovina, standing on both banks of the Neretva, connected by a handsome bridge for which it has always been celebrated. The towers of this bridge are, according to tradition, on Roman substructions, and its construction is attributed to Trajan, or, according to some, Hadrian. The word "most" = "star," signifies "old bridge." (Wilkinson, Dalmatia, vol. ii. pp. 57—63; Neugebauer, Die Süd-Slavonien, p. 127.) [E. B. J.]

MATRINUS (Maršower), a river of Picenum, flowing into the Adriatic, now called La Plomia. Strabo describes it as flowing from the city of Adria, but it is in reality intermediate between Adria (Apw) and Angula (Ciesta S. Angelo). According to the same writer it had a town of the same name at its mouth, which served as the port of Adria. (Strab. v. p. 241.) Ptolemy also mentions the mouth of the river Matrinus next to that of the Atinus, from which it is distant about 6 miles (Pol. iii. i. § 20), but he is certainly in error in assigning it to the Marmuncii. [E. H. B.]

MATRONA or MATRONAE MONS is the name given by later Latin writers to the pass of the Mons Genialis (Seguso) to Brigantia (Bri- geno), which was more commonly known by the general appellation of the Alpes Cottiae. The pass is described in some detail by Ammianus, from whom
MAURETANIA.

of the productions of Mauretania, marvellous enough, in some particulars, as where he describes vessels as large as cats, and leaves 10 ft. long; and among other animals the crocodile, which there can scarcely be any river of Morocco capable of nourishing, even if the climate were to permit it. (In Egypt, where the average heat is equal to that of Senegal, the crocodile is seldom seen so low as Sioua). Pliny (vi. 1) agrees with Strabo (p. 827) in asserting that Mauretania produced elephants. As the whole of Barbary is more European than African, it may be doubted whether the elephant, which is no longer found there, was ever indigenous, though it may have been naturalised by the Carthaginians, to whom elephants were of importance, as part of their military establishment. Appian (B. P. 9) says that when preparing for their last war with the Romans, they sent Hasdrubal, son of Gisco, to hunt elephants; he could have hardly gone into Ethiopia for this purpose. Shaw (Trav. p. 258; Jackson, Morocco, p. 53) confirms, in great measure, the statements of Strabo (p. 830) and of Aelian (H. A. iii. 136, vi. 20) about the scorpion and the "phantalangium," a species of the "saurophaga." The "saurophaga," of which Varro (de Re Rustica, iv. 14. § 4; Plin. ix. 82) gives so wonderful an account, has not been identified. Copper is still worked as in the days of Strabo (p. 830), and the natives continue to preserve the grain, legumes, and other produce of their husbandry in "maimoures," or conical excavations in the ground, as recorded by Pliny (xvii. 73; Shaw, p. 221).

Mauretania, which may be described generally as the highlands of N. Africa, elevates itself like an island between the Mediterranean, the Atlantic, and the great ocean of sand which cuts it off towards the S. and E. This "plateau" separates itself from the rest of Africa, and approximates, in the form and structure, the height, and arrangement of its elevated masses, to the system of mountains in the Spanish peninsula, of which, if the straits of the Mediterranean were dried up, it would form a part. A description of these Atlantic highlands is given in the article ATLAS.

Many rivers flow from this great range, and fall into the Mediterranean, and the Atlantic. Of these, the most important on the N. coast, were, in a direction from E. to W., the AMPSAGA, UARAE, CHINALAPH, and MULACHIA; on the W. coast, in a direction from N. to W., the SUBUR, SALSAB, PHUTH, and LIXUS.

The coast-line, after passing the AMPsaga (Wad-el-Kibir) and Sinus NUMIDICUS, has the harbours IOGLGIS (Jellit), SALDAB Ps. (Bayrjun), and RUSCCURRIUM (Teddis). Weighing from Algiers, and passing JOMMIUM (Ras-al-Kanater), to stand towards the W., there is a rocky and precipitous coast, mostly bold, in which in succession were the ports and creeks IOIL (Zershell), CARTENNA (Tence), MURUSTAGA (Mostagbou), ARSANA (Arzun), QULBA (Wadirom or Oram); PONTUR MAGNUS (Maras Kibir), within MEDITERRANEUM PRIM. (Ras-al-Harbah); and ACA (Ishgin). The MULACHIA falls into the Gulf of Mellah of the charts. About 10 miles to the NW. of this river lay the TRAE INSULAE (Zaphron or Jaferei group); about 30 miles distant from these rocks, on a NW. by W. rhumb, was RUBADER PRIM. (Cap Trez Forcas of the Spanish pilots, or Ras-ak-Dheb of the natives), and in the bight formed between it and the Mulucha stood RUSADER.
MAURETANIA.

(Melliah.) W. of Cap Tres Foros, which is a termination of an offshoot of the secondary chain of the Atlas, was the district of the Metagonitae, extending to Abyla (Jebel-el-Mina). From here to Tingis (Tanier) the coast is broken by alternate cliffs and coves; and, still standing to the W., a bold cape presents itself as far as the fine headland of Ampelina (Cape Spartel; Ras-el-Shukkar of the natives). From Cape Spartel to the SSW. as far as Ziria (Arzila), the coast-line is a flat, sandy, and shingly beach, after which it becomes more bold as it reaches Lixus (Al-Hardich or Lardische).

(Smyth, The Mediterranean, pp. 94-99.) A description of the SW. coast is given in the article LIXUA. (Comp. G. Miller, Top. ab Geog. Græc. Minoris, ed. Didot, Paris, 1855; West Coast of Africa surveyed, by Arlett, Vidal, and Boteler, 1832; Côte occidentale de l’Afrique au Déport de la Marine, Paris, 1852; Carte dé l’Empire de Maroc, par L. Benou, 1844; Barth, Karte vom Nord-Afrikanischen Gestadeiland, Berlin, 1849.)

III. History and Political Geography.

The Romans first became acquainted with this country when the war with Hannibal was transferred to Africa; Mauretania was the unknown land to the W. of the Mulucha. In the Jugurthine War, Bocchus, who is called king of Mauretania, played the traitor’s part so skilfully that he was enabled to hand over his kingdom to his two sons Bogudes and Bocchus, who were associated upon the throne. These princes, from their hostility to the Pompeian party, were confirmed as joint kings of Mauretania by J. Caesar in B.C. 49. During the civil war between M. Antonius and Octavius, Bocchus sided with the latter, while Bogudes was allied with Antonius. When Bogudes crossed into Spain, Bocchus seized upon his brother’s dominions; a usurpation which was ratified by Octavius. In B.C. 25, Octavius gave to Juba II., who was married to the daughter of Cleopatra and Antoninus, the two provinces of Mauretania (afterwards called Tingitana and Caesariensis) which had formed the kingdom of Bogudes and Bocchus, in exchange for Numidia, now made a Roman province. Juba was succeeded by his son Philip, and then by Seleus, Cleopatra’s daughter. Here, too, the two provinces were united. (Strab. xvii. pp. 828, 831, 840.) Tibериus loaded Polyclitus with favours on account of the assistance he gave the Romans in the war with Tacfarinas (Tac. Ann. iv. 23-25); but in A.D. 41 he was put to death by Caligula. (Dion Cass. ix. 29; Suet. Cal. 26; Seneca, de Tranq. 11.) For coins of these native princes, see Eckel, vol. iv. pp. 154-161.

In A.D. 42, Claudius divided the kingdom into two provinces separated from each other by the river Mulucha, the ancient frontier between the territories of Bocchus and Jugurtha; that to the W. was called Mauretania Tingitana, and that to the E. Mauretania Caesariensis. (Dion Cass. ix. 9; Plin. v. 1.) Both were imperial provinces (Tac. Hist. i. 11, ii. 58; Spart. Hadr. 6, “Mauretaniarum praefectura”), and were strengthened by numerous Roman “coloniae.” M. Tingitana contained in the time of Pliny (l.c.) five, three of which, Ziria, Barba, and Banasa, as they were founded by Augustus when Mauretania was independent of Rome, were reckoned as belonging to Bocchus. (Plin. l.c.; Pomp. Mela, iii. 10, § 5.) Tingi and Lixus were colonies of Claudius (Plin. l.c.); to which were added in later times Rubadir and Volubilis (Itin. Ant.).

M. Caesariensis contained eight coloniae: Augustus, Cartenna, Gueduz, Ioconiae, Rubazus, Salde, Soccarius; two by Claudius, Caesariensis, the capital of Juba, who gave it this name on the occasion of his patron Augustus, and Orphinae. Juba also built a town in the name of his wife Malaria, in the territory of Bocchus. In the north of Mauretania, and in the two provinces, the country was divided into Mauretania I. and II., or Mauretania Tingitana I. and II., the provinces of Mauretania I. or Mauretania Tingitana I. or Caesariensis. (Otho had assigned the cities of Mauretania Tingitana I. to the emperor (Tac. Hist. i. 78); but this probably single place, since we find the two

MAURETANIA.

enlarged unchangeable down to the time of Maruari, in Becker’s Handbuch der Gesch. v. v. 230-232; Morelli, Afriomata. p. 25.)

In A.D. 489, the Vandal king Geissar invaded Count Boniface, crossed

Gades, and Mauretania, with the other young princes, in order to conquer the empire. Belisarius, the African was destroyed the kingdom of the Vandals again became a Roman prov. Eastern exarch. One of the ablest of the Patrician, for a time repressed the Moors upon Roman civilization; the successor, the exarch Solomone, the Emperor adopted the religion of the church, and these, the conquerors, and sunk back in the congenital state of Mahometan savages.

Pliny (l.c.) makes out the breadth of Mauretania as 467 M. P.; but this was for Mauretania, where Mount Atlas, the S., and more than 300 M. P. beyond the extent of any part of Caesariensis was 170 M. P., which are too few and 879 M. P., which are so many for (Shaw, Trav. p. 9.)

The following tribes are enumer- lery (iv. 2. §§ 17-22) in I. C. MAURETANIA: — Topocae (Tofo), left bank of the River Ampaga; to the Garamantes (Kabylia), and the N., towards the coast, to the Ampaga; Mugani (Mugoni) or (Hrheius); to the W. of the latter, Thamis and Balsuari (Bauvouour) Macchures (Macouius); Salassus and Malchures (Makouius); NW. Wynn, and to the E. Lalicus (Laculis), and Macchures (Macouius) and N. of Zalacis, on the north of the coast, Macchures (Macouius); below them.
and ecclesiastical division of Palæstina Secunda, and its bishop assisted at the Council of Nicaea. (Reland, Palæstina, pp. 891, 892.)

MAXULA (Μάγουλα, Ptol. iv. 3. § 7), a Roman "colonia" (Maxulla, Plin. v. 3), about the exact distance of which from Carthage there is a considerable discrepancy in the Itineraries (Anton. Itin.; Pute. Tab.). From an expression of Victor Vitensis (de Persicat. Vand. i. 5. § 6), who calls it "Ligula," "a tongue of land," its position was probably on the coast, between Bades and Hammâm-el-Euf, where there are the remains of a Roman road.

The Coast-describer (Stadiasmus) speaks of the harbour and town of Maxyla as 20 stadia from Caphris, or the modern Garbôs: this was probably different from the former, and is the modern Myrta, where there are the remains of a town and harbour. (Shaw, Truc. p. 157; Barth, Wanderungen, p. 128.) As connected with the gentile epithet Maxyes or Mazyes, it is likely that there were several places of this name. Ptolemy (iv. 3. § 34) has MAXULA VETUS (Μάγουλα Παλαύα), and the Antonine Itinerary a station which it describes as MAXULA PRATES, 20 M. P. from Carthage. It is found in the Notitia, and was famous in the annals of Martyrology (Augustin, Serm. c. xxxiii.; Morelli, Africa Christiana, vol. i. p. 290.) [E. B. J.]

MAXYES (Μάξυες, Herod. iv. 191, where the name should be Mâxyes; see MAURETANIA, p. 297, a.), a Libyan tribe, and a branch of the nomad Ausenses. Herodotus (l. c.) places them on the "other side," i.e. the W. bank, of the river Triton: reclaimed from nomad life, they were "tilers of the earth, and accustomed to live in houses." They still, however, retained some relics of their former customs, as "they suffer the hair on the right side of their heads to grow, but shave the left; they paint their bodies with red-lea;" remains of this custom of wearing the hair are still preserved among the Tuareg, their modern descendants. (Hornemann, Truc. p. 103.) They were probably the same people as those mentioned by Justin (xviii. 7), and called MAXYTANI, whose king is said to have been Haibras (Verg. Aen. iv. 36, 196, 326), and have desired Dido for his wife. (Heeren, Afric. Nations, vol. i. p. 34, trans.; Bennell, Geogr. of Herod. vol. ii. p. 303.) [E. B. J.]

MAZACA. [CAESAREA, Vol. I. p. 469, b.]

MAZAEI (Μαξάι), a Pannonian tribe, occupying the southernmost part of Pannonia, on the frontiers of Dalmatia, whence Dion Cassius (iv. 32) calls them a Dalmatian people. They were conquered and severely treated by the Germanic. (Strab. vii. p. 314; Plin. iii. 26; Ptol. ii. 16. § 8.)

MAZARA (Μάζαρα), Dioec.; Maxar, Steph. B.1 (Mâzâra), a town on the S.W. coast of Sicily, situated at the mouth of a river of the same name, between Scilinus and Lilibœcum. It was, in early times an incomparable place, and is first noticed by Diodorus in B.C. 409, as an emporium at the mouth of the river Mazara. (Diod. xii. 54.) It was evidently at this time a dependency of Scilinus, and was taken by the Carthaginian general Hamilcar, during his advance upon that city. (Diod. l. c.) Stephanus of Byzantium calls it "a fort of the Selinuntines" (φρούριον Σέλινουντιον, Steph. B. a. e.), and it is mentioned again in the First Punic War as a fortress which was wrested by the Romans from the Carthaginians. (Diod. xxi. 9. p. 503.)
MAZICES.

It does not seem to have ever risen in ancient times to the rank of a city. Pliny mentions the river Mazaca, as does Procopius also, but neither of them notice the town. (Plin. iii. 8. s. 14; Prot. iii. 4. § 5.) The existence of this last is, however, attested by the inscriptions, which correctly places it in the territory of the Liparaeans. (Ibid. Ann. a. d. 49.); but it was first raised to an important position by the Saracens in the 9th century, under whom it became the capital of the whole surrounding district, as is evidenced by the coinage which bears their name. The western province of Sicily still bears the name of Fal da Mazara, but the town itself has greatly declined, though it still retains the rank of a city, and has about 10,000 inhabitants. (Fazul. de Aec. Sic. vi. 5. p. 254; Smyth's Sicily, p. 224.) A few sarcophagi and inscriptions are the only remains of antiquity extant there.

The river Mazaca, or Mazara, as it is called by Dioscorides (Maiussem, Prot. xii. 54) is still called the Fiume da Mazara. [E. H. B.]

MAZICES. (Maiusse. Prot. iv. 2. § 1.) Mazaca, Lucana, iv. 621; Claudian, Sid. i. 356, a people of Mauretania Caesariensis, who joined in the revolt of Firmus, but submitted to Theodosius. A.D. 373. (Anm. Marc. x. iii. 5. § 17; Le Beau. Bas Empire, vol. iii. p. 471; comp. Gibbon, c. xxv.) [E. B. J.]

MEABUS. (Maiusse. Prot. ii. 6. § 4.) Melia, iii. 1. § 1. This is a small river on the N. coast of Hispania Tarraconensis, flowing into the gulf of the Ardi, and called the Merus.

MECRIS, a town of Marmarica, which the Punic Table places at 33 M. P. to the E. of Palmarium; the Antonine Itinerary has a town MECHEBA (one MS. reads Meca), 20 M. P. to the E. of the same place; its position must be sought in the Wady-el-Ramsa (Barth, Wanderungen, pp. 509, 549). [E. B. J.]

MECYBERNA. (Maiusse. Eih. Maiusse. Proclus. Steph. B.; Scyl. p. 26; Sceum. 640), a town which stood at the head of the Torosian gulf, which was also called Sannia MECKBERNA. (Plin. iv. 10; Pomp. Melia. ii. 3. § 1.) Mecybenus was the port of Olythus (Strac. viii. p. 330), and had no less than 15,000 houses under Sernylla. (Herod. vii. 128.) It was taken from the Athenians by the Chalcidic Thracians (Thuc. v. 39), and surrendered to Philip before the siege of Olythus. (Diod. xvi. 54.) The site must be sought at Molonispyge, where some remains of antiquity are said to be preserved. (Leake, North. Greece, vol. iii. p. 155.) [E. B. J.]

MEDIAYA. (Maiusse), a town of Arabia Petraea, placed by Procopies in l. 68° 30' lat. 39° 45'., doubtless identical with Medeba or Medebia (MAZICA), 13° 40' W. of the parallel of N. latitude, 6° 16' 110° 29' E. 20° 45', and consequently, used interchangeably, especially in proper names. (Prot. vi. 7. § 6.) [G. W.]

MEDIA (Ad Medea, Jom. Anton.; Pott. Tab.; Huyg. de Gresl. p. 163; Apollod. iii. 3. § 30; Myth. Melaenaeus, a town of Numidia, which had originally belonged to the kingdom of Syrphax, but was annexed to that of Massinissa at the close of the Second Punic War, and afterwards was colonised by a detachment of Roman veterans, when it attained considerable splendour. Appuleius was born at this place, when his father had been "dum vivor," and calls himself "Semimagmida" and "Semigastilma." (Apol. p. 443, 444,) It lay on the road from Laces to Therasteia, 48 M. P. from the former and 25 M. P. from the latter. At a river AERDITIUS, which flowed between this place and Thercaste, the Moorish chieftain Gildo. (Oros. iv. 3. 4. Le Beau, Bas Empire, vol. v. p. 166, e. xiii.) Justinius fortified and held in this town, which Procopius (de Aegypt). It is perhaps a difficult to determine to which country was connected with the name of Conjunct. (ii. 3.)

MEDEON (Maiusse, Eih. Medea. Miezos: Katina), a town of the interior of Acarnania, on the road from Phytia (or Phoetidae) to Limmavesion gulf. It was one of the most important of the country which yielded independence against the Aetolians and Alexander the Great. At length, the Aetolians laid siege to Medeon with a large force, and had reduced it to great distress, attacked by a body of Illyrian men who had been sent by sea by Demetrius, king of Macedon, to relieve the place. The town was besieged and reduced, its camp, arms, and baggage Medeon was mentioned in B.C. 191, as one of the Aetolian of which Antiochus, king of Syria, was in possession in that year. (Thuc. iii. 106; Liv. xxxv. 11; 12; Leake, North. Greece, iii. p. 575.)

M. E. 2.

A town of Phocis, destroyed by the Phocians at the termination of the War, and never again restored. (Strabo)

Strabo places it in the Crissaean territory of the stadia from Boeotia (423); and Pausanias says that it is called Berytos (v. 36. § 6; comp. Steph. places it at Berytus (Nouther.

M. E. 3.

An ancient town of Boeotian Homer (Il. ii. 501), is described by the Ptolemaic ity of Haliartus, and situated at the foot of Mt. Phoecimmon, from where it was afterwards called Phocis (comp. Steph. B. s. c.; Plin. iv. 7.) years ago, and stood near the lake, in the north-western corner of Haliartus and Kardhiltonas. (I. North. Greece, vol. ii. p. 215.)

M. E. 4.

A town of the Labuates, in D. ({dixv. 23, 32.)

MEDERCIACUM, in Gallia Belgica, in the Antique Timo, on a road from (Kalka) through Julius (Julia) Agrrippina (Cologne). It lies between Turduardus, and is supposed to be Merovinum. (I. North. Greece, vol. ii. p. 215.)

MEDIA (Maiusse, Eih. Miezos, a country of considerable extent, in the western part of Asia, the Neapolitans on the N., and the great country of the Pannonians on the W., it is by no means determined what were its precise boundaries, for much was comprehended under the name of Thessalitis, Thus Herodotus, who speaks repeatedly.
by the name of Parthisia. Some have attempted to prove that it derived its name from its lying in the middle part of Asia (Gezerius, Thea., ii. p. 768; cf. also Polyb. v. 44, who states, 'H Media keivai upr wpl wnevo \u0395' Aiv' Aiv'k'). The derivation, however, admits of doubt. On the Cuneiform Inscriptions the name is read Mida (Rawlinson, Behistun Ins. As. Journ., vol. i.). Much of this land was of a high elevation above the sea, but it abounded in fertile valleys, famous for their richness, and in meadow land in which a celebrated breed of horses, called the Nisaean horses, were raised. (Herod. vii. 40, iii. 106; Diod. xvii. 100; Strab. xi. p. 525; Aelian, Hist. Anim. iii. 2; Ammian. xxiii. 6; cf. also the modern travellers, Ker Porter, vol. i. p. 216, Chardin, and Morier.) It is comprehended for the most part in the modern province of Irak Ajan.

The principal town of Media Magna was Ecbatana (doubtless the present Hamadan), which, during the time of the wars of Alexander, as for many years before, was the capital of the whole country. [Ecbatana.] Besides Ecbatana, were other towns of importance, most of them situated in the N.E. part of the country, on the edge of, if not within, Atropaten, as Rhagae and Hiranlea.

It is equally difficult to determine with accuracy what states or tribes belong to Media Magna. It is probable, however, that the following may be best comprehended in this division:—The Sarpis, who occupied the passes of Mt. Zagros; Choromithene, in the champaign country to the south of Ecbatana; Elamis, to the north of Choromithene—if indeed this name has not been erroneously introduced here by Ptolemey and Polybius [Elmains]; the Tapiry or Tapyrbi, S. of Mt. Coronavirus as far as Parthisia and the Caspian Gates; Rhagae, with its capital Rhagae; Sigriana, Daritis, and along the southern end of the Paracostas, what was called Siromedia. (See these places under their respective names.)

The Medi, or inhabitants of Media, are the same people as the Madai of the Bible, from which Semitic word the Greek name is most likely derived. Madal is mentioned in Genesis, as one of the sons of Japhet (x. 2). In the first repose of the earth after the Flood; and the same name occurs in more than one, subsequently, indicating, as it would seem, an independent people, subject to the king of Nineve (2 Kings, xvii. 6), or in connection with, if not subject to, the Persians, as in Dom. v. 28, vi. 15; Esth. i. 3, 14. The first Greek author who gives any description of them is Herodotus. According to him, they were originally called Ariti, but changed their name to that of Medi on the coming of Media from Athens (vii. 62). They were divided into six tribes, the Busae (Steph. Byz.), Parastaci (Strab. xi. p. 529, xvi. p. 739, &c.; Arrian, iii. 19), Strachates, Arizanti, Budii (Steph. Byz.), and the Magi. Von Hammer has attempted to show that, if not all, of these names occur under their Persian form in the Zend-avesta and Shah-namah (Wiener. Jahrh. ix. pp. 11, 12), but it may be questioned whether the identification can be considered as satisfactory. Some, however, of these names indicate the Eastern origin of the inhabitants of Media, as Ariti and Arizanti [Ariana; Arizanti]; though it may be doubted whether others of them, as the Magi, ought to be considered as separate tribes. The general evidence
It does not seem to have ever risen in ancient times to the rank of a city. Pliny mentions the river Maza, as does Ptolemy also, but neither of them notice the town. (Plin. iii. 8. s. 14; Ptol. iii. 4. § 5.) The existence of this last is, however, attested by the Itinerary, which correctly places it 12 miles from Liliaeum (Itin. Ant. p. 69); but it was first raised to an important position by the Sarmatians in the 9th century, under whom it became the capital of the whole surrounding district, as it continued under the Norman rule. The western province of Sicily still bears the name of Val di Mazara, but the town itself has greatly declined, though it still retains the rank of a city, and has about 10,000 inhabitants. (Fasel. de Rob. Soc. vi. 5. p. 284; Smyth's Sicily, p. 224.) A few sarcophagi and inscriptions are the only remains of antiquity extant there.

The river MAZARA, or MAZARUS, as it is called by Dio Chrys. (De Philosoph. Diad. xiii. 54), is still called the Flume di Mazara. [E. H. B.]

MAZICES (Μαζίκες, Ptol. iv. 2. § 19; Mazzax, Lucan. iv. 681; Claudian, S. R. i. 356), a people of Mauretania Caesariensis, who joined in the revolt of Firmus, but submitted to Theodosius, A.D. 373. (Amm. Marcellinus, xvi. 5. § 17; Le Bean, Bas Empire, vol. iii. p. 471; comp. Gibbon, c. xxi.) [E. E. J.]

MEBARUS (Μεμβροες, Ptol. ii. 6. § 4; Mela, iii. 1. § 17), a small river on the N. coast of Hispania Tarraconensis, flowing into the gulf of the Artarbi, still called the Merco.

MECORIS, a town of Marmaria, which the Pentinger Table places at 33 M. P. to the E. of Palerius; the Antonine Itinerary has a town of Mecoris (one MS. reads Mecires), 20 M. P. to the E. of the same place; its position must be sought in the Wady-er-Rina (Burth, Wanderungen, pp. 509, 549). [E. B. J.]

MECYBERNA (Μεκυβερνα: E. H. Μεκυβερνα, Steph. B.; Scyl. p. 26; Sacy, 540), a town which stood at the head of the Torano gulf, which was also called Sinus MECTHERNABUS. (Plin. iv. 10; Pomp. Mela, ii. 3. § 1.) Mecyberna was the port of Olymbus (Strack, iv. 330), and lay near the town that is now Semyrie. (Herod. vii. 123.) It was taken from the Athenians by the Chalcidean Thracians (Thuc. v. 39), and surrendered to Philip before the siege of Olymbus. (Diod. xvi. 54.)

The site must be sought at Molivospergo, where some remains of antiquity are said to be preserved. (Leake, North Greece, vol. iii. p. 155.) [E. E. J.]

MEDAVY (Μεδάβαιος), a town of Arabia Petraea, placed by Ptolemy in long. 68° 30', lat. 30° 45', doubtless identical with Medeba or Medea [Maceda], the letters aw and æ being identical in sound, and, consequently, used interchangeably, especially in proper names. (Ptol. iv. 17. § 6.) [G. W.]

MÉDÉA (Ad Medeia, Hirt. Anton. Post. Tab.; Bygin. de Lim. p. 163; Apuleius de M. L. Medea, Ptol. iv. 3. § 30; E. H. Macedon, a town of Numidia, which had originally belonged to the kingdom of Syphax, but was annexed to that of Massinissa at the close of the Second Punic War, and afterwards was colonised by a detachment of Roman veterans, when it attained considerable splendour. Appuleius was born at this place, where his father had been "dumnivir," as the text himself says. (Apuleius, pp. 443, 444.) It lay on the road from Laros to Theveste, 48 M. P. from the former and 25 M. P. from the latter. As a river Aredatio, which flowed between this place and Theveste, the Moorish chief Gaido. (Oros. Le Beau, Bas Empire, vol. v. p. 116. c. xix.) Justinian fortified and named it in this town, which Procopius calls Abydrapy. It is perhaps a disposition of the town of Madauros, to which Romulus was exiled (Constit. i. 3).

MÉDEBA. [MADIBA.]

MÉDON (Μεδών, Procop. B. I. x. 2), the spurs of Mount Popus, in the interior of the country which is known as the Phythia (or Phthiotis) to Limnbiac gives. It was one of the principal cities of the interior of the country which was known as the Phthia; it was a principal city in the district of Thessaly, and was attacked by a body of Illyrian marines, who had been sent by sea by Demetrius, in 297 B.C. (Polyb. iv. 18). The city was defeated, and obliged to retreat with camp, arms, and baggage. Mentioned in n. c. 191, as one of the places in which Antiochus, king of Syria, was defeated in that year. (Thuc. iii. 5; Liv. xxxvii. 11, 12; Leake, North Greece, iii. p. 575.)

2. A town of Phocis, destroy the Phocians at the termi of Pleur, and never again restored. Strabo places it on the Crissaean, 160 stadia from Boeotia (432); and Pausanias says that it was near the city of Phocis, and was called Phocis (Nord. p. 548.).

3. An ancient town of Boeotia. Homer (II. v. 501), is described under the name of Haliartus, and situated at the foot of Mt. Phocianum, from which it was afterwards called Phocianum comp. Steph. B. s. v.; Ptol. iv. is said to have stood near the lake of Bithynia. (Nord. p. 546.)

4. A town of the Labeates, in Phocis (Livy. xxv. 32, 33.)

MEDERIACUM, in Gallia Belgica, in the Antonine Itinerary, on a road from (Kellis) to the junction of the rivers Moselle and the Moselle (Cologne). It lies between the Meurthe and the Moselle, and is supposed to be Meravi-Rurumamemotum (Medien de M. J.). A country of considerable antiquity, in the western part of Asia Minor, and the province of Syria, on the W. of the Taurus, and the S. of the Euphrates. (Diod. ii. 55.) It is a region where much was comprehended under the name of Media. Thus Herodotus, who speaks of the
by the name of Parthia. Some have attempted to prove that it derived its name from its lying in the middle part of Asia (Gesenius, Thes. ii. p. 768; cf. also Polyaev, v. 44, who states, Ἡ Μαδαὶ κατὰ τὴν μέσην τῆς Ἀσίας). The derivation, however, admits of doubt. On the Cuneiform Inscriptions the name is read Mada (Rawlinson, Babistum Ins. As. Journ. vol. x.). Much of this land was of a high elevation above the sea, but it abounded in fertile valleys, famous for their richness, and in meadow land in which a celebrated breed of horses, called the Nisaenae horses, were raised. (Herod. vii. 40, iii. 106; Diod. xvi. 100; Strab. x. p. 525; Aelian, Hist. Anim. iii. 2; Ammianus, xxiii. 6; cf. also the modern travellers, Ker Porter, vol. i. p. 216, Claudian, and Morier.) It is comprehended for the most part in the modern province of Frisik Atjena.

The principal town of Media Magna was Ecbatana (doubtless the present Hamadan), which, during the time of the wars of Alexander, as far as many years before, was the capital of the whole country. [ECBATA]. Besides Ecbatana, were other towns of importance, most of them situated in the N.E. part of the country, on the edge of the desert, if not within it, Atropatene, as Bhagare and Heracleia.

It is equally difficult to determine with accuracy what states or tribes belong to Media Magna. It is probable, however, that the following may be best comprehended in this division;—The Sagartii, who occupied the passos of Mt. Zagros; Choromithrene, in the plain country to the south of Ecbatana; Elymais, to the north of Choromithrene—if indeed this name has not been erroneously introduced here by Ptolemy and Polybius [ELYMAIS]; the Tapyri or Tapyrrhi, S. of Mt. Coronus as far as Parthia and the Caspian Gates; Rhagiana, with its capital Rhagae; Sigriane, Dariitis, and, along the southern end of the Parnocharatas, what was called Syromedia. (See these places under their respective names.)

The Medi, or inhabitants of Media, are the same people as the Madai of the Bible, from which the Semitic word the Greek name is most likely derived. Madai is mentioned in Genesis, as one of the sons of Japhet (x. 2), in the first repopling of the earth after the Flood; and the same name occurs in more than one place, subsequently, indicating, as it would seem, an independent people, subject to the king of Nineveh ([2 Kings] vii. 6), or in connection with, if not subject to, the Persians, as in Dan. v. 28, vi. 15; Esth. i. 3, 14. The first Greek author who gives any description of them is Herodotus. According to him, they were originally called Arim, but changed their name to that of Medi on the coming of Media from Athens (yii. 62). They were divided into six tribes, the Busae (Steph. Byz.), Paraetaceni (Strab. x. p. 522, xvi. p. 739, &c.; Arrian, iii. 19), Strachates, Arizanti, Budi (Steph. Byz.), and the Magi. Von Hammer has attempted to show that most, if not all, of these names occur under their Persian form in the Zend-avesta and Shah-nameh (Wiener Jahrh. ix. pp. 11, 12), but it may be questioned whether the identification can be considered as satisfactory. Some, however, of these names indicate the Eastern origin of the inhabitants of Media, as Arim and Arizanti [ARIMI; ARIZANTI]; though it may be doubted whether others of them, as the Magi, ought to be considered as separate tribes. The general evidence
MEDIA.

is, that the Magi were a priest-class among the Medes: the adult or dominant tribe. (Cf. Strab. xvi. p. 926; Cic. Divin. i. 41; Porphyry, Abstinent. 4. 16, &c.) In other authors we find the following: a free people, who lived in separate villages, but that at length they chose for themselves a king in the person of Delioces, who built the celebrated city of Ecbatana [Ecbatana]. (Cf. Strab. xvi. p. 926; Cic. Divin. i. 41; Porphyry, Abstinent. 4. 16, &c.) In other authors we find the following: a free people, who lived in separate villages, but that at length they chose for themselves a king in the person of Delioces, who built the celebrated city of Ecbatana [Ecbatana], and was succeeded by Phraoctes and Gyazares (i. 95—103). The reign of the former was, he says, terminated by a defeat which he sustained at Rhages, (i. 15); while, during the commence ment of that of the latter, all Western Asia was overrun by a horde of Scythians (i. 103). There can be no doubt that for awhile they were subject to, and formed a satrapy of, the Assyrian Empire, as stated by Diodorus (ii. 9); that then they threw off the Assyrian yoke, as stated by Herodotus (i. 106), and were ruled over by a series of kings of their own for a long period. (Cf. Strab. xvi. p. 524.) The order and the names of these rulers are differently stated; and it would be out of place here to discuss at length one of the most difficult and disputed points of ancient chronology. (Cf., however, Diod. ii. 34, i. 96; Herod. i. 95; and Ruseh. Chron. Armen. i. 101; Clinton, Fast. Holm. vol. i. p. 257, app.) It may be remarked, that in the Bible the first notice we find of the Medes, places them as the subjects of the Assyrian king Salmaneser (2 Kings, xvii. 6), who was contemporary with the Jewish king Hoshea; while in the later times of Nebuchadnezzar, they appear as a warlike nation, governed by their own rulers. (Isaiah, xiii. 17; Jerem. xxxv. 25, lii. 11, 28.) It is equally clear that the Medes were united to the Persians by Cyrus, and formed one empire with them. (Herod. i. 129; Diod. ii. 34; Justin, i. 6), and hence are spoken of in the later books of the Bible as a people subject to the same ruler as the Persians. (Dent. vi. 28; v. 30; Esth. i. 5, &c.) From this time forward their fate was the same as that of the Persian monarchy; and they became in succession subject to the Greeks, under Alexander the Great, to the Syro-Macedonian rulers after his death, and lastly to the Parthian kings. (Cf. 1 Macc. vi. 56, xiv. 2; Strab. xvi. p. 745; Joseph., Antiq. xx. 3. § 3.)

The consent of history shows that in early times the Medes were held to be a very warlike race, who had a peculiar skill in the use of the bow. (Isaiah, xiii. 18; Herod. vii. 62; Xen. Anab. ii. 1. § 7; Strab. ii. p. 525.) They had also great knowledge and practice in horsemanship, and were considered in this, as in many other acquirements, to have been the master of the Persians. (Strab. xv. pp. 500, 505, 581.) Hence, in the armament of Xerxes, the Medes are described as equipped similarly with the Persians, and Herodotus expressly states that their dress and weapons were of Median, not Persian origin (L. c.). In later ages they appear to have degenerated very much, and to have adopted a luxurious fashion of life and dress (Cf. Xen. Cyrop. i. 3. § 2; Strab. l. c.; Ammianus, xiiii. 6), which passed from them to their Persian conquerors.

The religion of the Medes was a strict worship; their priests bearing, a marked, the name of Magi, which, together with them with them, the Persians, indeed was adopted by the latter from the former. (Cf. Strab. xv. pp. 727, 735; Cic. De Divin. ii. 33.) The principal object of their adoration was the Sun; then the Moon and the five planets. (Cf. Strab. xvi. p. 926.)

MEDIAE MURUS, mentioned by Xenophon, who calls it τὸ Μεδιὰν Ῥέχνος. (Anab. ii. 4. § 12.) He gives 20 parasangs in length, 100 ft. broad; and it may be inferred from this that it was from 30 to 40 miles in length. (Cf. Baghda). There can be little doubt of the same work as that called by Stobaeus (Cf. l. p. 597), and that it had been built of land where the Tigris and Euphrates met, most nearly, as a defence to the plains, which lay to the S. of it. For much question, whether this great work was the same as any of the numerous others remaining in this part of Mesopotamia. The question has, we think, been set a careful study of Lycius, Lynch, in Geog. Journ. vol. ix. pp. 472, 477, places the end adjoining the Tigris 30', and long. 21' 50' W. of the egress of the city, describes the existing ruins as a wall of lime and pebbles, having towers, built on the northern or NW. face, and a fosse; and states, that, putting his speed, he galloped along it for many miles without finding any appearance of the natives, too, assure him that the Euphrates.

MEDIAM, AD. [DACIA, Vol. III.]

MEDIANA, an imperial villa, Naisius, in Upper Moesia. (Amph. A town of this name is mentioned, Table, on the road leading through the Danube, opposite to Donawitz.) The name should be the same as the modern Mediolanum. (Cf. MEDIOLANUM, a Gallic name occurring in Gaul, North Italy, and Belgium.)

1. Mediolanum, the chief city of the Forum Sectastaurus (Ferrara) and (Salanitana). As to D'Anville's remarks of Mediolanum, see Forum Sertorii. Mediolanum is supposed to have been Tarsus Insularum, and so it is shown in our maps; but the existence of the Insularum is hardly established. [POL] PINTA., Vol. I. p. 936.

2. The Table places Mediolanum in the west of Agrenomus (Argentum) and Aquirum. The figures which have been generally belong to this road, belong to another; they have no distances in the Table for the distance seems to be Chiusium Mutium, from Avaricum (Bourges). A milestone makes the distance from Avaricum to be 39 M. P., which is not far from (Walckenaer, Géog. civ. vol. i. p. 67.)

3. The Antonine road from Colonia Trajana (Kostrzyn), Agrippina (Cologne), and 13 M. 1. 30 or Trajana. If Colonia Trajana is right
MEDIOLANUM.

The chief place of the Insurbae, and is mentioned as such several times in the history of the wars of those people with the Romans. Thus, in the campaign of a.c. 222, after the battle of Clastidium, it was attacked and taken by the Roman consul Claudius Marcellus and Cn. Scipio. (Pol. ii. 34; Entrop. iii. 6; Oros. iv. 13.) On this occasion it was taken by assault with apparently but little difficulty, and this confirms the statement of Strabo that it was an open town. Again, in a.c. 194, a battle was fought by it, between the Roman proconsul L. Valerius Flaccus and the combined forces of the Insurbae and Boians, under a chief named Dorylæus, in which the Gauls are said to have lost 10,000 men. (Liv. xxxiv. 46.)

No other mention of Mediolanum occurs previous to the Roman conquest, nor have we any precise account of the time at which it passed under the Roman yoke, or that at which it was admitted to the Roman "civitas." We can only infer that it must have submitted, together with the rest of the Insurbæ, about 190 B.C.; its citizens doubtless received the Latin franchise, together with the other Transpadane Gauls, in B.c. 89; and the full Roman franchise in B.c. 49. [Gallia Cisalpina, Vol. i. p. 95.] Mediolanum thus passed into the condition of a Roman municipium, but it did not as yet enjoy that degree of importance which it subsequently attained. Strabo calls it in his time a considerable city (v. 215 & 225), and Tacitus reckons it among the "firmissima Transpadanae regionis municipia;" but neither he nor Pliny give any indication of its possessing any marked superiority over the other municipal towns with which it associates its name. (Plin. iii. 17. s. 21; Ptol. iii. 1. § 33; Tac. Hist. i. 70.) It is evident, however, that under the Roman Empire it increased rapidly in prosperity, and became not only the chief town of the Insurbæ, but the most important city in Northern Italy. We learn from the younger Pliny that it was a place where literature flourished, and young men from the neighbouring towns were sent for their education. (Plin. Ep. iv. 13.) It was the native place of the emperor Didius Julianus, as well as of Septimius Geta. (Dion Cass. lxxiii. 11; Spartian. Dei Jul. i. Get. 3.) At a later period, A.D. 268, it was there that the usurper Aureolus took refuge after his defeat by Gallienus on the Adda, and was for a time detained by the emperor, till a sedition in his own camp ended in the death of Gallienus, and his brother Valerianus. (Entrop. ix. 11; Treb. Poll. Gall. 14; Vict. Caes. 33, Epit. 33.) Shortly after Aureolus was compelled to surrender the city to Claudius, who had been elected to succeed Gallienus, and was put to death by order of the new emperor. (Treb. Poll. Claud. 5.)

But it was the establishment of the imperial residence at Mediolanum that raised that city to the highest pitch of prosperity. Its central position, which rendered it a peculiarly suitable head-quarters from which to watch the movements of the barbarians, and the progress of the wars with them, whether in Gaul, Germany, or elsewhere, undoubtedly caused the cause of its selection for this purpose. Augustus himself is said to have sometimes repaired to Mediolanum with the same view (Suet. Aug. 20); and the constantly increasing dangers from these quarters led subsequent emperors from time to time to follow his example; but Maximian appears to have been the first of the Roman emperors who permanently fixed his residence there (about A.D. 305).
and thus at once raised it to the dignity of the capital of Northern Italy. From this period the emperors of the West made it their habitual abode (Eutrop. ix. 27; Zosim. ii. 10, 17, &c.), until the increasing fear of the barbarians induced Honorius, in A.D. 404, to take refuge in the inaccessible marshes of Ravenna. Maximian is said to have adorned the city with many splendid public buildings (Vit. Cass. 39); and it was doubtless at this period that it rose to the splendour and magnificence which, about the middle of the fourth century, excited the admiration of the poet Ausonius, who assigns it the sixth place among the cities of the empire. The houses are described by him as numerous and elegantly built, corresponding to the cultivated manners and cheerful character of the inhabitants. It was surrounded with a double range of walls, enclosing an ample space for the buildings of the city. Among these were conspicuous a circus, a theatre, many temples, the palace or residence of the emperor, a mint; and baths, which bore the name of Hercules, in honour of the founder Maximianus, and were so important as to give name to a whole quarter of the city. The numerous porticoes which were attached to these and other public buildings were adorned with marble statues; and the whole aspect of the city, if we may believe the poet, did not suffer by comparison with Rome.

(Auson. Citr. Urb. 5.)

The transferance of the imperial court and residence to Ravenna must have given a considerable shock to the prosperity of Mediolanum, though it continued to be still regarded as the capital of Liguria (as Gallia Transpadana was now called), and was the residence of the Consularia or Vicarius Italicae, to whose jurisdiction the whole of Northern Italy was subject. (Labell. Prov. L. 62; Böcking, ed Not. Dijn. ii. p. 442.) But a much more severe blow was inflicted on the city in A.D. 422, when it was taken and plundered by Attilla, who, after the fall of Aquileia carried his arms, almost without opposition, through the whole region N. of the Po. (Jornand. Got. 42; Hist. Miscell. xv. p. 549.) Notwithstanding this disaster, Mediolanum seems to have recovered its former importance. It was still regarded as the metropolis of Northern Italy, and after the fall of the Western Empire, in A.D. 476, became the royal residence of the Gothic kings Odoacer and Theoderic. Procopius indeed speaks of it in the sixth century as surpassing all the other cities of the West in size and population, and inferior to Rome alone. (Procop. B. G. ii. 8.) It was recovered with little difficulty by Belisarius, but immediately besieged by the Goths under Uraia, the brother of Vitiges, who, after a long siege, made himself again master of the city (A.D. 539), which he is said to have utterly destroyed, putting all the male inhabitants, to the number of 300,000, to the sword, and reducing the women to slavery. (Ib. &c. 21.) It was again restored, however, in a few years.

Procopius on this occasion must be greatly exaggerated, for, at the time of the invasion of the Lombards under Alboin (A.D. 568), Mediolanum already, reappears in little less than its former importance. It was still the acknowledged capital of Liguria (P. Diac. Hist. Lang. i. 15, 24); and, as the metropolis sea, appears to have retained this dignity under the Lombard kings, though those monarchs transferred their royal residence to Ticinum or Pavia. In the middle ages it rapidly rose again to prosperity; and, though a second time destroyed by the emperor Frederic Barbarossa in 1162, quickly recovered, and has continued down to the present day to be one of the most important and flourishing cities of Italy.

The position of Milan, almost in the centre of the great plain of Northern Italy, just about midway between the Alps and the Po, appears to have marked it in all ages as the natural capital of that extensive and fertile region. Its ready communications with the Ticinus on the one side, and the Adda on the other, in great measure supply the want which would otherwise have arisen from its not being situated on a navigable river; and the fertile plain between these two rivers is watered by the minor but still considerable streams of the Lambro and Olona. The latter, which is not noticed by any ancient writer, flows under the walls of Milan. The modern city contains few vestiges of its ancient splendour. Of all the public buildings which excited the admiration of Ausonius (see above), the only remains are the columns of a portico, 16 in number, in a Christian order, now attached to the church of S. Lorenzo, and supposed, with some probability, to have been originally connected with the Thermæ or baths erected by the emperor Maximian. A single antique column, now standing in front of the ancient basilica of Sant' Ambrogio, has been removed from some other site, and does not indicate the existence of an ancient building on the spot. Numerous inscriptions have, however, been discovered, and are still preserved in the museum at Milan. These fully confirm the municipal importance of Mediolanum under the early Roman Empire; while from one of these we learn the fact that the city, notwithstanding its flourishing condition, received a colony under Hadrian, and assumed, in honour of the emperor, the titles of Colonia Anilia Augusta. (Orig. Inscr. 1708, 1809, 3942, 4000, 4060, &c.; Zumpt, de Colom. p. 409.)

Mediolanum was the central point from which all the highroads of Italy N. of the Padus may be considered as radiating. The first and principal of these was that which led by Lava Pompeia to Piacentia, where it joined the Via Aemilia, and thus continued towards Rome. The second was that of Novaria and Vercellae to Epeoridia and Angusta Praetoria, which must have been the principal line of communication between Milan and Transalpine Gaul. A third road led in a southerly direction to Ticinum (Pavia), from which there were two lines; the one proceeding by Lausium to Angusta Taurinorum, and thence over the Cottian Alps into the southern provinces of Gaul; the other crossing the Padus to Dertona, and thence across the Apennines to Genoa. A fourth line was that to Comum, from whence there was a much frequented pass by the Lacus Larius, and across the Aesetan Alps into the valley of the Issus, thus opening a direct and speedy communication with the Danube. Lastly, a great line of highway led from Milan to Aquileia, passing through Bergomum, Brizia, Verona, Vicentia, Patavium, Atinum, and Concordia. The details of all these routes are given in the Antonine Itinerary and the Tabula Peutingeriana.

[8. H. B.]

**Mediolanum** (Itin. Ant.; Mediolanum, Ptol. ii. B. § 101), a town between the provinces of Britain. It occurs in the Itin. Ant., between-Dova (Ches- ter), and Uriconia (Worcester), two towns, the sites of which are well authenticated; and in the
MEDIOLANUM.  305

MEDMA or MESMA (Μέμα, Steph. B.; Μέμα, Strab., Synchr. Ch.; but Μέσμα on coins, and so Apolodorus, cited by Steph. B.; Scylax has ΜέΣία, evidently a corruption for Μέσμα; Euk. Μέμα, Minucius, Apollodorus, Μέσμα πεταλους, Μέμα πεταλους, and Μέσμα τοιος on the W. coast of the Bruttian peninsula, between Liponion and the mouth of the Metaurus. (Strab. vi. p. 234; Scyl. p. 4. § 12.) It was a colony founded by the Ephesyrhian Locrians, and is said to have derived its name from an adjoining fountain. (Strab. l. c.; Synchr. Ch. 306; Steph. B. s. a.) But though it is repeatedly noticed among the Greek cities in this part of Italy, it does not appear ever to have attained to any great power or importance, and its name never figures in history. It is probably, however, that the Medmiaeenses (Μεδμιανόι), who are noticed by Dionysius as contributing a body of colonists to the reenforcement of Messana by Dionsyius in a. c. 396, are no other than the Medmiaeenses, and that we should render Μεδμιανοί in the passage in question. (Diod. xiv. 78.) Though never a very considerable place, Medma seems to have survived the fall of many other more important cities of Magna Gracia, and it is noticed as a still existing town both by Strabo and Pliny. (Strab. l. c.; Plin. iii. 5. s. 10.) But the name is not found in Ptolemy, and all subsequent traces of it disappears. It appears from Strabo that the town itself was situated a little inland, and that it had a port or emporion on the sea-shore. The exact site has not been determined, but as the name of Mesina is still borne by a river which flows into the sea a little below Nicotera, there can be no doubt that Medma was situated somewhere in the neighbourhood of that town, and probably its port was at the mouth of the river which still bears its name. Nicotera, the name of which is already found in the Antonine Itinerary (pp. 106, 111), probably arose after the decline of Messina.  [E. H. B.]

COIN OF MEDMA.

MEDMASA (Μέδμασα or Μεδμασα), a town of Caria, situated somewhere in the peninsula between the Ceremusan and Iasian gulfs, not far from Myndus. (Plin. v. 29; Steph. B. s. a.; Hecat. Fragm. 230.) It is probably the same town as the one which Stephanus elsewhere calls Δέμμα: its site is unknown.  [L. S.]

MEDOACUS or MEUACUS (Μεδοακός: Bresta), a river of Northern Italy, in the province of Venetia, falling into the extensive lagoons which border the coast of the Adriatic, in the neighborhood of the modern Venice. According to Pliny (iii. 16. 20), there were two rivers of the name, but no other author mentions more than one, and Livy, a native of the region, mentions the "Meduacon amnis" without any distinctive epithet. (Livy. xii. 2.) There can be no doubt that this is the river now called the Brenta, which is a very considerable stream, rising in the mountains of the Val Soligna, and flowing near Padua (Patavium). A short distance from that city it receives the waters of the Bacchiglione, which may probably be the other branch of the Medoacus meant by Pliny. Strabo speaks of a part of the same name at its mouth (Medoacis Λακας, v. p. 213), which served as the port of Patavium. This must evidently be the same to which Pliny gives the name of Portus Edro, and which was formed by the "Medocii duo ad Foas Clodia:" it is in all probability the one now called Porto di Lido, close to Venice. The changes which have taken place in the configuration of the lagoons and the channels of the rivers, which are now wholly artificial, render the identification of the ports along this coast very obscure, but Strabo's statement that the Medoacus was navigated for a distance of 250 stadia, from the port at its mouth to Patavium, seems conclusive in favour of the Porto di Lido, rather than the more distant one of Chioggia. At the present day the Brenta flows, as it were, round the lagoons, and enters the sea at Brindisi, evidently the Portus Brundinus of Pliny (l. c.); while a canal called the Canale di Brenta, quitting the river of that name at Dolia, holds a more direct course to the lagoons at Fusina. This canal may perhaps be the Foas Clodia of Pliny.

Livy tells us that, in b.c. 301, Cleonymus the Lacedaemonian arrived at the mouth of the Medoacus, and having ascended the river with some of his lighter vessels, began to ravage the territory of the Patavini, but that people repulsed his at-
MEDOBRIA.\[\text{E. H. B.}\]

Aetn. 48), the inhabitants of which are called by Pline (iv. 22. a. 35) Medulbrices, Plumbaria, which is placed in the Antonine Itinerary (p. 430) on the road from Scandia to Emerita. There are ruins of the ancient town at Marconc, on the frontiers of Portugal. (Resend. Ant. Lou. p. 53; Flures, Exp. synops. xi. p. 66.)

MEDUACUS. [MEDOACUS.]

MEDUCA, a branch of the Ligur, in Gallia. The name may be ancient, but the verse of Lucan in which it occurs is spurious.

[LOKER.]

MEDUANTUM, in Gallia, is placed in the Table on a road from Durocortorum (Reims) through Noviomagus, Mosa or Mosse (Mosca), to Medulantum, an unknown site.

[GE.]

MEDULLI, a Gallic people on the coast south of the Garumna (Garumna). Anvianus (Ep. 4) says to Them:

"Quam tamen exercit Medulorum in litore vitam."

He says in another Epistle to Them (Ep. 5):

"Urum Domnoton te litore perferis aeactus
Condatis ad portum, si modo depopreas."

[As to this Condatis Portus, see Cond. No. 6.]

Anvianus (Ep. 7) thanks Them for sending him some of the oysters, equal to those of Baisie, which were fattened in the "stagna Medulorum." The country of the Medulli corresponds to Medov in the French department of the Girone. [GE.]

MEDULLI (MEDULLO, Strabo), an Alpine people, whose name occurs in the inscription on the arch of Susa and on the Trophy of the Alps (Plin. iii. 20), where they are placed between the Acitavones and Eucali. Ptolomy (ii. 10. § 11) places the Allobroges "under the Medulli," as the name is there written, by which he means that the Medulli occupy the country nearer to the Alps. Strabo's description of the position of this people is clear (iv. p. 203) - "After the Vocontii are the Sidonii (Ionii), and Tricorii, and then the Medulli, who occupy the highest summits of the Alps; now they say that the highest part of their country has an ascent of one hundred stadia, and thence to the borders of Italy the descent is as much: and above, in the vertex hollows, there is a great town, and two springs not far from one another, each from one of these flows the Drummy (Durance), a torrent stream which flows down to the Rhodans, and the Durus (Doria) runs in the opposite direction, for it joins the Padus (Pô), flowing down through the country of the Salassi into Cettia south of the Alps." When Strabo says further (iv. p. 204) that the Medulli "lie as it were in the middle above the confines of the Isera and the Rhone," he is not speaking of distance, but of direction or position; for he adds "and the other side of the mountain country above described, the part that slopes towards Italy, is occupied by the Taurini, a Ligurian people, and other Ligures." The conclusion is easy that the Medulli were in the Maurienne, north and south of the town of S. Jean de Maurienne, and enclosed between the Tarentaise and Dauphiné. The lake is supposed by D'Anville, and by Walckenaer (Geog. vol. ii. p. 81) to be that on Mont Cenis; and Walckenaer adds "that it is exactly 200 Olympic stadia from Sessa to the termination of the descent, 7 miles west of Aosta." But this is a false conclusion, derived probably from Strabo's remark about the Duarsis flowing through the country of the Salassi; by Dupin, which flows through the country of the Salassi in the Doria Balles, but the stream which rises near the Durancis is the Doria Riparia.

D'Anville supposed that Strabo made the Alps in the country of the Medulli 100 stadia in perpendicular height, which absurd mistake has been followed by the French translators of Strabo. Walckenaer has corrected it; but he has erroneously made Ptolemy place the Medulli immediately north of the Allobroges, instead of to the south-east. Vitruvius (viii. 3) speaks of the goteres of the Medulli, a disease supposed to arise from the water which they drank.

MEDULLIA (MEDULLA: E.N. MEDULLA; Medullium), an ancient city of Latium, which is repeatedly mentioned in the early history of Rome; but it is unknown to modern historians, and has disappeared at a comparatively early period. According to Dionysius it was one of the colonies of Alba; and Diodorus also includes it among the cities of which he ascribes the foundation to Latinus Silvius. (Dionys. iii. 1; Diod. viii., ep. Euseb. Arm. p. 185.) We are told that it fell into the power of Romulus by the voluntary submission of the inhabitants after the fall of Alba. Naturally, many of its citizens migrated to Rome, among whom was the father of Tullus Hostilius. (Dionys. ii. 36, iii. 1.) But in the reign of Ancus Marcius it was again conquered by the Latins, who held it for above three years, when the Roman king a second time reduced it. (Id. iii. 38.) Livy, however, says nothing of this reconquest, but treats it throughout as a Latin city, and enumerates it as one of the fourteen Latin cities which were taken by Tarquinius Priscus (i. 33, 38). At a somewhat later period it is mentioned for the last time, in B. c. 492, as abandoning the Roman alliance, and joining the Sabines. (Dionys. v. 34.) We have no account of the period of its destruction, but it is not noticed by any of the geographers, and Ptolemy tells us that it was no longer in existence at his time. (Ptol. vi. 35.22.)

The name of Medullis is found in Livy associated with those of Corniculum, Ficules, Crustumerium, and Numantum, of which the site is approximately known, as well as with Amerilia and Cameria, of which the position is as uncertain as that of Medullia itself. All three were probably situated in the neighbourhood of the cities just mentioned; but this is all that can be asserted with any confidence. Gell and Nibby have described the remains of an ancient city, at a spot called Marcellina, about 4 miles from Palombara, at the foot of the lofty Monte Cennaro, which the former writer supposes to be Medullia. The remains in question, consisting of considerable portions of walls of polygonal construction, enclosing a triangular area, are unquestionably those of an ancient city: but its identification is wholly uncertain; the situation would suit equally well for Cameria or Amerilia, as for Medullia. Nibby and Abeken would place the latter at S. Angelo di Capoccia, on the highest summit of the Corniculum hills; where there also remain ancient walls, supposed by Gell to be those of Corniculum.

Megalopolis was the place of meeting of the Arcadian confederation which was now formed. The council of the confederation was called the Ten Thousand (of Mopsus), and consisted of representatives of all the Arcadian states, except Orchomenus and Heraea. The number must be regarded as an indefinite one; and it is probable that all the citizens of the separate states had the right of attending the meetings. (Xen. Hell. vi. 5. § 6, vii. 1. § 38; Dion. xcv. 59; Paus. viii. 32. § 1; Dem. de Fals. Leg. p. 344.) A body of troops, called Eparchia (Ἐπαρχία), was raised for the service of the confederation; their number was 5000 (Xen. Hell. vii. 4. § 34, vii. 5. § 3; Dion. xci. 62, 67). The new confederation succeeded for a time in giving a certain degree of unity of sentiment and action to the Arcadians; but its influence gradually declined; and the city of Megalopolis never attained that importance which its founders had anticipated, and which had caused it to be laid out on a scale too large for the population collected within its walls. (Polyb. ii. 55.)

Upon the decline of the Theban power, the Spartans directed their attacks against Messenia, but these were easily repelled; and upon the rise of the Macedonian power the Megalopolitans formed a close alliance with Philip, and subsequently with Alexander, as their best security against their formidable neighbour. After the death of Alexander they continued faithful to the Macedonian alliance, and refused to join the other Greeks against Antipater. In the contest between Polyperchon and Alexander, Megalopolis espoused the side of the latter; in consequence of which Polyperchon laid siege to the city in n. c. 318. It was, however, bravely defended by its inhabitants, under an officer named Damis; and though Polyperchon succeeded in making a breach in its walls, he was finally repulsed with loss. (Diod. xcviii. 70, 71; Thuc. ii. 43, from Diodorus i. c.) that the territory of Megalopolis possessed some 15,000 men capable of bearing arms, which implied a population of about 65,000 souls. After this time Megalopolis was governed by tyrants, of whom the first was Aristodemus, a Phigalian by birth, who, on account of his good qualities, was called Ἐρυθρός. During his reign the Spartans, under their king Acrotatus, the son of Ares, and grandson of Cleonymus II., attacked Megalopolis, but were defeated, and Acrotatus was slain. (Paus. viii. 27. § 11, who erroneously calls Acrotatus the son of Cleonymus.) Two generations later Lydiades, a native of Megalopolis, became tyrant of the city, but he voluntarily resigned his power in n. c. 233, and united the Arcadian League. (Paus. viii. 27. § 12, seq.; Polyb. ii. 44.) In n. c. 222, Cleomenes III. surprised Megalopolis; the greater part of the inhabitants succeeded in making their escape to Messene; but, after plundering the city, he laid the greater part of it in ruins. (Paus. viii. 27. § 15, seq.; Polyb. ii. 55; Plut. Philip. 5, Cleom. 25.) Soon after the defeat of Cleomenes at the battle of Sellasia (n. c. 221), the Megalopolitans began to rebuild their city; but a dispute arose among them respecting its size. One party wished the compass of the walls to be contracted, that they might be the more easily defended; and the other

x 2
MEGALOPOLIS.

insisted upon preserving the former dimensions of the city. The former party, through the mediation of Aratus, appear to have prevailed, and the city was unfortunately rebuilt in its original magnitude. (Polyb. v. 93.) The fortifications were sufficiently strong to repel the attack of the tyrant Nabis (Plut. Philop. 13); but they were again suffered to fall into decay; and even as soon as A. D. 175, we find that Antiochus IV. Epiphanes promised the Megapolitans to surround their city with a wall, and gave them the greater part of the necessary money. (Liv. xii. 20.) Polybius remarks (ix. 21) that the population of Megalopolis in his time was only half that of Sparta, although it was two stadions greater in circumference. So much was it reduced, that a comic poet, quoted by Strabo, described "the Great City as a great desert" (δρημιά 

MEGALOPOLIS.

The Megalopolis was situated in the middle of a plain, and, unlike the generality of Greek cities, possessed no height, which might be converted into a sanctuary. Mantinea, which was also rebuilt about the same time, was placed in a level situation, instead of its old position upon a hill. A level situation appears to have been chosen as more convenient for a large population than the rocky heights upon which the old Greek cities were built; while the improvements which had been made in the art of fortifying cities enabled their inhabitants to dispense with natural defences. The city lay upon either bank of the Helisson, which flowed through it from east to west, and divided it into nearly two equal parts.

RUINS OF MEGALOPOLIS.

A. Creusa.
B. The Hellason.
C. Theatre.
D. Stadium.
E. Theratium.
F. Agras.
G. Temple of Athena Polias.
H. Temple of Hera Teleia.
I. The Bathylus.

The Helisson flows into the Alpheius about 2½ English miles from the city. The southern half of the city was called Orestia (Ορεστία), from an ancient settlement of the Maenadians upon this spot. (Steph. B. s. v. Μεγάλα χωρια.) The ruins of Megalopolis are near the modern village of Siatista, but almost all traces of the walls has disappeared, because they were probably built, like those of Mantinea (Xen. Hell. v. 8. § 5; Paus. viii. 8. § 6), of tree-trunks. Pausanias has given a particular description of the public buildings (viii. 30—33), the site of some of which may still be fixed by the existing remains. The two most important buildings were the theatre, on the left or southern side of the river, and the Agora on the right. The colossal remains of the theatre are conspicuous in the whole plain. Several other remains remain, and a part of the wall of the cavea. It is described by Pausanias (viii. 32. § 1) as the greatest theatre in Greece, and was 480 feet in diameter. Pausanias says that in the theatre there was a perennial fountain, which Leake could not find, but which Ross noticed in the Orchestra; it is now covered with rubbish, so that it is not visible, but in dry season it makes the ground quite moist. On the eastern side of the theatre was the stadium, the position of which is indicated in the shape of the ground near the river. Here is a fountain of water, which Pausanias says was in the stadium, and was sacred to Dionysus. On the eastern side of the stadium was a temple of Dionysus; and below the stadium, towards the river, were a sanctuary of Heracles, and an altar of the Phidian Apollo. Ross supposes a circular foundation close to the bank of the river to be the altar of Ares, and a quadrangular foundation between this and the theatre to be the temple of Aphrodite. East of the temple of Dionysus there is another source of water, also mentioned by Pausanias, by which we can fix the position of the temple of Asclepius that is described above, which, on a gently sloping hill, was a temple of Artemis Agrotera. West of the theatre was the Theratium, named from the person who built it, in which the Ten Thousand were accustomed to meet; and near it was a house, built originally by the Megapolitans for Alexander, the son of Philip. In this same locality there were a few foundations of a temple sacred to Apollo, Hermes, and the Muses.

Opposite the western end of the theatre there are, on both sides of the river, but more especially on the northern bank, large masses of square stones. These are probably the remains of the principal bridge over the Helisson, which led from the theatre to the Agora on the northern side of the river. The Agora was built on a magnificent scale, and extended from the river close to the western walls of the city; since Pausanias, who entered Megalopolis upon this side, immediately came upon the Agora. As Pausanias has given a fuller description of the Agora of Megalopolis than of any other in Greece, the following restoration of it (taken from Curtius) may be found useful in understanding the general form and arrangement of such buildings.

In the centre of the Agora was an inclosure sacred to Zeus Lycaon, who was the tutelary deity of all Arcadia. It had no entrance; but the objects it contained were exposed to public view; here were seen two altars of the god, two tables, two eagles, and a statue in stone of Pan. Before the sacred inclosure there was a statue of Athenes Brauronia, 12 feet high, which was brought from Bassae by the Phigalians, to adorn the new capital; it survived the destruction of the city, and is represented on coins of Septimius Severus. This colossal statue probably stood on the west side of the sanctuary of Zeus. To the right of the colossal statue was the temple of the Mother of the Gods, of which
only the columns remained in the time of Pananias. The road to Messene passed, at the distance of 7 stadia from the city, a temple of the goddesses called Mani, a name of the Eumenides, because Orestes here became insane on account of the murder of his mother. A little further was a small heap of earth, called the Monument of the Finger, because Orestes, in his madness, here bit off one of his fingers; still further was a place called Arde, because here Hector was here healed of his disorder, containing another temple of the Eumenides; and lastly a sanctuary named Cureium, because Orestes here cut off his hair. These stations lay between the villages Sineino and St. Be, in the district where there are four tumuli. From the Mani, there was a distance of 15 stadia to the Alpheion, the place where it receives the Gatheutae, joined by the Carmion. This united stream is the Xeroid Potamid. From the Alpheion the road led to Croni, a distance of 40 stadia, and from Croni to Nymphas, a distance of 50 stadia. Nymphas was a place abounding in water and trees, from which there were 30 stadia to the Herakleum, which marked the boundaries of Megalopolis and Messene. (Paus. viii. 34.)

2. The road to Carneum, in Messene, ran north of the former road, but parallel to it. It crossed the Alpheus, where it is joined to the united waters of the Malus (Macris) and Syrurus (Xiphatis). The Malus is probably the river of Neokhorii, which, a little westward of Dednoy, receives a small stream answering to the Syrurus. After the river crossed these 30 stadia on the right bank of the Malus, you crossed the river and ascended, by a steep path, to a village called Phokareia (Phokaria), which appears to have stood on the height above Neokhorii. Fifteen stadia farther was the Herakleum, named Despeos, another boundary between the territories of Megalopolis and Messene. (Paus. viii. 35 §§ 1, 2.)

3. The road to Sparta was probably the same as the modern road from Leonoros to Milia. At the distance of 30 stadia the road crossed the Alpheus, where it is joined by the Theut (Theius), now called Kutyforin. From thence the road followed the left bank of the Theus for 40 stadia to Phaumene (Phumene), which was 30 stadia distant from the Herakleum, and beyond the divide of the waters flowing southward to the Eotus, and northward to the Alpheus. (Paus. viii. 35 seq.)

4. The road to Methydrium was 170 stadia in length. It ran northwards from Megalopolis through that portion of central Arcadia which was surrounded by the rivers Corpynus, Alpheus, and Heletron. Thirteen stadia from the city was a place called Sial (Sia), with a temple of Artemis Scia, founded by the tyrant Aristodemus. Ten stadia further lay Chaniem (Kapellos), and from thence, at the distance of another 10 stadia, was Trikoloni (Trikolosos). These two cities were in ruins in the time of Pananias. Trikoloni, which was founded by the sons of Lysippos, still possessed the temple of Poseidon, standing upon a hill in a grove of trees. We may place Trikoloni near the modern Korintia, on the edge of the plain of Megalopolis. At Methydrium two side roads branched off from the main road. The road to the left went by Zestia (10 stadia), Porosba (10 stadia), and Tyra (15 stadia), to Eupha (Zovia, Paus.); Zovia, Varosia, Gr. Steph. a. e. and Pangeria (Pangereia) were founded by Trikoloni. They were in ruins.
MEGALOPOLIS.

in the time of Pausanias, but in Zeezis there still remained a temple of Demeter and Artemis. Paro-
reia probably occupied the site of Paleocemii. Thys-
barum (Ωυπολόος) was founded by a son of Lycon, and
may be placed at Palewret, at the foot of the
mountain. The other side road branched off from Methydrium to the right, ascending to the fountain
Καστυρί (Καστυρί), and from thence descending 30
stadia to the tomb of Callisto, a lofty mound of earth,
upon which was a temple of Artemis Callista. Here
Pausanias turned to the left, and at the distance of
25 stadia from this tomb he reached Asemossa
(Ασαμορά), on the direct road from Megalopolis to
Methydrium. As Asemossa was 100 stadia from Trikiloni and 57 from Methydrium, it may be placed at
Zibouria. Beyond Asemossa the road passed over
the mountain Phalanthos, upon which were the ruins
of the town Phalanthos (Φαλάνθος). On the other
side of this mountain was the plain of Potus, and near it Schemoens (Σχεμώνη), which was called from a Boeotian of this name: near Schemo-
ens were the ruins of the ancient city of Alatia. Methydrium
was the next place. [METHYDRIUM.] (Paus. viii.
35. § 5. seq.)

5. The road to Meamos, led along the Hælios
from the foot of Mt. Meamos. In leaving the city
it first ran through a marshy district, which was here
called Helos; it then entered a narrow valley, in
which was a place called Palecuros (Παλακρόος),
where a mountain torrent, named Elaphus, flowed
into the Helios on the left: this is the torrent
which flows from Valtitias. Here a side road ran
along the left bank of the Elaphus, for 20 stadia,
to Phrontis (Φροντίς), where was a temple of
Pan; it must have stood near Kakkmugetes. But
the direct road crossed the Elaphus, and entered the
Meamalian plain, at the distance of 15 stadia from
the Elaphus. This number, however, is much too
small, as it is 5 geographical miles from the junction
of the Elaphus with the Helios into the Mea-
manian plain. (Leake, Peloponnesea, p. 242 ;
Paus. viii. 36. § 5, seq.)

6. The road to Phigalea crossed the Alpheus
at the distance of 20 stadia from Megalopolis. Two
stadia from the Alpheus were the ruins of MEG-
ARAS. 2 stadia further those of Daskere, and
again 7 stadia the hill Acacensis, upon which
stood the city ACACESIS. At the distance of 4
stadia from Acacensis, was the temple of Despoens,
one of the most celebrated sanctuaries in the Pelo-
ponnese, and of which Pausanias has given a partic-
ular description. Adjoining, was the temple of
Pan, above which stood the ancient city of LYCO-
SEIRA. Between Lycosara and the river Plataniston,
which was 30 stadia from Phigalea, Pausanias
mentions no object, though the direct distance be-
tween Lycosara and this river is 9 geographical
miles. (Paus. viii. 36. §§ 9—39.)

7. The road to Pallantium and Tegea, passed
first through Ladoceia, a suburb of Megalopolis,
next by the ruins of Harmonien [see Vol. i.
p. 192, b.]: beyond which, to the right of the road,
were the ruins of Orestesrium; while upon the
direct road were the villages of Aphroditium and
Athenarum; and 20 stadia beyond the latter the ruins
of Asea, near which were the sources of the Alpheus
and the Eurotas. From Asea there was an ascent to a
mountain called Erebetum, upon
which was the Ochôa, marking the boundaries of
Megalopolis, Pallantium, and Tegea. (Paus. viii.
44.)

MEGARA.

8. The road to Heraea was the one by which
Pausanias travelled to Megalopolis, and conse-
quently is described by him in an inverse direction
to that of the others. This was the great Roman
road through the Peloponneseus, which occurs in
the Peutinger Tabula. After leaving Heraea, the first
place was Melemis, which in the time of Pausa-
nias was deserted and covered with water. Forty
stadia above Melemis was Buphagium, at the
sources of the river Buphagus, near which were the
boundaries of Heraea and Megalopolis. Beyond
Buphagium came the village Marathia, and then
Gortyna. Further on was the sepulchre of those
slain in battle against Cleomenes, and called Pa-
ranakhrus (Παρανακρόος), because Cleomenes
violated his covenant with them. On the right of
the road were the ruins of Braemnis, and on the
other side of the Alpheus the ruins of Trapezaus.
Descending from thence towards the Alpheus was a
place called Babron. Ten stadia further was Ba-
kalos; beyond which, after crossing the Alpheus,
the traveller came to a deserted city, standing upon a
height above the Aminius, a tributary of the
Heloias. (Paus. vii. 8. § 8, vii. 2—3.)

(Leake, Morea, vol. ii. p. 29, seq. p. 288, seq.,
Peloponnesea, p. 231, seq.; Blayde, Richterkhes,
74, seq.; Curtius, Peloponnesea, vol. i. p. 281, seq.)

COIN OF MEGALOPOLIS.

MEGALOPOLIS. 1. In Caria. [APHRODISIUS.] 2. In Pontus. [SEBASTIA.]

MEGARA, sometimes called, for distinction's
sake, MEGARA HYBŁAES (Μέγαρα Ἑβλαίη, Eub. M.
Ὑβλαίη or Μεγαρά Η骙, Megetarum), a city of
Sicily, situated on the E coast of the island, be-
tween Syracuse and Catana, in the deep bay formed
by the Xiphonian promontory. It was unques-
tionably a Greek colony, deriving its origin from the
Megara in Greece Proper; and the circum-
stances attending its foundation are related in detail
by Thucydides. He tells us that a colony from Me-
agara, under the command of a leader named Lamis,
arrived in Sicily about the time that Leontini was
founded by the Chalcidian colonists, and settled
themselves first near the mouth of the river Pan-
tagia, at a place called Trotilus. From thence they
removed to Leontini itself, where they dwelt for a
time together with the Chalcidians; but were soon
afterwards expelled by them, and next established
themselves on the promontory or peninsula of
Trapezaus, near Syracuse. Hence they again removed
after the death of Lamis, and, at the suggestion of
Hyblon, a Sicilian chief of the surrounding country,
finally settled at a place afterwards called the Hy-
blaean Megara. (Thuc. vi. 4.) Seymanus Chiusus
follows a different tradition, as he describes the estab-
lishment of the Chalcidians at Naxos and that of
the Megarians at Hybla as contemporary, and both
preceding the foundation of Syracuse, p. 734. Strabo
also adopts the same view of the subject, as he
represents Megara as founded about the same
MEGARA.

time with Mænas (n. c. 735), and before Syracuse. (Seym. Ch. 271—276; Strab. vi. p. 369.) It is impossible to reconcile the two accounts, but that of Thucydides is probably the most trustworthy. According to this the foundation of Megara may probably be placed about 736 a. c. Of its earlier history we have scarcely any information, but it would appear to have attained to a flourishing condition, as 100 years after its foundation it sent out, in its turn, a colony to the other end of Sicily, where it founded the city of Selinunte, which was destined to rise to far greater power than its parent city. (Thuc. vi. 4; Seym. Ch. 291; Strab. vi. p. 572.)

Nothing more is known of Megara till the period of its destruction by Gelon of Syracuse, who, after a long siege, made himself master of the city by a capitulation; but, notwithstanding this, caused the bulk of the inhabitants to be sold into slavery, while he established the more wealthy and noble citizens at Syracuse. (Hierod. vii. 156; Thuc. vi. 4.) Among the persons thus removed was the celebrated comic poet Epicharmus, who had received his education at Megara, though not a native of that city. (Suid. s. v. Επίχαρμος; Diog. Laert. viii. 3.) According to Thucydides, this event took place 245 years after the foundation of Megara, and may therefore be placed about 481 a. c. It is certain that Megara never recovered its power and independence; the Syracusans, under the leadership of tyrants, steadily subjugated and finally destroyed it, till the city was again founded by the Romans, but under a government which gave it greater freedom than before. (Thuc. vi. 49, 98.) From this time we meet with repeated mention of a place named Megara or Megarum (Scyl. p. 4. § 6), which it seems impossible to separate from Hyla, and it is probable that the two were, in fact, identical. These notices are discussed under HYLA, No. 2.

The site of this later Megara or Hyla may be fixed, with little doubt, at the mouth of the river Alabus (Casmero); but there seems much reason to suppose that the ancient city, with its original Greek colony, was situated almost close to the remarkable promontory now occupied by the city of Agosta or Augusta. (Thuc. vi. 49.) It is difficult to believe that this position, the port of which is at least equal to that of Syracuse, while the peninsula itself has the same advantages as that of Ortigia, should have been wholly neglected in ancient times; and such a station would have admirably served the purposes for which Lamachus urged upon his brother general the occupation of the vacant site of Megara. (Thuc. vi. 49.)

MEGARA (πόλη Μεγαρά, Megara -orum, sometimes Megara -ae: the territory ἡ Μεγαρία, sometimes ἡ Μεγαρία, sc. γη); E. Μεγαρίδας, Megaramia; Adj. Μεγαρικός), a city in Greece Proper.

I. SITUATION.

The city of Megara is situated rather more than a mile from the Salonic gulf, in a plain about 6 or 7 miles in length, and the same in breadth, bounded to the westward by the range of the Geraniæan mountains, to the eastward by the range which terminates in the mountains called Kerata or the Horns, and to the south by the sea; while on the north the plain loses itself in a gradual ascent. The city stood on a low hill with a double summit, on each of which there was an acropolis, one named Caria (Καρία), and the other Alcathoe (Ἀλκαθής), the former probably being on the eastern, and the latter on the western heights, upon which the modern village is chiefly situated. Immediately below the city was a port-town named Nisara (Νίσαρα and Nisaria), the port being formed by an island called Minoa (Μινώα). The city was connected with its port-town by Long Walls.

II. HISTORY.

There were two traditions respecting the early history of Megara. According to the Megarians, the town owed its origin to Car, the son of Phoroneus, who built the citadel called Caria and the temples of Demeter called Megara, from which the place derived its name. (Paus. i. 59. § 5, i. 40. § 6.) Twelve generations afterwards Lelex came from Egypt and gave the inhabitants the name of Lelges, whence we read in Ovid (Met. vii. 445): —

"Tutus ad Alcathon, Lelegiae mons, fines
Composito Scironis patet."

Lelex was succeeded by his son Cleese, the latter by his son Pylas, whose son Sciron married the daughter of Pandion, king of Athens. But Niæs, the son of Pandion, disputing with Sciron the possession of Megara, Aeacus, who had been called in as arbiter, assigned the kingdom to Niæs and his posterity, and to Sciron the command in war. Niæs was succeeded by Megareus, the son of Poseidon, who had married Philina, the daughter of Niæs; and Megareus was followed by his son Alchathus, who built the other citadel named after him. Such was the account of the Megarians, who purposely suppressed the story of the capture of their city by Minos during the reign of Niæs. (Paus. i. 59. §§ 5, 6, i. 41. § 5.)

The other tradition, which was preserved by the Boeotians and adhered to by the rest of Greece, differs widely from the preceding one. In the reign of Pylaee, Pandion being expelled from Athens by the Metionidae, fled to Megara, married the daughter of Pylas, and succeeded his father-in-law in the kingdom. (Paus. i. 39. § 4; Apollod. iii. 15.) The Metionidae were in their turn driven out of Athens; and when the dominions of Pandion were divided among his four sons, Niæs, the youngest, obtained Megara. The city was called after him Niæs (Νιάς), and the same name was given to the port-town which he built. When Minos attacked Niæs, Megareus, son of Poseidon, came from Orchæsus to Boeotia to assist the latter, and was buried in the city, which was called after him Megara. The name of Niæs, subsequently Niæsas, was henceforth confined to the port-town. (Paus. i. 39. §§ 4, 6.) But even the inhabitants of Megara were sometimes called Nisai, to distinguish them from the Megarians of Sicily, their colonists (Theocr. Id. xii. 27). Through the treachery of his daughter Scylla, Niæs perished, and Minos obtained possession of the city, and demolished its walls. They were subsequently restored by Alcatho, son of Pelope, who came from Elia. In this work he was assisted by Apollo. (Paus. i. 41. § 6; Theogn. 771; Or. Met. viii. 14.) It was further related, that Hyperion, the son of Agamemnon, was the last king of Megara, and that after his death a democra-
MEGARA.

Political form of government was established. (Paus. i. 43. § 3.)

Into the value of those traditions it would be useless to inquire. It may, however, be regarded as certain, that Megara and its territory were in early times regarded as part of Attica; and hence Strabo accounts for the location of the Iliad, because they were comprehended along with the Athenians under the general name of Ionians. (Strab. i. p. 399.) The most certain event in the history of Megara is its conquest by the Dorians. This event is connected in tradition with the expedition of the Peloponnesians against Athens. The Dorian invaders were defeated by the voluntary sacrifice of Codrus; but Megara was notwithstanding permanently conquered, and a Corinthian and Massenian colony founded at Megara. The pillar at the isthmus of Corinth, which had hitherto marked the boundaries of Ionia and Peloponnesus, was now removed; and Megara was henceforth a Dorian state, and its territory included in Peloponnesus. (Strab. i. 393; S虚空. Ch. 502.) Megara, however, continued for some time to be subject to Corinth, and it was not without frequent struggles and wars that it at length established its independence. (For authorities, see Miller, Dorians, i. 5. § 10.)

Megara appears not to have become the ruling city in the district till it was independent of Corinth, since in earlier times it had been only one of the five hamlets (κυκλιτα), into which the country was divided, namely, the Heraeans, Piraees, Megarians, Cynosurians and Triopsidaeans. (Plit. Quest. Græc. c. 17, p. 387.)

After Megara had become an independent city, its prosperity rapidly increased, and in the seventh century before the Christian era it was one of the most flourishing commercial cities of Greece. For this it was chiefly indebted to its admirable situation, which gave its inhabitants great facilities for the prosecution of commerce both by land and sea. All the roads from Northern Greece to Peloponnesus passed through their country, while their shores were washed by the Corinthian and Saronic gulf, enabled them to trade with the most distant parts of the Peloponnesus. Megara founded some of the earlier Greco colonies, both in Sicily and Thrace. In B.C. 728 it established Megara Hyblae in Sicily, in 712 Astacus in Bithynia, in 675 Cyzicus in the Propontis, in the following year Chalcodon at the mouth of the Boeotian, and in 657 Byzantium opposite Chalcodon. About this time, or rather later, Comedy is said to have been invented by the Megarians. According to the common account, Susaion, a native of Tripodiscus in Megara, introduced comedy into Attica. (Dict. of Biogr. art. Susaion.)

But, with the increase of wealth, the lower orders attempted to obtain a share in the government, which had hitherto been exclusively in the hands of the Dorian conquerors; and Thespis, the father-in-law of Cylon, became tyrant or despot of Megara, by attacking the rich landed proprietors and advocating the claims of the poor. (Aristot. Rhel. i. 2, Polit. v. 6.) He embellished the city by the construction of a beautiful aqueduct, which continued to exist down to the time of Pausanias (i. 40. § 1). Thebes came ruled about B.C. 360—600; but he was subsequently driven from power, and Megara was for some time subject by struggles between the aristocracy and democracy. The eloquent poet Theognis, who belonged to the aristocracy, deprecates the sufferings of his party, and complains that the poor no longer paid the interest of their debts, and that they plundered the houses of the rich and even the temples.

About the same time the Megarians were engaged in frequent contests with their neighbours in Attica. The chief struggle between them was for the island of Euboea, which was at length gained by the Athenians in consequence of the well-known stratagem of Solon. (Paus. i. 40. § 5; Strab. i. p. 394.) The Megarians took their share in the Persian wars. They fought with 20 ships at the battles of Artemisium and Salamis. (Herod. viii. 1. 45.) They repulsed a body of Persians whom Mardonius sent to ravage their territory (Paus. i. 40. § 2), and finally 3000 of their troops fought at the battle of Plataea. (Herod. i. 28.)

After the Persian War the Megarians were involved in hostilities with the Corinthians respecting the boundaries of their territories. This led the Megarians to desert the Peloponnesian alliance, and unite themselves with the Athenians, B.C. 455. In course to secure their independence, the Athenians built two Long Walls connecting the city with Nissa; and they garrisoned at the same time the town of Pegas, on the Corinthian gulf. (Thuc. i. 103.) But ten years afterwards the Megarians revolted from Athens, and having obtained the assistance of some Peloponnesian troops, they slew the Athenian garrison, with the exception of those who escaped into Nissa. They continued to hold Nissa and Pegas, but they also surrendered these towns in the thirty years' truce made in the same year (445) with Sparta and her allies. (Thuc. i. 114, 115.) The Athenians thus lost all authority over Megara; but they were so exasperated with the Megarians, that they passed a decree excluding them from their markets and ports. This decree pressed very hard upon the Megarians, whose unproductive soil was not sufficient to support the population, and who obtained most of their supplies from Attica; it was one of the reasons urged by the Peloponnesians for declaring war against Athens. (Thuc. i. 67, 159; Aristoph. Acharn. 533.)

In the war between Athens and the Megarians suffered greatly. In the first year of the war the Athenians invaded Megara with a very large force, and laid waste the whole territory up to the city walls. At the same time the Athenian fleet blockaded the harbour of Nissa, so that Megara was in the situation of a besieged city cut off from all its supplies. This invasion was repeated by the Athenians once in every year, and sometimes twice; and the sufferings which the people then endured were remembered by them many centuries afterwards, and were assigned to Pansanias as the reason why one of their works of art had not been finished. (Thuc. ii. 51; Plat. Per. 50; Paus. i. 40. § 4.) In the fifth year of the Peloponnesian War (B.C. 427), the Athenians took possession of the island of Nissa, which lay in front of Nissa, and left a garrison there, by which means the port of Nissa was still more effectively blockaded. (Thuc. iii. 51.) Of the position of this island, and of the causeway connecting it with the mainland, we shall speak presently.

In the eighth year of the Peloponnesian War (B.C. 424), the democratic party in Megara fearing the return of the aristocratical exiles, who were at Pegasus, entered into negotiations with the Athenians to surrender their city to them. The Athenians still held Nissa; and the Long Walls and Nissa were occupied by an Athenian garrison. The Athenians
MEGARA.

were admitted within the Long Walls by their friends in Megara, and after a siege of two days they took Nisaea.* Megara was saved by Brasidas, who advanced to the relief of the city with a large Peloponnesian force, and, after offering battle to the Athenians, which they declined, was admitted within the city. The aristocratical exiles were now recalled, and a strict and exclusive oligarchy established, which lasted for some time. (Thuc. iv. 66—74.) A few months afterwards the Megarians captured the Long Walls from the Athenians and levelled them to the ground; but the Athenians still continued to hold Nisaea and Minos. (Thuc. iv. 109.) In the truce concluded between the Athenians and Peloponnesians in the following year it was settled that the line of demarcation between the Athenians in Nisaea and Minos, on one side, and the Megarians and their allies in Megara, on the other, should be the road leading from the gate of Nisaea near the monument of Nicias to the Poseidon-temple at Poseidon, and from the latter in a straight line to the casemate leading to Minos. (Plut. Meg. 17.)

From this time Megara is seldom mentioned in Greek history. Its prosperous condition at a later period is extolled by Isocrates, who says that it possessed the largest houses of any city in Greece, and that it remained at peace, though placed between the Peloponnesian Thebans, and Athenians. (Isocr. de Pace. p. 183, ed. Steph.) Megara surrendered to Philip after the battle of Chaeronea. (Aelian, V. H. vi. 1.) After the death of Alexander it was for some time in the power of Cassander; but his garrison was expelled by Demetrius Poliorcetes, who proclaimed the freedom of the city B.C. 307. (Diod. xx. 46; Plut. Demetr. 9.) Subsequently it again passed into the hands of the Macedonian kings, and it was united by Aratus to the Achaean League. (Polyb. ii. 43.) In the war between the Achaean League and the Romans, Megara surrendered to Metellus without a contest. (Paus. vii. 15. § 11.) It is mentioned by Sulpicius, in his well-known letter to Cicero (ad Pamat. iv. 5), as one of the ruined cities of Greece. It still existed in the time of Strabo (p. 393), and it was subsequently made a Roman colony, as a temple, containing a statue of the goddess, was never finished, owing to the distress occasioned by the Athenians in the Peloponnesian War. From thence Pausanias ascended to the citadel, named Caria, passing by a temple of Dionysus Nyctelius, a sanctuary of Aphrodite Apotrophia, an oracle of Night, and a roofless temple of Zeus Cronius. Here, also, was the Megaron, or temple of Demeter, said to have been founded by Ceres during his reign.

Below the northern side of the Acropolis Caria was the tomb of Alcmena near the Olympiæum. Hence Pausanias was conducted by his Megarian guide to a place called Hymus ('Feur'; comp. Plut. These. 27), because the waters from the neighbouring mountains were collected here, until they were turned off by the Megarians, who erected on the spot an altar to Acheclus. It was probably this water which supplied the fountain of the Sibyls. Near this place was the monument of Hyllus; and not far from the latter were temples of Iésus, Apollo Agraeus, and Artemis Agrotæa, which was said to have been dedicated by Alcathous after he had slain the Cretan lion. Below her tomb of Pandion, and the monuments of Hippolytus, queen of the Amazons, and Tereus, who married Procnus.

* On this occasion Thucydides (iv. 68) calls Megara αὑτοῖς ἔδωκεν, in contradistinction to the acropolis of Megara, as some critics interpret it.
MEGARA.

On the ascent to the citadel Alcaitho, Pausanias saw, on the right hand, the sepulchre of Megareus, and near it the hearse of the gods called Promeneis, to whom Alcaitho sacrificed when he was going to build the walls. Here was the stone upon which Apollo laid his lyre, when he was assisting Alcaitho, and which, on being struck, returned a sound like that of a harp. (Comp. Theog. 771; Or. Met. viii. 14.) Beyond was the council-house (boulé) of the Megarians, formerly the sepulchre of Timaclus; and on the summit of the Acropolis was a temple of Athena, containing a statue of the goddess, entirely gilded, with the exception of the face, hands, and feet, which were of ivory. Here, also, were temples of Athena Nica, or Victory, and Aeantis. The temple of Apollo was originally of brick, but had been rebuilt of white marble by Hadrian. Here, also, was a temple of Demeter Thesmophora, in descending from which occurred the tomb of Callipolis, daughter of Alcaitho.

On the road leading to the Pyranum the traveller passed the heroum of Ino, the heroum of Iphigenia, and a temple of Artemis said to have been erected by Agamemnon. In the Pyranum were tombs of Menippus, son of Megareus, and Echecoris, son of Alcaitho; near which was a stone called the fuga, on which the mother sat down and called her daughter. Pausanias next mentions the sepulchres of those Megarians who had fallen in battle against the Persians, and the Aesynium, so named from its founder, which contained a monument of the heroes of Megara. There were several sepulchral monuments on the way from the Aesynium to the heroum of Alcaitho, in which the poets, philosophers, and philosophers who had been in the time of Pausanias. Beyond was the Dionysia or temple of Dionysus; close to which was the temple of Aphrodite, containing several statues by Praxiteles. Near the latter was a temple of Fortune, with an image of the goddess by Praxiteles. A neighbouring temple contained statues of the Muses, and a Jupiter in brass, by Lysippus. Above the tombs of Corinth and of the athletes of Corinth, the former of which was ornamented by some of the most ancient specimens of sculpture which Pausanias had seen in Greece. On descending from the Agora by the street called Straight, there stood, a little to the right, the temple of Apollo Presteratus, with a statue of the god of great merit, as well as other statues by Praxiteles. In the ancient gymnasium, near the gates called Nymphades, was a pyramidal stone, called by the natives Apollo Carinus, and a temple of the Heilithyes.

On the road to the port of Naisa was a temple of Demeter Malphorphas. The Acropolis of Naisa still remained; on descending from the Acropolis there was the tomb of Lelex on the sea-side. Near Naisa was the Agora, and opposite the Agora stood a temple of Apollo, which was moored during the war against Naisa. Megara still retains its ancient name, but it is a miserable place. It occupies only the western of the two ancient citadels, and as this was probably Alcaitho, the town on the summit is on the site of the temple of Athena. There are hardly any remains of antiquity at Megara. On the eastern acropolis there are a few remains of the ancient walls. None of the numerous temples mentioned by Pausanias can be identified; and only one of them is marked by the fruits of some Ionic columns. The magnificent aqueduct of these has disappeared; and some imperfect foundations and a large fountain on the northern side of the town are the only remains of the celebrated fountain of the Sthnide nymphs.

Of the Long Walls, uniting Megara with Naisa, we have already spoken. They are noticed by Aristophanes under the name of νάι Μεγαρακα ενατία (Lysist. 1172). They were destroyed by the Megarians themselves, as we have already seen, in the eighth year of the Peloponnesian War, but they were subsequently restored by Phocion. Strabo speaks of them as if they still existed in his time (ix. p. 391), but they would seem to have fallen to ruin before that of Themistocles, as according to Thucydides (iv. 66) they were 8 stadia in length, but according to Strabo (L. c.) 18 stadia.

The position of Naisa and Minos has given rise to much dispute, as the localities described by Thucydides do not agree with the present features of the coast. The subject has been briefly discussed by Colonel Leake (Northern Greece, vol. ii. p. 401), and more fully by Dr. Arnold (Trans. vol. ii. p. 393) and Lient. Spratt. (London Geographical Journal, vol. viii. p. 205.) Thucydides represents Minos as an island close to Naisa, and united to the latter by a bridge over a morass. On Minos the Megarians had built a fortress (Them. iii. 51). Strabo (ix. p. 39) calls Minos a promontory (θέρα). He also makes it a promontory, Minos, forming the harbour of Naisa." Pausanias (i. 44. § 3), however, agrees with Thucydides in calling it an island; but it may be observed that the expression of Strabo (θέρα) is not inconsistent with its being an island, as stated by Thucydides and Pausanias. The difficulty in determining the site of Minos and Naisa arises from the fact that at the present time no part of the coast which can be identified with Minos. At the distance of nearly a mile and a half from Megara there is a small rocky peninsula, and further off two islands, the inner one of which affords shelter to a few of the small class of coasters. Hence it has been supposed that the inner island was Minos, as it forms the port of the Megarians of the present day. But this island is distant from the promontory about 200 yards, with 7 fathoms of water between them; consequently they could never have been connected by a bridge. It might, indeed, be argued, that the peninsula was once an island; but this is disproved by the fact that its isthmus is of equal height with its extremity. Moreover, there are no ancient remains, either on this island or the peninsula.

Other writers, among whom are Colonel Leake and Dr. Arnold, suppose the promontory of Tisbe (see map, No. 6), further to the east, at the entrance of the straits of Salamis, to have been Minos, since it may at one time have been an island. Accordingly, the statement of Strabo respecting the length of the Long Walls is preferred to that of Thucydides. But this promontory is nearly 3 miles in length, which is larger than is implied in the description of Thucydides (iii. 51), who speaks of it as fortified only by a single fort. Moreover, Pausanias calls Minos a small island. Lieutenant Spratt has offered a more probable solution of the difficulty. He supposes Minos to be a rocky hill, surrounded by a ruined fortress, and standing on the margin of the sea of Megara, at the distance of little more than a geographical mile, thus agreeing with the 8 stadia of Thucydides. That this hill was once a peninsula, appears evident from the dry beds of two rivers, which pass close to its base; one on each side. The eastern
leaving only a
stream and that

short distance to
impossible are four
foundations, in
shafts of small

columns erect, and wanting apparently only the
fourth to complete the original number. Probably
they were monuments or temples: and two Greek
churches, which are now in ruins, but standing on
two ancient foundations, will not be unfavourable to
the supposition. Another church, Agios Nikolaos,
which is perfect, also occupies the site of an ancient
building, but it stands nearer to the sea." Lieut.
MEGARA.

Spratt further supposes that he has discovered remains of the ancient causeway. "Between the base of the hill on its north side, and the opposite bank of the dry bed of a former river, there are three platforms of heavy buildings, one of which lies immediately at the foot of the hill, another on the edge of the opposite bank, and the third nearly central; and as the course of that former river-bed is clearly and indisputably between them, it is more than probable that the bridge of communications may be recognised in these ruins." He also says, "that distinct remains of an ancient mole are to be seen even now from the south-eastern end of the hill, and curving to the eastward, so as to have formed a harbour between the hill and those ruins," which is in accordance with the statement of Strabo, that the port of Nisaes was formed by the promontory of Minos.

IV. TERRITORY OF MEGARA.

Megara occupied the greater part of the large Isthmus, which extends from the foot of Mt. Cithaeron to the Acroorinthus, and which connects Northern Greece with the Peloponnesus. The southern part of this Isthmus, including the Isthmus proper so called, belonged to Corinth; but the boundaries of Megara and Corinth differed at an earlier and a later date. Originally Megara extended as far as the Acroorinthus, and Cithaeron as far as Thermessos on the Corinthian gulf, and a pillar was set up near the Isthmus proper, marking the boundaries between Peloponnesus and Ionia; but subsequently this pillar was removed, and the territory of Corinth reached as far as the Scirocian rocks and the other passes of the Greek mountains. (Strab. ix. pp. 392, 393.)

Towards the N., Megara was separated from Boeotia by Mt. Cithaeron, and towards the E. and NE. from Attica by some high land, which terminates on the west side of the bay of Eleeia in two summits, formerly called Kerata or The Horns (τά Κηράτα), and now Kaselia. (Strab. ix. p. 395; Dion. xiii. 65; Plut. Them. 13.) Here there is an immense deposit of conchiferous limstone, which Panaitini also noticed. (44. 46.) The river Iaspis, which flowed into the sea a little to the W. of the Horns, was the boundary of Megara and Attica. (Attica, p. 323, a.) The extreme breadth of Megara from Paege to Nisaes is estimated by Strabo (viii. p. 334) at 120 stadia; and, according to the calculation of Clinton, the area of the country is 143 square miles.

Megara is a rugged and mountainous country, and contains no plain, except the one in which its capital, Megara, was situated. This plain was called the "White Plain" (τὸ Λευκὸν κτῆσις, Schol. ad Hom. Od. v. 333, ed. Mai; Eust. M. s. a. Lαξανίας), and is the same as Cimolia (Κιμώλια), Diai. xi. 79), which produced the Cretan Cimolia or fuller's earth, and which Laskos erroneously regards as a place (Northern Greece, vol. ii. p. 413). The main range of Mt. Cithaeron runs from W. to E., forming the boundary between Boeotia and Attica; but it is also prolonged southwards along the shores of the Corinthian gulf, and gradually rises into a new chain, which stretches across Megara from W. to E., parallel to Mt. Cithaeron. This chain is highest on the western side, where it attains the height of 4217 feet (Paris), and gradually sinks down on the eastern side towards the Saronic gulf. On its western side it runs out into the promontory ARGOLIACUS (Αργολιακός, Ashch. Argali, 303, with Schol.), and also into those of OLMATI and HERAEUM in the Corinthian territory. (Co- rinthus, p. 655.) On its eastern side the island of Salamis and the surrounding rocks are only a continuation of this chain. The mountains were called GERANIAE in antiquity (λευκὸν κτῆσις, Thuc. i. 105; Paus. i. 40. § 7), and are said to have received this name because, in the deluge of Deucalion, Megara, the son of Zeus and a Sthenian nympha, was led by the cries of cranes (γαταριαῖ) to take refuge upon their summit. (Paus. i. c.) Towards the south the Geraneian mountains sink down into the plains of the Peloponnesus, while to the north of the Isthmus there rises another chain of mountains called the Oseian. Strabo (viii. p. 380) confines the Geraneia with the Oseia; and erroneously represents the latter extending as far as Bocotia and Cithaeron. His error has misled many modern writers, who, in consequence, speak of the Geraneia as a portion of the Oseia. ( Curtius, Peloponnesus, vol. i. p. 285.)

The Geraneian mountains are almost, if not entirely, calcareous. They form the true boundary of Northern Greece, and rise above the Isthmus of Corinth like a vast wall from sea to sea. Three roads lead across these mountains into Peloponnesus. One runs from the western coast of Megara, across the plains of Bocotia, and thence over the Acroorinthus to the Pelasgian coast, the latter extending as far as the Patrasian of Corinth, down to the Corinthian gulf. It was the road by which armies frequently marched from Peloponnesus into Northern Greece, but in ordinary intercourse was not much used on account of its length. The second road passes through the centre of the Geraneia, and is called the road of the great Dervenika from the narrow pass (Τόκος Δερβένηκα), which leads between two masses of rock, and where guards were stationed in Turkish times. According to Gell the top of this pass was anciently fortified with a wall. The same writer says that, from the top of this pass to Corinth the distance is 8 hours 37 minutes, and to Megara 2 hours 33 minutes. This road is now little used. The third road, which leads along the eastern coast of Megara, is the shortest way to Corinth and Bocotia, and therefore has been the chief line of communication between Peloponnesus and Northern Greece from the earliest times to the present day. This road, soon after leaving Megara, runs for several miles along a narrow ledge or terrace, cut in the rock half-way up the sides of the cliffs. On his right hand the traveller has the precipitous rock, while on his left it descends perpendicularly to the sea, which is 600 or 700 feet beneath him. The road, which is now narrow and impracticable for carriages, was made wide enough by the emperor Hadrian for two carriages to pass abreast. From the higher level the road descends to the brink of the water by a most rugged and precipitous path cut between walls of rock. This pass is the celebrated Scironian rocks of antiquity, now called Kabud-whalo, or bed ladder (Al Ξυρωπίδας ψρος, Strab. i. 391; Άλ Ξυρωπίδας and Al Ξυρωπίδας, Polyb. xvi. 16; Ξυρωπίδας κατά, Eur. Hippol. 1308; the road itself δούλα, Herod. viii. 71; Scironia saza, Plin. iv. 7. s. 11). According to a Megarian tradition, these rocks derived their name from Sciron, a polemarch of the Megarians, who was the first to make a footpath along the rocks (Paus. i. 44. § 6); but, according to the more common tradition, they were so called from the robber Sciron. Near the southern end of the pass, where the road
MEGARIS. [MEGARA.] MELAENAE. [ATTICA. p. 329, b.]

MEGARIS. [MEGARA.] MEGARIS, a small island on the coast of Campania, mentioned by Pliny (iii. 6. 12), who places it between Paestum and Neapolis; it can therefore be no other than the islet or rock now occupied by the Castel dell'Ovo. [NEAPOLIS.] It is evidently the same which is called by Statius Megaria. (Stat. Silv. ii. 2. 80.)

MEGIDDO. [JERUSAL. MAGDOM.] MEGIDDO VALLIS, the western part of the vast plain of Esdraelon, at the northern foot of Mount Carmel, watered by the Kishon. [ESDRAELON VALLIS V. CAMPA.] [G. W.]

MEGISTE (MEGISTH), an island off the coast of Lycia, opposite to Antiphellus. It contained a town which, if the reading in Strabo (xiv. p. 666) be correct, was called Cisthene (KOSTHYNH), but had perished before the time of Pliny (v. 33). There was also an excellent harbour, which appears to have been capable of containing a whole fleet. (Liv. xxxviii. 22; comp. Steph. B. s. v., who calls the town Megistia; Ptole. v. 2. § 5; Scylax, p. 393.) The island, which derived its name from the fact that it is the largest of a group, is now called Kasteloryzos, or Castel Rosso. The island seems to have been colonised by the Rhodians, or at least to have been in their possessions, for inscriptions found there are composed in the Doric dialect. There are but few remains of ancient buildings. (Leca, Asia Minor, p. 184; Fellows, Lyca, pp. 187 sq. [L. B.])

MEGISSTUS. [MACEDON.] MELACARMEN (Amm. Mar. xviii. 6. 10; Melakarmon, Theophyl. Sicomo. i. 13, ed. Bonn.), a small place in Mesopotamia, mentioned by Ammianus and Theophylact. It appears to have been at no great distance from Amidia. Ammianus states that it derived its name from certain cold springs which were there. (Cl. Böcking, Notit. Dugiêa, p. 418.)

MELICHUS. [ACHAIA. p. 13, b.]

MELA or MELLA, a river of Gallia Transpadana, still called the Meda, which rises in the Alpes, flows through the Vad Tirossum, anciently the residence of the Triumpilini, enters the plain of Lombardy near Brixia, and falls into the Olius (Oglio) more than 20 miles below that city. Curtisius speaks of it as flowing through the city of Brixia, but this is an inaccuracy or a poetical license, as it passes, in fact, about a mile to the W. of it. [BRIXIA.] Both he and Virgil describe it as a placid and winding stream. (Casull. livil. 33.; Virg. G. iv. 278; Philargyr. ad loc.) [E. H. B.]

MELAENAE, a town of the Samnites, mentioned only by Livy (xxiv. 20), among the towns of the Caninde Samnites which were taken by Fabius in n. c. 214. The same author elsewhere (xxvii. 1) mentions a town of the Samnites which he calls Mels, and which was not taken till n. c. 210, by Marcellus. Nevertheless, it is probable that the same place is meant in both cases, but we have no clue to its position.

2. A town in the neighbourhood of Locri in Bruttium, mentioned by Teneaydides (v. 5), but otherwise wholly unknown. [LOCAL.] [E. H. B.]

MELAENAE (MELAONA). 1. A promontory of Ionia, forming the north-western point of the peninsula which is traversed by Mount Mimas. It was celebrated in ancient times for its quarries of millstone. (Sthan. xiv. 644.) It is possible that this promontory, which is now called Kara-Barasa (the Black Cape), may be the same as the one called by Pliny (v. 31) Corynæum Promontorium, from the town of Coryne, situated at the southern extremity of Mount Mimas.

3. A promontory of Bithynia, on the right hand on sailing through the Bosphorus into the Exine, between the rivers Rhdes and Ariane. (Apollon. Rhod. ii. 651; Orph. Argos. 716; Arist. Perip. ii. 13; Marcar. p. 69.) In the anonymous Peripus of the Exine (p. 2), it is called Kallonéma, and Ptolemy (v. 1. § 5) calls it simply Bithynia Boreos. Its modern name is Tautili.

3. The north-western promontory of the island of Chios (Strab. xiv. p. 643), now called Cape S. Nicol. [L. B.]

MELAENAE (MELENAI). [ATTICA. p. 329, b.]

MELAENAE or MELAENAE (MELENAI), a town of Arcadia, in the territory of Heraea, and on the road from Heraea to Megalopolis. It was distant 40 stadia from Buphagia. Panassius says that it was founded by Melanes, a son of Lycurgus, but that it was deserted in his time and overflowed with water. The ruins of Melanesian lie 4 or 5 miles eastward of Heraea, between the villages Kôkora and Káboros, where are the

[Image -5x0 to 400x652]
MELANIBAUM.

MELANIPPE or MELANIPPIUM (Μελανίππη or Μελανιππίου), a small town on the coast of Lycia, on the western slope of Mount Phœnicus, about 30 stadia from Cape Hieron, and 60 stadia south of Gage, of which Leake (Aia Minor, p. 185) believes it to have been the port town. (Inact. Fragm. 247; Steph. B. s. c., who erroneously calls it a river; Quint. Smyrn. iii. 328; Stadicius, Mar. N. M. §§ 310, 211.) Fellows (Diag. in Lycia, p. 218) found a few tombs cut out of the cliffs of the neighbourhood. [L. S.]

MELANOGASTRUL. [GAETULLA.]

MELANTIAS (Μελαντίας), a small river on the north coast of Pontus, forming the boundary between Pontus Polemonianus and Cappadocia, and flowing into the Exine a little to the east of Cotyora. (Plin. H. N. vi. 4; Arrian, Perip. p. 17; Anonymous, Perip. p. 12; Tab. Peut., where it is called Melantrus.) It is probably the same river as that now bearing the name of Melas Ismak. (Hamilton, Remark., i. p. 267.)

MELANTIAS (Μελαντιας), a village of Thrace, on the river Arythus, and on the road from Heraclea to Byzantium, 18 miles from the latter. (It. Ant. pp. 138, 320, 323, 332; Ammian. xxii. 11; Agath. v. 158.)

MELANTII SCOPULI (Μελαντείοι σχοπολοί), some rocks on the Aegaean sea, where Apollo appeared to the Argonauts, probably lay between Ischia and Myconus. (Strab. xiv. p. 636; Apoll. Rhod. iv. 1707; Syl. p. 55; Hesych. a. s. v.; Apollod. i. 9. § 26; Stadicius §§ 259, 270.)

MELAS (Μέλας), the name of several rivers, so called from the dark colour of their water.

1. A small river of Arcadia or Achaea, described by Diodorus, is to be found in the environs of Mount Ennione. (Dio. Per. 416; Callim. in Jov. 32.) Strabo (vii. p. 386) confounds it with the Peirus or Pierus in Achaea; but the reading is probably corrupt. [Achæia, p. 14, a.]

2. A river of Boeotia. [Borotia, p. 413, a.]

3. A river of Mælis, which in the time of Herodotus flowed into the Maliac gulf, at the distance of 5 stadia from Trachis, but now called the Maliac Neura, and falls into the Sperchius, after uniting its waters with the Urgo (Ydros), which also used to flow in ancient times into the Maliac gulf. (Herod. vii. 198; Strab. x. p. 428; Liv. xxxii. 22; Leake, Northern Greece, vol. ii. p. 26.)

5. A river of Thrace, now called Saldattii or Schekher-Su, falling into a deep bay of the same name (Μέλας κόλπος), which is bounded on the east by the shore of the Thracian Chersonesus. The modern name of the bay is the gulf of Saros. (Herc. vii. 56, 195; Strab. vi. p. 351; Liv. xxxiii. 40; Ptolem. iii. 11. §§ 1, 5; Mel. ii. 1; Plin. iv. 11. a. 18.)

MELAS (Μέλας). 1. A small river of Cappadocia, which had its sources on Mount Aegaeus (Ptol. v. 6. § 8), and flowed in a north-western direction past the town of Masaças, frequently over-flowing its banks and forming marshes. (Strab. xii. p. 539; &c.) It is emptied itself into the river Haly, opposite the town of Siva. (Strabo.) erronously describes the Melas as a tributary of the Euphrates, as has been shown by Hamilton in the Journal of the Geogr. Society, vol. viii. p. 149 (comp. his Reseurches, ii. p. 259, &c.). The river still bears a
MELAS SINUS.

2. A navigable river in Pamphylia, flowing in a southern direction from Mount Taurus towards the sea, into which it emptied itself 50 stadia to the east of Side. (Plin. v. 22; Strab. xiv. p. 667; Paus. viii. 28. § 2; Mela, i. 14; Zon. v. 16, vi. 3; Stad. Mar. Magn. §§ 193, 194.) Its modern name is Menagat-Sa. (Leake, Asia Minor, p. 196.)

3. A small river in Pontus Polemoniacus, in the country of the Macrones. (Plin. v. 4.) [L. S.]

MELAS SINUS. [MELA. No. 5.]

MELDI (Mélias, Ptol. ii. 8. § 15), a people of Gallia Celtica or Lugdunensis in Ptolemy's time, whose chief place was Latinum; but the position which Ptolemy assigns to the Medae and to Latinum is very incorrect, if the Meldi are properly placed as neighbours of the Parisii and on the Matrona (Marne). Strabo is not clearer. He says (v. 194. 4.):

"On both sides of the Seine there are the Parisii, who possess an island in the river and a city Lutetia, and sailing along the Ocean these;" by which he perhaps means only the Locris, but he might mean to say that the Medae were on the Ocean. Pliny (v. 18) mentions in Lugdunensis Gallia "Meli Liber, Parisii, Trecessae." From all this we may infer that the Meldi were near the Parisii; but we only obtain a certain result as to their position from that of Latinum (Latinum) and other evidence. Gregory of Tours speaks of the "Comitatus Medmilium:" the "territorium Meldicum" is mentioned in the Gesta of Dagobert I.; and in the capitularies of Charlemagne the "Meliacus Pagus" is placed between the "Paissiacus" and "Miludensis," or the Pagus of Melitodunum (Melès), and as the Meliaca occupies the space between the two other Pagi, it must comprise the diocese of Meaux. Thus we obtain with certainty the position of the Meldi. (D'Anville, Notice, etc.)

Cæsar (B. G. v. 5) mentions the Meldi once; and the passage has caused great difficulty. The name Meldi in Cæsar's text is not certain. The MSS. have Medi, Melui, Hedui, Meldi, and Belgae. Cæsar, intending to invade Britannia a second time, endeavoured to make sure of his means to get ships built in the winter of a. c. 55—54. All his legions were in the country of the Belgae during this winter (B. G. iv. 38); and it seems a proper inference that all these ships were built in the country of the Belgae. When Cæsar in the spring of a. c. 54 came to the Portus Itius, he found all the ships there except sixty which were built in "Melidae." These ships being driven back by bad weather, had returned to the place from which they sailed. The wind which brought the other ships to the Portus Itius, which ships must have come from the south, would not suit ships that came from the north and east; and hence D'Anville justly concluded that these Meldi, whatever may be the true name, must have been north and east of Ilion. A resemblance of words led him to find the name of the Meldi in a place which he calls Meldicilia near Bruges. The true name of the place is Maldegem. There is a place on the Schelde about a league from Oudenaarde, named Melden, which under the Empire was a Roman station (Recueil d'Antiquités, etc. trouvées dans la Flandre, par M. J. de Batz). This is certainly not what he intended for the site of the Meldi; if that is the right name. "Belge" cannot be the true reading, because all the ships were built in the territory of the Belgae; and

Cæsar's remark about the sixty would have no meaning, if he spoke of them as built "in Belgia."

If we cannot fix the site of these Meldi, we can see that they are not the people on the Marne, Cæsar could have no reason for building vessels so far up the river. If he did build any on the Seine, he built them lower down. But it is clear that Cæsar does not mean any vessels built on the Seine, for he says that these sixty were driven back to the place from which they came; a remark which, if applied to ships built on the Seine, is without any meaning. Ubert (Gallien, p. 326) has made some objection to D'Anville's position of the Meldi, and his objections may have some weight; but his notion that Caesar's Meldi can be the Meldi on the Marne shows that he did not understand Caesar's text.

G. L.

MELDIA (Melidia), a town of Moesia Superior, on the road from Naisus to Sardica. (It. Ant. p. 135; It. Hier. p. 566.) [A. L.]

MELES (Mélin), a small river of Ionia, flowing close by the walls of Smyrna and discharging its waters into the Hermos gulf. (Strab. ii. 334, xiv. p. 646.) The little stream derives its celebrity from its connection with the legends about Homer, and from a report about the healing powers of its waters. There was a tradition that near the sources of the river Meles there was a cave in which Homer had composed his epic poems, whence he is sometimes called Meleagroperus. (Paus. vi. 5. § 6; Vit. Hom. 2; Stat. Silv. iii. 3. 60, 7. 33, Tibull. iv. 1. 200.) The belief in the healing power of its waters is attested by an inscription quoted by Arrudell (Asia Minor, vol. ii. p. 406) and Hamilton (Researches, etc. Appendix. No. 48). These circumstances are of some importance in identifying the river. It used to be supposed that a small, dirty, and muddy stream, flowing close by the modern town of Smyrna, was the same as the ancient Meles. But there is another stream, with bright and sparkling water, which rushes over its rocky bed near Bourenval, and is still celebrated for its agreeable and wholesome qualities. Travellers are now justly inclined to identify this river with the ancient Meles. This supposition is confirmed by our best trustworthy authorities. We are assured by ancient Smyrna, which was on the north of the bay, while new Smyrna was on the south of it, at a distance of 20 stadia from the former; the site of the ancient place is still marked by a few ruins; and close by them flows the clear stream which we must assume to be the ancient Meles. (Comp. Hom. Hymn. viii. 3; Ptol. v. 2. § 7; Steph. B. s. m. Melicahnomin, according to whom the river was also called Melates; Plin. v. 31; Hamilton, Researches, vol. i. p. 51, fol.)

L. S.

MELESSES, a people in the S. of Spain, upon whose confines was situated the rich city of Oringis, also called Aurinc. (Liv. xxviii. 3.) [AURINC.]

MELIBOCUS (Μελιβόκος), a mountain in the interior of Germany, about two days' journey from the Elbe, which the ancients called Melichus (Ptol. ii. 11. § 7). There can be little doubt that Melibocus is the ancient name for the Harz mountain, or the Thüringerwald, or for both. [L. S.]

MELIBOA, an island at the mouth of the Orontes in Syria, the sole authority for the existence of which appears to be a poetical myth of Oppianus. (Cyp. F. B. 11. 9, Soc. M. 22.) [MELIBOA. (Meliboea: Eth. Meliboeo.)

1. An ancient town of Magnesia in Thessaly, mentioned by Homer as one of the places subject to Philoctetes
MELITHEA

(II. i. 717). It was situated upon the sea-coast (Herod. vii. 188; Scylax, p. 25; Apoll. Rhod. i. 592), and is described by Livy (xlv. 13) as situated at the roots of Mt. Cass, and by Strabo (ix. p. 445) as lying in the gulf between Ossa and Pelium. Leech describes it near Agidis (Northern Greece, vol. iv. p. 414). Melibeos was taken and plundered by the Romans under Cn. Octavius, n. c. 168. (Livy xlv 46: Melibeos is also mentioned by Strab. ix. p. 456; Steph. B. s. v.; Mela, ii. 3; Plin. iv. 9, s. 16.)

The Melibeonian purple is said by Lucrutius (ii. 492) and Strabo (ix. 561) to have derived its name from this town. Many modern writers, however, suppose the name to have come from the small island Meliboea at the mouth of the Orontes in Syria; but there is no reason for this supposition, as the shellfish from which the purple dye is obtained is found in the present day off the coast of Thessaly.

2. A town of Histiaeotis in Thessaly, is conjectured by Leake to be represented by Neorodisa. (Livy xxvi. 13; Leake, Northern Greece, vol. iv. p. 536.)

MELINOEPHAGI (Μελινοεφάγοι), a people of Thrace upon the coast of the Euxine, near Salmydessus. (Xen. Anab. vii. 5. § 12; Theopomp. ap. Steph. B. s. v.) They are, perhaps, the same people as the Asti (Ἀστί) whom Strabo places in the same sea; p. 419. (via. 561.)

MELITA (Μέλιτα; Ed. Mar Laureis, Melitensis: Malta), an island in the Mediterranean sea, to the S. of Sicily, from the nearest part of which it is distant 47 geogr. miles, but 55 from cape Pachyam. Strabo gives this last distance as 88 miles, which is greatly overstated; while Pliny calls it 84 miles distant from Carthurus, which equally exceeds the truth. (Strab. vi. p. 277; Plin. iii. 8. s. 14.) The island is about 17 miles long, and between 9 and 10 in breadth, and is separated only by a narrow channel from the adjoining island of Gaulos, now Gozo. Notwithstanding its small extent, the opulence situation of Melita in the channel between Sicily and Africa, and the excellence of its harbours, must have early rendered it a place of importance as a commercial station, and it was occupied, probably of a very early period, by a Phoenician colony. (Diod. v. 12.) The date of this is wholly uncertain, and it is called by later writers for the most part a Carthaginian settlement (Scyl. p. 50. § 110; Steph. B. s. v.), which it certainly became in after times; but there can be no doubt that Diolorus is right in describing it as originally a Phoenician one, established by that people as an emporium and harbour of refuge during their long voyages towards the west. The same author tells us that in consequence of this commercial traffic, the colony rose rapidly to prosperity, which was increased by the industry of its inhabitants, who practised various kinds of manufactures with great success. (Diod. i. c.) But notwithstanding this account of its prosperity we have scarcely any knowledge of its history. The notice of it by Scylax as a Carthaginian colony, seems to prove that it had not in its day received a Greek settlement; and indeed there is no trace in history of its having ever fallen into the hands of the Greeks of Sicily, though its coins, as well as inscriptions, indicate that it received a strong tincture of Greek civilization; and at a later period it appears to have been in a great measure Hellenized. Some of these inscriptions point to a close connection with Syracuse in particular, but of the origin and nature of this we have no account.

(Boech, Corp. Isser. Gr. 5752, &c.) In the First Punic War we find Melita still in the hands of the Carthaginians; and though it was ravaged in n. c. 257 by a Roman fleet under Attius Regulus, it does not appear that it fell permanently into the hands of the Romans. At the outbreak of the Second Punic War it was held by a Carthaginian garrison under Hamilcar, the son of Gisco, who, however, surrendered the island to Tib. Sempronius, with a Roman fleet, n. c. 218 (Liv. xxi. 51); and from this time it continued without intermission subject to the Roman rule. It was annexed to the province of Sicily, and the government of the praetor of that island. During the period that the Mediterranean was so severely infested by the Cilician pirates, Melita was a favourite resort of those corsairs, who often made it their winter-quarters. (Cic. Verr. iv. 46, 47.) Notwithstanding this it appears to have been in the days of Cicero in a flourishing condition, and the great orator more than once during periods of civil disturbances entertained the project of retiring thither into a kind of voluntary exile. (Cic. ad Att. iii. 4, x, 7, 8, 9, &c.)

The inhabitants of Melita were at this period famous for their skill in manufacturing a kind of fine linen, or rather cotton, stuffs, which appear to have been in great request at Rome, and which are generally known under the name of "vestis Melitaica." (Cic. Verr. ii. 72, iv. 46; Diod. v. 12.) There is no doubt that these were manufactured from the cotton, which still forms the staple production of the island.

Melita is celebrated in sacred history as the scene of the shipwreck of St. Paul on his voyage to Rome, A.D. 60. (Act. Apost. xxviii.) The error of several earlier writers, who have transferred this to the Melita on the E. coast of the Adriatic (now Melico), has evidently arisen from the vague use of the name of the Adriatic, which is employed in the Acts of the Apostles (xxvi. 27), in the manner that was customary under the Roman Empire, as corresponding to the Ionian and Sicilian seas of geographers. (Adriaticum Mare.) The whole coast on which this mysterious island is supposed to have lain is studded with islands, and it is difficult to imagine that the Melita in question was not other than the modern Malta, where a bay called St. Paul's Bay is still pointed out by tradition as the landing-place of the Apostle. (The question is fully examined and discussed by Mr. J. Smith, in his Voyage and Shipwreck of St. Paul, 5vo. Lond. 1848: also in Goebear's and Howson's Life of St. Paul, vol. ii. p. 365, &c.)

No other mention is found of Melita during the Roman Empire, except in the geographers and the Maritime Itinerary, in which last the name already appears corrupted into its modern form of Malta. (Strab. vi. p. 277; Plin. iii. 8. s. 13; Mel. ii. 7. § 18; Ptol. iv. 3. § 37; Egin. Macedonia. p. 816; Sil. Italic. xiv. 361.) After the fall of the Roman Empire it fell for a time into the hands of the Vandals; but was recovered from them by Belisarius in A.D. 533 (Procop. B. V. i. 14), and appears to have continued from this time subject to the Byzantine empire, until it was conquered by the Arabs in A.D. 870.

The present population is principally derived from an Arab stock; but it is probable that the Arab conquerors here, as well as in Africa, have been to a great extent amalgamated with the previously existing Punic population. The inscriptions discovered at Malta sufficiently prove that the Greek language was at one time in ha-
MELITA.

Some writers derived these from the Melita in the Adriatic. The breed still exists in Malta. (Strab. vi. p. 277; Athen. xii. p. 518; Plin. iii. 26. s. 30.)

The freedom from venomous reptiles which Malta enjoys, in common with many other secluded islands, is ascribed by the inhabitants to the miraculous intervention of St. Paul. (Quintino, l. c. p. 117.)

[Ref. B.]

MELITÆA, (Melita, Scyl. p. 8; Steph. B. Agath. i. 5; Plin. iii. 30; Justin. Anton. 1.; Ptolemy, 1.; Malta, Geogr. Rav.), one of the Liburnian group of islands. It was so called like its namesake Melita or Malta, from the excellence of its honey; and some erroneously have claimed for it the honour of being the island on which St. Paul was wrecked. (See preceding article.)

It is the same as the long narrow and hilly island of Meleda, lying about half-way between Currà and Ragusa, remarkable in modern times for the singular phenomenon of subterranean noises called "Detonazioni di Meleda," the cause of which has never been attributed to the region of volcanic activity which is supposed to underlie the whole of this coast. (Comp. Daubeney, On Volcanoes, p. 333.)

The site of a palace which was built by Agelaius of Cilicia, the father of Oppianus, the author of the "Halleucites," when banished to the island in the time of Septimius Severus, is still shown. (Wilkinson, Deltamia and Menia. 1.; Ptolemy, p. 265.)

[Ref. B. J.]

MELITÆA, or MELITÆA (Melitaea, Strab., Ptol. Ph. B.; Melitæa, Polyb.; Melitæa, Thuc. Ech. Melitaiæs, Melitæa), an ancient town of Phthiotis in Thessaly, situated near the river Enipeus, at the distance of 10 stadia from the town Hellas. (Strab. iv. p. 432.) The inhabitants of Melitaea affirmed that their town was anciently called Pyrrha, and they showed in the market-place the tomb of Hellen, the son of Deucalion and Pyrrha, (Strab. l. c.)

When Brasidas was marching through Thessaly to Macedonia, his Thessalian friends met him at Melitae in order to escort him (Thuc. iv. 78); and we learn from this narrative that the town was one day's march from Pharsalus, which Brasidas proceeded on leaving the former place. In the Lamic war the allies left their baggage at Melitae, when they proceeded to attack Leonnatus. (Diod. xviii. 15.) Subsequently Melitae was in the hands of the Aetolians. Philip attempted to take it, but he did not succeed, in consequence of his scaling-ladders being too short. (Polyb. v. 97, i. 18.)

Melitæa is also mentioned by Scaliz, p. 24; Ephor. ap. Steph. B. s. e.; Dicaearch. p. 21; Plin. iv. 9. s. 16; Ptol. iii. 13. § 46, who erroneously calls it Melitana. Leake identifies it with the ruins of an ancient fortress situated upon a lofty hill on the left bank of the Enipeus, at the foot of which stands the small village of Kanali. (Northern Greece, vol. iv. p. 469, seq.)

MELITÆA (Melitæa). 1. A lake of Acarnania. (Acarnania, p. 9.)

2. A demus in the city of Athina. (Athenea, p. 301.)

MELITENÆ (Melitana, Ptol. vi. 3, § 3), the name given by Ptolemy to that part of Susiana which lay along the banks of the Tigris. (V.)

MELITENÆ (Melitana, Plin. Mart. viii. 37), a city in the easternmost part of Cappadocia, and the capital of the district called Melitene. It appears that the time of Strabo (xii. p. 537) neither
MELLONUS. this nor any other town existed in that district, Pliny (vi. 3), on the other hand, speaks of Melitone as a town built by the fabulous queen Semirramis of Assyria; both accounts may be reconciled by the supposition that the site of the town was formerly occupied by some castle or fort, as we know to have existed in that country from early times. (Strab. xii. p. 557.) The town was situated on the banks of a small tributary of the Euphrates, which was not far distant from Melitone and in a very salubrious district. During the first century of the Christian era, the town was not of much importance (Tac. Ann. x. 26); but Trajan raised it to the rank of a great city (Procop. de Aedif. iii. 4), and thenceforth it became a central point to which several roads converged. (It. Ant. pp. 157, 209, 211, 215.) The emperors Anastasius and Justinian also embellished the place and surrounded it with new walls. Ever since the reign of Titus, Melitone had been the station of the famous Christian Legio xii. fulminata; and after the division of Armenia into two provinces, it became the capital of Armenia Secunda. (Hieroc. p. 703; comp. Pol. v. 7. § 5, viii. 17. § 88; Dion Cass. iv. 23; Steph. B. s. v.; Plut. Anton. 4; Istit. Hist. Eccles. v. § 5.) In A.D. 577, the Romans gained a great victory over the Persian Chosroes I. near Melitone; and the place is frequently mentioned by the Byzantine writers. But at present it is in ruins, though it still bears its ancient name in the form of Maleita.

[2. S.]

MELITONUS, a station on the Euphrates, which the Jerusalem Itinerary places between Tarsus, Nicaea and Grunde, at 13 M. P. from the former. Its position must be sought for not far from Tellinina. Tafel (de Viae Egnat. Part. Occ. p. 40) thinks that the name should be written Melittoues. [E. B. J.]

MELITTA (Μέλιττα, Μέλισσα, Hecat. Fr. 297, ed. Kl.); one of the five factories which Hann. (p. 2, ed. Hudson) placed between Prom. Soloeis and the river Litus, on the W. coast of Africa; probably near the Wad Medes. (Comp. Mem. de l'Acad. des Insr. vol. xxvi. p. 41.) [E. B. J.]

MELISSIGARA (Μέλισσιγαρά, Ariad. Peripl. p. 80), a commercial entrepôt on the southern coast of Hindostan, apparently nearly opposite to Ceylon. It probably denotes the same place which Ptolemy records as an island under the name of Melissigaria or Milizigeria. (Μέλισσιγαρα, Μελισσιγερία, vii. 1. § 95.) [V.]

MELLA. [Mela.]

MELLARIA. 1. (Μελλάρια, Plut. Sertor. 12; Mellaria, Mela, ii. § 9; Plin. iii. 1. a. 3; It. Anton. p. 407; Geogr. Rav. iv. 12; Mela, Strab. iii. p. 146; in Kramer's ed. the old ed. have Mellaria; also Mèlliaria, Marcian, p. 39; Mannelia, Plut. ii. 4. § 6; Μελλάρια, Steph. B. s. v. Βελλάριον), a town of the Bastuli (Plot. l. c.), on the road between Calpe and Belon (It. Anton. l. c.), possessing establishments for salting fish (Strab. l. c.). It probably stood between Turifia and Val de Vacca, or was on the site of Val de Vacca itself. (Mem. de l'Acad. des Insr. xxx. 1. p. 107; Philos. Transactions, xxx. p. 920.)

2. A town in the interior of Hispania Baetica, belonging to the conventus Cordubensis, and on the road from Corduba to Emerita, probably the modern Fuente de la Ovejuna. (Plin. iii. 1. a. 3; It. Anton. p. 415, with Wesseling's note; Gruter, Insr. p. 321. 10; Morales, Ant. p. 19; Flores, Exp. Sagra. ix. p. 90.)

MELOS. MELLISBURGIS, a place in the road from Thessalonica to Apollonia of Mygdonia, which occurs in two of the Itineraries (Istn. Anton.; Pesc. Tab.), at a distance of 20 M. F. from Thessalonica. It still preserves its ancient name in the usual Roman form of Mellisburgus, and is inhabited by honey-makers, as the word implies. (Leake, North Greece, vol. iii. p. 461; Tafel, de Viae Egnat. Part. Orient. p. 42.)

MELOSSEUM or MELLOSECTUM, as it is also read, in Gallia Narbonensis, is placed in the Table on a route from Alpis Cottia (Monte Genove) to Vienna (Vienne). It is the next place before Catorissium [Catorissum], which lies between it and Cularo (Curnadum). Melosseum may be at or near the Bourg d'Ossoue. [G. L.]

MELOBOETEIRA (Μελοβοητείρα), a name which was applied to Edessa in Macedonia. (Steph. B. s. v. Abral.) [E. B. J.]

MELODUNUM (Μέλοδονομ), a town of the Senones in Gallia (B. G. vii. 58), on an island in the Sequana (Seine). Though the termination den seems originally to have signified a hill or height, it became a part of the name of some towns, which like Melos, must have been on a rock in the sea. In the Antonine Itinerary Melodunum appears under the name Mecleum, and in the Table in the form Metegenum. The distance from Lutetia in the Itins. is 17 or 18 Gallic leagues. From Melodunum to Condaste (Montereau-sur-Yonne) is 15 Gallic leagues [Condate, No. 2]. The old Celtic town on the island was replaced by a castle, of which there are some remains. The present town of Melos is on the right bank of the Seine, about 28 miles from Paris by the road.

In the text of Caesar (B. G. vii. 58) there is a reading "qui Meltosedo," where the common reading is "qui a Melidonu." The same variation occurs in c. 60; and in c. 61 "Meliodesum versus" appears in the received reading. A careful study of Caesar will satisfy any person that Melen is meant in all these passages, whether the true reading in Caesar's text is Melodunum, Meliodusum, or something else. Melodunum comes nearest to the modern form. Walskenset places Meltosedo at the confluence of the Seine and Marsne. The variety in the reading of this name also appears in the Itins., and the conjecture given by the Itins. is not more unlikely than the name Mecleum. The Seine (B. G. vii. 58, &c.) is explained in the article Lutetia. [G. L.]

MELOS (Μήλος : Ειθ. Μήλος : Μήλο), an island in the Aegean sea, and the most south-westerly of the Cyclades, whence it was called Zephyria by Aristotle (ap. Plin. iv. 12. s. 23; comp. Steph. B. s. v.), and was even placed by Strabo in the Crete sea (x. p. 484). The latter writer says (l. c.) that Melos was 700 stadias from the promontory Dictynnaem in Crete, and the same distance from the promontory Scylaeum in Argolis. The island is ir. reality 70 miles north of the coast of Crete, and 65 miles east of the coast of Peloponnese. It is about 14 miles in length and 8 in breadth. Pliny and other descriptive writers make it a "nauticaler rotundissima." (Plin. l. c.; Solin. c. 11; Isidor. Orig. xiv. 6;) but it more resembles the form of a bow. On the northern side there is a deep bay, which forms an excellent harbour. The island is said to have borne several names in more ancient times. Besides that of Zephyria given to it by Aristotle, it was also called Membris by Aristides, Mimalis by Callimachus, Siphis and Acrton by
MELOS.

Heracleides (Plin. l.c.), and also Byblis by Stephanes B. (s. v. Μήλος; the latter name is said to have been derived from its receiving a colony from the town of Byblis in Phoenicia. Other writers mention this Phoenician colony, and Festus derives the name of Melos from the founder of the colony. (Fest. s. v. Melos.) Some connect the name with μήλος, an apple, on account of the round shape of the island. The Phoenician settlement is probable; but we know that it was colonised at an early period by the Lacedaemonians, and that it continued to be inhabited by Dorians down to the time of the Peloponnesian War. According to the Melians themselves, the Lacedaemonians settled in the island 700 years before this war. (Herod. viii. 46; Thuc. v. 84, 112.) In the Peloponnesian War, the Melians remained faithful to their mother city. In B.C. 436, the Athenians made an unsuccessful attempt upon the island; but in 416 they captured the principal town, put all the adult males to death, sold the women and children into slavery, and colonised the island afresh by 500 Athenians. (Thuc. v. 84—112; Diod. s.c. iv. 90, s. c. l.c.)

Melos is now called Mylo. It is mountainous and of volcanic origin. Its warm springs, which are now used for bathing, are mentioned in ancient times. (Plin. xxxi. 6. a. 23; Athen. ii. p. 43.) Pliny says that the best sulphur was found in Melos (xxxiv. 15. a. 50); and among other products of the island he enumerates alum (xxxiv. 15. a. 53), pumice-stone (xxxiv. 21. a. 49), and a bright colour, called geolium pigmentum (xxxiv. 6. a. 19; comp. Vitruv. vii. 7; Diosc. v. 180; Plaut. Most. i. 3. 107). The mines of alum are on the eastern side of the island, near a height which emits smoke, and has every appearance of having been a volcano. In the south-western half of the island, the mountains are more rugged and lofty; the highest summit bears the name of St. Elias. The island produces good wine and olives, but there is not much care taken in the cultivation of the vine. In antiquity Melos was celebrated for its kites. (Athen. l. p. 4.) One of its greatest deficiencies is want of water. The inhabitants of Kastron depend almost exclusively upon cisterns; and the only spring in the vicinity is to the westward of the ancient city, on the sea-side, where is a chapel of St. Nicholas.

In ancient times the chief town in the island was called Melos. It stood upon the great harbour. It is celebrated as the birthplace of Diogenes, surnamed the Atheist. [Dict. of Biogr. art. DIAGONÉS.] The town appears to have been small, since it is called by Thucydides a χωρίον, not νῆσος; and of the 5000 men who originally composed the Athenian expedition, the smaller half was sufficient to besiege the place. (Thuc. v. 84, 114.) The present capital of Melos is named Kastrom, and is situated upon a steep hill above the harbour. The former capital was in the interior, and was deserted on account of its unhealthy situation. Between Kastrom and the northern shore of the harbour are the ruins of the ancient town, extending down to the water-side. On the highest part, which is immediately overlooked by the village, are some remains of polygonal walls, and others of regular masonry with round towers. The western wall of the city is traceable all the way down the hill from the summit to the sea: on the east it followed the ridge of some cliffs, but some foundations remain only in a few places” (Laseke). Within the enclosure there is a small hill on which stood a church of St. Elias and a small monastery, and which perhaps served in antiquity as a kind of acropolis. Here several architectural fragments have been found. On the south-eastern side of the hill are some seats cut out of the rock in a semi-circular form, of which only four remained uncovered when Ross visited the island in 1843. They appear to have been the upper seats of a small theatre or odeum, which was perhaps more ancient than the large theatre mentioned below. In front of these seats is a quadrangular foundation of regular masonry, of which in one part four or five courses remain. About 40 steps eastward of this foundation are the remains of a temple or some other public building, consisting of fragments of a Corinthian capital and part of a corinice. About a hundred steps SW. is the larger theatre, which was cleared from its rubbish in 1836 by the king of Bavaria, then Crown Prince. The nine lowest rows of seats, of white marble, are for the most part still remaining, but the theatre, when entire, extended far up the hill. From the character of its architecture, it may safely be ascribed to the Roman period. There are also other remains of the ancient town worthy of notice.

Eastward of the ancient city is a village named Τριφυλία, from the tombs with which the hill is pierced in every part. Eastward of Τριφυλία is a narrow valley sloping to the sea, which also contains several sepulchral excavations: Some of them consist of two chambers, and contain niches for several bodies. There are also tombs in other parts of the island. In these tombs many works of art and other objects have been discovered; painted vases, gold ornaments, arms, and utensils of various kinds. Some very interesting Christian catacombs have also been discovered at Melos, of which Ross has given a description. (Tournefort, Voyage, vol. i. p. 114, Eng. tr.; Tavernier, Voyage, vol. i. p. 435; Olivier, Voyage, vol. ii. p. 317; Leake, Northern Greece, vol. iii. p. 77; Froekech, Descriptions, vol. i. p. 531, vol. ii. p. 200; Fiebled, Reise, vol. ii. p. 369; Ross, Reisen auf den Griechischen Inseln, vol. iii. pp. 3, 145.)

COIN OF MELOS.

MELOS (Μήλος; Eub. Μήλος), a village of Acrania, mentioned only by Stephanus B. (s. v.)

MELOTIS, a district of Triphyllia in Epirus. (Liv. xxxii. 13.) The names of Triphyllia and Melotis, in connection with Epirus, occur only in Livy. Leake supposes that Melotis, which name indicates a sheep-feeding district, was probably the pastoral highlands around Oasania, on the borders of Molossia and Atthinania. (Northern Greece, vol. iv. pp. 101, 119.)

MELEPÈA (Μέλεπέα), a village in Arcadia, situated upon Mt. Nomia, which is a portion of Mount Lycaeus, so called because Pan is said to have discovered the melody (μήλος) of the syrinx. (Paus. viii. 36. § 11.)

MELEPS, a small river of Lucania, flowing into the Tyrrenian sea, near the promontory of Pa
LINUMUS (Plin. iii. 5. s. 10). It is now called the Molpa.

MELIS or MELIS (Μηλίς, Μήλος), a small river of Latium, falling into the Liris (Garigliano), about 4 miles below its junction with the Tevere (Sacco). It crossed the Via Latina about 4 miles from Aquinum, though Strabo erroneously speaks of it as flowing by that city. It is a still greater mistake that he calls it a great river (\textit{ποταμός μεγάς}, Strab. v. p. 237), for it is in reality a very insignificant stream: but the text of Strabo is, in this case, very corrupt, and perhaps the error is not that of the author. The name appears in the Tabula, under the corrupt form Melef, for which we should probably read Ad Melperm. (Tab. Peut.)

MELFUM, a city of Cisalpine Gaul, of which the only record preserved to us is that of its capture and destruction by the combined forces of the Insulians, Boians, and Senones, which took place according to Cornelius Nepos on the same day with the taking of Veii by Camillus. B.c. 396 (Corn. Nep. ap. Plin. iii. 17. a. 21). He calls it a very wealthy city ("opulentia praeclara"), and it therefore seems to have been one of the principal of the Etruscan settlements in this part of Italy. All trace of it subsequently disappears, and its site is a matter of more conjecture.

MELSIAGUM, a lake or marsh in Germany (Mela, iii. § 3), the site of which is unknown; it is perhaps one of the lakes of Mecklenburg. [L.S.]

MELSUS (Μέιλσος), a small river of Hispania Tarraconensis, flowing into the sea through the territory of the Astures, not far from the city Neoga (Neoja) of modern Morocco. (Strab. iii. p. 167; Flor. Eng. Sog. xv. p. 47.)

MEMBRIANUS. [ΑΜΑΦΡΗ]

MEMBRESA (Μεμμερέσα), a town of the proconsular province, the position of which is fixed by Procopius (B. V. ii. 15) at 350 stadia from Carthage. Membrissa (Membrissa, Peut. Tab.), as it is called in the Antonine itinerary, was a station between Munti and Smyrne, and a place of some importance in ecclesiastical history. (Morcell. Afr. Christ. vol. i. p. 223.)

MEMINI. [CARPENTORACTE.]

MEMNONENSES (Μεμνονείς), a tribe of Aethiopians, who dwelt between the Nile and the Astartas, north of the peninsula of Meroe. (Piol. iv. 8. § 114.) The name was not an indigeneous one, but given by the Greek geographers to one of the Nubian tribes, among whom they placed their legend of Memnon, son of Aurora. [W.B.D.]

MEMPHIS (Μεμφίς, Herod. ii. 99, 114, 136, 154; Polyb. v. 61; Diod. i. 50, seq.; Steph. B. s. v.; Euth. Μεμφητήριον), the Noah of the Old Testament (Isaiah, xix. 13; Jeremiah. ii. 16, xiv. 1), was the first capital of the entire kingdom of Egypt, after the Deltaic monarchy at Heliopolis was united to the Thebaid capital at This or Abydos. It stood on the western bank of the Nile, 15 miles S. of Cæsarea, in lat. 30° 6' N.

The foundation of Memphis belongs to the very earliest age of Egyptian history. It is ascribed (1) to Menes, the first mortal king; (2) to Uchoreus, a monarch of a later dynasty; and (3) to Apis, an Astartiac Epaphus. (Hygin. Fab. 149.) But the two latter may be disapproved as resting on very doubtful authority. (Diod. i. 51.) The only certainty is that Memphis was of remote antiquity, as indeed is implied in the ascription of its origin to Menes, and that it was the first capital of the united kingdom of Upper and Lower Egypt. The motives which induced its founder to select such a site for his capital are obvious. Not far removed from the bifurcation of the Nile at Cæsarea, it commanded the S. entrance to the Delta, while it was nearer to the Thebaid than any of the Deltaic provincial cities of importance, Heliopolis, Bubastis, and Saïs. It is also clear why he placed it on the western bank of the Nile. His kingdom had little to apprehend from the eastern. Not far removed from the frontier of Asyrticus was always exposed to attack from Arabia, Assyria, and Persia, nor indeed was it beyond the reach of the Scythians. (Herod. i. 105.)

It was important, therefore, to make the Nile a barrier of the city; and this was effected by placing Memphis W. of it. Before, however, Menes could lay the foundations of his capital, an artificial area was to be provided for them. The Nile, at that remote period, seems to have had a double bifurcation; one at the head of the Delta, the other above the site of Memphis, and parallel with the Arisinoe Nome. Of the branches of its southern fork, the western and the wider of the two ran at the foot of the Libyan hills; the eastern and lower was the present main stream. Between them the plain, though reservoirs and meadows existed, was a matter of more marshes, caused by their periodical overflow. This plain Menes chose for the area of Memphis. He began by constructing an embankment about 100 stadia S. of its site, that diverted the main body of the water into the eastern arm; and the marshes he drained off into two principal lakes, one to N., the other to W. of Memphis, which thus, on every side but the W. was surrounded by water.

The area of Memphis, according to Diodorus (i. 50), occupied a circuit of 150 stadia, or at least 15 miles. This space, doubtless, included much open ground, laid out in gardens, as well as the courts required for the barracks of the garrison, in the quarter denominated "the White Castle," and which was successively occupied, under the Pharaohs, by the native militia; in the reign of Ptolemy I. (281-279) it was reinaugurated (279-275) by Phoenician and Greek mercenaries; by the Persians, under the invasion of Cambyses (n. c. 524); and finally by the Macedonian and Roman troops. For although Memphis was not always a royal residence, it retained always two features of a metropolis: (1) it was the seat of the central garrison, at least until Alexander was founded; and (2) its necropolis—the pyramids—was the tomb of the kings of every native dynasty.

The mound which surmounted the inundations of the Nile was so essential to the very existence of Memphis, that even the Egyptians, who ravaged or neglected all other great works of the country, annually repaired it. (Herod. ii. 99.) The climate was of remarkable salubrity; the soil was extremely productive; and the prospect from its walls attracted the notice of the Greeks and Romans, who seldom cared much for the picturesque. Diodorus (i. 96) mentions its bright green meadows, intersected by canals, paven with the lotus-flower. Phiny (xxii. 10. xvi. 21) speaks of trees of such girth that three men with extended arms could not span them. Martial (vi. 80) says that the "motu viro Memphiticus" brought roses in winter to Rome (comp. Lucan, Pharsal. iv. 135); and Atheneus (i. 20. p. 11) celebrates its teeming soil and its wine. (Comp. Joseph. Antiq. ii. 14. § 4; Horace, Od. iii. 26. 10.) And these natural advantages were seconded by its
MEMPHIS. 325

arch over the Assyrians was commemorated by a statue in the temple of Ptah—Sethos holding in his hand a mouse, the symbol of destruction. (Herod. iii. 52; comp. Aelian, H. Anim. vi. 41; Strab. xiii. p. 604; Herod. ii. 141.) Under Psammetichus (c. 670) the Phoenician soldiers, who had aided him in gaining the crown, were established by him in the Tyrian camp,—at least this seems to be the meaning of Herodotus (ii. 112)—but were removed by his successor Amasis into the capital itself, and into that quarter of it called the "White Castle."

Of all the Egyptian cities, Memphis suffered the most severely from the cruelty and fanaticism of the Persians. Its populace, excited by the defeat of the Egyptian army at Pelusium, put to death the Persian herald who summoned the Memphians to surrender. The vengeance of the conqueror is relater by Herodotus. Memphis became the headquarters of a Persian garrison; and Cambyses, on his return from his unfortunate expedition against Aethiopia, was more than ever incensed against the vanquished. Psammetichus, the last of the Pharaohs, was compelled to put himself in safety (Herod. iii. 15); Cambyses slew the god Apis with his own hand, and massacred his priests; he profaned the Temple of Ptah and burned the images of the Cabeiri (id. ib. 32). Under Darius Aegypt was mildly governed, and his moderation was shown by his acquiescence in the high-priest's refusal to permit the erection of a statue to him at Memphis. (Herod. ii. 110; Diodor. i. 58.) The next important notice of this city is in the reign of Artaxerxes I. Inaros, son of Psammetichus, had revolted from Persia, and called in the aid of the Athenians. (Diod. xi. 71.) The Persians were defeated at Paphymis in the Delta (ib. 74; comp. Mannert, Geogr. x. p. 591), fled to Memphis, and were besieged in the "White Castle." (Thucyd. i. 108—109.) The siege lasted for more than a year (Diodor. ii. 75), and was at length raised (Ctesias, c. 33), and the authority of the king of Persia restored. Under Nectanebus I, the first monarch of the Scebeniuny dynasty, Memphis expelled its Persian garrison, nor did it return to its allegiance until Nectanebus II, the last representative of that dynasty, was driven into Aethiopia. (Atheneus, iv. p. 150.) From this period Memphis loses its metropolitan importance, and sinks to the level of the chief provincial city of Egypt.

If, as Diodorus remarks (i. 51), Thebes surpassed Memphis in the grandeur of its temples, the latter city was more remarkable for the number of its deities and sacred buildings, and for its sacred and commercial edifices. It might, indeed, as regards its shrines, be not improperly termed the Pantheon of the land of Misraim. The following were its principal religious structures, and they seem to include nearly all the capital objects of Egyptian worship except the goat and the crocodile:

1. The temple of Isis, was commenced at a very early period, but only completed by Amasis, c. 564. It is described as spacious and beautiful (Herod. ii. 176; Hell. Hist. i. 2, 8, 11), but inferior to the Iseum at Busiris (Herod. ii. 59, 61).

2. The temple of Proteus, founded probably by Phoenicians, who had a commercial establishment at Memphis. It was of so early date as to be ascribed to the era of the Trojan War. (Plutarch, de Gen. Sacrat. c. 7.)

3. The temple of Apis, completed in the reign of...
Pammettichus (Herod. ii. 158; Aelian, Hist. Anim. xi. 10; Clemens Alexand. Paedag. iii. 2; Strab. xvii. p. 807), stood opposite the southern portal of the great temple of Pth or Hephastos, and was celebrated for its colonnades, through which the processions of Apis were conducted. Here was also an oracle of Apis, in connection with one of Osiris and Isis (Plin. viii. 46; Pausan. vii. 22.) This temple was the cathedral of Egypt, and not only estab-
lished there a numerous, opulent, and learned col-
lege of priests, but also attracted thither innumerable wor-hippers, who combined commercial with reli-
gious purposes.

4. The village of Serapis, in the western quarter of Memphis. This Serapis was of earlier date than the Alexandrian deity of similar name. To the Memphian Serapeum was attached a Nilometer for gauging and recording the periodical overflows of the river. It was removed by Constantine as a relic of paganism, but replaced by his successor Julian. (Socrat. Hist. Eccl. i. 18; Sozomen, v. 2; comp. Diodor. i. 50, 57; Serene. Quast. Nat. iv. 2; Plin. viii. 46.) It stands at the temple of Ehn or the Sun, mentioned only in the Rosetta inscription (Letronne, Recueil des Inscrip. Grecques et Lat. de l'Egypte; Brugsch, In-
script. Rosettan.)

6. The temple of the Cabiri (Herod. iii. 37), into which none but the high-priest might lawfully enter. The statues of the pignmy gods were burned by Cambyses, and the temple mutilated. The temple of Pth or Hephastos, the ele-
mental principle of fire, worshipped under the form of a Pygmy. This was the most ancient shrine in Memphis, being coeval with its foundation. (Diandor. i. 45; Herod. ii. 99, iii. 37; Strab. xvii. 807; Aman-
ian, xvii. 4.) It was enlarged and beautified by several successive monarchs, apparently through a spirit of rivalry with the great buildings at Thebes. (1.) Moeris erected the great northern court (Herod. ii. 101; Dio. iii. 51). (2.) Rameses the Great
raised in this court six colossal figures of stone,—
portrait-statues of himself, his queen, and their four sons. (Herod. ii. 106—110; Strab. xvii. p. 807.) (3.) Rhamphius built the western court, and erected two colossal figures of summer and winter. (Herod. ii. 121; Dio. i. 62; Wilkinson, M. and C. i. 456.) (4.) Asyrias added the eastern court. (Herod. ii. 136.) It was, in the opinion of Herodotus, by far the noblest and most beautiful of the four quadrangles. (5.) Pammettichus, the Satte king, added the south court, in commemoration of his victory over the Doclearch (Polyena, Strateg. vii. 3; Herod. ii. 153; Dio. i. 67); and Amais (Herod. ii. 176) erected or restored to its basis the colossal statue of Pth, in front of the southern portico. From the priests of the Memphian temples, the Greeks derived their knowledge of Egyptian annals, and the rudiments also of their philosophical systems. It was at Memphis that Herodotus made his longest sojourn, and gained most of his inform-
ation respecting Lower Egypt. Democritus also resided five years at Memphis, and won the favour of the priests by his addition to astrological and hiero-
glyphical studies. (Diog. Laert. Democrit. i. 34.) Memphis reckoned among its illustrious visitors, in early times, the legislator Solon, the historian Heca-
taeus, the philosophers Thales and Cleobulus of Lindus; and in a later age, Strabo the geographer, and Diodorus the Sicilian.

The village of Menasich, half concealed in a

grove of palm-trees, about 10 miles S. of Gizeh, marks the site of the ancient Memphis. The suc-
cessive conquerors of the land, indeed, have used its ruins as a stone-quarry, so that its exact situation has been a subject of dispute. Major Renneill (Geog. of Herodotus, vol. ii. p. 121, seq.), however, brings incontestable evidence of the corre-
spondence of Menasich with Memphis. Its re-

mains extend over many hundred acres of ground, which are covered with blocks of granite, broken obelisks, columns and colossal statues. The principal mound corresponds probably with the area of the great temple of Pth.

There are several accounts of the appearance of Memphis at different eras. Strabo saw the Hephase-
teum entire, although much of the city was then in ruins. In the twelfth century A.D. it was visited by the Arabian traveller Ab-dalalf, who was deeply impressed with the spectacle of grandeur and desola-
tion. "Its ruins offer," he says, "to the spectator a union of things which confound him, and which the most eloquent man in the world would in vain attempt to describe." He seems to have seen at least one of the colossal statues of the great temple in the northern court of the Hephasteum. Among innumerable "idols," as he terms them, he "measured one which, without its pedestal, was more than 30 cubits long. This statue was formed of a single piece of red granite, and was covered with a red varnish." (Ab-dalalf, De Sacy's Translation, 4to. p. 184.) Sir William Hamilton 's (Aegyptiaca, 4to. p. 309) visits of some parts of some colossal statues, the chief
ornaments of the temple.

The district in which these remains are found is still termed Memby by the Coptic population, and thus helps to confirm the identity of the village of Menasich with the ancient capital of Egypt. [W.B.D.]

MENAENUM or MENAE (Mous, Ptol. Steph. B.; Menasius, Diad. Ith. Menallos, Steph.; but see Menenman, Gic. ; Menenmnus, Plin. i. Minos), an inland city of Sicily, about 18 miles W. of Lenonti. It was a city of the Siculi, and not a Greek colony, but, according to Diodorus, was not an ancient settlement of that people, but first founded by their king Duceius, in B.C. 459. (Diod. xi. 78.) It was situated at a distance of about 2 miles from the celebrated lake and sanc-
tuary of the Pa!ci [Paloebum Lacus] (Steph. B. s. v.); and Duceius appears, a few years after-
wards, to have removed the inhabitants again from his newly built city, and to have founded another, in the immediate neighbourhood of the sacred lake, to which he gave the name of Pal!c! (Diod. xi. 88., where the reading Mous for Men, suggested by Cluver, and adopted by Wesseling, is at least very probable, though it is difficult to understand how Duceius could call it the native city of Duceius, if it had, in fact, been only founded by him.) This new city, however, was destroyed soon after the death of Duceius (Diod. xii. 90), and it is probable that the inhabitants settled again at Menaeum. The latter city, though it never attained to any great importance, continued to subsist down to a
Cesar sent two of his legati to invade the country of the Menapii and those Pagi of the Morini which had not made their submission (B. G. iv. 22). After his return from Britannia Cesar sent Labienus against the Morini with the legions which had been brought back from Britannia. The summer had been dry, and as the marshes did not protect the Morini, as in the year before, most of them were compelled to yield. The troops which had been sent against the Menapii under the two legati ravaged the lands, destroyed the corn, and burnt the houses; but the people fled to the thickets of their forests, and saved themselves from their cruel enemy. (B. G. iv. 38.)

In B. C. 53 Cesar himself entered the country of the Menapii with five legions uncumbered with baggage. The Menapii were the only Galli who had never sent ambassadors to Cesar about peace, and they were allies of Ambiorix, king of the Eburones, Cesar's enemy. Trusting to the natural protection of their country, the Menapii did not combine their forces, but fled to the forests and marshes, carrying their property with them. Cesar entered their country with his army in three divisions, after having with great rapidity made his bridges over the rivers, but he does not mention any names. The buildings and villages were burnt, and a great number of cattle and men were captured. The Menapii prayed for peace, gave hostages, and were told that their hostages would be put to death, if they allowed Ambiorix to come within their borders. With this threat Cesar quitted the country that he had ravaged, leaving Comm. the Atrebates, one of his slavish Gallic tools, with a body of cavalry to keep watch over the Menapii. (B. G. vi. 5.)

It appears from Cesar's narrative that this people had farms, arable land, and cattle; and probably ships. They were not savages, but a people with some civility. Cesar's narrative also leads us to infer that the Menapii on the coast bordered on the Morini, as Strabo (iv. pp. 194, 199) says. Pliny (iv. 17) also makes the Menapii and Morini conterminous on the coast, but he makes the Scaldis (Schelde) the northern limit of the Morini; and he does not describe the territory north of the Schelde. D'Arville (Imago, etc., Narroii) attempts to show, against the authority of the ancient writers, that the Nervii extended to the coast, and consequently were between the Morini and the Menapii. But it is here assumed as proved that the Menapii on the coast bordered on the Nervii, who in Cesar's time at least extended along the coast from the northern boundary of the Morini to the territory of the Batavii. (Trinovantium.)

Walkeaseer proves, as he supposes, that the river Aas, from its source to its outlet, was the boundary between the Morini and the Menapii. The Aas is the dull stream which flows by St. Omer, and is made navigable by Gravelines. Accordingly he makes the hill of Cesar, which is east of the Aas, to be the Castellum Menaporum of the Table. This question is examined under Castellum Morinorum. The boundary on the coast between the Morini and Menapii is unknown, but it may, perhaps, have been as far north as Dunkerque. As the Eburones about Tongern and Spa were the neighbours of the Menapii and Morini, except the Morini and Menapii (B. G. iii. 28), who were protected against the Roman general for this season by their forests and the bad weather. The next year (B. C. 55), immediately before sailing for Britannia,
were removed to the west side of the Rhine. The
Toxandri, who were settled in North Brabant, occu-
pied the place of those Menapii who bordered on the
Eburones. But the Menapii still maintained them-
theselves on the west. Tacitus (Hist. iv. 28), in his
description of the rebellion of the Civitas, still speaks of
the "Menapiae et Marcomini et extrema Galliarum." Part
of the former territory of the Menapii was finally
included in Germania Inferior, and the rest in
Beligica. The name Menapii subsisted for a long
Aurelius Victor (de Caesaribus, 39) calls
Caranuus "Menapiae civis;" and it appears in
the middle ages. D'Anville observes that though the
Noticia of the Empire mentions a body of soldiers
named Menapii, we see no trace of this nation in
any city which represents it; but Walckenaer (Géog.
 GC. vol. i. p. 460) contends that Turnacum
(Tournay) was their chief place, to which place
probably belong the Belgic silver medals with the
legend DYNAMOV (Bast, Recueil, etc.) "In an
act of Charles the Bald, A.D. 847, in favour of
the abbey of St. Amand, which is south of Tournai, this
act of the king states that it is to be "in territorio Menapiorum quod
nunc Mennescum appellant." We thus obtain, as
it seems, a fixed point for part of the territory of
the Menapii, which under the later Empire may have
been limited to the country west of the Schelde.

It is observed that "though it is very probable
that Caesar never advanced into the interior of
Flanders, it is, however, certain that the Romans
souredwards, if they did not absolutely make them-

MENAPIA. selves masters of it, at least were there for some
time at different epochs. Their idols, their Dei
Penates, sepulchral urns, lamps, Roman utensils, and
especially the medals of almost all the emperors,
discovered in great numbers, are irrefragable evi-
dence of this." (Bast, Recueil d'Antiquités Romaines
et Gauloises, etc., Introduction.)

"Ancient earthen vessels have been found in
large numbers all along the coast from Dunkerque
to Bruges, which shows that the sea has not gained
here, and refutes the notion that in the time of
Caesar and Pliny this coast was neither inhabited
nor habitable." (Walckenaer, Géog. GC. vol. i. p. 469.)
An inscription found at Rimini, of the age of Ves-
pastian, mentions "Salinarum Menaporum," or
saltworks of the Menapii.

If the position of the Meldi of Caesar has been
rightly determined [MELDI, they were a Menapian
type. There is nothing to show whether the
Menapii were Gaul or Germani.

G. L."

MENAPIA [Menap.] MENDS (Mendes, Herod. vii. 125; Scoly. p. 26;
Thuc. iv. 123; Steph. B.), or MENDEA (Mendiak,
Pan. v. 10. § 27; Plin. iv. 10; Mendiak, Polyaeu.
ii. 1. § 21; Suid. s. v.; Mendis, Liv. xxi. 45;
Eth. Mendiak), a town of Pallene, situated on
the SW. side the cape. It was a colony of Eretria in
Enoeboe, which became subject to Athens with the
other cities of Pallene and Chalidice. On the
arrival of Brasidas, Mende revolted from the Athe-
nians (Thuc. i. c.), but was afterwards retaken by
Nicias and Nicostatus (Thuc. iv. 130; Diod. xii.
75). It appears, from the account which Livy
(l. c.) gives of the expedition of Attalus and the
Romans (n. c. 200), to have been a small maritime
place under the dominion of Casanderia. Together
with Scione, Mende occupied the broadest part of
the peninsula (Pom. Mela. ii. 11), and is
probably represented by some Hellenic remains
which have been observed on the shore near Kiro-

PETIÁ, to the E., as well as on the heights above it.
(Leake, North. Greece, vol. iii. p. 156.) The type of
its autonomous coins—Silenes riding upon an
ass, and a "Diota" in a square (Eckh, vol. ii.
p. 72)—refer to the famous Menadan wine, of which
the ancients make honourable mention. (Athen. i.
Onomast. vi. segm. 15.)

COIN OF MENDE.

MENDES (Μηνδής, Herod. ii. 42, 46, 165; Diocl. i. 84; Strab. xvii.
p. 802; Mela. i. 9 § 9; Plin. v. 10. s. 12; Ptol. iv. 5. § 51; Steph. B.
s. v.: Eth. Menedou), the capital of the
Menadian neme in the Delta of Egypt. It was situ-
ated at the point where the Mendesian arm of the
Nile (Menediani auctus, Sclayx, p. 43, Ptol. iv.
5. § 10; Mendesiae ostium, Pliny, Mela. ii. ce.)
flows into the lake of Tanis. Mendes was, under
the Ptolemaic kings, a considerable town; the
name was the chief seat of the worship of Menes or
Pan, the all-producing-principle of life, and
one of the eight greater deities of Egypt, and
represented under the form of a goat. It was
also one of the names assigned to that division
of the native army which was called the Calasairi,
and the city was celebrated for the manufacture
of a perfume designated as the Mendesium unguentum.
(Plin. xiii. 1. 2.) Mendes, however, declined
clearly, and disappears in the first century A. D.;
since both Ptolemy (l. c.) and Aristeas (iii. p. 160)
mention Thamus as the only town of note in the
Menadian nome. From its position at the junction
of the river and the lake, it was probably encroched
upon by their waters, after the canals fell into
neglect under the Macedonian kings, and when they
were repaired by Augustus (Sueton. Aug. 18, 63)
Thamus had attracted its trade and population.
However, supposed to be the town Menes had been,
found near the hamlet of Achmen-Tanak
(Champollion, l'Egypte, vol. ii. p. 122.) [W. B. D.]

MENDICULIA. 1. A town of the Ihergetes,
probably Monosom. [Vol. ii. p. 32, st.]
2. A town in the interior of Lusitania, on the
banks of the Tagus. (Ptol. ii. 5. § 8, where some
MSS. have Menesorulhis, others Menesorulia.)

MENDICULIUM (Meneduliou), a town in the
western part of Pissidia, two miles west of Pogla.
(Ptol. v. 5. § 6; Steph. s. v., who calls it a town of
Lycaia.) [L. S.]

MENELAI PORTUS (Menedalos lipovic, Herod.
iv. 169), a harbour of Marmarica, situated to the
W. of Paracolenum (Strab. l. p. 40, xvii. p. 838),
and a day's voyage from Petra. (Sclayx. 107, d.)
Here, according to tradition, the legendary
Heracles landed (Herod. ii. 119); and it was the place
where Agesilaus died in his march from the Nile to Cyrene,
N. C. 361. (Corn. Nep. Ages. 8.) Its position
must be sought on the coast of the Wady Dophkath,
near the Rds-al-Milir. (Pacho, Voyage dans la
Marmarique, p. 47.) [E. B. J.]

MENELAIUS (Middlest, Strab. xviii. p. 803; Steph. B. s. v.: Eth. Menelaites), was of the town of the
DELTA, situated to the SE. of the highroad between Alexandria and Hermopolis, near the Canopic arm of the Nile. It derived its name from Menelus, a brother of Ptolemy Lagon, and attained much importance as to confer the title of Meneltah upon the Canopic branch of the river. (Ptol. iv. 5. § 9; Strab. iber. p. 801.)

W. B. D.

MENESTEH PORTUS (see Menetbas, al-Menetbas), a harbour of Hispasia Baetica, between Gades and Asta. (Strab. iii. p. 140; Ptol. ii. 4. § 5; Marclan. p. 128.) In its neighbourhood was the oracle of Menetbas (Strab. i. c.), to whom, also, the inhabitants of the suburbs offered sacrifices. (Philostr. Vit. Apoll. v. 1.) The Scholiast on Trucydes (i. 12) relates that Menetbas, being expelled by the Thebaidae, went to Iberia. The harbour is probably the modern Puerto de S. Maria.

MENINX (Μενίνξ, al. Ἑνίνξ), an island off the N. coast of Africa, to the SE. of the Lesser Syrtis. It is first described by Secullius (p. 40), who calls it Brascarum (Boekez), and states that its length was 300 stadia, while its breadth was something less. Pliny (v. 7) makes the length 25 M.P. and the breadth 22 M.P. Its distance from the mainland was about 3 stadia (8 stadia, Stadiasmus, p. 435), and it was one day's sail from Tharichae. It was the abode of the "ambreous Lutos-eaters" [Loto-peizantes, Polyb. i. 39; comp. Strab. i. p. 25, ii. p. 123, iii. p. 157, xvi. p. 834; Pomp. Mela, ii. 7. § 7; Ptol. l.c. x. 60; Dionys. v. 180].

The Romans first became acquainted with it, by the disastrous expedition of C. Sempronius Blaesus, B.C. 255. (Polyb. l.c.; comp. Zonar. viii. 14; Oros. iv. 9.) It contained two towns, Meninx and Thor, and was the birthplace of the emperors Gallus Trebonianus, and his son, Volusianus (Aurel. Victor, Epit. 31), when it was already known by the name of Gireb. Jerbas, as the island is now called, produces the "lutos Zykephus," a tree-fruit like beans. (Shaw, Treez. p. 197; Bemmell, Geog. of Herod. vol. ii. p. 267; Barth, Wanderings, P. 5.)

[EB. J.]

MENNIS (Curt. v. 1. § 16), a small town of the province of Mesopotamia, at which Alexander halted in his march from Arbeta to Babylon. Curtius stated that it was celebrated for its naphtha pits,—which indeed abounds in that part of Asia. [V.]

MENOBA (Ptol. iii. i. 3) or MENUBA (Inscr. ap. Flores, Esp. Sagra. ix. p. 47), a tributary of the river Baetis, on its right side, now the Gaudieras.

MENOSCA (Μηνοσκα, Ptol. ii. 6. § 9; Ptol. iv. 20. § 34), a town of the Varduli, on the N. coast of Hispania Tarraconensis. Its site is uncertain. Some place it at St. Sebastian; others at St. Andre; and others again, at Sumaya.

MENOSGADA (Μηνοσγαδα), a place in central Germany, not far from the sources of the Main (Meinse), from which it is, no doubt, derived its name. (Ptol. iii. 11. § 29.) Its site is believed to have been that of the modern Mainzroth, near Coblenz.

[LS.]

MENETSA. 1. Surnamed BASTTRA (It. Anton. p. 402; Mengers, Liv. xxvi. 17; Meters, Ptol. ii. 6. § 59), a town of the Oretani in Hispania Tarraconensis, on the road from Carthage Nova to Carthago and 22 Roman miles from Cartago. Pliny (iii. 3. a. 4) calls the inhabitants "Mentesani, qui et Oretanis," to distinguish them from the following.

MENTHIAI, an estuary or bay of the Northern Ocean, mentioned by Pytheas, upon which the Guttonees dwelt, and at a day's sail from which was an island named Abalus, where amber was gathered. (Ptol. xxxvii. 8. a. 11.) The same island is mentioned in another passage of Pliny (iv. 13. a. 27), as situated a day's sail from the Scythian coast. In Billig's edition of Pliny this part of Scythia is called Rannonia. None of the MSS. of older editions have Rannonia or Bantonnania, which is apparently only another form of Mentonomon. The bay was no doubt on the Prussian coast in the Baltic. (Zees, Die Deutschen, ge. p. 269.)

MENTORES (Μεντορες), a Liburnian tribe (Hecatae. Fr. 63, ed. Klaseus; Ptol. iii. 21. a. 25), off whose coast were the three islands called Mentoridae, probably the same as the rocky islands of Pago, Oeno, and Are. [E. B. J.]

MENTHIAI (Μενθιαί), an island off the E. coast of Africa. Ptolemy (iv. 8. § 2, comp. vii. 2. § 1) describes it as being adjacent to (ναπεκτεινον) to the Prom. Prasum; at the same time he removes it 5° from the continent, and places it at 85° long., 18° 30' lat., to the NE. (ἀνθροπος ἀνασκευασμένος) of Prasum. The graduation of Ptolemy's map is here so erroneous, that it is impossible to make out the position of his island Menthiai, which some have identified with one of the islands of Zamòbo, or even with Madagascar. (Vincent, Navigation of the Ancients, vol. ii. pp. 174—183; Gosselin, Geographie des Anciens, vol. i. pp. 191, 195.) The simple narrative of the Peripitus gives a very faithful picture of this coast,—harmonising with the statements of Ptolomy and Marinus of Tyre,—as far as the Rhaptus of the former (Geonid, or the river of Jubac). Afterwards it thus proceeds (p. 9, ed. Hudson):—

"Thence" (from the Nova Fossa, "New Cut," or "Channel," or the opening of the coral reefs by Geonid, at the distance of two natural days' sail, or a day's sail on a course little north of the line of the Lus (SW.), Menthiai is on the W. (the important words "Due West"—παρευρείσθη τοῦ δύο—are arbitrarily altered in Blancard's edition to the opposite sense, with a view to force the author into agreement with Ptolomy; comp. Annot. ed Hudson, p. 68), about 300 stadia from the mainland, low, and covered with wood, with streams, plenty of birds of various kinds, and land-turtle. But, excepting crocodiles, which are harmless, it has no other animals. At this island there are boats, both sewed together, and hollowed out of single trunks, which are used for fishing, and catching turtle. Here, they take fish in wicker baskets, which are let down in front of the hollows of the rocks." It appears, therefore, that Menthiai was distant about two days' sail from Nova Fossa, or 60 or 80 miles from the river Geonid, just where an opening in the coral reefs is now found. The coasting voyager, steering SW., reached the island on the E. side,—a proof that it was close to the main; a contiguity which perhaps is further shown by the presence of the crocodiles; though much stress cannot be laid upon this point, as they may have been only sand bars. It is true, the navigator says that it was 300 stadia from the mainland; but as there is no reason to suppose that he surveyed the island, this distance must be taken
to signify the estimated width of the northern inlet separating the island from the main; and this estimate is probably much exaggerated. The mode of fishing with baskets is still practised in the Jâdâb islands, and along the coast. The formation of the coast of E. Africa in these latitudes—where the hills or downs upon the coast are all formed of a coral conglomerate, comprising fragments of madrepores, shell, and sand—renders it likely that the island, which was close to the main sixteen or seventeen centuries ago, should now be united to it. Granting this theory of gradual transformation of the coast-line, the Meninthias of the "Periplus" may be supposed to have stood in what is now the rich garden-land of Sevadda, where the rivers, carrying down mud to mingle with the marine deposit of coral drift, covered the choked-up estuary with a rich soil. (Cooley, Ptolemy and the Nile, London, 1854, pp. 56-68.)

MERCURI PROM. (Ὑπάλλα Βοσα, Ptol. iv. 3. § 7; Pomp. Mela, i. 7. § 2; Plin. v. 3), the most northerly point of the coast of Africa, to the E. of the gulf of Carthage, now Cape Bom, or the Ria Addar of the Moors. [E. B. J.]

MERICABUM, a town of Hispania Baetica, on the road from Gades to Malaca, now Bigger de la Miel. (Mêm. de l'Acad. des Inserr. xxx. p. 111.)

MERINUM. [GAROANUS.]

MEREMESSUS (Μερεμοσσός or Μερουμόσσος), a town in Troas or Myasia, belonging to the territory of Lampsacus, was celebrated in antiquity as the nurse place of Asklepios. [Steph. B. s. v.; Paus. ii. 12. § 2; Lactant. i. 6. 12, where it is called Marmessus; Suid. a. v.]; but its exact site is unknown. [L. S.]

MEROBICA. [MIOBROICA.]

MEROE (Μερόη, Herod. ii. 29; Diod. i. 23, seq.; Strab. xviii. p. 831; Plin. ii. 73. 78. v. 9 s. 10; Steph. B. s. v.; Ech. Meroeios, Mepoieos). The kingdom of Meroë lay between the modern hamlets of El-Khartoum, where the Atapasa joins the true Nile and the influx of the Atabasors into their united streams, lat. 17° 40′ N., long. 34° E. Although described as an island by the ancient geographers, it was properly an irregular space, like Mesopotamia, included between two or more confluent rivers. According to Diodorus (i. 23) the region of Meroe was 375 miles in length, and 125 in breadth, the area of which was 592,500 miles square as referring to its circumference and diameter respectively. On its eastern side it was bounded by the Abysynian highlands; on the western by the Libyan sands—the desert of Bahrudoua. Its extreme southern extremity was, according to a survey made in the reign of Nero, 575 miles distant from Syene. (Plin. vi. 39. 33.) Eratothenes and Artemidorus, indeed, reduced this distance to 822 and 600 miles. (Mannert, Geogr. d. Alten, x. p. 183.) Within these limits Meroe was a region of singular opulence, both as respects its mineral wealth and its cereal and leguminous productions. It possessed, on its eastern frontier, mines of gold, iron, copper, and salt; its woods of date-palm, almond-trees, and ikeu yielded abundant supplies of both fruit and timber for export and home consumption; its meadows supported large herds of cattle, or produced double harvests of millet (dákhuuru); and its forests and swamps abounded with wild beasts and game, which the natives caught and salted for food. The banks of the Nile are so high in this region, that Meroe derives no benefit from the inundation, and, as rain falls scantly in the north, even in the wet season (Strab. xv. p. 690), the lands remote from the rivers must always have been nearly desert. But the waste bore little proportion to the fertile lands in a tract so intersected with streams; the art of irrigation was extensively practised; and in the south, where the hills rise towards Abysynia, the rains are sufficient to maintain a considerable degree of fertility. The valley of the Atabasors (Tocozza) is smaller and narrower than the rest of Meroe. Partly from its natural richness, and partly from its situation between Aethiopia and the Red Sea,—the regions which produced spice, and those which yielded gold—dust, ivory, and precious stones,—Meroë was from very early times the seat of an active and diversified commerce. It was one of the capital centres of the caravan trade from Libya Interior, from the harenns on the Red Sea, and from Aegypt and Aethiopia. It was, in fact, the receptacle and terminus of the Libyan traffic from Carthage, on the one side, and from Adulis and Berenice on the other. The ruins of its cities, so far as they have been explored, attest its commercial prosperity. The site of the city of Meroes was placed by Eratosthenes (Strab. xiv. 7. 786) 700 stadia, or nearly 90 miles, south of the junction of the Nile with the Atabasors, lat. 16° 44′; and such a position agrees with Philo's statement (ii. p. 77) that the sun was vertical there 45 days before the summer solstice. (Comp. Plin. vi. 30.) The pyramids scattered over the plains of this mesopotamian region indicate the existence of numerous cities besides the capital; of which some have been discovered, but others, of those either temples or public monuments, for the cities themselves, being built of palm-branches and bricks dried in the sun, speedily crumbled away in a latitude to which the tropical rains partially extend. (Ritter, Africa, p. 542.) The remains of Meroë itself all lie between 16° and 17° lat. N., and are not far from the Nile. The most southerly of them are found at Naqa-gabal-aradim. Here have been discovered the ruins of four temples, built in the Egyptian style, but of late date. The largest of them was dedicated to the ram-headed deity Ammon. The principal portico of this temple is detached from the main building,—an unusual practice in Egyptian architecture,—and is approached through an avenue of sphinxes, whose heads also bear the ram's head. The sculptures, like those of Aegypt, represent historical events,—Ammon receiving the homage of a queen, or a king holding his captives by the hair, and preparing to strike off their heads with an axe. At Wood Naja, about a mile from the Atapasa, are the remains of a sandstone temple, 89 feet in length, bearing on the capital of its columns the figures and emblems of Pth, Ahor, and Typhon. These ruins are amidst mounds of brick, which betoken the former presence of an extensive city. Again, 16 or 17 miles west of the Atapasa, and among the hollows of the sandstone hills, surrounded by the desert, are the ruins of El-Mesuourat. Eight temples, connected with one another by galleries or colonnades, and divided into courts and cloisters, are here found. The style of architecture is that of the era of the Ptolemies. On the eastern bank, however, and about 2 miles from the river, are found groups of pyramids, which mark the site of a necropolis and the neighbourhood of a city: they are 80 in number, and of various dimensions; the base of the largest being 63 feet square, of the smallest less than 12 feet. The
MEROE.

lofittest of these pyramids is about 160 feet in height. Some of these have evidently been royal tombs. None of the buildings of Meroe, indeed, can claim a remote antiquity. The sculptures as well as the pyramids bear the impress of the decline of Egyptian art, and even traces of Greek architecture; and this circumstance is one of many indications that Meroe derived its civilisation from Egypt, and did not, as has been supposed, transmit an earlier civilisation to the Nile valley. And yet it is not probable that Meroe received either its art or its peculiar forms of civil polity from Egypt, either entirely, or at any very remote epoch of time. Their points of resemblance, as well as of difference, forbid the supposition of direct transmission; for, on the one hand, the architecture and sculptures of Meroe betray the inferiority of a later age, and its civil government is not modelled upon that of the Pharaohs. One remarkable feature in the latter is that the sceptre was so often held by female sovereigns; whereas in Egypt we find a queen regnant only once mentioned—Nitocris, in the 3rd dynasty. Again, the polity of Meroe appears to have been in great measure scribal in nature after Egypt had ceased to be governed by a pure theocracy. Yet, that the civilisation of Meroe was indigenous, the general barbarism of the native tribes of this portion of Libya in all ages renders highly improbable. From whatever quarter the ruling caste of this ancient kingdom may have come, it bears all the tokens, both in what we know of its laws, and in what is visible of its arts, of the presence of a conquering race presiding over a subject people.

The most probable theory appears to be the following, since it will account for the inferiority of the arts and for the resemblance of the polity of Meroe to that of Egypt:—

Strabo, quoting Eratothenes (xvii. p. 786), says that the Sembritae were subject to Meroe; and again he relates, from Artemidorus, that the Sembritae ruled Meroe. The name of Sembritae, he adds, signifies immigrants, and they are governed by a queen. Pliny (vi. 30. s. 91) mentions four islands, each called Sembritae, each having a chief or more towns, and which, from that circumstance, are evidently not mere river-islands, but tracts between the streams which intersect that part of Libya—the modern kingdom of Senaar. Herodotus, in whom is the earliest allusion to these Sembritae (ii. 30), calls them Automali, that is voluntary exiles or immigrants, and adds that they dwell as far above Meroe, as the latter is from Syene, i.e., a two months' voyage up the river. Now, we know that, in the reign of Ptolemy the Great (B.C. 655—614), the military caste withdrew from Egypt in anger, because their privileges had been invaded by that monarch; and tradition uniformly assigns Aethiopia, a vague name, as their place of refuge. The number of these exiles was very considerable, enough—

even if we reduce the number of Herodotus (iii. 31), 240,000, to a tenth—to enable warriors, well armed and disciplined, to begin under the subject the scattered and barbarous tribes of Senaar. The islands of the Sembritae, surrounded by rivers, were easy of defence: the soil and productions of Meroe proper would attract exiles accustomed to the rich Nile valley; while, at the distance of two months' journey, they were secure against invasion from Egypt. Having revolted from a king rendered powerful by his army, they would naturally establish a form of government in which the royal authority was limited; and, recurring to the era when the monarch was elected by or from the scribal caste, they apparently reorganised a theocracy, in which the royal power was so restricted as to admit of its being held by male or female sovereigns indifferently,—for there were kings as well as queens of Meroe.

Again, the condition of the arts in this southern kingdom points to a similar conclusion. The pyramids scattered over the plains of Meroe, though copied from the monuments of the Nile valley, and borrowing names from early Egyptian dynasties, are all of a comparatively recent date; long, indeed, posterior to the age when the arts of Egypt were likely either to be derived from the south, or to be conveyed up the river by conquest or commercial intercourse. The structures of Meroe, indeed, so far as they have been explored hitherto, indicate less a regular than an interrupted intercourse between the kingdoms above and below Byssos. And when it is remembered that the Sembritae bear also many vestiges even of later Greek and Roman times, we may infer that the original Sembritae were, during many generations, recruited by exiles from Egypt, to whom the government of their Macedonian or Roman conquerors may have been irksome or oppressive. Finally, the native tribes of Senaar live principally on the produce of the chase; whereas the population of Meroe was agricultural. New emigrants from Egypt would naturally revert to tillage, and avail themselves of the natural productiveness of its alluvial plains. The whole subject, indeed, is involved in much obscurity, since the ancient Meroe is in many parts inaccessible; partly from its immense tracts of jungle, tenanted by wild beasts, and partly from the fever which prevails in a climate where a brief season of tropical rain is succeeded by many months of drought. From the little that has been discovered, however, we seem warranted in at least surmising that Meroe was indirectly a colony of Egypt, and repeated in a rude form its peculiar civilisation. (See Heeren, Africau Nations, vol. I. Meroe; Cookey's Poemen and the Nile; Cailliard, l'isle de Meroue, &c.; [W. B. D.]

MEROM. [PARASPINTA.]

MEROZ [Meroi], a town of Palestine, mentioned only in Judges (v. 23), apparently situated in the vicinity of the battle-field, and in the tribe of Asher. The tradition of its site was lost as early as the time of Procopius of Gaza, who had attempted in vain to recover it. (Roland, Palestina, a. d. p. 696.)

MERYA. [GALLARGA, p. 934, a.]

MERULA (Merula), a river of Liguria, mentioned only by Pliny (iii. 5. a. 7), who places it between Albium Intemium (Vistamigilia) and Albium Ingaum (Albenga). The name is still retained (according to the best maps) by a stream which flows into the Mediterranean near the Copo delle Mele, about 10 miles W. of Albenga, but more commonly known as the Fiume d'Andrea, from the village of that name near its mouth. [K. H. B.]

MERUS (Miro), a town of Phrygia, which is mentioned only in the ecclesiastical writers as situated in Phrygia Salutaris, on the south-east of Cotysseum. (Hieroc. p. 677; Sozomen, i. 10; Sozomen, v. 11; Constant. Pontphr. de Them. i. 40.) Some believe that the ruins near Donganik (commonly called Doganik), of which Fellowes heard (Dioscor. in Ligcia, p. 513, &c.), belong to Merus. (Comp. Leake, Asia Minor, p. 24, &c.) [L. S.]
MESANITES SINUS.

MESANITES SINUS (Μεσανίτης, al. Μεσανίτης κάποιος), a bay at the extreme north of the Arabian coast of the Persian Gulf. (Ptol. v. 19. § I. vi. § 7. 19.) Forster finds the modern representative of the ancient name in the Phrat Mesana of D'Anville, at the mouth of the Eufrates, or the Shat-al-Arab. (Arabia, vol. ii. p. 55.) “The coincidence of names,” he says, “is important, as placing in our power to point out two towns which Ptolemy disposes close to this bay; viz. Idiraha (Ibid.) in El-Kader, a town at the mouth of the Orontes, and Jucara (Toumara), in Djukaha, an ancient town, now in ruins, 20 miles south of El-Kader, now Core Boobain” (p. 214).

MESAMBRIA (Μεσαμβρία, Arrian, ind. c. 58), a small place, apparently a chersonese on the southern coast of Persia, the present Abu-shir. (Vincent, Voy. de Nearchus, i. p. 394.)

MESÉCHIANS. [MESAMBRIA.]

MESCHÉNE (Μέσχήνη, Ptol. iv. 9. § 6), a mountain of Interior Africa, S. of the equator, which Ptolemy (i. c.) places in W. long. 25°, and which may be identified with part of the chain of the Mades or Kong Mountains, to the N. of Dabolomey.

[Ε. Β. Ι.]

MESCHELIA (Μεσχέλια, Diod. xx. 57, 58), a town of Numidia, taken by Eumachus the general of Agathocles.

[Ε. Β. J.]

MES. [MYLARES.]

MES. [STORCHAREDES.]

MESAMBRIA (Μεσαμβρία, Dead. Μεσαμβριά: Eth. Μεσαμβριανός). 1. An important Greek city in Thrace, situated on the coast of the Exinfne and at the foot of Mt. Hasmone (Sccymn. Ch. 738); consequently upon the confines of Mesoine, in which it is placed by Ptolemy (iii. 10. § 8). Strabo (vii. p. 519) relates that it was a colony of the Macedonians, and that it was originally called Menemia (Μεσαμβρία) after its founder Mena; Stephana B. (s. v.) says that its original name was Mesembria (Μεσαμβρία), from its founder Melissa; and both writers state that the termination -ebra was the Thracian word for town. According to the Anonymous Periplus of the Exinfne (p. 14) Mesembria was founded by Chalcedonians at the time of the expedition of Darius against Scythia; but according to Herodotus (vi. 33) it was founded a little later, after the suppression of the Ionic revolt, by Byzantine and Chalcedonian fugitives. These statements may, however, be reconciled by supposing that the Thracian town was originally colonized by Macedonians, and afterwards received additional colonies from Byzantine and Chalcedon. Mesembria was one of the cities, forming the Great Pentapolis on the Exinfne, the other four being Odessa, Tomi, Istrani and Apolloniae. (See Böckh, Jour. vol. ii. p. 996.) Mesembria is rarely mentioned in history, but it continued to exist till a late period. (Mela, ii. 2; Plin. iv. 11. s. 18; Ptol. L c.; Tab. Pent.)

2. A Greek city of Thrace, on the Aegean Sea, and not far from the mouth of the Lissus. (H. c. vii. 108; Steph. B. s. v.)

MESÉNE (Μεσσηνία, Strab. ii. p. 84) a small tract of land in ancient Mesopotamia, about the exact position of which there has been much discussion, owing to the indistinct and confused accounts of it which have been preserved in ancient authors. The real cause of this would seem to be that there were two districts at no great distance one from the other, both of which, from similar reasons, bore the name of Messene, or Middle-Land. One of these was near the mouths of the Tigris, where that river is divided into two branches, corresponding to the modern tract called Shat-al-Arab (Steph. B. s. v. s. Mešéni). To this Mesene must be referred the passage in Philostorgius (H. Ε. iii. 7), in which he states that the Tigris, before it reaches the sea, is divided into two great branches, forming an extensive island, which is inhabited by the Meseni. To this also belongs the Messene, mentioned in the history of Trajan by Dion Cassius, who calls it an island in the Tigris, over which Athambulus was the ruler (lxxviii. 28). The other was much higher up on the same river, and has derived its chief importance from its capital Apameia. Stephanus speaks of this tract in two places; first (s. v. Aρδασία), where he states that that city is surrounded by land divided into two streams, of which on the right hand is called Delas, and that on the left bears the name of Tigris; and secondly (s. v. Oρασία), where he asserts that Oratha is a town of Messene, which is near the Tigris, according to Arrian, in the 16th book of his Parthica.

Pliny, 23, only refers to this Messene, when he is speaking of Apameia, which town he states to have been 125 miles on this side (i.e. to the N.) of Seleucia; the Tigris being divided into two channels, by one of which it flows to the S. and to Seleucia, washing all along Messene (vii. 27. s. 31). There might have been some doubt to which Messene Ammianus refers; but as he mentions Teredon, which was near the mouth of the Tigris, it is probable that he is speaking of the former one (according to Pliny). The district in the neighbourhood of the Apamean Messene has been surveyed with great care by Lyc. and, from his observations, it seems almost certain that the more northern Messene was the territory now comprehended between the Dijfel and the Tigris. (Roy. Geogr. Journ. vol. ix. p. 473.)

MESMA. [MEDMA.]

MESÓA or MEISSÓA. [SPARTA.]

MESOBOA. [ARGANDIA, p. 193, No. 15.]

MESOGAEAE. [ATTICA, p. 322.]

MESOGIS or MESSO'GIS (Messagis, Messow'gis), the chief mountain of Lydia, belonging to the trunk of Mount Taurus, and extending on the north of the Maeander, into which it sends numerous small streams, from Celenus to Mycale, which forms its western termination. Its slopes were known in antiquity to produce an excellent kind of wine. (Strab. xiv. pp. 629, 636, 637, 648, 650; Steph. B. s. v.; Ptol. v. 2. § 13, where Messagis is, no doubt, only a corrupt form of Messagis.) Mounts Pactyes and Theorion, near its western extremity, are only branches of Messogis, and even the large range of Mount Tmolus is, in reality, only an offshoot of it. Its modern Turkish name is Kastaneh Dagh, that is, chestnut mountain.

[Σ.]

MESOPOTAMIA (ἡ Μεσοποταμία), an extensive
MESOPOTAMIA.

Though Mesopotamia is for the most part a flat country, the ancients reckoned some mountains which were along its northern boundary, as belonging to this division of Asia. These were Morns (now Karja Boghair), one of the southern outlying spurs of the great range of the Taurus; and M. SINGARAS (now Singar), which may be considered as an extension to the west of the M. Masius. The latter is nearly isolated from the main ranges on the N., and extends on the NE. to the neighbourhood of the Tigris. The two most important rivers of Mesopotamia are, as we have stated, those which formed its W. and E. boundaries, the Euphrates and Tigris; but besides these, there are a number of smaller, but not wholly unimportant streams, which traverse it as affluents of the former rivers. These were the CHABORAS (Khachber); the Sadgaras, perhaps the same as that which Xenophon calls Masaes (Arab. i. 5. § 4); the Belias or Bilecha; and the MYGONDUS (Hermes). Under the Roman Empire, Mesopotamia was divided into two parts, of which the western was called Osrhoene, while the eastern continued to bear its ancient name. It was conquered by Trajan (A.D. 115), who took Singara and Nicibis, and formed the three Roman provinces of Armenia, Mesopotamia, and Assyria, of which Mesopotamia reached as far as the Persian Gulf. (Dion Cass. xlviii. 22. 23; Eutrop. viii. 3; Euseb. p. 165, ed. Scalig.; Malalas, p. 274, ed. Bomn.) But even Trajan could not retain his conquests (Dion Cass. lixvii. 29), and they were given up to the Persians by his successor (Spartian, Hdr. 5; Eutrop. viii. 6.) Under M. Aurelius, Mesopotamia was again conquered by L. Verus, as far as the Median Wall (S. Rufus, Brev. 14); and the conquest was further secured by the foundation of the colonies of Carrhae on the Chaboras and Singara, to which Septimius Severus added those of Nisibis and Rhesaina. But this province was a constant cause of war between the Persians and Roman empire; and at length the greater part of it was surrendered to the Persians by Jovian in A.D. 365. After this time Mesopotamia contained two dravias: Osrhoene, bounded on the south by the Chaboras, with the capital Edessa; and Mesopotamia, extending as far south as Daras, and having Amid as its capital. The province was governed by a Praeses (Becker's Romans, vol. iii. p. 204, seq.)

The most important cities of this province were BATAEIA or BATHMATA; CARHIAEA; CHICHEIUM; NICIBIS or Antiocheia MYGDONIAE; and SINGARA.

MESPILA. (Μεσπιλα, Xem. Arab. iii. 4. § 10), an ancient deserted city of Assyria, noticed by Xenophon on his retreat northwards from Babylon. He describes it as about 6 parasangs from Larissae, on the same (or left) bank of the Tigris. He mentions that the town had been inhabited by the Medes, and that its walls were of immense size, the foundations being of polished shelly limestone, 50 feet in breadth and height; and the wall above, made of brick, being 100 feet high and 50 broad. The circumference of the walls is 100 stadia. The court surrounded by a wall he states to have been 6 parasangs. He mentions, as a report, that on the Medians being conquered by the Persians, the queen, who was a Median, fled to this place; and that, when subsequently the place was besieged by the Persians, they would have been unable to take it, had not Zeus aided them with his lightning. There can be little doubt that Mespila is represented as
situation of the place soon led to the establishment there of a more regular colony, consisting of settlers from Chalcis and the other cities of Euboea, at the head of whom were Periander of Chalcis and Grataces of Cumae, who became the joint founders or Dekletai of the new colony (Thuc. vi. 4). This statement of Thucydides is confirmed in its leading points by Pausanias; while Sicyonius, Chios, as well as Strabo, though agreeing in its Chalcidean origin, represents it as founded immediately from the Chalcidian colony of Naxos in Sicily. (Paus. vi. 23. § 7; Sicyon. Ch. 284—286; Strab. vi. p. 268.) From this last version we may infer that it was looked upon as of more recent origin than Naxos, and therefore not founded till after 735 B.C.; but we have no clue to the precise, or even approximate date, of its establishment. Of its early history we know scarcely anything; but we may probably infer that it rose early to a flourishing condition, from the circumstance that the Zancleans were able before the close of the seventh century B.C. to establish two colonies on the N. coast of the island: Mylae, about 30 miles W. of Cape Pelorus, and Himera, much further to the W. (Thuc. vi. 5; Sicyon. Ch. 288; Strab. vi. p. 272.) The latter grew up into a great and powerful city, but Mylae appears to have continued for the most part a mere dependency of Zancle. (Strab. l.c.)

The Zancleans appear to have been still desirous of extending their colonial system in this direction, and were endeavouring to induce fresh settlers from the Ionian cities of Asia to co-operate with them in this enterprise, when the fall of Mileius in 494 B.C. gave a fresh impulse to emigration from that quarter. A large body of Samians, together with some of the surviving Mileians, were in consequence induced to accept the invitation of the Zancleans, and set out for Sicily, with the purpose of establishing themselves on the N. coast between Mylae and Himera, which was commonly known as the "Fair Shore" (καλὴ ἀκτή). But having arrived, on their way, at Locri Epizephyrii, they were here persuaded by Anaxilas, tyrant of Rhegium, to take a treasurer's advantage of the absence of the Zanclean troops, who were engaged in military operations elsewhere, and surprise the colony itself. That city was, indeed, the first to succumb under the government of a despot named Scythe, to whom Herodotus gives the title of king. On finding themselves thus betrayed, the Zancleans invoked the assistance of the powerful Hippocrates, despot of Gela; but that monarch in his turn betrayed them, and instead of aiding them to recover possession of Zancle, made common cause with the Samians, whom he confirme in the possession of the city, while he threw Scythe into prison, and reduced the greater part of the Zancleans into captivity. (Herod. vi. 23—24; Thuc. vi. 4; Sicyon. Ch. 289; Arist. Pol. v. 3.)

By this sudden revolution, the Samians found themselves in undisputed possession of Zancle, but they did not long enjoy their new acquisition. Not many years afterwards they were in their turn reduced to subjection by Anaxilas himself, who is said to have expelled them from the city, which he peopled with a mixed body of colonists, while he gave to it the name of Messana, in remembrance of the land of that name in Greece, from which his own ancestors derived their descent. (Thuc. vi. 4; Herod. viii. 164; Strab. vi. p. 268.)

The exact period of this revolution cannot be determined with certainty; but the first settlement of the Samians at Zancle cannot be carried back further than B.C. 493, while their subsequent expulsion or
subjection by Anaxilas must have occurred some years prior to his death in n. c. 476. It is certain that at that period he had been for some time ruler both of Rhegium and Zancle, the latter of which, according to one account, he had placed under the nominal government of his son Cleophon or Leo- phron. (Diod. xii. 48; Schol. ad Pind. Pyth. ii. 34.) It is certain, also, that before the close of his reign Zancle had assumed the name of Messana or Mes- sanya, by which it has ever since been known. The error of Pausanius, who carries back the whole settle- ment, and with it the reign of Anaxilas to the close of the Second Messenian War, n. c. 668, has been sufficiently refuted by Bentley (Dios. on Pha- leria, pp. 204—224.). It is probable that he con- founded the Second Messenian War with the Third, which was really contemporary with the reign of Anaxilas (Clinton, F. H. vol. i. p. 257); and it is not unlikely that some fugitives from the latter were among the fresh settlers established by Anaxilas at the time of the colonisation of Messana. It is prob- able also that the Samians were by no means absolutely expelled, as stated by Thucydides, but continued to inhabit the city together with the new colonists, though deprived of the enjoyment of their free- dom. (Herod. vii. 164; Siebert, Zancle-Messana, p. 16.)

The Messanians for some time followed the for- tunes of their neighbours of Rhegium; they passed, after the death of Anaxilas, under the government of Nicytus, and subsequently of the two sons of Anaxilas; but, after the death of Hieron, and the expu- lision of his brother Thrasylalus from Syracuse, they took the opportunity, in conjunction with the other cities of Sicily, to drive out their despots and assert their freedom and independence, n. c. 461. (Diod. xii. 59, 66, 76.) A large body of the foreign settlers, who had been introduced into Sicily by the tyrants, were upon this occasion established in the territory of Messana, a proof that it was at this period still thinly peopled; but the city seems to have participated largely in the prosperity which the Sicilian republics in general enjoyed during the period that followed, n. c. 460—410. The great fertility of its territory, and the excellence of its port, were natural advantages which qualified it to become one of the first cities of Sicily: and this ap- parently was the case throughout the period in question. In n. c. 496, their tranquillity was, how- ever, interrupted by the arrival of the Athenian fleet under Laches, which established itself at Rhegium, on the opposite side of the straits; and from thence made an attack on Mylae, a fortress and dependency of the Messanians, which, though occupied by a strong garrison, was compelled to surrender. Laches, with his allies, then moved against Messana itself, which was unable to resist so large a force, and was compelled to accede to the Athenian alliance. (Thuc. iii. 86, 90; Diod. xii. 54.) But the next year (n. c. 425) the Messanians hastened to desert their new alliance, and join that of the Syracusans; and from thenceforth their port became the chief naval station of the combined Syracusan and Locrian fleets. (Thuc. iv. 24, 25.) They themselves, also, on one occasion, took courage to make a vigorous attack on their Chalcidic neigh- bour of Naxos, and were able to defeat the Na- xians themselves, and shut them up within their walls; but were in their turn defeated by the Sicu- lians and Leontines, who had hastened to the relief of Naxos, and who for a short time laid siege, but without effect, to Messana itself. (Thuc. iv. 25.) The Messanians were included in the general pacifi- cation of Sicily, n. c. 424; but were themselves still divided by factions, and appear at one time to have for a short period passed under the actual dominion of the Locrians. (Id. v. 5.) At the time of the Athenian expedition to Sicily (n. c. 415) they were again independent, and on that occasion they per- sisted in maintaining a neutral position, though in vain solicited by the Athenians on one side, and the Syracusans on the other. An attempt of the former to make themselves masters of the city by treachery proved wholly ineffectual. (Diod. xiii. 4; Thuc. vi. 48, 74.) A few years later, the Messa- nians afforded a hospitable refuge to the fugitives from Himera, when that city was taken by the Carthaginians, n. c. 409 (Diod. xiii. 61), and sent an auxiliary force to assist in the defence of Agri- gentum against the same people. (Id. 86.)

It appears certain that Messana was at this period, one of the most flourishing and considerable cities in Sicily. Diodorus tells us, that the Messa- nians and Rheginians together could equip a fleet of not less than 80 triremes (xiv. 8); and their combined forces were very formidable in comparison with the much less formidable, even by the powerful Dionysius of Syracuse. (Id. 44.) But though unfavourably disposed towards that despot, the Messanians did not share in the strong sympathies of the Rheginians with the Chalcidic cities of Naxos and Catana [RHEGION], and pursued an uncertain and vacillating policy. (Diod. xiv. 8, 40, 44.) But while they thus sought to evade the hatred of the Syracusan despot, they were visited by a more severe calamity. Himilcon, the Carthaginian general, who had landed in Sicily in n. c. 396, having compelled Dionysius to fall back upon Syracuse, himself advanced with a large army from Panormus, along the N. coast of the island. Messana was the immediate object of the campaign, on account of the importance of its port; and it was so ill prepared for defence that notwithstanding the spirited resistance of its citizens, it was taken by Himilcon with little difficulty. Great part of the inhabitants made their escape to the surrounding country; but the rest were put to the sword, and not only the walls of the city levelled to the ground, but all its buildings so studiously destroyed as to give the impression of Dionysius, to leave scarcely a trace of where it had formerly stood. (Diod. 56—58.)

After the defeat and expulsion of the Cartha- ginians, Dionysius endeavoured to repeople Messana with the fugitive citizens who survived, to whom he added fresh colonists from Locri and Medina, together with a small body of Messanian exiles, but the latter were soon afterwards transferred to the newly founded city of Tyndaria. (Diod. xiv. 78.) Mean- while, the Rheginians, who viewed with dissatisfaction the footing thus established by Dionysius on the Sicilian straits, endeavoured to obtain in their turn an advanced post against the Messanians by forti- fying Mylae, where they established the exiles from Naxos, Catana, and other cities, who had been driven from their homes by Dionysius. (Id. xiv. 87.) The attempt, however, proved abortive: the Messanians recovered possession of Mylae, and con- tinued to support Dionysius in his enterprises against Rhegium. (Id. 87, 103.) After the death of that despot, we hear but little of Messana, which appears to have gradually, but slowly, risen again to a flourishing condition. In n. c. 357 the Messa-
nians are mentioned as sending assistance to Dion against the younger Dionysius; and after the death of Dion, they repulsed an attempt of Callipus to make himself master of their city. (Diod. xvi. 9; Plut. Dion, 58.) At a somewhat later period, however, they fell under the yoke of a tyrant named Hippon, from whom they were freed by Timoleon, (n. c. 339), and at the same time detached from the alliance of Carthage, to which they had been for a time compelled to adhere. (Diod. xvi. 69; Plut. Tim. 284.)
